Copiopia (*kop-i-o'-pe-ah*) [κόπος, a straining; ὤψ, eye]. Eye-strain; weariness of the eyes. **C. hysterica,** a term applied to those symptoms that indicate hyperesthesia of the fifth and optic nerves.

TABLE OF CONVOLUTIONS OR GYRI OF THE CEREBRUM.

NAME.	LOCATION.	BOUNDARIES.
Abrupt.	Small convolutions at the extremity of the occipital lobe.	
Angular.	Posterior portion of inferior parietal lobule.	*Anteriorly*, continuous with the supramarginal convolution. *Inferiorly*, continuous with the middle temporo-sphenoidal convolution. *Posteriorly*, connected with the occipital lobe by the annectant convolutions.
Annectant (4).	Occipital lobe.	Connect the occipital with the temporo-sphenoidal and parietal lobes.
Annectant, external.	See *Annectant, first.*	
Annectant, first.	Occipital lobe; a portion of the superior occipital convolution.	Joins the superior occipital convolution with the superior parietal lobe.
Annectant, second.	Occipital lobe, posterior part.	Connects the angular and middle convolutions.
Annectant, superior.	See *Paroccipital.*	
Antero-parietal.	See *Frontal, ascending.*	
Antero-temporal.	See *Temporal, first.*	
Antorbital.	Frontal lobe (of orang-outang), orbital surface.	*Internally*, olfactory lobe.
Arcuate.	See *Uncinate.*	
Arnold.	See *Posterior, inferior.*	
Basilar, internal.	Frontal lobe (orbital face); probably the rectus convolution, *q. v.*	
Basirrhinal.	Temporal lobe, near tip.	Hippocampal and amygdaline fissures.
Breves.	The larger number of the insular convolutions, as distinguished from the long insular.	
Bridging.	See *Annectant.*	
Broca's.	The inferior or third frontal convolution, *q. v.*	
Callosal.	See *Fornicate.*	
Calloso-marginal.	See *Fornicate.*	
Central, anterior.	See *Frontal, ascending.*	
Central, posterior.	See *Parietal, ascending.*	
Choroid, anterior.	In the embryo, the convexity of the parietes of the lateral recess of the fourth ventricle.	
Choroid, inferior.	See *Choroid, posterior.*	
Choroid, posterior.	In the embryo, a convexity posterior to the anterior choroid convolution in the lateral recess of the fourth ventricle.	
Choroid, superior.	See *Choroid, anterior.*	
The corpus callosum.	See *Fornicate.*	
Cociate.	See *Orbital convolutions.*	
Cuneate.	Occipital lobe, median aspect of cerebrum; wedge-shaped.	*Above*, parieto-occipital fissure. *Below*, calcarine fissure.
Cuneiform.	See *Abrupt.*	
Dentate.	In the dentate fissure; rudimentary in man.	*Above*, the tænia hippocampi; terminates in the notch of the uncinate gyrus.
Descending.	Occipital lobe.	*Anteriorly*, post-calcarine fissure.
Diagonalis.	See *Frontal, ascending.*	
Fimbriated.	See *Fornicate.*	
External (4).	Convexity of each cerebral hemisphere (of dog).	

TABLE OF CONVOLUTIONS OR GYRI OF THE CEREBRUM.—*Continued.*

NAME.	LOCATION.	BOUNDARIES.
Fornicate.	Median surface of cerebrum, immediately above the corpus callosum.	*Above*, calloso-marginal fissure. *Internally*, great longitudinal fissure *Below*, corpus callosum.
Frontal.	See *Frontal, ascending*.	
Frontal, ascending.	Frontal lobe.	*Above* and *below*, generally continuou with the ascending parietal convolu tion. *Posteriorly*, fissure of Rolando *Anteriorly*, precentral and supercen tral fissures.
Frontal, first.	See *Frontal, superior*.	
Frontal, inferior.	Frontal lobe, lower and outer portion. U-shaped convolution; forms an essential part of Broca's speech-center.	*Above*, subfrontal fissure. *Posteriorly* the ascending frontal convolution *Anteriorly*, becomes the posterio orbital convolution.
Frontal, lower.	See *Frontal, inferior*.	
Frontal, middle.	See *Frontal, second*.	
Frontal, second.	Frontal lobe between the superior and inferior frontal convolutions.	*Posteriorly*, continuous with the as cending frontal convolution. *Anteriorly*, continuous with the middl orbital convolution. *Above*, super frontal fissure. *Below*, subfronta fissure.
Frontal, straight.	See *Rectus*.	
Frontal, superior.	Frontal lobe.	*Posteriorly*, continuous with ascend ing frontal c. *Anteriorly*, continuou with the internal orbital. Its mes surface is called the marginal c. *Below*, the superfrontal fissure.
Frontal, third.	See *Frontal, inferior*.	
Frontal, transverse.	See *Frontal, ascending*.	
Frontal, upper.	See *Frontal, superior*.	
Fronto-marginal.	Frontal lobe of cerebrum, median aspect.	*Above*, fronto-marginal fissure. *Below* supercallosal fissure.
Fronto-parietal, middle.	See *Frontal, superior*.	
Fusiform.	See *Subcollateral*.	
Geniculate.	"Passes from the anterior extremity of the fornicate convolution over the upper surface of the callosum, becoming the medial and lateral striæ Lancisi."	
Glossiform.	See *Subcalcarine*.	
Hippocampal.	Extends from the splenium, dipping behind and below the callosum, and continuing forward to the uncinate convolution.	The hippocampal and collateral fi sures. *Anteriorly*, the uncinate con volution. *Posteriorly*, the splenium
Infero-frontal.	See *Subfrontal*.	
Inflected.	A V-shaped convolution about the inflected fissure.	
Infra-marginal.	Temporo-sphenoidal lobe, the superior convolution.	*Above*, the Sylvian fissure. *Below*, th super-temporal or parallel fissure.
Insular.	One of a group of small convolutions that form the island of Reil.	
Insular, long.	A portion of the insula; recognized by its length and horizontal direction.	
Intercentral.	The convolution between the two parallel central fissures, in the rare cases in which two co-exist.	The parallel central fissures.
Internal.	See *Fornicate*.	
Lingual.	See *Subcalcarine*.	
Longitudinal, superior internal.	See *Fornicate*.	
Marginal.	Frontal lobe.	*Internally*, longitudinal fissure. *Interiorly*, the calloso-marginal fissur *Posteriorly*, the calloso-marginal fi sure and fissure of Rolando.

TABLE OF CONVOLUTIONS OR GYRI OF THE CEREBRUM.—*Continued.*

NAME.	LOCATION.	BOUNDARIES.
Marginal, external.	See *Fornicate.*	
Marginal, inferior.	See *Supertemporal.*	
Marginal, internal.	The lamina of the septum lucidum and dentate convolution.	*Above* and *externally*, by the fornicate convolution.
Medifrontal.	See *Frontal, second.*	
Medio-parietal, transverse.	See *Parietal, ascending.*	
Meditemporal.	Middle of temporal lobe; a small horizontal convolution.	*Above*, the supertemporal fissure. *Below*, meditemporal fissure. *Posteriorly*, continuous with the angular convolution.
Mendel's.	See *Opercular.*	
Nuclear; also called *Rauber's* convolution.	A fold of gray matter in the olivary body.	
Occipital, fifth.	Occipital lobe (of gorilla). Corresponds to the lingual convolution of man.	
Occipital, first.	See *Occipital, superior.*	
Occipital, fourth.	Occipital lobe (of gorilla). Corresponds to the fusiform of man.	
Occipital, inferior.	Occipital lobe.	*Above*, middle occipital fissure. *Below*, inferior occipital fissure. *Anteriorly*, continuous with middle temporo-sphenoidal convolution.
Occipital, lower.	See *Occipital, inferior.*	
Occipital, middle.	Occipital lobe, between the first and third occipital convolutions.	*Superiorly*, transverse occipital fissure. *Inferiorly*, inferior longitudinal and occipital fissures. *Internally*, the median longitudinal fissure. *Externally* or *anteriorly*, it runs into the angular gyrus.
Occipital, second.	See *Occipital, middle.*	
Occipital, superior.	Occipital lobe, superior surface, upper convolution.	Connected with the superior parietal by the annectant gyrus.
Occipital, third.	See *Occipital, inferior.*	
Occipital, upper.	See *Occipital, superior.*	
Occipito-temporal.	Lower surface of temporo-sphenoidal lobe.	
Occipito-temporal, inferior.	See *Subcollateral.*	
Occipito-temporal, lateral.	See *Subcollateral.*	
Occipito-temporal, middle.	See *Subcalcarine.*	
Occipito-temporal, superior.	See *Subcalcarine.*	
Olfactory.	Arises in the anterior perforated space, passing forward in the olfactory sulcus, and ending in the olfactory bulb.	
Olfactory, external.	The lateral root of the olfactory tract.	*Internally*, the olfactory groove.
Olfactory, internal.	Frontal lobe; the ridge along the inner side of the olfactory groove. The internal root of the olfactory tract.	
Opercular; also called *Mendel's convolution.*	Frontal lobe.	Enters into the operculum.
Orbital.	See *Breves.*	
Orbital.	Frontal lobe; small convolutions on the orbital surface.	
Orbital, anterior.	Frontal lobe.	Continuous with the middle frontal convolution. *Posteriorly*, orbital sulcus.
Orbital, external.	See *Frontal, inferior.*	
Orbital, internal.	Frontal lobe.	*Internally*, the rectus convolution.

TABLE OF CONVOLUTIONS OR GYRI OF THE CEREBRUM.—*Continued.*

NAME.	LOCATION.	BOUNDARIES.
Orbital, lateral.	Frontal lobe.	The ventral portion of the subfrontal convolution.
Orbital, middle.	Frontal lobe.	*Internally*, the internal orbital convolution.
Orbital, posterior.	Frontal lobe, a small convolution.	*Anteriorly* and *internally*, the orbital fissure. Continuous with the inferior frontal convolution.
Orbital, transverse.	Frontal lobe, posterior portion of inferior surface.	
Paracentral.	Parietal and post-frontal lobes, mesial aspect. It is the motor area for some part of the leg.	*Below*, the paracentral fissure. *Dorsal*, the precuneus.
Pararolandicus.	See *Paracentral.*	
Parietal.	See *Superior.*	
Parietal, ascending.	Parietal lobe.	*Anteriorly*, fissure of Rolando. *Posteriorly*, intraparietal fissure. *Below* fissure of Sylvius. *Above* and *below* usually continuous with the ascending frontal, and also *above* with the superior parietal convolutions.
Parietal, first.	See *Parietal, superior.*	
Parietal, inferior.	See *Subparietal.*	
Parietal, middle.	See *Angular.*	
Parietal, posterior.	See *Parietal, ascending.*	
Parietal, second.	See *Angular* and *Subparietal.*	
Parietal, superior.	Parietal lobe.	Continuous *anteriorly* with ascending frontal (generally). *Anteriorly*, upper part of fissure of Rolando. *Posteriorly*, the external parieto-occipital fissure. *Inferiorly*, the intraparietal fissure.
Parietal, third.	See *Marginal.*	
Parietal, upper.	See *Parietal, superior.*	
Parieto-occipital, lateral.	See *Occipital, middle.*	
Parieto-occipital, middle (of Schwalbe).	Occipital lobe; the dorsal surface of the superior occipital convolution.	
Paroccipital.	Occipital and parietal lobes; U-shaped, curving around the dorsal end of the occipital fissure.	*Laterally*, the paroccipital fissure. *Mesially*, the margin of the cerebrum.
Post-central.	See *Parietal, ascending.*	
Postcruciate.	Posterior portion of the sigmoid convolution.	
Posterior, inferior (of Arnold).	Occipito-temporal lobe, ventral aspect.	
Postero-parietal.	See *Parietal, ascending.*	
Post-frontal.	See *Post-cruciate.*	
Postrolandicus.	See *Parietal, ascending.*	
Precentral.	See *Frontal, ascending.*	
Precruciate.	In the dog's brain, the convolution lying in front of the cruciate fissure.	*Posteriorly*, the cruciate fissure.
Prefrontal.	See *Precruciate.*	
Preorbital.	Prefrontal lobes at junction of frontal and orbital aspects of the cerebrum.	*Caudad*, preorbital (or orbito-frontal) fissure.
Prerolandicus.	See *Frontal, ascending.*	
Quadrate.	Parietal lobe of cerebrum, median surface.	*Anteriorly*, calloso-marginal fissure. *Posteriorly*, the parieto-occipital fissure. *Below*, continuous with the fornicate convolution.
Rauber's.	See *Nuclear.*	
Rectus.	Frontal lobe, orbital aspect.	Between the olfactory fissure and the mesial margin.

TABLE OF CONVOLUTIONS OR GYRI OF THE CEREBRUM.—*Continued.*

NAME.	LOCATION.	BOUNDARIES.
Retrocentral.	See *Parietal, ascending.*	
Rolandicus, anterior.	See *Precentral.*	
Rolandicus, posterior.	See *Post-central.*	
Sagittal.	In *Edentata*, the longitudinal convolution.	Lies next to the longitudinal fissure.
Of Schwalbe.	See *Parieto-occipital, middle.*	
Sigmoid.	A U-shaped convolution, including important motor areas.	Surrounding the cruciate fissure.
Straight.	See *Rectus.*	
Subcalcarine.	Occipital and temporal lobes; a narrow convolution.	*Above*, calcarine fissure. *Below*, collateral fissure. *Peripherad*, the cuneus.
Subcallosal (of Zuckerkandl).	Mesial aspect of cerebrum.	Reaches from the chiasm to the rostrum.
Subcollateral.	Temporal lobe; the fusiform lobules of the brain.	Connects the occipital and temporal lobes. *Above*, collateral fissure. *Below*, subtemporal fissure.
Subfrontal.	See *Frontal, inferior.*	
Subparietal.	Parietal lobe.	*Above*, parietal fissure. *Anteriorly*, continuous with the marginal and angular convolutions. *Posteriorly*, the paroccipital fissure.
Subtemporal.	See *Temporal, inferior.*	
Superfrontal.	See *Frontal, superior.*	
Superior.	See *Temporo-sphenoidal, superior.*	
Supertemporal.	See *Infra-marginal.*	
Supra-marginal.	Inferior parietal lobe, anterior portion.	*Anteriorly*, the inferior extremity of the intraparietal fissure. *Below*, continuous with the ascending parietal and superior temporo-sphenoidal convolutions.
Supra-orbital.	See *Frontal, inferior.*	
Supra-sylvian.	The third external convolution of the dog.	
Sylvian.	In *Marsupials*, the portion of the brain surrounding the fissure of Sylvius.	
Temporal, first.	See *Infra-marginal*	
Temporal, inferior.	Temporo-sphenoidal lobe; the lowest of the three convolutions.	*Posteriorly*, connected with the third occipital convolution. *Above*, the meditemporal fissure. *Below*, the subtemporal fissure.
Temporal, inframarginal.	See *Temporo-sphenoidal, superior.*	
Temporal, lateral inferior.	See *Temporal, inferior.*	
Temporal, lower.	See *Temporo-sphenoidal, inferior.*	
Temporal, middle.	See *Meditemporal.*	
Temporal, second.	See *Meditemporal.*	
Temporal, superior.	See *Infra-marginal.*	
Temporal, third.	See *Subtemporal.*	
Temporal, transverse.	Temporal lobe, ental surface; a number (2 to 4) of short convolutions near its extremity.	
Temporal, upper.	See *Infra-marginal.*	
Temporo-occipital.	See *Occipital, inferior.*	
Temporo-occipital, internal.	See *Fusiform.*	
Temporo-occipital, middle.	See *Calcarine.*	
Temporo-sphenoidal, first.	See *Temporo-sphenoidal, superior.*	

TABLE OF CONVOLUTIONS OR GYRI OF THE CEREBRUM.—*Continued.*

NAME.	LOCATION.	BOUNDARIES.
Temporo-sphenoidal, inferior.	See *Temporal, inferior.*	
Temporo-sphenoidal, middle.	See *Meditemporal.*	
Temporo-sphenoidal, superior.	See *Infra-marginal.*	
Transeundus.	See *Transitional.*	
Transitional.	A small convolution.	*Anteriorly*, the ascending branch o the fissure of Sylvius.
Transverse.	See *Frontal, ascending.*	
Triangular.	Frontal lobe.	*Posteriorly*, the opercular convolution
Unciform.	See *Breves.*	
Uncinate.	Temporo-sphenoidal lobe (median surface).	*Above*, the calcarine and dentate fis sures. *Below*, the collateral fissure *Internally*, the great longitudinal fis sure.
Vaulted.	See *Fornicate.*	
Of Zuckerkandl.	See *Subcallosal.*	

Copodyscinesia (*kop-o-dis-in-e'-ze-ah*) [κόπος, toil, fatigue; δυς, hard; κίνησις, motion]. Difficult or faulty motion due to constant repetition of the same act. Lewis's term for the so-called Fatigue-diseases.

Copopsia (*ko-pop'-se-ah*). See *Copiopia.*

Copos (*kop'-os*) [κόπος, fatigue]. 1. Lassitude; exhaustion after illness. 2. Cramp in the calves of the legs.

Copper (*kop'-er*) [ME., *coper*, copper]. Cuprum. A reddish-brown metal not used in medicine in its metallic form, but represented by several salts. The latter are gastro-intestinal irritants, producing nausea and emesis. See *Elements, Table of.* **C. acetate,** Cu $(C_2H_3O_2)_2$, verdigris, used in pulmonary diseases, and as a lotion in skin-diseases. Dose gr. $\frac{1}{10}$–$\frac{1}{4}$. **C. aceto-arsenite,** Paris Green, used as a pigment and an insecticide. **C. ammoniate,** unof., ammonium carbonate 3, copper sulphate 4 parts. Useful in chorea, hysteria, etc. Dose gr. ⅙-j. **C. arsenite,** a salt valuable in intestinal diseases. Dose gr. $\frac{1}{100}$. **C. nitrate** (B. P.), Cu $(NO_3)_2 3H_2O$, is used for the same purposes as the sulphate. **C. sulphate,** $CuSO_4.5H_2O$, soluble in water, valuable as an emetic. Dose, as an emetic, gr. ij–v, as a tonic, gr. ⅙–½. **C. Amalgam,** a metallic filling-material composed of chemically pure copper and redistilled mercury. **C.-colic.** See *Colic.* **C.-glass.** Same as *Egyptian Blue.* **C.-green.** Same as *Malachite-green.* **C. Indigo.** Same as *Oil Blue.* **C. Lazulite.** Same as *Azurite.* **C.-nose.** Synonym of *Acne rosacea.* **C., Potassio-tartrate Sol.,** Fehling's solution, unof., copper sulphate gr. 70, distilled water ♏400; also dissolve Rochelle salt, gr. 488, in water ♏1600; when required, mix and add water to make ♏2720. Used as a test for glucose.

Copperas (*kop'-er-as*) [*cupri rosa*, rose of copper (?)]. A common name for ferrous sulphate. See *Ferrum.* **C.- black.** See *Pigments, Conspectus of.*

Coppice-bark (*kop'-is-bark*). See *Oak-bark.*

Copra (*kop'-rah*) [Hind.]. The dried and crushed kernel of the cocoa-nut, from which cocoa-oil is expressed.

Copragogue (*kop'-rag-og*) [κόπρος, dung; ἀγωγός, leading]. A remedy to carry off feces; a purgative.

Copremesis (*kop-rem'-es-is*) [κόπρος, dung; ἔμεσις, vomiting]. The vomiting of fecal matter.

Copremia (*kop-re'-me-ah*) [κόπρος, dung; αἷμα, blood]. A form of general blood-poisoning arising from absorption of unduly retained feces. This condition is occasionally met with in chronic constipation. The symptoms are anemia, sallow complexion, anorexia, frontal headache, vertigo, nausea, flatulence, thirst, lithemia, fetid breath, lassitude, hypochondriasis, and irritability of temper.

Copremic (*kop-rem'-ik*) [κόπρος, dung; ἔμεσις, vomiting]. Relating to or affected with copremia.

Coproctic (*kop-rok'-tik*) [κόπρος, feces]. Relating to feces; fecal.

Coproechololia (*kop-ro-ek-o-la'-le-ah*) [κόπρος, filth; ἠχώ, an echo; λαλιά, a babbling]. The mechanical and purposeless utterance of obscene words by the insane.

Coprolalia (*kop-ro-la'-le-ah*) [κόπρος, filth; λαλιά, speech]. The use of filthy and offensive language as a manifestation of disease. See *Habit-spasm.*

Coprolith (*kop'-ro-lith*) [κόπρος, dung; λίθος, stone]. A hard mass of fecal matter in the bowels.

Coprophagous (*kop-roff'-ag-us*) [κόπρος, dung; φαγεῖν, eat]. In biology, applied to dung-feeding beetles.

Coprophagy (*kop-roff'-a-je*) [κόπρος, dung; φαγεῖν, to eat]. The eating of ordure; a symptom sometimes seen in insane and hysterical patients.

Coprophilous (*kop-roff'-il-us*) [κόπρος, dung; φίλος, loving]. In biology, fond of feeding or growing upon dung.

Coprorrhea (*kop-ror-e'-ah*) [κόπρος, dung; ῥέειν, to flow]. Synonym of *Diarrhea.*

Coprostasia (*kop-ro-sta'-se-ah*). See *Coprostasis.*

Coprostasis (*kop-ros'-tas-is*) [κόπρος, dung; στάσις, standing]. The accumulation of fecal matter; arrest of the onward movement of fecal matters.

Coptin (*kop'-tin*) [κόπτειν, to cut]. A colorless alkaloid of *Goldthread.* See *Coptis*

Coptis (*kop'-tis*) [κόπτειν, to cut]. Goldthread. The root of *C. trifolia*, a simple bitter tonic resembling quassia. It contains *coptin*, an alkaloid closely allied to berberin. Dose gr. x–xxx.

Copula (*kop'-u-lah*) [L., "a band"]. 1. The *copula alba cerebri*, an anterior commissure of the cerebrum. 2. A thin lamina joining the rostrum with the terma.

Copulation (*kop-u-la'-shun*) [*copulare*, to couple]. The act of sexual intercourse.

Copyopia (*kop-e-o'-pe-ah*). See *Copiopia.*

Coqueluche (*kōk-lūsh'*) [Fr., a hood or cowl]. Synonym of *Influenza*; also of *Whooping-cough*.

Coquet or **Coquette** (*ko-ket'*) [Fr.]. Synonym of *Influenza*.

Coquilles (*ko-kēl'*) [Fr.]. A variety of dark eyeglasses curved like shells.

Cor (*kor*) [L.; *gen.*, *cordis*]. The heart. See *Heart*. In biology, according to Cæsalpino, the seat of the principle of life in plants. See *Root-neck*. **C. adiposum**, a heart with a simple excess of the normal subpericardial fat. **C. biloculare**, reptilian heart; a congenital condition in which there is absence or deficiency of the septa of both cardiac auricles and ventricles. **C. bovinum.** See *Bovine Heart*. **C. seminis**, the heart of the seed; the corcle or corcule. **C. villosum**, hairy heart; the peculiar shaggy appearance presented by the heart in acute plastic pericarditis, with the deposited fibrin existing in long shreds.

Coraco- (*kor'-ak-o-*) [κόραξ, a crow]. Pertaining to the coracoid process, as *C.-brachialis*. See *Muscles, Table of*.

Coracoid (*kor'-ak-oid*) [κόραξ, a crow; εἶδος, likeness]. 1. Having the shape of a crow's beak. 2. The coracoid process. **C. Ligament**, a triangular ligament joining the coracoid process to the acromion. **C. Process**, a beak-shaped process of the scapula.

Coracopectoralis (*kor-ak-o-pek-tor-a'-lis*) [κόραξ, a crow; *pectus*, the breast]. The pectoralis minor muscle. See *Muscles, Table of*.

Coral (*kor'-al*) [κοράλλιον, coral]. The hard substance secreted by marine polyps. **C. Calculus**, a peculiar dendritic form of calculus found in the pelvis of the kidney, and forming a complete mold of the infundibula and calices.

Coral Root (*kor'-al root*). Crawley. The root of *Corallorhiza odontorhiza*, a prompt and powerful diaphoretic that is used in fevers. Dose gr. xxx. **C., Fld., Ext.** Dose ♏xv–xxx. Unof.

Coralliform (*kor-al'-if-orm*) [*corallum*, coral; *forma*, shape]. In biology, resembling coral.

Corallin (*kor'-al-in*) [*corallinus*, coral-red]. A coloring-matter derived from rosolic acid and alcoholic ammonia. It is used for dyeing red, and is noteworthy as being a cause of local and general poisoning, and it is liable to lead to cutaneous and constitutional affections in those who wear garments dyed with it. Some observers ascribe its ill-effects to an arsenical admixture. **C.-red.** See *Pigments, Conspectus of*. **C.-yellow.** See *Pigments, Conspectus of*.

Corallite (*kor'-al-īt*) [*corallum*, coral]. In biology, the calcareous calyx or cup of a single coral polyp.

Corbiculum (*kor-bik'-u-lum*) [*corbis*, a basket]. In biology, applied to the pollen-basket or the inner side of the tarsus of a bee.

Cord [*chorda*, a string]. Used as a synonym for the *Umbilical Cord*, the vascular, cord-like structure connecting the placenta and fetus. **C., Coiling of**, loops about the fetus or its members. **C., Columns of.** See *Columns*. **C., False or Superior** (vocal), a fold of mucous membrane on either side of the middle line of the larynx, inclosing the superior thyro-arytenoid ligament. **C., Knots of**, real knots of the cord formed by the passage of the fetus through a loop. *False Knots*, accumulations of Wharton's jelly at particular points. **C., Presentation of**, descent of the cord, at the beginning of labor, between the presenting part and the membranes. **C., Prolapse of**, descent at the rupture of the bag of waters; *incomplete*, if remaining in the vagina, *complete*, if protruding therefrom. **C., Spinal.** See *Spinal Cord*. **C., Torsion of**, twisting upon its axis. The blood-vessels of the cord make about 40 spiral turns. **C., Vocal.** See *Vocal Band*. **C. of Weitbrecht**, the orbicular ligament of the elbow. See also *Chorda*.

Corda (*kor'-dah*). See *Chorda*. **C. valvuleux**, Dufour's term for the cecal pouches or pancreatic organs invariably and normally loaded with bacteria (*Micrococcus insectorum*, Burrill) in certain families of the higher Hemiptera (*Pentatomidæ, Scutelleridæ, Corimelænidæ*); invariably wanting in the lower Hemiptera.

Cordial (*kor'-jal*) [*cor*, the heart]. 1. Pertaining to the heart; exhilarant; stimulant. 2. An aromatic, spirituous stimulant.

Cordiale (*kor-de-a'-le*) [L.]. A cordial. **C. rubi fructus.** See *Blackberry Cordial*.

Corditis (*kor-di'-tis*). See *Chorditis*.

Cordon (*kor'-don*) [Fr., a cord or rope]. A chain of posts to enforce a quarantine against a place infected with an epidemic disease.

Cordylus (*kor'-dil-us*) [κορδύλη, a club]. In biology, one of the tentacular "auditory clubs" of *Hydromedusæ*.

Core (*kor*) [ME., *core*, a core]. 1. The central slough of a boil or carbuncle. 2. The axial or central portion of the terminal corpuscle in a nerve. 3. A bundle of soft iron wires used as a magnet in the center of a coil.

Coreclisis (*kor-ek-li'-sis*). See *Coroclisis*.

Corectasis (*kor-ek'-tas-is*) [κόρη, pupil; ἔκτασις, a stretching out]. Dilatation of the pupil.

Corectome (*kor-ek'-tōm*) [κόρη, the pupil; ἐκτέμνειν, to cut out]. An instrument used in iridectomy.

Corectomy (*kor-ek'-to-me*) [κόρη, pupil; ἐκτέμνειν, to cut out]. See *Iridectomy*, and *Pupil, Artificial*.

Corectopia (*kor-ek-to'-pe-ah*) [κόρη, pupil; ἔκτοπος, misplaced]. An anomalous position of the pupil; displacement of the pupil.

Coredialysis (*kor-e-di-al'-is-is*) [κόρη, pupil; διαλύειν, to liberate]. The production of an artificial pupil at the ciliary border of the iris.

Corediastasis (*kor-e-di-as'-tas-is*) [κόρη, pupil; διάστασις, dilatation]. Dilatation of the pupil.

Corelysis (*kor-el'-is-is*) [κόρη, pupil; λύσις, a loosening]. The detachment of iritic adhesions to the lens, or to the cornea.

Coremorphosis (*kor-e-mor'-fo-sis*) [κόρη, pupil; μόρφωσις, formation]. See *Pupil, Artificial*.

Corenclisis (*kor-en-kli'-sis*) [κόρη, pupil; ἐγκλεῖσις, inclusion]. The formation of a new pupil by displacement, the iris being drawn aside and in part excised.

Coreometer (*kor-e-om'-et-er*) [κόρη, pupil, μέτρον, a measure]. An instrument for measuring the pupil of the eye.

Corephthisis (*kor-ef'-tis-is*) [κόρη, pupil; φθίσις, a wasting]. See *Corophthisis*.

Coreplasty (*kor'-e-plas-te*). See *Pupil, Artificial*.

Coreses (*kor'-es-ēz*) [κόρις, a bed-bug]. In botany, reddish discoid bodies found beneath the skin of grapes.

Coretomy (*kor-et'-o-me*) [κόρη, pupil; τέμνειν to cut]. Iridotomy or iridectomy; any surgical cutting operation on the iris.

Coriaceous (*kor-e-a'-she-us*) [*corium*, leather]. In biology, leathery.

Coriamyrtin (*ko-re-am-er'-tin*) [*corium*, a hide; *myrtus*, myrtle]. An exceedingly poisonous principle, a glucosid, obtained from the fruit of *Coriaria myrtifolia*.

Coriander, or **Coriandrum** (*ko-re-an'-der*, *ko-re-an'-drum*) [κορίαννον, coriander]. Coriander. The fruit of *C. sativum*, an aromatic carminative and stimulant, used mainly to give flavor to other remedies and as a corrective to griping purgatives. Dose gr. x–xx. **C., Ol.**, the volatile oil. Dose ♏ij–v.

Coriaria (*ko-re-a'-re-ah*) [L.]. A genus of poisonous shrubs of several species, having a wide geographic distribution. **C. myrtifolia**, used in dyeing and tanning, has poisonous berries and shoots. The seeds and shoots of **C. sarmentosa** of New Zealand afford what is called *toot-poison*. The memory is said to be impaired after recovery from poisoning by this plant. Unof.

Corium (*ko'-re-um*) [L., leather]. The deep layer of the cutis.

Cork (*kork*) [*cortex*, bark]. A substance obtained from the outer part of the sub-epidermic bark of certain oaks, as *Quercus ruber* and *Q. occidentalis*, of the Mediterranean region; extensively used in pharmacy, and to some extent in surgery. **C.-oak.** See *Oak-bark*. **C.-black.** See *Pigments, Conspectus of*.

Corm (*korm*) [κορμός the trunk of a tree]. The bulbous underground part of certain plants, as the crocus.

Cormophyte (*kor'-mo-fīt*) [κορμός, the trunk of a tree; φυτόν a plant]. In biology, a term formerly applied to vascular cryptogams and flowering plants—to all plants possessing roots, stems and leaves.

Cormus (*kor'-mus*) [*cormus*, a tree-trunk: *pl.*, *Cormi*]. In biology, a colony of animals, associated "personæ." See *Corm*.

Corn [*cornu*, horn]. A local induration and thickening of the skin from friction or pressure. See *Clavus*. **C.-flower.** See *Centaurea*. **C.-plaster**, a thick plaster worn over a corn, sometimes as a direct curative agent, and sometimes to prevent pressure and friction from the shoe. **C.-silk**, the long, thread-like styles of Indian corn, gathered while still green and succulent. It is used occasionally to relieve the pain and spasm of chronic and subacute cystitis, and is also recommended for gonorrhea, gravel, rheumatism, gout, etc. Dose of the *tincture* ʒss to j. See *Zea mays*. **C.-smut.** See *Ustilago*. **C.-starch**, the commercial name of a starch derived from maize, and extensively used as an article of food, especially for invalids.

Cornalia's Corpuscles. See *Bacteria, Synonymatic Table of*.

Cornalian Corpuscles. See *Bacteria, Synonymatic Table of*.

Corne's Test. See *Tests, Table of*.

Cornea (*kor'-ne-ah*) [*corneus*, horny]. The transparent anterior portion of the eyeball, its area occupying about one-sixth the circumference of the globe. It is continuous with the sclerotic, and is nourished by lymph from the looped blood-vessels at its peripheral border. It is lined posteriorly by Descemet's membrane; the conjunctiva is firmly adherent to its substance in front. **C., Conical.** See *Keratoglobus*. **C., Leukoma of.** See *Leukoma*. **C., Tattooing of.** See *Tattooing*. **C., Transplantation of**, the operation of engrafting a section of transparent cornea from some animal into the space of an excised portion of leukomatous human cornea.

Corneal (*kor'-ne-al*) [*corneus*, horny]. Relating to the cornea. **C. Reflex.** See *Reflexes, Table of*.

Cornein (*kor'-ne-in*) [*corneus*, horny], $C_{30}H_{44}N_9O_{11}$. The skeleton of gorgonia and certain corals.

Corneitis (*kor-ne-ī'-tis*). See *Keratitis*.

Corneocalcareous (*kor-ne-o-kal-ka'-re-us*) [*corneus*, horny; *calcareus*, pertaining to lime]. In biology, formed of a mixture of horny and calcareous substances.

Corneosilicious (*kor-ne-o-sil ish'-us*) [*corneus*, horny; *siliceus*, pertaining to flint]. In biology, applied to sponges containing both horny and silicious substances.

Corneous (*kor'-ne-us*) [*corneus*, horny]. Horny, or horn-like. **C. Tissue**, the substance of the nails.

Cornet (*kor-net'*) [*cornu*, a horn]. A small ear-trumpet worn within the auricula, and sometimes concealed by the hair of the wearer.

Cornic Acid (*kor'-nik*). See *Cornin*.

Cornicle (*kor'-nik-l*) [*corniculum*, dim. of *cornu*, a horn]. In biology, one of the horn-like excretory ducts on the back of a plant-louse.

Corniculum (*kor-nik'-u-lum*) [*cornicula*, a little horn: *pl.*, *Cornicula*]. A small cornu or horn-like process. **C. laryngis**, a small, horn-shaped mass of cartilage on the arytenoid cartilages; called also the *Cartilages of Santorini*.

Cornification (*kor-nif-ik-a'-shun*) [*corneus*, horny; *facere*, to make]. The process of hardening or making horny.

Corniform (*kor'-nif-orm*) [*cornu*, a horn; *forma*, shape]. In biology, shaped like the horn of an ox.

Cornin (*kor'-nin*) [*corneus*, horny]. A precipitate from the tincture of the bark of Dogwood, *Cornus florida*; it occurs in white, silky, bitter crystals, and is a tonic, stimulant, and astringent. Dose two to four grains. Unof.

Corning's Method. See *Treatment, Methods of*.

Cornu (*kor'-nu*) [L.: *pl.*, *Cornua*]. A horn. A name applied to any excrescence resembling a horn. **C. ammonis**, the *hippocampus major* of the brain. **C. cervi**, hartshorn or ammonium hydrate. **C. cutaneum**, cornu humanum, a horn or excrescence arising from the skin, with a deeper portion imbedded within. These horns vary in shape and size, and may resemble the horns of lower animals. They are solid, dry, dense, smooth or corrugated, laminated or excavated on the surface, often elongated and conical at the extremity. In color they are white, gray, yellow, brown, or black. They may be single or multiple, and may involve any region of the body, though usually seen on the scalp and face. They are likely to recur on removal. **C. humanum.** See *C. cutaneum*. **C. sacri**, the prominence on each bone of the sacrum.

Cornual (*kor'-nu-al*) [*cornu*, a horn]. Relating to a cornu. **C. Myelitis**, myelitis affecting the anterior cornua of the spinal cord.

Cornuan's Operation. See *Operations, Table of*.

Cornus (*kor'-nus*) [L.]. Dogwood. The bark of the root of *C. florida*, with properties due to a crystalline principle, *cornin*. It is a simple stomachic, bitter and somewhat antiperiodic. **C., Fld. Ext.** Dose mx–ʒj.

Cornutin (*kor-nu'-tin*). One of the poisonous basic principles or alkaloids of *Ergot*. Unof.

Coroclisis, or Corocleisis (*ko-ro-kli'-sis*) [κόρη, pupil; κλεῖσις, a closure]. Pathologic closure or obliteration of the pupil.

Corodialysis (*kor-o-di-al'-is-is*) [κόρη, the pupil; διάλυσις, a loosening]. See *Iridodialysis*.

Corodiastasis (*kor-o-di-as'-tas-is*) [κόρη, the pupil; διάστασις, separation]. Dilatation of the pupil.

Corolla (*ko-rol'-ah*) [*corolla*, dim. of *corona*, a crown]. In biology, the inner floral envelop.

Corona (*ko-ro'-nah*) [*corona*, a garland]. A crown. See, also, *Capsula*. **C. ciliaris**, the ciliary ligament. **C. dentis**, the crown of a tooth, *q. v.* **C. glandis**, the ridge of the *glans penis*. **C. ovariana**, the crescentic area of tympany above the area of dulness in cases of ovarian tumor. **C. radiata**, a radiating mass of white brain-substance ascending from the internal capsule to the cortex cerebri. **C. veneris**, a circle of syphilitic blotches occurring on the forehead, sometimes dependent upon caries or inflammation of the frontal bone.

Coronad (*kor'-o-nad*) [*corona*, the crown; *ad*, to]. Toward the coronal aspect of the head.

Coronal (*kor-o'-nal*) [*corona*, the crown]. Pertaining to the crown of the head. **C. Intestine.** See

Perogaster. **C. Suture,** the suture joining the frontal with the two parietal bones.

Coronamen (*kor-o-na'-men*) [L., a crowning: *pl.*, *Coronamina*]. Same as *Coronet.*

Coronary (*kor'-o-na-re*) [*corona*, a crown]. A term applied to vessels, nerves, or attachments that encircle a part or organ. **C. Bone,** the small pastern or median phalanx of a horse's foot.

Coronate (*kor'-o-nāt*) [*coronatus*, to crown]. In biology, provided with a crown.

Coronen (*ko-ro'-nen*) [*corona*, a crown]. Belonging to the corona in itself.

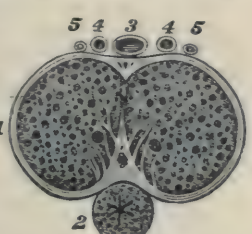
Coroner (*kor'-o-ner*) [*coronator*, a crown, an officer appointed by the Crown]. An officer who inquires by authority of the law into the causes of deaths of sudden or violent occurrence. **C., Inquest of,** the legal inquiry before a jury into the cause of a sudden or violent death.

Coronet (*kor'-o-net*) [Fr., *coronette*, dim. of *corone*, a crown]. 1. In biology, a crowning circle of hairs. 2. In veterinary surgery, the lowest part of the pastern of the hoof, also called *coronamen.*

Coronilla (*kor-o-nil'-ah*) [dim. of *corona*, a crown]. A genus of leguminous herbs. **C. emerus** is purgative. **C. scorpeoides,** abundant in southwestern Europe, has doubtful value in cardiac affections when increased amplitude of pulsation is required. **C. varia** is diuretic, purgative, and poisonous. Unof.

Coronillin (*kor-o-nil'-in*) [dim. of *corona*, a crown]. A glucosid from *Coronilla scorpeoides*; it is said to be a diuretic cardiant.

Corono-basilar (*kor-o-no-ba'-sil-ar*) [*corona*, a crown; *basis*, the base]. Extending from the coronal suture to the basilar aspect of the head.



Coronofacial (*kor-o-no-fa'-shal*) [*corona*, crown; *facies*, face]. Relating to the crown of the head and to the face.

Coronoid (*kor'-o-noid*) [*corona*, crown; εἶδος, likeness]. Crown-shaped; as the **C. process** of the ulna or of the jaw.

Coronule (*kor'-o-nūl*) [*coronula*, dim. of *corona*, a crown]. In biology, the tuft of down forming a crown to certain seeds.

Corophthisis (*ko-roff'-tis-is*) [κόρη, pupil; φθίσις, a wasting]. Habitual or permanent contraction of the pupil due to a wasting disease of the eye.

Corpora (*kor'-por-ah*) [pl. of *corpus*, a body]. A general term applied to certain parts of the body having a rounded or ovoid shape. **C. albicantia.** See *C. mammillaria.* **C. arantii,** the tubercles, one in the center of each segment of the semilunar valves. **C. cavernosa,** the cylindric bodies of erectile tissue forming the chief part of the penis. Also the two masses of erectile tissue composing the clitoris. See *Penis.* **C. geniculata,** two small eminences projecting from the optic thalami. **C. libera articulorum.** Mures Articulorum; joint-mice; loose bodies, either fibromatous, lipomatous, or chondromatous in nature, occurring occasionally in joints. They vary in size from that of a pea to that of a walnut, and are of all shapes. They are most frequent in the knee-joint. They are of traumatic origin. **C. mammillaria,** Corpora albicantia; the mammillary bodies of the brain. They are formed by the spreading out on the surface of Gudden's ganglion and an adjoining ganglion of the somewhat interwoven fibers of Gudden's and Vicq d'Azyr's bundles. They form the bulbs of the fornix. **C. olivaria,** the two oval masses behind the pyramids of the medulla oblongata. **C. oryzoidea,** the rice-like corpuscles or melon-seed bodies of hygromata. **C. pyramidalia,** the two bundles of white matter of the medulla oblongata, situated below the pons varolii. **C. quadrigemina,** the optic lobes of the brain, the four rounded eminences situated under the corpus callosum. The anterior pair are called the *nates*, and the posterior, the *testes.* **C. restiformia,** the large columns or cord-like bodies extending from the medulla to the cerebrum. **C. striata,** two organs, one in each lateral ventricle of the brain, composed of the caudate and lenticular nuclei. The first, or intraventricular portion, extends into the lateral ventricle. **C. wolffiana,** the "primordial kidney."

CORPORA CAVERNOSA AND ADJACENT PARTS. (*Potter.*)
1. Corpora cavernosa. 2. Corpus spongiosum. 3. Dorsal vein. 4, 4. Arteries. 5, 5. Nerves.

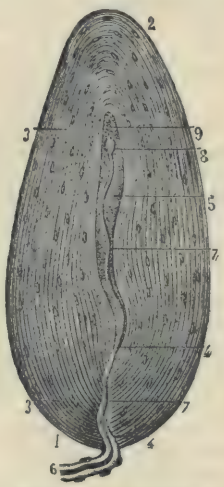
Corporeal (*kor-por'-e-al*) [*corpus*, a body]. Pertaining to the body. **C. Endometritis.** See *Endometritis.*

Corpse (*korps*) [ME., *corps*, a dead body]. See *Cadaver.* **C.-plant,** the *Monotropa uniflora*, a singular saprophytic plant of Asia and N. America; it is a popular remedy for epilepsy and for sore-eyes. Unof.

Corpulency (*kor'-pu-len-se*) [*corpulentus*, corpulent]. Obesity; fatness of the body.

Corpulent (*kor'-pu-lent*) [*corpulentus*, corpulent]. Excessively fat; obese.

Corpus (*kor'-pus*) [*corpus*, a body: *pl.*, *Corpora*]. A body; the human body. **C. of Arantius.** See *Callosum.* **C. callosum.** See *Commissure.* **C. cavernosum vaginæ,** the spongy tissue of the vagina. **C. candicans,** corpus mamillare; a small white tubercle lying on the base of the brain, one on each side under the thalamus. The two form the boundary-point between the fore-brain and inter-brain; each is composed of three nuclei. **C. ciliare,** the ciliary body of the eye. **C. dentatum.** See *Olivary Body.* Also a ganglion of the cerebellum, an open bag or capsule of gray matter, on section of a dentated outline, and open anteriorly. **C. highmorianum,** the mediastinum of the testis, a reflection inward of the tunica albuginea into the testicle at its posterior border. **C. fimbriatum,** the lateral thin edge of the tænia hippocampi. See also *Fimbria.* **C. luteum,** the yellow body. Hypertrophy of the *membrana propria*, or *reticulata* of the ovisac, after the escape of the ovule. **C. L., False,** that resulting when pregnancy does not occur, called also the **C. L. of Menstruation. C. L., True,** that resulting when pregnancy takes place, called also the **C. L. of Pregnancy,** and differing in several respects from the first. **C. mamillare.** See *Corpus candicans.* **C. pampiniforme,** the parovarium. **C. spongiosum,** the spongy body enclosing the urethra, etc. **C. striatum.** See *Corpora.* **C. trapezoides,** the arbor of the cerebellum. **C. trigonum.** See *Trigonum vesicæ.* **C. uteri.** See *Uterus.* **C. vertebræ.** See *Centrum.* **C. Vitreum.** See *Vitreous Humor.*



Corpuscle (*kor'-pus-l*) [dim. of *corpus*]. A name loosely applied to almost any small, rounded, or oval body. **C., Bizzozero's.** See *Blood-platelets.* **C. of Blood,** the minute, biconcave, flat discs, circular in man, elliptic in the camel, and oval in birds and reptiles. They are distinguished as red and white, or colorless. Red corpuscles have been divided, according to their size, into **normoblasts** (normal in size), **megaloblasts** or **megalocytes** (of excessive size), **microblasts** or **microcytes** (abnormally small), and **poikiloblasts** or **poikilocytes** (of irregular shape and size). The red corpuscles in the blood of man

are about $\frac{1}{3200}$ in. in diameter and $\frac{1}{12400}$ in. thick. They consist of a colorless stroma (paraglobulin, cholesterin, lecithin, and neurin) infiltrated with coloring-matter (hemoglobin). The **white or colorless corpuscles** are flattened, binucleated or trinucleated cells, about $\frac{1}{2300}$ in. in diameter, and exist in the ratio of 1 : 400 compared with red corpuscles. They possess contractile power, alter their shape readily, and in general appearance closely resemble amebæ. They are most numerous in venous blood. The colorless corpuscles are variously designated as *eosinophile*, *basophile*, *neutrophile*, *mononuclear*, *polynuclear*, *lymphocytes*, *transitional*, *large*, *small*, *etc.* **C. of Donné.** See *Colostrum-corpuscles.* **C., Eichhorst's,** a special form of microcyte in the blood of those suffering from pernicious anemia. **C., Gluge's,** a variety of large cells containing fat-drops, myelin, or detritus. They are called also *Compound Granule-Cells* and *Inflammatory Corpuscles.* **C. of Krause,** the spherical or ovoid corpuscles occurring at the ends of the nerve-tubules that emerge from a nerve-plexus. They occur in the conjunctiva, the edges of the lips, and various mucous and glandular surfaces. **C., Malpighian,** a name applied to the splenic corpuscles, and to the Malpighian bodies. **C. of Neumann,** the nucleated colored corpuscles of the blood seen after repeated hemorrhages. **C., Norris's Invisible,** colorless, transparent, biconcave discs of the same size as the red ones, invisible in the serum because their color and refractive index are the same as those of the liquor sanguinis; they are believed by Norris to exist normally in the blood. They are probably red corpuscles that have lost their hemoglobin. **C., Pacinian,** certain small corpuscles occurring in the subcutaneous cellular tissue of the fingers and toes. **C. of Purkinje,** a bone-cell. See *Purkinje.* **C., Shadow.** See *Shadow.* **C., Tactile, of Wagner,** the small, oval bodies found in the papillæ of the skin and enveloped by nerve-fibers. **C. of v. Tröltsch,** a name formerly given to a series of lymph-channels between the two layers of the *lamina propria* of the ear. They are spindle-shaped on longitudinal section and stellate on transverse section, and are lined with endothelium. **C., Valentin's,** the small, roundish amyloid bodies found in nerve-substance. **C., Weber's,** the sinus pocularis.

Corpuscle of Krause.

1, 1, 1. Nerve-tubule. 2, 2, 2. Its medullary substance. 3, 3, 3 Nuclei of the sheath of Schwann. 4. Granular substance occupying the center of the corpuscle and the contained nuclei.

Corpuscle of Pacini.

1. Base, or proximal extremity. 2. Summit, or distal extremity. 3. Capsules displaying nuclei. 4, 4. Attachment of capsules to sheath of nerve-tubule. 5. Cavity of corpuscle. 6 Nerve-tubule. 7, 7. Nerve-tubule successively losing its medullary sheath and neurilemma. 8. Enlargement in which it terminates. 9. Granular matter continuous with the base of this enlargement.

Tactile Corpuscle with Two Lobes.

Corpuscula (*kor-pus'-ku-lah*) [L.]. Plural of *Corpusculum.* **C. marginalia,** in biology, the marginal sense-organs of *Medusæ.*

Corpuscular (*kor-pus'-ku-lar*) [*corpusculum*, a little body]. Relating to or of the nature of a corpuscle.

Corpusculation (*kor-pus-ku-la'-shun*) [*corpusculum*, a corpuscle]. A condition in which the corpuscles of the blood have undergone hyperplasia, being larger and more numerous than normally.

Corpusculous (*kor-pus'-ku-lus*) [*corpusculum*, a corpuscle]. Corpuscular.

Corpusculum (*kor-pus'-ku-lum*) [L.: *pl.*, *Corpuscula*]. A corpuscle.

Correctant, or **Corrective** (*kor-ek'-tant* or *kor-ek'-tiv*) [*corrigere*, to correct]. 1. Having the power to correct or to modify favorably. 2. A substance used to modify or make more pleasant the action of a purgative or other remedy.

Correction (*kor-ek'-shun*) [*correctus; corrigere*, to amend]. The rectification of any abnormality (as a refractive or muscular defect), or of any undesirable quality (as in a medicine).

Correlated (*kor'-el-a-ted*) [*correlatus*, related]. Interdependent; related. **C. Atrophy.** See *Atrophy.*

Correlation (*kor-el-a'-shun*) [*correlatus*, related]. Interdependence; relationship.

Corrigan's Button. A cautery-iron. It consists of a button of iron, ½ inch in diameter by ¼ inch thick, fastened in a wooden handle by a rod 2 inches long. **C. Cautery.** Same as *C. Button.* **C. Disease.** See *Diseases, Table of.* **C. Line.** See *Signs and Symptoms, Table of,* and *Line.* **C. Pulse,** water-hammer pulse. The jerking pulse of aortic regurgitation. The volume of the pulse is large, owing to the hypertrophy and dilatation of the left ventricle; hence there is a sudden expansion of the arteries. The regurgitation of the blood, however, as suddenly empties the artery, and the pulse-wave subsides rapidly. The peculiarities of the radial pulse may usually be intensified by raising the hand. It is also called the *collapsing*, *speaking*, *reading*, *locomotive*, *kicking*, and *shuttle* pulse. See *Pulse*, and *Signs and Symptoms, Table of.*

Corrigent (*kor'-ij-ent*). See *Corrective.*

Corroborant (*kor-ob'-o-rant*) [*corroborans*, strengthening]. 1. Tonic; strengthening. 2. A strengthening medicine.

Corrosion (*kor-o'-zhun*) [*corrodere*, to corrode]. The process of corroding, or the state of being corroded. **C.-anatomy,** the preparation of any anatomic specimen by means of a corrosive process that eats away those parts which it is not desired to preserve. In some cases a resisting-substance is injected, so as to preserve the vessels and ducts from corrosion. **C.-preparation,** one in which the vessels, ducts, or cavities of organs are filled by a fluid that will harden and preserve the shape of the vessel or cavity after the organ itself is corroded or digested or otherwise de-

stroyed, the cast remaining. Three methods are used: 1. The injection is composed of rosin and white wax colored with paint, dissolved in balsam of copaiba; after the injection, the organ is destroyed by hydrochloric acid and water. 2. *Wood's Fusiform Metal*, consisting of 7 parts of bismuth, 4 parts lead, 2 parts tin, and 1 part cadmium. The tissues are destroyed by caustic potash. 3. Celloidin: The cold celloidin is slowly and forcibly injected by a syringe, and the soft parts eaten by an acid or a digesting fluid.

Corrosive (*kor-o'-siv*) [*con*, intensive; *rodere*, to gnaw]. A substance that destroys organic tissue either by direct chemic means or by causing inflammation and suppuration. **C. Chlorid**, mercuric chlorid. **C. Sublimate**. See *Hydrargyrum*. **C.-sublimate Bath**. See *Bath*.

Corroval (*kor'-o-val*). A variety of curare, or arrow-poison; a cardiac and muscular paralyzant.

Corrovalin (*kor-o'-val-in*). A poisonous alkaloid obtained from corroval. Unof.

Corrugator (*kor'-u-ga-tor*) [*corrugere*, to wrinkle]. That which wrinkles. See *Muscles, Table of*.

Corset (*kor'-set*) [F., dim. of *cors*, body]. In surgery, an investment for the abdomen or chest, or both; useful in some spinal disorders and deformities, and in fractures or injuries of the thoracic walls. **C.-liver**, a liver characterized by a furrow resulting from the pressure exerted by a corset and situated chiefly in the right lobe. It is due to habitual tight lacing, and hence is found in women and, rarely, among soldiers. If extreme, the furrow can be felt along the margin of the ribs if the abdominal walls are lax.

Corsican Moss. A mixture of fragments of various seaweeds, brought from Corsica, etc.; called, also, *helminthochorton*. It is said to be alterative, febrifuge, anthelmintic, and nutritious. Unof.

Corson's Paint. A substance used as a means of counter-irritation. It consists of croton oil 2 drams, ether 4 drams, compound tincture of iodin sufficient to make 2 ounces. Paint over the affected part with a camel's-hair pencil once daily.

Cortex (*kor'-teks*) [L., bark]. The bark of an exogenous plant. **C. aurantii**, orange-peel. **C. cerebri**, the external layer of gray matter of the brain. **C. renalis**, the cortical substance of the kidney.

Corti (*kor'-te*). A celebrated Italian anatomist, 1729–1813. **C., Arch of.** See *Arch*. **C., Canal of.** See *Canal*. **C., Cells of**, the external hair-cells of the organ of Corti. See *Cell*. **C., Fibers of**, the rods of Corti. **C., Ganglion of.** See *Ganglia, Table of*. **C., Membrane of.** See *Membrane*. **C., Organ of**, a series of some 3000 arches upon the floor of the basilar membrane within the *ductus cochlearis* of the internal ear. **C., Pillars of**, the rods of Corti. **C., Rods of**, the pillars of the arch of the organ of Corti. **C., Rolls of**, the fibers forming the inner limb of the arches of Corti. **C., Tunnel of**, a triangular canal between the layers of the rods of Corti.

Cortical (*kor'-tik-al*) [*cortex*, bark]. Pertaining to the cortex or bark, or to the cortex of the brain, or of the kidney. **C. Epilepsy**, C. Paralysis, such as is due to a lesion of the cortical substance of the brain.

Corticiferous (*kor-tis-if'-er-us*) [*cortex*, bark; *ferre*, to bear]. In biology, producing a bark.

Corticin (*kor'-tis-in*) [*cortex*, bark]. 1. An alkaloid from poplar-bark. 2. A form of tannin from certain wood-barks.

Corticole (*kor'-tik-ōl*) [*cortex*, bark; *colere*, to inhabit]. In biology, growing on bark.

Cortina (*kor-ti'-nah*) [*cortina*, a curtain]. In biology, the marginal veil of certain fungi.

Corviform (*kor'-ve-form*) [*corvus*, a crow; *forma*, shape]. In biology, resembling a crow.

Corvisart's Facies. See *Signs and Symptoms, Table of*.

Corybantism (*kor-e-bant'-izm*) [κορυβαναντισμός, corybantic frenzy]. Maniacal frenzy, with sleeplessness, choreic excitement and visual hallucinations.

Corydalin (*kor-id'-al-in*) [κορυδαλλίς, the crested lark], $C_{18}H_{19}NO_4$. A precipitate from the tincture of the root of *Corydalis formosa*; it is tonic, diuretic, antisyphilitic, resolvent, etc. Dose 1 to 5 grains. Unof.

Corydalis (*kor-id'-al-is*) [κορυδαλλίς, the crested lark]. Turkey corn. The tuber of *C. formosa* (*Dicentra canadensis*), a tonic, diuretic, and alterative. Dose of fld. ext. ♏x–xl. **Corydalin**, the alkaloid. Dose gr. j–v. Unof.

Corymb (*kor'-imb*) [κόρυμβος, a head or cluster of fruit or flowers]. In biology, a flower-cluster on the indeterminate plan, in which the axis is somewhat shortened and the pedicels of the lower flowers somewhat lengthened, so as to form a flat-topped cluster.

Corymbose (*kor-im'-bōs*) [κόρυμβος, a flower-cluster]. In biology, corymb-like, or arranged in corymbs. **C. Eruption**, a variety of the eruption of smallpox in which it shows itself in patches or clusters the size of the hand, as thickly set as possible, while the surrounding skin often remains entirely free. The grouping may be symmetrically distributed. This variety of small-pox is very dangerous.

Coryphodont (*kor-if'-o-dont*) [κορυφή, summit; ὀδούς (ὀδοντ-) tooth]. In biology, having teeth with pointed cusps.

Corysterium (*kor-is-te'-re-um*) [κορυστής, one having a helmet]. In biology, an organ found in the abdomen of certain female insects, that secretes a jelly-like protective envelop for the eggs.

Coryza (*ko-ri'-zah*) [κόρυζα, a running at the nose]. Catarrh of the mucous membrane of the nasal passages and adjacent sinuses, popularly called a "cold in the head." See *Rhinitis*. **C. caseosa**, a term applied by Cozzolino to a disease in which the nostrils are filled with caseous masses. **C., Idiosyncratic.** See *Hay-fever*. **C. maligna.** Synonym of *Snuffles of the Newborn*. **C., Periodic Vasomotor.** See *Hay-fever*. **C., Vasomotor.** Synonym of *Hay-fever*.

Cosme's Paste. See *Hebra's Arsenical Paste*.

Cosmesis (*koz-me'-sis*) [κοσμέειν, to adorn]. The art of preserving or increasing beauty.

Cosmetic (*koz-met'-ik*) [κοσμητικός; κοσμέειν, to adorn]. A remedy designed to improve or to hide defects of the skin or other external parts. It may be a white powder, such as starch, magnesic oxid, calcium carbonate (levigated), zinc oxid, mercurous chlorid, or bismuth subnitrate applied externally; it may be a white substance dissolved in dilute alcohol, which is left upon the face after the evaporation of the solvent; or it may be a stimulant to the skin used internally, such as arsenic. **C. Operation**, a surgical operation to give a natural appearance to a defective or unsightly part.

Cosmetology (*koz-met-ol'-o-je*) [κόσμετος, orderly; λόγος, science]. The science of the proper care of the body with respect to cleanliness, dress, etc.

Cosmic Disease. Syphilis of the heart-valves.

Cosmolin (*koz'-mo-lin*). See *Petrolatum*.

Costa (*kos'-tah*) [L.]. A rib. See *Rib*.

Costal (*kos'-tal*) [*costa*, a rib]. Pertaining to the ribs. **C. Arch**, the arch of the ribs. **C. Cartilages**, the 12 cartilaginous extensions of the ribs.

Costalgia (*kos-tal'-je-ah*) [*costa*, a rib; ἄλγος, pain]. Intercostal neuralgia; pain in the ribs.

Costen (*kos'-ten*) [*costa*, a rib]. Belonging to a rib in itself.

Coster's Paste. A remedy of some value in the treatment of *Tinea tonsurans*. It is made of iodin, 2 drams, in one ounce of oil of pitch. This is to be painted upon the patch and allowed to remain until the crust which is produced by the application falls off.

Costicartilage (*kos-te-kar'-til-āj*) [*costa*, a rib; *cartilago*, gristle]. A costal cartilage or unossified sternal rib.

Costicervical (*kos-te-ser'-vik-al*) [*costa*, a rib; *cervix*, a neck]. Relating to the neck and ribs.

Costicervicalis (*kos-te-ser-vik-a'-lis*) [*costa*, a rib; *cervix*, the neck]. The cervicalis ascendens muscle. See *Muscles, Table of.*

Costispinal (*kos-te-spi'-nal*) [*costa*, a rib; *spina*, the spine]. Relating to the ribs and vertebral column. **C. muscles**, levatores costarum. See *Muscles, Table of.*

Costive (*kos'-tiv*) [*constipare*, to be bound]. Constipated; affected with costiveness.

Costiveness (*kos'-tiv-ness*) [*constipare*, to be bound]. An abnormality of digestion characterized by retention and hardness of the feces.

Costo- (*kos'-to-*) [*costa*, a rib]. A prefix denoting connection with the ribs.

Costotome (*kos'-to-tōm*) [*costa*, rib; τομός, cutting]. A strong knife for cutting the costal cartilages in dissection, etc.

Costus Root (*kos'-tus root*). See *Putchuk.*

Cotnar (*kot'-nar*) [a Moldavian place-name]. A rich, strong, and highly esteemed wine from Roumania.

Coto (*ko'-to*) [Sp., a cubit]. Coto Bark. The bark of a tree native to Bolivia. It contains a bitter principle, *Cotoïn*, $C_{22}H_{18}O_6$, irritant to the skin and mucous membranes. Its therapeutic properties are not known. It is recommended for diarrhea and zymotic fevers and for the night-sweats of pulmonary tuberculosis. Dose of the powder, gr. j–xv; of the fluid extract gtt. v–xv; of the tincture (1 in 10), gtt. x–xxx; of cotoïn, gr. ss–j.

Cotoïn (*ko'-to-in*) [Sp., *coto*, a cubit], $C_{22}H_{18}O_8$. A crystalline substance found in Coto Bark. See *Coto.*

Cottage-hospital (*kot'-āj-hos'-pit-al*). A small establishment for the purpose of providing for the sick in a small and isolated community.

Cotting's Operation. See *Operations, Table of.*

Cotton (*kot'-n*) [ME., *cotoun*]. Gossypium, a white fibrous seed-hair that envelops the seeds of the cotton-plant. The structure of the cotton-fiber is very characteristic. It presents a flattened and collapsed tube, slightly twisted in a spiral form, with comparatively thick walls and a small central opening. Chemically, it contains about 91 per cent. of pure cellulose, 7 per cent. of moisture, and a small amount of fat, nitrogenous material and cuticular substance. **C., Absorbent**, is the fiber prepared, by removal of oily matters, for the surgeon's use. **C.-blue.** Same as *Soluble Blue.* **C.-holder**, a probe roughened near the end, upon which cotton may be twisted into a pledget. **C.-oil.** See *C.-seed Oil.* **C.-root.** See *Gossypium.* **C.-phthisis**, a variety of pulmonary disease occurring among cotton operatives from inhalation of cotton-dust. **C.-seed Oil** or **C.-oil**, oleum gossypii seminis, an oil obtained by pressure from the hulled seeds of several species of *Gossypium.* The raw oil is brownish-yellow in color, somewhat viscid, of a specific gravity of .922 to .9306 at 15° C. The refined oil has a straw-yellow color, or is colorless, of a pleasant, nutty flavor, specific gravity .9264 at 15° C., boiling at about 600° F. It possesses slight drying properties, and is saponifiable, but is chiefly used in adulterating olive, lard, sperm, and other oils.

Cotton's Test. See *Test's, Table of.*

Cotunnius, Aqueduct of. See *Aqueduct.* **C., Canal of.** See *Canals.* **C., Liquor, or Water of, the** perilymph. See *Aqua labyrinthi.* **C., Nerve of, the** naso-palatine. See *Nerves, Table of.*

Cotyledon (*kot-il-e'-don*) [κοτυληδών, a socket]. A mass or tuft of villi on the uterine side of the placenta; always present upon the human placenta. The placenta of the ruminant mammals has many such masses, hence is *polycotyledonous.*

Cotyloid (*kot'-il-oid*) [κοτύλη, a cup; εἶδος, form]. Cup-shape. **C. Fossa**, or **Cavity**, the acetabulum. **C. Ligament**, surrounds the acetabulum. **C. Notch**, a notch in the anterior and lower border of the acetabulum.

Couch-grass (*kowch'-gras*). See *Triticum.*

Couching (*kowch'-ing*) [Fr., *coucher*, to depress]. The operation, now fallen into disuse, of depressing a cataractous lens into the vitreous chamber, where it was left to be absorbed.

Couerbe's Test. See *Tests, Table of.*

Cough (*kof*) [ME., *cough*, a cough]. A sudden violent expiratory explosion through the mouth after deep inspiration and closure of the glottis. **C.-center.** See *Center.* **C., Trigeminal**, a reflex paroxysmal cough, occurring in individuals whose respiratory organs are perfectly sound, and due to an irritation of the trigeminal fibers distributed to the nose, pharynx, and external auditory meatus. **C., Winter**, a short troublesome cough of old people, due to chronic bronchitis, and recurring every winter.

Coulomb (*koo-lom'*) [after *Coulomb*, a French physicist]. The unit of measurement of electric quantity; the quantity of electricity that passes during one second through a conductor having a resistance of one ohm, with one volt of electromotive force. The **micro-coulomb** is the millionth part of this amount.

Coulomb's Law. See *Law.*

Coumalic Acid (*koo-mal'-ik*). See *Acid.*

Coumaric Acid (*koo-mar'-ik*). See *Acid.*

Coumarilic Acid (*koo-mar-il'-ik*). See *Acid.*

Coumarin (*koo'-mar-in*), $C_9H_6O_2$. A vegetable proximate principle that occurs in *Asperula odorata*, in the Tonka bean, and in *Melilotus officinalis.* It is soluble in hot water, readily so in alcohol and ether; it crystallizes in shining prisms, possesses the odor of the *Asperula*, and melts at 67°, in the proportion of 2 grains to the dram. It covers the odor of iodoform. Unof.

Coumarone (*koo'-mar-on*), C_8H_6O. A body, formed by distilling coumarilic acid with lime. It is present in coal-tar. It is an oil that sinks in water, and boils at 169° C.

Counter-extension (*kown'-ter-eks-ten'-shun*). See *Extension.*

Counter-indication (*kown'-ter-in-dik-a'-shun*). See *Contra-indication.*

Counter-irritation (*kown'-ter-ir-it-a'-shun*) [*contra*, against; *irritare*, to irritate]. Superficial and artificially-produced inflammation, in order to exercise a good effect upon some adjacent or deep-seated morbid process. This is generally accomplished by vesicants, rubefacients, etc.

Counter-opening (*kown'-ter-ōp'-en-ing*) [*contra*, against; ME., *openyng*, an opening]. An incision made in an abscess or cavity, opposite to another, generally for purposes of drainage.

Counter-poison (*kown'-ter-poi'-zn*) [*contra*, against; ME., *poisoun*, poison]. A poison given as an antidote to another poison.

Counter-stroke (*kown'-ter-strōk*). See *Contre-coup.*

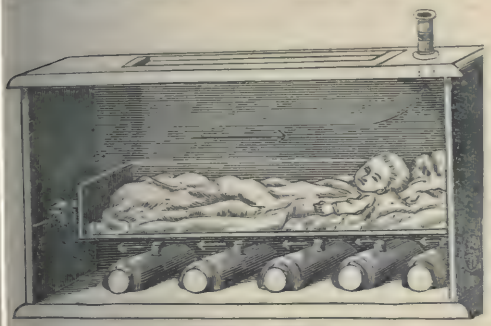
Country Fever. See *Fever, Florida.* **C. F. of Constantinople.** Synonym of *Mediterranean Fever.*

Coup de Soleil (*koo duh so-lay'*) [Fr.]. Sunstroke. See *Heat-stroke.*

Coup sur Coup (*koo sur koo'*) [Fr.]. Blow upon blow; a designation for an obsolete method of applying venesection; the successive bleedings following each other rapidly.

Couperose (*kup'-rōz*) [Fr.]. Synonym of *Acne rosacea*.

Coupier's Blue. See *Pigments, Conspectus of.* **C. Red.** Same as *Rosanilin.*



Courses (*kors'-ez*). See *Menses.*

Court Plaster (*kort plas'-ter*). See *Ichthycolla.*

Courty's Method. See *Treatment, Methods of.*

Couvade (*koo-vahd'*) [Fr., *couver*, to hatch]. Male child-bed. A custom of certain savage tribes in which, after child-birth, the father goes to bed, etc., and the mother gets up, etc.

Couveuse (*koo-vuh'z*) [Fr.]. See *Incubator.*

TARNIER'S COUVEUSE.
(*From Fullerton's "Obstetric Nursing."*)

Cover (*kuv'-er*) [ME., *cuveren*, to cover]. 1. To protect. 2. To copulate with; said of male animals. **C.-correction,** an arrangement to so adjust the lenses of a microscope that the best definition may be obtained for varying thicknesses of cover-glasses. **C.-glass,** in microscopy, the thin lamina of glass covering the object mounted on the slide. It should not exceed $\frac{1}{250}$ inch in thickness. On account of its effect on the transmission of light, the thickness of the cover-glass must be considered in correcting the objective. **C.-glass Preparation,** the fixing and staining of a fluid upon a cover-glass. **C.-slip.** Same as *C.-glass.*

Cow (*kow*) [AS., *cū*, cow]. The female of the genus *Bos*, and of other large animals. **C.-bane,** Water Hemlock. The leaves of *Cicuta virosa*, an acrid narcotic, highly poisonous to cattle, but not affecting sheep and goats. It causes intoxication and spasm. It is sometimes used externally as an anodyne in rheumatism. **C.-parsnip.** See *Masterwort.* **C.-pox, C.-pock,** a variety of pock seen in the cow, and thought to correspond with smallpox in man. **C.-tree.** See *Brosimum.*

Cowage (*kow'-āj*) [Hind., *kawānch*, cowhage]. The external hairs of the pod of *Mucuna pruriens*, used in medicine as a mechanical vermifuge.

Cowan-plant (*kow'-an-plant*). See *Alonsenel.*

Cowdie-gum (*kow'-de-gum*) [nat. N. Zeal.]. Codie pine resin. The resinous juice from the *Dammara australis*, a coniferous tree of New Zealand. It is one of the ingredients of copal varnishes. It is also one of the ingredients of the impression-material known as "Modeling Composition." It is one of the varieties of *Dammar, q. v.*, and is also called *Kauri-gum.*

Cowell's Operation. See *Operations, Table of.*

Cowhage, Cowitch (*kow'-āj. kow'-ich*). See *Mucuna* and *Cowage.*

Cowl (*kowl*) [AS., *cūle*, a hood]. A cover for a chimney, that turns with the wind and assists in ventilation.

Cowling's Rule. A rule for dosage. In his formula the age of the child at the next birthday is the numerator and 24 the denominator. According to this, the dose of a child approaching four years of age would be $\frac{4}{24} = \frac{1}{6}$ of the dose for an adult.

Cowper's Glands. See *Gland.*

Cowperitis (*kow-per-i'-tis*) [*Cowper*, an English anatomist; *ιτις*, inflammation]. Inflammation of the glands of Cowper, usually gonorrheal in origin.

Cowpoxing (*kow-poks'-ing*). Synonym of *Vaccination.*

Coxa (*koks'-ah*) [*coxa*, hip]. The hip-joint or the hip. In biology, the basal joint of the leg of an arthropod, abbreviated from *coxognathite* and *coxopodite*, of Milne Edwards; also *Coxopodite.* **C. vara,** bending or twisting of the neck of the femur.

Coxagra (*koks-a'-grah*) [*coxa*, the hip; *ἀγρα*, seizure]. Gout in the hip; sciatica.

Coxal (*koks'-al*) [*coxa*, the hip]. Relating to the coxa.

Coxalgia (*koks-al'-je-ah*) [*coxa*, a hip; *ἀλγος*, pain]. Pain in the hip-joint. See *Sciatica*, and *Hip-joint Disease.*

Coxalgic (*koks-al'-jik*) [*coxa*, the hip; *ἀλφος*, pain]. Relating to coxalgia.

Coxarthrocace (*koks-arth-rok'-as-e*) [*coxa*, hip; *ἀρθρον*, joint; *κακός*, bad]. A fungoid inflammation of the hip-joint.

Coxe's Hive-mixture. See *Scilla* and *Antimonium.*

Coxecphysis (*koks-ek'-fis-is*) [*coxa*, hip; *ἐκφυσᾶν*, to blow out]. In biology, a branch springing from the coxa of an arthropod; synonymous with the *epignathite* and *epipodite* of Milne Edwards, and with the podobranchia of Huxley when it is connected with the branchial plumes, as in *Homarus.*

Coxitis (*koks-i'-tis*) [*coxa*, the hip; *ιτις*, inflammation]. Inflammation of the hip-joint.

Coxocerite (*koks-os'-er-it*) [*coxa*, the hip; *κέρας*, horn]. In biology, the basal joint of the antenna of an arthropod.

Coxodynia (*koks-o-din'-e-ah*) [*coxa*, hip; *ὀδύνη*, pain]. Same as *Coxalgia.*

Coxo-femoral (*koks-o-fem'-or-al*) [*coxa*, the hip; *femur*, the thigh-bone]. Relating to the coxa and the femur.

Coxopodite (*koks-op'-o-dīt*) [*coxa*, hip; *πούς*, a foot]. See *Coxa.*

Coxotuberculosis (*koks-o-tu-ber-ku-lo'-sis*) [*coxa*, the hip; *tuberculum*, a tubercle]. Tuberculous disease of the hip-joint.

Crab Louse (*krab'-lows*) See *Pediculus.*

Crab's-eyes (*krabz'-īz*). Flat, calcareous concretions (*Lapides cancrorum*) derived from the stomach of the crab, and used as a means of removing foreign bodies from the eye. Also a name for the seeds of *Abrus precatorius.*

Crachotement (*kra-shot-mon (g')*) [Fr.]. A peculiar reflex following operations upon the utero-ovarian organs, marked by a desire to spit, without the ability to do so. It is usually accompanied by a tendency to syncope.

Cracked-metal Sound. See *Cracked-pot Sound.*

Cracked-pot Sound. A peculiar sound elicited by percussion over a pulmonary cavity communicating with a bronchus.

Crackling (*krak'-ling*) [ME., *crakelen*, to crackle]. A sound compared to that produced when salt is thrown into the fire, heard over a lung in which softening of tuberculous deposits has begun to take place.

Cradin (*krad'-in*) [*κράδη*, fig-branch]. A principle obtainable from the leaves and twigs of the common fig. It is said to be a peptic ferment, in some respects

more effective than pepsin, and is believed to be identical with papain.

Cradle (*kra'-dl*) [AS., *cradol*, a cradle]. In surgery, the arculus, a wire or wicker frame so arranged as to keep the weight of the bed-clothing from an injured part of the body. It is employed in the treatment of fractures, wounds, etc. **C.-Cap,** a name given to the scabs composed of dirt and sebum, that form on the scalps of neglected infants and children. **C., Ice-,** the suspension over a febrile patient, by means of iron frames, of a number of zinc buckets, kept half-filled with ice, and inclosed in a light covering. **C.-pessary,** a cradle-shaped pessary for treating retrodisplacements of the uterus.

CRADLE FOR SUPPORTING BED-CLOTHES.
(*From Fullerton's "Nursing in Abdominal Surgery."*)

Cram (*kram*) [ME., *crammen*, to cram]. To store the memory with information for the purpose merely of passing an examination. **C.-stunt,** arrest in mental development due to over-study. **C.-stunted,** arrested in mental development by over-study.

Cramp (*kramp*) [Teut., *kramp*]. A spasmodic tonic contraction of the muscles, attended with sharp pain. It is especially prone to attack the muscles of the calf. It occurs frequently in those of neurotic tendency, and is often the forerunner of epilepsy. **C., Accommodation,** a spasm of the ciliary muscle of the eye. **C., Auctioneers',** one of the professional neuroses affecting mainly the left side of the orbicularis oris muscle. **C.-asphyxia,** spinal spasm. **C., Ballet-dancers',** a neuralgic affection occurring in ballet-dancers, especially premiéres danseuses, characterized by pain and paralytic symptoms, affecting the muscles of the calf. It is the result of local strain upon the parts. **C.-bone,** a name for the patella of a sheep. **C., Blacksmiths'.** See *C., Hammermen's.* **C., Car-drivers',** a professional neurosis seen in car-drivers, and perhaps also in brakemen, characterized by spasm and weakness of the hand from the effort of tightening car-brakes. **C., Chisel,** a professional neurosis occurring in smiths, affecting the left hand, and produced by the continuous holding of the chisel or similar instrument. **C., Cigar-makers',** one of the rarer professional neuroses, consisting in a tonic contraction of the flexor muscles of the fingers with pain. The painful sensations also extend up the arm and shoulders. **C., Cigaret-makers'.** See *C., Cigar-makers'.* **C., Clarionet-players',** a cramp of the tongue and of the laryngeal muscles experienced occasionally by players on this instrument. **C. Colic,** a form of colic in the horse, produced by contraction, or spasm, of a portion of the small intestines from the irritation of indigestible food. **C., Coachmen's,** contraction of the palmar fascia, occasionally seen in coachmen. **C., Cornet-players',** a rare and peculiar neurosis of the tongue in cornet-players, in which certain notes cannot be sounded, from inability to direct the tongue for that purpose. **C., Dancers'.** See *C., Ballet-dancers'.* **C., Elocutionists'.** See *Dysphonia spastica.* **C., Flute-players',** slight laryngeal spasms occurring occasionally in flute-players from excessive use of the instrument. Also a cramp of the flexors and extensors of the hand, from constant use of the instrument. **C., Glass-blowers',** a painless, but decided and permanent flexion of the fingers, the thumb excepted, due to the continuous grasping of the tube with which the glass is worked. **C., Goldbeaters',** a cramp of the muscles of the arm due to excessive use in beating gold-leaf. **C., Hammer.** See *C., Hammermen's.* **C., Hammermen's,** a spasmodic affection of the muscles of the arm and shoulder, at times unattended with pain, due to the repeated act of hammering. **C., Knitters',** a peculiar affection of the hands of those who knit, consisting in a contraction of the extensor muscles, with numbness of the ends of the fingers. **C., Milkers',** a spasmodic contraction of the extensors and flexors of the forearm in consequence of continuous exertion in milking. **C., Milkmaids'.** See *C., Milkers'.* **C., Musicians',** a general term including pianists' cramp, violinists' cramp, flutists' cramp, the cramp of clarionet-players, etc. **C., Nailsmiths'.** See *C., Hammermen's.* **C., Photographers',** a rare professional neurosis. **C., Pianists',** a neurosis of the hands and fingers of piano-players, characterized by fatigue, pain, and weakness. The pain extends up the arm to between the shoulders. **C., Piano-players'.** See *C., Pianists'.* **C., Saltatory.** See *Saltatory Spasm.* **C., Sawyers',** peculiar incoördinated movements of the saw-arm and corresponding side of the body, from excessive use. **C., Scriveners'.** See *C., Writers'.* **C., Seamstresses',** a professional neurosis consisting in a spastic condition of the flexors of the fingers from constantly plying the needle. **C., Shoemakers'.** See *Shoesalesmen's Disease.* **C., Smiths'.** See *C., Hammermen's.* **C., Speakers'.** See *Dysphonia spastica.* **C., Swimmers',** a painful cramp of the muscles of the calf of the leg of swimmers, frequently causing death by drowning. **C., Tailors',** a spasmodic affection of the muscles of the thumb, forefinger, hands, and arms, sometimes occurring in tailors, from overwork. **C., Telegraphers',** a partial paralysis of the muscles of the hand and fingers with spasm, produced by fatigue from long-continued use of Morse's instrument. **C., Treadlers',** one of the professional neuroses; it is met with in treadlers, and consists in cramps of the leg-muscles from constant use of the machine. **C., Violinists',** a painful cramp most common in the left shoulder of violinists; it is due to the peculiar position assumed in holding the violin. **C., Watchmakers',** a cramp in which there is a flexion of the metacarpo-phalangeal joints, with extension of the other joints of the hand. Also, an inability to retain the glass in the eye-socket. **C., Writers',** Scriveners' palsy; a difficulty in writing, due to spasmodic action of the muscles of the hand and arm, to pain, to tremulousness of these muscles, or to fatigue and weakness of the extremity. These constitute the four forms, *spastic*, *neuralgic*, *tremulous*, and *paralytic.*

Crampton's Muscle. See *Muscles, Table of.* **C. Operations.** See *Operations, Table of.*

Crampus (*kram'-pus*) [L.]. An old name for a cramp, or for any disease characterized by cramps.

Cranberry (*kran'-ber-e*) [ME., *cranebery*, a berry]. The acid fruit of *Vaccinium oxycoccus* and *V. macrocarpon.* It is a popular material for poultices, and is vaunted as a cure for carcinoma. Unof. **C.-tree.** See *Viburnum opulus.*

Crane-bark (*krān'-bark*). See *Viburnum opulus.*

Crane's-bill Root. See *Geranium.*

Craniacromial (*kra-ne-ak-ro'-me-al*) [κρανίον, skull; ἀκρωμία, the point of the shoulder-blade]. Relating to the cranium and the acromion.

Cranial (*kra'-ne-al*) [κρανίον, the skull]. Relating to the cranium. **C. Bosses,** flat, bony elevations of the frontal and parietal bones sometimes seen at the angles of the anterior fontanel. They are said to be a proof of hereditary syphilis. **C. Nerves.** See *Nerve.*

Craniectomy (*kra-ne-ek'-to-me*) [κρανίον, skull; ἐκτομή, a cutting out]. The surgical removal of strips or pieces of the cranial bones. It is performed in cases of microcephaly.

Craniocele (*kra′-ne-o-sēl*) [κρανίον, skull; κηλή, a tumor]. Encephalocele, *q. v.*

Cranioclasis (*kra-ne-ok′-las-is*) [κρανίον, skull; κλάσις, a breaking]. See *Cranioclasm.*

Cranioclasm (*kra′-ne-o-klazm*) [κρανίον, the skull; κλᾶν, to break]. The operation of breaking the fetal head by means of the *cranioclast.*

Cranioclast (*kra′-ne-o-klast*) [κρανίον, skull; κλάειν, to break]. A heavy forceps for crushing the fetal head.

Craniodiaclast (*kra-ne-o-di′-ak-last*) [κρανίον skull; διακλᾶν, to break into pieces]. An instrument for breaking the skull in craniotomy.

Craniodidymus (*kra-ne-o-did′-im-us*) [κρανίον, skull; δίδυμος, double]. Same as *Cephalopagus.*

Craniofacial (*kra-ne-o-fa′-shal*) [κρανίον, skull; *facies*, face]. Relating to the cranium and the face; as the craniofacial axis, the craniofacial notch, etc.

Craniograph (*kra′-ne-o-graf*) [κρανίον, skull; γράφειν, to record]. An instrument for recording the outlines of the skull.

Craniography (*kra-ne-og′-ra-fe*) [κρανίον, the skull; γράφειν, to write]. That part of descriptive craniology the object of which is to describe the parts or regions of the skull or bones of the face.

Cranio-hematoncus (*kra′-ne-o-hem-at-ong′-kus*) [κρανίον, skull; αἷμα, blood; ὄγκος, a tumor]. Synonym of *Cephalhematoma.*

Craniology (*kra-ne-ol′-o-je*) [κρανίον, cranium; λόγος, science]. A branch of anatomy based upon the comparative study of skulls.

Craniomalacia (*kra-ne-o-mal-a′-se-ah*). See *Craniotabes*

Craniomandibular (*kra-ne-o-man-dib′-u-lar*) [κρανίον, skull; *mandibula*, the mandible]. Relating to the skull and the lower jaw.

Craniometer (*kra-ne-om′-et-er*) [κρανίον, skull; μέτρον, a measure]. An instrument for gauging the dimensions of the skull.

Craniometric, Craniometrical (*kra-ne-o-met′-rik, kra-ne-o-met′-rik-al*) [κρανίον, skull; μέτρον, a measure]. Pertaining to craniometry. **C. Point,** any one of the points of measurement used in craniometry. A list of the craniometric points is given. ACANTHION [ἀκάνθιον, a little spine], a point in the median line of the skull at the base of the nasal spine. ALVEOLAR POINT, the point between the two middle incisors of the upper jaw. ANTINION, that point on the glabellum, and in the median line, that is farthest from the inion. ASTERION [ἀστέριον, starry], the point behind the ear where the parietal, temporal and occipital bones meet. AURICULAR POINT, the center of the orifice of the external auditory meatus. BASION [*basis*, fundament], the middle point of the anterior margin of the foramen magnum. BREGMA, the point where the coronal and sagittal sutures meet. DACRYON, or DAKRYON [δάκρυον, a tear], the point beside the root of the nose where the frontal, lachrymal, and superior maxillary bones meet. ENTOMION, the point where the parietal notch of the temporal bone receives the anterior extension of the mastoid angle of the parietal. GLABELLA, or GLABELLUM, the point in the median line between the superciliary arches, marked by a swelling, sometimes by a depression. GNATHION, same as *Mental Point.* GONION, the point at the angle of the lower jaw. HORMION, the anterior point of the basilar portion of the united spheno-occipital bone, where it is crossed by the median line. INION, the external occipital protuberance. JUGAL POINT, the point situated at the angle that the posterior border of the frontal branch of the malar bone makes with the superior border of its zygomatic branch. KORONION, the apex of the coronoid process of the inferior maxilla. LAMBDA, the point of meeting of the sagittal and the lambdoid sutures. MALAR POINT, a point situated on the tubercle on the external surface of the malar bone, or at the intersection of a line drawn from the external extremity of the fronto-malar suture to the tubercle at the inferior angle of the malar bone and a line drawn nearly horizontally from the inferior border of the orbit over the malar bone to the superior border of the zygomatic arch. MAXIMUM OCCIPITAL POINT, or OCCIPITAL POINT, the posterior extremity of the antero-posterior diameter of the skull, measured from the glabella in front to the most distant point behind. MENTAL POINT, the middle point of the anterior lip of the lower border of the lower jaw. METOPION, or METOPIC POINT, a point in the middle line between the two frontal eminences. NASION, or NASAL POINT, the middle of the frontal suture at the root of the nose. OBELION, the part of the sagittal suture between the two parietal foramina. OCCIPITAL POINT. See *Maximum Occipital Point.* OPHRYON, the middle of the supraorbital line, which, drawn across the narrowest part of the forehead, separates the face from the cranium. OPISTHION, the middle point of the posterior border of the foramen magnum. PROSTHION, the *Alveolar point.* PTERION, the point where the frontal, parietal, temporal, and sphenoid bones come together. RHINION, the upper median point of the anterior nasal opening. SPINAL POINT. Same as *Subnasal Point.* STEPHANION, INFERIOR, the point where the ridge for the temporal muscle intersects the coronal suture. STEPHANION, SUPERIOR, the point where the coronal suture crosses the temporal ridge. SUBNASAL POINT, the middle of the inferior border of the anterior nares at the base of the nasal spine. SUPRA-AURICULAR POINT, the point vertically over the auricular point at the root of the zygomatic process. SUPRANASAL POINT. Same as *Ophryon.* SUPRAORBITAL POINT. Same as *Ophryon.* SYMPHYSION, the median point of the outer border of the alveolus of the lower jaw. VERTEX, the superior point of the skull. In obstetrics, that conical portion of the skull whose apex is at the posterior fontanel and whose base is formed by the biparietal and trachelo-bregmatic diameters.

Craniometry (*kra-ne-om′-et-re*) [κρανίον, skull; μέτρον, a measure]. The ascertainment of the proportions and measurements of skulls, together with the discussion of the ascertained facts, and the drawing of scientific inferences therefrom. See *Angle, Arc, Index, Plane, Point.*

Craniopagus (*kra-ne-op′-ag-us*). See *Cephalopagus.*

Craniopharyngeal (*kra-ne-o-far-in′-je-al*) [κρανίον, skull; φάρυγξ, the pharynx]. Relating to the cranium and the pharynx.

Craniophore (*kra′-ne-o-fōr*) [κρανίον, cranium; φέρειν, to bear]. A device for holding the skull during craniometric study.

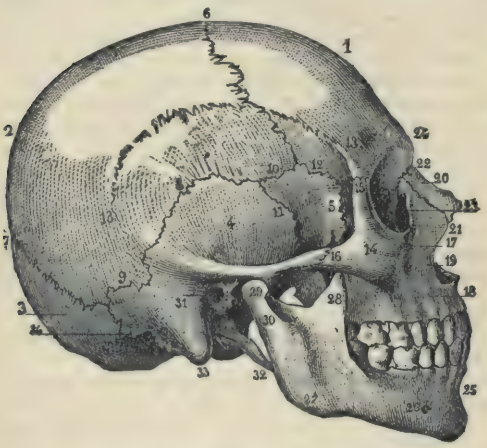
Cranioplasty (*kra′-ne-o-plas-te*) [κρανίον, skull; πλαστός, formed]. The surgical restoration or correction of cranial deficiencies.

Craniosclerosis (*kra-ne-o-skle-ro′-sis*) [κρανίον, skull; σκληρός, hard]. A condition the antithesis of that seen in craniotabes. A thickening of the cranial bones, usually due to rhachitis.

Cranioscopy (*kran-e-os′-ko-pe*). See *Phrenology.*

Craniostegnosis (*kra-ne-o-steg-no′-sis*) [κρανίον, skull; στέγνωσις, contraction]. Contraction of the skull.

Craniostosis (*kran-e-os-to′-sis*) [κρανίον, skull; ὀστεον, a bone]. Congenital ossification of the cranial sutures.



Craniotabes (*kra-ne-o-ta′-bēz*) [κρανίον, skull; *tabere*, to waste away]. An atrophy of the cranial bones occurring in infancy, with the formation of small, shallow, conical pits in the bone-substance. These pits are granular within, and present a worm-eaten appearance around the margin. They are most usually found in the posterior inferior region of the parietal bone, but may be seen in any of the other cranial bones. They form from within outward, so that in life often they cannot be found. Craniotabes is probably a result of rhachitis, syphilis, or marasmus. The craniotabetic pits are in some way associated with the rapid growth and development of the brain; they may be due to a premature formation of the markings of the convolutions on the skull. They are only encountered during the first months of life, that is, up to the sixteenth month. This disease is not a serious one as regards danger to life.

Craniotabetic (*kra-ne-o-tab-et′-ik*) [κρανιόν, skull; *tabere*, to waste away]. Pertaining or belonging to *Craniotabes*, *q. v.*

Craniotome (*kra′-ne-o-tōm*) [κρανίον, skull; τέμνειν, to cut]. An instrument used in craniotomy

Craniotomy (*kra-ne-ot′-o-me*) [κρανίον, skull; τομή, a cutting]. 1. The operation of reducing the size of the fetal head by cutting or breaking it up, when delivery is otherwise impossible. 2. Excision of a portion of the skull; performed by Prof. Lannelongue in cases of *microcephaly* to relieve pressure upon the brain and to give the brain space. **C., Linear.** See *Craniectomy*.

Craniotractor (*kra′-ne-o-trak-tor*) [κρανίον, skull; *tractor*, a drawer]. A cranioclast designed to be used also, or mainly, as a tractor.

LATERAL ASPECT OF CRANIUM.

1. Frontal bone. 2. Parietal bone. 3. Occipital bone. 4. Temporal bone. 5. Greater wing of sphenoid bone. 6. Coronal suture. 7. Lambdoid suture. 8. Squamo-parietal suture. 9. Masto-parietal suture. 10. Spheno-parietal suture. 11. Spheno-temporal suture. 12. Spheno-frontal suture. 13, 13. Temporal ridge. 14. Malar bone. 15. Fronto-malar suture. 16. Malo-temporal suture. 17. Malo-maxillary suture. 18. Superior maxillary bone. 19. Infraorbital foramen. 20. Nasal bone. 21. Naso-maxillary suture. 22. Naso-frontal suture. 23. Lachrymal groove, at the bottom of which may be seen the suture between the lachrymal and the superior maxillary bones. 24 Nasal eminence. 25. Inferior maxillary bone. 26. Mental foramen. 27. Angle of lower jaw. 28. Coronoid process. 29. Condyle. 30 Neck of condyle. 31. External auditory canal. 32. Styloid process. 33. Mastoid process. 34. Masto-occipital suture.

Cranium (*kra′-ne-um*) [κρανίον, the skull]. The skull. The cavity that contains the brain, its membranes and vessels. It consists of 22 bones, of which 14 belong to the face, and 8 to the cranium proper. See *Skull*.

Crank (*krank*) [Ger., sick]. A popular term for an eccentric individual or a hobby-rider. See *Paranoiac*.

Cranter (*kran′-ter*) [κραντήρ, κραίνειν, to finish, render perfect: *pl.*, *Cranteres*]. A wisdom-tooth. The dentes sapientiæ are sometimes so called because their presence is necessary to a perfect denture.

Crapaudine (*krap′-aw-din*) [Fr., *crapaud*, a toad]. In veterinary surgery, an ulcer on the coronet of a horse's hoof.

Crapulous (*krap′-u-lus*) [*crapula*, drunkenness, surfeit]. Characterized by debauch or excess in drinking or in eating.

Craquement (*krahk′-mon(g)*) [Fr.]. Any crackling sound heard in auscultation.

Crasis (*kras′-is*) [κρᾶσις, mixture]. Temperament; constitution; predisposition. **C., Verminous,** an old term used to designate a peculiar dyscrasia of the system due to the presence of worms.

Craspedotal (*kras-pe-do′-tal*) [κρασπεδωτός, bordered]. In biology, applied to those Medusæ that have velar otolithic vesicles.

Crassamentum (*kras-am-en′-tum*) [L., thickness]. A clot, as of blood.

Crateriform (*kra-ter′-if-orm*) [*crater*, a crater; *forma*, shape]. Goblet-shaped or deep-saucer-shaped. Excavated like a crater.

Cratomania (*krat-o-ma′-ne-ah*) [κράτος, power; μανία, madness]. A delirium of exaltation in which the patient conceives himself to possess vast power.

Cravat (*kra-vat′*) [Fr., *cravate*, a Croat]. 1. A neck-cloth. 2. A bandage of triangular shape, used as a temporary dressing for a wound or fracture. The middle is applied to the injured part, and the ends are brought around and tied. See *Handkerchief Dressings*.

Craw-Craw (*kraw′-kraw*). See *Filaria sanguinis hominis*, and *Parasites* (*Animal*), *Table of*.

Crawley (*kraw′-le*). See *Coral Root*.

Craziness (*kra′-ze-nes*) [ME., *crasen*, to break]. Insanity.

Crazy (*kra′-ze*) [*crasen*, to break]. Insane; demented; deranged. **C.-bone.** See *Funny-bone*. **C.-weed.** See *Loco*.

Cream (*krēm*) [*cremor*, thick juice or broth]. The rich, fat part of milk. **C., Cold.** See *Rosa*. **C., Ripening of.** See *Ripening*. **C. of Tartar.** See *Potassium*.

Creamometer (*krēm-om′-et-er*) [*cremor*, cream; μέτρον, a measure]. An instrument for estimating the amount of cream in milk.

Crease (*krēs*) [Celtic]. A line made by folding. **C., Gluteo-femoral.** See *C., Ileo-femoral*. **C., Ileo-femoral,** is the crease that bounds the buttock below, corresponding nearly to the lower edge of the gluteus maximus muscle. It is of supposed significance in the diagnosis of hip-disease.

Creasol (*kre′-as-ol*) [κρέας, flesh; *oleum*, oil], $C_8H_{10}O_2$. One of the principal phenols contained in creasote. It is formed from guaiacum-resin, and is found in beech-wood-tar. It is a colorless, oily liquid of an agreeable odor and a burning taste, boiling at 220° C. It is very similar to guaiacol.

Creasote, or Creasotum (*kre′-as-ōt*, *-ōt′-um*) [κρέας, flesh; σῴζειν, to preserve]. The product of the distillation of wood-tar, consisting of a mixture of phenol compounds. It is an inflammable oily liquid, differing in this respect from carbolic acid. It does not coagulate albumin or collodion. Most of the commercial creasote consists of carbolic acid or contains a large percentage of it. It is valuable for its antiseptic, astringent, styptic, anesthetic, and escharotic properties.

Dose ♏j–iij. **Beechwood Creasote**, from *Fagus sylvatica*, is best for internal use. Dose ♏j, every three hours. **C., Aqua**, a one per cent. solution. Dose ʒj–iv. **C.-bath.** See *Bath.* **C., Mistura** (B.P.). Dose ʒj–ij. **C.-oil**, Heavy Oil, the third main fraction in the coal-tar distillation-process. It is collected at temperatures of from 230° to 270° C., or until the anthracene commences to distil. The oil has a greenish-yellow color, and is very fluorescent, and becomes progressively more so upon exposure to light and air. The odor is unpleasant and extremely characteristic. The oil is heavier than water, and contains naphthalene, anthracene, phenanthrene, phenol, cresol, etc. It is used mainly in the creasoting or preservation of timber; it is also used as a fuel, and for the production of illuminating gas, as a lubricant, and for the production of lampblack. **C., Unguentum** (B.P.), for local application. **C., Vapor** (B.P.), for inhalation.

Creatic (*kre-at'-ik*) [κρέας, flesh]. Relating to flesh. See *Kreatinin*. **C. Nausea**, a loathing of flesh as food.

Creatin (*kre'-at-in*) [κρέας, flesh], $C_4H_9N_3O_2$. A neutral organic substance that occurs in the animal organism, especially in the juice of muscles. It crystallizes with one molecule of water in glistening prisms, which, heated to 100°, sustain a loss of water. It has a faintly bitter taste and dissolves rather readily in boiling water. It dissolves with difficulty in alcohol and yields crystalline salts with one equivalent of acid.

Creatinin (*kre-at'-in-in*) [κρέας, flesh], $C_4H_7N_3O$. An alkaline substance, a normal constituent of urine. It crystallizes in rhombic prisms, and is a strong base. It is much more soluble than creatin.

Crebricostate (*kreb-re-kos'-tāt*) [*creber*, close; *costa*, rib]. In biology, characterized by closely-set ridges.

Crebrisulcate (*kreb-re-sul'-kat*) [*creber*, close; *sulcus*, a furrow]. In biology, marked by closely-set furrows.

Crebruria (*kreb-ru'-re-ah*) [*creber*, close together; οὖρον, urine]. Frequent micturition.

Creche (*krāsh*) [Fr., a crib]. See *Infant Shelter*.

Credé's Method (*kre-da'*). See *Treatment, Methods of.* **C. Operation.** See *Operations, Table of.*

Crédivité (*kra-div-it-a'*) [Fr.]. See *Hypnotism.*

Creeping Sickness (*krēp'-ing sik'-nes*). The gangrenous form of ergotism.

Cremaster (*kre-mas'-ter*) [κρεμάειν, to support]. The muscle that draws up the testis. See *Muscles, Table of.*

Cremasteric (*kre-mas-ter'-ik*) [κρεμάειν, to support]. Pertaining to the cremaster muscle. **C. Reflex.** See *Reflexes, Table of.*

Cremation (*kre-ma'-shun*) [*cremare*, to burn]. The destruction of the body by burning, as distinguished from interment.

Cremator (*kre-ma'-tor*) [*cremare*, to burn]. A crematory, *q. v.* **C., Engle System**, a variety of cremator for the destruction of garbage, in which the smoke and gases generated by the destruction of the waste material are consumed by a second fire.

Crematory (*krem'-at-or-e*) [*cremare*, to burn]. An establishment for burning the bodies of the dead, or for consuming garbage and other refuse matter.

Cremnitz White. Same as *White Lead.*

Cremocarp (*krem'-o-karp*) [κρεμᾶν, to hang; καρπός, fruit]. The peculiar capsular fruit of the natural order *Umbelliferæ.*

Cremor (*kre'-mor*) [*cremor*, broth]. Cream. Any thick substance formed on the surface of a liquid. **C. tartari**, cream of tartar.

Crena (*kre'-nah*) [L.]. A notch, especially such a notch as is seen on the sutural margins of the cranial bones.

Crenate (*kre'-nāt*), or **Crenated** (*kre'-na-ted*) [*crena*, a notch]. Notched or scalloped. In botany, leaves that are serrated. See *Crenation.*

Crenation (*kre-na'-shun*) [*crena*, a notch]. A notched or mulberry appearance of the red corpuscles of the blood; it may be spontaneous or due to poisoning with Calabar bean, etc.

Crenic Acid (*kre'-nik*). See *Acid.*

Crenothrix (*kren-oth'-riks*) [κρήνη, a spring; θρίξ, hair]. A genus of Schizomycetes the filaments of which are enveloped in a gelatinous sheath. **C. kühniana**, abundant in fresh waters; when putrefied it gives drinking-water a very bad taste, but the rôle attributed to it in the production of typhoid fever is unjustified.

Crenulate (*kren'-u-lāt*) [*crena*, a notch]. Finely crenate.

Creolin (*kre'-o-lin*) [κρέας, flesh; *oleum*, oil]. A coal-tar product deprived of carbolic acid. It is hemostatic and highly antiseptic, and is more active than carbolic acid in pure cultures of pathogenic microbes, but less efficacious in putrefying masses. It is an excellent non-poisonous deodorizer, used in a two per cent. solution or a five per cent. ointment with lanolin. It is used internally in typhoid fever and catarrh of the bladder in five-drop doses.

Creosol (*kre'-o-sol*). See *Creasol.*

Creosote (*kre'-o-sōt*). See *Creasote.* **C.-bush**, *Larrea mexicana*, an odorous and resinous shrub of the Pacific States and Mexico. It is a local remedy for rheumatism and for wounds and sores. Unof.

Crepitant (*krep'-it-ant*) [*crepitare*, to crackle]. Possessing the character of crepitus. **C. Râle.** See *Râle* and *Breath-sounds.*

Crepitation (*krep-it-a'-shun*), **Crepitus** (*krep'-it-us*) [*crepitare*, to crackle]. The noise produced by escaping flatus. The grating of fractured bones. The crackling of the joints. The noise produced by pressure upon tissues containing an abnormal amount of air or gas, as in cellular emphysema. Also the peculiar murmur of respiration observed in pneumonia during inspiration. It closely resembles the sound produced by rubbing the hair between the fingers held close to the ear. **C., Redux**, a crepitant râle heard in pneumonia during the stage of resolution; usually the first manifestation of the recession of the disease.

Cresalol (*kres'-al-ol*) [*cresol; salol*], $C_6H_4.OH.COO.C_6H_4.CH_3$. Salicylate of cresol. It possesses antiseptic properties very similar to those of salol. Dose gr. iv in water from one to eight times daily. Unof.

Crescent (*kres'-ent*) [*crescere*, to grow]. Shaped like the moon in its first quarter. A name given to one form of the malarial hematozoön. **C. of Gianuzzi.** Groups of non-secreting cells in the acinus of a gland, pushed to one side by the secreting cells. **C., Myopic.** See *Myopia.* **C. Operation.** See *Operations, Table of.*

Crescentia (*kres-en'-she-ah*) [*crescere*, to grow]. A genus of bignoniaceous trees and shrubs. **C. alata**, of tropical Asia and America, affords leaves that are useful in hemoptysis, and the fruit is employed in pulmonary diseases. The pulp of the West Indian **C. cujete** is similarly used. Unof.

Cresol (*kre'-sol*) [κρέας, flesh; *oleum*, oil], $C_7H_8O_2$. Cresylic acid; a body obtained from the distillation of coal-tar. It is a colorless, caustic liquid, with properties similar to those of phenol, but is superior as an antiseptic. Unof.

Cresolin (*kres'-o-lin*) [κρέας, flesh; *oleum*, oil]. A proprietary preparation used as a disinfectant in diphtheria, etc.

Cresosulphuric Acid (*kres-o-sul-fu'-rik*). See *Acid.*

Crest (*krest*) [*crista*, a crest]. The surmounting part of any bone, organ, or process. **C., Frontal**, a ridge

along the middle line of the internal surface of the frontal bone. **C. of Ilium**, the thickened and expanded upper border of the ilium. **C., Lachrymal**, a vertical ridge dividing the external surface of the lachrymal bone into two parts. **C., Nasal**, a crest on the internal border of the nasal bone and forming part of the septum of the nose. **C., Neural**, a series of swellings along each side of the rudimentary spinal cord in the embryo from which the spinal nerves are developed. **C., Occipital**, a vertical ridge on the external surface of the occipital bone extending from the occipital protuberance to the foramen magnum. **C. of Pubes**, a crest extending from the spine to the inner extremity of the pubes. **C. of Tibia**, the prominent border or ridge on the front of the tibia; the shin. **C., Turbinated**, a prominent horizontal ridge on the internal surface of the palate bone. **C., Urethral.** See *Verumontanum.*

Cresti's Test. See *Tests, Table of.*

Cresylic Acid (*kres-il'-ik*). See *Cresol.*

Creta (*kre'-tah*) [L.]. Chalk. See *Calcium.*

Cretaceous (*kre-ta'-she-us*) [*creta*, chalk]. Chalky; abounding in calcium carbonate.

Cretefaction (*kre-te-fak'-shun*). See *Calcification.*

Cretin (*kre'-tin*) [Fr., *crétin*, a simple-minded person]. A person affected with cretinism.

Cretinism (*kre'-tin-izm*) [Fr., *crétin*, a simple-minded person]. The condition of a cretin. Also an endemic disease, characterized by goiter and a condition of physical, physiologic, and mental degeneracy and non-development. The subjects of this disease seldom reach five feet in height. **C., Sporadic**, the congenital form of myxedema, characterized by absence of the thyroid gland, diminutiveness of size, thickness of neck, shortness of arms and legs, prominence of abdomen, large size of face, thickness of lips, large and protruding tongue, and imbecility or idiocy. It is popularly supposed that coitus during intoxication is a cause of this condition.

Cretinoid (*kre'-tin-oid*) [*crétin*, a simple-minded person]. 1. Resembling a cretin; resembling cretinism. 2. A person who resembles a cretin.

Creuse's Test. See *Tests, Table of.*

Crewels (*kroo'-elz*) [Fr., *écrouelles*, scrofula]. Synonym of *Scrofula.*

Crib (*krib*) [ME., *crib*, a manger]. A small frame with inclosed sides for a child's bed. 2. A stall for cattle. **C. Biting.** See *Cribbing* and *Wind-sucking.*

Cribbing (*krib'-ing*) [ME., crib, a manger]. The peculiar wearing of a horses' teeth, due to a habit of biting his crib or manger, and at the same time sucking air into the stomach.

Cribriform (*krib'-re-form*) [*cribrum*, a sieve; *forma*, form]. Similar to a sieve in being perforated, as the *cribriform plate* of the ethmoid bone.

Cribrose (*krib'-rōs*) [*cribrum*, a sieve]. In biology, sieve-like.

Crick (*krik*) [ME., *cricke*, a twist in the neck]. Any painful spasmodic affection, as of the back or neck.

Crico- (*kri'-ko-*) [κρίκος, a ring]. A prefix denoting connection with the cricoid cartilage.

Cricoid (*kri'-koid*) [κρίκος, a ring]. Ring-shaped. **C. Cartilage.** See *Cartilages of the Larynx.*

Cricothyroid (*kri-ko-thi'-roid*) [κρίκος, a ring; θυρεοειδής, shield-shaped]. Pertaining to the cricoid and thyroid cartilages. **C. Artery**, a small branch of the superior thyroid, crossing the crico-thyroid membrane. It is of much surgical importance. See *Arteries, Table of.* **C. Membrane**, a ligamentous membrane that lies between the cricoid and thyroid cartilages. **C. Muscle.** See *Muscles, Table of.*

Cricotomy (*kri-kot'-o-me*) [κρίκος, ring; τέμνειν, to cut]. Surgical laryngotomy by cutting through the cricoid cartilage.

Criminal (*krim'-in-al*) [*crimen*, a crime]. Of the nature of crime. **C. Abortion.** See *Abortion.* **C. Assault.** See *Assault.*

Criminalogy (*krim-in-al'-o-je*). See *Criminology.*

Criminology (*krim-in-ol'-o-je*) [*crimen*, crime; λόγος, science]. The science of crime and of criminals; criminal anthropology; the study of crime as a branch of morbid psychology.

Crino (*kri'-no*) [*crinis*, hair: *pl.*, *Crinones*]. 1. A skin-affection of infants supposed to be due to the presence of a hair-worm. 2. Same as *Comedo.*

Crinosin (*krin'-o-sin*) [*crinis*, hair]. A nitrogenized fat from brain-substance, crystallizing in hair-like threads.

Cripple (*krip'-l*) [ME., *cripel*, a paralytic]. One who is unable to walk or to use his members normally.

Cripps' Operations. See *Operations, Table of.*

Crisis (*kri'-sis*) [κρίσις, a decisive point: *pl.*, *Crises*]. The turning-point in a disease, fever, time of life, etc., and in disease, marking a change either for the better or worse. **C. clitoridiennes**, periods of voluptuous excitement in women suffering with tabes dorsalis, accompanied by vaginal secretion, analogous to the violent erections and spermatorrhea found in men in the initial stages of tabes. **C. gastriques**, Charcot's term for certain gastric symptoms sometimes encountered in the course of progressive locomotor ataxia. The symptoms are shooting pains in the groin and abdomen, ending finally in gastralgia, pains in the shoulders and arms, a quick pulse, and often vertigo and vomiting. **C., Laryngeal**, paroxysmal spasm of the larynx sometimes observed in cases of posterior spinal sclerosis.

Crispate (*kris'-pāt*) [*crispatus*, curl]. In biology, crisped on the margin.

Crista (*kris'-tah*) [L.]. Same as *Crest.* **C. acustica**, a yellow elevation projecting into the equator of the ampulla of the ear. **C. fornicis**, the crest of the fornix; a half-oval or semi-globular mass on the posterior surface of the fornix of the brain. **C. galli**, cock's crest, the superior triangular process of the ethmoid bone **C. helicis**, spina helicis; a projection of the helix above the external auditory meatus. **C. spiralis**, a crest of the limbus of the ear overhanging the internal spiral sulcus of Waldeyer. **C. urethralis.** See *Verumontanum.*

Critchett's Operations. See *Operations, Table of.*

Crith (*krith*) [κριθή, barley-corn]. The assumed unit of mass and weight for hydrogen, and hence for gases generally. It is .0896 of a gram or 1.37 grains.

Critical (*krit'-ik-al*) [κρίσις, a decisive point]. 1. Pertaining to a crisis in disease, period of life, etc. 2. A qualification applied to temperature and to pressure in relation to gases.

Crocein Scarlet (*kro'-se-in skar'-let*). See *Pigments, Conspectus of.*

Crochet (*kro-sha'*) [Fr., dim. of *croc*, a hook]. A hook. **C. of Uncinate Gyrus**, the narrow portion of the uncinate gyrus at its anterior extremity which is reversed in the form of a hook.

Crocin (*kro'-sin*), $C_{16}H_{18}O_8$. Polychroit; the coloring-matter of *Saffron.* It is a deliquescent, orange red, amorphous substance, odorless, with a sweetish taste, freely soluble in water and diluted alcohol.

Crocitin (*kro'-sit-in*). A coloring-substance of saffron; a red powder, easily soluble in alcohol, but not in water or ether.

Crocker's Calamin Liniment. A liniment used in the treatment of dermatitis. It consists of prepared

calamin powder, 2 scruples; powdered zinc oxid, ½ dram; olive oil and lime-water each one ounce. It is applied on soft rags.

Crocus (*kro'-kus*) [κρόκος, crocus, saffron]. Saffron. The stigmata of the flowers of *C. sativus*. (This should not be confounded with American Saffron, Carthamus tinctorius.) It is an aromatic stimulant and emmenagogue, commonly used as a cooling-agent. **C., Tinct.**, 10 per cent. in strength. Dose ʒj–ij; of the drug, gr. v–xx, in infusion.

Crocydismus (*kro-sid-iz'-mus*) [κροκυδίζειν, to pick at]. Same as *Carphology*.

Croft's Operations. See *Operations, Table of.*

Crooke's Tube. A highly exhausted vacuum-tube used in producing X-rays.

Crop (*krop*) [ME., *crop*, the craw of a bird]. The craw or pouch of the esophagus of a bird. **C.-bound**, a disease of poultry in which the fowls are unable to pass the food from the crop into the gizzard, and the former becomes filled with food, hanging like a bag in front of the bird.

Crosby's Operation. See *Operations, Table of.*

Cross (*kros*) [*crux*, a cross]. In biology, a cross-breed in plants, the result of cross-fertilization. **C.-birth**, shoulder-presentation, or other presentation requiring version. **C.-circulation.** See *Circulation*. **C.-eye.** See *Strabismus*. **C.-fertilization**, in biology, the fertilization of the ovules of one species by the seed-germs of another. **C.-knee.** See *Genu valgum*. **C.-leg**, a deformity that sometimes follows double hip-joint disease; the legs are crossed in walking. **C.-legged Progression**, a method of walking in which one foot gets over or in front of the other. It is a symptom of certain cord-lesions.

Crossed (*krosd*) [*crux*, a cross]. Having the shape of a cross. Applied to alternate sides of the body. **C. Anesthesia.** See *Anesthesia*. **C. Hemiplegia.** See *Stauroplegia*. **C. Paralysis.** See *Paralysis*. **C. Reflexes**, an exception to the usual law of reflex movements, in which, *e. g.*, excitation of one fore-limb induces movement in the opposite hind-limb. See *Reflexes, Table of.*

Crotalin (*kro'-tal-in*) [κρόταλον, a rattle]. An albuminous body contained in the poison of the cobra. It is not coagulable by heat at 212° C.

Crotalus (*kro'-tal-us*) [κρόταλον, a rattle]. A genus of serpents, including the typical rattlesnakes. **C. Poison.** The virus of the rattlesnake, used as a remedy by homeopathists.

Crotchet (*krotch'-et*) [ME., *crochett*, a little hook]. A hook used in extracting the fetus after craniotomy.

Croton (*kro'-ton*) [κρότων, a tick]. A great genus of euphorbiaceous plants. **C. eleuteria**, yields cascarilla. **C. tiglium**, croton oil; **C. niveus**, a part of the product called copalche bark. **C. Aldehyd**, C_4H_8O, a compound obtained by the condensation of acetaldehyd when heated with dilute HCl, with water and zinc chlorid; it is a liquid, soluble in water, possessing an irritating odor; it boils at from 104° to 105° and has a sp. gr. of 1.033 at 0°. In the air it oxidizes to crotonic acid. **C. Chloral.** See *Chloral butylicum*. **C. Oil.** See *Tiglii, Oleum*.

Crotonol (*kro'-ton-ol*) [κρότων, a tick], $C_9H_{14}O_2$. An acid, aromatic principle in croton oil, believed to be the vesicant constituent of the oil.

Croup (*kroop*) [AS., *krópan*, to cry aloud]. Membranous croup; pseudo-membranous croup; true croup; a disease of the larynx and trachea of children, prominent symptoms of which are a peculiar cough, and difficulty in breathing; it is often accompanied by the development of a membranous deposit or exudate upon the parts. There is doubt as to the real nature of the disease, some contending that it is laryngeal diphtheria, while others believe it a special type of disease. See also *Roup*. **C., Catarrhal**, an affection of childhood characterized by paroxysms of intense dyspnea and a peculiar, ringing, metallic cough. **C., False**, catarrhal or spasmodic croup; catarrhal laryngitis. **C., Spasmodic.** See *C., Catarrhal*.

Crown (*krown*) [ME., *crowne*, a crown]. See *Corona*. **C. Glass**, a kind of glass used in optics. **C. Leather.** See *Leather*. **C.-setting**, the operation of uniting an artificial crown to the root of a natural tooth; the operation being commonly known by the misnomer "pivoting." **C. of a Tooth**, the exposed part of the tooth above the gums, covered with enamel. **C.-work**, the adaptation of an artificial crown of porcelain or gold on the cervical portion of the natural root of a tooth. **C.-yellow.** Same as *Chrome-yellow*.

Crucial (*kru'-shal*) [*crux*, a cross]. Resembling or pertaining to a cross, as a *crucial incision*.

Cruciate (*kru'-she-āt*) [*crux*, a cross]. In biology, shaped like a Greek cross.

Crucible (*kru'-sib-l*) [*crucibulum*, a melting pot]. A vessel of conical shape in which substances are exposed to the heat of a fire or furnace; it is formed of clay or earthenware, porcelain, iron, black lead or plumbago or graphite, silver, gold or platinum.

Crucifixion Attitude (*kru-se-fik'-shun*). See *Attitude*.

Crucing (*kru'-sing*). See *Block Teeth*.

Cruels (*kroo'-elz*). Synonym of *Scrofula*.

Cruentin (*kru-en'-tin*) [*cruentus*, bloody]. A precipitate obtained by boiling defibrinated blood with strong H_2SO_4, adding water, and filtering.

Crull's Line. See *Line*.

Cruorin (*kru'-or-in*) [*cruor*, blood]. Synonym of *Hemoglobin*.

Crupper (*krup'-er*) [Fr., *croupe*, the rump]. The buttocks of a horse. **C.-bone**, the coccyx.

Crura (*kru'-rah*) [Plural of *crus*, a leg]. A name applied to certain parts of the body, from their resemblance to legs or roots. **C. cerebelli**, the peduncles of the cerebellum, superior, middle, and inferior. **C. cerebri**, the peduncles of the cerebrum. **C. of Diaphragm**, the muscular bundles arising from the vertebræ, etc., and inserted into the central tendon. **C. of Penis**, the corpora cavernosi.

Crural (*kru'-ral*) [*crus*, a leg]. Pertaining to the thigh. **C. Arch.** See *Ligament*. **C. Hernia**, femoral hernia. **C. Ring**, the femoral ring; the upper opening of the temporal canal, bounded in front by Poupart's ligament and the deep crural arch, behind by the pubis, internally by Gimbernat's ligament, externally by a fibrous band separating it from the femoral ring.

Crureus (*kru'-re-us*) [L.]. One of the muscles of the thigh. See *Muscles, Table of.*

Crus (*krus*) [L.]. The leg; structures resembling a leg. See the plural, *Crura*.

Cruso-creatinin (*kru-so-kre-at'-in-in*), $C_8H_8N_4O$. A leucomaïne, isolated from muscle-tissue. In this and other leucomaïnes of the Creatinin Group, as well as in those of the Uric Acid Group, hydrocyanic acid plays an important part in the molecular structure of the bases. Very little is yet known as to the function of this Cyanogen Group in relation to the vital activity of tissues, but recent investigations seem to show that the seat of the cyanogen-formation lies within the nucleated cell, and is intimately connected with the functions of the nuclein-molecule. A number of leucomaïnes of fresh muscle-tissue are credited with possessing an intensely poisonous action; and, if this be the case, any accumulation of such bases in the

system, due to interference with elimination, may cause very serious disturbances.

Crust (*krust*) [*crusta*, a crust]. An irregular, dried mass of exudation, or other effete products of disease of the skin. It varies much in appearance, according to the condition that produces it. It may be adherent or loose, thin and flat, or thick and craggy, light-yellow or blackish in color.

Crusta (*krus'-tah*) [L., a crust]. The ectal portion of the crus cerebri. **C. lactea.** See *Achor*. Also synonym for *Eczema*. **C. petrosa,** a thin layer of bone covering the fang of a tooth. **C. phlogistica,** the yellowish layer of the upper stratum of a blood-clot coagulating slowly.

Crustaceorubrin (*krus-ta-she-o-ru'-brin*) [*crustata*, shell-fish; *ruber*, red]. In biology a red coloring-matter of crustaceans.

Crustaceous (*krus-ta'-she-us*) [*crusta*, crust]. In biology, having a thin, hard, brittle, crust-like shell or coating.

Crusted (*krus'-ted*) [*crusta*, a crust]. Having crusts or scabs. **C. Ringworm.** Synonym of *Favus*. **C. Scall.** Synonym of *Impetigo*.

Crusting (*krus'-ting*) [*crusta*, a crust]. The formation of crusts or scabs.

Crutch (*kruch*) [ME., *crutche*, a crutch]. A staff reaching from the axilla to the ground, for the purpose of aiding the progression of lame or crippled persons. **C. Paralysis,** paralysis of an upper extremity due to the pressure of the crutch-head upon the nerves of the axilla.

Cruveilhier's Atrophy. See *Diseases, Table of.* **C. Disease.** See *Diseases, Table of.* **C. Fascia,** the superficial layer of the perineal fascia. **C. Plexus.** See *Plexuses, Table of.* **C. Paralysis.** Same as *C. Disease*.

Cry (*kri*) [ME., *crien*, to cry]. The utterance of an inarticulate vocal sound, or the sound so uttered; the sound of the voice in lamentation.

Cryesthesia (*kri-es-the'-ze-ah*) [κρύος, cold; αἴσθησις, sensation]. Undue sensitiveness to cold.

Crypt (*kript*) [κρύπτη, concealed]. A small sac or follicle. **Crypts of Lieberkühn,** minute tubular depressions of the mucous membrane of the small intestine.

Crypta (*krip'-tah*) [κρύπτη, concealed: *pl.*, *Cryptæ*]. Same as *Crypt*.

Cryptic (*krip'-tik*) [κρυπτικός, hidden]. In biology, a term used in the study of mimicry, for such colors as enable the animal to escape enemies, or to approach its prey; protective, *procryptic*; aggressive, *anticryptic* resemblances. Similar effects may be produced by the use of foreign objects with which the animal covers itself to a greater or lesser extent, *allocryptic*. (Poulton.)

Cryptidin (*krip'-tid-in*) [κρυπτός, hidden], $C_{11}H_{11}N$. An alkaloid formed by the dry distillation of quinin.

Cryptitis (*krip-ti'-tis*) [κρύπτη, concealed; ιτις, inflammation]. Inflammation of a crypt, or of crypts. **C., Urethral,** phlegmasia of the mucous follicles of the urethra.

Cryptobranchiate (*krip-to-brangk'-e-āt*) [κρυπτός, hidden; βράγχια, gills]. In biology, having concealed gills.

Cryptocephalus (*krip-to-sef'-al-us*) [κρυπτός, hidden; κεφαλή, head]. A monster fetus with an imperfectly-formed and concealed head.

Cryptodidymus (*krip-to-did'-im-us*) [κρυπτός, hidden; δίδυμος, twin]. A teratism in which one fetus is concealed within another.

Cryptodirous (*krip-to-di'-rus*) [κρυπτός, hidden; δειρή, neck]. In biology, having a concealed neck.

Cryptogam (*krip'-to-gam*) [κρυπτός, hidden; γάμος, marriage]. In biology, a general term applied to any plant below Phanerogamia; any flowerless plant is called a cryptogam.

Cryptogamia (*krip-to-ga'-me-ah*) [κρυπτός, hidden; γάμος, marriage]. A division of the vegetable kingdom comprising all plants with concealed sexual organs, without pistils or stamens.

Cryptogamic (*krip-to-gam'-ik*). See *Cryptogamous*.

Cryptogamous (*krip-tog'-am-us*) [κρυπτός, concealed; γάμος, marriage]. Belonging to the cryptogamia; having the processes of the reproductive function obscured or concealed.

Cryptogenetic (*krip-to-jen-et'-ik*) [κρυπτός, concealed; γεννάειν, to beget]. Same as *Cryptogamous*.

Cryptolith (*krip'-to-lith*) [κρύπτη, crypt; λίθος, stone]. A concretion or calculus formed within a crypt.

Cryptophanic, or Kryptophanic Acid (*krip-to-fan'-ik*) [κρυπτός, concealed; φαίνειν, to bring to light], $C_{10}H_{18}N_2O_{10}$. An acid said to occur in a free state in urine, though regarded by Landwehr as an animal gum.

Cryptophthalmia (*krip-toff-thal'-me-ah*). Same as *Cryptophthalmos*.

Cryptophthalmos (*krip-toff-thal'-mos*) [κρυπτός, hidden; ὀφθαλμός, the eye]. 1. Congenital union of the eyelids, usually over imperfect eyes. 2. A person who has congenital union of the eyelids.

Cryptopia (*krip-to'-pe-ah*). Same as *Cryptopin*.

Cryptopin (*krip'-to-pin*) [κρυπτός, hidden; ὀπιον, opium], $C_{21}H_{23}NO_5$. One of the alkaloids of opium, colorless and odorless. It is said to be anodyne and hypnotic, but it is less safe than morphin. Dose, ½ gr. Unof.

Cryptopyic (*krip-to-pi'-ik*) [κρυπτός, hidden; πῦον, pus]. Characterized by concealed suppuration.

Cryptorchid, or Cryptorchis (*krip-tor'-kid, -kis*) [κρυπτός, hidden; ὄρχις, testicle]. A person with retained testicles, *i. e.*, not descended into the scrotum.

Cryptorchidism (*krip-tor'-kid-izm*) [κρυπτός, hidden; ὄρχις, testicle]. Retention of the testes in the abdominal cavity.

Cryptorchism (*krip-tor'-kizm*). See *Cryptorchidism*.

Cryptoscope (*krip'-to-skōp*) [κρυπτός, hidden; σκοπεῖν, to inspect]. See *Fluoroscope*.

Cryptozygous (*krip-toz'-ig-us*) [κρυπτός, hidden; ζυγόν, arch]. Having the dental arches or zygomata concealed from view when the skull is viewed from above.

Crystal (*kris'-tal*) [κρύσταλλος, clear ice]. In chemistry, a substance that assumes a definite geometric form. **C., Charcot-Leyden.** See *Charcot-Leyden*. **C., Charcot's,** minute colorless crystals found in the sputa of asthmatic and bronchitic patients and others. They are said to consist of tyrosin, or according to some, of mucin. **C., Violet.** See *Pigments, Conspectus of*.

Crystalli (*kris-tal'-i*). Synonym of *Chicken-pox*.

Crystallin (*kris'-tal-in*) [κρύσταλλος, clear ice]. The globulin of the crystalline lens.

Crystalline (*kris'-tal-ēn* or *-in*) [κρύσταλλος, crystal]. Like a crystal. **C. Lens.** See *Lens*. **C. Swelling.** See *Sœmmering*.

Crystallitis (*kris-tal-i'-tis*). See *Phakitis*.

Crystallization (*kris-tal-iz-a'-shun*) [κρύσταλλος, ice]. The process by which the molecules of a substance arrange themselves in geometric forms when passing from a gaseous or a liquid to a solid state. **C., Water of,** the water of salts that cannot be extracted without destruction of their crystalline nature.

Crystallized (*kris'-tal-izd*) [κρύσταλλος, ice]. Formed into crystals. **C. Green.** Same as *Iodin Green*.

Crystallography (*kris-tal-og'-ra-fe*) [κρύσταλλος, crystal: γράφειν, to write]. The science of crystals, their formation, etc.

Crystalloid (*kris'-tal-oid*) [κρύσταλλος, crystal; εἶδος, likeness]. Having a crystalline structure, as distinguished from colloid. In biology, one of the crystal-like proteid bodies found in seeds, tubers, etc.

Ctenes (*ten'-ez*) [κτένες]. Incisor teeth.

Ctenocyst (*ten'-o-sist*) [κτείς (κτεν), comb; κύστις, a bladder]. In biology, applied to the auditory vesicles of ctenophorans.

Ctenoid (*ten'-oid*) [κτείς (κτεν-), comb; εἶδος, like]. In biology, pectinate or comb-like.

Cubeb, or Cubeba (*ku'-beb*, or *ku be'-bah*) [Pers., *kabāba*, cubeb: *gen.*, *Cubebæ*]. The unripe fruit of *Piper Cubeba*, cultivated in Java. Its properties are due to a volatile oil, $C_{15}H_{24}$, and an organic acid. It is an aromatic stimulant, diuretic in small doses, and is useful in affections of the bladder and urethra. It is a good remedy (applied by insufflation or smoked in cigarets) for diseases of the fauces, catarrh of the air-passages, etc. Dose gr. x–℥ij. **C., Fld. Ext.**, alcoholic. Dose ♏v–xxx. **C., Oleoresina**, ethereal. Dose ♏v–xxx. **C., Ol.**, the volatile oil. Dose ♏v–xx. **C., Tinct.**, 20 per cent. in strength. Dose ♏x–℥iij. **C., Trochisci**, oleoresin gr. ½, oil of sassafras gr. $\frac{1.5}{100}$, ext. of glycyrrhiza gr. iv, acacia gr. ij, syr. of tolu q.s., in each troche. Dose j–iij.

Cubebene (*ku'-beb-ēn*) [*cubeb*], $C_{20}H_{16}$. The light portion of the essential oil of cubebs.

Cubebic Acid (*ku-beb'-ik*) [*cubeb*], $C_{13}H_{14}O_7$. A resinous acid body from cubebs; actively diuretic and cathartic. Unof.

Cubebin (*ku-beb'-in*) [*cubeb*], $C_{10}H_{10}O_3$. An odorless crystalline substance obtained from cubebs.

Cubic (*ku'-bik*) [κύβος, a cube]. Pertaining to a cube. **C. Space** (of air), the amount of space required by persons in health and in disease. In hospitals about 1000 cubic feet to each patient is necessary for proper ventilation.

Cubital (*ku'-bit-al*) [κύβος, a cube]. Relating to the forearm, to the elbow, or to the ulna.

Cubitocarpal (*ku'-bit-o-kar'-pal*) [κύβος, a cube; καρπός, the wrist]. Relating to the forearm and to the carpus.

Cubitoradial (*ku'-bit-o-ra'-de-al*) [κύβος, a cube; *radius*, a staff]. Relating to both the ulna and the radius.

Cubitus (*ku'-bit-us*) [*cubitus*, the elbow]. The forearm.

Cubitus (*ku'-bit-us*) [*cubare*, to lie down]. A bed; a couch.

Cuboid (*ku'-boid*) [κύβος, cube; εἶδος, resemblance]. Resembling a cube. **C. Bone**, a bone of the foot situated at the outer anterior part of the tarsus.

Cuca (*koo'-kah*). See *Erythroxylon*.

Cucullate (*ku-kul'-āt*) [*cucullus*, a cap, hood]. In biology, hooded.

Cucullus (*ku-kul'-us*) [L., a hood]. 1. In biology, a hood-shaped formation of the head. 2. Synonym of *Whooping-cough*.

Cucumber, Squirting. See *Elaterium*.

Cucumis (*ku'-ku-mis*) [L., a cucumber]. A genus of plants. **C. colocynthis.** See *Colocynth*.

Cucurbit (*ku-ker'-bit*) [*cucurbita*, a gourd]. 1. A cupping-glass. [Old.] 2. The body of an alembic.

Cucurbitation (*ku-ker-bit-a'-shun*) [*cucurbitatio*, a cupping]. The operation of cupping.

Cud (*kud*) [AS., *cudde*]. The regurgitated food of ruminants. **C.-weed** (*kud-wēd*). See *Life Everlasting*.

Cudbear (*kud'-bār*) [After Dr. *Cuthbert* Gordon]. A purplish-red powder, nearly identical with *Orchil*, *q.v.* From it the *Tinctura persionis*, and *Tinctura persionis composita*, N. F., are prepared. Both are used mainly in coloring various pharmaceutic preparations. See *Pigments*, *Conspectus of*.

Cuichunchulli [Peruvian]. The root of *Ionidium parviflorum*; said to be diaphoretic, diuretic, sialagogue, emetic, and cathartic; it is useful in elephantiasis. Unof.

Cuirass (*kwe-ras'*) [Fr.]. A close-fitting or immovable bandage for the front of the chest. **C. Cancer**, a large, flat cancerous growth upon the front of the chest.

Cul-de-sac (*kul'-de-sak'*) [Fr. *cul*, the bottom; *de*, of; *sac*, bag]. A cavity of the body closed at one end. **Douglas's C.**, a pouch between the anterior wall of the rectum and the posterior wall of the uterus, formed by the reflection of the peritoneum. It is called, also, the *recto-uterine* or *retro-uterine cul-de-sac*.

Culex (*ku'-leks*) [L., a gnat]. A mosquito. A well-known insect that punctures the skin to obtain its food, the blood. See *Parasites* (*Animal*), *Table of*.

Culicifuge (*ku-lis'-if-ūj*) [*culex*, a gnat; *fugare*, to drive away]. An agent that prevents the biting of mosquitoes; as oil of pennyroyal.

Cullen's Theory. A theory as to the origin of gout, which he claims to be primarily an affection of the nervous system.

Culm (*kulm*) [*culmus*, a stalk]. In biology, a hollow-jointed stem.

Culmen (*kul'-men*) [L., the summit]. The cacumen; a portion of the cerebellum situated to the cephalic side of the vermis. In biology, the highest middle lengthwise line of the bill of a bird.

Cultrate (*kul'-trāt*) [*culter*, a knife]. Sharp-edged; also cultriform.

Cultriform (*kul'-trif-orm*) [*culter*, a knife; *forma*, shape]. See *Cultrate*.

Culture (*kul'-chūr*) [*colo*, *cultum*, to till, cultivate]. A name loosely and indiscriminately applied to the act, the liquid or solid medium used, and the product of the process, in culture-experiments upon microörganisms. The **culture-media** are of various kinds; mineral liquids (see *Raulin's Liquid*, *Cohn's Liquid*, etc.), bouillons of various kinds, gelatinous fluids, gelose, potato, serum, etc. These media are first sterilized, usually by heat (see *Oven*, *Sterilization*), but possibly also by chemicals, by filtration, by cold, by steam, etc. The infectious matter is then taken upon a sterilized platinum needle-point, pipet, or other instrument, and transferred to the culture-medium. When the latter is of semi-solid consistency, as gelatin, the inoculation by the needle is called *Stab-culture*, *Stichcultur* (Ger.), or *par piqûre* (Fr.), the needle being thrust into the substance. When smeared over the surface, it is called *smear-culture*, *Strichcultur* (Ger.), or *en stries* (Fr.). The macroscopic features of the subsequent development give important means of differentiation. For example, when the inoculated matter forms a mass in the medium, pointed below and rising like a nail-head above, it is called *en clou*, nail-shaped. Then the medium may be liquefied or not, variously colored, peculiarly changed, sediment deposited or not, etc. Subsequent microscopic examination of the culture-product, inoculation-experiments upon animals, etc., complete the study. *Culture-bulbs*, *culture-cells*, *culture-fluids*, *culture-media*, *culture-ovens*, *culture-tubes*, etc., are among the equipments of the bacteriologist. **C.-oven.** See *Oven*.

Culver's Physic, or Root (*kul'-verz fiz'-ik* or *root*) See *Leptandra*.

Cumberland Disease. An Australian term for *Anthrax*, *q. v.*

Cumene (*ku'-mēn*) [*cuminum*, cumin], C_9H_{12}. Isopropyl benzene; a compound made by distilling cumic acid with lime. It boils at 153° C., and its specific gravity at 0° C. is 0.879.

Cumic (*ku'-mik*) [*cuminum*, cumin]. Derived from or pertaining to cumin. **C. Acid.** See *Acid.* **C. Aldehyd.** See *Cuminol.*

Cumidin (*ku'-mid-in*) [*cuminum*, cumin], $C_9H_{13}N$. A methylated homologue of anilin. It melts at 63° C., boils at 235° C. **C.-red.** See *Pigments, Conspectus of.*

Cumin (*ku'-min*) [*cuminum*, cumin]. A fennel-like, cultivated, umbelliferous plant, *Cuminum cyminum*, found native in Egypt and Syria. The fruit is agreeably aromatic and possesses well-marked stimulating and carminative properties. Its active principle is an oil.

Cuminol (*ku'-min-ol*) [*cuminum*, cumin; *oleum*, oil], $C_{10}H_{12}O$. Cumic aldehyd, occurs in Roman caraway oil, and in oil of *Cicuta virosa*, or water hemlock, etc. It possesses an aromatic odor and a burning taste, has a specific gravity of 0.973 at 13° C., and boils at 235° C. (430° F.).

Cumulative (*ku'-mu-la-tiv*) [*cumulare*, to heap up]. Increasing; adding to. **C. Action**, or **Effect**, the production of a noteworthy and sudden result, after the administration of a considerable number of comparatively ineffective doses. The possible cumulative effect of certain drugs is one of the sources of danger that attend their administration.

Cumulus (*ku'-mu-lus*) [L., a heap]. A heap or mound. **C. ovigerus.** See *Ovule.*

Condurango (*kun-du-ran'-go*). See *Condurango.*

Cuneate (*ku'-ne-āt*) [*cuneus*, a wedge]. Wedge-shaped.

Cuneiform (*ku-ne'-if-orm*) [*cuneus*, a wedge; *forma*, shape]. Wedge-shaped, cuneate. **C. Bones**, three wedge-shaped bones at the anterior part of the tarsus. **C. Columns.** See *Columns of Burdach.*

Cuneihysterectomy (*ku-ne-i-his-ter-ek'-to-me*) [*cuneus*, wedge; *ὑστέρα*, the womb; *ἐκτομή*, a cutting out]. The excision of a wedge-shaped piece of uterine tissue, a procedure that has been advocated in the treatment of anteflexion of the uterus.

Cuneus (*ku'-ne-us*) [L., a wedge]. 1. A wedge. 2. A wedge-shaped gyrus on the mesial aspect of the occipital lobe.

Cunicular (*ku-nik'-u-lar*) [*κούνικλος*, a subterranean passage]. Furrowed.

Cuniculate (*ku-nik'-u-lāt*). Same as *Cunicular.*

Cuniculus (*ku-nik'-u-lus*) [L.]. The burrow of the itch-insect.

Cunila (*ku-ni'-lah*) [L., a plant]. A genus of labiate plants of the U. S. **C. mariana**, dittany; a labiate plant of N. America. It is aromatic, carminative, and gently stimulant. Unof.

Cunisset's Test. See *Tests, Table of.*

Cunnilinguist (*kun-i-ling'-gwist*) [*cunnus*, the vulva; *lingere*, to lick]. One who practices licking the vulva. See *Passivism.*

Cunnus (*kun'-us*) [L.: *gen.*, *Cunni*]. The vulva.

Cup (*kup*) [AS., *cuppe*, a cup]. 1. To bleed. 2. A cupping-glass. **C., Dry**, a cup for drawing the blood to the surface merely. **C., Favus**, a depression in a favus scale surrounding a hair. **C., Physiologic.** See *Funnel, Vascular.* **C., Wet**, a cup for abstracting blood through incisions in the skin.

Cuphosis (*ku-fo'-sis*). See *Kyphosis.*

Cupola (*ku'-po-lah*) [*cupola*, a dome]. The dome-shaped extremity of the canal of the cochlea. Also, the summit of a solitary gland of the small intestines.

Cupped (*kupt*) [AS., *cuppe*, a cup]. Having the upper surface depressed; applied to the coagulum of blood after phlebotomy. **C. Disc**, excavation of the fundus oculi, normally present in slight degree, but pathologic if excessive.

Cupping (*kup'-ing*) [AS., *cuppe*, a cup]. A method of blood-derivation by means of the application of cupping-glasses to the surface of the body. **C., Dry**, without the abstraction of blood—a form of counter-irritation. This is used mainly in inflammatory affections of the lung. **C.-glass**, a small bell-shaped glass capable of holding three to four ounces, in which the air is rarefied either by heat or exhaustion, and the glass applied to the skin, either with or without scarification of the latter. **C., Wet**, with the abstraction of blood after scarification.

Cuprea Bark (*ku'-pre-ah*) [*cupreus*, coppery; ME., *barke*, bark]. The bark of certain species of *Remijia*, *q. v.*; it affords quinin and the associated alkaloids.

Cuprum (*ku'-prum*) [L.: *gen.*, *Cupri*]. See *Copper.*

Cupule (*ku'-pūl*) [*cupula*, a little cup]. In biology, a cup-shaped organ, as an acorn-cup, or the sucking apparatus of an insect's foot.

Curaçao (*ku-ra-so'*) [Island of *Curaçao*, north of Venezuela]. A cordial or elixir prepared from brandy, and variously flavored, principally with orange-peel. It is sometimes used as a vehicle for certain medicines.

Curaçoa (*ku-ras-o'-ah*). See *Curaçao.*

Curage (*ku-rahzh'*) [Fr.]. Curettage; cleansing of the eye, or of an ulcerated or carious surface.

Curara (*koo-rah'-rah*), **Curare** (*koo-rah-rę*), **Curari** (*koo-rah'-re*) [S. Am.]. Woorara. Urari. A vegetable extract obtained from *Paullinia curare* and certain members of the Strychnos family. It is a powerful paralyzant of the motor nerves. Its active principle is *Curarin*, $C_{10}H_{15}N$ (*Preyer*), dose gr. $\frac{1}{200}$–$\frac{1}{100}$, hypodermatically. It is used in S. America and elsewhere as an arrow-poison. Toxic doses cause death by paralysis of the organs of respiration. It has been reported effectual in two cases of hydrophobia, and has been successful in the treatment of tetanus. Dose by hypodermatic injection gr. $\frac{1}{20}$–$\frac{1}{5}$. **Injectio Curare Hypodermatica**, 5 grains in 60 minims. Dose ♏j–vj.

Curarin (*koo-rah'-rin*). See *Curara.*

Curarism, Curarization (*koo-rah'-rism*, *koo-rah-ris-a'-shun*) [S. A., *curare*]. The state of one subjected to the full influence of curare by hypodermatic injection. The voice and power of motion are generally abolished, but not the sensibility to pain.

Curatio (*ku-ra'-she-o*) [*cura*, care]. The treatment and nursing of a patient.

Curative (*ku'-rat-iv*) [*cura*, care]. Having a healing tendency.

Curb (*kerb*) [ME., *courben*, to bend]. A hard and callous swelling on various parts of a horse's leg, as the hinder part of the hock, the inside of the hoof, etc.

Curcas (*ker'-kas*). See *Barbadoes Nut.*

Curcuma (*ker'-ku-mah*) [L.]. Turmeric. The rhizome of *Curcuma longa* of India. Its action is similar to that of ginger. It is employed as a yellow dye; in chemistry, as a test for alkalies; and in pharmacy, occasionally, to color ointments and other preparations.

Curcumin (*ker'-ku-min*) [*curcuma*, saffron], $C_{14}H_{16}O_4$. The coloring-matter of turmeric; it crystallizes in orange-yellow prisms, and melts at 177° C. It dissolves in the alkalies to brownish-red salts. See *Pigments, Conspectus of.*

Curd (*kerd*) [ME., *curd*, curds]. The coagulum of milk that separates on the addition of rennet or an acid.

Curdling Ferment, Test for. See *Tests, Table of.*

Cure (*kūr*) [*cura*, care]. The successful treatment of a disease; also, a system of treatment. See *Faith-cure, Mind-cure, Grape-cure, Water-cure* (see *Hydropathy*), *Hunger-cure, Rest-cure*, etc. **C.-all**, a *Panacea, q. v.* **C., Herb-juice**, a method of treating certain intestinal and gastric troubles. It consists in drinking daily the fresh juice of various herbs and wild plants. **C., Potato**, Cameron's method of treating foreign bodies in the alimentary tract by the ingestion of mashed potatoes. The body becomes imbedded in the potato-mass that is formed. **C., Shaking-.** See *Shaking-cure.*

Curet (*ku-ret'*) [Fr.]. An instrument shaped like a spoon or scoop, for detaching substances from one another, as the placenta from the uterine wall, etc.

Curettage (*ku-ret'-āj*). See *Curage.*

Curling's Operation. See *Operations, Table of.* **C. Ulcer.** See *Ulcer* and *Diseases, Table of.*

Currant (*ker'-ant*) [ME.]. 1. *Uva passa minor;* the small, dried, seedless grapes of Greece; formerly used in pharmacy. 2. The fruit of various species of *Ribes*, as *R. nigrum*, the black currant, preparations of which have long been employed in the home-treatment of sore-throats. Unof. **C.-jelly Clot**, a soft variety of clot seen in thrombi, the fibrin being stained by the presence of red cells.

Current (*ker'-ent*) [*currere*, to run]. In electricity, a term applied to the transference of electric force, which is arbitrarily likened to the flow of a liquid in a confined passage. **C., Action**, the physiologic current obtained during the activity of a muscle or nerve. **C., After**, a current produced in nervous or muscular tissue when a constant current which has been flowing through the same has been stopped. **C., Alternating**, a term applied to a current which, by means of an interrupter, is alternately direct and reverse. This current is employed (in New York) for the execution of capital sentences. **C., Ascending**, the current formed by placing the positive electrode upon the periphery of a nerve and the negative upon the surface over the nerve-center in the spinal cord. **C., Axial**, a current passing through a nerve in the direction opposite to that taken by the normal impulse. **C., Battery**, a galvanic current. **C., Blood**, the stream of blood as it flows from and back to the heart. **C., Centrifugal**, a descending current. **C., Centripetal**, an ascending current. **C., Constant.** See *C., Continuous.* **C., Continuous**, a constant, uninterrupted current in one direction. **C., Critical**, the current at which a certain result is reached. **C., Demarcation**, the muscle-current of Du Bois Reymond; the current obtained from an injured muscle. **C., Derived**, a current drawn off by a derivation-wire from the main current. **C., Descending**, one passing through a nerve centrifugally, the anode being placed proximally, the cathode distally. **C., Diffusion of**, the power of a galvanic current to extend its influence in all directions, the same power never being limited to the two electrodes. **C., Direct**, a current constant in direction, in contradistinction to an alternating current. **C., Electrotonic**, in electro-therapeutics, a current due to internal polarization in the nerve-fiber between the conducting core of the nerve and the enclosing sheath. **C., Faradic**, the current produced by an induction-coil, or by a magneto-electric machine. **C., Franklinic**, a term sometimes used in electro-therapeutics for a current produced by the action of a frictional electric machine. **C., Galvanic**, a current generated by the decomposition of acidulated water by means of metallic plates. **C., Induced.** See *C., Secondary.* **C., Interrupted**, a current that is alternately opened and closed. **C., Inverse**, an ascending or centripetal current. **C., Labile**, moving one or both electrodes over the surface treated. **C., Muscular or Nerve, Alteration Theory of**, a theory proposed by L. Hermann, in which the currents of nerve or muscular fibers are regarded as a result of their alteration from any original condition; **Molecular Theory of**, a theory proposed by Du Bois Reymond, according to which every nerve or muscular fiber is regarded as composed of a series of electro-motive molecules arranged in series and surrounded by a neutral conducting fluid. **C., Reversed**, that produced by changing the poles. **C., Secondary**, a momentary current produced when a coil of insulated wire is introduced within the field of another coil, through which a continuous current is passing. When the coil is removed from the field there is a momentary current in the opposite direction. **C., Secretion**, a current following stimulation of the secretory nerves. **C.-selector**, a device for altering the strength of a current. **C., Stabile**, a current applied with both electrodes in a fixed position. **C., Swelling**, one that begins weak and is gradually made stronger, and again gradually diminished. **C., To and Fro**, a Faradic current. **C., Voltaic**, the continuous current.

Curry (*ker'-e*) [Canarese, *kari*]. A sauce, originally Anglo-Indian, containing turmeric, coriander, capsicum, garlic, ginger, etc.; it is much employed as a relish or appetizer, especially in warm countries; also, a dish seasoned with the foregoing.

Curschmann's Spirals. Corkscrew-like threads of mucin contained in the small, thick pellets that are expectorated during or at the close of an asthmatic paroxysm. They are supposed to be casts of the bronchioles, and have also been seen in simple bronchitis and in pneumonia. **C. Theory.** See *Bronchiolitis exudativa.*

Curtate (*ker'-tāt*) [*curtatus*, shortened]. See *Expectation of Life.* **C. Expectation.** See *Expectation of Life.*

Curtman's Test. See *Tests, Table of.*

Curvature (*ker'-vat-ūr*) [*curvare*, to curve]. A bending or curving. **C., Angular.** See *Spondylitis.* **C., Potts'**, angular curvature of the spine, with a posterior projection. **C. of Spine.** See *Caries, Kyphosis, Scoliosis.*

Curve (*kerv*) [*curvus*, bent]. A bending or flexure. **C. of Carus**, in obstetrics, a portion of the arc of a circle the circumference of which lies in the median line of the pelvis, the center being at the symphysis pubis; the curve is that part of the arc that lies between the planes of the inlet and the outlet.

Curvicaudate (*ker-ve-kaw'-dāt*) [*curvus*, curved; *cauda*, a tail]. In biology, having a curved tail.

Curvidentate (*ker-ve-den'-tāt*) [*curvus*, curved; *dens*, tooth]. In biology, having curved teeth.

Curvifoliate (*ker-ve-fo'-le-āt*) [*curvus*, curved; *folium*, leaf]. In biology, having curved leaves.

Curvinervate (*ker-ve-ner'-vāt*) [*curvus*, curved; *nervus*, nerve]. In biology, applied to leaves the veins of which are curved and nearly parallel in their course.

Curvirostral (*ker-ve-ros'-tral*) [*curvus*, curved; *rostrum*, beak]. In biology, having a crooked bill or beak.

Curvoisier and Von Hacker's Method. See *Operations, Table of.*

Cusack's Operation. See *Operations, Table of.*

Cuscamidin (*kus-kam'-id-in*) [*cusco; amid*]. A substance found in *Cinchonas.*

Cuscamin (*kus'-kam-in*) [*cusco; amin*]. A crystalline substance found in *Cinchonas.*

Cusco Bark (*kus'-ko bark*). A kind of cinchona; the bark of a variety of *Cinchona pubescens.*

Cusconidin (*kus-kon'-id-in*) [*cusco*]. An alkaloid found in *Cinchonas*.

Cusconin (*kus'-ko-nin*) [*cusco*], $C_{23}H_{26}N_2O_4$. A crystalline alkaloid found in Cinchona bark.

Cushing's Operation. See *Operations, Table of.*

Cushion (*kūsh'-un*) [ME., *cuschone*, a cushion]. A soft body used as a pillow, for the purpose of reclining or sitting.

Cusp (*kusp*) [*cuspis*, a point]. The pointed crown of a tooth.

Cusparia Bark (*kus-pa'-re-ah bark*). See *Angustura.*

Cuspid Teeth (*kus'-pid*). The four teeth that have conical crowns. They are situated, one on each side, in each jaw, between the lateral incisor and first bicuspid.

Cuspidate (*kus'-pid-āt*) [*cuspis*, a point]. In biology, tipped with a sharp, rigid point.

Cuspidatus (*kus-pid-a'-tus*) [*cuspis*, a point: *pl.*, *Cuspidati*]. A cuspid tooth.

Cuspidor (*kus'-pid-or*) [Pg., *cuspidor*, a spittoon]. A spittoon; a vessel for receiving the ejecta from the mouth. **C., Sanitary**, a small pasteboard or wooden cup with a cover supported in a rim of metal. These cuspidors should contain some water or disinfecting solution, and at the end of the day should be thrown into the fire. They are used to prevent the dissemination of the germs of tuberculosis.

Cusso (*kūs'-so*). See *Brayera* and *Kooso.*

Cut (*kut*) [ME., *cutten*, to cut]. To incise, as with a knife. To castrate. An incision. In biology, a cleft. **C.-velvet.** See *Velvet.*

Cutaneous (*ku-ta'-ne-us*) [*cutis*, the skin]. Pertaining to the skin. **C. Calculus.** See *Milium.* **C. Emphysema.** See *Emphysema.* **C. Horns.** See *Cornu cutaneum.* **C. Respiration**, the transpiration of gases through the skin.

Cutch (*kuch*) [Anglo.-Ind.]. 1. A name given to *Catechu*, the dried extract from *Acacia catechu*, cultivated in India and Burmah, and containing 45 to 55 per cent. of a special variety of tannic acid (catechutannic or mimotannic). It is used in leather-manufactures. 2. The tool, or book of parchment leaves, between which gold is beaten into foil.

Cuticle (*ku'-tik-l*) [dim. of *cutis*, the skin]. The epidermis or scarf-skin. See *Skin.*

Cuticula (*ku-tik'-u-lah*) [dim. of *cutis*, a skin]. The outer, finely lamellated layer of the wall of hydatid cysts. **C. dentis**, the cuticle of a tooth; Nasmyth's membrane; the delicate horny envelop that covers the enamel of young and unworn teeth.

Cuticular (*ku-tik'-u-lar*) [*cuticula*, dim. of *cutis*, the skin]. Belonging or pertaining to the skin.

Cuticularization (*ku-tik-u-lar-iz-a'-shun*) [*cuticula*, dim. of *cutis*, the skin]. The formation of a cuticula.

Cutin (*ku'-tin*) [*cutis*, skin]. In biology, cork-substance; a modification of cellulose (Frémy), also called *suberin.*

Cutipunctor (*ku-te-punk'-tor*) [*cutis*, skin; *punctor*, puncturer]. An instrument for puncturing the skin.

Cutis (*ku'-tis*) [L.]. The derma, or true skin. **C. anserina.** See *Goose Skin.* **C. pendula.** Synonym of *Dermatolysis.* **C. testacea**, a variety of seborrhea in which the trunk and extensor surfaces of the extremities are covered with large, thick plates of greasy, inspissated sebum, usually greenish or blackish, from accumulation of dirt upon them. There is no inflammation of the subjacent skin. **C. unctuosa.** Synonym of *Seborrhea.*

Cutisation (*ku-tis-a'-shun*) [*cutis*, skin]. The acquirement of the characters of true skin by exposed mucous membrane.

Cutisector (*ku-tis-ek'-tor*) [*cutis*, skin; *sector*, a cutter]. An instrument for taking small sections of skin from the living subject for microscopic study.

Cut-off Muscle. A popular designation for the compressor urethræ muscle. See *Muscles, Table of.*

Cutose (*ku'-tōs*) [*cutis*, skin]. In biology, the substance forming the thin outer covering of the aërial organs of plants (Frémy).

Cuttle, Cuttlebone (*kut'-l, kut'-l bōn*). See *Sepia.*

Cuvier, Angle of. See *Angle.* **C., Canals of.** See *Canal.* **C., Ducts of.** See *Duct.*

Cyanalcohol (*si-an-al'-ko-hol*) [κύανος, dark-blue; *alcohol*]. Cyanhydrin; a substance obtained by the union of an aldehyd with hydrocyanic acid.

Cyanaldehyd (*si-an-al'-de-hid*) [κύανος, dark-blue; *aldehyd*]. A substitution-compound of acetic aldehyd.

Cyanalkin (*si-an-al'-kin*) [κύανος, blue; *alkali*]. One of the products of the action of sodium upon the pure nitrites. The cyanalkins are crystalline and strongly alkaline bases, and form salts with one equivalent of the acids.

Cyanamid (*si-an'-am-id*) [κύανος, blue; *amid*], $CN.NH_2$. A white, crystalline body prepared by the action of ammonia on cyanogen chlorid.

Cyananilid (*si-an-an'-il-id*) [κύανος, blue; *anilin*]. C_7N_2H. Phenylcyanamid, a body formed on conducting CNCl, into a cooled ethereal solution of anilin. It is readily soluble in alcohol and ether, but dissolves with difficulty in water.

Cyanbenzene (*si-an-ben'-zēn*). See *Benzonitrile.*

Cyanein (*si-an-e'-in*) [κύανος, dark-blue]. In biology, the blue pigment found by Krukenberg in *Rhizostoma*, *Vellella*, *Aurelia*, and *Cyanea*. It is soluble in water, insoluble in benzene, carbon disulphid, and chloroform.

Cyanephidrosis (*si-an-ef-id-ro'-sis*) [κνάνος, blue; ἐφίδρωσις, sweat]. Blue sweat.

Cyanetholin (*si-an-eth'-o-lin*) [κύανος, blue; *ethyl*]. A liquid of ethereal odor, insoluble in water, and decomposing when distilled. The cyanetholins are the esters of the cyanic acids.

Cyanhematin (*si-an-hem'-at-in*) [κύανος, blue; αἷμα, blood]. A substance produced by adding a solution of cyanid of potassium to a solution of blood, and heating gently for some time.

Cyanhydrin (*si-an-hi'-drin*). See *Cyanalcohol.*

Cyanhydrosis (*si-an-hid-ro'-sis*). See *Cyanephidrosis.*

Cyanic (*si-an'-ik*) [κύανος, blue]. Blue or bluish. **C. Acid.** See *Acid, Cyanic.*

Cyanid (*si'-an-id*) [κύανος, blue]. Any compound of cyanogen with a metal or a radical. Most of the cyanids are actively poisonous.

Cyanidrosis (*si-an-id-ro'-sis*). Same as *Cyanephidrosis.*

Cyanin (*si'-an-in*) [κύανος, dark-blue]. 1. In biology, the blue pigment of certain flowers, as the corn flower, violet, iris, etc. 2. $C_{29}H_{35}N_2I$. A blue dye formerly prepared by heating quinolin amyl iodid with potassium hydroxid. Same as *Quinolin-blue.* See *Pigments, Conspectus of.* **C.-blue.** See *Pigments, Conspectus of.*

Cyanochroia (*si-an-o-kroi'-ah*) [κύανος, blue; χροιά, color]. Cyanosis.

Cyanoderma (*si-an-o-der'-mah*) [κύανος, blue; δέρμα, skin]. Cyanosis.

Cyanodermia (*si-an-o-der'-me-ah*). See *Cyanoderma.*

Cyanogen (*si-an'-o-jen*) [κύανος, blue; γεννάω, to produce]. A radical molecule having the structure CN, an acid-compound of carbon and nitrogen, existing as a colorless, combustible gas, exceedingly poisonous. With hydrogen it forms hydrocyanic or prussic acid; with metals, the cyanids; with oxygen,

the compound known as fulminic acid. Cyanogen and hydrocyanic acid are usually distinguished by the odor of bitter almonds.

yanohemoglobin (*si-an'-o-hem-o-glo'-bin*) [*κύανος*, blue; *γενάν*, to produce; *aima*, blood; *globus*, a ball]. A peculiar compound of hydrocyanic acid and hemoglobin, made by the addition of hydrocyanic acid to warm blood outside of the body. This substance is entirely wanting in the ozonizing power of normal oxyhemoglobin.

yanomycosis (*si-an'-o-mi-ko'-sis*) [*κύανος*, blue; *μύκης*, fungus]. The production of blue pus, or of pus charged with *Micrococcus pyocyaneus*. See *Bacteria*.

yanopathy (*si-an-op'-a-the*). See *Cyanosis*.

yanophilous (*si-an-off'-il-us*) [*κύανος*, blue; *φιλέειν*, to love]. Stainable with blue coloring-matter.

yanophyl (*si-an'-o-fil*) [*κύανος*, dark-blue; *φύλλον*, leaf]. Frémy's name for a supposed blue constituent of chlorophyl.

yanopia (*si-an-o'-pe-ah*) [*κύανος*, blue; *ὤψ*, eye]. A perverted state of the visual powers, during which all objects appear blue.

yanosin (*si-an'-o-sin*) [*κύανος*, blue]. One of the Fluorescein colors. See *Pigments, Conspectus of*.

yanosis (*si-an-o'-sis*) [*κύανος*, blue]. A bluish discoloration of the skin from non-oxidation of the blood, caused by local or general circulatory diseases. It may be due to the admixture of arterial and venous blood, as when there is a deficiency of the septum between the auricles and ventricles. It is seen in various diseases of the heart and lungs. **C., Congenital.** See *Blue Disease*.

yanospermia (*si-an'-o-sper'-me-ah*) [*κύανος*, blue; *σπέρμα*, sperm]. A condition wherein the semen has a bluish tint.

yanotic (*si-an-ot'-ik*) [*κύανος*, blue]. Relating to or affected with cyanosis.

yanuric Acid (*si-an-u'-rik*). See *Acid, Tricyanic*.

yanurin (*si-an-u'-rin*) [*κύανος*, blue; *οὖρον*, urine]. Uroglaucin or urine-indigo; indigo found in the urine in cystitis and in chronic kidney-diseases; it is also occasionally found in apparent health.

yar (*si'-ar*) [*κύαρ*, the eye of a needle]. The internal auditory meatus.

yasma (*si-as'-mah*) [*κυέειν*, to be pregnant: *pl.*, *Cyasmata*]. The peculiar freckle sometimes seen upon pregnant women.

yathiform (*si'-ath-if-orm*) [*cyathus*, a cup; *forma*, shape]. In biology, cup-shaped.

yclarthrosis (*sik-lar-thro'-sis*) [*κύκλος*, circle; *ἀρθρωσις*, a joint]. A pivot-joint; lateral ginglymus, or rotary diarthrosis; an articulation that admits of decided rotation in one of its elements.

yclic (*si'-klik*) [*κυκλικός*, circular]. Having cycles or periods of exacerbation or change, as *cyclic* insanity. In biology, applied to flowers whose organs are arranged in whorls. **C. Albuminuria.** See *Albuminuria*. **C. Insanity.** See *Insanity*.

yclicotomy (*si-klik-ot'-o-me*) [*κυκλικός*, circular; *τέμνειν*, to cut]. Surgical incision or division of the ciliary body.

yclitic Shell (*si-klit'-ik*) [*κυκλικός*, circular]. A coherent, solid, fibrous mass of exudate, completely enveloping the crystalline lens.

yclitis (*sik-li'-tis*) [*κύκλος*, a circle; *ιτις*, inflammation]. Inflammation of the ciliary body, characterized by a zone of congestion in the sclerotic coat surrounding the cornea. It is a serious condition, often implicating adjacent structures. It may be serous, plastic, or suppurative. **Irido-cyclitis**, the involvement of both iris and ciliary body in the inflammatory process.

yclocephalus (*si-klo-sef'-al-us*) [*κύκλος*, a circle; *κεφαλή*, head]. 1. A species of single autositic monsters characterized by a more or less complete absence of the olfactory organs, together with an intimate union of imperfectly developed or rudimentary visual organs, situated in the median line. 2. A variety of this species in which there is a fusion of the orbital cavities and of the eyes, without a vestige of a nose or of a proboscis.

Cycloid (*si'-kloid*) [*κύκλος*, a circle; *εἶδος*, form]. In biology, having a circular form.

Cyclophoria (*sik-lo-fo'-re-ah*) [*κύκλος*, a circle; *φορεῖν*, to bear]. 1. A term applied to the circulation of the fluids of the body. 2. An insufficiency of the oblique muscles of the eye, giving the eyes a tendency to roll outward or inward, so that the naturally vertical meridians would diverge either at the upper or lower extremities.

Cyclopia (*si-klo'-pe-ah*). See *Synophthalmia*.

Cycloplegia (*si-klo-ple'-je-ah*) [*κύκλος*, circle; *πληγή*, a stroke]. Paralysis of the ciliary muscle of the eye.

Cyclops (*si'-klops*) [*κύκλος*, circle; *ὤψ*, eye]. A congenital malformation consisting in a fusion of the two eyes into one. See *Rhinocephalus*.

Cyclosis (*si-klo'-sis*) [*κύκλος*, a circle]. In biology, circulation, as of the protoplasm within a cell.

Cyclothymia (*si-klo-thim'-e-ah*) [*κύκλος*, circle; *θυμός*, mind]. Cyclic insanity. See *Insanity*.

Cyclotome (*sik'-lo-tōm*) [*κύκλος*, circle; *τομός*, cutting]. A kind of knife for performing cyclotomy.

Cyclotomy (*sik-lot'-o-me*) [*κύκλος*, round; *τομή*, section]. An operation proposed for the relief of glaucoma, consisting of an incision through the ciliary body.

Cydonium (*si-do'-ne-um*) [*κυδώνιον*, a quince]. Quince-seed. The seeds of *C. vulgaris*, employed mainly for the mucilage contained in the epithelial covering, which consists of a compound of gum and glucose. **C. mucilago**, quince-seeds 2, macerated in water 100 parts, is a bland demulcent, known as *Bandolin*, and used as a hair-dressing.

Cyematocardia (*si-em-at-o-kar'-de-ah*) [*κύημα*, a fetus; *καρδιά*, a heart]. Fetal rhythm of the heart-sounds.

Cyesiognosis (*si-e-se-og-no'-sis*) [*κύησις*, pregnancy; *γνῶσις*, knowledge]. The diagnosis of pregnancy.

Cyesiology (*si-e-se-ol'-o-je*) [*κύησις*, pregnancy; *λόγος*, treatise]. The science of gestation in its medical aspects.

Cyesis (*si-e'-sis*) [*κύησις*, pregnancy]. Pregnancy.

Cyetic (*si-et'-ik*) [*κυητικός*, pregnant]. Relating to pregnancy.

Cylicotomy (*sil-ik-ot'-o-me*) [*κύλιξ*, cup; *τέμνειν*, to cut]. Surgical incision of the ciliary muscle.

Cylinder (*sil'-in-der*) [*κύλινδρος*, a cylinder]. A long, circular body. See, also, *Lenses*. **C.-cone of Kuhnt**, one of the conical sections marked off by the "incisures" and going to build up the annular segments of a medullated nerve-fiber. **C.-filling**, a filling, the material of which is composed of gold-foil or tin-foil cylinders, sometimes called block-filling. **C. of Gold-foil**, a form of gold-foil for filling teeth, made by rolling a tape of non-cohesive gold upon a fine broach, commencing at one end of the tape and continuing the movement until the desired size of the cylinder is reached.

Cylindrenchyma (*sil-in-dreng'-kim-ah*) [*κύλινδρος*, a cylinder; *ἔγχυμα*, an infusion]. In biology, tissue composed of cylindric cells.

Cylindric (*sil-in'-drik*), or **Cylindrical** (*sil-in'-drik-al*) [*κύλινδρος*, a cylinder]. Pertaining to or like a cylinder. **C. Lenses.** See *Lenses*.

Cylindrocephalic (*sil-in'-dro-sef-al'-ik*) [*κύλινδρος*, cylinder; *κεφαλή*, head]. Affected with cylindrocephaly.

Cylindrocephaly (*sil-in'-dro-sef'-a-le*) [*κύλινδρος*, cylinder; *κεφαλή*, head]. A cylindric formation of the skull.

Cylindroid (*sil'-in-droid*) [*κύλινδρος*, cylinder; *εἶδος*, likeness]. A name given to a mucous cast frequently found in the urine in scarlet fever, and other diseases. It closely resembles a hyaline tube-cast. Cylindroids are ribbon-like forms, usually of great length, and of about the same diameter as renal casts. They may assume various shapes, due to bends and twists, giving them a cork-screw appearance. The extremities are narrow and elongated and often bifurcated.

CYLINDROIDS.
a and *b*. Cast-like forms.
c. Filamentous forms.

Cylindroma (*sil-in-dro'-mah*) [*κύλινδρος*, a cylinder: *pl.*, *Cylindromata*]. A tumor peculiar to the orbit of the eye, to the face, and to the stomach, composed of cylindric or club-like hyaline processes. It is a variety of myxo-sarcoma.

Cylindrosis (*sil-in-dro'-sis*) [*κυλινδροῦν*, to roll]. A variety of bony articulation, the bone being rolled upon itself to form a canal and then a suture, as in the cranium.

Cyllosis (*sil-o'-sis*) [*κύλλωσις*, crippled]. Club-foot; lameness from deformity.

Cyllosoma (*sil-o-so'-mah*) [*κυλλός*, lame; *σῶμα*, a body: *pl.*, *Cyllosomata*]. A variety of single autositic monsters of the species celosoma, in which there is a lateral eventration occupying principally the lower portion of the abdomen, with absence or imperfect development of the lower extremity on that side occupied by the eventration.

Cyllum (*sil'-um*) [*κύλλος*, crooked]. Knock-knee.

Cymba (*sim'-bah*) [*κύμβη*, a boat]. In biology, a boat-shaped sponge-spicule.

Cymbiform (*sim'-bif-orm*) [*cymba*, boat; *forma*, shape]. In biology, boat-shaped. **C. Bone**, the scaphoid bone.

Cymbocephalia (*sim-bo-sef-a'-le-ah*). See *Cymbocephaly*.

Cymbocephalic, or Cymbocephalous (*sim-bo-sef-al'-ik*, or *sim-bo-sef'-al-us*) [*κύμβη*, boat; *κεφαλή*, head]. Exhibiting cymbocephaly.

Cymbocephaly (*sim-bo-sef'-a-le*) [*κύμβη*, boat; *κεφαλή*, head]. The condition of having a boat-shaped head.

Cyme (*sīm*) [*cyme*, a young sprout]. In biology, a loose flower-cluster on the determinate or centrifugal plan.

Cymene (*si'-mēn*) [*cyminum*, cumin], $C_{10}H_{14}$. A hydrocarbon that occurs, together with cumic aldehyd, in Roman caraway oil (from *Cuminum cyminum*), and in other ethereal oils. It is prepared by treating oil of turpentine with oil of vitriol. It is a pleasantly-smelling liquid, that boils at 175°–176° C.; its specific gravity at 0° C. is 0.8722.

Cymogene (*si'-mo-jēn*) [*κύμινον*, cumin; *γένης*, producing]. A product obtained from petroleum, gaseous at ordinary temperatures, but liquefiable by cold or pressure; boiling at 0° C. (32° F.); specific gravity 110° B. It is used in the manufacture of artificial ice, and is serviceable in the production of great cold for local or minor surgical purposes.

Cymose (*si'-mōs*) [*κῦμα*, a young sprout]. In biology pertaining to a cyme; bearing cymes.

Cynanche (*sin-ang'-ke*) [*κύων*, a dog; *ἄγχειν*, t strangle]. An old name for any acute affection o the throat, as diphtheria, croup, tonsillitis, etc., i which the patient struggles for breath (as a pantin dog). See also *Angina*. **C. maligna**, a fatal forr of sore-throat. **C. suffocativa**. Synonym of *Croup* **C. tonsillaris.** See *Quinsy*.

Cynanthropia (*sin-an-thro'-pe-ah*) [*κύων*, dog; *ἄνθρωπ* a man]. A mania in which the patient believes hin self a dog, and imitates the actions of one.

Cyniatria (*si-ne-a-tri'-ah*) [*κύων*, dog; *ἰατρεία*, me ication]. The science or treatise of the diseases o the dog and their treatment.

Cynic (*sin'-ik*) [*κυνικός*, dog-like]. Pertaining to dog. **C. Spasm**, a contraction of the facial muscle upon one side, so as to expose the teeth in the mar ner of an angry dog.

Cynobex hebetica (*si'-no-beks he-bet'-ik-ah*) [*κύω* dog; *βήξ*, cough; *ἡβητικος*, youthful]. The convu sive cough of puberty; a loud, dry, barking coug that often attacks boys and girls at puberty. Gener hygienic treatment is usually curative.

Cynocephalous (*sin-o-sef'-al-us*) [*κύων*, dog; *κεφαλ* the head]. With the head dog-shaped.

Cynodontes (*si-no-don'-tēz*) [*κύων*, dog; *ὀδού ὀδόντος*, tooth]. The canine teeth, so called from the resemblance to the teeth of a dog. See *Cuspid Teeth*

Cynoglossum (*si-no-glos'-um*). See *Hound's Ton*

Cynolyssa (*si-no-lis'-ah*) [*κύων*, dog; *λύσσα*, rabies Hydrophobia; rabies.

Cynophobia (*si-no-fo'-be-ah*) [*χύων*, a dog; *φόβος*, fear 1. Morbid fear of dogs. 2. Imaginary hydrophobia.

Cynorexia (*si-no-reks'-e-ah*) [*κύων*, dog; *ὄρεξις*, appe tite]. Canine voracity; bulimia.

Cynospasmus (*si-no-spas'-mus*) [*κύων*, dog; *σπασμ* spasm]. Same as *Cynic Spasm*.

Cynurenic Acid (*sin-u-ren'-ik*) [*κύων*, a dog; *οὖρ* urine], $C_{20}H_{14}N_2O_6 + 2H_2O$. A crystalline acid fou in dog's urine. It is a decomposition-product of pr teids. On heating it cynurin is evolved.

Cynurin (*sin'-u-rin*) [*κύων*, a dog; *οὖρον*, urine $C_{18}H_{14}N_2O_2$. A base obtained by heating cynuren acid to 250°.

Cyophoria (*si-o-fo'-re-ah*) [*κύος*, fetus; *φέρειν*, t carry]. Pregnancy; gestation.

Cyopin (*si'-o-pin*) [*κυάνεος*, blue; *πύον*, pus]. Th coloring-matter found in blue pus.

Cyphosis (*si-fo'-sis*). See *Kyphosis*.

Cypripedin (*sip-rip-e'-din*) [*κύπρις*, Venus; *πόδιον* slipper]. A precipitate from the tincture of *Cypri dium pubescens*; antispasmodic, nervine, narcot Dose ½ to 3 grains. Unof.

Cypripedium (*sip-rip-e'-de-um*) [*κύπρις*, Venus; *πόδιο* a slipper]. Lady's Slipper. The roots of *C. pub cens* and *C. parviflorum*, American valerian, wi properties due to a volatile oil and acid. It is a antispasmodic and stimulant tonic, used instead valerian, which it resembles. **C., Fld. Ext.** Dos ♏x–xxx.

Cypriphobia (*sip-rif-o'-be-ah*) [*κύπρις*, Venus; *φόβ* fear]. Fear of sexual intercourse.

Cyprus Vitriol (*si'-prus vit'-re-ol*). Same as *Blu Vitriol*. **C. Fever.** Same as *Malta Fever*.

Cypsela (*sip-sel'-ah*) [*κυψέλα*, a hollow, cup-lik structure]. In biology, a term sometimes applied an achenium which is invested with an adnate cal such as that of the Compositæ.

Cyron (*sir'-on*). See *Chyron*.

Cyrtocephalus (*sir-to-sef'-al-us*) [*κυρτός*, convex *κεφαλή*, head]. Having a short head.

rtocoryphus (*sir-to-kor'-if-us*) [*κυρτός*, convex; ..., the crown of the head]. Lissauer's term for ... skull with a parietal angle between 122° and 132°.

rtograph (*sir'-to-graf*) [*κυρτός*, curved; *γράφειν*, to ...]. A recording cyrtometer.

rtoma (*sir-to'-mah*) [*κύρτωμα*, a curving: *pl.*, *Cyr-mata*]. A convexity, especially one that is abnormal.

rtometer (*sir-tom'-et-er*) [*κυρτός*, curved; *μέτρον*, measure]. An instrument adapted for measuring urves, and especially those of the chest.

rtometopus (*sir-to-met-op'-us*) [*κυρτός*, convex; ..., the forehead]. Lissauer's term for a skull ... which the angle formed by lines connecting the ...asion with the bregma and the metopion is between ...20° and 130.5°.

rtonosus (*sir-ton'-o-sus*) [*κυρτός*, curved; *νόσος*, disease]. Synonym for *Rhachitis*.

rtopisthocranius (*sir-to-pis-tho-kra'-ne-us*) [*κυρτός*, curved; *ὀπισθοκράνιον*, the occiput]. Lissauer's term for a skull in which the angle of the summit of the occiput is between 117° and 140°.

rtosis (*sir-to'-sis*) [*κύρτωσις*, curvature: *pl.*, *Cyrtoses*]. ny deformity, especially one that affects the bones.

rturanus (*sir-tūr-a'- nus*) [*κυρτός*, curved; *οὐρανός*, ...e roof of the mouth]. Lissauer's term for a skull ... which the angle at the roof of the mouth is between ...32° and 147.5°.

st (*sist*) [*κύστις*, a pouch]. A cavity containing fluid ...nd surrounded by a capsule. **C., Blood.** See *...ematoma*. **C., Cutaneous.** See *C., Dermoid*. **C., ...entigerous**, one containing teeth; one form is found ... the ovaries. **C., Dermoid**, a congenital cyst con-...ining bone, hair, teeth, etc.; the cyst-wall is like ...e skin. **C., Echinococcus**, a cyst formed in ...arious tissues and organs of man by the larva of the *...enia echinococcus* of the dog, taken into the stomach. **...., Exudation**, one resulting from increase of exuda-...on, or from exudation into a closed cavity. **C., ...ydatid.** See *C., Echinococcus*. **C., Meibomian.** ...e *Chalazion*. **C., Mucous**, a retention cyst con-...ining mucus. **C., Multilocular**, one composed of ...any separate compartments. **C., Müllerian**, a cyst ...ntaining mucus, blood, or pus, developed in the ...mnants or rudiments of the inferior or vaginal ...rtion of the duct of Müller. **C., Piliferous**, a ...ir-containing or dermoid cyst. **C., Primary**, one ...wly formed, not from distention. **C., Retention**, ...e that is due to the non-expulsion from its duct of ... secretion of a gland, in consequence of closure of ... duct, as in *mucous* or *sebaceous* cysts. **C., Seba-...ous**, one containing fatty material. **C., Secondary**, ...cyst within a cyst. **C., Sublingual.** See *Ranula*. **..., Synovial**, one resulting from the distention of ...rsæ or synovial sheaths. **C., Tarsal.** See *Chala-...n*. **C., Unilocular**, one having but a single cavity. **..., Wolffian**, a cyst developed in the inferior vestiges ... the canal of Wolff. It is situated in the anterior or ...ero-lateral vaginal wall, and is frequently pro-...ged toward the cervix or even into the base of the ...ad ligament.

...adenoma (*sist-ad-en-o'-mah*) [*κύστις*, cyst; *ἀδήν*, ...nd; *ὄμα*, a tumor: *pl.*, *Cystadenomata*]. An ad-...oma containing cysts.

...algia (*sist-al'-je-ah*) [*κύστις*, bladder; *ἄλγος*, pain]. ...n in the bladder.

...atrophia (*sist-at-ro'-fe-ah*) [*κύστις*, bladder; *ἀτρο-...*, want of nourishment]. Atrophy of the urinary ...dder.

...auchenitis (*sist-aw-ken-i'-tis*) [*κύστις*, bladder; ...ήν, neck; *ιτις*, inflammation]. Inflammation of ... neck of the bladder; trachelocystitis.

Cystauxe (*sist-awks'-e*) [*κύστις*, bladder; *αὔξη*, increase]. Thickening of the bladder.

Cystectasia (*sist-ek-ta'-ze-ah*), or **Cystectasy** (*sist-ek'-taz-e*) [*κύστις*, bladder; *ἔκτασις*, a stretching out]. Surgical dilatation of the urethra or of its prostatic portion in certain operations for stone.

Cystein (*sist'-e-in*) [*κύστις*, bladder], $C_3H_7NO_2S$. A compound obtained by reducing cystin; it is a crystalline powder, soluble in water, yielding an indigo-blue color with ferric chlorid; in the air it rapidly oxidizes to cystin.

Cystelcosis (*sist-el-ko'-sis*) [*κύστις*, bladder; *ἕλκωσις*, ulceration]. Ulceration of the bladder.

Cystencephalus (*sist-en-sef'-al-us*) [*κύστις*, a bladder; *ἐγκεφαλός*, the brain]. A form of monstrosity in which the brain is replaced by a cyst-like structure.

Cystenchyma (*sist-eng'-kim-ah*) [*κύστις*, a bladder; *ἔγχυμα*, an infusion]. In biology, a connective tissue of large, oval, thin-walled cells, as seen in certain sponges.

Cysthitis (*sis-thi'-tis*) [*κύσθος*, vulva; *ιτις*, inflammation]. Inflammation of the vulva.

Cystic (*sist'-ik*) [*κύστις*, bladder]. Pertaining to or resembling a cyst; pertaining to the urinary bladder or the gall-bladder. **C. Angioma.** Synonym of *Lymphangioma circumscriptum*.

Cysticercus (*sis-te-ser'-kus*) [*κύστις*, a bladder; *κέρκος*, a tail]. The scolex of the tape-worm. An hydatid. **C. bovis**, a form of hydatid existing in the muscles of the ox (mostly in the calf). Its progenitor is the *Tænia mediocanellata* of man. It produces the disease called *Beef Measles*. **C. cellulosæ**, the hydatid found inhabiting the intermuscular connective tissue of the pig, producing the condition known as "measles." Its progenitor is the *Tænia solium* of man. See *Alternation of Generation*. **C. cellulosæ cutis.** An hydatid, or immature form of *Tænia solium*, which is sometimes parasitic upon the subcutaneous tissues of the skin. **C. ovis**, an hydatid of uncertain origin found in sheep in the condition called *Mutton Measles*. **C. pisiformis**, an hydatid found mainly in the abdominal cavity of the rabbit and of the hare, and, in its immature state, in the liver of these animals. Its progenitor is the *Tænia serrata* of the dog. **C. tenuicollis**, a slender or long-necked hydatid found in the abdominal and pelvic cavity of the sheep, the pig, the ox, and the fowl. Its progenitor is the *Tænia marginata* of the dog. See *Parasites* (*Animal*), *Table of*.

Cystid (*sist'-id*) [*κύστις*, a bladder]. In biology, the saccular, ciliated, planula-like embryo of a polyzoan; also the cell in which the body of an adult polyzoan is contained.

Cystidomyeloma (*sist-id-o-mi-el-o'-mah*) [*κύστις*, bladder; *μυελός*, marrow]. A medullary carcinoma of the bladder.

Cystifellotomy (*sist-if-el-ot'-o-me*) [*κύστις*, cyst; *fel*, bile; *τομή*, a cutting]. See *Cholecystotomy*.

Cystiform (*sist'-if-orm*) [*cystis*, a bladder; *forma*, shape]. Encysted, cystomorphous.

Cystin (*sist'-in*) [*κύστις*, bladder], $C_3H_7NSO_3$. A substance found in the urine in small amount. It occurs in regular, colorless, six-sided tables of very characteristic appearance. It is insoluble in water, alcohol, and ether, but readily soluble in ammonia. Test: boil with a solution of lead oxid in sodium hydrate. If cystin is present, black lead sulphid is precipitated.

Cystinuria (*sist-in-u'-re-ah*) [*κύστις*, bladder; *οὖρον*, urine]. The presence of cystin in the urine. The cystin may be present in the form of calculi or as a deposit. The urine has a yellowish-green color and a peculiar smell, like that of fresh sweet-briar, but rapidly acquires a putrescent odor on standing, whilst an oily film forms on the surface.

Cystipathy (*sist-ip'-a-the*) [*κύστις*, bladder; *πάθος*, disease]. Any disease of the bladder.

Cystirrhea (*sist-ir-e'-ah*) [*κύστις*, bladder; *ῥοία*, a flow]. Vesical catarrh.

Cystis (*sist'-is*). See *Cyst*.

Cystitic (*sist-it'-ik*) [*κύστις*, a bladder]. Relating to cystitis.

Cystitis (*sist-i'-tis*) [*κύστις*, bladder; *ιτις*, inflammation]. Inflammation of the bladder. **C., Exfoliative**, that form of cystitis in which the inflammatory process has produced a sloughing of the mucous membrane, or a separation of the whole or a portion of the membrane, which lies loose in the bladder.

Cystitome (*sist'-it-ōm*). See *Cystotome*.

Cystoblast (*sist'-o-blast*). See *Cytoblast*.

Cystobubonocele (*sist-o-bu-bon'-o-sēl*) [*κύστις*, bladder; *βουβών*, groin; *κήλη*, hernia]. Hernia of the bladder through the inguinal ring.

Cystocarcinoma (*sist-o-kar-sin-o'-mah*) [*κύστις*, bladder; *καρκίνωμα*, a cancer]. Carcinoma with cystic degeneration.

Cystocarp (*sist'-o-karp*) [*κύστις*, a bladder; *καρπός*, fruit]. In biology, a name sometimes applied to the sporocarp of certain algæ.

Cystocele (*sist'-o-sēl*) [*κύστις*, pouch; *κήλη*, a tumor]. A hernia of the bladder into the vagina, pushing the vaginal wall through the vulvar orifice. In the great majority of cases it is a sequela of childbirth, following laceration of the pelvic floor. It may, however, result from heavy lifting, etc. There is a feeling of weight, with frequent and difficult micturition, and a protrusion between the labia. It is generally associated with a rectocele, and if left uncorrected favors the descent of the uterus.

Cystochondroma (*sist-o-kon-dro'-mah*) [*κύστις*, bladder; *χόνδρος*, cartilage; *ὄμα*, a tumor: *pl.*, *Cystochondromata*]. A neoplasm presenting the characters of both chondroma and cystoma.

Cystocolpitis (*sist-o-kol-pi'-tis*) [*κύστις*, bladder; *κόλπος*, vagina]. Inflammation of both bladder and vagina.

Cystocope (*sist'-o-kōp*) [*κύστις*, bladder; *κόπος*, a blow]. A urethral sound, having at the proximal extremity a plate to amplify the sound produced by striking against a vesical calculus.

Cystocyte (*sist'-o-sīt*) [*κύστις*, a bladder; *κύτος*, a cell]. In biology, one of the bladder-like cells of the cystenchyma, as in sponges.

Cystodynia (*sist-o-din'-e-ah*) [*κύστις*, bladder; *ὀδύνη*, pain]. Same as *Cystalgia*.

Cystofibroma (*sist-o-fi-bro'-mah*) [*κύστις*, a bladder; *fibra*, a fiber; *ὄμα*, a tumor: *pl.*, *Cystofibromata*]. A neoplasm presenting the character of both a fibroma and a cystoma.

Cystohemorrhagia (*sist-o-hem-or-a'-je-ah*) [*κύστις*, the bladder; *αἷμα*, blood; *ῥηγνύναι*, to burst]. Vesical hemorrhage.

Cystolith (*sist'-o-lith*) [*κύστις*, bladder; *λίθος*, a stone]. Vesical calculus. In biology, a stalked body mainly composed of calcium carbonate, found in the cells of certain leaves, as in those of the nettle.

Cystolithiasis (*sist-o-lith-i'-as-is*) [*κύστις*, a bladder; *λίθος*, a stone]. Stone in the bladder; also that condition of the system that is associated with the presence of vesical calculus.

Cystolithic (*sist-o-lith'-ik*) [*κύστις*, bladder; *λίθος*, a stone]. Pertaining to a vesical calculus.

Cystolutein (*sist-o-lu'-te-in*) [*κύστις*, a cyst; *luteus*, yellow]. A yellow coloring-matter found in cysts.

Cystoma (*sist-o'-mah*) [*κύστις*, a cyst; *ὄμα*, a tumor: *pl.*, *Cystomata*]. A neoplasm, especially an ovarian tumor, containing or made up of cysts.

Cystomerocele (*sist-o-mer'-o-sēl*) [*κύστις*, bladder *μηρός*, thigh; *κήλη*, hernia]. A hernia of the bladde through the femoral ring.

Cystomorphous (*sist-o-mor'-fus*) [*κύστις*, cyst; *μορφ* form]. Having the form of a cyst.

Cystomyxoma (*sist-o-miks-o'-mah*) [*κύστις*, a cyst *μύξα*, mucus; *ὄμα*, a tumor: *pl.*, *Cystomyxomata*] A neoplasm presenting the characters of both myxom and cystoma.

Cystoncus (*sist-ong'-kus*) [*κύστις*, bladder; *ὄγκος*, a swelling]. Any swelling of the bladder.

Cystonephrosis (*sist-o-ne-fro'-sis*) [*κύστις*, sac; *νεφρός* kidney]. A cystic or cystomorphous dilatation of the kidney.

Cystoparalysis (*sist-o-par-al'-is-is*) [*κύστις*, bladder; *παράλυσις*, palsy]. Paralysis of the bladder.

Cystopexy (*sist'-o-peks-e*) [*κύστις*, bladder; *πῆξις*, fixation]. Fixation of the bladder. An operation for the cure of cystocele, based upon the principle of the Alexander-Adams operation.

Cystophotography (*sist-o-fo-tog'-ra-fe*) [*κύστις*, the bladder; *φῶς*, light; *γράφειν*, to write]. Photographing the interior of the bladder for diagnostic purposes.

Cystoplastic (*sist-o-plas'-tik*) [*κύστις*, the bladder *πλάσσειν*, to form]. Relating to cystoplasty.

Cystoplasty (*sist'-o-plas-te*) [*κύστις*, bladder; *πλάσσειν* to form]. Plastic operation upon the bladder, especially for vesico-vaginal fistula.

Cystoplegia (*sist-o-ple'-je-ah*) [*κύστις*, bladder; *πληγή* a blow]. Paralysis of the bladder.

Cystoptosis (*sist-op-to'-sis*) [*κύστις*, bladder; *πτῶσις*, a fall]. The projection of some portion of the bladder into the urethra.

Cystopylometer (*sist-o-pi-lom'-et-er*) [*κύστις*, bladder; *πύλη*, gate; *μέτρον*, measure]. An instrument for measuring any obstruction (as an enlarged prostate at the entrance to the bladder; it is called also *pylometer*.

Cystorrhagia (*sist-or-a'-je-ah*). See *Cystohemorrhagia*.

Cystorrhea (*sist-or-e'-ah*). Same as *Cystirrhea*.

Cystorrhexis (*sist-or-eks'-is*) [*κύστις*, bladder; *ῥῆξις* rupture]. Rupture of the bladder.

Cystoscope (*sist'-o-skōp*) [*κύστις*, bladder; *σκοπεῖν*, to examine]. An instrument for examining the interior of the bladder.

Cystoscopy (*sist-os'-ko-pe*) [*κύστις*, bladder; *σκοπεῖν* to examine]. Examination of the interior of the bladder by means of the cystoscope.

Cystospasmus (*sist-o-spaz'-mus*) [*κύστις*, bladder; *σπασμός*, spasm]. Spasm of the bladder.

Cystospastic (*sist-o-spas'-tik*) [*κύστις*, bladder; *σπαστικός*, pulling]. Relating to spasm of the bladder.

Cystostomy (*sist-os'-to-me*) [*κύστις*, bladder; *στόμα*, a mouth or opening]. The formation of a fistulous opening in the bladder-wall.

Cystotome (*sist'-o-tōm*) [*κύστις*, bladder; *τέμνειν*, to cut]. A knife used in cystotomy; also a knife used in rupturing the capsule of the lens in cataract operations.

Cystotomia (*sist-o-to'-me-ah*) [L.]. Same as *Cystotomy*. **C. hypogastrica.** Suprapubic cystotomy.

Cystotomy (*sist-ot'-o-me*) [*κύστις*, bladder; *τομή*, a cutting]. Incision of the bladder.

Cyte (*sīt*) [*κύτος*, a hollow]. Any cell; especially a nuclear cell (used mostly in composition).

Cythemolysis (*si-them-ol'-is-is*) [*κύτος*, cell; *αἷμα* blood; *λύσις*, dissolution]. Dissolution of the corpuscles of the blood.

Cytin (*si'-tin*) [*κύτος*, a cell]. An insoluble cellular substance that remains in various residues of animal tissue from which cytoglobin has been removed. By decomposition it is changed into an albuminoid.

Cytisin (*sit'-is-in*) [κύτισος, a kind of clover], $C_{20}H_{27}N_3O$. A poisonous alkaloid obtained from *Cytisus laburnum* and other species. It occurs in yellowish-white, deliquescent crystals. It is chiefly used in the form of the *nitrate*, a beautiful crystalline salt, pale-yellow in color and acid in reaction. It is used subcutaneously in paralytic migraine, and as a diuretic in dropsy and cardiac disease. Dose, grain $\frac{1}{20}$ to $\frac{1}{12}$, hypodermatically.

Cytoblast (*si'-to-blast*) [κύτος, a cell; βλαστός, a germ]. In biology, applied to the nucleus of a cell; also one of the ameboid cytodes going to make up the cytoblastema of sponges.

Cytoblastema (*si-to-blas-te'-mah*) [κύτος, a cell; βλαστημα, a sprout]. In biology, applied to formative material or protoplasm, as giving rise to cells or cytodes; also to the matrix in which the individuals of a protozoan colony are imbedded; the gelatinous matrix of a sponge.

Cytochylema (*si-to-ki-le'-mah*) [κύτος, a cell; χυλός, juice]. Strasburger's term for the inter-reticular portion of protoplasm; cell-juice.

Cytochyma, or **Cytochyme** (*si-to-kim'-ah*, or *si'-to-kim*) [κύτος, a cell; χυμός, juice]. The water-sap in the vacuoles of the cytochylema of protoplasm.

Cytococcus (*si-to-kok'-us*) [κύτος, cell; κόκκος, kernel: *pl.*, *Cytococci*]. The nucleus of a cytula.

Cytode (*si'-tōd*) [κύτος, a cell; εἶδος, form]. In biology, a term applied by Haeckel to a non-nucleated cell. The simplest, most primitive form of cell, without nucleus or nucleolus; Haeckel therefore calls the *Monera* cytodes.

Cytoderm (*si'-to-derm*) [κύτος, a cell; δέρμα, skin]. In biology, a cell-wall.

Cytodieresis (*si-to-di-er'-es-is*) [κύτος, cell; διαίρεσις, division]. The process of cell-division.

Cytogenesis (*si-to-jen'-es-is*) [κύτος, a cell; γένεσις, production]. The formation or genesis of the cell, or of cells.

Cytogenetic (*si-to-jen-et'-ik*) [κύτος, a cell; γένεσις, production]. Relating to cell-formation.

Cytogenic (*si-to-jen'-ik*). See *Cytogenous*.

Cytogenous (*si-toj'-en-us*) [κύτος, a cell; γένης, producing]. In biology, producing cells.

Cytogeny (*si-toj'-en-e*). See *Cytogenesis*.

Cytoglobin (*si-to-glo'-bin*) [κύτος, a cell; *globus*, a ball]. An albuminoid, obtainable in the form of a white, soluble powder. It forms three per cent. of the pulp of the lymphatic glands. It is partially convertible into preglobin.

Cytography (*si-tog'-ra-fe*) [κύτος, a cell; γράφειν, to write]. A description of cells.

Cohyaloplasm (*si-to-hi'-al-o-plazm*) [κύτος, a cell; ὑάλος, transparent; πλάσμα, formed matter]. Strasburger's name for the reticulum of protoplasm.

Cytoid (*si'-toid*) [κύτος, cell; εἶδος, likeness]. Resembling a cell.

Cytokinetic (*si-to-ki-net'-ik*) [κύτος, a cell; κινεῖν, to move]. In biology, applied to the phenomena of motion of plasma or cells; the opposite of *Cytostatic* (Ryder).

Cytolergy (*si-tol'-er-je*) [κύτος, a cell; ἔργον, work]. Cell-activity.

Cytologist (*si-tol'-o-jist*) [κύτος, a cell; λόγος, science]. One who is versed in cytology.

Cytology (*si-tol'-o-je*) [κύτος, a cell; λόγος, science]. The science of cell-formation and cell-life.

Cytolysis (*si-tol'-is-is*) [κύτις, cell; λύσις, loosening; solution]. Cell-catabolism; cell-destruction.

Cytometer (*si-tom'-et-er*) [κύτις, cell; μέτρον, a measure]. A device for measuring cells.

Cyto-mitoma (*si'-to-mi-to'-mah*) [κύτος, cell; μίτος, a fiber]. The fibrillar part of a cell-body. See *Mitoma*.

Cytonergy (*si-ton'-er-je*). Same as *Cytolergy*.

Cytopathy (*si-top'-ath-e*) [κύτος, a cell; πάθος, disease]. Disease of the living cell.

Cytophagous (*si-toff'-ag-us*) [κύτος, a cell; φᾱγειν, to devour]. Phagocytic; of the nature of a phagocyte; cell-devouring.

Cytophosphatid (*si-to-fos-fat'-id*) [κύτος, cell; φωσφόρος, Lucifer]. A form of nuclein, containing sulphur and phosphorus and said to be obtainable from brain-tissue; gangliocytin.

Cytoplasm, or **Cytoplasma** (*si'-to-plazm*, or *si-to-plaz'-mah*) [κύτος, cell; πλάσμα, anything formed]. In biology, Dujardin's name for *protoplasm*, *q. v.*

Cytoproct (*si'-to-prokt*) [κύτος, a cell; πρωκτός, the anus]. In biology, an orifice with anal functions in the Infusoria. Cf. *Cytopyge*.

Cytopyge (*si-to-pi'-je*) [κύτος, a cell; πυγή, the rump]. In biology, the anal aperture of a unicellular animal. Cf. *Cytoproct*.

Cytostasis (*si-tos'-tas-is*) [κύτος, cell; στάσις, stasis]. Stoppage or plugging of the capillaries by the blood-cells.

Cytostatic (*si-to-stat'-ik*) [κύτος, a cell; στατός, fixed]. In biology, applied to the static or resting conditions of plasma or cells; the opposite of *Cytokinetic* (Ryder).

Cytostome (*si'-to-stōm*) [κύτος, a cell; στόμα, mouth]. In biology, the oral aperture of a unicellular organism.

Cytotaxis (*si-to-taks'-is*) [κύτος, a cell; τάξις, order]. The selective, ordering, and arranging function of a living cell.

Cytotrophy (*si-tot'-ro-fe*) [κύτος, cell; τρόφη, nourishment]. The growth of the cell and sustentation of cell-life.

Cytozoön (*si-to-zo'-on*) [κύτος, cell; ζῷον, animal]. A protoplasmic cell-mass, probably parasitic in nature, with independent movement; found by Gaule in defibrinated blood and other structures.

Cyttarhagia (*sit-ar-a'-je-ah*) [κύτταρος, cell; ῥηγνύναι, to burst forth]. Hemorrhage from the socket of a tooth.

Cytula (*sit'-u-lah*) [κύτος, a cell]. In biology, an impregnated ovum.

Cytuloplasm (*sit'-u-lo-plazm*) [κύτος, a cell; πλάσσειν, to form, mold]. In biology, the mingled *ovoplasm* and *spermoplasm* in a cytula.

Czermak's Spaces. Same as *Interglobular Spaces*, *q. v.*

Czerny's Operations. See *Operations, Table of.*

Czerny-Lembert Suture. See *Suture.*

Czerny-Schrœder Operation. See *Operations, Table of.*

Czoker's Alum Cochineal. A solution for staining microscopic sections. Boil 7 grams of pulverized cochineal and 7 grams of alum in 700 c.c. of distilled water, until the quantity of fluid is reduced to 400 c.c.; cool, add a few drops of carbolic acid, and filter. After standing for a few days filter again, after which the fluid will be ready for use. See *Stains, Table of.*

Czumpelitz's Test. See *Tests, Table of.*

D

D. (Dosis). A dose. In Electro-therapeutics an abbreviation of *Duration* and of *Density*. In ophthalmology the letter is used as an abbreviation of *Dexter* and *Dioptry*. It is also used for *detur*, let it be given.

Da Costa's Disease. See *Diseases, Table of.*

Dacryadenalgia (*dak-re-ad-en-al'-je-ah*) [δάκρυ, tear; ἀδήν, gland; ἄλγος, pain]. Pain in a lachrymal gland.

Dacryadenitis (*dak-re-ad-en-i'-tis*). See *Dacryoadenitis.*

Dacryagogue (*dak'-re-ag-og*) [δάκρυ, tear; ἀγωγός, conducting]. 1. Inducing a flow of tears. 2. An agent that induces a flow of tears.

Dacrycystalgia (*dak-re-sis-tal'-je-ah*). See *Dacryocystalgia.*

Dacryelcosis (*dak-re-el-ko'-sis*) [δάκρυ, tear; ἕλκωσις, ulceration]. Ulceration of the lachrymal apparatus.

Dacrygelosis (*dak-re-jel-o'-sis*) [δάκρυ, tear; γέλως laughter]. Alternate weeping and laughter.

Dacryhemorrhysis (*dak-reh-em-or'-is-is*) [δάκρυ, tear; αἷμα, blood; ῥύσις, a flow]. The weeping of bloody tears; a flow of blood from a lachrymal duct.

Dacryin (*dak'-re-in*) [δάκρυ, a tear]. A peculiar substance contained in tears.

Dacryma (*dak'-re-mah*) [δάκρυμα, a tear: *pl.*, *Dacrymata*]. A tear; the lachrymal secretion.

Dacryoadenitis (*dak-re-o-ad-en-i'-tis*) [δάκρυον, a tear; ἀδήν, a gland]. Inflammation of a lachrymal gland.

Dacryoblenorrhea (*dak-re-o-blen-or-e'-ah*) [δάκρυον, a tear; βλέννος, mucus; ῥοία, a flow]. Chronic inflammation and discharge of mucus from the lachrymal sac.

Dacryocele (*dak'-re-o-sēl*, or *-se'-le*) [δάκρυον, tear; κήλη, hernia]. See *Dacryocystocele.*

Dacryocyst (*dak'-re-o-sist*) [δάκρυον, tear; κύστις, cyst]. The lachrymal cyst.

Dacryocystalgia (*dak-re-o-sis-tal'-je-ah*) [δάκρυον, tear; κύστις, cyst; ἄλγος, pain]. Pain in a lachrymal sac.

Dacryocystitis (*dak-re-o-sis-ti'-tis*) [δάκρυον, tear; κύστις, a sac]. Inflammation of a lachrymal sac.

Dacryocystocele (*dak-re-o-sist'-o-sēl*) [δάκρυον, a tear; κύστις, a sac; κήλη, hernia]. Hernia of a lachrymal sac.

Dacryocystoptosis (*dak-re-o-sis-top-to'-sis*) [δάκρυον, a tear; κύστις, a cyst; πτῶσις, a fall]. Prolapse or downward displacement of a lachrymal sac.

Dacryohemorrhea (*dak-re-o-hem-or-e'-ah*). See *Dacryhemorrhysis.*

Dacryoid (*dak'-re-oid*) [δάκρυον, tear; εἶδος, form]. Resembling a tear.

Dacryolite (*dak'-re-o-līt*). See *Dacryolith.*

Dacryolith (*dak'-re-o-lith*) [δάκρυον, tear; λίθος, stone]. A lachrymal calculus; a calcareous concretion in a lachrymal passage or in the palpebral conjunctiva.

Dacryolithiasis (*dak-re-o-lith-i'-as-is*) [δάκρυον, a tear; λίθος, a stone]. The morbid condition that is attended by the formation of dacryoliths; also, the presence of dacryoliths.

Dacryoma (*dak-re-o'-mah*) [δακρύειν, to weep]. 1. A lachrymal tumor. 2. The closure or obstruction of the *puncta lachrymalia*, causing epiphora.

Dacryon (*dak'-re-on*) [δάκρυον, a tear]. 1. A tear. 2. See *Craniometric Points.*

Dacryops (*dak'-re-ops*) [δάκρυον, tear; ὄψ, eye]. 1. A watery eye. 2. Cyst of the duct of a lachrymal gland.

Dacryoptosis (*dak-re-op'-to-sis*) [δάκρυον, tear; πτῶσις, a fall]. 1. The falling or shedding of tears. 2. Dacryocystoptosis.

Dacryopyorrhea (*dak-re-o-pi-or-e'-ah*) [δάκρυον, a tear; πύον, pus; ῥοία, a flow]. A discharge of pus from the lachrymal apparatus.

Dacryopyosis (*dak-re-o-pi-o'-sis*) [δάκρυον, tear; πύον, pus]. Suppuration in the lachrymal apparatus.

Dacryorrhea (*dak-re-or-e'-ah*) [δάκρυον, tear; ῥοία, a flow]. Excessive discharge of tears.

Dacryosolen (*dak-re-o-so'-len*) [δάκρυον, tear; σωλήν, pipe]. A lachrymal duct or canal.

Dacryosolenitis (*dak-re-o-so-len-i'-tis*) [δάκρυον, a tear; σωλήν, a pipe; ιτις, inflammation]. Inflammation of a lachrymal duct.

Dacryostenosis (*dak-re-o-ste-no'-sis*) [δάκρυον, tear; στενός, narrow]. Stenosis or stricture of a lachrymal duct.

Dacryosyrinx (*dak-re-o-sir'-inks*) [δάκρυον, tear; σύριγξ, pipe]. 1. A lachrymal fistula. 2. A syringe for use in the lachrymal ducts.

Dactyl (*dak'-til*) [δάκτυλος, a finger]. A finger or toe; a digit.

Dactylagra (*dak-til-a'-grah*) [δάκτυλος, a digit; ἄγρα, seizure]. An attack of gout or rheumatism in the fingers.

Dactylate (*dak'-til-āt*) [δάκτυλος, a finger]. Resembling a finger. Possessing five rays or appendages.

Dactylion (*dak-til'-e-on*). See *Syndactylism.*

Dactylitis (*dak-til-i'-tis*) [δάκτυλος, a finger; ιτις, inflammation]. Inflammation of a finger or toe.

Dactylognathite (*dak-til-og-nath'-īt*) [δάκτυλος, a finger; γνάθος, jaw]. In biology, Milne Edwards' term for the terminal (distal) joint of one of the foot-jaws of a crustacean. See *Dactylos.*

Dactylogryposis (*dak-til-o-grip-o'-sis*) [δάκτυλος, finger; γρυπός, curved]. Abnormal curvature of the fingers or toes.

Dactyloid (*dak'-til-oid*) [δάκτυλος, finger; εἶδος, form]. In biology, resembling a finger.

Dactylology (*dak-til-ol'-o-je*) [δάκτυλος, finger; λόγος, speech]. Conversation or talking by the fingers.

Dactylolysis (*dak-til-ol'-is-is*) [δάκτυλος, digit; λύσις, loosening]. The falling off of a finger or toe. **D. spontanea.** See *Ainhum.*

Dactylopatagium (*dak-til-o-pat-ag'-e-um*) [δάκτυλος, finger; παταγεῖον, a border to a woman's gown]. In biology, that part of the patagium of a bat which is connected with the digits. Cf. *Ectopatagium.*

Dactylopodite (*dak-til-op'-o-dīt*) [δάκτυλος, a finger; πούς, a foot]. See *Dactylos.*

Dactylopore (*dak-til'-o-por*) [δάκτυλος, finger; πόρος, pore]. In biology, applied to the opening of the finger-like, or tentacular dactylozoid of certain hydrozoans.

Dactylopterus (*dak-til-op'-ter-us*) [δάκτυλος, finger; πτερόν, wing]. In biology, applied to fishes in which certain of the pectoral fin-rays are separate and finger-like.

Dactylorhiza (*dak-til-or-i'-zah*) [δάκτυλος, finger; ῥίζα, root]. A disease of the roots of certain vegetables, as turnips.

Dactylos (*dak'-til-os*) [δάκτυλος, a finger]. In biology, the seventh joint of any crustacean appendage; the *dactylognathite* and *dactylopodite* of Milne Edwards.

Dactylospasmus (*dak-til-o-spaz'-mus*) [δάκτυλος, digit; σπασμός, a spasm]. Spasm of a digit.

Dactylosymphysis (*dak-til-o-sim'-fis-is*) [δάκτυλος, finger; σύν, together; φύειν, to grow]. Syndactylism.

Dadi Gogo (*da'-de go'-go*) [African]. See *Gogo.*

Dæmonomania (*de-mo-no-ma'-ne-ah*). See *Demonomania.*

Daffy's Elixir. A compound aromatic tincture of senna. Unof.

Dahlia (*dahl'-yah*). See *Pigments, Conspectus of.*

Dajaksch (*di'-aksh*) [Java]. The arrow-poison used in Borneo. It is believed to be distinct from the Java arrow-poison.

Dakryon (*dak'-re-on*). See *Craniometric Points.*

Dakryops (*dak'-re-ops*). Same as *Dacryops.*

Dalby's Carminative. An old empiric carminative and mildly opiate mixture, answering nearly to the *mistura carminativa* of the National Formulary. It contains about two and a half minims of tincture of opium to the fluidounce.

Dalgarno Alphabet. Glove-alphabet; a method of manual communication among deaf-mutes, in which the letters are indicated by touching various parts of the hand.

Dallas's Operation. See *Operations, Table of.*

Dalmatian Insect Powder. See *Buhach.*

Dalton's Theory. The atomic theory of compounds.

Dalton-Henry Law. See *Law.*

Daltonism (*dal'-ton-izm*) [*Dalton*, a physician]. Color-blindness. See *Blindness.*

Dam. See *Rubber Dam* and *Coffer Dam.*

Damalic Acid (*dam-al'-ik*). See *Acid.*

Damaluric Acid (*dam-al-u'-rik*). See *Acid.*

Damiana (*dam-e-an'-ah*). The leaves of *Turnera aphrodisiaca*, found in Mexico and Lower California; a stimulant tonic and said to be a powerful aphrodisiac. It is the basis of a great number of quack remedies. **D., Ext.** Dose gr. ij–x. **D., Fld. Ext.** Dose ♏x–3j. Dose of the leaves ℥j daily. All inot.

Dammar (*dam'-ar*) [Hind., *dāmar*, resin]. A gum or resin resembling copal, produced by various species of *Dammara* and by various other trees. **D., True,** is obtained from the *Dammara orientalis*, a coniferous tree, indigenous in the East Indies, and also from *Dammara australis*, in New Zealand. The latter variety is also known as *Kauri*, or *cowdie resin.* The former is the variety commonly called dammar in commerce. It occurs in masses, coated on the exterior with white powder from mutual attrition, while the interior is pale-amber colored and transparent. It is harder than rosin, and splits and cracks at the temperature of the hand. It is used in the manufacture of varnishes. See *Cowdie Gum.*

Damp. See *Choke-damp; Black-damp; Fire-damp.*

Damping Apparatus. The union of the tympanic membrane of the ear with the auditory ossicles acting as a damper to prevent excessive sympathetic vibration for its own fundamental note.

Dance (*dans*) [Fr., *danser*, to dance]. Any measured tread or system of steps accompanied by music. Also, any motion of the body caused by an abnormal nervous stimulus. **D., St. Vitus's.** See *Chorea.* **D. Plague.** Synonym of *Chorea.*

Dancel's Method. See *Treatment, Methods of.*

Dancer's Cramp. See *Cramp.* **D. Palsy.** See *Palsy.*

Dancing Mania. See *Choromania.*

Dandelion (*dan'-de-li-on*). See *Taraxacum.*

Dandruff (*dan'-druf*). See *Seborrhea, Pityriasis, and Alopecia furfuracea.*

Dandy (*dan'-de*) [Hind., *dāndi*, a boatman]. 1. In India, a kind of stretcher or hammock of canvas with bamboo frame. It is serviceable in the transportation of the sick and wounded. 2. See *Colic, Endemic.* **D. Fever.** See *Dengue.*

Danforth's Oil. See *Naphtha.*

Daniell (*dan'-yel*) [*Daniell*, an electrician]. A unit of electric measurements equal to 1.124 volts. **D. Cell.** See *Cell.*

Daniella (*dan-e-el'-ah*) [Dr. *Daniell*, a traveler]. A genus of leguminous trees of W. Africa. **D. thurifera**, the only species of this genus affording olibanum, or true frankincense.

Dantec, Bacillus of. See *Bacteria, Table of.*

Danube Fever (*dan'-ūb fe'-ver*). A febrile affection of remittent or relapsing type observed in sailors and others that have sailed on and have drunk the water of the Danube River, characterized by symptoms of gastro-intestinal derangement, albuminuria, hematuria, edema, uremic symptoms, profuse perspiration, enlarged spleen, and nervous symptoms. Its precise nature is unknown; possibly it is the same as *Malta fever, Rock fever, Cretan fever, Mediterranean fever.*

Daphne (*daf'-ne*) [δάφνη, the laurel]. A genus of thymelaceous shrubs, mostly poisonous or acrid. See *Mezereon.*

Daphnetin (*daf'-net-in*) [δάφνη, the laurel], $C_9H_6O_4+H_2O$. A substance obtained by the decomposition of the glucosid *daphnin.* It crystallizes in yellow needles or prisms, melting at 255° C.

Daphnin (*daf'-nin*) [δάφνη, the laurel], $C_{15}H_{16}O_9+2H_2O$. 1. A glucosid isomeric with esculin; it is obtained from the bark of *Daphne alpina*, and forms prismatic transparent crystals having a bitter taste and melting at 200° C. 2. See also *Pigments, Conspectus of.*

Darier's Disease. *Psorospermose folliculaire végétante; Keratosis follicularis; Ichthyosis sebacea cornea;* a disease of the skin commencing on the face or trunk, but ultimately spreading to other parts of the body, and characterized by the development of papules of small size and dirty-red color, with firmly-adherent grayish-brown, black, or gray horny crusts. These crusts can be squeezed out of the papules by the thumb-nails. In some places the lesions may become confluent. The disease progresses slowly, and the papules may assume considerable size. Ulceration of their surfaces may occur, or the tumors may suppurate *en masse.* The disease occurs usually in males. Its etiology is obscure. See *Diseases, Table of.*

Darnel (*dar'-nel*). See *Lolium.*

D'Arsonval's Oven. See *Oven.*

Dartoic, or **Dartoid** (*dar-to'-ik*, or *dar'-toid*) [δαρτός, flayed]. Pertaining to or resembling the dartos. **D. Myoma.** See *Myoma.*

Darton's Test. See *Tests, Table of.*

Dartos (*dar'-tos*) [δαρτός, flayed]. The contractile fibrous layer beneath the skin of the scrotum.

Dartre (*dar'-tr*) [Fr.]. Any herpetic or other chronic skin-disease; a term vaguely used in French and the older English medical literature.

Dartrous (*dar'-trus*) [Fr., *dartre*]. Of the nature of tetter or herpes; herpetic.

Dartsac (*dart'-sak*). A muscular sac containing a calcareous or chitinous dart or rod, opening into the cloaca of certain gasteropods. (Helix.)

Darwin's Ducts. See *Ducts.* **D. Ear.** See *Ear, Deformities of, Darwinian Tubercle,* and *Diseases, Table of.* **D. Theory of Heredity.** See *Heredity.*

Darwinian Tubercle. A nodule or eminence sometimes seen on the edge of the helix of the ear; it is believed to be a relic corresponding to the point of an ape's ear.

Darwinism (*dar'-win-izm*). [Named after Charles *Darwin*, a celebrated naturalist]. The theory of descent by evolution, as modified by the doctrine of the survival of the fittest. See *Neo-Darwinism* and *Evolution.*

Dastre-Morat's Method. See *Anesthetic.*

Dasyma (*das'-im-ah*). Same as *Hirsuties.*

Date-disease. See *Aleppo Boil.* **D.-fever.** Synonym of *Dengue.*

Datisca (*da-tis'-kah*) [L.]. A genus of herbs, somewhat allied to the cacti. **D. cannabina**, of Asia and the Levant, is antiperiodic and antiscrofulous. **D. glomerata** is a Californian species.

Datiscin (*da-tis'-in*) [*Datisca*], $C_{21}H_{22}O_{12}$. A starch-like glucosid from *Datisca cannabina*; it is a good yellow dye.

Datura (*da-tu'-rah*) [Hind., *dhatūra*, a certain plant]. A genus of Solanaceæ, or night-shade family. **D. stramonium.** See *Stramonium.* **D. tatula**, a plant belonging to the nightshade family, closely resembling stramonium in its therapeutic and physiologic properties. It has been smoked with advantage in asthma. Unof.

Daturin (*da-tu'-rin*) [Hind., *dhatūra*, a certain plant]. A poisonous alkaloid from the thorn-apple. See *Atropin.*

Daturism (*dat'-u-rizm*) [Hind., *dhatūra*, a certain plant]. A morbid condition of mind and body induced by excessive dosing with stramonium (*Datura*); stramonium-poisoning. It is nearly or quite identical with atropism.

Daubenton's Angle. See *Angle.* **D. Line.** See *Line.* **D. Plane.** See *Plane.*

Daughter (*daw'-ter*) [AS., *dohtor*, daughter]. A female child or descendant. **D.-cell.** See *Cell.* **D.-cyst**, a cyst formed within a cyst. **D.-nuclei.** See *Karyokinesis.* **D.-star**, an amphiaster. See *Karyokinesis.*

Dauvergne's Apparatus. An apparatus used for treating old dislocations of the shoulder.

Davat's Operation. See *Operations, Table of.*

Davidsohn, Pupillary Reflex of. The light reflected through the pupil in translumination, when the electric light is held in the mouth.

Daviel's Operation. See *Operations, Table of.*

Davier (*dah'-ve-á*) [Fr.]. A tooth-forceps; a lion-forceps.

Davies and Dale's Carmin Mass. A warm-flowing mass for injecting tissues. Digest in a flask for thirty-six hours, at the ordinary temperature, 11.6 grams of carmin in a mixture of 15 c.c. of ammonia (0.92 strength) and 118 c.c. of water. Filter, and dilute with water to 472 c.c. Dissolve 38.88 grams of potassium alum in 295 c.c. of water, and add, with constant boiling, a solution of sodium carbonate until a slight precipitate is produced. Boil and add to the carmin fluid, shaking vigorously. A drop of the fluid, when placed on a white filter-paper, should show no color-ring. Allow it to cool and settle for a day or two, and draw off the supernatant fluid with a siphon. Wash, by decantation, until the wash-water ceases to give a precipitate with barium chlorid. So much water must be kept with the color that it shall measure 1180 c.c. For use soak 100 grams of gelatin in 750 c.c. of this fluid and melt over a water-bath.

Davies-Colley Operations. See *Operations, Table of.*

Davis's (Leon) Sign. See *Death.*

Davy's Method. See *Treatment, Methods of.* **D. Operation.** See *Operations, Table of.* **D. Tests.** See *Tests, Table of.*

Day's Test. See *Tests, Table of.*

Day-Blindness. See *Nyctalopia;* also *Hemeralopia.*

Daymare (*da'-mār*). A state of temporary distress and terror, resembling nightmare, but coming on when the patient is awake. It is thought to be due to a diseased state of the blood-vessels of the brain.

Dead (*ded*) [AS., *deád*, dead]. Without life; destitute of life. **D.-born.** Still-born. **D. Finger.** See *Sphaceloderma* and *Night-palsy.* **D.-house**, a morgue; an apartment in a public institution for keeping dead bodies. **D. Nettle.** See *Lamium.* **D. Voice**, a voice without nasal resonance. The so-called nasal voice.

Deadly (*ded'-le*) [AS., *deád*, dead]. Capable of causing death; fatal; mortal. **D. Nightshade.** See *Atropa* and *Belladonna.*

Deaf (*def*, or *dēf*) [AS., *deáf*, deaf]. Without the sense of hearing. A condition of impaired hearing. **D.-dumbness.** See *Deaf-mutism.* **D.-fields**, two small triangular planes, converging toward the external auditory meatus, and in which the vibrating tuning-fork is not heard. **D.-mute**, one who suffers from deaf-mutism. **D.-mutism**, a condition of deafness or impaired hearing, accompanied by imperfect development (congenital), or loss of speech. **D.-points**, some points near the ear in which a vibrating tuning-fork cannot be heard.

Deafness (*def'-nes*) [AS., *deáf*, deaf]. The condition of being deaf; surdity. **D., Boilermakers'**, chronic labyrinthine deafness resulting from constant exposure to loud sounds. Bone-conduction is impaired, and there are destructive and atrophic changes throughout the cochleæ, most marked at the base. **D., Mind.** See *D., Psychic.* **D., Music**, a variety of psychic deafness in which, although musical sounds are heard, they are not recognized as such. **D., Paradoxic**, called also *Paracousia Willissii*, deafness for speech in silence, but with ability, *e. g.*, to hear the same voice in a noisy car or street. This is said to be caused by compression of the labyrinth. It is a form of otopiesis. **D., Psychic**, the deafness from destruction of the auditory center (Munk). Sounds are heard, but not recognized or understood. **D., Word**, a variety of psychic deafness in which, although words be heard, they are not comprehended.

Death (*deth*) [AS., *deáth*, death]. The cessation of life. **D., Apparent**, a term applied to a cataleptic state in which respiration and circulation are so feeble as to be inappreciable. **D., Black**, an exceedingly fatal epidemic called the "Plague," which occurred in Europe during the 14th century, during which it is estimated 20,000,000 people died. **D. Camass.** See *Camass.* **D., Localized.** See *D., Somatic.* **D., Molecular**, caries; ulceration. **D.-rate**, a term arbitrarily expressing the mortality of a place, based upon the number of deaths for each 1000 of population during a period of one year. **D.-rattle**, the peculiar sound produced by the passage of air through mucus in the throat of a dying person. **D., Signs of**, certain indications of death, such as cessation of the heart's action, and respiration, vigor of the body, healthiness of the tissues, etc. See *D., Tests of.* **D., Somatic**, death of the organism as a whole, in distinction from localized **D.**, or necrosis, and gangrene. **D., Tests of:** Dr. Richardson summarizes the most important as: 1. Absence of the pulsation of the heart. 2. Absence of the respiratory murmur. 3. Pressure on veins (*Fillet test*). 4. Electric test for muscular irritability. 5. The ammonia hypodermatic test (*Montuverde's sign*). 6. Coagulation of the blood in the veins. 7. Rigor mortis. 8. Decomposition. *Balfour's Test*, a test for the action of the heart in apparent death. He proposed sticking into the skin over the heart needles having little paper flags fixed at their blunt ends. Should there be contraction of the heart-muscle, such movement would be communicated to the paper flags. *Cloquet's Needle T.*, a bright needle plunged into the body of the biceps muscle and left there for a time; then ex-

amined for signs of oxidation. If found, life is present. *Durst's (Leon) Sign*, after death the arteries are pale or yellowish, and empty of blood, whilst during life the vessels pulsate, and have the color of the surrounding tissues. *Dzophanous Test*, the scarlet-red color of the finger-edges when held toward the light, due, if life exists, to the blood circulating through the tissues. The scarlet tint does not appear if life is extinct. The test is not to be relied on in all cases, as in syncope the red coloration may be absent. *Fillet Test: Richardson's Test*, a fillet applied to the veins of the arm will not cause filling of the veins on the distal side of the fillet if death be present. *Foubert's Test* consists in cutting through one of the intercostal spaces and feeling the heart with the point of the finger. *Laborde's Sign*. Same as *Cloquet's Needle Test*. *Larcher's Sign*, soon after death the conjunctivæ exhibit externally gray, cloudy discolorations, that rapidly become black. They are due either to the formation of films of mucus, or to cadaveric imbibition dependent on putrefactive changes. *Lewassem's Sign*, the application of a scarificator and cupping-glass will fail to draw blood if life has been extinct for some hours. *Magnus's Sign*, if a finger be tightly bound round with a ligature, the part beyond the constriction will, if the person be living, become bright red, the tint increasing in depth until it finally assumes a uniformly bluish-red color. At the spot, however, where the ligature is applied, a narrow white ring becomes visible. No change results from the application of the ligature if life be extinct. *Monro's Sign*, the injection subcutaneously during life of a little ammonia solution will be followed by a short-wine congestion in surrounding parts, which does not take place in case of death. *Ripault Sign*, during life the circular shape of the pupil is influenced by external pressure only during its actual application. After life, however, external pressure is capable of permanently affecting the normal roundness of the pupillary aperture. **D. Trance**, trance that closely resembles death.

Debilitant (*de-bil'-it-ant*) [*debilitare*, to weaken]. 1. Weakening. 2. A medicine that weakens.

Debility (*de-bil'-it-e*). See *Asthenia*.

Deboove's Membrane. See *Membrane*. **D. Method.** See *Treatment, Methods of*.

Debridement (*da-brēd'-mon(g)*) [Fr., *débridement*]. The enlarging of a gunshot wound or a hernia with the knife; the slitting of any constricting tissue or band.

Debrunner's Tests. See *Tests, Table of*.

Decacerous (*dek-as'-er-us*) [δέκα, ten; κέρας, horn]. In biology, having ten horn-like processes, tentacles or arms.

Decagram (*dek'-a-gram*) [δέκα, ten; γράμμα, a certain weight]. Ten grams or 154.32349 grains, 0.353 ounce avoirdupois, or 0.3215 ounce troy. See *Metric System*.

Decagynous (*dek-aj'-in-us*) [δέκα, ten; γυνή, female]. In botany, with ten pistils.

Decalcification (*de-kal-sif-ik-a'-shun*) [*de* priv.; *calx*, lime; *facere*, to make]. The loss of the lime-constituent of bone in some cases of osteitis.

Decalcified Bone-Drain. A drainage-tube made of a calcified chicken-bone.

Decalcify (*de-kal'-sif-i*) [*de* priv.; *calx*, lime; *facere*, to make]. To remove lime-salts from tissues previously fixed in order to cutting for histologic examination. An acid is usually combined with a hardening agent to prevent shrinking of the tissues. The best decalcifying fluids are Arsenious Acid, Chromic Acid, Hydrochloric Acid, Kleiner's Solution, Hydrochloric Acid and Glycerin, Nitric Acid, Nitric Acid and Chromic Acid, Picric Acid. See *Reagents and Stains, Table of*.

Decalcifying Fluid (*de-kal'-sif-i-ing flu'-id*). A solution used for the purpose of depriving tissue of its calcium salts. Chromic acid 1 gram, water 200 c.c., then add 2 c.c. nitric acid,—is commended.

Decaliter, Decalitre (*dek'-a-le-ter*) [δέκα, ten; λίτρα, a pound]. Ten liters, or 2¼ imperial gallons, or 2.64 U. S. gallons. See *Metric System*.

Decalvant (*de-kal'-vant*) [*decalvans*, depilatory]. Removing hair; depilatory; causing baldness.

Decamerous (*dek-am'-er-us*) [δέκα, ten; μέρος, a part]. In biology, ten-parted, as a flower.

Decameter, Decametre (*dek'-a-me-ter*) [δέκα, ten; μέτρον, a measure]. Ten meters or 393.7 English inches, or 32.8 feet. See *Metric System*.

De Candolle, Canal of. See *Canal*.

Decandrous (*dek-an'-drus*) [δέκα, ten; ἀνήρ, male]. In biology, having ten stamens.

Decane (*dek'-an*) [δέκα, ten], $C_{10}H_{22}$. A hydrocarbon of the paraffin series.

Decantation (*de-kan-ta'-shun*) [*de*, down; *cantus*, a side]. The operation of removing the supernatant fluid from a sediment. It may be poured off by means of a guiding-rod, or drawn off by means of a siphon.

Decapetalous (*dek-ap-et'-al-us*) [δέκα, ten; πέταλον, a leaf]. In biology, having ten petals.

Decaphyllous (*dek-af'-il-us*) [δέκα, ten; φύλλον, a leaf]. In biology, ten-leaved.

Decapitation (*de-kap-it-a'-shun*) [*de*, from; *caput*, head]. Division of the neck of the child in labor, when delivery and version are both impossible. This is sometimes called *decollation*.

Decapitator (*de-kap'-it-a-tor*) [*de*, from; *caput*, head]. An instrument used in performing decapitation.

Decapod (*dek'-a-pod*) [δέκα, ten; πούς (ποδ-), foot]. In biology, having ten feet, rays, or arms.

De Cassis' Operation. See *Operations, Table of*.

Decay (*de-ka'*) [*de*, down; *cadere*, to fall]. 1. Putrefactive change. 2. The ultimate catabolic state; decline of life, of health, or of any one or more functions.

Dece's Operations. See *Operations, Table of*.

Decentered Lens (*de-sent'-terd lenz*). 1. A lens thicker at one side than at the other. 2. A lens so mounted that the visual line does not pass through its center.

Decentration (*de-sen-tra'-shun*) [*de*, from; *centrum*, a center]. Removal from a center.

Decephalization (*de-sef-al-iz-a'-shun*) [*de*, away from; κεφαλή, head]. In biology, applied to retrograde changes or simplification in the head parts.

Decerebrated (*de-ser'-e-bra-ted*) [*de*, from; *cerebrum*, the brain]. Deprived of the cerebrum; said of birds and other animals that have been thus vivisected for observational study.

De Chaumont's Formula. A formula for determining the volume of pure air necessary to maintain a certain standard of purity in the atmosphere. It is as follows:

$d' = \frac{e}{s}$; d' = the volume of air to be delivered per hour in cubic feet; e = the quantity of CO_2 that each person is assumed to evolve per hour; s = the amount of impurity in a cubic foot of air.

Decidua (*de-sid'-u-ah*) [*deciduus*, a falling off]. The membranous envelop of the ovum derived from the mother and cast off at birth with the placenta, etc. **D., Ovular.** See *D. reflexa*. **D., Placental.** See *D. serotina*. **D. reflexa**, that part of the decidua growing about the ovum and enclosing it as a sac. **D. serotina**, that part of the decidua vera upon which the ovum lies, and from which the placenta is subsequently formed. **D., Uterine.** See *D. vera*. **D. vera**, the thickened, vascular, spongy mucous membrane of the gravid uterus.

Decidual (*de-sid'-u-al*) [*deciduus*, a falling off]. Belonging to the decidua. **D. Cells**, a proliferation of young connective-tissue cells above the uterine glands, taking place after the ovum is impregnated, and producing an hypertrophy of the mucous membrane of the uterus. **D. Endometritis.** See *Endometritis.*

Deciduoma (*de-sid-u-o'-mah*) [*deciduus*, a falling off; ὄμα, a tumor: *pl. Deciduomata*]. An intra-uterine neoplasm, containing decidual relics, and believed to arise from some hyperplasia of a retained portion of the decidua.

Deciduous (*de-sid'-u-us*) [*de*, away, from; *cadere*, to fall]. In biology, falling off. Applied to leaves that fall in autumn, and to the calyx and corolla when they fall off before the fruit develops. In dental anatomy, applied to the milk-teeth or temporary teeth. **D. Skin.** See *Keratolysis.* **D. Teeth**, the temporary teeth or milk-teeth are so called because, after subserving the purposes of early childhood, they are removed by an operation of the economy, to give place to others of a larger size and of a more solid texture. See *Teeth, Temporary.*

Decigram (*des'-e-gram*) [*decimus*, tenth; *gramma*, gram]. One-tenth of a gram or 1.54 grains troy. See *Metric System.*

Deciliter (*des'-e-le-ter*) [*decimus*, tenth; *litra*, liter]. One-tenth of a liter, or 3.52 English fluidounces or 3.38 U. S. fluidounces. See *Metric System.*

Decimeter (*des'-e-me-ter*) [*decimus*, tenth; μέτρον, a measure]. One-tenth of a meter, or 3.937 inches. See *Metric System.*

Decinormal (*des-e-nor'-mal*) [*decimus*, tenth; *norma*, normal]. Having one-tenth the strength of the normal, as a solution.

Deck Plug (*dek' plug*). A short wooden cylinder that may be of various sizes, used by ship-builders, and employed in pathologic laboratories for making paper boxes in which the specimens may be embedded. A strip of thin paper is wound around the plug and held in place by a rubber band, sufficient paper projecting above to form a cylindric box with a wooden bottom.

Declinate (*dek'-lin-āt*) [*de*, down; *clinare*, to bend]. In biology, bent downward.

Declination (*dek-lin-a'-shun*) [*declinare*, to decline]. The dip of the magnetic needle.

Declinator (*dek'-lin-a-tor*) [*declinare*, to decline]. An instrument for keeping the dura out of harm's way during the act of trephining.

Decline (*de-klīn'*) [*declinare*, to bend]. A marked deterioration; weakness of the body; an enfeebling chronic state of disease: the decreasing stage, as of a fever. Also a popular term for *Pulmonary tuberculosis.*

Declivis cerebelli (*de-kli'-vis ser-e-bel'-i*) [L.]. The sloping posterior aspect of the monticulus of the cerebellum.

Decoction (*de-kok'-shun*) [*decoquere*, to boil down]. A decoction, or "tea." In pharmacy, a liquid preparation obtained by boiling vegetable substances in water. There are two official *decocta*, besides one in the national formulary, and twelve in the British pharmacopeia.

Decoctum (*de-kok'-tum*) [L.: *pl.*, *Decocta*]. A decoction.

Decollated (*de-kol'-a-ted*) [*de*, away, from; *collum*, neck]. In biology, applied to univalve shells the apices of which have been lost; beheaded.

Decollation (*de-kol-a'-shun*). See *Decapitation.*

Decollator (*de-kol'-a-tor*) [*decollare*, to behead]. An instrument used in embryotomy for decapitating the fetus.

Decoloration (*de-kul-or-a'-shun*) [*decolorare*, to deprive of color]. The operation of discharging the color of an organic substance, usually by bleaching or by filtration through animal charcoal.

Decolorize (*de-kul'-or-īz*) [*decolorare*, to deprive of color]. To remove the excess of coloring-matter from stained histologic preparations, for purposes of differentiation.

Decomposition (*de-kom-po-zish'-un*) [*decomponere*, to decompose]. The separation of the component principles of a body, either by chemic analysis or by putrefactive fermentation.

Decompound (*de-kom'-pound*) [*de*, away, from; *compositus*, compound]. In biology, many times compound, as certain leaves.

Decongestive (*de-kon-jes'-tiv*) [*de*, from; *congerere*, to bring together]. Relieving congestion.

Decortication (*de-kor-tik-a'-shun*) [*de*, from; *cortex*, the bark]. 1. The operation of removing or stripping the bark or husk of a plant. 2. The stripping off of portions of the cortical substance of the brain from the summits of the gyri. This lesion is often witnessed in post-mortem examinations of the brain after death from paretic dementia, and is partly due to the abnormal adhesion of the gray matter to the meninges.

Decrepit (*de-krep'-it*) [*decrepitus*, old]. Broken down with age.

Decrepitation (*de-krep-it-a'-shun*) [*decrepitare*, to crackle]. The crackling noise made by certain crystalline bodies when their water of crystallization is driven off by heat. It is caused by the conversion of the imprisoned water into steam.

Decrepitude (*de-krep'-it-ūd*) [*decrepitus*, decrepit]. The state of being decrepit; senility; the feebleness of old age.

Decrescent (*de-kres'-ent*) [*decrescere*, to decrease]. In biology, gradually tapering or diminishing from below upward.

Decubitus (*de-ku'-bit-us*) [*decumbere*, to lie down]. A term denoting a recumbent or horizontal position. Also, the position of a sick person while in bed. **D., Acute**, a form of bed-sore, sometimes seen in connection with cerebral lesions.

Decumbent (*de-kum'-bent*) [*de*, down; *cumbere*, to lie]. In biology, bent to one side; reclining.

Decurrent (*de-kur'-ent*) [*de*, down; *currere*, to run]. In biology, applied to leaves that are prolonged down the side of the stem below the point of their insertion.

Decussate (*de-kus'-at*) [*decussatus*, cross]. In biology, arranged in pairs that successively cross each other. To intersect. A term applied to nerve-fibers and to muscle fibers that interlace.

Decussatio (*de-kus-a'-she-o*) [L.]. A crossing. **D. pontinalis** (more correctly *pontilis*), in the pons, a decussation of tegmental fibers from the thalamus.

Decussation (*de-kus-a'-shun*) [*decussatio*, a crossing]. A chiasma or X-shaped crossing, especially of nerves, or of nerve-filaments. The principal decussations are that of *the optic nerve*, and that of *the pyramids*: i. e., of the anterior pyramids of the oblongata.

Decussorium (*de-kus-o'-re-um*) [L.]. An instrument for depressing the dura after the operation of trephining, so as to facilitate the removal of pus, blood, or abnormal effusions.

Dedentition (*de-den-tish'-un*) [*de*, down; *dens*, a tooth]. The shedding of the teeth, especially the milk-teeth.

Dedolation (*ded-o-la'-shun*) [*dedolatio*, a hewing off]. The removal of a slice by cutting; a wound by which a part is cut off.

Deduplication [*de-du-plik-a'-shun*) [*deduplicare*, to divide in two]. In biology, the same as *Chorisis*, q. v.

Deelinæ Oleum. A highly refined petroleum oil manu

factured on the Dee River. It is said to be valuable as a local application in eczema, etc. Unof.

Deemetinize (*de-em-et'-in-iz*). To deprive ipecacuanha of its emetic principle, emetin.

Deep (*dēp*) [ME., *depe*]. Not superficial; not situated near the surface. See *Profundus*. **D. Reflexes.** See *Reflexes, Table of.* **D. Water,** water obtained from a porous substance beneath the first impervious stratum.

Deer-berry (*dēr'-ber-e*). A popular name for *Gaultheria procumbens.*

Defatigatio (*de-fat-ig-a'-she-o*) [L.]. Over-fatigue; overstrain, as of the heart-muscle. **D. mentis,** brain-fag.

Defecation (*def-ek-a'-shun*) [*defæcare,* to separate from the dregs]. The evacuation of the bowels, or discharge of feces.

Defect (*de-fekt'*) [*defectus,* a failure]. A lack or failure; absence of any part or organ; absence or failure of a normal function.

Defemination (*de-fem-in-a'-shun*). See *Eviration.*

Defensive Proteids. Hankin's name for those substances formed in the bodies of animals that render them immune to certain diseases. See also *Sozin, Phylaxin, Mycosozin, Toxosozin, Mycophylaxin, Toxophylaxin, Alexin.*

Deferent (*def'-er-ent*) [*deferens,* carrying away]. Carrying away or down; efferent. See *Vas.*

Deferentitis (*def-er-en-ti'-tis*) [*deferens,* carrying away; *-itis,* inflammation]. Inflammation of a vas deferens.

Defervescence (*de-fer-ves'-ens*) [*defervescere,* to cease boiling]. A term applied to periods during the course of fevers in which the temperature falls.

Defibrillation (*de-fi-bril-a'-shun*) [*de,* from; *fibrilla,* a small fiber]. The tearing of the brain-substance in the direction of the least resistance, in order to make cleavage-preparations.

Defibrination (*de-fi-brin-a'-shun*) [*de,* from; *fibra,* a fiber]. The removal of fibrin from blood or lymph.

Definition (*def-in-ish'-un*) [*definitio*; *definire,* to bound by limits]. In optics, the power of an object-glass to show clear outlines of area or structure, free from aberration or distortion.

Defixus (*de-fiks'-us*) [*defigere,* to fasten]. Impotent; sexually powerless; an old term based upon the idea of a spell wrought by an enemy being the cause of the condition indicated.

Deflagration (*def-lag-ra'-shun*) [*deflagrare,* to be consumed]. A sudden, violent combustion, such as accompanies the oxidation of certain inorganic substances by mixing with an easily decomposing salt, such as the alkaline chlorates and nitrates.

Deflex (*de-fleks'*) [*deflexus,* to turn aside]. In biology, to bend down.

Deflorate (*de-flo'-rāt*) [*defloratus,* to deprive of flowers]. In biology, said of a plant or anther that has lost its pollen or flowers, or is past the flowering state.

Defloration (*def-lo-ra'-shun*) [*de,* from; *flora,* a flower]. On the part of the female the first sexual connection effected by consent, not by rape. The loss of those marks or features that indicate virginity, as rupture of the hymen.

Defluvium capillorum (*de-flu'-ve-um kap-il-or'-um*). Synonym of *Alopecia simplex.*

Defluxion (*de-fluk'-shun*) [*defluxio; de,* down; *fluere,* to flow]. 1. A catarrh; a descent of the humors or secretions. 2. A rapid falling, as of the hair or eyebrows.

Defœdatio unguium (*de-fe-da'-she-o un'-gwe-um*) [L., "Fouling of the nails"]. Excessive thickness, with foul appearance of the nails, which often become partly detached from the matrix.

Defoliate (*de-fo'-le-at*) [*de* priv.; *folium,* a leaf]. To destroy the leaves of a plant, or to cause them to drop off.

Deforestation (*de-for-es-ta'-shun*) [*de,* down; *foresta,* a forest]. The stripping of a country or district of its forests, a process that has a direct influence upon the public health for good or for evil.

Deformation (*de-for-ma'-shun*) [*deformere,* to disfigure or distort]. A process by which the body or any of its parts acquires an abnormal shape.

Deformity (*de-form'-it-e*) [*deformitas,* a deformity]. Abnormal shape or structure of a body or any part. **D., Anterior.** See *Lordosis.*

Defunctionalization (*de-funk-shun-al-iz-a'-shun*). Failure or deprival of a function.

Degasify (*de-gas'-if-i*) [*de* priv.; *gas*]. To expel from wood, coal-tar or other substance all moisture and gaseous material, by means of the application of heat.

Degener's Test. See *Tests, Table of.*

Degeneration (*de-jen-er-a'-shun*) [*degenerare,* to differ from ancestors]. Deterioration, degradation, or retrogression of the molecular or cellular structure of a tissue, organ, or cell, so that it can no longer maintain its function; passage from an anastate to a catastate, or from one catastate to a lower one. **Atrophy** is a form of degeneration. **D., Amyloid** or **D., Albuminoid,** now regarded as an infiltration from without, and not as a degeneration of the proper cells and fibers. See *Albuminoid Disease.* **D., Ascending,** that which takes place in centripetal fibers after a destructive lesion of the spinal cord. **D., Atheromatous.** See *Endarteritis, Chronic.* **D., Black.** Synonym of *Melanosis* and of *Anthracosis.* **D., Calcareous,** the deposition of insoluble compounds of calcium and magnesium within the tissues. **Caseation.** See *Caseation.* **Cloudy Swelling.** See *Cloudy Swelling.* **D., Colloid,** akin to mucoid, the disorganized material becoming of a structureless, semi-solid, jelly-like consistence. **D., Descending,** that which takes place in the centrifugal fibers of the cord after a destructive lesion between the central cortex and the anterior nerve-roots. **D., Fatty,** the conversion of the proteids of a cell or fiber into oil. **D., Fibroid,** the substitution of fibrous for a higher grade of tissue. **D., Glassy,** the halo-granular change of the heart-muscle seen in fevers. **D., Gray,** in nervous tissue a degeneration due to chronic inflammation, and characterized by the production of a gray color. **D., Hyaline,** the disorganized tissue becomes shining and translucent. **D., Hydropsic,** a form of degeneration in which the degenerating cells imbibe large quantities of water. **D., Lardaceous.** See *Albuminoid Disease.* **D., Mucoid,** hyper-secretion followed by disorganization of the mucus-cells. **D., Reaction of.** See *Reaction of Degeneration.* **D., Senile,** the widely disseminated degenerative changes, largely fibroid in character, that mark old age. **D., System,** degeneration of a system of fibers, in contradistinction to insular or scattered degeneration. **D., Waxy.** See *Albuminoid Disease.* **D., Zenker's.** Same as *D., Glassy.*

Deglutable (*deg-lut'-a-bl*) [*deglutitio,* a swallowing; ME., *able,* capable]. Capable of swallowing, or of being swallowed.

Deglutitio impedita (*de-glu-tish'-e-o im-pe-di'-tah*). Synonym of *Dysphagia.*

Deglutition (*deg-lu-tish'-un*) [*deglutitio,* a swallowing]. The act of swallowing.

Degmus (*deg'-mus*) [δηγμός, a sting; pain]. A gnawing pain in the stomach.

Degradation (*deg-rad-a'-shun*) [*degradatio,* a descent by steps]. Gradual physiologic and histologic change for the worse; degeneration; retrograde metamorphosis.

Degras (*de'-gras*). See *Leather.*

Degrease (*de-grēs'*) [Fr., *dégraisser*]. To remove fat, as from bones in the preparation of skeletons.

Degreasing (*de-grēs'-ing*) [Fr., *dégraisser*]. Removing the fat, as from bones.

Degree (*de-gre'*) [*de*, from; *gradus*, a step]. Position in a graded series; quality. The units or intervals of thermometric scales. Also, a charter or testimonial of qualification granted by a medical or other college. In trigonometry the $\frac{1}{360}$ part of the arc of a circle.

Degut (*de-gūt'*) [Russ.]. Birch oil or tar. See *Birch.*

Dehio's Method. A method of outlining the stomach. About a quart of water is introduced in separate quantities of a half-pint each, and after the ingestion of each portion, the lower crescentic limit of flatness against the tympanitic transverse colon is outlined. The normal stomach with this additional weight will not quite reach the level of the umbilicus, while in case of dilatation its descent will be rapid and considerable.

Dehisce (*de-his'*) [*de*, off; *hiscere*, to gape]. In biology, to split open. Applied to the splitting open of anthers to shed their pollen, of antheridia to set free their antherozoids, of sporangia to shed their spores, of certain fruits to shed their seeds, etc.

Dehiscence (*de-his'-ens*) [*de*, off; *hiscere*, to gape or yawn]. In biology, the act of dehiscing or splitting open.

Dehorn [*de*, away from; ME., *horn*]. To deprive cattle of their horns.

Dehumanization (*de-hu-man-iz-a'-shun*) [*de*, from; *humanus*, human]. 1. The loss of the proper characteristics of humanity, either by insane persons, or by debased criminals. 2. The supposed loss of some quality pertaining to the human species; as in the alleged *dehumanization* of vaccine virus.

Dehydration (*de-hi-dra'-shun*) [*de*, away from; ὑδωρ (ὑδρ-), water]. The necessary removal of water from microscopic preparations previously to clearing and mounting in balsam. Absolute alcohol is generally best; anilin is used in special cases in which alcohol is inadmissible. 96 per cent. alcohol will answer if xylol or cedar oil be used as the clearing-agent, and should always be used with celloidin sections. It is also called *Anhydration.*

Deiters' Cells. Certain cellular structures between the outer hair-cells of the organ of Corti. Also certain nucleated cells at the intersection of the fibers of the white substance of nerves. Deiters' Cells (spider-cells) are also found in the neuroglia, especially in that of diseased brain-tissue. **D. Nucleus**, a nucleus lying in the direct sensory cerebellar tract of the medulla oblongata. Its function is unknown. See *Nucleus magno-cellularis.* **D. Process**, the process of a nerve-cell, that goes to form an axis-cylinder.

Dejection (*de jek'-shun*) [*dejectio*: *de*, down; *jacere*, to throw]. The discharge of fecal or other excrementitious matter; the matter so discharged. Also, a state of despondency.

Dejectiones nigræ (*de-jek-she-o'-nez ni'-gre*) [L.]. Synonym of *Melena.*

Dekagram (*dek'-a-gram*). See *Decagram.*

Dekaliter (*dek'-a-le-ter*). See *Decaliter.*

Dekameter (*dek'-a-me-ter*). See *Decameter.*

Del Toro's Operation. See *Operations, Table of.*

Delafield's Hematoxylin. See *Hematoxylin* and *Stains.*

Delagarde's Operation. See *Operations, Table of.*

Delamination (*de-lam-in-a'-shun*) [*de*, away; *lamina*, a thin metal plate]. In biology, applied to the splitting of the blastoderm into two layers.

De la Rue's Method. A method of preparing carminic acid. Exhaust cochineal in boiling water. Precipitate the extract with plumbic acetate slightly acidulated with acetic acid, care being taken not to add an excess of the lead. Wash the precipitate with distilled water until the wash-water ceases to give a precipitate with mercuric chlorid; then decompose it with hydrogen sulphid; filter, evaporate the filtrate to a syrupy consistence on a water-bath, and dry; extract the dark-purple product with alcohol, which dissolves out the carminic acid. See *Stains, Table of.*

Delayed Symptoms. A term used as a synonym of *Shock, Deferred, q. v.*

Deleterious (*del-et-e'-re-us*) [δηλητήριος, hurtful]. Hurtful, injurious.

Delffs' Tests. See *Tests, Table of.*

Delhi Boil (*del'-he boil*). See *Furunculus orientalis.*

Delicate (*del'-ik-at*) [*delicatus*, delicate]. Of a refined constitution. Feeble. In a condition of poor health.

Deligation (*del-ig-a'-shun*) [*deligatio*, a binding]. Ligation, as of an artery; bandaging, as of a wound.

De Lignerolle's Operation. See *Operations, Table of.*

Deliquescence (*del-ik-wes'-ens*) [*deliquescere*, to melt away]. The breaking down as a result of the absorption of water from the atmosphere, characteristic of certain substances. Such substances are said to be *hygroscopic.*

Deliquescent (*del-ik-wes'-ent*) [*deliquescere*, to melt away]. In biology, dissolving; applied to a stem that divides into branches.

Deliquium (*del-ik'-we-um*) [L.]. An absence. **D. animi.** 1. Failure of the mind; mental decay; melancholy; lowness of the spirits. 2. Syncope or fainting.

Delirament (*de-lir'-am-ent*) [*deliramentum*, delirium]. Delirium.

Deliration (*de-lir-a'-shun*) [*Deliratio*, delirium]. Delirium.

Deliriant (*de-lir'-e-ant*) [*de*, out of; *lira*, the furrow]. An agent that acts on the brain, so as to disorder the mental faculties and produce confusion of will-power.

Delirifacient (*de-lir-e-fa'-she-ent*) [*delirium*, delirium; *facere*, to make]. Producing delirium.

Delirious (*de-lir'-e-us*) [*delirus*, mad, raving]. Affected with delirium; wandering in mind.

Delirium (*de-lir'-e-um*) [*delirium*, madness]. A disturbance of the cerebral functions manifested by impaired action of the nerve-centers, characterized by hallucinations, an incoherence of speech, a staggering gait, etc. **D., Alcoholic.** See *D. tremens.* **D. ambitiosum**, a condition of boastfulness that is sometimes manifest in the course of paretic dementia. **D. cordis**, a peculiar condition of the myocardium resulting when chloroform vapor is administered above a certain point of concentration. The myocardium fails to contract and rapidly becomes insensitive to stimulation, being thrown only into fibrillary contraction. A heart once so dilated beyond the point of its ability to re-contract never recovers, and death results. **D. ebrositatis.** See *D. tremens.* **D., Febrile**, the delirium of fever. **D. furibundum**, acute mania. **D. of Grandeur**, delirium ambitiosum. **D. mussitans**, low, muttering delirium. **D. nervosum**, the delirium following severe surgical operations, or injuries. **D. palignosticum**, that in which the patient asserts that he has been before in a place to which he has come for the first time. **D. persecutionis**, that in which the patient imagines himself the object of persecution. **D. potatorum**, synonym of *D. tremens.* **D., Senile**, the delirium of old age; dotage. **D., Toxic**, the delirium caused by poisons. **D. tremens**, the delirium arising from alcoholic poisoning, and usually following some acute sickness, overwork, or the shock consequent upon an injury or surgical operation. It is characterized by constant

tremor, great exhaustion, distressing illusions and hallucinations. **D. vigilans.** See *D. tremens.*

Delitescence (*del-it-es'-ens*) [*delitescere*, to lie hid]. The sudden disappearance of inflammation by resolution. Also, the period of incubation of the virus of contagious diseases, such as smallpox, etc.

Delivery (*de-liv'-er-e*) [Fr., *délivrer; deliberare*, to set free]. Parturition, childbirth. **D., Post-mortem,** the birth of a fetus after the death of the mother, from an accumulation of gases in the uterine cavity.

Delomorphous (*del-o-mor'-fus*) [δῆλος, conspicuous; μορφή, form]. With open or conspicuous form. **D. Cells of Rollet,** collections of large, oval, or angular, well-defined, granular, reticulated, nucleated cells, between the membrana propria and the adelomorphous cells of the fundus glands of the gastric mucous membrane. They are called, also, **Parietal Cells of Heidenhain,** or **Oxyntic Cells of Langley.** The secretory part of the tubes is lined by cells called **Adelomorphous, Central, or Principal Cells.**

Delore's Operation. See *Operations, Table of.*

Delpech's Operations. See *Operations, Table of.*

Delphin (*del'-fin*). Same as *Delphinin.*

Delphini Oleum (*del-fi'-ni o'-le-um*) [L.]. The oil of the common porpoise, *Phocæna communis.* It is said to have all the medicinal virtues of cod-liver oil, without the disagreeable qualities of the latter.

Delphinin (*del'-fin-in*) [δελφίνιον, larkspur], $C_{34}H_{35}NO_8$. A poisonous alkaloid from Staphisagria. See *Staphisagria.*

Delphinium (*del-fin'-e-um*). See *Staphisagria.*

Delphinoidin (*del-fin-oid'-in*) [δελφίνιον, larkspur; εἶδος, like]. An amorphous alkaloid derived from *Stavesacre.*

Delphisin (*del'-fis-in*) [δελφίνιον, larkspur], $C_{54}H_{46}N_2O_8$. An alkaloid of *Stavesacre* occurring in crystalline tufts.

Delta (*del'-tah*) [δέλτα, the fourth letter of the Greek alphabet]. The vulva, from its triangular shape. **D. mesoscapulæ,** the triangular area at the root of the spine of the scapula.

Deltidium (*del-tid'-e-um*) [the Greek letter Δ, δέλτα]. In biology, applied to the triangular space on a brachiopod shell, between the beak and the hinge.

Deltoid (*del'-toid*) [*delta*, the Greek letter Δ; εἶδος, likeness]. Having the shape of a delta, or a triangular form, as the **D. Muscle.** See *Muscles, Table of.*

Delusion (*de-lu'-zhun*) [*de*, from; *lusus*, play]. A false judgment of objective things, as distinguished from illusion and hallucination. It is the result of an abnormal condition of the brain. A delusion may be systematized or unsystematized, the former being the more serious and met with in the chronically insane.

Delusional (*de-lu'-shun-al*) [*deludere*, to delude]. Of the nature of a delusion; characterized by delusions. **D. Stupor.** See *Insanity, Confusional.*

Demarcation (*de-mark-a'-shun*) [*demarcare*, to set the bounds of]. A line of separation, as between gangrenous and healthy tissue.

Demarquay's Operation. See *Operations, Table of.*

Demembration (*de-mem-bra'-shun*) [*demembrare*, to deprive of a limb or limbs]. The cutting off of a member; amputation; castration.

Dement (*de'-ment*) [*demens*, insane]. An insane person; one who is demented.

Dementia (*de-men'-she-ah*) [*de*, out of; *mens*, the mind]. A mild form of insanity marked by imperfect conception, illogical sequence of expression, loss of reflection, and impaired perception. There is partial loss of self-control and self-respect. Dementia is often a final stage of other forms of insanity. It is described under the various forms of *secondary, senile, organic,* and *alcoholic.* There is a general atrophy of the brain-substance, with a compensatory thickening of the brain-membranes, and an increase of the fluid of the brain and of the neuroglia.

Demersal, or **Demersed** (*de-mer'-sal,* or *de-merst'*) [*demersus*, plunge into]. In biology, growing beneath the surface of water, as the eggs of the catfish.

Demi- (*dem'-e-*). A Latin prefix denoting one-half.

Demilune Cells (*dem'-e-lūn selz*) [*demiius*, half; *luna*, moon]. See *Cell.* **D. C. of Adamkiewicz.** A peculiar form of nerve-corpuscle lying below the neurilemma of medullated nerve-fibers; it is stained yellow by safranin. **D. C. of Heidenhain,** half-moon shaped bodies lying between the cells and the membrana propria of the alveolus in the salivary glands.

Demimonstrosity (*dem-e-mon-stros'-it-e*) [*demi*, half; *monstruosus*, monstrous]. A variety of congenital deformity that does not give rise to appreciable disorder of function.

Demme, Bacillus and Micrococcus of. See *Bacteria, Synonymatic Table of.*

Demnia (*dem'-ne-ah*) [δέμνιον, a bed]. In biology, the subgenital cavities found in the *Discomedusæ;* they are also called respiratory cavities, genital cavities, umbrella-cavities of the reproductive organs; *infundibula subgenitalia.*

Demodex (*dem'-o-deks*) [δημός, fat; δήξ, an insect]. A genus of parasitic insects. **D. folliculorum,** a minute parasite found in the sebaceous follicles, particularly of the face. It probably does not produce any symptoms, though in large numbers it may produce acne. See *Comedo,* also *Parasites* (*Animal*), *Table of.*

Demography (*de-mog'-ra-fe*) [δῆμος, the people; γράφειν, to write]. The science of peoples collectively considered; social science, including that of vital statistics and the consideration of various questions of state medicine.

De Moivre's Hypothesis. An hypothesis that the decrements of population are in arithmetic proportion, and that of every 86 persons born, one dies uniformly every year until all are extinct.

Demonolatry (*de-mon-ol'-at-re*) [δαίμων, a demon; λατρεία, worship]. Insane or delusional worship of devils; the morbid assumption of the character of a witch.

Demonomania (*de-mo-no-ma'-ne-ah*) [δαίμων, a devil; μανία, madness]. A form of madness in which a person imagines himself possessed of a devil.

Demonomaniac (*de-mo-no-ma'-ne-ak*) [δαίμων, a devil; μανία, madness]. One who suffers with demonomania.

Demonopathy (*de-mon-op'-a-the*) [δαίμων, a demon; πάθος, disease]. Same as *Demonomania.*

Demonstrator (*dem'-on-stra-tor*) [*demonstrare*, to show]. One who instructs in the practical application of the arts and sciences.

De Morgan's Operation. See *Operations, Table of.*

Demours, Membrane of. See *Descemet's Membrane.*

Demulcent (*de-mul'-sent*) [*demulcere*, to smooth]. 1. Soothing; locally softening and lenitive. 2. Any substance that protects the mucous membranes. It is generally of a mucilaginous nature.

Demutization (*de-mu-tiz-a'-shun*) [*de*, not; *mutus*, dumb]. The education of deaf-mutes to speak and to understand spoken language by the movement of the lips, signs, etc.

Denan's Operation. See *Operations, Table of.*

Denarcotized (*de-nar'-ko-tīzd*) [*de*, priv.; ναρκωτικός, narcotic]. Having the narcotin removed, as opium.

Dendrite (*den'-drīt*) [δένδρον, a tree]. A protoplasmic process of a nerve-cell.

Dendritic, or **Dendroid** (*den-drit'-ik,* or *den'-droid*) [δενδρίτης; δενδροειδής; δένδρον, a tree]. Tree-like or arborescent. The arrangement of the structures that

make up the *arbor vitæ* of the cerebellum, or that of the uterus, is dendritic.

Dendrocelus (*den-dro-se'-lus*) [δένδρον, a tree; κοιλία, belly]. In biology, having a branched intestine.

Dendrodentine (*den-dro-den'-tin*) [δένδρον, a tree; *dentine*, tooth-tissue]. In biology, a tooth-tissue formed by the blending of the dentine, enamel, and cement of many teeth.

Dendron (*den'-dron*) [δένδρον, a tree]. Same as *Dendrite*.

Dendrostyle (*den'-dro-stil*) [δένδρον, tree; στῦλος, pillar]. In biology, Huxley's term for the stalk of the hydroid stage of certain hydrozoans.

Dengue (*deng'-ga*) [West Ind.]. A zymotic disease somewhat resembling remittent fever, but much more severe. It is characterized by racking pain in the head and eyeballs, pain in the back and knees, arthralgia, catarrhal inflammation of those mucous surfaces that are exposed to the air, swollen salivary glands, and measly eruptions. Cf. *Bacteria*, *Synonymatic Table of*.

Denidation (*de-ni-da'-shun*) [*de* priv.; *nidus*, a nest]. During involution after pregnancy, the process of disintegration and casting off of the superficial portion of the uterine mucosa.

Denis's Plasmin. A precipitate of uncoagulated blood with sodic sulphate, and treated with sodic chlorid.

Denneth's System. See *Treatment, Methods of.*

De novo (*de no'-vo*) [L.]. Anew.

Dens (*denz*) [L.: *pl.*, *Dentes*]. A tooth. See *Teeth*.

Density (*den'-sit-e*) [*densitas*, thickness]. Closeness; compactness. In electro-therapeutics, the amount of electricity accumulated on a unit of surface.

Dent (*don(g)*) [Fr.]. A tooth.

Dentagra (*den-ta'-grah*) [*dens*, a tooth; ἄγρα, a seizure]. 1. The *Denticeps*, an instrument for extracting teeth; a tooth-forceps. 2. The term is also applied to toothache.

Dental (*den'-tal*) [*dens*, a tooth: *gen.*, *Dentis*]. Pertaining to the teeth. **D. Apparatus**, the teeth, together with the alveoli in which they are implanted, and the jaws; also a set of artificial teeth. The instruments and appliances employed in dental operations are likewise so termed. **D. Arches**, arcades dentaires. The arches formed by the teeth when arranged in their sockets in the alveolar borders, or the arch formed by the alveolar process of each jaw. **D. Arteries**, the arteries supplying the teeth. See *Arteries, Table of*. **D. Atrophy**, atrophia dentalis. See *Atrophy of the Teeth*. **D. Bone**, dentine. The osseous part of a tooth. **D. Canals**, the canals that perforate the alveoli, and give passage to the blood-vessels and nerves that enter the teeth at the extremities of their roots. See *Canal*. **D. Caries**, caries of the teeth. **D. Cavity**, cavitas pulpæ; cavum dentis; antrum dentale. The pulp-cavity. The cavity occupied by the dental pulp in the interior of a tooth. Its shape resembles that of the tooth; it is larger in young persons than in old, and when the teeth suffer great loss of substance, either from mechanical or spontaneous abrasion, it sometimes becomes completely obliterated. See *Abrasion of the Teeth*. **D. Engine**, a machine first introduced in 1870, but since greatly improved, and which has almost wholly superseded the use of hand-burs and drills. It is operated like a dental lathe, and possesses a flexible cable, or an adjustable arm and hand-piece, which afford great facility of movement and adaptation. By means of attachments to the hand-piece, drills can be operated at a right angle with the shaft, at an acute angle, or with a backward inclination of nearly forty-five degrees. Burnishers, discs, etc., are also adapted to these dental engines. **D. Excavator**, an instrument employed for the removal of the decayed part of a tooth, preparatory to the operation of filling. **D. Exostosis**. See *Exostosis of the Teeth*. **D. File**, a file manufactured for operations on the teeth. See *File, Dental*. **D. Forceps**. See *Forceps for Extracting Teeth*. **D. Glands**. See *Gland*. **D. Groove**, a furrow on the lower border of the upper jaw early in fetal life, in which the teeth are developed. **D. Laboratory**, a room or place where the operations connected with mechanical dentistry are performed. **D. Necrosis**, odontonecrosis. See *Necrosis of the Teeth*. **D. Neuralgia**, a form of neuralgia the immediate exciting cause of which is owing to some disease of the dental pulp. See *Odontalgia*. **D. Organism**, the organism of the teeth; the organic structure of these organs; the vital forces that govern them. **D. Orthopedia**, the art of correcting deformity occasioned by irregularity of the teeth, or other causes. See *Irregularity of the Teeth*. **D. Pathology**, considers the causes and different forms of the various diseases to which the teeth are liable. **D. Periostitis**, periostitis dentium. Inflammation of the dental periosteum or peridental membrane. See *Odontalgia*, and *Periodontitis*. **D. Pulp**, a soft, vascular, and highly sensitive substance, of a reddish-gray color, occupying the cavity of a living tooth. It also constitutes the rudiment of a tooth. The dental pulp is the principal blood-supply and nerve-supply of the dentine. **D. Pulp, Destruction of**; there are two methods of destroying the pulp; one by an operation, such as the use of a barbed brooch; the other by the application of some devitalizing agent, as arsenious acid. **D. Ridges**, the projecting borders of the primitive dental groove. **D. Sac**, the sac that encloses the developing tooth in the embryo. **D. Surgeon** (chirurgien dentiste), surgeon-dentist, one who devotes himself to the study and treatment of the diseases of the teeth, and their connections, and the adoption of substitutes for them when, by age, accident or disease, they are lost. **D. Therapeutics**, considers the methods and medicaments used in the treatment of diseases of the teeth. **D. tubuli**, the tubes occurring in the structure of the dentine.

Dentalgia (*den-tal'-je-ah*) [*dens*, tooth; ἄλγος, pain]. Tooth-ache.

Dentalis lapis (*den-ta'-lis la'-pis*) [L.]. Salivary calculus; tartar of the teeth.

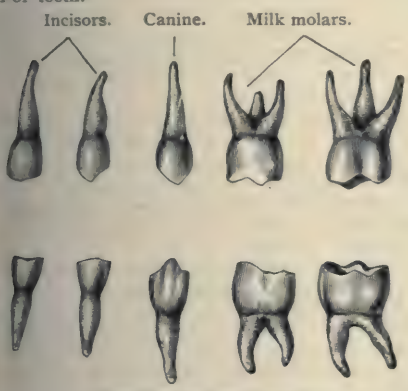
Dentaphone (*den'-taf-ōn*) [*dens*, tooth; φωνή, sound]. A modification of the audiphone, *q. v.*, by means of which the sound-waves are transmitted through the bones of the head to the auditory apparatus.

Dentarpaga (*den-tar'-pa-gah*) [*dens*, tooth; ἁρπάγη, hook]. An instrument for the extraction of teeth.

Dentate (*den'-tāt*) [*dens*, a tooth]. In biology, applied to leaves, wings, or other flattened organs that have their margins provided with acute teeth that point directly outward from the margin.

Dentatum (*den-ta'-tum*) [L.]. The dentate nucleus of the cerebellum. **D. olivæ**. See *Dentoliva*.

Dentes (*den'-tēz*) [L., the plural of *dens*]. Teeth. See *Teeth*. **D. acuti**, the incisor teeth. **D. adulti**, the teeth of second dentition. **D. adversi**, the incisor teeth. **D. angulares**, the canine or cuspid teeth, so called, probably, because they are situated at the angles of the alveolar arch, at the corners of the mouth, or from the angular shape of their crowns. **D. bicuspidati**, bicuspid teeth. **D. canini**, the cuspid or canine teeth; so called from their resemblance to the teeth of a dog. **D. cariosi**, carious teeth. **D. columellares**, the molar teeth. **D. cuspidati**, cuspid teeth. **D. exserti** [*exsertere*, to thrust out], teeth that project or are in front of the dental arch, but applied more particularly to the cuspidati. **D. incisores**, incisor teeth. **D. lactei**, the milk, temporary, or deciduous teeth. See *Deciduous Teeth*. **D. molares**,



molar teeth. **D. primores,** the incisor teeth; so called because they occupy the front or anterior part of the dental arch. **D. sapientiæ,** the wisdom-teeth. A name given to the third molar tooth of each half of the jaws. **D. tomici** [*tomicus*, cutting], the incisor teeth.

Denticulate (*den-tik'-u-lāt*) [*denticulus*, a small tooth]. In biology, having minute dentations. Furnished with small teeth.

Denticulus (*den-tik'-u-lus*) [L.]. A little tooth.

Dentier (*don(g)-te-a'*) [Fr.]. A French word signifying a base of metal, ivory or any other substance, employed as a support or attachment for artificial teeth. The term is also sometimes applied to a set of artificial teeth.

Dentification (*den-tif-ik-a'-shun*) [*dens*, a tooth; *facere*, to make]. The formation of teeth.

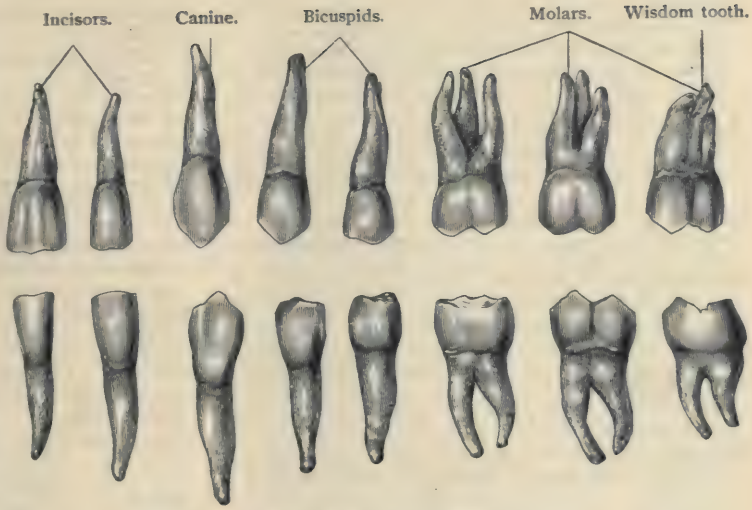
THE TEMPORARY TEETH.
The top section of illustration is the upper set, and the bottom section is the lower set.

Dentiform (*den'-tif-orm*) [*dens*, a tooth; *forma*, shape]. In biology, tooth-like.

Dentifrice (*den'-tif-ris*) [*dens*, tooth; *fricere*, to rub]. A substance used for cleansing the teeth.

Dentigerous (*den-tij'-er-us*) [*dens*, a tooth; *gerere*, to carry]. In biology, bearing teeth.

Dentinal (*den'-tin-al*) [*dens*, a tooth]. Pertaining to or composed of dentine.



Dentinalgia (*den-tin-al'-je-ah*) [*dens*, a tooth; ἄλγος, pain]. Pain in dentine.

Dentine (*den'-tin*) [*dens*, a tooth]. The bony structure of the tooth, lying under the enamel of the crown and the pericementum of the root. **D., Sensitiveness of,** a hypersensitive condition of the dentine of a tooth, occasioned by distal irritation of the dentinal fibrils. See *Sensitive Dentine*.

Dentinitis (*den-tin-i'-tis*) [*dens*, a tooth; ιτις, inflammation]. Inflammation of the dentinal fibrils.

Dentiphone (*den'-tif-ōn*) [*dens*, a tooth; φωνή, a voice]. A form of audiphone in which the vibrating disc is attached to the teeth.

Dentist (*den'-tist*) [*dens*, a tooth]. Dentista; odontiater; a dental surgeon. See *Dental Surgeon*.

THE TEETH OF AN ADULT.
The top section of illustration is the upper set, and the bottom is the lower set.

Dentistry (*den'-tis-tre*) [*dens*, a tooth]. Odontotechny; odontiatria; odontotherapia; dental surgery, embracing everything pertaining to the treatment and replacement of the loss of the natural teeth.

Dentitio (*den-tish'-e-o*) [L.]. Dentition.

Dentition (*den-tish'-un*) [*dens*, a tooth]. The cutting or first appearance of the teeth in infancy. Also, the arrangement and evolution of the teeth. Dentition is *primary*, that is, the cutting of the temporary or milk teeth, and *secondary*, or that of the permanent teeth. There are always some vague symptoms associated with the process, such as fretfulness, restlessness, convulsions, diarrhea, painful and swollen gum, which may be relieved by lancing over the protruding tooth.

Dentium (*den'-she-um*) [L.: *gen.* of *Dentii*]. Of the teeth. **D. cavernæ,** the sockets of the teeth. **D. cortex,** the enamel of the teeth. **D. dolor,** pain in the teeth; tooth-ache. **D. nitor,** enamel of the teeth. **D. scalptura,** lancing of the gums. **D. vacillantia,** looseness of the teeth.

Dentography (*den-tog'-ra-fe*) [*dens*, a tooth; γράφη, a description]. A description of teeth.

Dentoliva (*den-tol'-iv-ah*) [*dens*, a tooth; *oliva*, an olive]. Dentatum olivæ; olivary nucleus; a capsule of cinerea within the oliva of the brain.

Dentology (*den-tol'-o-je*) [*dens*, a tooth; λόγος, science]. A treatise on the teeth.

Dentonomy (*den-ton'-o-me*) [*dens*, a tooth; νόμος, a law]. The arrangement of the teeth into classes.

Dentos (*den'-tos*) [*dens*, tooth; *os*, bone]. Tooth-bone; tooth-substance.

Dentrification (*den-trif-ik-a'-shun*) [*dens*, a tooth; *facere*, to make]. The deposition of lime-salts on the enamel and dentine of the teeth.

Dents (*dahnt*) [Fr.]. Teeth. **D. bicuspidées,** the bicuspid teeth. **D. coldes,** neck of the teeth. **D. canides,** the canine teeth. **D. de lait,** the milk or temporary teeth. **D. machelures,** the molar teeth. **D. molares,** the molar teeth. **D. multicuspidées,** the large molar teeth. **D. œilleries,** canine teeth.

Denture (*den'-chūr*) [*dens*, a tooth]. A complete set of teeth; the whole assemblage of teeth in both jaws.

Denudate (*den'-u-dāt*) [*denudare*, to strip]. In biology, lacking covering, as scales, hair, foliage.

Denuding (*den-u'-ding*) [*denudare*, to denude]. A stripping or making bare. **D. of the Teeth**, an affection that consists in the gradual destruction of the enamel of the anterior or labial surfaces of the incisors, cuspidati, and sometimes of the bicuspids; the molars are rarely affected by it.

Denutrition (*de-nu-trish'-un*) [*de*, from; *nutriare*, to nourish]. The breaking down or atrophy of tissue arising from lack of nutrition. The opposite of nutrition.

Deobstruent (*de-ob'-stru-ent*) [*de*, from; *obstruere*, to obstruct]. A medicine that removes functional obstructions of the body. An aperient.

Deodand (*de'-o-dand*) [*deus*, God; *dare*, to give]. A fine formerly imposed on an inanimate thing or animal that had caused the injury or violent death of a person.

Deodorant (*de-ōd'-or-ant*) [*de* priv.; *odorare*, to smell]. A substance that removes or corrects offensive odors.

Deodorizer (*de-o'-dor-i-zer*) [*de* priv.; *odorare*, to smell]. A deodorizing agent; a substance that destroys offensive odors.

Deontology (*de-on-tol'-o-je*) [δέον, right, binding; λόγος, science]. The science of duty. **D., Medical**, medical ethics.

Deoppilant, or **Deoppilative** (*de-op'-il-ant*, or *de-op-pil'-at-iv*) [*de*, from; *oppilare*, to stop]. 1. Deobstruent; aperient. 2. An aperient medicine.

Deorsum (*de-or'-sum*) [L.]. Downward. **D. vergens.** See *Vergens*.

Deossification (*de-os-if-ik-a'-shun*) [*de*, away; *os*, bone; *facere*, to do]. The absorption of bony material; the deprivation of any part of its bony character.

Deoxidation (*de-oks-id-a'-shun*) [*de*, from; *oxidatus*, having oxygen]. In chemistry, the separation of an element or compound from the oxygen held in combination. Reduction.

Deozonize (*de-o'-zōn-īz*) [*de*, from; ὄζειν, to smell]. To deprive of ozone.

Depauperate (*de-paw'-per-āt*) [*de*, intensive; *pauper*, poor]. 1. To render poor; to pauperize; to impoverish. 2. Impoverished; ill-nourished; underfed, and under-grown.

Depilation (*dep-il-a'-shun*) [*depilatio*, removal of hair]. The removal of hairs.

Depilator (*de-pil'-a-tor*) [*depilare*, to remove the hair]. An instrument for pulling out the hair.

Depilatory (*de-pil'-at-or-e*) [*de*, from; *pilus*, the hair]. 1. Having the power to remove the hair. 2. A substance used to destroy the hair, usually a caustic alkali.

Deplethoric (*de-pleth'-or-ik*) [*de* priv; πληθώρη, plethora]. Marked by absence of plethora.

Depletion (*de-ple'-shun*) [*deplere*, to empty]. The process of diminishing the quantity of any tissue or fluid of the body, especially the blood. It may be general or local, the former by venesection and purging, and the latter by leeching, cupping, or scarification.

Depletive, Depletory (*de-ple'-tiv, de-ple'-tor-e*) [*deplere*, to empty]. 1. Causing or tending toward depletion. 2. A medicine that depletes.

Deplumation (*de-plu-ma'-shun*) [*de*, down, off; *pluma*, feather]. The loss of the eyelashes.

Depolarization (*de-po-lar-iz-a'-shun*). Destruction of polarity. The neutralization of the opposite poles of a magnet. The neutralization or recombination of light-waves that have been separated by means of a Nicol prism.

Deposit (*de-poz'-it*) [*de*, from; *ponere*, to place]. A gathering of particles that have been held in suspension. A gathering of morbid or normal matter in any part of the body. See *Urinary Deposit*.

Deposition (*de-po-zish'-un*). See *Couching*.

Depositive (*de-poz'-it-iv*) [*deponere*, to lay aside]. Tending to or characterized by a morbid deposit; exudative.

Depravation (*dep-rav-a'-shun*) [*depravare*, to vitiate]. A deterioration or morbid change in the secretions, tissues, or functions of the body.

Depressant (*de-pres'-ant*) [*deprimere*, to press down]. A medicine that retards or depresses the physiological action of an organ. A sedative. **D., Cardiac**, one that lowers the action of the heart. **D., Cerebral**, one that arrests the functions of the cerebrum. **D., Motor**, one that lowers the activity of the spinal cord and motor apparatus.

Depressio (*de-pres'-e-o*) [L.]. A depressing. **D. cataractæ.** Synonym of *Couching*.

Depression (*de-presh'-un*) [*depressio*; *deprimere*, to depress]. In anatomy, a hollow, or fossa. In surgery, displacement inward of the skull, often giving rise to pressure on the brain. **D. and Elevation**, one of the Swedish movements, either excentric or concentric, in which, while the part is being raised or depressed, resistance is made by the patient or operator. **Depressions, Pacchionian.** The depressions on the internal surface of the parietal bone that lodge the Pacchionian bodies.

Depressor (*de-pres'-or*) [*deprimere*, to depress]. A name given to a muscle or an instrument that depresses. See *Muscles, Table of*. **D. Fibers.** See *Pressor*. **D. of Sims**, an instrument for holding back the vaginal wall during exploration with the speculum. **D., Tongue**, an instrument for depressing the tongue in order to examine the throat.

Deprimens (*dep'-rim-enz*) [L.]. 1. Depressing; pressing down. 2. A depressing muscle. **D. auriculæ**, the retrahens auris muscle. **D. oculi**, the rectus inferior of the eye. See *Muscles, Table of*.

Depurant (*dep'-u-rant*) [*depurare*, to purify]. Purifying; cleansing. 2. A medicine that purifies the animal economy.

Depurative (*dep'-u-ra-tive*), or **Depuratory** (*dep'-u-ra-tor-e*) [*depurare*, to purify]. Purifying or cleansing. **D. Liver**, same as *Amyloid Liver*.

Depurator (*dep'-u-ra-tor*) [*depurare*, to purify]. Medicine or device for promoting a depuratory process.

DeR. A contraction and symbol of the term *Reaction of Degeneration*, *q. v.*

Deradelphus (*der-ad-el'-fus*) [δέρη, neck; ἀδελφός, brother]. A monocephalic dual monstrosity, with fusion of the bodies above the umbilicus, and with four lower extremities, and three or four upper.

Deradenitis (*der-ad-en-i'-tis*) [δέρη, neck; ἀδήν, gland; ιτις, inflammation]. Inflammation of the glands of the neck.

Deradenoncus (*der-ad-en-ong'-kus*) [δέρη, neck; ἀδήν, gland; ὄγκος, mass]. A swelling of a gland of the neck; a swollen gland of the neck.

Deranencephalia (*der-an-en-sef-a'-le-ah*) [δέρη, neck; ἀν priv.; ἐγκέφαλος, brain]. Teratism marked by absence of the head and brain, the neck being present.

Derangement (*de-rānj'-ment*). See *Insanity*.

Derbyshire Neck (*der'-be-shēr nek*). See *Goiter*.

Dercum's Disease. Adiposis dolorosa. A disorder characterized by irregular, sometimes symmetric, deposits of fatty masses in various portions of the body preceded by, or attended with, pain.

Derencephalia (*der-en-sef-a'-le-ah*) [δέρη, neck; ἐγκέφαλος, brain]. The condition of being derencephalous; teratic absence of cranium, the vestiges of the brain being enclosed in the cervical vertebræ.

Derencephalocele (*der-en-sef'-al-o-sēl*) [δέρη, neck; ἐγκέφαλος, brain; κήλη, tumor]. A protrusion of the

brain through a split in one or more of the cervical vertebræ.

erencephalous (*der-en-sef'-al-us*) [δέρη, neck; ἐγκέφαλος, brain]. Affected with derencephalia; of the nature of derencephalus.

erencephalus (*der-en-sef'-al-us*) [δέρη, neck; ἐγκέφαλος, brain]. A variety of single autositic monsters of the species anencephalus, in which the bones of the cranial vault are rudimentary, the posterior portion of the occiput absent, and the upper cervical vertebræ bifid, the brain resting in them.

eRheim's Plaster. A celebrated plaster for chilblains, made as follows: Capsicum pods ℥j, strong alcohol, ℥ij; macerate several days, then add mucilage of acacia ℥ij. Stir well and brush over sheets of silk or tissue paper, and apply like court-plaster to the unbroken chilblain.

erivant (*der'-iv-ant*) [*derivare*, to derive]. 1. Derivative; revulsive. 2. A derivative medicine or application.

erivate (*der'-iv-āt*) [*derivare*, to derive]. In chemistry, a substance that is derived from another.

erivation (*der-iv-a'-shun*) [*derivare*, to derive]. 1. Derivative action; the drawing away of a morbid process from one part to another; revulsive treatment. 2. The supposed suctional power of the heart, or the effect of that power upon the circulation. **D. Wire,** in an electric battery a wire connecting two points in a closed circuit.

erivative (*de-riv'-at-iv*) [*derivare*, to turn aside a stream]. Diverting or drawing a morbid process from its seat; revulsive.

erm. See *Derma.*

erma (*der'-mah*) [δέρμα, the skin]. The skin. The true skin. See *Cutis.*

ermad (*der'-mad*) [δέρμα, the skin; *ad*, to]. Externally; toward the skin; ectad.

ermagra (*der-ma'-grah*). See *Dermatagra.*

ermal (*der'-mal*) [δέρμα, the skin]. Pertaining to the skin.

ermalaxia (*der-mal-aks'-e-ah*) [δέρμα, skin; μαλαξια, softness]. Morbid softening of the skin.

ermalgia (*der-mal'-je-ah*). See *Dermatalgia.*

ermanoplasty (*der-man'-o-plas-te*) [δέρμα, skin; ἀναπλάσσειν, to form anew]. Skin-transplantation; skin-grafting; a method of plastic surgery, in which a piece of the whole thickness of the skin is entirely removed from one part and transferred to another distant part to fill up a gap.

ermanyssus (*der-man-is'-us*) [δέρμα, skin; νύσσειν, to prick]. A genus of itch-mites. **D. avium** is a species found on birds and sometimes on the human subject.

ermapostasis (*der-map-os'-tas-is*) [δέρμα, skin; ἀπόστασις, a falling away]. Any skin-disease dependent upon some constitutional disorder, and marked by metastatic dermal deposits.

ermatagra (*der-mat-a'-grah*) [δέρμα, skin; ἀγρα, seizure]. See *Pellagra.*

ermatalgia (*der-mat-al'-je-ah*) [δέρμα, skin; ἄλγος, pain]. Neuralgia of the skin. Rheumatism of the skin. Pain in the skin not due to any structural change in it.

ermatauxe (*der-mat-awks'-e*) [δέρμα, skin; αὐξη, augmentation]. Thickening or hypertrophy of the skin.

ermatic (*der-mat'-ik*) [δερματικός, pertaining to the skin]. 1. Relating to the skin. 2. A remedy for diseases of the skin.

ermatitis (*der-mat-i'-tis*) [δέρμα, skin; ιτις, inflammation]. A generic term used to designate an ill-defined and extensive group of symptomatic inflammations of the skin, characterized clinically by redness, heat, swelling, and pain, and terminating in resolution, suppuration, gangrene, or chronic dermatitis. **D. ambustionis,** the form due to burns and scalds. **D. bullosa.** See *Epidermolysis.* **D. calorica.** Synonym of *Chilblain.* **D. congelationis.** Same as *Frostbite.* **D. contusiformis.** See *Erythema nodosum.* **D. exfoliativa,** an acute or chronic, general or partial, inflammation of the skin, in which the epidermis is shed more or less freely in large or small scales. See *Pityriasis rubra.* **D. exfoliativa infantum vel neonatorum,** *Ritter's Disease*; a severe form of exfoliative inflammation of the skin, usually unattended by fever, which begins between the second and fifth weeks of life. About 50 per cent. of those attacked succumb to marasmus. **D. gangrænosa;** *Sphacelo-derma;* gangrenous inflammation of the skin. It has been observed in cases of cerebral and spinal disorders, diabetes, etc. It may also be primary in those whose constitutions are depraved. The lesions are at first reddish or purplish erythematous spots, usually on the trunk and extremities; these vesicate, rapidly become gangrenous, and slough; they are attended by fever and constitutional disturbance. Spontaneous recovery generally ensues with scar-formation. **D. gangrænosa infantum;** *Varicella gangrænosa, pemphigus gangrænosus; rupia escharotica;* a gangrenous eruption following varicella and other pustular eruptions of children. It is a rare condition. If it occur while the varicellar lesions are still present, it begins on the head or upper part of the body, and, instead of the scab being thrown off, ulceration occurs beneath it, and often a pustular border with a red areola is formed, the whole resembling a vaccination-pustule. On separating, a sharp-edged, roundish or oval, conical ulcer remains, deep or shallow. Death may result if the lesions are numerous, and constitutional disturbance is always great. **D. herpetiformis,** an inflammatory skin-disease of an herpetic character, the various lesions showing a tendency to group. It is a protean disease, appearing as erythema, vesicles, blebs, and pustules. Itching and burning are the most marked symptoms. See *Hydroa herpetiforme.* **D., Malignant,** Papillary dermatitis, Paget's disease of the nipple. Carcinoma of the nipple. **D. medicamentosa,** *Drug-eruptions;* inflammatory eruptions upon the skin due to the action of certain drugs taken internally. The most prominent are the following: *Antifebrin* produces a kind of cyanosis; *antipyrin,* an erythema that may be general or partial, but symmetric, affecting the extensor aspects in preference to the flexor, and the limbs more than the trunk; papules, vesicles, and bullæ have been noted; *arsenic* produces an urticarial, erysipelatoid dermatitis of the face and eyelids, a papular rash on the face, neck, and hands, herpes zoster, and in large doses pustular, ulcerative, or gangrenous eruptions; *belladonna,* a diffuse erythematous blush and a scarlatiniform eruption; *boric acid,* an erythema; *borax,* psoriasis, eczema, and erythema; *bromin and bromids,* pustular, erythematous, urticarial, bullous, and squamous eruptions; *cannabis indica,* a vesicular eruption; *chlorate of potash,* a fiery, erythematous and papular eruption, and cyanosis; *chloroform,* purpuric spots; *chloral hydrate,* erythema, scarlatiniform, bullous, erysipelatous eruptions; *chloralamid,* scarlatiniform; *chrysarobin,* erythema, vesicles; *cod-liver-oil,* vesicular eruption, acne; *copaiba,* erythematous, urticarial, papular eruption; *cubebs,* papular erythema; *digitalis,* scarlatiniform, papular erythema; *iodin and iodids,* pustular, vesicular or bullous, purpuric, erythematous, urticarial; *iodoform,* punctiform, papular and erythematous; *mercury,* erythematous, exfoliative

dermatitis; *morphin*, erythematous; *phosphoric acid*, bullous, purpura; *quinin*, eczema, erythematous, urticarial, purpuric, vesicular, bullous; *resin*, urticaria; *rhubarb*, hemorrhagic and pustular bullæ; *salicylic acid*, erythema, urticaria, bullæ, petechiæ, vesicles, pustules; *santonin*, urticaria; *stramonium*, erythema; *strychnin*, scarlatiniform, pruritus, miliaria; *sulphonal*, erythema, purpura; *tannin*, urticaria; *tar*, erythema, vesicles and bullæ, acne; *terebene*, papular erythema; *tuberculin*, scarlatiniform; *turpentine*, erythema, papules, vesicles. **D. papillaris capillitii.** Same as *D. papillomatosa capillitii.* **D. papillomatosa capillitii.** *Acne keloid; Sycosis framboesiformis*; a rare form of chronic skin-disease affecting the nape of the neck and adjacent portion of the skin. The lesions consist of minute red papules, which occasionally suppurate, and are usually traversed by a hair. Ultimately these unite to form extensive, irregular, hard, white, or reddish keloid-looking growths from which a few brush-like bundles of atrophied, firmly adherent hairs protrude. It occurs usually in males of middle age. **D. repens**, a spreading dermatitis, usually following injuries, and probably neuritic, commencing almost exclusively in the upper extremities. **D., Seborrheic**; *Seborrheic eczema*; a form of inflammation of the skin associated with seborrhea of the scalp, due to the direct transference of the same pathogenic organism from the head to the region affected. **D. traumatica**, those inflammatory changes in the skin resulting from traumatism. **D. venenata**, a term embracing all forms of inflammation of the skin produced by external irritating agencies, whether from the animal, vegetable, or mineral kingdom. This includes the dermatitis produced by rhus-poisoning.

Dermatobia (*der-mat-o'-be-ah*) [δέρμα, skin; βιοῦν, to live]. A bot-fly of Central America, the eggs of which are not infrequently deposited in the skin and produce a swelling very like an ordinary boil. See *Macaco Worm* and *Parasites* (*Animal*), *Table of.*

Dermatogen (*der-mat'-o-jen*) [δέρμα, skin; γένης, producing]. In biology, the layer of cells, in a young or growing part, that is destined to become epidermis.

Dermatography (*der-mat-og'-ra-fe*) [δέρμα, skin; γράφειν, to write]. A description of the skin.

Dermatoid (*der'-mat-oid*) [δέρμα, skin; εἶδος, resemblance]. Like or resembling skin.

Dermatokeras (*der-mat-o-ker'-as*) [δέρμα, skin; κέρας, a horn]. See *Cornu cutaneum.*

Dermatol (*der'-mat-ol*) [δέρμα, skin], $C_6H_2(OH)_3.CO_2Bi(OH)_2$. The subgallate of bismuth, which appears to be a valuable antiseptic agent. It is especially of service in cutaneous affections or lesions associated with copious secretion. Dose internally in affections of the stomach and intestines, two drams daily. It is valuable as a drying antiseptic for dusting wounds.

Dermatologist (*der-mat-ol'-o-jist*) [δέρμα, skin; λόγος, science]. One who is an adept in the treatment of skin-diseases.

Dermatology (*der-mat-ol'-o-je*) [δέρμα, skin; λόγος, science]. The science of the skin, its nature, structure, functions, diseases, and treatment.

Dermatolysis (*der-mat-ol'-is-is*) [δέρμα, skin; λύσις, a loosing]. An exaggerated form of *Molluscum fibrosum*, marked by large flaps or folds of hypertrophied skin, their commonest sites being the neck, face, buttocks, and chest. The skin-flaps are often deeply pigmented, thickened, indurated, and warty. Hypertrophy of the bones or other subjacent tissues may also be present.

Dermatoma (*der-mat-o'-mah*) [δέρμα, skin; ὄμα, a tumor: *pl.*, *Dermatomata*]. Any tumor of the skin or one made up of dermal elements.

Dermatomalacia (*der-mat-o-mal-a'-se-ah*) [δέρμα, skin; μαλακια, softness]. Morbid softening of the skin.

Dermatomelasma (*der-mat-o-mel-az'-mah*) [δέρμα skin; μέλασμα, a black color]. Addison's disease.

Dermatomycosis (*der-mat-o-mi-ko'-sis*) [δέρμα, skin; μύκης, fungus]. Any skin-disease caused by a parasitic plant-growth.

Dermatomyoma (*der-mat-o-mi-o'-mah*) [δέρμα, skin; μῦς, muscle; ὄμα, a tumor: *pl.*, *Dermatomyomata*]. Myoma seated upon or involving the skin.

Dermatoneurosis (*der-mat-o-nu-ro'-sis*) [δέρμα, skin; νεῦρον, a nerve]. Any neurosis of the skin.

Dermatonosus (*der-mat-on'-o-sus*) [δέρμα, skin; νόσος, disease]. Any skin-disease.

Dermato-pathology (*der-mat-o-path-ol'-o-je*) [δέρμα skin; πάθος, disease; λόγος, science]. The pathology of the skin.

Dermatopathy (*der-mat-op'-ath-e*) [δέρμα, skin; πάθος disease]. Any skin-disease.

Dermatophony (*der-mat-off'-o-ne*) [δέρμα, skin; φωνή sound]. The auscultation of the skin; a process by which, it is alleged, the sound made by the blood in the vessels of the skin can be heard.

Dermatophyte (*der'-mat-o-fit*) [δέρμα, skin; φυτόν, a plant]. Any species of fungous vegetation that grows upon the skin.

Dermatoplasty (*der'-mat-o-plas-te*) [δέρμα, skin; πλάσσειν, to form]. Plastic surgery of the skin.

Dermatorrhea (*der-mat-or-e'-ah*) [δέρμα, skin; ῥοία a flowing]. An increased secretion from the skin.

Dermatosclerosis (*der-mat-o-skle-ro'-sis*). See *Sclerodema.*

Dermatosis (*der-mat-o'-sis*) [δέρμα, skin; νόσος, disease: *pl. Dermatoses*]. Any disorder or disease of the skin. **D. Kaposi.** Synonym of *Xeroderma pigmentosum.*

Dermatosome (*der'-mat-o-sōm*) [δέρμα, skin; σῶμα body]. A thickening or knot in the equatorial region of each spindle fiber in the process of cell-division.

Dermatospasmus (*der-mat-o-spaz'-mus*) [δέρμα, skin σπασμός, spasm]. Cutis anserina, or goose-skin.

Dermatosyphilis (*der-mat-o-sif'-il-is*) [δέρμα, skin *Syphilus*, a Latin proper name]. The cutaneous manifestations of syphilis. See *Syphiloderma.*

Dermatotomy (*der-mat-ot'-o-me*) [δέρμα, skin; τέμνειν to cut]. The anatomy or dissection of the skin.

Dermatozoön (*der-mat-o-zo'-on*) [δέρμα, skin; ζῷον, an animal: *pl. Dermatozoa*]. Any animal parasitic upon the skin.

Dermen (*der'-men*) [δέρμα, the skin]. Belonging to the derma itself.

Dermenchysis (*der-men'-kis-is*) [δέρμα, skin; ἐγχυσις a pouring in]. Hypodermatic injection.

Dermepenthesis (*der-mep-en'-thes-is*) [δέρμα, skin ἐπένθεσις, insertion]. Synonym of skin-grafting.

Dermexanthesis (*der-meks-an-the'-sis*) [δέρμα, skin ἐξάνθησις, eruption: *pl. Dermexantheses*]. Any skin disease marked by a rash-like eruption.

Dermic (*der'-mik*) [δέρμα, the skin]. Relating to the skin.

Dermocyma (*der-mo-si'-mah*) [δέρμα, skin; κῦμα, the fetus]. A form of double monstrosity in which the parasite is contained within the skin of the host.

Dermogastric (*der-mo-gas'-trik*) [δέρμα, skin; γαστήρ stomach]. In biology, applied to structures having a connection with the skin and the stomach, as dermogastric pores.

Dermographia (*der-mo-graf'-e-ah*) [δέρμα, skin; γράφειν, to write]. The condition observed in the so-

called autographic skin; autographism. See *Urticaria factitia.*

ermographic (*der-mo-graf'-ik*) [δέρμα, skin; γράφειν, to write]. Affected with dermographia. **D. pseudo-urticaria.** Same as *Dermographia.*

ermographism (*der-mo-graf'-izm*) [δέρμα, skin; γράφειν, to write]. Autographism. See *Autographic Skin* and *Urticaria factitia.*

ermography (*der-mog'-ra-fe*) [δέρμα, skin; γράφειν, to write]. Dermographia; dermal autographism.

ermohemal (*der-mo-he'-mal*) [δέρμα, skin; αἷμα, blood]. In biology, applied to parts of the ventral or hemal fins of certain fishes.

ermoid (*der'-moid*). See *Dermatoid.* **D. Cyst,** a teratoma.

ermology (*der-mol'-o-je*). See *Dermatology.*

ermoneural (*der-mo-nu'-ral*) [δέρμα, skin; νεῦρον, nerve]. In biology, applied to parts of the dorsal or neural fins of certain fishes.

ermoneurosis (*der-mo-nu-ro'-sis*). See *Dermatoneurosis.*

ermoplasty (*der'-mo-plas-te*) [δέρμα, skin; πλάσσειν, to form]. Restoration of skin; skin-grafting.

ermorhynchous (*der-mo-ring'-kus*) [δέρμα, skin; ῥύγχος, snout]. In biology, having a bill or beak covered with skin, as the duck.

ermorrhagia (*der-mor-a'-je-ah*) [δέρμα, skin; ῥηγνύναι, to break forth]. Hemorrhage from the skin; bloody sweat; hematidrosis.

ermosclerite (*der-mo-skle'-rīt*) [δέρμα, skin; σκληρός, hard]. In biology, one of the spicular masses found in certain actinozoans.

ermoskeleton (*der-mo-skel'-et-un*) [δέρμα, skin; σκελετόν, a skeleton]. The exoskeleton of invertebrates; the skin and its appendages.

ermo-syphilopathy (*der-mo-sif-il-op'-a-the*) [δέρμα, skin; *syphilis*; πάθος, affection]. A syphilitic skin-disease.

ermotomy (*der-mot'-o-me*). See *Dermatotomy.*

erodidymus (*der-o-did'-im-us*) [δέρη, neck; δίδυμος, double]. A sysomic monstrosity with a single body, two necks and heads, two upper and lower extremities, with other rudimentary limbs occasionally present.

erospasmus (*der-o-spaz'-mus*) [δέρη, neck; σπασμός, spasm]. Spasm or cramp in the neck.

ertrotheca (*der-tro-the'-kah*) [δέρτρον, a vulture's beak; θήκη, a sheath]. In biology, the skin of the *Dertrum* or tip of the upper mandible in certain birds.

ertrum (*der'-trum*) [δέρτρον, a beak]. See *Dertrotheca.*

e Salle, Line of. See *Lines, Table of.*

esanimania (*des-an-im-a'-ne-ah*) [*des* (*dis*) priv.; *animus*, mind; μανία, mania]. Mindless insanity; amentia.

esault's Apparatus or **Bandage.** See *Bandage.* **D. Operations.** See *Operations, Table of.*

esbassins' Test. Same as *Richmont's Test.* See *Tests, Table of.* **D. Splint.** See *Splint.*

escemet's Membrane. The internal or posterior lining membrane of the cornea. Also called the *Membrane of Demours.*

escemetitis (*des-em-et-i'-tis*) [*Descemet*; ιτις, inflammation]. Inflammation of Descemet's membrane.

escemetocele (*des-em-et'-o-sēl*) [*Descemet*; κήλη, hernia]. Hernia of Descemet's membrane.

escendens (*de-sen'-denz*) [*descendere*, to go down]. Downward. **D. noni,** a branch of the hypoglossal nerve. See *Nerves, Table of.*

escent (*de-sent'*) [*descensus*, a going down]. The act of going down; downward motion. **D. Stage of Labor,** one of the stages in labor, consisting in the entrance of the fetal head into the pelvis. **D. of Testicle.** See *Testicle.* **D. of Womb.** See *Prolapsus.*

Deschamps' Angle. See *Angle.*

Deshler's Salve. The compound resin cerate of the pharmacopeia.

Desiccant (*des'-ik-ant*) [*desiccare*, to dry up]. 1. Causing desiccation; drying. 2. A drying medicine or application.

Desiccation (*des-ik-a'-shun*) [*desiccare*, to dry up]. The process of removing moisture from solids and organic tissues.

Desiccative (*des'-ik-a-tiv*) [*desiccare*, to dry up]. 1. Drying; desiccant. 2. A medicine or application having the property of drying moist tissues, ulcers and running sores.

Desma (*dez'-mah*) [δέσμα, a band]. In biology, a term applied to irregular sponge-spicules.

Desmachyme (*des'-mah-kim*) (δέσμα, a band; χυμός, juice]. In biology, the connective tissue of sponge.

Desmacyte (*des'-mah-sīt*) [δέσμα, a band; κύτος, a cell]. In biology, one of the connective-tissue cells of a sponge.

Desmarres' Operations. See *Operations, Table of.*

Desmitis (*des-mi'-tis*) [δεσμός, ligament]. Inflammation of a ligament.

Desmobacterium (*des-mo-bak-te'-re-um*) [δεσμός, band; βακτήριον, a small staff: *pl. Desmobacteria*]. A group of microbes, so-called by Cohn, corresponding to the genus *Bacillus* of Klein.

Desmodactylous (*des-mo-dak'-til-us*) [δεσμός, a band; δάκτυλος, a finger or toe]. In biology, having the flexor tendons of the toes united.

Desmodynia (*des-mo-din'-e-ah*) [δεσμός, a band; ὀδύνη, pain]. Pain in a ligament.

Desmognathism (*des-mog'-na-thizm*) [δεσμός, a band; γνάθος, jaw]. Union of the maxillo-palatine bones across the middle line; normal in certain birds, as hawks, ducks, etc.

Desmognathous (*des-mog'-na-thus*) [δεσμός, a band; γνάθος, a jaw]. In biology, applied to birds of the "bound palate" type, in which the vomer is small or absent, the maxillo-palatines united, and the palatines and pterygoids articulate directly with the sphenoid.

Desmography (*des-mog'-ra-fe*) [δεσμός, a ligament; γράφειν, to write]. The description of the ligaments.

Desmoid (*des'-moid*) [δέσμη, a bundle; εἶδος, likeness]. Like a small bundle. **D. Carcinoma.** Synonym of *Hodgkin's Disease.*

Desmoma (*des-mo'-mah*) [δεσμός, a band: *pl., Desmomata*]. A connective-tissue tumor.

Desmoneoplasma (*des-mo-ne-o-plaz'-mah*) [δεσμός, band; νέος, new; πλάσμα, plasma: *pl., Desmoneoplasmata*]. Any neoplasm made up of connective tissue.

Desmopathy (*des-mop'-a-the*) [δεσμός, a band; πάθος, disease]. Any disease of a ligament.

Desmopelmous (*des-mo-pel'-mus*) [δέσμα, a band; πέλμα, the sole of the foot]. In biology applied to such birds as have the plantar tendons bound together.

Desmosis (*des-mo'-sis*) [δεσμός, a band: *pl., Desmoses*]. Any disease of connective tissue, especially of the connective tissue of the skin.

Desmotomy (*des-mot'-o-me*) [δεσμός, band; τομή, section]. The dissection and anatomy of the ligaments; surgical cutting of a ligament.

Desmotrophy (*des-mot'-ro-fe*) [δεσμός, a band; τρέφειν, to turn]. Tautomerism.

Desoxalic Acid (*des-oks-al'-ik*). See *Acid.*

Desprez' Operation. See *Operations, Table of.*

Despumation (*des-pu-ma'-shun*) [*despumare*, to skim froth]. The purification of a liquid by removal of the scum or froth: also the formation of froth; purification; clarification in general.

Desquamation (*des-kwam-a′-shun*) [*desquamare*, to scale off]. The exfoliation or falling off of the cuticle in scales. It is bran-like after measles; in layers after scarlet fever.

Desquamative (*des-kwam′-at-iv*) [*desquamare*, to scale off]. Characterized by desquamation.

Destructive (*de-struk′-tiv*) [*destructivus*, destroying]. Hurtful; tending to destroy. **D. Distillation.** See *Distillation.*

Desudation (*des-u-da′-shun*) [*desudatio; de*, away; *sudare*, to sweat]. 1. Excessive or morbidly profuse sweating. 2. Sudamina.

Desudatory (*de-su′-dat-or-e*) [*desudatio*, a sweating]. A sweating-bath.

Detergent (*de-ter′-jent*) [*detergere*, to cleanse]. 1. Purifying; cleansing; abluent. 2. A drug, compound, or solution used for cleansing wounds, ulcers, etc.

Determinant or Determining Part (*de-ter′-min-ant*) [*determinare*, to limit]. Weismann's name for one of the particles of germ-plasm corresponding to a group of *biophors;* a primary constituent of a cell or group of cells.

Determinate (*de-ter′-min-āt*) [*determinare*, to limit]. 1. Applied in botany to an inflorescence in which the blossoming takes place centrifugally, the blossoms being from terminal and not from axillary buds. 2. Weismann's name for one of the cells or groups of cells that are independently variable from the germ onward. They are also called *hereditary parts.*

Determination (*de-ter-min-a′-shun*) [*determinatio*, a directing]. The direction or tendency to or toward a part or an organ, as of blood to the head.

Determinism (*de-ter′-min-izm*) [*determinare*, to limit, prescribe]. In biology, a term introduced by Claude Bernard to indicate the fatality of the reproduction of phenomena under similar conditions, as seen in Experimental Science.

Detersion (*de-ter′-shun*) [*detergere*, to cleanse]. The action of a detergent; a cleansing.

Detersive (*de-ter′-siv*). Same as *Detergent.*

Detmold's Method. See *Treatment, Methods of.*

Detrition (*de-trish′-un*) [*deterere*, to wear off]. The act of wearing or wasting of an organ or part, especially the teeth.

Detritus (*det′-rit-us*) [*deterere*, to wear off]. The waste matter resulting from any wearing away, or from a destructive process.

Detumescence (*de-tu-mes′-ens*) [*detumescentia*, a subsidence of a tumor]. The subsidence of any swelling.

Deutencephalon (*dūt-en-sef′-al-on*). See *Diencephalon.*

Deuteria (*du-te′-re-ah*) [δευτέρια]. The secundines.

Deutero-albumose (*du-ter-o-al′-bu-mōs*). See *Albumose.*

Deutero-elastose (*du-ter-o-e-las′-tōs*) [δεύτερος, second; ἐλαστικός, elastic]. Elastin-peptone; one of the products of the digestion of elastin. It is not precipitable by saturation with sodium chlorid.

Deuteropathy (*du-ter-op′-a-the*) [δεύτερος, second; πάθος, a disease]. A disease that is secondary to another.

Deuteropin (*du-ter-o′-pin*) [δεύτερος, second; ὄπιον, opium], $C_{20}H_{21}NO_5$. An alkaloid of opium.

Deuteroplasm, or Deutoplasm (*du-ter-o′-plazm*, or *du′-to-plazm*) [δεύτερος, second; πλάσμα, formed material]. The food-yolk of an egg; a mass of granules of proteid and fatty matter occurring in the ovum.

Deuteroscopy (*du-ter-os′-ko-pe*) [δεύτερος, second; σκοπεῖν, to view]. Synonym of *Clairvoyance.*

Deuterostoma (*du-ter-os′-to-mah*) [δεύτερος, second; στόμα, mouth]. In biology, a secondary blastopore.

Deuterozoöid (*du-ter-o-zo′-oid*) [δεύτερος, second; ζῷον, an animal; εἶδος, likeness]. In biology, a secondary zoöid, developed by budding.

Deuthyalosome (*du-thi-al′-o-sōm*) [δεύτερος, second; ὑαλος, glass, crystal; σῶμα, body]. The remains of the germinal vesicle after the polar bodies have been extruded, formed by the union of portions of the chromatic stars or discs with portions of the prothyalosome.

Deutoleucite (*du-to-lu′-sīt*) [δεύτερος, second; λέκιθος, the yolk of an egg]. In biology, a term applied by Salensky to the nutritive vitellus of the eggs of sturgeons; it is homologous to the secondary vitellus (Nebendotter) of osseous fishes. Cf. *Protoleucyte.*

Deutomala (*du-to-ma′-lah*) [δεύτερος, second; *mala*, jaw]. In biology, a term applied by A. S. Packard, Jr., to the second pair of mouth-appendages of the Myriopoda, formerly called *labium*, but really homologous with the first maxillæ of insects.

Deutomerite (*du-tom′-er-īt*) [δεύτερος, second; μέρος, a part]. In biology, the posterior segment of a two-celled organism, as a gregarine, the anterior cell being called the *protomerite, q. v.*

Deutoscolex (*du-to-sko′-leks*) [δεύτερος, second; σκόληξ, worm]. In biology, applied to secondary or daughter-cysts or bladder-worms that are derived from a scolex or primary bladder-worm.

Deutospermoblast (*du-to-sper′-mo-blast*) [δεύτερος, second; σπέρμα, sperm; βλαστός, germ]. Any one of the cells produced by the division of a protospermoblast.

Deutoxid (*du-toks′-id*) [δεύτερος, second; ὀξύς, sharp]. See *Dioxid.*

Devalgate (*de-val′-gāt*) [*de*, intensive; *valgus*, bowleg]. Bowlegged or bandylegged.

Development (*de-vel′-op-ment*) [Fr., *developper*, to unfold]. The sequence of organic changes, by which the fertilized ovum becomes the mature animal or plant.

Deventer's Diameter. The oblique diameter of the pelvis. **D.'s Method.** See *Treatment, Methods of.*

Devergie's Disease. See *Diseases, Table of.*

Deviation (*de-ve-a′-shun*) [*deviare*, to deviate]. Turning from a regular course, standard, or position. **D., Conjugate,** the forced and persistent turning of eyes and head toward one side, observed with some lesions of the cerebrum. **D., Primary,** the deviation of the weaker eye from that position that would make its visual line pass through the object-point of the healthy eye. **D., Secondary,** the deviation of the healthy eye from that position that would make its visual line pass through the object-point of the weaker eye. **D. of Teeth,** a faulty direction or position of one or more teeth.

Devitalization (*de-vi-tal-iz-a′-shun*) [*de* priv.; *vita*, life]. Depriving of life or vitality. **D. of Dental Pulp.** See *Dental Pulp, Devitalization of.*

Devitalize (*de-vi′-tal-īz*) [*de*, from; *vita*, life]. To destroy vitality, as that of living tissue.

Devonshire Colic (*dev′-on-shēr kol′-ik*). See *Lead Colic.*

De Vries' Theory of "Intracellular Pangenesis." See *Heredity.*

Devys' Operation. See *Operations, Table of.*

Dew's Method. See *Artificial Respiration.*

Dew (*du*) [AS., *deáw*, dew]. The water deposited during the night from the atmosphere by the process of condensation. **D.-claw,** the aborted hallux of a domestic dog, or the false hoof of an ungulate. **D.-point,** the point at which the air cannot take up more vapor at the existing temperature, or loses a portion of its vapor by condensation if the temperature be but slightly reduced.

DeWecker's Operations. See *Operations, Table of.*

Dewees' Carminative. See *Asafetida.*

Dewlap (*du'-lap*) [ME., *dewlappe*, a loose, hanging piece]. The pendulous longitudinal fold of skin seen under the throat of most bovine animals and of some dogs; the wattle of a turkey; colloquially, the similar fold seen occasionally under the chin of old persons.

Dexicardia (*deks-e-kar'-de-ah*). See *Dexiocardia* and *Dextrocardia.*

Dexiocardia (*deks-e-o-kar'-de-ah*) [δεξιός, on the right; καρδία, the heart]. Transposition of the heart to the right side of the thorax.

Dexter (*deks'-ter*) [L.]. Right; upon the right side.

Dextrad (*deks'-trad*) [*dexter*, right; *ad*, to]. Toward the right side. See *Position and Direction, Table of.*

Dextral (*deks'-tral*) [*dexter*, right]. Pertaining to the right side; right-handed. See *Position and Direction, Table of.*

Dextran (*deks'-tran*) [*dexter*, right], $C_6H_{10}O_5$. A stringy, gummy substance formed in milk by the action of cocci, and occurring in unripe beet-root.

Dextren (*deks'-tren*) [*dexter*, right]. Belonging to the dextral side in itself.

Dextrin (*deks'-trin*) [*dexter*, right], $C_6H_{10}O_5$. The soluble or gummy matter into which starch is converted by diastase or by certain acids. It is white, insipid, odorless, and is remarkable for the extent to which it turns the plane of polarization to the right hand, whence its name. See *Carbohydrates, Table of.*

Dextrins (*deks'-trinz*) [*dexter*, right]. Gummy amorphous masses, readily soluble in water and precipitated by alcohol. Their aqueous solutions are dextro-rotatory, hence their name. They do not reduce Fehling's solution, even on boiling, and are incapable of direct fermentation; in the presence of diastase, however, they can be fermented by yeast.

Dextrocardia (*deks-tro-kar'-de-ah*) [*dexter*, right; καρδία, heart]. A congenital condition in which the heart is situated on the right side of the thorax; either alone or as a part of a general transposition of the viscera. See *Dexiocardia.*

Dextro-compound (*deks-tro-com'-pound*) [*dexter*, right; *componere*, to set together]. In chemistry, a compound body that causes a ray of polarized light to rotate to the right. Dextrin, malic acid, and cinchonin are dextro-compounds.

Dextrogyrate (*deks-tro-ji'-rāt*). Same as *Dextro-rotatory.*

Dextrolichenin (*deks-tro-li'-ken-in*) [*dexter*, right; λειχήν, a lichen]. A form of lichenin readily distinguished from normal lichenin in being colored blue by iodin, while lichenin is not.

Dextro-rotatory (*deks-tro-ro'-tat-or-e*) [*dexter*, right; *rotare*, to whirl]. Causing to turn toward the right hand, as a dextro-rotatory crystal.

Dextrose (*deks'-trōs*) [*dexter*, right], $C_6H_{12}O_6$. Grape-sugar. A sugar belonging to the glucose-group, that crystallizes from aqueous solution with $1H_2O$ in nodular masses of six-sided scales. It is readily soluble in water and alcohol, has a taste less sweet than ordinary cane-sugar, and directly reduces an alkaline copper-solution. It is dextro-rotatory to polarized light. It is found in most sweet fruits, and in large amount in diabetic urine. See *Sugar* and *Glucose.*

Dextro-sinistral (*deks-tro-sin-is'-tral*) [*dexter*, right; *sinister*, left]. Extending from right to left.

Dextroversion (*deks-tro-ver'-shun*) [*dexter*, right; *vertere*, to turn]. Version to the right side, as when the fundus of the uterus is tilted dextrally; dextral utero-version.

Dezeanneau's Operation. See *Operations, Table of.*

Dhobie's Itch. An Indian name for Ringworm of the body.

Diabetes (*di-ab-e'-tēz*) [διαβήτης: διά, through; βαίνειν, to go]. The habitual excessive discharge of urine; used alone the term often designates *D. mellitus.* **D., Artificial,** that form produced in the physiologic laboratory by puncturing the floor of the fourth ventricle of the brain. **D., Cerebral,** diabetes in which *cerebrose* appears in the urine in place of the ordinary form of glucose or liver-sugar. It indicates a cerebral lesion. **D., English.** Synonym of *D. mellitus.* **D., Fat,** a variety in which there is a tendency to obesity. **D. insipidus,** *polyuria,* a disease characterized by the excessive secretion of a urine of low specific gravity, associated with a marked degree of thirst, but without the presence of glycosuria. The urine is pale, almost colorless, and with a specific gravity but slightly above that of water, and may be voided in considerable quantities, even as much as fifty pints in a day. Many of the cases progressively emaciate and finally die of exhaustion. There is frequently found some lesion of the central nervous system, as a cerebral tumor; or the disease may be due to some lesion of the vaso-motor system of nerves. It is most frequent in males, and usually occurs between the ages of five and thirty years. **D., Lean,** a variety in which emaciation is marked. **D. mellitus,** *glycosuria,* a disease of the metabolic functions of the system, without gross or clearly defined anatomic lesions, manifesting itself by glycosuria, polyuria, thirst, and progressive loss of flesh and strength, with a tendency to a fatal termination. The onset is generally insidious. The urine is not so excessive as in simple polyuria, but may be as much as thirty pints in twenty-four hours. It contains glucose or grape-sugar, varying in quantity from two to five per cent., but occasionally reaching as high as ten or twelve per cent. The specific gravity is increased to between 1040 and 1060 though it may be as low as 1010; the quantity of urea is increased; in some cases there is an excess of the phosphates of the urine, and these cases have been termed "*phosphatic diabetes.*" The reaction of the urine is slightly acid; the smell sweetish. The emaciation is very marked and rapid, and persists notwithstanding the fact that the appetite is ravenous and the patient consumes an enormous quantity of food. Toward the end of the disease there is a failure of the mental faculties. Among the complications of diabetes may be mentioned a tuberculous variety of pneumonia, eczema and pruritus of the skin, gangrene of the toes, albuminuria, opacity of the crystalline lens, coma, and cardiac failure. *Coma* occurs most frequently in the young, and is characterized by an extreme degree of dyspnea both of inspiration and of expiration; it has been called "*air hunger*" by Kussmaul. No appreciable cause for the dyspnea can be found. As regards the morbid anatomy of diabetes no lesion has as yet been found. The disease occurs most commonly in young males, and in those of the gouty and neurotic diatheses. Exposure to cold, mental strain, injuries of the cerebrum, and the excessive use of starchy and saccharine foods, are given as exciting causes. **D., Mosler's,** polyuria due to the presence of too much inosit in the blood. **D., Non-saccharine.** Synonym of *D. insipidus.* **D., Pancreatic,** a variety of glycosuria associated with and probably dependent upon disease of the pancreas. **D., Phloretin,** that form produced in animals by the administration of phloretin. **D., Phloridzin,** that following the administration of phloridzin. **D., Phos-**

phatic. See *D. mellitus.* **D., Saccharine.** See *D. mellitus.* **D., True.** Synonym of *D. mellitus.*

Diabetic (*di-ab-et'-ik*) [*διά*, through; *βαίνειν*, to go]. 1. Pertaining or belonging to diabetes. 2. A person suffering from diabetes. **D. Cataract,** an opacity of the crystalline lens sometimes found in association with and thought to be a complication of diabetes. **D. Coma.** See *Diabetes mellitus.* **D. Gangrene.** See *Sphaceloderma.* **D. Sugar,** $C_6H_{12}O_6$, a form of glucose, present in the urine of diabetes mellitus. It is identical with grape-sugar. **D. Tabes,** a peripheral neuritis occurring in diabetic patients, characterized by lightning-pains in the legs, loss of knee-jerk, and a loss of power in the extensors of the feet. The gait is the characteristic *steppage.*

Diabetin (*di-ab-e'-tin*) [*διά*, through; *βαίνειν*, to go]. The trademarked name for levulose, which is recommended as an innocuous and palatable sugar, and nourishing substance for diabetics. It is a white granular mass, soluble in water, and has a pure sweet taste.

Diabetometer (*di-ab-e-tom'-et-er*) [*διαβήτης*, diabetes; *μέτρον*, a measure]. A polariscope for ascertaining the proportion of sugar in diabetic urine.

Diaboleptic (*di-ab-o-lep'-tik*) [*διάβολος*, devil; *λαμβάνειν*, to seize]. An insane or deluded person who professes to have supernatural communications.

Diabrotic (*di-ab-rot'-ik*) [*διαβρωτικός*; *διά*, through; *βιβρώσκειν*, to eat]. 1. Corrosive. 2. A corrosive substance.

Diacatholicon (*di-ak-ath-ol'-ik-on*) [*διά*, through: *καθολικός*, universal]. Formerly, a purgative compound.

Diacaustic (*di-ak-aws'-tik*) [*διά*, through; *καυστικός*, caustic]. A double convex cauterizing lens.

Diacele, Diacœle (*di'-as-el*) [*διά*, between; *κοίλη*, a hollow]. A term for the third ventricle or cavity of the diencephalon or interbrain. Its walls are the thalami; its floor the tuber and diaterma.

Diacetic Acid (*di-as-e'-tik*). See *Acid.*

Diacetin (*di-as'-et-in*) [*di*, two; *acidum*, acid], $C_3H_5(OH)(C_2H_3O_2)_2$. A liquid derivative of glycerin, with a bitter taste. It is also called *acetidin.*

Diaceturia (*di-as-et-u'-re-ah*) [*di*, two; *acidum*, acid; *οὖρον*, urine]. The presence of diacetic acid in the urine; it is a precursor of diabetic coma.

Diachorema (*di-ak-o-re'-mah*) [*διαχώρημα*, excrement]. Fecal matter; excrement.

Diachoresis (*di-ak-o-re'-sis*) [*διαχώρησις*, a passing through]. Excretion or passage of feces.

Diachoretic (*di-ak-o-ret'-ik*) [*διαχωρητικός*: *διαχωρέειν*, to go through]. Laxative; aperient.

Diachylon (*di-ak'-il-on*) [*διά*, through; *χυλός*, juice]. Formerly any emollient plaster composed of the juices of herbs. **D. Plaster** or **Ointment.** See *Plumbum.*

Diacid (*di-as'-id*) [*di*, two; *acidus*, acid]. In chemistry, having an acidity of two; said of an acid or salt.

Diaclasis (*di-ak'-las-is*) [*διάκλασις*, a breaking in two]. Refraction. A breaking.

Diaclast (*di'-ak-last*) [*διακλάειν*, to break apart]. An instrument for penetrating and breaking up the fetal head in craniotomy.

Diaclastic (*di-ak-las'-tik*) [*διακλάειν*, to break apart]. Pertaining to diaclasis. **D. Amputation.** See *Maisonneuve's Amputation,* in *Operations, Table of.*

Diacodion (*di-ak-o-de'-on*), or **Diacodium** (*di-ak-o-de'-um*) [*διά*, through; *κωδειῶν*, of poppy-heads]. Syrup of poppies or of opium.

Diacœle (*di-as-e'-le*), or **Diacœlia** (*di-as-e'-le-ah*). See *Diacele.*

Diacope (*di-ak'-o-pe*) [*διά*, through; *κοπή*, a cut]. A deep, incised wound, especially of the head or skull; a lengthwise fracture or cut, as of a bone.

Diacrisis (*di-ak'-ris-is*) [*διά*, a part; *κρίνειν*, to separate or secrete: *pl., Diacrises*]. 1. A critical discharge. 2. A change or disorder in a secretion. 3. Any disease marked by altered secretions.

Diacritic, or **Diacritical** (*di-ak-rit'-ik, di-ak-rit'-ik-al*) [*διάκρισις*, a separating]. Diagnostic.

Diactine (*di-ak'-tin*) [*δίς*, two; *ἀκτίς*, a ray]. In biology, having two rays.

Diad (*di'-ad*). See *Quantivalence.*

Diadelphous (*di-ad-el'-fus*) [*δίς*, two; *ἀδελφός*, brother]. In botany, applied to stamens that are arranged in two sets or brotherhoods.

Diaderm (*di'-a-derm*) [*δίς*, two; *δέρμα*, skin]. In biology, a general term proposed by Minot for that essential differentiation of the segmenting ovum, characterized by the formation of two plates of cells, differing in character, joined at their edges and surrounding a segmentation-cavity; the two plates or lamina are the two primitive germ-layers, the ectoderm and entoderm.

Diadermatic, Diadermic (*di-ad-er-mat'-ik, di-ad-er'-mik*) [*διά*, through; *δέρμα*, skin]. Administered through the skin. Cf. *Hypodermatic.*

Diadexis (*di-ad-ek'-sis*) [*διάδεξις*, metastasis]. Metastasis of a disease, with a change of its character; change in the seat and nature of a disease.

Diæresis (*di-er'-es-is*). See *Dieresis.*

Diageotropic (*di-aj-e-o-trop'-ik*) [*διά*, through; *γῆ*, the earth; *τρέπειν*, to turn]. In biology, growing at right angles to the direction of gravitation.

Diagnose (*di-ag-nōs'*). See *Diagnosticate.*

Diagnosis (*di-ag-no'-sis*) [*διά*, apart; *γνῶσις*, knowledge]. The distinguishing, fixation, or interpretation of a disease from its symptoms. **D., Differential,** the qualitative distinguishing between two diseases of similar character, by comparative symptoms. **D., Direct,** the recognition of a disease from the existence of one or more signs or symptoms, independently of or in relation with other symptoms, or with age, sex, physical and mental characteristics, residence or occupation, or with the family history. **D. by Exclusion,** the recognition of a disease by excluding all other known conditions. **D., Physical,** the application of physical methods to the study of disease.

Diagnostic (*di-ag-nos'-tik*) [*διά*, apart; *γνῶσις*, knowledge]. Determining or confirming a diagnosis; serving as sufficient evidence in a diagnosis. **D. Incision,** an incision (as through the abdominal wall) made for diagnostic purposes.

Diagnosticate (*di-ag-nos'-tik-at*) [*διά*, apart; *γνῶσις*, knowledge]. To make a diagnosis.

Diagnostician (*di-ag-nos-tish'-an*) [*διά*, through; *γνῶσις*, knowledge]. One skilled in making diagnoses.

Diagometer (*di-ag-om'-et-er*) [*διαγωγή*, transmission; *μέτρον*, a measure]. An instrument for measuring the electric conductivity of bodies.

Diagraph (*di'-ag-raf*) [*διά*, thoroughly; *γράφειν*, to record]. An apparatus for recording the outlines of crania.

Diaheliotropic (*di-a-he-le-o-trop'-ik*) [*διά*, through; *ἥλιος*, the sun; *τροπή*, a turning]. In biology, having a tendency to grow at right angles to the direction of the light.

Dialdan (*di-al'-dan*) [*di*, two; *aldehyd*], $C_8H_{14}O_3$. A chemic compound prepared by allowing the mixture of aldehyd and HCl used for the preparation of aldol to stand for some time; it melts at 139° C.

Dialysate (*di-al'-is-āt*) [*διά*, through; *λύειν*, to loose]. A substance that has been acted upon by dialysis.

Dialysis (*di-al'-is-is*) [*διά*, through; *λύειν*, to loose]. The operation of separating crystalline from colloid

substances by means of a porous diaphragm, the former passing through the diaphragm into the pure water upon which the dialyzer rests.

Dialyzed (*di'-al-izd*) [διά, through; λύειν, to loose]. Prepared, acted upon, or separated, by dialysis.

Dialyzer (*di'-al-iz-er*) [διά, through; λύειν, to loose]. An apparatus for effecting dialysis; also the septum, or diaphragm of such an apparatus.

Diamagnetic Bodies (*di-a-mag-net'-ik bod'-ēz*). Bodies not susceptible of being magnetized.

Diamagnetism (*di-a-mag'-net-izm*) [διά, across; μάγνης, magnet]. The east-and-west orientation of certain substances, notably antimony, copper, and gold, when placed in the magnetic field.

Diamesogamous (*di-a-me-sog'-am-us*) [διά, through; μέσος, middle; γάμος, marriage]. In biology, applied to such flowers as are fertilized by means of the wind, water, insects, or other external agency.

Diameter (*di-am'-et-er*) [διά, through; μέτρον, a measure]. A straight line passing through the center of a body or figure, or connecting two points at opposite sides. **D., Bisacromial,** that between the acromial processes. **D., Bisiliac,** that between the iliac bones. **D. Bistrochanteric,** that between the two trochanters. **D., Craniometric,** one of several lines connecting points on opposite surfaces of the cranium. The most important craniometric diameters are the following: *Auricular* or *Biauricular*, connecting the centers of the two external auditory meatuses; *Basilo-bregmatic*, that joining the basilon and the bregma; *Biglenoid*, that joining the central points of the two glenoid cavities; *Bigoniac*, that joining the two gonions; *Bijugal*, that joining the two malar points; *Bijugular*, that joining the two jugular points; *Bimalar*, that joining the two malar points; *Bimastoid*, that joining the apices of the mastoid bones; *Biparietal*, that joining the parietal eminences; *Bistephanic*, see *Maximum Frontal*; *Bitemporal*, that joining the extremities of the coronal suture; *Bizygomatic*, that joining the most prominent points of the zygomata; *Cervico-bregmatic*, that joining the center of the anterior fontanel and the junction of the neck and floor of the mouth; *Fronto-mental*, that joining the top of the forehead and the point of the chin; *Fronto-occipital*, see *Occipito-frontal*; *Inial*, that joining the most prominent points of the inion and glabella; *Maximum Antero-posterior*, the distance from the glabella to the furthest point of the occipital bone; *Maximum Frontal*, that joining the stephanions; *Maximum Occipital*, that joining the two asterions; *Maximum Transverse*, the greatest transverse diameter of the cranium, wherever found; *Mento-bregmatic*, that joining the chin and the middle of the anterior fontanel; *Mento-frontal*, see *Fronto-mental*; *Minimum Frontal*, the supra-orbital line; *Occipito-frontal*, that joining the root of the nose and the most prominent point of the occiput; *Occipito-mental*, that joining the external occipital protuberance and the chin; *Sagittal*, see *Basilo-bregmatic*; *Stephanic*, see *Maximum Frontal*; *Sub-temporal*, that joining the spheno-temporal sutures on either side of the head; *Trachelo-bregmatic*, see *Cervico-bregmatic*; *Vertical Diameter*, ordinarily the distance from the basion to the bregma, or what is nearly equivalent, the distance from the basion to the point where the line through the basion at right angles to the alveolo-condylean plane intersects the cranial vault; but sometimes the line is drawn at right angles to the foramen magnum. **D., Deventer's.** See *Deventer*. **D., Pelvic,** any one of the diameters of the pelvis. The most important are the following: *Antero-posterior* (of pelvic inlet), that which joins the sacro-vertebral angle and the pubic symphysis; *Antero-posterior* (of pelvic outlet), see *Coccypubic*; *Coccypubic*, that which joins the tip of the coccyx with the subpubic ligament; the antero-posterior diameter of the pelvic outlet; *Conjugate*, the antero-posterior diameter of the pelvic inlet; *Conjugate, diagonal*, that connecting the sacro-vertebral angle and subpubic ligament; *Conjugate, external*, that connecting the spine of the first sacral vertebra and the middle of the upper border of the symphysis pubis; *Conjugate, true*, that connecting the sacro-vertebral angle and the most prominent portion of the posterior aspect of the symphysis pubis; *Oblique* (of pelvic inlet), left and right, that connecting one sacro-iliac symphysis with the opposite ilio-pectineal eminence; see also *Deventer*; *Oblique* (of pelvic outlet), that extending from the middle of the under surface of the sciatic ligament upon one side to the junction of the ischio-pubic rami on the opposite side; *Sacro-pubic*, see *Antero-posterior*; *Sacro-subpubic*, see *Conjugate, diagonal*; *Sacro-suprapubic*, that connecting the sacro-vertebral angle and the upper portion of the symphysis pubis; *Transverse* (of pelvic inlet), that connecting the two most widely separated points of the pelvic inlet; *Transverse* (of pelvic outlet), that connecting the ischial tuberosities.

Diametroscopy (*di-am-et-ros'-ko-pe*) [διάμετρος, diameter; σκοπεῖν, to inspect]. Observation or measurement of diameters (as of the retinal vessels).

Diamid (*di'-am-id*). See *Hydrazin*.

Diamin (*di'-am-in*). See *Amin*.

Diamotosis (*di-am-o-to'-sis*) [διά, through; μοτός, lint]. The packing of a wound or sore with lint.

Diandrous (*di-an'-drus*) [δίς, two; ἀνήρ, a man]. In biology; having two stamens.

Dianoux's Operation. See *Operations, Table of*.

Diapason (*di-ap-as'-on*) [διαπασῶν, concord]. A tuning-fork.

Diapedesis (*di-ap-ed-e'-sis*) [διαπήδησις, a jumping through]. The escape of the elements of the blood, especially the white corpuscles, through the vessel-wall. Also a synonym of *Hematidrosis*.

Diapedetic (*di-ap-ed-et'-ik*) [διαπήδησις, a jumping through]. Relating to diapedesis.

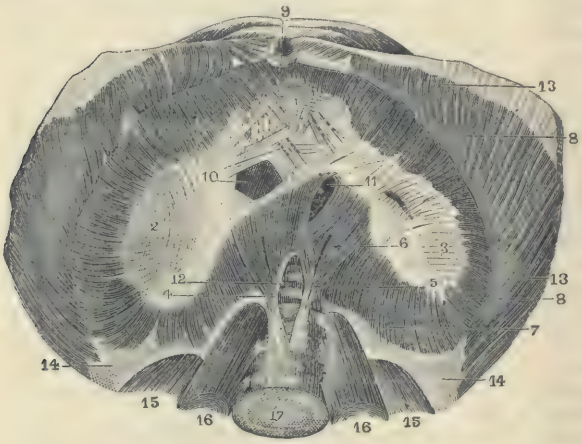
Diaper (*di'-ap-er*) [ME., *dyaper*, diaper; ornamented cloth]. A napkin used as a T-bandage for infants and menstruating women.

Diaphanometer (*di-af-an-om'-et-er*). See *Lactoscope*.

Diaphanoscope (*di-af-an'-o-skōp*) [διαφανής, translucent; σκοπεῖν, to inspect]. A form of endoscope in which the walls of the inspected cavity are rendered diaphanous by means of an intense light.

Diaphanoscopy (*di-af-an-os'-ko-pe*) [διαφανής translucent; σκοπεῖν, to see]. The examination of cavities of the body by means of an introduced incandescent electric light.

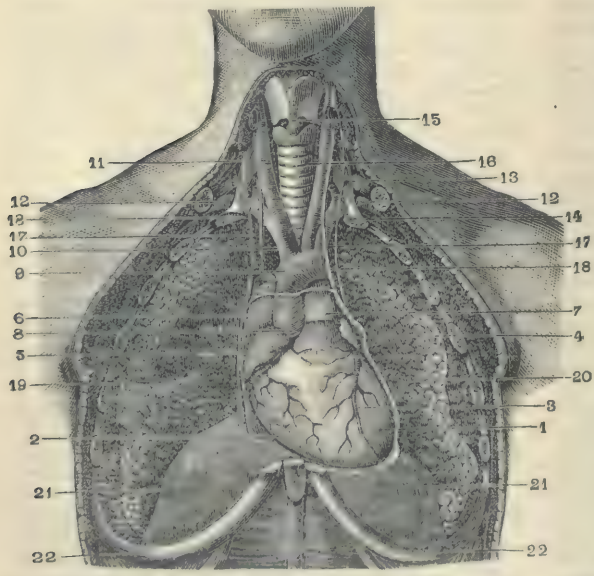
Diaphanous (*di-af'-an-us*) [διά, through; φαίνειν, to shine]. Transmitting light; translucent. **D. Test.** See *Death*.



Diaphemetric (*di-af-em-et'-rik*) [διά, through; ἁφή, touch; μέτρον, measure]. Pertaining to measurements of tactile sensibility.

Diaphoresis (*di-af-o-re'-sis*) [διά, apart; φορέειν, to carry]. Perspiration, especially perceptible perspiration, or that induced by medical treatment.

Diaphoretic (*di-af-or-et'-ik*) [διά, apart; φορέειν, to carry]. 1. Causing an increase of perspiration; sudorific. 2. A medicine that induces diaphoresis.



Diaphragm (*di'-af-ram*) [διά, across; φράγμα, wall]. 1. The wall, muscular at the circumference and tendinous at the center, that separates the thorax and abdomen. The chief muscle of respiration and expulsion. 2. A thin septum, such as is used in

dialysis. 3. In microscopy, an apparatus placed between the mirror and object to regulate the amount of light that is to pass through the object. **D., Central Stop,** in microscopy, a diaphragm having a circular slit just within its margin, the center remaining opaque. **D. Iris,** a device for changing or regulating the amount of light directed upon an object under the microscope. **D. Opening.** The opening in the disc or apparatus of a microscope through which the rays of light pass. It should be of about the same size as that of the front lens of the objective.

DIAPHRAGM, INFERIOR ASPECT.

1. Anterior and middle leaflet of central tendon. 2. Right leaflet. 3 Left leaflet. 4. Right crus. 5. Left crus. 6, 6. Intervals for phrenic nerves. 7. Muscular fibers, from which the ligamenta arcuata originate. 8. Muscular fibers that arise from the inner surface of the six lower ribs 9. Fibers that arise from ensiform cartilage. 10. Opening for inferior vena cava. 11. Opening for esophagus. 12. Aortic opening. 13, 13. Upper portion of transversalis abdominis, turned upward and outward 14. Anterior leaflet of transversalis aponeurosis. 15, 15. Quadratus lumborum. 16, 16. Psoas magnus. 17. Third lumbar vertebra.

THE DIAPHRAGM IN ITS RELATIONS TO THE HEART AND LUNGS.

1. Left ventricle. 2. Right ventricle. 3. Anterior coronary artery. 4. Left auricle. 5. Right auricle. 6. Superior vena cava. 7. Pulmonary artery. 8. Origin of aorta. 9 Arch of aorta. 10. Innominate artery. 11. Right carotid. 12, 12. Subclavian arteries. 13. Scalenus anticus 14. First rib. 15. Larynx. 16. Trachea. 17, 17. Pneumogastrics. 18, 18. Phrenics 19. Right lung. 20 Left lung. 21, 21 Diaphragm. 22, 22. Seventh pair of ribs.

Diaphragmalgia (*di-af-rag-mal'-je-ah*). See *Diaphragmatalgia.*

Diaphragmatalgia (*di-af-rag-mat-al'-je-ah*) [διά, across; φράγμα, a wall; ἄλγος, pain]. Pain in or neuralgia of the diaphragm.

Diaphragmatic (*di-af-rag-mat'-ik*) [διά, across; φράγμα, a wall. Relating to the diaphragm. **D. Hernia.** See *Hernia.* **D. Pleurisy.** See *Pleurisy.*

Diaphragmatitis (*di-af-rag-mat-i'-tis*) [διά, across; φράγμα, a wall; ιτις, inflammation]. Inflammation of the diaphragm.

Diaphragmatocele (*di-af-rag-mat'-o-sēl*) [διάφραγμα, diaphragm; κήλη, hernia]. Hernia through the diaphragm.

Diaphragmitis (*di-af-rag-mi'-tis*). See *Diaphragmatitis.*

Diaphragmodynia (*di-af-rag-mo-din'-e-ah*) [διάφραγμα, diaphragm; ὀδύνη, pain]. Pain in the diaphragm.

Diaphtherin (*di-af'-ther-in*) [διαφθείρειν, to destroy]. Oxychinaseptol; a coal-tar derivative composed of two molecules of oxychinolin and one of aseptol. It is a yellow powder, with a phenol-like odor. It is used as an antiseptic and bactericide in solutions varying in strength from 1 to 50 per cent. Its chief drawback is that it attacks silver-plated or nickel-plated instruments, turning them black. Unof.

Diaphylactic (*di-af-il-ak'-tik*) [διαφυλακτικός, preserving]. Same as *Prophylactic.*

Diaphyseitis (*di-af-iz-e-i'-tis*) [διάφυσις, a diaphysis; ιτις, inflammation]. Inflammation of a diaphysis.

Diaphysis (*di-af'-is-is*) [διά, between; φύειν, to grow]. The middle part or shaft of any long, cylindric bone, as considered apart from the apophyses and epiphyses. In biology, applied to an unusually elongated axis, as that of a flower or flower-cluster.

Diaplex, or **Diaplexus** (*di'-ap-leks, di-ap-leks'-us*) [διά, between; *plexus*, a network]. The choroid plexus of the third ventricle or diacele.

Diapophysial (*di-ap-off-iz'-e-al*) [διά, apart; ἀπόφυσις, an outgrowth]. Relating to a diapophysis.

Diapophysis (*di-ap-off'-is-is*) [διά, apart; ἀπόφυσις, an outgrowth]. The superior or articular part of a transverse apophysis, or its homologue.

Diapyema (*di-ap-i-e'-mah*) [διαπύημα; διά, through; πύον, pus: *pl.*, *Diapyemata*]. An abscess.

Diapyesis (*di-ap-i-e'-sis*) [διαπύησις; διά, through; πύησις, suppuration]. Suppuration.

Diapyetic (*di-ap-i-et'-ik*) [διαπυητικος, suppurating]. Promoting diapyesis or suppuration.

Diarch (*di'-ark*) [δίς, two; ἄρχοι, rulers]. In biology, a term descriptive of radial fibro-vascular bundles having two rays.

Diarrhea (*di-ar-e'-ah*) [διά, through; ῥέειν, to flow]. An abnormal frequency of evacuation of the feces, which are watery, and sometimes acrid. **D., Acute,** that due to cold, or to the ingestion of improper food or chemic poisons. In severe forms it is associated with collapse, and may in rare cases be followed by death.

D., Acute Inflammatory, a term including the severer forms of the catarrhal and summer diarrheas of children. It is characterized by griping, vomiting, and the passage of offensive, watery, brown or greenish stools. The child in the latter stage of this disease presents the same appearance as that seen in advanced tuberculous meningitis—pinched features, drowsiness, sunken and half-closed eyes, and rapid irregular pulse—and to this condition the term "*spurious hydrocephalus*" has been applied. Death frequently results from this form of diarrhea. **D., Acute Summer,** a term given to sudden attacks of profuse watery diarrhea occurring in children and weak adults during the prevalence of hot weather. (See *Cholera infantum*). **D. alba.** See *Celiac Affection.* **D., Cachectic,** that depending on some diathetic disease, as syphilis, scurvy, malaria, tuberculosis, and carcinoma, or else on chronic intestinal catarrh. **D., Choleraic,** severe, acute diarrhea of any form not readily traceable to any recognized cause. **D., Choleriform.** Synonym of *Cholera infantum.* **D., Chronic Inflammatory,** a diarrhea of children either following an acute attack, or developing insidiously. The stools are of a dark-brown color, thin and foul, and may occasionally contain a spinach-like material. There is great emaciation and anemia, and the term "*consumption of the bowels,*" has been given to this condition. The prognosis must be guarded. **D., Chronic Tropical,** *Hill-diarrhea,* "*white flux,*" of India, a severe form of chronic intestinal catarrh, and essentially a tropical disease. In India it develops often in those who, after dwelling in the heat of the plains, pass to the changeable temperature of the hilly country, hence the name "*Hill-diarrhea.*" The stools are copious, light, and frothy; there is progressive failure of strength; the temperature becomes subnormal; albuminuria and edema develop, and death results in many cases from exhaustion. **D. chylosa.** See *Celiac Affection.* **D., Compensatory.** See *D., Vicarious.* **D., Dissecting-room,** a severe form of diarrhea resulting from exposure to the animal effluvia of the dissecting-room. The discharges are very fetid and may be accompanied by colicky pains, nausea and vomiting, and headache. **D., Dysenteric,** a form of diarrhea frequently encountered in children in temperate climates. There are tenesmus and colic, the passage of mucous and fecal stools, prolapse of the rectum, and great exhaustion. Death may result. **D., Fatty,** a rare form, the result of the imperfect performance of the pancreatic or hepatic function. **D. febrilis.** Synonym of *Enteritis, Pseudo-membranous.* **D., Fibrinous.** Synonym of *Enteritis, Pseudo-membranous.* **D., Gelatinous.** See *Enteritis, Membranous.* **D., Heat.** See *D., Summer.* **D., Hill.** See *D., Chronic Tropical.* **D., Infantile,** a term including various forms of diarrhea occurring in infants and young children. **D., Irritative,** that due to direct irritation of the intestines by improper food and drink, purgative medicines, poisons, intestinal worms, etc. **D., Lienteric,** a form of diarrhea common in children over two years of age, and characterized by the passage of fluid stools containing scraps of undigested food, and associated with griping pains. **D., Matinal.** See *D., Chronic Tropical.* **D., Mechanical,** that due to mechanical obstruction to the portal circulation, with consequent gastro-intestinal hyperemia and catarrh. It is seen in cases of mitral lesion. **D., Mucous.** See *Enteritis, Membranous.* **D., Nervous.** See *D., Lienteric.* **D. pituitosa.** Synonym of *Enteritis, Pseudo-membranous.* **D., Secondary,** *symptomatic diarrhea;* that secondary to some ulcerative condition of the intestines, as in typhoid fever, tuberculosis, pyemia, etc. **D., Serous,** a variety in which the stools are very watery. **D., Simple Catarrhal,** a common variety of diarrhea occurring in infants. It is marked by watery evacuations containing feculent matter and undigested curds. It is due to errors in diet or exposure to cold. **D., Summer,** an acute form due to the intense heat of summer. A synonym of the *Summer Complaint* of infants. **D., Symptomatic.** See *D., Secondary.* **D., Tuberculous,** that form dependent upon tuberculous disease of the bowels. **D. tubularis.** Synonym of *Enteritis, Pseudo-membranous.* **D., Ulcerative,** a grave form due to intestinal ulceration. **D., Vicarious,** that due to suppression or arrest of the functions of the skin, kidneys, or lungs, so that the bowels do the extra or vicarious work. It is also called *Compensatory diarrhea.* It is rather salutary than otherwise.

Diarrheal (*di-ar-e'-al*) [διά, through; ῥέειν, to flow]. Relating to, or of the nature of diarrhea.

Diarthrodial (*di-ar-thro'-de-al*) [διά, throughout; ἀρθρωσις, articulation]. Relating to or of the nature of a diarthrosis.

Diarthrosis (*di-ar-thro'-sis*) [διά, throughout; ἀρθρωσις, articulation]. A form of articulation characterized by mobility. The various forms are: *Arthrodia,* in which the bones glide upon plane surfaces; *Enarthrosis,* best known as ball-and-socket joint, with motion in all directions; *Ginglymus,* or hinge-joint, with backward and forward motion; and *D. rotatoria,* with pivotal movement.

Diary Fever (*di'-ar-e*). See *Fever.*

Diastaltic (*di-as-tal'-tik*) [διά, apart; στέλλειν, to send]. Reflex; performed (as are many reflex actions) through the medium of the spinal cord.

Diastase (*di'-as-tās*) [διάστασις, separation]. A nitrogenous vegetable ferment that is either contained or developed in the fermentation of grain, which acts on the molecules of starch, converting this into grape-sugar or glucose.

Diastasemia (*di-as-tas-e'-me-ah*) [διά, apart; στάσις, settling; αἷμα, blood]. Acute anasarca.

Diastasic, or **Diastatic** (*di-as-tas'-ik,* or *di-as-tat'-ik*) [διάστασις, separation]. Relating to a diastasis. **D. Ferments.** See *Ferments.*

Diastasis (*di-as'-tas-is*) [διάστασις, separation]. 1. Luxation or dislocation. 2. The separation of an epiphysis from the body of a bone without true fracture.

Diastema (*di-as-te'-mah*) [διάστημα, a distance: *pl., Diastemata*]. A space or cleft. In biology, applied to the space between any two consecutive teeth.

Diastematelytria (*di-as-tem-at-el-it'-re-ah*) [διάστημα, fissure; ἔλυτρον, vagina]. Longitudinal and congenital fissure of the vagina.

Diastematochilia (*di-as-tem-at-o-kil'-e-ah*) [διάστημα, fissure; χείλος, lip]. Congenital longitudinal fissure of the lip; hare-lip.

Diastematocystia (*di-as-tem-at-o-sis'-te-ah*) [διάστημα, fissure; κύστις, bladder]. Congenital longitudinal fissure of the bladder.

Diastematognathia (*di-as-tem-at-og-na'-the-ah*) [διάστημα, fissure; γνάθος, jaw]. Congenital longitudinal fissure of the jaw.

Diastematometria (*di-as-tem-at-o-me'-tre-ah*) [διάστημα, fissure; μήτρα, womb]. Congenital longitudinal median fissure of the uterus.

Diastematosternia (*di-as-tem-at-o-ster'-ne-ah*) [διάστημα, fissure; στέρνον, sternum]. Median congenital fissure of the sternum.

Diaster (*di'-as-ter*). See *Dyaster* and *Karyokinesis.*

Diastole (*di-as'-to-le*) [διαστολή, a drawing apart]. The period of dilatation of either cavity of the heart

during its rhythmic cycle or beat. It is applied also to the dilatation of the arteries by the heart's contraction.

Diastolic (*di-as-tol'-ik*) [*διαστολή*, a drawing apart]. Pertaining to diastole. **D. Impulse,** the back-stroke. **D. Murmur.** See *Murmur.* **D. Thrill,** the vibration felt in the region of the heart during the diastole of the ventricles.

Diastrephia (*di-as-tref'-e-ah*) [*διά*, apart; *στρέφειν*, to turn]. Insanity marked by acts of cruelty and by gross perversion of the moral sense.

Diatactic (*di-at-ak'-tik*) [*διατάσσειν*, to make ready]. Preparatory. **D. Action,** the supposed molecular establishment of unions between different brain-cells and nerve-centers preparatory to coördinated motor activity.

Diatela (*di-at-e'-lah*) [*διά*, between; *tela*, a web]. The membranous roof of the diacele (third ventricle).

Diaterma (*di-at-er'-mah*) [*διά*, between; *τέρμα*, end]. A portion of the floor of the diacele. It has a nearly dorso-ventral direction.

Diathermal or Diathermanous (*di-ath-er'-mal, di-ath-er'-man-us*) [*διά*, through; *θέρμη*, heat]. Transparent or diaphanous to the waves of radiant heat.

Diathermancy (*di-ath-er'-man-se*) [*διά*, through; *θέρμη*, heat]. Permeability to rays of heat.

Diathesis (*di-ath'-es-is*) [*διά*, through; *τιθέναι*, to arrange]. A state or condition of the body whereby it is especially liable to certain diseases, such as gout, calculus, diabetes, etc. It may be acquired or hereditary. **D., Hemorrhagic.** See *Hemophilia.*

Diathetic (*di-ath-et'-ik*) [*διά*, through; *τιθέναι*, to arrange]. Relating to a diathesis.

Diatom (*di'-at-ōm*). One of the *Diatomaceæ*, a group of microscopic *Algæ*.

Diatomic (*di-at-om'-ik*) [*δίς*, two; *ἄτομος*, atom]. In chemistry, consisting of two atoms; specifically applied to hydrates that have two hydrogen atoms united to the nucleus radical by oxygen.

Diatomin (*di-at'-o-min*) [*διά*, through; *τέμνειν*, to cut]. The yellowish-brown coloring-matter of diatoms. It is also called *Phycoxanthin.*

Diaxon (*di-aks'-on*) [*δίς*, two; *ἄξων*, axis]. In biology, having two axes.

Diazo- (*di-a'-zo-*) [*δίς*, two; *azotum*, nitrogen]. In chemistry, a prefix signifying that a compound contains phenyl, C_6H_5, united with a radical consisting of two nitrogen atoms. **D.-acid,** one of certain volatile liquids of yellow color and peculiar odor, which distil undecomposed with steam or under reduced pressure. They are slightly soluble in water, but mix readily with alcohol and with ether. **D.-compound,** in chemistry a compound containing a group consisting of phenyl (C_6H_5) united with a radical consisting of two nitrogen-atoms (whence the name). **D.-reaction or test,** a urinary test, originally thought to be especially valuable in the diagnosis of enteric fever. It is not found in the urine of healthy persons. The test is made by mixing 200 parts of sulphanilic acid solution (concentrated solution in water) with 10 parts of pure hydrochloric acid, and 6 parts of nitrite of sodium solution (1 : 200). To this mixture add an equal volume of urine with sufficient ammonia to render the whole alkaline. A bright or carmin-red denotes the reaction. See *Tests, Table of.*

Diazobenzene (*di-a-zo-ben'-zēn*) [*dis*, two; *azotum*, nitrogen; *benzoin*]. The nitrogenous body called *Tyrotoxicon, q. v.*

Dib [E. dial]. The knee-pan or ankle-bone of a sheep's leg.

Dibasic (*di-ba'-sik*) [*δίς*, twice; *βάσις*, base]. Having two bases. **D. Acids.** See *Acids.*

Dibenzyl (*di-ben'-zil*) [*δίς*, twice; *benzoin*], $C_{14}H_{14}$. A compound prepared by the action of sodium upon benzyl chlorid. It crystallizes in large prisms, melting at 52° C. and boiling at 284° C.

Diblastic (*di-blas'-tik*) [*δίς*, double; *βλαστός*, germ]. Referring to any theory of disease that ascribes it to a double agency.

Dibothrium (*di-both'-re-um*) [L.]. A genus of cestode worms. **D. latum.** See *Bothriocephalus latus.*

Dibromindone (*di-bro-min'-dōn*) [*δίς*, double; *βρῶμος*, a stench], $C_9H_4Br_2O$. A compound derived from dibromcinnamic acid. It consists of orange-yellow needles, with an odor resembling that of quinone. It melts at 123°.

Dicephalism (*di-sef'-al-izm*) [*δίς*, two; *κεφαλή*, head]. The condition of having two heads.

Dicephalous (*di-sef'-al-us*) [*δίς*, two; *κεφαλή*, head]. Two-headed.

Dicephalus (*di-sef'-al-us*) [*δίς*, two; *κεφαλή*, a head]. A monster having two heads.

Dicerous (*dis'-er-us*) [*δίς*, two; *κέρας*, a horn]. In biology, having two antennæ.

Dichasium (*di-ka'-se-um*) [*δίχασις*, division]. In biology, applied to a cyme having two axes.

Dichastasis (*di-kas'-tas-is*) [*δίχασις*, division]. In biology, spontaneous fission.

Dichasteres (*di-kas-te'-rēz*) [*διχάξειν*, to divide]. An old name for the incisor teeth.

Dichlamydeous (*di-klam-id'-e-us*) [*δίς*, two; *χλαμύς*, a mantle]. In biology, applied to flowers having both floral envelops.

Dichogamy (*di-kog'-a-me*) [*δίχα*, in two; *γάμος*, marriage]. In biology, a provision for cross-fertilization of flowers by the maturation of the reproductive elements of the same flower at different times.

Dichotomous (*di-kot'-o-mus*) [*δίχα*, in two; *τέμνειν*, to cut]. In biology, divided, forked or having a dual arrangement.

Dichroism (*di'-kro-izm*) [*δίς*, double; *χρόα*, color]. The phenomenon of difference of color in bodies when viewed by reflected or by transmitted light.

Dichromatism (*di-kro'-mat-izm*). Same as *Color-blindness.*

Dicinchonin (*di-sin'-kon-in*) [*δίς*, double; *cinchona*], $C_{38}H_{44}N_4O_2$. An alkaloid of Cinchona bark, an amorphous solid, melting at 40° C., readily soluble in alcohol and ether.

Diclesium (*di-kle'-se-um*) [*δίς*, two; *κλείειν*, close]. In biology, an achenium having a persistent calyx or perianth.

Diclinous (*di-kli'-nus*) [*δίς*, two; *κλίνη*, a bed]. In biology, having the stamens and pistils in separate flowers.

Dicochirurgea (*di-ko-ki-rer'-je-ah*) [*δίκη*, justice; *χειρουργία*, surgery]. Forensic surgery.

Dicotoin (*di-ko'-to-in*) [*δίς*, double; *Coto*]. A derivative of cotoin present in coto bark.

Dicotyledon (*di-kot-il-e'-don*) [*δίς*, two; *κοτυληδών*, a cavity]. In biology, a term introduced by J. Ray in 1682, for a plant whose embryo has two seed-leaves or cotyledons.

Dicranous (*di-kra'-nus*) [*δίκρανος*, two-headed]. Dicephalous.

Dicranus (*di-kra'-nus*) [*δίς*, double; *κράνον*, head]. A dicephalous monster.

Dicrotic (*di-krot'-ik*) [*δίκροτος*, double beating]. Having a double beat. **D. Pulse,** a term applied to a pulse that imparts the sensation of a double beat at each pulsation. **D. Wave,** the wave of recoil, or the second smaller ascending wave of the sphygmographic tracing. It is generated by closure of the aortic valves.

Dicrotism (*di'-kro-tizm*) [δίκροτος, a double-beat]. The quality of being dicrotic. A condition of the pulse in which with every wave there is given to the finger of the examiner the sensation of two beats. It is present when the arterial tension is low. The second shock is due to the recoil of the arterial walls when the aortic valves are closed.

Dictyitis (*dik-te-i'-tis*) [δίκτυον, net, retina]. Retinitis.

Dictyopsia (*dik-te-op'-se-ah*) [δίκτυον, net; ὄψις, view]. The sensation as if a net were stretched before the eyes.

Dicyanogen (*di-si-an'-o-jen*) [δίς, double; *cyanogen*], NC.CN. Free cyanogen; a colorless, poisonous gas of peculiar odor, and specific gravity 26 (H=1). It may be condensed to a mobile liquid by cold of —25° C., or by a pressure of four atmospheres at ordinary temperatures. In this condition it has a specific gravity of .566, solidifies at —34° C. to a crystalline mass and boils at —21° C. It burns with a bluish-purple mantled flame.

Didactic (*di-dak'-tik*) [διδακτικός, apt at teaching]. Teaching by description, rules, or principles; opposed to clinical.

Didactylism (*di-dak'-til-izm*) [δίς, double; δάκτυλος, a finger]. The condition of having congenitally but two digits on a hand or foot.

Diday's Operation. See *Operations, Table of.*

Didot's Operation. See *Operations, Table of.*

Diduction (*di-duk'-shun*) [*diducere*, to draw apart]. Abduction of two parts; the withdrawal of a part.

Didymalgia (*did-e-mal'-je-ah*) [δίδυμος, testicle; ἄλγος, pain]. Pain in a testicle.

Didymitis (*did-e-mi'-tis*) [δίδυμος, a testicle; ιτις, inflammation]. Orchitis affecting mainly the body of the testicle.

Didymium (*di-dim'-e-um*) [δίδυμος, twin]. A rare metal of grayish or yellow color. See *Elements, Table of.*

Didymous (*did'-im-us*) [δίδυμος, twin]. Arranged in a pair, or in pairs.

Didymus (*did'-im-us*) [δίδυμος, twin]. A twin; a twin-monstrosity; a testis.

Didynamous (*di-din'-am-us*) [δίς, two; δύναμις, power]. In biology, having the stamens in two pairs, one longer than the other.

Die (*di*) [ME., *dien*]. To cease to live; to become dead.

Diecious (*di-e'-shus*) [δίς, two; οἶκος, house]. In biology, having the two sexes in different individuals, or in two households, as staminate and pistillate flowers separate and on separate plants.

Dieffenbach's Operation. See *Operations, Table of.*

Dielectric (*di-e-lek'-trik*) [διά, through; ἤλεκτρον, amber]. A non-conducting substance that transmits electricity by induction.

Dielectrics (*di-e-lek'-triks*) [διά, through; ἤλεκτρον, amber]. The property of certain substances to permit an inductive electric influence to act through or across them.

Dielectrolysis (*di-e-lek-trol'-is-is*) [διά, through; ἤλεκτρον, electricity; λύειν, to dissolve]. Galvanic electrolysis of a compound, the current passing at the same time through a diseased portion of the body and carrying one of the elements of the compound with it.

Dien (*di'-en*) [διά, through; ἐγκέφαλος, brain]. A contraction of diencephalon.

Diencephal (*di-en'-sef-al*). Same as *Diencephalon.*

Diencephalon (*di-en-sef'-al-on*) [διά, between; ἐγκέφαλος, brain]. Thalamencephalon. Between-brain. That part of the brain between the prosencephalon and the mesencephalon. It includes the thalami and the third ventricle.

Dieresis (*di-er'-es-is*) [διαίρεσις, a division]. A solution of continuity, as a wound, ulceration, etc. In biology, the division of the outer branch of the posterior or caudal pleopod of a crustacean. (Bate).

Dieretic (*di-er-et'-ik*) [διαιρέειν, to divide]. Destructive; escharotic; corrosive.

Dies and Counter-dies. Metallic casts obtained by molding in sand or dipping in molten zinc and lead, or other alloys, such as Babbitt metal, and which are used for stamping up dental plates; they are generally described as male and female castings, between which the plate is swaged.

Diesel's Test. See *Tests, Table of.*

Diet (*di'-et*) [δίαιτα, a system or mode of living]. 1. An arranged selection of food necessary to meet the needs of the body. 2. To regulate the amount and character of the food ingested. **D.-drink**, a medicated drink, or beverage. **D., Lisbon**, a draught much resembling the compound tincture of sarsaparilla. **D., Milk**, one consisting mainly of milk. **D., Tuffnell's**, a highly nutritious diet including but a small amount of liquids, employed in the treatment of internal aneurysms.

Dietarian (*di-et-a'-re-an*) [δίαιτα, a system or mode of living]. A physician who pays special attention to matters of diet.

Dietary (*di'-et-a-re*) [δίαιτα, a system or mode of living]. A system of food-regulation intended to meet the requirements of the animal economy.

Dietetic (*di-et-et'-ik*) [δίαιτα, a system or mode of living]. Pertaining to diet.

Dietetics (*di-et-et'-iks*) [δίαιτα, a system or mode of living]. The science of the systematic regulation of the diet for hygienic or therapeutic purposes.

Dietetist (*di-et-et'-ist*) [δίαιτα, a system or mode of living]. One who is expert in questions of diet; a dietarian.

Diethylamin (*di-eth-il'-am-in*) [δίς, double; *ethyl, amin*], NC_4H_{11}. A ptomaïne, obtained from the pike-fish when allowed to putrefy for six days in summer. It is an inflammable liquid of strong basic properties, soluble in water, and boiling at 57.5° C. It is non-poisonous.

Dietic (*di-et'-ik*) [δίαιτα, a system or mode of living]. Same as *Dietetic.* **D. Diseases**, those caused by errors of diet.

Difference-Theory (*dif'-er-ens*). A theory in explanation of the galvanic phenomena of living tissues. The theory is an expression of these facts: Protoplasm when injured or excited in its continuity becomes negative to the uninjured part; when heated it becomes positive; and the surface-polarization diminishes with excitement and in the process of dying. It is also called *Alteration-theory* (*Hermann*).

Differential (*dif-er-en'-shal*) [*differentia*, difference]. Pertaining to or creating a difference. **D. Diagnosis.** See *Diagnosis.* **D. Rheotome.** See *Rheotome.* **D. Tone**, a tone produced by two primary tones when sounding simultaneously; the number of the vibrations corresponds to the difference between the two primary tones. **D. Staining**, a method of staining tubercle-bacilli, syphilis-bacilli, etc., founded upon the fact that if deeply-colored, and especially with a mordant, they retain the color in the presence of certain reagents that decolorize the surrounding tissues. Koch, Ehrlich and Weigert, Ziehl and Neelson, Fütterer, Gibbes, etc., have devised various methods of differential staining.

Differentiation (*dif-er-en-she-a'-shun*) [*differentia*, difference]. Specialization of tissues, organs, or functions. The gradual change of homogeneous material into special tissues or organs.

Difficultas intestinorum (*dif-ik-ul'-tas in-tes-tin-or'-um*) [L.]. Synonym of *Dysentery.*

Diffraction (*dif-rak'-shun*) [*dis*, apart; *fractus*, broken]. The deflection suffered by a ray of light when it passes through a narrow slit or aperture. **D. Grating**, a strip of glass closely ruled with fine lines; it is often used in the spectroscope in the place of the battery of prisms.

Diffuse (*dif-us'*) [*de*, apart; *fundere*, to pour over]. Scattered or spread about. In medicine, applied to diseases that involve a large part of the body. **D. Aneurysm**, one caused by a rupture of the walls of a blood-vessel. **D. Cerebral Sclerosis.** See *Sclerosis*. **D. Inflammation.** See *Inflammation*.

Diffusible (*dif-u'-zib-l*) [*dis*, away; *fundere*, to pour]. Susceptible of being rapidly diffused throughout the system; applied to certain quickly-acting stimulants, usually of transient effect.

Diffusion (*dif-u'-zhun*) [*diffundere*, to spread]. A spreading or dissemination. **D., Anodal**, same as *Cataphoresis*. **D.-circle**, the imperfect image formed by incomplete focalization, the position of the true focus not having been reached or else having been passed.

Digastric (*di-gas'-trik*) [δίς, double; γαστήρ, belly]. Having two bellies. **D. Muscle.** See *Muscles, Table of*. **D. Triangle.** See *Triangles, Table of*.

Digenesis (*di-jen'-es-is*) [δίς, two; γένεσις, generation]. In biology, the alternation of sexual and asexual generation.

Digenous (*dij'-en-us*) [δίς, two; γένος, sex]. In biology, pertaining to both sexes, or originating from opposite sexes.

Digerent (*dij'-er-ent*) [*digerere*, to digest]. A digestant; also a medicine that excites the secretion of pus in wounds.

Digestant (*di-jest'-ant*) [*digerere*, to digest]. 1. A body or substance that effects solution of the food in the mouth, stomach, and intestines. 2. A remedy for indigestion.

Digestibility (*di-jes-tib-il'-it-e*) [*digestibilis*, that can be digested]. Susceptibility of being digested.

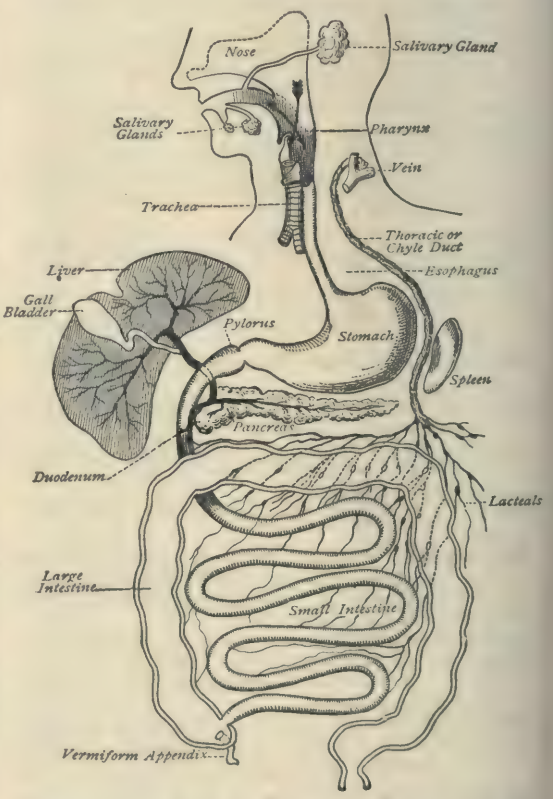
Digestible (*di-jest'-ib-l*) [*digestibilis*, that can be digested]. Capable of being digested.

Digestio Difficilis (*di-jes'-che-o dif-ik'-il-is*) [L.]. Synonym of *Dyspepsia*.

Digestion (*di-jes'-chun*) [*digerere*, to digest]. In biology, that process whereby the food taken into an organism is made fit to become part thereof. **D., Artificial**, the production of peptones outside of the body. **D., Primary**, gastro-intestinal digestion. **D., Secondary**, the assimilation by the body-cells of their appropriate pabulum.

Digestive (*di-jes'-tiv*) [*digerere*, to digest]. 1. Relating to or favoring digestion. 2. An agent that promotes digestion. 3. Pertaining to the process of digestion. **D. Apparatus**, the organs of digestion considered collectively. **D. Tract**, the whole alimentary canal from the mouth to the anus. See *Illustration*.

Digit (*dij'-it*) [*digitus*, a finger]. A finger or toe.



Digital (*dij'-it-al*) [*digitus*, a finger]. Pertaining to the fingers or toes. **D. Arteries**, the arteries of the hands and feet supplying the digits. See *Arteries, Table of*. **D. Compression**, the stoppage of a flow of blood by pressure with the finger. **D. Dilatation**, the enlarging of a cavity by means of the finger. **D. Examination**, examination or exploration with the finger. **D. Nerves**, the nerves of the hands and feet. **D. Phalanges**, the bones of the fingers or of the toes.

Digitalein (*dij-it-a'-le-in*) [*digitalis*, pertaining to the fingers]. One of the constituents of digitalis.

Digitalin (*dij-it-a'-lin*) [*digitalis*, pertaining to the fingers]. 1. *Digitalinum* (U. S. P.); $C_5H_8O_2$ (?), the active principle of *Digitalis purpurea*, *q. v.* Dose gr. $\frac{1}{60}$–$\frac{1}{30}$. 2. A precipitate from a tincture of *Digitalis purpurea*. Unof. Besides the foregoing there are various commercial preparations known by this name.

Digitalis (*dij-it-a'-lis*) [*digitalis*, pertaining to the fingers]. Foxglove. The leaves of *D. purpurea*. It contains an amorphous complex substance, *digitalin*, that does not, however, represent the full properties of the leaves. It is a cardiac stimulant and excito-motor, and in large doses causes severe gastric disturbance. It is employed mainly in affections of the heart when the latter is rapid and feeble. Dose of the leaves gr. ss–iij. **D. abstractum**, strength twice that of digitalis itself. Unof. Dose gr. ¼–ij. **D., Ext.**, leaves yield 25 per cent. of extract. Dose gr. ⅙–½. **D., Ext., Fld.**, strength 100 per cent. Dose ♏ j–iij. **D. infusum**, 1½ per cent. in strength. Dose ℥ ss–j. **D., Tinct.**, 15 per cent. Dose ♏v–℥j. See *Digitalin*.

Digitalose (*dij-it-al-ōz'*) [*digitalis*, pertaining to the fingers]. A white crystalline constituent of digitalis.

GENERAL SCHEME OF THE DIGESTIVE TRACT, WITH THE CHIEF GLANDS OPENING INTO IT; TOGETHER WITH THE LACTEALS ARISING FROM THE INTESTINE AND JOINING THE THORACIC DUCT. (*Landois.*)

Digitate (*dij'-it-āt*) [*digitus*, finger]. In biology, having finger-like divisions, as when the leaflets of a compound leaf are all borne on the apex of the petiole.

Digitation (*dij-it-a'-shun*) [*digitatus*, having digits]. A serration; a finger-like process, or a succession of such processes.

Digiten (*dij'-it-en*) [*digitus*, a finger]. Belonging to a digit in itself.

Digiti mortui (*dij'-it-i mor'-tu-i*) [L.]. Dead-fingers; a cold and white state of the fingers, seen in

some hysterical women, and in certain types of insanity. It is a manifestation of some vaso-motor disorder.

Digitigrade (*dij'-it-ig-rād*) [*digitus*, finger; *gradi*, to walk]. In biology, walking on the toes.

Digitonin (*dij-it-o-nin'*) [*digitalis*, pertaining to the fingers], $C_{31}H_{52}O_{17}$. A white, amorphous mass obtained from digitalis. It is easily soluble in water, slightly so in alcohol; insoluble in ether and chloroform.

Digitoxin (*dij-it-oks'-in*) [*digitalis*, pertaining to the fingers; *toxicum*, poison], $C_{21}H_{32}O_7$, or $C_{13}H_{52}O_{34}$. A highly poisonous alkaloid from *Digitalis purpurea*. Its effects are little understood. Its action is cumulative. Unof.

Digitule (*dig'-it-ūl*) [*digitulus*, a little digit]. A little finger, toe, or claw; a small organ or prominence resembling a digit.

Digitus (*dij'-it-us*) [L.]. A finger or toe.

Diglossia (*di-glos'-e-ah*) [*δίς*, double; *γλῶσσα*, tongue]. The condition of having a double tongue.

Digoneutic (*di-go-nu'-tik*) [*δίς*, two; *γόνος*, offspring]. In biology, producing two broods a year.

Digonoporous (*di-go-nop'-or-us*) [*δίς*, two; *γόνος*, offspring; *πόρος*, pore]. In biology, having the genital pores separate.

Digyn (*dī'-jin*) [*δίς*, two; *γυνή*, woman]. In biology, having two pistils.

Dihydrolutidin (*di-hi-dro-lu'-tid-in*) [*δίς*, double; *ὕδωρ*, water], $C_7H_{11}N$. One of the alkaloids of cod-liver oil. See *Morrhuolins*.

Dihysteria (*di-his-te'-re-ah*) [*δίς*, double; *ὑστέρα*, the womb]. The presence of a double womb.

Dilaceratio cataractæ (*di-las-er-a'-she-o kat-ar-ak'-te*) [L.]. See *Dilaceration*.

Dilaceration (*di-las-er-a'-shun*) [*dilaceratio*, a tearing apart]. A tearing apart; division of a membranous cataract by a tearing operation.

Dilatatio cordis (*di-lat-a'-she-o kor'-dis*) [L.]. Dilatation of the heart.

Dilatation (*di-lat-a'-shun*) [*dilatare*, to spread out]. 1. An increase in the size of a cavity or of the lumen of a vessel; expansion of an organ without hypertrophy. 2. Surgical stretching out of the walls of a hollow organ. **D. of Blood-vessel.** See *Telangiectasis*. **D. of Heart**, an increase in the size of one or more of the cavities of the heart, arising from a relaxation or weakening of the heart-muscle. It is associated with evidences of failure of circulation, resulting in congestion of the lungs and other viscera and tissues.

Dilatator (*di-lat-a'-tor*). See *Dilator*.

Dilator (*di-la'-tor*) [*dilatare*, to spread out]. An instrument for stretching or enlarging a cavity or opening; also, a dilating muscle. See *Muscles, Table of*. **D., Barnes'**, an instrument for dilatation of the os and cervix uteri, consisting of a rubber bag, which, when inserted, is distended with water. **D., Intra-uterine**, for dilating the uterine cavity by means of air or water. **D., Laryngeal**, an instrument with two or three blades that may be separated, for freeing or dilating the larynx.

Dilemma (*di-lem'-ah*) [*δίλημμα*; *δίς*, double; *λῆμμα*, proposition]. In experiments to determine the reaction-time of psychic processes, if the person is told which side is to be stimulated, or what colored disc is to be presented, etc., the time is shorter. Lack of such foreknowledge is called the dilemma.

Dill (*dil*). See *Anethum*.

Dilmaisch Disease. See *Disease*.

Diluent (*dil'-u-ent*) [*diluere*, to wash away]. An agent that dilutes the secretions of an organ, or that increases the fluidity of secretions.

Dilution (*di-lu'-shun*) [*diluere*, to wash away]. 1. The process of mixing with a neutral fluid or substance, in order to attenuate. 2. A diluted substance; the result of a diluting process.

Dilutionist (*di-lu'-shun-ist*) [*diluere*, to wash away]. One who advocates the dilution of medicines. **D., High**, a homeopathist who advocates the extreme attenuation of medicines.

Dimerosomatous (*dim-er-o-som'-at-us*) [*δίς*, two; *μέρος*, a part; *σῶμα*, body]. In biology, applied to animals, as spiders, that have the body divided into two regions, cephalo-thorax and abdomen.

Dimerous (*dim'-er-us*) [*δίς*, two; *μέρος*, a part]. In biology, bipartite.

Dimethyl Ketone. See *Acetone*.

Dimethylamin (*di-meth-il'-am-in*) [*δίς*, two; *methyl*, *amin*], NC_2H_7. A non-toxic ptomaïne found in putrefying gelatin, old decomposing yeast, certain varieties of fish-decomposition, etc.

Dimethylarsin (*di-meth-il-ar'-sin*). See *Cacodyl*.

Dimethylphenylene-green. See *Pigments, Conspectus of*.

Dimetria (*di-me'-tre-ah*) [*δίς*, double; *μήτρα*, the womb]. The condition of having a double womb.

Dimidiate (*di-mid'-e-āt*) [*di*, apart; *medius*, middle]. In biology, divided into halves, or represented by one half only; one-sided. Applied to an anther whose lobes are widely separated by a broad connective, or to animals that are male on one side and female on the other.

Diminished Breathing. See *Breath-sounds*.

Dimorphism (*di-morf'-izm*) [*δίς*, double; *μορφή*, form]. The property of assuming or of existing under two distinct forms.

Dimorphous (*di-morf'-us*) [*δίς*, double; *μορφή*, form]. In chemistry, having the quality of two forms of crystallization. In biology, existing in two forms, as individuals of the same species that differ in form, structure, size, or color.

Dimple (*dim'-pl*) [AS., *dynt*]. A slight depression.

Dingee (*din'-ge*). Synonym of *Dengue*.

Dingler's Green. See *Pigments, Conspectus of*.

Dinic, Dinical (*din'-ik*, or *din'-ik-al*) [*δῖνος*, whirl]. Pertaining to or useful in the relief of vertigo.

Dinitrobenzene (*di-ni-tro-ben'-zēn*) [*di*, two; *nitrum*, niter; *benzene*], $C_6H_4(NO_2)_2$. One of the ingredients of *Roburite*, *q.v.*

Dinner Pills. A name applied to various mild cathartic pills taken after meals. See *Lady Webster Pill*.

Dinomania (*din-o-ma'-ne-ah*) [*δῖνος*, a whirling dance; *μανία*, mania]. Dancing-mania. Choromania, *q.v.*

Dinus (*dī'-nus*) [*δῖνος*, whirl]. Vertigo or dizziness.

Diœcious (*di-e'-shus*). See *Diecious*.

Diogenes' Cup. See *Poculum diogenis*.

Diogmus (*di-og'-mus*) [*διωγμός*, a chase]. Palpitation of the heart.

Dionæa (*di-o-ne'-ah*) [*Διώνη*, Dione]. A genus of plants. **D. muscipula**, a plant of the Sundew family, growing in the Carolinas; Venus's fly-trap. It captures and feeds upon various insects, and is said to contain droserin and azerin, the same digestive ferments that occur in *Drosera*, *q.v.* Unof.

Dionym (*dī'-o-nim*) [*δίς*, two; *ὄνυμα*, name]. A name consisting of two words, as *medulla oblongata*; *corpus callosum*.

Diophthalmus (*di-off-thal'-mus*). See *Diprosopus*.

Diopsimeter (*di-op-sim'-et-er*) [*διοψις*, clear vision; *μέτρον*, a measure]. An instrument for exploration of the visual field.

Diopter (*di-op'-ter*). See *Dioptry*.

Dioptometer (*di-op-tom'-et-er*). Same as *Optometer*.

Dioptometry (*di-op-tom'-et-re*) [*διοπτήρ*, a watchman; *μέτρον*, a measure]. The measurement of the accommodative and refractive states of the eye.

Dioptral (*di-op'-tral*) [διοπτήρ, a watchman]. Pertaining to a dioptry; expressed in dioptrics.

Dioptre (*di-op'-ter*). See *Dioptry*.

Dioptric (*di-op'-trik*) [διά, through; ὄψεσθαι, to see]. 1. Pertaining to transmitted and refracted light. 2. A dioptry.

Dioptrics (*di-op'-triks*) [διά, through; ὄψεσθαι, to see]. A branch of optics treating of the refraction of light by transparent media, especially by the media of the eye.

Dioptry (*di-op'-tre*) [διά, through; ὄψεσθαι, to see]. The most commonly accepted unit of measurement for optic lenses. A positive (or *plus*) spherical (biconvex) lens of one dioptry has a focal distance of one meter; one of two dioptries, a focal distance of one-half a meter, etc. See *Lenses*, and *Spectacle-lenses*.

Diorthosis (*di-or'-tho-sis*) [διά, throughout; ὀρθόειν, to straighten]. The surgical correction of a deformity, or repair of an injury done to a limb.

Diorthotic (*di-or-thot'-ik*) [διά, throughout; ὀρθόειν, to straighten]. Relating to or effecting a diorthosis.

Dioscorea (*di-os-ko'-re-ah*) [*Dioscorides*, a famous Greek physician and botanist]. Wild Yam, Colic Root. The rhizome of *D. villosa*, a creeping-plant, indigenous to the eastern U. S. It is claimed to be expectorant, diaphoretic, and stimulant to the intestinal canal, in large doses causing neuralgic pains and erotic excitement. It is used successfully for bilious colic. **D., Fld. Ext.**, of standard strength, dose ℥xv–xxx. Unof.

Dioscorein (*di-os-ko'-re-in*) [*Dioscorides*, a Greek botanist]. A precipitate from a tincture of the root of *Dioscorea villosa*. It is antispasmodic, expectorant, and diaphoretic. Dose ½ to 4 grains. Unof.

Diosma (*di-oz'-mah*) [δίος, divine; ὀσμή, odor]. Buchu. See *Barosma*.

Diosmin (*di-oz'-min*) [δίος, divine; ὀσμή, odor]. An active principle obtained from various species of Buchu. It is an amorphous, bitter substance. Unof.

Diosmosis (*di-os-mo'-sis*). Same as *Osmosis*.

Diotic (*di-ot'-ik*) [δίς, two; οὖς, ὠτός, ear]. Binaural; pertaining to both ears.

Dioxid (*di-oks'-id*) [δίς, two; ὀξύς, sharp]. An oxid containing two atoms of oxygen and one of a metal.

Dipentene (*di-pen'-tēn*), $C_{10}H_{16}$. Cinene; a compound produced by heating pinene, camphor, and limonene to 250–300° C. It is present in the Russian and Swedish turpentine oil. It is a liquid with an agreeable lemon-like odor; sp. gr. 0.853; boils at 175–176° C.

Dipetalous (*di-pet'-al-us*) [δίς, two; πέταλον, a leaf]. In biology, two-petaled.

Diphenyl (*di-fen'-il*) [δίς, two; φοῖνιξ, purple-red], $C_{12}H_{10}$. A hydrocarbon resulting from the action of sodium upon the solution of brom-benzene in ether or benzene. It is also present in coal-tar. It crystallizes from alcohol and ether in large colorless leaflets, melting at 71° C., and boiling at 254° C. **D.-methane**, $C_{13}H_{12}$. Benzyl benzene; a hydrocarbon obtained from benzyl chlorid and benzene. It is easily soluble in alcohol and ether, possesses the odor of oranges, crystallizes in needles, melts at 26.5° C., and boils at 262° C.

Diphenylamin (*dif-en-il'-am-in*) [*diphenyl; amin*], $C_{12}H_{11}N$. A compound produced in the dry distillation of triphenyl rosanilin (Rosanilin blue); it is also prepared by heating anilin hydrochlorid and anilin to 240°. It is a pleasant-smelling, crystalline compound, melting at 54° and boiling at 310°. It is almost insoluble in water, but readily soluble in alcohol and ether. It serves in the preparation of various dyestuffs. **D. Orange.** See *Pigments, Conspectus of*.

Diphenylol (*di-fen'-il-ol*), $C_{12}H_{10}O$. Oxy-diphenyl; obtained by diazotizing amido-diphenyl sulphate. It sublimes in shining leaflets, melting at 165° C., and boiling at 305.8° C.

Diphosphatid (*di-fos'-fat-id*) [*di*, twice; *phosphorus*]. Any phosphatid containing the phosphorized radical twice (such as assurin). Diphosphatids exist in the brain-substance and in other animal tissues.

Diphtheria (*dif-*, or *dip-ther'-re-ah*) [διφθερα, a skin or membrane]. An acute, epidemic, infectious disease, generally regarded as of specific contagious origin, attacking especially the mucous membrane of the air-passages, and producing profound depression of the vital forces. It is characterized specifically by the formation of layers of whitish or yellowish membrane upon the mucous membrane of the pharynx, nose, and larynx, and upon any existing cutaneous abrasion. The duration of the disease is from one to two weeks, death, when it follows, occurring usually within a week. There are certain grave sequelæ that must be noted; chief among these are various forms of paralysis, especially of the palate. The prognosis is always grave. To stain the microörganisms of diphtheria see *Löffler's Method*, *Gram's Method*,—a fragment of false membrane being spread on a cover-glass, dried, and otherwise treated as a cover-glass preparation. **D., Antitoxin Treatment of**, the treatment of diphtheria with subcutaneous injections of the blood-serum of animals, and more especially the horse, rendered immune to diphtheria by previous and repeated inoculation with progressively increasing doses of the toxic products of the bacillus diphtheriæ. **D. circumscripta**, a peculiar form of diphtheria described by Barrett, in which a distinct circumscribed slough appears on one tonsil, and death often results. **D., Cutaneous**, a form involving abrasions of the skin. **D., Gangrenous**, a gangrene of the skin and mucous membrane sometimes accompanying diphtheria. **D., Laryngeal**, a form involving the larynx, threatening death by suffocation. **D., Malignant**, a very fatal form, beginning with rigor, vomiting, and attended with typhoid symptoms. **D., Nasal**, a form in which the diphtheritic membrane spreads to the nasal passages, and is accompanied by a fetid, brown discharge. **D., Secondary**, a term designating the occurrence of the disease in association with other acute affections, such as typhoid fever, scarlatina, etc. **D., Paraffin Treatment of**, the membrane is scraped or peeled off, and paraffin is applied to the raw surface every hour by means of a large camel's-hair brush.

Diphtheric (*dif-ther'-ik*) [διφθερα, a skin or membrane]. Pertaining to diphtheria. **D. Conjunctivitis**, a form of conjunctivitis attended with an infiltration of coagulable matter or inflammatory products. **D. Membrane**, the pellicle forming on the parts involved in the diphtheric process. **D. Paralysis**, a paralysis frequently affecting the muscles of the soft palate and larynx, after the healing of the lesions of these parts.

Diphtheritic (*dif-ther-it'-ik*) [διφθερα, a skin or membrane], Same as *Diphtheric*, *q.v.*

Diphtheritis (*dif-ther-i'-tis*). See *Diphtheria*.

Diphtheroid (*dif'-ther-oid*) [διφθερα, a skin or membrane]. Resembling diphtheria. **D. Throat.** Synonym of *Herpetic Tonsilitis*.

Diphthongia (*dif-thon'-je-ah*) [δίς, double; φθόγγος, a voice]. The production of a double tone of the voice by the incomplete unilateral paralysis of the recurrent nerve, or by some lesion of the vocal bands that causes each portion of the glottis to produce its own sound.

Diphycercal (*dif-i-ser'-kal*) [διφυής, double; κέρκος, tail]. In biology, applied to fishes that have the

caudal fin-rays arranged equally above and below the extremity of the spinal column.

Diphygenic (*dif-i-gen′-ik*) [*διφυής*, of a two-fold nature or form; *γεννᾶν*, to produce]. In biology, producing successively two sorts of embryos.

Diphyllous (*di-fil′-us*) [*δίς*, two; *φύλλον*, leaf]. In biology, composed of two leaves or sepals.

Diphyodont (*dif′-e-o-dont*) [*διφυής*, twofold; *ὀδούς*, tooth]. In biology, having two sets of teeth, as the milk-teeth and the permanent teeth.

Diplacusis (*dip-lak-u′-sis*) [*διπλόος*, double; *ἄκουσις*, hearing]. 1. The hearing of a tone as higher by one ear than by the other; called *D. binauralis*. 2. The hearing of two tones by one ear, when only one tone is produced; called *D. uniauralis*, or *D. monauricularis*.

Diplanetic (*di-plan-et′-ik*) [*δίς*, twice; *πλανητός*, wandering]. In biology, applied to organisms that are twice active with an intervening period of quiescence.

Diplastic (*di-plas′-tik*) [*δίς*, two; *πλάσσειν*, to form]. A term applied to cells having two substances in their constitution.

Diplegia (*di-ple′-je-ah*) [*δίς*, double; *πληγή*, stroke]. Coincident paralysis of two corresponding parts, as of the two arms. Double or bilateral hemiplegia.

Diplegic (*di-ple′-jik*) [*δίς*, double; *πληγή*, stroke]. Relating to or of the nature of diplegia.

Dipleuric (*di-plu′-rik*) [*δίς*, two; *πλευρά*, side]. In biology, bilaterally symmetric.

Diplococcus (*dip-lo-kok′-us*) [*διπλόος*, double; *κόκκος*, kernel]. A micrococcus whose spherules are joined two and two. See *Micrococcus* and *Bacteria*.

Diplocoria (*dip-lo-ko′-re-ah*) [*διπλόος*, double; *κόρη*, pupil]. That state in which the pupil is double.

Diploë (*dip′-lo-e*) [*διπλοή*, a fold]. The lacunar osseous tissue between the tables of the skull.

Diploëtic (*dip-lo-et′-ik*) [*διπλοή*, a fold]. Relating to the diploë; diploic.

Diplogenesis (*dip-lo-jen′-es-is*) [*διπλόος*, double; *γένεσις*, production]. The development of a double or twin monstrosity.

Diploic (*dip-lo′-ik*) [*διπλοή*, a fold]. Pertaining to the diploë.

Diploma (*dip-lo′-mah*) [*δίπλωμα*, a diploma]. A document granted by an authorized body of men, showing that the recipient has performed certain work under the prescribed conditions, and is entitled to a definite professional rank and title.

Diplomyelia (*dip-lo-mi-e′-le-ah*) [*διπλόος*, double; *μυελός*, marrow]. An apparent doubleness of the spinal cord, produced by a longitudinal fissure.

Diplophony (*dip-loff′-o-ne*) [*διπλόος*, double; *φωνή*, voice]. Same as *Diphthongia*.

Diplophonia (*dip-lo-fo′-ne-ah*) [*διπλόος*, double; *φωνή*, voice]. A rare symptom of laryngeal disease in which a double note is produced in the larynx. It is stated by Gottstein to occur in some cases of paralysis, or when a small tumor is situated so that on phonation it lies between the vocal bands. Cf. *Diphthongia*.

Diplopia (*dip-lo′-pe-ah*) [*διπλόος*, double; *ὄψις*, sight]. Double vision, one object being seen by the eye or eyes as two. **D., Binocular**, the most frequent, is due to a derangement of the muscular balance, the images of the object being thereby thrown upon non-identical points of the retinæ. **D., Crossed, or D., Heteronymous**, the result of divergent strabismus, the image of the right eye appearing upon the left side, and that of the left eye upon the right side. **D., Direct, or D., Homonymous**, the reverse of Crossed D., due either to paralysis of the external rectus or over-action of the internal rectus. **D., Physiologic**, that produced when an imperfect image is seen beyond or within the distance of the object accommodated for and transfixed by the visual axes. **D., Monocular**, or **D., Uniocular**, diplopia with a single eye, usually due to polycoria or other imperfections of the media.

Diplopic (*dip-lo′-pik*) [*διπλόος*, double; *ὄψις*, sight]. Relating to or affected with diplopia.

Diplopiometer (*dip-lo-pe-om′-et-er*) [*διπλόος*, double; *ὄψις*, sight; *μέτρον*, measure]. An instrument for measuring the degree of double vision.

Diploplacula (*dip-lo-plak′-u-lah*) [*διπλόος*, double; *πλάξ*, a tablet or plate]. In biology, a placula or discoid embryo composed of two layers of cells.

Diplostemonous (*dip-lo-stem′-o-nus*) [*διπλόος*, double; *στήμων*, a thread]. In biology, applied to a flower in which the stamens are double the number of sepals and petals.

Diploteratography (*dip-lo-ter-at-og′-ra-fe*) [*διπλόος*, double; *τέρας*, a monster; *γράφειν*, to write]. A term used by Fisher to denote the description and diagnosis of special forms of double monsters.

Diploteratology (*dip-lo-ter-at-ol′-o-je*) [*διπλόος*, double; *τέρας*, a monster; *λόγος*, science]. The science of twin monstrosities.

Dippel's Animal Oil. Oleum cornu cervi; a pyroligneous oil, containing ammonium carbonate, amins, and aromatic compounds. It is obtained in distilling bone and deer's horn. It is antispasmodic and stimulant. Unof.

Dipropargyl (*di-pro-par′-jil*), C_6H_8. One of the hydrocarbons; a mobile liquid, of penetrating odor, isomeric with benzene; it boils at 85° C.; its specific gravity at 18° C. equals 0.81. If allowed to stand or if heat be applied to it, dipropargyl polymerizes and becomes thick and resinous.

Diprosopia (*di-pro-so′-pe-ah*) [*δίς*, double; *πρόσωπον*, face]. In teratology, the duplication of the face.

Diprosopus (*di-pros′-o-pus*) [*δίς*, double; *πρόσωπον*, face]. A monster characterized by a duplicity of the face and head, frequently associated with hydrocephalus, acrania, defective development of the brain, and spina bifida. The diprosopi have been classified as follows: 1. *Diprosopus diophthalmus*. 2. *D. distornus*. "Fisher has described the first case of diprosopus diophthalmus, or distornus, reported in English." There was anencephalus, a broad duplex nose, two mouths, one oral cavity, two tongues. 3. *D. triophthalmus*. In this variety there are three eyes, often with other deformities of the face and head, such as acrania, hare-lip, and cleft-palate. 4. *D. tetrophthalmus*. In this variety the differentiation of the two faces is further advanced, but there are still but two ears. There are present four eyes. 5. *D. triotus*. In this variety there are usually four eyes and always three ears. 6. *D. tetrotus*. In this variety, the intermediate stage between diprosopus and dicephalus, there are four eyes and four ears, with considerable duplicity in the cervical region. This is an extremely rare condition in the human race.

Dipsesis (*dip-se′-sis*) [*δίψησις*, thirst]. Extreme thirst.

Dipsetic (*dip-set′-ik*) [*διψητικός*, causing thirst]. Causing or attended with thirst.

Dipsomania (*dip-so-ma′-ne-ah*) [*δίψα*, thirst; *μανία*, madness]. The uncontrollable desire for spirituous liquors. This is generally considered as a disease.

Dipsomaniac (*dip-so-ma′-ne-ak*) [*δίψα*, thirst; *μανία*, madness]. A person affected with dipsomania.

Dipsopathy (*dip-sop′-a-the*) [*δίψα*, thirst; *πάθος*, affection]. Any disease depending upon or related to alcoholic excess.

Dipsosis (*dip-so′-sis*). See *Dipsesis*.

Dipterocarpus (*dip-ter-o-kar'-pus*) [δίπτερος, two-winged; καρπός, fruit]. A genus of trees, mostly S. Asiatic. *D. alatus*, *D. costatus*, *D. hispidus*, *D. lævis*, and *D. zeylanicus* afford wood-oil or gurjun balsam.

Dipterous (*dip'-ter-us*) [δίς, two; πτερόν, wing]. In biology, two-winged, as a fly or a seed.

Dipteryx (*dip'-ter-iks*) [δίς, two; πτέρυξ, a wing]. A genus of leguminous trees. **D. odorata,** the tree that produces the Tonka Bean, *q. v.*.

Dipygus (*dip'-ig-us*) [δίς, double; πυγή, buttocks]. A monstrosity with more or less duplication of the pelvis and lower parts of the back.

Dirca (*der'-kah*) [Δίρκη, a fountain near Thebes]. A genus of apetalous shrubs. **D. palustris,** wicopy, leatherwood, or moosewood; a N. American thymelaceous shrub, with the properties of mezereon. It is sparingly used in domestic practice for dyspepsia and hemicrania. Unof.

Direct (*di-rekt'*) [*directus*, straight]. In a right or straight line. **D. Current.** See *Current.* **D., Image.** See *Image.* **D. Ophthalmoscopy.** See *Ophthalmoscopy.* **D. Vision,** the perception of an object the image of which falls upon the maculæ.

Direction (*di-rek'-shun*) [*dirigere*, to direct]. Relative position considered without regard to linear distance. **D.-spindle,** a fusiform body of the ovula, stretching from the germinal vesicle toward the surface.

Director (*di-rek'-tor*) [*dirigere*, to guide]. Anything that guides or directs. **D., Grooved,** an instrument grooved to guide the knife in surgical operations.

Dirigomotor (*dir-ig-o-mo'-tor*) [*dirigere*, to direct; *motor*, a mover]. Causing or involving motion and at the same time directing that motion to an end.

Dirt (*dert*) [ME., *drit*]. Excrement; feces. **D.-eating.** See *Chthonophagia* and *Geophagism.*

Dis [δίς, twice]. A prefix used to denote *two* or *double.* Also, a prefix to denote *apart from.*

Disaccharids (*di-sak'-ar-ids*). See *Carbohydrates.*

Disarthral (*dis-ar'-thral*) [δίς, twice; ἄρθρον, a joint]. Relating to muscles that pass over two joints, *e. g.*, the biceps.

Disarticulation (*dis-ar-tik-u-la'-shun*) [*dis*, apart; *articulum*, a joint]. Amputation in the contiguity of a part or at a joint.

Disassimilation (*dis-as-sim-il-a'-shun*) [*disassimilatio*]. In ophthalmology, the decomposition of visual substances in the retina.

Disassociation (*dis-as-o-se-a'-shun*) [*dis*, apart; *associare*, to unite with]. In chemistry, the decomposition of a compound by heat, the molecules reuniting on the removal of the heat.

Disc (*disk*) [*discus*, δίσκος, a quoit or round plate]. A circular, plate-like organ or body, especially the papilla of the eye, the entrance of the optic nerve into the eyeball. Its area corresponds with that of the *blind spot.* In dentistry, an instrument in the form of a disc, made of emery, cuttle-fish, bone, or sand-paper, for finishing fillings on surfaces between teeth. **D., Blood.** See *Blood-corpuscle.* **D.-carrier,** an instrument applied to the dental engine for the better application of corundum discs to the teeth. **D., Choked.** See *Papillitis.* **D., Corundum.** A device used in dentistry for separating teeth, by cutting away a portion; it is used with the dental engine, and applied by means of carriers, that admit of ready adjustment and change of the disc to any desired angle with the shaft containing it. **D., Cupping of.** See *Excavation of the Optic Nerve.* **D., Germinal,** the small disc of the blastodermic membrane, in which the first traces of the embryo are seen. **D., Hypermetropic,** hazy; simulating optic neuritis, observed in hypermetropia. **D., Proligerous.** See *Discus proligerus.*

Discharge (*dis-charj'*) [ME., *dischargen*, to unload]. Any evacuation; that which is evacuated. See also *Pigments, Colors and Dyestuffs.*

Discharger (*dis-char'-jer*). See *Electric.*

Discharging (*dis-charj'-ing*) [ME., *dischargen*, to unload]. Unloading, flowing out, as pus, etc. **D. Centers,** nerve-centers whence emanate influences which, according to the structures at the other ends of the nerves connected with them, may cause movements (muscles), secretion (glands), or contraction of vessels. **D. Lesion,** a brain-lesion that causes sudden discharges of nervous motor influence.

Disciferous (*dis-if'-er-us*) [*discus*, a disc; *ferre*, to bear]. In biology, disc-bearing.

Dicifloral (*dis'-if-lo-ral*) [*discus*, a disc; *flos* (*flor*), a flower]. In biology, applied to such flowers as have the receptacle expanded into a conspicuous disc.

Discissio cataractæ. See *Discission.*

Discission (*dis-ish'-un*) [*discissio; discindere*, to tear or cut apart]. 1. Bilateral incision, as of the cervix uteri. 2. An operation for cataract. See *Cataract.*

Discoblastula (*dis-ko-blas'-tu-lah*) [δίσκος, a disc; βλαστός, a germ]. In embryology, the blastula resulting from the development of a discomorula.

Discocarp (*dis'-ko-karp*) [δίσκος, a disc; καρπός, a fruit]. In biology, applied to those fruits in which the expanded receptacle encloses the seeds or achenia; also the same as *Apothecium.*

Discocytula (*dis-ko-sit'-u-lah*) [δίσκος, a disc; κύτος, a cell]. In embryology, the cytula resulting from the reformation of a nucleus in a discomonerula.

Discodactyl (*dis-ko-dak'-til*) [δίσκος, a disc; δάκτυλος, a finger]. In biology, applied to those animals (*e. g.*, toads and frogs) the ends of whose toes are provided with disc-like dilatations.

Discogastrula (*dis-ko-gas'-tru-lah*) [δίσκος, a disc; γαστήρ, belly; *gastrule*, a two-layered germ-cup]. The gastrula resulting from discoid egg-cleavage or discoid segmentation of the yolk.

Discoid or **Discoidal** (*dis'-koid, dis-koi'-dal*) [δίσκος, a disc]. Somewhat disc-shaped.

Discomonerula (*dis-ko-mo-ner'-u-lah*) [δίσκος, disc; μονήρης, solitary]. In embryology, a disc-like monerula of a meroblastic ovum.

Discomorula (*dis-ko-mor'-u-lah*) [δίσκος, a disc; *morula*, dim. of *morum*, a mulberry]. In embryology, a disc-like morula of a meroblastic ovum.

Discrete (*dis-krēt'*) [*discretus*, separated]. A term applied to exanthematous eruptions in which the pustules or papules remain distinct. The opposite of confluent.

Discus (*dis'-kus*) [δίσκος, a disc]. A disc. **D. proligerus,** the elevated cells of the *membrana granulosa* of the ovum, whereby the ovum is attached.

Discussion (*dis-kush'-un*) [*discussio*]. The scattering or driving away of a swelling, effusion, or tumor.

Discutient (*dis-ku'-shent*) [*discutere*, to shake apart]. 1. Capable of effecting resolution or discussion. 2. A medicine supposed to have the power of scattering or discussing a swelling.

Disdiaclast (*dis-di'-ak-last*) [δίς, double; διά, through; κλάειν, to break down]. Any one of the (supposed) small doubly-refractive elements in the contractile discs changing its position during muscular contraction and relaxation.

Disease (*dis-ez'*) [*dis* negative; *ease*, a state of rest]. A condition of the body marked by inharmonious action of one or more of the various organs, owing to abnormal condition or structural change. A *Table of Diseases* named after men who have described or have especially studied them is appended. **D., Acute,** a disease marked by rapid onset and course. **D., Bad,**

a synonym of syphilis. **D., Bleeders'**, synonym of *Hemophilia*. **D., Chronic**, one that is slow in its course. **D., Constitutional**, one in which a system of organs or the whole body is involved. **D., Coarse**, the macroscopic organic lesions in a disease. **D., Cretinoid.** See *Myxedema*. **D. of Ditmarsch**, a form of endemic syphilis that was seen in Ditmarsch from 1762–1842. **D., Fatigue.** See *Fatigue*. **D., Feigned**, the wilful simulation of disease or injury, through malice or for the purpose of attaining a desired end. **D., Focal**, a centrally localized disease of the nervous system as distinguished from peripherally localized affections. **D., Functional**, abnormality of function without discoverable organic lesion. **D., Grouse.** See *Grouse Disease*. **D., Idiopathic**, one that exists by itself without any connection with another disorder; one of which the cause is unknown. **D., Intercurrent**, a disease occurring during the progress of another of which it is independent. **D., Knife-grinder's**, chronic catarrhal bronchitis met with in knife-grinders. **D., Pearl-worker's**, a recurrent bone-inflammation, with enormous hypertrophy of the bone, seen in workers in pearl-dust. **D., Saint Gothard**, a synonym of *Anchylostomiasis* or *Dochmiasis*, *q. v.* **D., Septic**, one arising from the putrefactive fermentation of some foreign substance within the body. **D. of Siam.** Synonym of *Yellow Fever*. **D., Specific**, one caused by the introduction of a specific virus or poison within the body; also a synonym of *Syphilis*. **D., Subacute**, one more protracted and less active than an acute disease. **D., Subchronic**, one less protracted than a chronic disease, but more protracted than an acute disease. **D., Symptomatic**, a disease caused by or connected with another ailment of the body. The opposite of idiopathic disease. **D., Zymotic**, a term used to include the whole class of germ-diseases, or those arising from the introduction and multiplication of some living germ within the body.

Disengagement (*dis-en-gāj'-ment*) [Fr., *desengager*, to disengage]. Emergence from a confined state; especially the escape of the fetus from the vaginal canal.

Disfigurement (*dis-fig'-ūr-ment*) [*dis*, priv.; *figurare*, to fashion]. Blemish; deformity.

Disinfectant (*dis-in-fek'-tant*) [*dis*, neg.; *inficere*, to corrupt]. An agent that destroys disease-germs and noxious properties of fermentation and putrefaction.

Disinfection (*dis-in-fek'-shun*) [*dis*, neg.; *inficere*, to corrupt]. The destroying of disease-germs by means of heat, chemic substances, fumigation, or by fresh air. **D., Ransom's Apparatus for**, a method of disinfection by means of dry heat. **Washington Lyon's Apparatus**, a method in which steam is employed as the active agent.

Disinfectol (*dis-in-fek'-tol*) [*dis*, neg.; *inficere*, to corrupt]. An antiseptic substance analogous to creolin and lysol. It is used in the form of a two to five per cent. emulsion.

Disinfector (*dis-in-fek'-tor*) [*dis*, neg.; *inficere*, to corrupt]. An apparatus for the purpose of disinfection.

Disintegrate (*dis-in'-te-grāt*) [*dis*, apart; *integer*, the whole]. To break up or decompose.

Disinvagination (*dis-in-vaj-in-a'-shun*) [*dis*, neg.; *in*, in; *vagina*, a sheath]. The reduction or relief of an invagination.

Disjoint (*dis-joint'*) [*disjoindre*, to disjoin]. To disarticulate; to separate, as bones, from their natural relations.

Disk. See *Disc*.

Disklet (*disk'-let*) [*δισκος*, a disc]. A little disc.

Dislocation (*dis-lo-ka'-shun*) [*dis*, apart; *locare*, to place]. The luxation or abnormal displacement of one or more bones of a joint, or of any organ from its natural position. **D., Complete**, the bones entirely separated. **D., Compound**, the coverings of the joint ruptured. **D., Consecutive**, the displaced bone is not in the same position as when originally misplaced. **D. of Eyeball**, displacement of the eyeball outside of the lids. **D. of Lens**, the crystalline lens thrown out of its capsule, or misplaced so that it does not occupy its proper position behind the pupil. **D., Old**, inflammatory changes having ensued. **D., Partial, or Incomplete**, the articulating surfaces remaining in partial contact; called, also, *Subluxation*. **D., Primitive**, the bones remaining as originally displaced. **D., Recent**, no inflammatory changes having ensued. **D., Simple**, without laceration of the surrounding parts. **Diastasis**, dislocation of an amphiarthrotic joint; also a separation, as of the parts of a muscle, or of the epiphysis of a bone from the diaphysis.

Disorder (*dis-or'-der*). See *Disease*.

Disorganization (*dis-or-gan-iz-a'-shun*) [*dis*, priv.; *organizare*, to organize]. Destruction or loss of organic structure; complete pathologic or traumatic change in the minute structure of any tissue.

Disparate (*dis'-par-āt*) [*dispar*, unequal]. Not alike; unequal or unmated. **D. Points**, non-identical points of the two retinæ. Diplopia is produced when the images of a single object fall upon such points.

Dispareunia (*dis-par-oo'-ne-ah*). See *Dyspareunia*.

Dispensary (*dis-pens'-ar-e*) [*dispensare*, to distribute]. A charitable institution where medical treatment is given the poor and medicines are dispensed on prescription.

Dispensatory (*dis-pens'-at-or-e*) [*dispensatorium*, an apothecary's diary]. A treatise on the materia medica, and the composition, effects, and preparation of medicines.

Dispensing (*dis-pens'-ing*) [*dispensare*, to weigh out]. The measuring, weighing, and issuing of the drugs ordered in a prescription.

Dispersion (*dis-per'-shun*) [*dispersio*; *dispersus*, scattered]. The resolution, discussion, or scattering of an inflammation or other morbid condition. In physics, the separation of a ray of white light into colored rays; also, any scattering of light, as that which has passed through ground glass.

Dispirem (*di-spi'-rem*) [*dis*, two; *spira*, a spiral]. In embryology, the two skeins of a dividing nucleus formed from the nuclear loops and giving rise to the daughter nuclei. It is the seventh stage of *Karyokinesis*, *q. v.*

Displacement (*dis-plās'-ment*) [Fr., *desplacer*, to displace]. A putting out of place; applied to various organs, as the uterus, heart, etc. **D. of Mortality.** See *Carrol's Doctrine*.

Dispora caucasica (*dis'-por-ah kaw-kas'-ik-ah*). See *Bacillus caucasicus*, under *Bacteria*, *Synonymatic Table of*.

Disposition (*dis-po-sish'-un*) [*dispositio*, an arranging]. Tendency, either physical or mental, to certain diseases.

Dissection (*dis-ek'-shun*) [*dissectio*, *dissecare*, to cut up]. The disassociation and exposition by means of incisions, cutting apart, etc., of the organs of the body, for purposes of scientific study. **Dissecting Aneurysm.** See *Aneurysm*. **Dissecting Wound**, injury during dissection, with consequent introduction of septic material. It may become constitutional and result in septicemia, or it may take the form of warts, *Verruca necrogenica*. The sore resulting directly from the prick or abrasion is called *Post-mortem pustule*.

Disseminated (*dis-em'-in-a-ted*) [*disseminare*, to scatter seed]. Scattered; spread over a large area. **D. Sclerosis.** See *Insular Sclerosis*.

TABLE OF EPONYMIC DISEASES.

NAME.	PART AFFECTED.	SYMPTOMS.	PATHOLOGY.	ETIOLOGY.	SYNONYMS.
Addison's disease. See *Addison's disease*.	Supra-renal capsules and some abdominal sympathetic nerves and ganglia.	Brown pigmentation of the skin, progressive anemia, asthenia, death from exhaustion.	Tuberculous infiltration and fibrocaseous degeneration of the capsules.	Tubercle-bacillus.	Melasma supra-renale; dermato-melasma supra-renale; cutis ærea; bronzed-skin disease; copper-skin.
Addison's keloid or cheloid.	Skin of breast, face, and neck.	Contractions of the skin and fascia; scar-like growths, of rounded, ovoid, or irregular shape; pale-yellowish or brownish in color; fixation of joints from skin-induration.	Formation of scar-tissue.	Traumatism.	Morphea; circumscribed scleroderma; scleroderma localis.
Alibert's keloid.	Skin of sternum, shoulders and neck.	Fibrous outgrowths of the skin.	Formation of connective tissue.	Obscure; traumatism.	Cheloid; kelis; fungoid mycosis; true keloid.
Aran-Duchenne's disease.	Spinal cord.	Progressive muscular atrophy, spastic condition, tremors.	Degeneration of the motor nuclei in the pyramidal tracts of the cord and medulla; fatty and sclerotic changes in the muscles.	Unknown.	Cruveilhier's palsy; progressive muscular atrophy; Cruveilhier's atrophy; Duchenne's disease.
Balser's fatty necrosis.	Pancreas, omentum, mesentery.	Indefinite; those of acute pancreatitis.	Areas of opaque, white, fatty, and calcareous degeneration in the organs affected.	Obscure.	
Barton's fracture.	Radius (lower extremity).	Silver-fork deformity.	A chipping off of the articular surface.	Traumatism.	
Basedow's disease.	See *Graves' disease*.				
Bazin's disease.	Mucous membrane of cheek.	Psoriatic eruption on the buccal mucous membrane.	That of psoriasis.	Obscure.	Buccal psoriasis.
Béclard's hernia.	Intestine.	Those of hernia.	Femoral hernia, through the saphenous opening.	Strain; traumatism.	
Bednar's aphthæ.	Mucous membrane of hard palate of the new-born.	Progressive marasmus and death.	Specific ulcerative stomatitis of the hard palate.	Microbic.	Ulcerative stomatitis of the new-born; plaques pterygoïdiennes; aphthæ of the palate; athrepsia.
Begbie's disease.	See *Graves' disease* and	*Bergeron's disease*.			
Beigel's disease.	See *Bergeron's disease*.				
Bell's disease or mania.	Brain.	Acute delirium, wild hallucinations, insomnia, slight fever, dry tongue, rapid running pulse.	No lesions found.	Obscure.	Acute delirium; acute periencephalitis.
Bell's palsy or paralysis.	Facial nerve.	Immobility of the affected side of the face; impairment of hearing; herpes; occasional neuralgia.	Lesion of the facial nerve; a neuritis.	Tumors; abscess; chronic inflammation; cold.	Facial paralysis.
Bérard's aneurysm. See *Aneurysm*.	Artery.	Those of aneurysm.	That of aneurysm.	Traumatism; strain; atheroma.	
Bergeron's disease.	Any group of muscles, as of abdomen, head, etc.	Localized rhythmic movements.	None.	Hysteria.	Localized rhythmic chorea; hysterical chorea; Begbie's disease.
Blainville's ear.	Ear.	Asymmetry of the ears.	Deformity of the ears.	Congenital.	
Bostock's catarrh.	A synonym of *Hay-fever*,	*q.v.*			

Bouillaud's disease.	A synonym of *Endocarditis, q. v.*				
Boyer's cyst.	Subhyoid bursa.	Painless and gradual enlargement of the bursa.		Irritation.	
Bright's disease. See *Bright's Disease.*	Kidney.	Edema, anemia, albuminuria, tube-casts.	Inflammation of the renal tissues.	Cold; specific poisons; lead-poisoning; repeated congestion.	Nephritis; kidney-disease.
Briquet's ataxia.	Nervous system.	Ataxia; local anesthesia; hysterical manifestations.	None.	Hysteria.	Hysterical ataxia.
Broca's aphasia.	Brain.	Loss of speech from incoördination of the muscles; agraphia; right-sided hemiplegia.	Lesion of third left frontal convolution of the brain.	Various diseased conditions of the brain.	Motor aphasia; ataxic aphasia.
Brodie's abscess.	Head of the tibia.	Those of bone-abscess.	Ulceration of bone-tissue.	Tubercle-bacillus; traumatism.	
Brodie's disease or knee.	Knee and other joints.	Those of synovitis.	Pulpy degeneration of the synovial membrane of a joint, especially of the knee.		
Brown-Séquard's disease.	Spinal cord.	Paralysis of a limb or side of the body, corresponding to the lesion in the cord; anesthesia on the opposite side; increased reflexes on side of lesion.		Tumors or traumatism of one side of the cord at some level.	Brown-Séquard's paralysis.
Budd's jaundice.	A synonym of *Acute Yellow Atrophy of the liver.* See *Icterus gravis.*				Icterus typhoides (of Lebert).
Buhl's disease.	All the organs of the new-born.	Icterus, cyanosis, diarrhea, vomiting.	Acute fatty degeneration of all the organs.	Septic infection.	Icterus of the new-born.
Carswell's grapes.	Lungs.	Those of pulmonary tuberculosis.	Racemose distribution of tuberculous infiltration about the smaller bronchial tubes.	Tubercle-bacillus.	
Cazenave's lupus.	Skin of face and head, usually; occasionally that of extremities, rarely on trunk.	Characteristic eruption on skin. See *Lupus.*	Inflammation of cutis with cell-infiltration.	Unknown; preëxisting congestion of skin.	Lupus erythematodes; lupus erythematosus.
Chabert's disease.	A synonym of *Symptomatic Anthrax or Black-leg, q. v.*				
Charcot's disease (*sclérose en plaques*).	Brain and spinal cord.	Spastic paraplegia with great increase in the reflexes; volitional tremor; scanning speech; nystagmus; mental debility; vertigo; attacks of coma.	Areas of grayish-red degeneration in the white matter of the cord and brain; excess of fibrous tissue.	Obscure.	Disseminated sclerosis; cerebro-spinal sclerosis; insular sclerosis; multilocular sclerosis; multiple sclerosis.
Charcot's disease.	Pyramidal tracts of medulla and spinal cord.	Progressive emaciation, and wasting of the muscles; spastic condition of the muscles; increased reflexes; tremor; failure of memory; dementia.	Atrophy of the anterior horns and sclerosis of the antero-lateral columns.	Heredity; cold; wet; exposure; worry.	Amyotrophic lateral sclerosis; primary lateral sclerosis; primary spastic paraplegia; lateral sclerosis; chronic anterior poliomyelitis; progressive muscular atrophy.
Charcot's joint.	Any joint.	Swelling; but slight local heat and pain; soreness on motion.	Chronic inflammation of the synovial membrane, later involving the bony substance.	Various diseases of the spinal cord (Pott's disease; tumors of the gray substance; locomotor ataxia; syringomyelia); traumatism.	Spinal arthropathy.

NAME.	PART AFFECTED.	SYMPTOMS.	PATHOLOGY.	ETIOLOGY.	SYNONYMS.
Cloquet's hernia.	Intestines.	Those of hernia.	Femoral hernia resting on the pectineus muscle, the tumor having turned within and behind the femoral vessels.	Strain; traumatism.	Pectineal crural hernia.
Colles' fracture.	Radius (lower third).	Silver-fork deformity.	A splitting from ¼-inch to 1½-inches above the articulation.	Traumatism.	
Concato's disease.	Serous membranes, especially the pleura.	Vary with the membranes involved.	Progressive and malignant inflammation of various serous membranes.	Obscure.	Polyorrhymenitis; polyorrhomenitis.
Cooper's (Astley) hernia.	Intestines.	Those of hernia.	Congestion; strangulation of the bowel.	Lodgment of the small intestine in the duodeno-jejunal fossa.	Mesenteric hernia; retroperitoneal hernia.
Cooper's irritable breast.	Synonym of *Mastodynia*,	*q. v.*			
Cooper's irritable testicle.	Synonym of *Orchialgia*,	*q. v.*			
Corrigan's disease.	A synonym of *Aortic In-*	*competency*, *q. v.*			
Cruveilhier's atrophy or palsy.	See *Aran-Duchenne's Disease.*				
Cruveilhier's disease.	Stomach.	Pain; hematemesis; vomiting; emaciation; peritonitis (occasionally).	Ulceration of the gastric wall.	Improper diet and hygiene.	Simple ulcer of the stomach.
Curling's ulcer.	Duodenum.		Ulceration of the bowel-wall.	Burns of the surface.	Duodenal ulcer.
DaCosta's disease.	Gastro-intestinal tract; heart, brain.	Vary with the part affected, and are preceded by a rapid disappearance of the local signs.	Vary with the localization of the disease.	Gouty diathesis.	Suppressed gout; retrocedent gout; lithemia
Darier's disease.	Skin of body.	Characteristic lesions of the skin. See *Darier.*	Inflammation of the skin-layers, with cell-infiltration.	Obscure.	Psorospermose folliculaire végétante; keratosis follicularis; ichthyosis sebacea cornea.
Darwin's ear.	Ear.	Absence of the upper part of the helix, and formation of cartilaginous nodules in the helix.	Malformation.	Congenital.	
Devergie's disease.	See *Gibert's pityriasis.*				
Donders' glaucoma.	Eye.	Those of glaucoma.	Atrophy of the optic papilla and hardening of the eyeball.	Obscure.	Simple atrophic glaucoma.
Dressler's disease.	Blood.	Recurring periodic attacks of hematuria.	Presence of coloring-matter of the blood in the urine.	Malarial.	Paroxysmal hemoglobinuria; intermittent hemoglobinuria; periodic hemoglobinuria; Harley's disease.
Dubini's disease.	Nervous system.	Progressive palsy and wasting, with sudden, shock-like movements.	Obscure.	Obscure.	Electric chorea.
Duchenne's disease.	See *Aran-Duchenne's Dis-*	*ease.*			
Duchenne's disease.	A synonym of *Bulbar Par-*	*alysis*, *q.v.*, and of *Progressive Loco-*	*motor ataxia.*		

Duchenne's paralysis.	A synonym of *Pseudo-hypertrophic paralysis.*				
Duhring's disease, or impetigo.	Skin.	Protean eruption; itching and burning; exhaustion.	Undetermined.	Obscure.	Dermatitis herpetiformis; pemphigus pruriginosus; hydroa herpetiforme; herpes gestationis; herpes circinatus bullosus; pemphigus circinatus; pemphigus malignus; pemphigus hystericus.
Dupuytren's contraction.	Palmar fascia and contiguous structures.	Contraction of one or more fingers.	Cicatricial contraction.	Burns and injuries.	
Dupuytren's hydrocele.	Tunica vaginalis testis.	Those of hydrocele.	Same as hydrocele.	Same as hydrocele.	Biocular hydrocele.
Eichhorst's neuritis.	Nerves.	Those of neuritis.	Obscure.	Obscure.	Neuritis fasciens.
Eichstedt's disease.	Skin.	Characteristic lesion. See *Tinea versicolor.* Slight or no subjective symptoms.	Infiltration of cuticle with the parasite and its spores.	A vegetable parasite; microsporon furfur.	Pityriasis versicolor; chromophytosis; tinea versicolor.
Erb's disease.	Spinal cord.	Progressive wasting of various groups of muscles in upper arm and shoulder, and gluteal and thigh muscles; later, hypertrophy.	Fatty and sclerotic degeneration of affected muscles; degeneration of motor nuclei in cord.	Largely hereditary; disease of puberty.	Juvenile muscular atrophy; primary muscular dystrophy; idiopathic muscular atrophy.
Erb's palsy.	Pyramidal tracts of cord.	Loss of power; spasm of muscles of lower extremities; spastic gait; cross-legged progression; increased reflexes.	Obscure; degeneration of pyramidal tracts.	Syphilis, frequently.	Spastic paraplegia; spasmodic tabes dorsalis; lateral sclerosis.
Erb-Charcot's disease.					Spasmodic locomotor ataxia.
Erichsen's disease.	Cerebro-spinal axis.	Those of neurasthenia and hysteria.		Concussion of central nervous system from railroad shock.	Railway spine, *q. v.*; railway brain; traumatic hysteria.
Fauchard's disease.	Dental alveoli.	Pain; suppuration; swelling.	Slow and progressive destruction of alveoli; death of teeth.	Decayed teeth, etc.	Alveolo-dental periostitis; pyorrhœa alveolaris; alveolar abscess; Riggs' disease.
Flajani's disease.	Synonym of *Exophthalmic goitre.*				
Fothergill's disease, or faceache.	Facial nerve.	Severe pain in face; tender points of Valleix; salivation; herpes; lachrymation.	Obscure.		Facial neuralgia; tic douloureux; trifacial neuralgia; prosopalgia; trigeminal neuralgia.
Fothergill's sore-throat.	Throat.	Pain; swelling; associated symptoms of scarlet fever.	Intense inflammation; membranous exudate.	Specific virus of scarlatina.	Scarlatina anginosa; anginoid scarlet fever.
Friedreich's ataxia or disease.	Spinal cord.	Peculiar swaying, irregular gait; also similar movements of head and arms; reflexes frequently lost; nystagmus; talipes equinus; lateral curvature of spine; scanning speech.	Sclerosis of posterior and lateral columns of cord.	Heredity.	Hereditary ataxia; family ataxia; postero-lateral sclerosis; hereditary ataxic paraplegia.
Friedreich's disease.	Synonym of *Paramyoclonus multiplex, q. v.*				
Gerlier's disease.	Nervous system.	Sudden paroxysms of ptosis; rotary vertigo; muscular paresis; cervico-occipital pain.	Obscure.	Obscure.	Paralyzing vertigo.
Gibbon's hydrocele.	Scrotum and bowel.	Those of hydrocele and hernia.	Hydrocele with hernia.	Those of hernia; irritation of tunica vaginalis testis.	
Gibert's pityriasis.	Skin.	Characteristic eruption; free desquamation; chronic course; itching; progresssive emaciation; exhaustion; death.	A dermatitis.	Uncertain.	Pityriasis ruber; dermatitis exfoliativa; pityriasis ruber aigu; Devergie's disease; Hebra's pityriasis.

TABLE OF EPONYMIC DISEASES.—*Continued.*

NAME.	PART AFFECTED.	SYMPTOMS.	PATHOLOGY.	ETIOLOGY.	SYNONYMS.
Glénard's disease.	Abdominal viscera.	Those of gastro-intestinal disturbance with neurasthenia; prolapse of abdominal organs; looseness of mesenteric and peritoneal attachments.	Occurs in pendulous abdomen, etc.	Relaxation and neurasthenia.	Enteroptosis; splanchnoptosis.
Glissonian cirrhosis.	Liver.	Those of cirrhosis.	Liver much reduced in size, covered by a firm grayish membrane; cirrhotic changes in parenchyma.	Alcoholism; cyanotic induration.	Perihepatitis.
Gourand's (or Goyrand's) disease.	The bowel.	Those of hernia.	That of hernia.	Usual causes of hernia.	Inguinal intestinal hernia.
Graves' disease. See *Graves' Disease.*	Thyroid gland, eyes, heart.	Cardiac palpitation; goiter; exophthalmos; Graefe's lid-sign; Stellwag's sign.	Unknown.	Obscure, but most frequent in neurotic persons.	Exophthalmic goiter; Basedow's disease; Parry's disease; Begbie's disease; March's disease; Parson's disease; Stokes' disease.
Gubler's tumor.	Wrist.	Prominence on back of wrist in wrist-drop.		Lead-poisoning.	
Hall's (Marshall) disease.	Brain.	Occasional convulsions; semi-comatose condition; irregular pulse; contracted pupils; flaccid, depressed fontanels; retracted head; Cheyne-Stokes breathing.		Early age; prolonged illness; premature weaning.	Hydrocephaloid disease; spurious hydrocephalus; hydrencephaloid disease.
Halstern's disease.	Entire body.	Those of syphilis.	That of syphilis	Syphilitic virus	Endemic syphilis.
Hammond's disease.	Brain and cord.	Constant rhythmic movements of fingers and toes.	Obscure.	Lesion of the brain and cord.	Athetosis; post-hemiplegic chorea.
Hanot's disease.	Liver.	Chronic jaundice; absence of ascites; enlargement of spleen.	Increase of intralobular and interlobular connective tissue; liver large, smooth, firm.	That of cirrhosis.	Hypertrophic cirrhosis of liver; biliary cirrhosis.
Harley's disease.	See *Dressler's Disease.*				
Heberden's asthma.	Synonym of *Angina pectoris, q. v.*				
Heberden's disease or rheumatism.	Smaller articulations, as those of the fingers.	Those of chronic rheumatism, with formation of nodosities.	Destruction of the cartilages; roughening of articular surfaces; thickening of the ligaments.	That of rheumatism.	Osteo-arthritis; rheumatic arthritis; digitorum nodi.
Hebra's erythema.	Skin.	Characteristic eruption; slight constitutional manifestations.	Inflammatory effusion of serum and leukocytes.	Early adult age; spring and autumn; irritating ingesta; specific bacilli (?).	Polymorphous erythema; erythema multiforme.
Hebra's pityriasis.	See *Gibert's pityriasis.*				
Hebra's prurigo.	Skin.	Characteristic eruption; limbs feel like coarse brown paper; incurable; persists through life.	Unknown—probably a neurosis.	Poor food; poor hygiene; early age.	Prurigo ferox; congenital prurigo.
Henoch's purpura.	Skin.	Purpuric eruption, associated with peculiar intestinal symptoms.		Obscure.	

Hesselbach's hernia.	Intestines.	Those of hernia. The hernia presents a lobulated appearance.	There is a diverticulum of the hernia through the cribriform fascia.	That of hernia generally.	
Heubner's disease.	Cerebral arteries.	Pain in the head; giddiness; drowsiness; numbness and weakness of one side of body; glycosuria; albuminuria; later, hemiplegia; aphasia; coma, or delirium; death.	Grayish or whitish thickenings of the coats of the vessels; complete or incomplete occlusion of the lumen; growth of fibrous tissue; infiltration of round cells.	Syphilis.	
Hodgkin's disease. See *Hodgkin's Disease.*	Lymph-glands; blood.	Enlargement of the lymphatic glands; marked and progressive anemia; edema of the face; pressure-symptoms; hemorrhages; purpura; dyspnea; hemic murmurs; palpitation; fever; exhaustion; death.	Hyperplasia of lymphoid structures of the body; enlargement of spleen.	Unknown.	Pseudo-leukocythemia; lymphadenoma; lymphadenosis; pseudo-leukemia; general lymphadenoma; malignant lymphoma; lympho-sarcoma; anæmia lymphatica; adenoid disease; adenia; chronic recurrent fever (Ebstein).
Hodgson's aneurysm, or disease.	Aorta, first part.	Those of aneurysm, frequently with hypertrophy and dilatation of the heart.	Inflammatory and sub-inflammatory changes with extreme degeneration.	Old age.	Hodgson's dilatation.
Huguier's disease.	Uterus.	Those of fibroid tumor of the uterus; growth; pressure-symptoms; hemorrhage, etc.	Development of fibrous tissue.		Fibro-myoma of the uterus.
Huntingdon's chorea.	Brain.	Irregular movements; disturbance of speech; gradual dementia.	No characteristic lesions; atrophy of the convolutions; chronic meningo-encephalitis.	Advanced age; heredity; psychic troubles.	Hereditary chorea; chronic chorea.
Inman's myalgia	Muscular system.	Muscular pain of any origin.	None.		Muscular rheumatism.
Jacksonian epilepsy.	Brain-cortex.	Spasm of a single group of muscles in the face, arm, or leg, or other region; no loss of consciousness; usually there are sensory phenomena.	Lesion of the motor area of the brain.	Hemorrhage; abscess; uremia; progressive paralysis of the insane; hemiplegia; syphilitic tumors of brain.	Cortical epilepsy; symptomatic epilepsy; focal epilepsy; partial epilepsy; epileptiform seizures.
Jacob's ulcer.	Eyelid.	Slow ulceration at inner end of lower lid.	Epithelial cancer-formation; edges indurated and elevated; no lymphatic involvement.	Old age.	Rodent ulcer of the eyelid; lupus of the eyelid; carcinoma of the eyelid.
v. Jaksch's disease.	A synonym of *Pseudo-leukocythemia occurring in infants.* See		*Hodgkin's Disease.*		Infantile pseudo-leukemic anemia; anæmia pseudo-leukemica infantilis.
Kaposi's disease.	Skin.	Characteristic eruption, followed by atrophy of the skin and formation of epithelial carcinomata; emaciation; exhaustion; death.	Atrophic degeneration of the skin.	Early age—under puberty; congenital predisposition; exposure to the sun.	Xeroderma pigmentosum; parchment skin; atrophoderma pigmentosum; angioma pigmentosum atrophicum; dermatosis kaposi; liodermia essentialis cum melanosi et telangiectasia; melanosis lenticularis progressiva.
Kopp's asthma.	See *Millar's Asthma.*				
Krishaber's disease.	Nervous system.	Hyperesthesia; illusions of sense; vertigo; tachycardia.	Neurosis.	Obscure.	Cerebro-cardiac neuropathy.
Krönlein's hernia.	Intestines.	Those of hernia.	A variety of inguinal hernia.	That of hernia.	Inguino-preperitoneal hernia.
Kussmaul's coma.	A synonym of *Diabetic*	*Coma.* See *Diabetes* and *Coma.*			

TABLE OF EPONYMIC DISEASES.—*Continued.*

NAME.	PART AFFECTED.	SYMPTOMS.	PATHOLOGY.	ETIOLOGY.	SYNONYMS.
Kussmaul's disease.	Spinal cord.	Sudden onset; rapid muscular wasting; reaction of degeneration; fever.	Acute hemorrhagic myelitis of the anterior horns, with degeneration and destruction of the large ganglion-cells.	Unknown.	Acute atrophic spinal paralysis; polio-myelitis anterior.
Laennec's atrophic cirrhosis.	Liver.	Digestive derangement; diminution in size of liver; tendency to hemorrhage; ascites; jaundice.	Great reduction in the size and weight of the liver, with deformity; surface granular; substance composed of greenish-yellow islands surrounded by grayish-white connective tissue.	Alcoholism; lead-poisoning; malaria; gout.	Chronic interstitial hepatitis; atrophic cirrhosis; portal cirrhosis.
Landouzy-Déjérine type of muscular atrophy.	Spinal cord.	Wasting of muscles of face and those of the scapulo-humeral groups.	Degeneration of the muscles involved, which undergo a fatty and sclerotic change; degeneration of motor nuclei in spinal cord.	Heredity; age twenty to thirty years.	Facio-scapulo-humeral type of idiopathic muscular atrophy.
Landry's paralysis.	Spinal cord.	Loss of motor power in the lower extremities gradually extending upward; exhaustion; loss of reflexes; sensation usually intact; death usually.	Degenerative changes in the anterior roots of the spinal nerves.	Unknown; most common in males between 20 and 30.	Landry's disease; acute ascending paralysis.
Laugier's hernia.	Intestines.	Those of hernia.	A femoral hernia perforating Gimbernat's ligament.	That of hernia.	
Leber's disease.	Eye.	Those of optic neuritis.	Malformation of optic nerve with atrophy, and inflammatory changes.	Heredity—affects the males of a family.	Hereditary optic atrophy.
Legal's disease.	Meningo-tympanic region.	Headache.	Inflammatory changes.	Obscure.	
Leyden's neuritis.	Nerves.	Those of neuritis.	Destruction of the nerve-fibers; formation of fibrous connective tissue, with deposit of fat.	That of neuritis.	Lipomatous neuritis.
Leyden's type of muscular atrophy.	Spinal cord.	Wasting of muscles of lower extremities and back; hypertrophy of the calves.	Fatty and sclerotic degeneration of the affected muscles; degeneration of the motor nuclei of the spinal cord.	Heredity.	Hereditary muscular atrophy.
Little's disease.	Brain and cord.	Stiffness of the legs; talipes equinus with characteristic attitude; cross-legged progression; lead-pipe contraction; increased reflexes; sensation normal; symptoms of cerebral defects—idiocy, imbecility, nystagmus.	Lesion of brain-cortex; meningeal hemorrhage; arrest of development of pyramidal tracts.	Difficult labor or premature delivery.	Congenital muscular rigidity; spasmodic tabes of children; spastic paraplegia of infants; paraplegia cerebralis spastica.
Littre's hernia.	Intestines.	Those of hernia.	Hernia of an intestinal diverticulum.	That of hernia.	
Littre's hernia.	Synonym of *Richter's*	*Hernia.*			
Lobstein's cancer.	Abdomen.	Large abdominal tumor, centrally situated; immovable.	Sarcomatous tissue.	Unknown.	Retroperitoneal sarcoma.
Louis' angina.	Synonym of *Ludwig's*	*Angina.*			
Loy's disease.	Entire body of horse.	Characteristic pustular eruption.		Specific virus.	Horse-pox; variola equina.

Ludwig's angina.	Neck.	Swelling, especially in the submaxillary region; intense pain.	Cellulitis of neck.	Usually follows specific fevers, especially diphtheria and scarlet fever; may be idiopathic, or result from trauma.	Louis' angina; cellulitis of the neck.
Malassez' disease.	Testicle.	Tumor of the gland.	Cyst-formation.		Cyst of the testicle.
March's disease.	See *Graves' Disease.*				
Marie's disease. See *Acromegaly.*	Bones of face and extremities.	Gradual hypertrophy of the hands, feet, and face; changes in the size of the thyroid gland; headache.	Hypertrophy of the bones; enormous enlargement of the pituitary body.	Unknown; heredity probably.	Acromegaly; acromegalia; akromegaly.
Marjolin's warty ulcer.	Skin.	Wart-like parallel growths; progress slow; glandular enlargement.	Malignant degeneration of a cicatrix or old ulcer.	Old age; heredity.	
McLeod's capsular rheumatism.	Joints.	Those of rheumatism.	Effusion into the synovial capsules and into the synovial sheaths and bursæ around the affected joints.	That of rheumatism.	
Ménière's disease.	Semicircular canals.	Vertigo; nausea; vomiting; deafness; rotatory movements; sudden and temporary apoplectic symptoms; tinnitus aurium; ocular symptoms—nystagmus, diplopia.	Inflammatory processes in the canals.	Uncertain.	Aural vertigo; auditory vertigo; labyrinthine vertigo.
Millar's asthma.	Nervous system; reflexly the larynx.	Sudden paroxysms of suffocation, with short, sonorous respiration; high mortality.	Neurosis.	Rachitis; early age.	Thymic asthma; spasm of the glottis; laryngismus stridulus; laryngospasm; laryngic suffocation; spasmodic croup; internal convulsions; spasmodic laryngitis; "passion fits;" child-crowing; Kopp's asthma.
Morand's disease.	Extremities.	Paresis of the extremities.	Disease of the nervous system.	Obscure.	
Morand's foot.	Foot.	The presence of eight toes on the foot.	Deformity of foot.	Congenital	
Morel's ear.	Ear.	Flattening of the folds of the ear; thinness of the rim; increase in the size of the ear.	Abnormality of the helix, anti-helix, scaphoid fossa, and crura furcata.	Congenital.	Flat ear.
Morton's foot or Morton's toe.	Metatarso-phalangeal joint of the fourth toe.	Pain in the foot.	Local neuritis.	Bruising of one or more branches of the external plantar nerve.	Morton's affection; Morton's toe; metatarsalgia.
Morvan's disease.	A limb.	Loss of sensibility on one side; neuralgic pain and paresthesia of the affected limb; vaso-motor and trophic disturbances, as shown by painless and destructive whitlows.	Disease of the posterior roots of the nerves of the affected limb.	Rheumatic elements (?); hysteria.	Monoplegia anæsthetica.
Naegele's pelvis.	Pelvis.	Deformity of pelvis.	Lack of development of one lateral mass of the sacrum.	Congenital.	Obliquely-contracted pelvis.
Paget's disease.	Bone.	Hypertrophy of the bone-tissue, with deformity.	Inflammatory changes.		Hypertrophic deforming osteitis; osteitis deformans.
Paget's disease.	Nipple and areola.	Eczema-like eruption; intensely red; clear, yellowish, viscid exudation; frequently terminates in carcinoma.	Inflammatory changes; cell-infiltration.	Presence of psorosperms (Darier, Macallum, Osler).	Paget's nipple.

Name	Part Affected.	Symptoms.	Pathology.	Etiology.	Synonyms.
Paget's recurrent fibroid.	Subcutaneous tissue; occasionally the breast.	Recurrent growth; painless; non-involvement of lymphatic glands.	Small spindle-cell sarcoma.	Unknown.	
Park's aneurysm. See *Aneurysm.*	Arteries and veins.	Those of aneurysm.	Arterio-venous aneurysm; the artery communicates with two contiguous veins.	Trauma.	
Parkinson's disease. See *Paralysis agitans.*	Nervous system.	Muscular weakness; tremors; rigidity; festination; characteristic attitude.	No constant lesion; probably changes in the cerebral cortex.	Exposure to cold and wet; worry; severe mental shock.	Paralysis agitans; shaking palsy; senile chorea.
Parrot's disease.	Nervous system.			Syphilis.	Syphilitic pseudo-paralysis.
Parry's disease.	See *Graves' Disease.*				
Parson's disease.	See *Graves' Disease.*				
Partridge's hernia.	Intestines.	Those of hernia.	Femoral hernia external to the femoral vessels.	That of hernia.	
Pavy's disease. See *Albuminuria, Cyclic.*	Kidney.	Occasional appearance of a small amount of albumin in the urine.	Renal congestion.	Obscure.	Intermittent albuminuria; paroxysmal albuminuria; cyclic albuminuria; physiologic albuminuria; simple albuminuria; functional albuminuria; transparent albuminuria; albuminuria of adolescence.
Paxton's disease.	Hair of beard.	Nodular growth on the hairs; brittleness of the hairs.	Thickening and roughening of the hair-shaft.	Specific parasite.	Tinea nodosa.
Petit's hernia.	Intestines.	Those of hernia.	Hernia in the lumbar region.	That of hernia.	
Physick's encysted rectum.	Rectum.	Burning pain in the anus and adjacent parts; increased mucous secretion.	Hypertrophy and occasionally inflammation of the natural rectal sacs.	Advanced age.	
Pott's aneurysm. See *Aneurysm.*	Arteries.	Pulsating tumor under the skin.	That of aneurysm.	That of aneurysm.	Aneurysm by anastomosis; aneurysmal varix.
Pott's disease. See *Pott's Disease.*	Spinal column.	Curvature of the spine in an antero-posterior direction; persistent lumbago.	Inflammation and caries of the vertebral bodies and inter-vertebral discs.	Tubercle-bacillus; syphilis; trauma.	Caries of the vertebræ; Pott's curvature.
Pott's fracture.	Fibula.	Those of fracture; dislocation outward of foot.	Fracture of lower end of bone; sometimes fracture of inner malleolus.	Traumatism.	
Pott's gangrene.	Extremities.	Extreme pain; drying and discoloration of affected part; occasionally line of demarcation; exhaustion; death.	Death of the part.	Obstruction of blood-supply from atheroma, etc.; old age.	Senile gangrene.
Pott's paralysis or paraplegia.	Lower portion of body.	Inability to move the limbs; disturbances of sensation.	Compression of spinal cord.	Pott's disease.	
Quain's fatty heart.	Heart.	Those of fatty heart.	Fatty degeneration of heart-muscle.	Atheroma; obstruction of circulation of blood.	

Quincke's disease.	Skin, usually of loins and thigh.	Immense and sudden circumscribed swelling of the skin; a sense of tension.	That of urticaria.	That of urticaria.	Urticaria œdematosa; giant urticaria; acute circumscribed edema; urticaria subcutanea.
Quinquaud's disease.	Scalp and hairy parts.	Formation of smooth, irregular patches of alopecia, dotted with red points.	Perifollicular inflammation.	Probably mycotic.	Folliculitis decalvans; acne decalvans.
Ray's mania.	Brain.	A form of general moral insanity.	Changes in the cerebral cortex.	Obscure.	
Raynaud's disease. See *Raynaud's Disease.*	The extremities.	Local syncope; local asphyxia; local gangrene; chill; hemoglobinuria; cerebral symptoms; mental torpor.	Obscure.	Vaso-motor changes.	Local gangrene; symmetric gangrene; sphaceloderma; gangrene of the skin; dermatitis gangræosa.
Raynaud's disease.	Throat-muscles.	Paralysis of affected muscles.		Secondary to parotiditis.	
Reclus' disease.	Mammary gland.	Slight enlargement of both breasts; fluctuation; no pain.	Disseminated cystic dilatations of the ducts and acini.		Cystic disease of the breast.
Richter's hernia.	Intestines.	Those of strangulated hernia.	Strangulated enterocele in which only a part of the circumference of the gut is constricted.	That of hernia.	Parietal enterocele; partial enterocele; Littré's hernia.
Riga's disease.	Mouth.	Aphthous eruption beneath the tongue; painless; grave constitutional symptoms; emaciation; exhaustion; earthy pigmentation of skin; death.	Ulcer, gray in color, with irregular and poorly defined borders; enlargement and fatty degeneration of liver and spleen.	Heredity; characteristic bacilli.	Cachectic aphthæ.
Riggs' disease. See	*Fauchard's disease.*				
Ritter's disease.	Skin.	Characteristic eruption on skin; exhaustion.	Inflammation, with exfoliation.		Dermatitis exfoliativa infantum; dermatitis exfoliativa neonatorum.
Rivolta's disease.	Synonym of *Actinomycosis,*	*q. v.*			
Robert's pelvis.	Pelvis.	Deformity of pelvis.	Lack of development of both lateral masses of the sacrum.	Congenital.	Transversely-contracted pelvis; doubly synostotic pelvis.
Rodrigues' aneurysm. See *Aneurysm.*	Arteries and veins.	Those of varicose aneurysm.	A varicose aneurysm with the sac immediately contiguous to the artery.	Trauma.	
Rokitansky's disease.	A synonym of *Acute Yel-*	*low Atrophy of the Liver.* See *Icterus*	*gravis.*		
Rossbach's disease.	Stomach.	Cephalalgia; gastralgia; very acid vomiting, in paroxysms.	Neurosis.	Exaggerated secretion of HCl in the gastric juice.	Hyperchlorhydria; gastroxia; gastroxynsis; hyperacid vomiting of Rosenthal.
Saemisch's ulcer.	Cornea.	Those of purulent keratitis.	An acute, serpiginous or creeping ulceration; sharp margins; arc of propagation; gray floor; sloughing of cornea.	Local infection.	Infectious ulcer of the cornea.
Saint Agatha's disease.	Synonym of *Mammitis,*	*q. v.*			
Saint Aignon's disease.	Synonym of *Tinea favosa,*	or *Favus, q. v.*			
Saint Anthony's dance.	Synonym of *Chorea, q. v.*				
Saint Anthony's fire.	Synonym of *Erysipelas, q. v.*				
Saint Anthony's fire.	Skin.	Gangrene of the affected parts; pain.	Intense inflammation, with destruction of the affected parts.	Chronic ergotism.	Epidemic gangrene.

TABLE OF EPONYMIC DISEASES.—*Continued.*

NAME.	PART AFFECTED.	SYMPTOMS.	PATHOLOGY.	ETIOLOGY.	SYNONYMS.
Saint Apollonia's disease.	Teeth and jaws.	Toothache and pain in the jaws.	Neurosis.	Caries, etc.	Toothache.
Saint Avertin's disease.	Synonym of *Epilepsy*, *q. v.*				
Saint Avidus' disease.	Synonym of *Deafness*, *q.v.*				
Saint Blase's disease.	Same as *Saint Blasius'*	*Disease.*			
Saint Blasius' disease.	Synonym of *Quinsy*, *q. v.*				
Saint Clara's disease.	Synonym of *Ophthalmia*,	or *Sore Eyes*, *q. v.*			
Saint Dymphna's disease.	Synonym of *Insanity*, *q.v.*				
Saint Erasmus' disease.	Synonym of *Colic*, *q. v.*				
Saint Fiacre's disease.	Synonym of *Hemorrhoids*,	or of *Condylomata*, *q. v.*			
Saint Francis' fire.	Synonym of *Erysipelas*, *q.v*				
Saint Gervasius' disease.	Synonym of *Rheumatism*, *q. v.*				
Saint Giles' disease.	Synonym of *Carcinoma*,	or *Leprosy*, *q. v.*			
Saint Guy's dance.	Synonym of *Chorea*, *q. v.*				
Saint Hubert's disease.	Synonym of *Hydrophobia*,	*q. v.*			
Saint Job's disease.	Synonym of *Syphilis*, *q. v.*				
Saint John's dance.	Synonym of *Chorea*, *q. v.*				
Saint John's evil.	Synonym of *Epilepsy*, *q.v.*				
Saint Lazarus' disease.	Synonym of *Leprosy*, of	*Tinea*, and of *Measles of the Hog*, *q.v.*			
Saint Main's disease.	Synonym of *Scabies*, *q. v.*				
Saint Martin's evil.	Synonym of *Drunkenness*,	*q. v.*			
Saint Mathurin's disease.	Synonym of *Insanity*, of	*Idiocy*, or of *Epilepsy*, *q. v.*			
Saint Modestus' dance.	Synonym of *Chorea*, *q. v.*				
Saint Roch's disease.	Synonym of the *Bubonic*	*Plague*, *q. v.*			
Saint Sement's disease.	Synonym of *Syphilis*, *q. v.*				
Saint Valentine's disease.	Synonym of *Epilepsy*, *q.v.*				

Saint Vitus' dance.	Synonym of *Chorea, q. v.*				
Saint With's dance.	Synonym of *Chorea, q. v.*				
Saint Zachary's disease.	Synonym of *Dumbness, q. v.*				
Schönlein's peliosis. See *Schönlein's peliosis.*	Joints and skin.	Multiple arthritis; purpuric eruption, with urticaria and erythema; sore throat; fever; articular pains; edema; scanty and albuminous urine; relapses.	Vaso-motor neurosis (?).	Males; age 20 to 30; rheumatic origin.	Schönlein's disease; peliosis rheumatica; purpura rheumatica.
Stahl's ear.	Ear.	Helix flat and folded over, forming one mass with the anti-helix at its bifurcation.	Deformity of ear.	Congenital.	
Stokes' disease.	See *Graves' disease.*				
Störck's blennorrhea.	Respiratory tract.	Chronic mucous discharge.	Engorgement of the mucous membrane.	That of laryngitis.	Laryngitis sicca.
Strümpell's disease.	Brain and spinal cord.	Those of inflammation of the cord and brain; ophthalmoplegia; progressive muscular atrophy.		Obscure.	Polio-encephalitis; polio-encephalomyelitis.
Sydenham's chorea.	Synonym of *Chorea, q. v.*				
Tay's choroiditis.	Eye.	Those of central choroiditis; chronic course; symmetric; numerous white, glistening dots on retina; contraction of the field of vision; scotoma.	Changes resembling those in albuminuric retinitis; colloid degeneration, and calcareous formations in choroid.	Old age.	Senile guttate choroiditis.
Thomsen's disease. See *Thomsen's Disease.*	Muscles of arms and legs.	Tonic spasm or rigidity of the muscles; myotonic reaction; reflexes normal.	Hypertrophy of the muscles; increase in the number of the nuclei.	Congenital; hereditary.	Myotonia congenita.
Thornwaldt's disease.	Pharynx, Luschka's gland.	Hypersecretion of mucus; hawking; catarrh.	Naso-laryngeal stenosis; formation of a cyst-like cavity in the gland, containing pus or muco-pus.	Cold.	Thornwaldt's bursitis; Thornwaldtitis.
Tourette's (Gilles de la) disease.	Nervous system.	Motor incoördination; echolalia; coprolalia; involuntary muscular movements; explosive utterances; echokinesis; fixed mental ideas.	Psychosis.	Early age; neurotic tendency.	Tic convulsif.
Velpeau's hernia.	Intestines.	Those of femoral hernia.	Femoral hernia in front of the vessels.	That of hernia.	
Volkmann's deformity.	Foot.	Deformity.	Tibio-tarsal luxation.	Congenital.	
Voltolini's disease.	Middle ear.	Acute inflammation; cerebral symptoms; permanent deafness.	Inflammation of the labyrinth.	Childhood.	Purulent labyrinthic otitis.
Wardrop's disease.	Matrix of nails.	Pain; swelling; redness; tenderness; exudation of a fetid, serous fluid; falling off of the affected nails; involvement of the bone.	Intense inflammation.	Childhood; traumatism.	Malignant onychitis; onychia maligna; onyxitis.
Weil's disease.	General disease.	Remitting fever; chill; muscular pains; jaundice; headache; course, 8–14 days; clay-colored stools; urine albuminous; occasionally hematuria; cerebral symptoms and coma.	Swelling of liver and spleen; frequently nephritis.	Specific virus; males; age 25 to 40.	Acute infectious jaundice; acute febrile icterus.

TABLE OF EPONYMIC DISEASES.—*Continued.*

Name.	Part Affected.	Symptoms.	Pathology.	Etiology.	Synonyms.
Werlhoff's disease.	Skin.	Headache; great debility; purpuric eruption; hemorrhages from mucous surfaces; epistaxis; hematuria; hemoptysis; anemia; slight fever; frequently death.	Obscure.	Youth; delicate constitution.	Purpura hæmorrhagica; morbus maculosus Werlhoffii; land-scurvy.
Wildermuth's ear.	Ear.	Prominence of the anti-helix.	Deformity.	Congenital.	
Wilks' kidney.	The large white kidney of	*Chronic Parenchymatous Nephritis*,	*q. v.*		
Willard's lupus.	Skin.	Those of lupus.	A name formerly given to lupus of tuberculous, as opposed to that of non-tuberculous, origin.	Tubercle-bacillus.	
Willis's disease.	A synonym of *Diabetes*,	*q. v.*			
Wilson's (E.) disease.	Skin.	Those of *Pityriasis rubra*, *q. v.*	That of *Pityriasis rubra*, *q. v.*	That of *Pityriasis rubra*, *q. v.*	Universal exfoliative dermatitis.
Winckel's disease.	All the organs of the new-born infant.	Acute hemoglobinuria; jaundice; cyanosis.	Fatty degeneration of the organs; infarcts of the kidney.	Microörganism, entering through the umbilical cord.	
Woillez' disease.	Lungs.	Those of acute pulmonary congestion.	Congestion of the lung-tissue.		

Dissemination (*dis-em-in-a'-shun*) [*dis*, apart; *seminare*, to sow]. The scattering or dispersion of disease or disease-germs.

Dissepiment (*dis-ep'-e-ment*) [*dis*, apart; *sæpire*, to hedge in]. A partition, septum, or diaphragm.

Dissipation (*dis-ip-a'-shun*) [*dissipare*, to scatter]. A dispersion of matter or of the morbid conditions that cause disease.

Dissociation (*dis-so-se-a'-shun*) [*dis*, apart; *sociare*, to associate]. In physiology, the separation of the component elements of a compound. In chemistry, the decomposition of a compound by means of high temperature **D. Symptom,** anesthesia to pain and to heat and cold, with preservation of tactile sensibility and of the muscular sense; it is observed in syringomyelia.

Dissolution (*dis-o-lu'-shun*) [*dissolutio; dissolvere*, to set free]. A solution of the continuity of a part. Decomposition arising from the death of the body or its parts; death.

Dissolvent (*dis-ol'-vent*) [*dissolvere*, to loosen, dissolve]. A solvent.

Dissonance (*dis'-o-nans*) [*dissononare*, to disagree in sound]. The combination of such tones as are so different from each other as to produce beats.

Distad (*dis'-tad*) [*distare*, to be at a distance; *ad*, to]. In the direction of the free extremity of an appendage or part. See *Position and Direction, Table of.*

Distal (*dis'-tal*) [*distare*, to be at a distance]. At the greatest distance from the trunk, heart, or mesial line. See *Position and Direction, Table of.* **D. Clot.** See *Clot.*

Distally (*dis'-tal-e*) [*distare*, to be at a distance]. Distad.

Distance (*dis'-tans*) [*distantia*, distance]. The measure of space between two objects. **D., Working,** in the microscope, the distance from the front lens of an objective to the object, when the objective is correctly focused.

Distemper (*dis-tem'-per*) [*distemperare*, to dissolve]. 1. Disease; malady; indisposition; most commonly applied to the diseases of animals. 2. A disease of young dogs, commonly considered as a catarrhal disorder. **D. Colors.** See *Pigments, Colors, and Dyestuffs.*

Disten (*dis'-ten*) [*distare*, to be at a distance]. Belonging to the distal aspect in itself.

Distention (*dis-ten'-shun*) [*distendere*, to stretch]. The state of being dilated.

Distichiasis (*dis-tik-i'-as-is*) [δίς, double; στίχος, a row]. The condition of a double row of eyelashes, the inner rubbing against the globe.

Distichous (*dis'-tik-us*) [δίστιχος, having two rows]. In biology, in two perpendicular rows; applied to the arrangement of leaves or other organs.

Distillation (*dis-til-a'-shun*) [*destillare*, to drop little by little]. The double process of vaporization and condensation of the vapor. This is used mainly in purifying liquids by separating them from non-volatile substances. **D., Destructive,** the decomposition of a substance in a close vessel in such a manner as to obtain liquid products. The substances that are submitted to destructive distillation are in the main solids, as wood, coal, shales, bones, and animal refuse. **D., Fractional,** a process of decomposition of complex liquid bodies depending upon the fact that, if a mixture of liquids, each having a different boiling-point, be heated, the one having the lowest boiling-point will pass over first, and if the temperature is not increased beyond that point at which the distillation of this fraction takes place, no other constituent will come over; if the temperature be gradually increased the

others will follow in the order of their boiling-points. In cases in which the boiling-points are close, the action of one substance upon another often prevents exact separations.

Distocia (*dis-to'-se-ah*) [δίς, double; τόκος, birth]. Delivery or birth of twins.

Distoma (*dis-to'-mah*), or **Distomum** (*dis-to'-mum*) [δίς, double; στόμα, a mouth]. A genus of trematode worms. See *Parasites* (*Animal*), *Table of.*

Distomiasis (*dis-to-mi'-as-is*) [δίς, double; στόμα, mouth]. The symptoms produced by the presence of certain trematodes or flukes in the human system.

Distomum (*dis-to'-mum*) [δίς, double; στόμα, mouth]. Same as *Distoma.* See *Parasites* (*Animal*), *Table of.*

Distomus (*dis-to'-mus*). See *Diprosopus.*

Distortion (*dis-tor'-shun*) [*distorquere*, to distort]. 1. A twisted or bent shape; deformity or malformation, acquired or congenital. 2. A writhing or twisting motion, as of the face; a grimace.

Distortor oris (*dis-tor'-ter o'-ris*) [L., "the distortor of the mouth"]. The zygomaticus minor muscle. See *Muscles, Table of.*

Distribution (*dis-trib-u'-shun*) [*distribuere*, to distribute]. The branching of a nerve or artery, and the arrangement of its branches within those parts that it supplies.

Distrix (*dis'-triks*) [δίς, two; θρίξ, hair]. The splitting of the distal ends of the hair.

Disulphate (*di-sul'-fāt*) [*dis*, two; *sulphur*]. In chemistry, an acid sulphate.

Disulphone (*di-sul'-fōn*) [*dis*, double; *sulphur*]. One of the solid, crystalline, very stable compounds, produced on oxidizing the di-thio-ethers or thio-acetals with a permanganate solution. The disulphones are not attacked by acids or alkalies.

Disuse-amblyopia. See *Argamblyopia.*

Disvulnerability (*dis-vul-ner-ab-il'-it-e*) [*dis*, neg.; *vulnerare*, to wound]. The power of abnormally rapid recovery from wounds, said to be a peculiarity of many criminals.

Dita Bark (*di'-tah*) [L.]. The bark of *Alstonia scholaris*, native to the Philippine Islands. It is employed as a tonic and antiperiodic in intermittent fever. Dose of the tincture, ʒ j–ij; of the fluid extract, gtt. ij–v; of the powder, gr. v. Unof.

Ditain (*dit'-a-in*) [*Dita*], $C_{44}H_{30}N_2O$. An alkaloid of *Dita*, occurring as a yellow amorphous substance.

Ditamin (*dit'-am-in*). Same as *Ditain.*

Ditana digitifolia (*dit-a'-nah dij-it-if-o'-le-ah*) [L.]. A Mexican plant said to possess galactagogue properties. The existence of such a plant has been questioned.

Dithecal (*di-the'-kal*) [δίς, two; θήκη, a case]. In biology, having two thecæ or anther-cells.

Ditokus (*dit'-o-kus*) [δις, two; τέκειν, to bring forth]. In biology, giving birth to twins, or laying two eggs.

Ditrichotomous (*di-trik-ot'-o-mus*) [δίς, two; τρίχα, threefold; τέμνειν, to cut]. In biology, divided into twos and threes.

Dittany (*dit'-an-e*) [American]. See *Cunila mariana.*

Dittel's Operation. See *Operations, Table of.*

Dittopsia (*dit-top'-se-ah*). Synonym of *Diplopia.*

Dittrich's Plugs. Masses of granular matter, degenerated epithelium, and crystals of the fatty acids (chiefly butyric acid) plugging up the ends of the bronchial tubes in cases of gangrene of the lung. They are yellowish-brown in color, of very fetid odor, and vary in size from a millet-seed to a bean.

Diuresis (*di-u-re'-sis*) [διά, through; οὐρέειν, to make water]. Abnormal increase in the secretion of urine.

Diuretic (*di-u-ret'-ik*) [διά, through; οὐρέειν, to make water]. 1. Increasing the flow of urine. 2. A medicine that increases the secretion and flow of urine.

Diuretin (*di-u-re'-tin*) [διά, through; οὐρέειν, to make water], $C_7H_7NaN_4O_2$,$C_6H_4OHCOONa$. Theobromin sodio-salicylate, containing 50 per cent. of theobromin salicylate. It has been found useful as a diuretic in pleuritic effusion and cardiac dropsy. Dose 90 grains daily, in 15-grain doses.

Diurnule (*di-urn'-ūl*) [Fr.]. A form of medicinal tablet that contains the maximum quantity of a toxic drug that may be administered to an adult in 24 hours.

Divagation (*di-vag-a'-shun*) [*divagatio*, a wandering]. Incoherence of speech or thought.

Divalent (*di'-val-ent*) [δίς, twice; *valens*, having power]. Having power to combine with two monovalent atoms, as a chemic compound. Thus, the oxygen atom and the radical CH_2 are divalent.

Divaricatio palpebrarum (*di-var-ik-a'-she-o pal-pebra'-rum*). Synonym of *Ectropion.*

Divergent (*di-ver'-jent*) [*divergere*, to diverge]. Moving in different directions from a common point. **D. Strabismus.** See *Strabismus.*

Divers' Disease. An affection similar to *Caisson-disease, q. v.*, common in deep-water divers. **D. Paralysis.** See *Caisson-disease.*

Diverticulum (*di-ver-tik'-u-lum*) [*divertere*, to turn: *pl.*, *Diverticula*]. 1. A small cul-de-sac or pouch; an offshoot from a main structure; an organ supposed to be a place of lodgment for superfluous blood. 2. Variation from a normal structure; malformation. **D., Meckel's,** a sacculation of the ileum, owing to the non-obliteration of the vitelline duct.

Divi-divi (*div'-e-div'-e*) [S. Amer.]. The seed-pods of *Cæsalpinia coriaria*, a small tree found in South America. The pods are about three inches long, brownish in color, and generally bent, by drying, into the shape of the letter S. They contain 30 to 50 per cent. of a peculiar tannin somewhat similar to that of valonia, but liable to fermentation. They are used in leather-manufactures.

Division (*div-izh'-un*) [*divisio*, a dividing]. Surgical section into two or more parts; separation into two or more parts, such as occurs in certain cell-nuclei.

Divulsion (*di-vul'-shun*) [*divulsio*, a tearing apart]. The surgical or traumatic division of any part by tearing it asunder.

Divulsor (*di-vul'-sor*) [L.]. An instrument for effecting surgical divulsion, especially of a urethral stricture.

Dizziness (*diz'-e-nes*). See *Vertigo.*

Dobell's Spray, or **Solution.** Liquor sodii boratis compositus (N. F.); a solution of borax, sodium bicarbonate, and carbolic acid in glycerin and water; it is valued as a spray for nasal and throat troubles.

Dobie's Line, or **Stripe.** See *Lines, Table of.*

Dochmiasis (*dok-mi'-as-is*) [δόχμιος, crumpled]. The diseased condition caused by the presence in the body of parasites belonging to the genus *Dochmius.* Cf. *Ankylostomiasis.*

Dochmius (*dok'-me-us*) [δόχμιος, crumpled]. In biology, a genus of thread-worms of the family Strongylidæ. See *Parasites* (*Animal*), *Table of.*

Docimasia (*dos-im-a'-se-ah*) [δοκιμασία; δοκιμάζειν, to examine]. 1. Examination, especially a post-mortem examination. 2. A test, especially a chemic test, of poisons. 3. In pharmacy, the testing or assaying of medicines. **D. pulmonum,** a mode of determining whether a child has or has not been born alive, by examination of the lungs.

Docimastic (*dos-im-as'-tik*) [δοκιμασία; δοκιμάζειν, to examine]. Making use of tests; testing; proving.

Docimasy (*dos'-im-as-e*). See *Dosimasia.*

Dock (*dok*). See *Rumex*.

Dockmackamus, or **Dockmackie** (*dok-mak'-am-us,* or *dok'-mak-e*) [aboriginal]. The shrub *Viburnum acerifolium*, of N. America; used in domestic practice in poulticing tumors, and as an alterative. Unof.

Doctor (*dok'-tor*) [*doctor*, a teacher]. A teacher. A title conferred by a university or college. A physician licensed to practise medicine. **D. Gum,** the resin of *Rhus metopium*, a poisonous sumach of tropical America; it is said to be purgative and alterative. The name is given in the W. Indies to various other soft resins.

Dodecadactylitis (*do-dek-a-dak-til-i'-tis*) [δώδεκα, twelve; δάκτυλος, a finger; ιτις, inflammation]. Inflammation of the duodenum.

Dodecadactylon, or **Dodecadactylus** (*do-dek-a-dak'-til-on*, or *-us*) [δώδεκα, twelve; δάκτυλος, finger]. The duodenum.

Dodecagynous (*do-dek-aj'-in-us*) [δώδεκα, twelve; γυνή, a female]. In biology, having twelve pistils.

Dodecamerous (*do-dek-am'-er-us*) [δώδεκα, twelve; μέρος, part]. In biology, having the floral organs in twelves.

Dodecandrous (*do-dek-an'-drus*) [δώδεκα, twelve; ἀνήρ (ἀνδρ-), a male]. In biology, having twelve stamens.

Dodecapetalous (*do-dek-a-pet'-al-us*) [δώδεκα, twelve; πέταλον, a leaf]. In biology, having a corolla consisting of twelve petals.

Döderlein, Bacillus of. See *Bacteria, Synonymatic Table of.*

Dodging Time. The popular term among women for the period of irregular menstruation of varying duration preceding the full establishment of the menopause.

Dog-button. See *Nux vomica.*

Dogma (*dog'-mah*) [δόγμα, opinion; δοκέειν, to think]. A tenet or principle taught by authority. A statement of medical science.

Dog-rose (*dog'-rōz*). See *Rosa canina.*

Dogwood (*dog'-wood*). See *Cornus.*

Dohrn's Method. A method of dressing the umbilical cord. The stump is covered with cotton-wool fixed with stumps of adhesive plaster. This dressing is likely to be followed by umbilical ulceration.

Dolabra (*do-la'-brah*) [L.]. A name applied to various bandages. **D. currens.** See *Ascia.* **D. repens.** See *Ascia.*

Dolabriform (*do-lab'-rif-orm*) [*dolabra*, a kind of hatchet; *forma*, shape]. In biology, shaped like an axe.

Dolbeau's Operation. See *Operations, Table of.*

Doliarin (*do-le-a'-re-in*) [*dolium*, a cask]. A vegetable pepsin, like papain and cradin, obtained from *Ficus doliaria*, a wild fig-tree of Brazil. It is vermifuge, purgative, and digestive. Unof.

Doli capax (*do'-li ka'-paks*) [L.: *pl.*, *Doli capaces*]. In legal medicine, one capable of guilt; one able or old enough to distinguish right and wrong; one morally or legally responsible. **D. incapax,** one incapable, or not old enough to distinguish wrong from right, or to be legally responsible for wrong-doing.

Dolichocephalia (*dol-ik-o-sef-a'-le-ah*) [δολιχός, long; κεφαλή, head]. The condition of being dolichocephalic.

Dolichocephalic, or **Dolichocephalous** (*dol-ik-o-sef-al'-ik*, or *-sef'-al-us*) [δολιχός, long; κεφαλή, head]. Having a relatively long antero-posterior cephalic diameter (applied to skulls or to persons or races). See *Index.*

Dolichohieric (*dol-ik-o-hi-er'-ik*) [δολιχός, long; ιερόν, sacrum]. Having a relatively slender sacrum. See *Platyhieric.*

Dolichopellic (*dol-ik-o-pel'-ik*) [δολιχός, long; πέλλα, a bowl]. Having a relatively long or narrow pelvis. See *Platypellic.*

Dolor (*do'-lor*) [*dolere*, to feel pain]. Bodily or mental pain or suffering. **D. colicus.** Synonym of *Enteralgia.* **D. dentium,** pain in the teeth. See *Odontalgia.* **Dolores præsagientes,** precursory pains felt by women in advance of labor.

Domatophobia (*do-mat-o-fo'-be-ah*) [δῶμα, house; φόβος, fear]. Insane dread of being in a house; a variety of claustrophobia.

Donath's Tests. See *Tests, Table of.* **D. and Mayrhofer's Test.** See *Tests, Table of.*

Donda Ndugu [African]. Brother Ulcer; a disease common on the east coast of Africa, due to some minute organism that infests stagnant water and enters an abraded joint of the lower extremities, especially of the lower third of the leg. The part becomes swollen, and a deep-seated slough occurs that burrows beneath the healthy tissues. Death may follow from exhaustion or hemorrhage. Those who recover are generally permanently lamed.

Donders' Glaucoma. See *Diseases, Table of.* **D. Law.** See *Law.* **D. Schematic Eye,** in optics, a device for calculating the path of the rays from one refracting surface to the other. **D. Theory,** a theory of the formation of glaucoma, in which the disease is supposed to originate in an irritation of the choroid nerves.

Donegana's Operation. See *Operations, Table of.*

Donne's Corpuscles, or **Globules.** See *Globule* and *Colostrum Corpuscles.* **D. Test.** See *Tests, Table of.*

Donovan's Solution. See *Arsenic.*

Doornick's Horizontal Line. See *Line.*

Dorcadizant (*dor-kad'-iz-ant*) [δορκαδίξειν, to leap like a gazelle; δορκάς, gazelle]. Leaping; characterized by leaps; applied to certain forms of insanity.

Doremus's Method. A method of estimating the amount of urea in the urine. It is done by allowing the urine to pass through a solution of sodium hypobromite and measuring the gas that is evolved.

Dorsad (*dor'-sad*) [*dorsum*, the back]. Toward the dorsal aspect; dorsally. See *Position and Direction, Table of.*

Dorsal (*dor'-sal*) [*dorsum*, the back]. Pertaining to the back, or to the posterior part of an organ. The term *Neural* is sometimes used in place of dorsal. See *Position and Direction, Table of.* **D. Artery.** See *Artery.* **D. Decubitus,** recumbency in the supine position. **D.-elevated Position.** See *Postures, Table of.* **D. Nerves.** See *Nerves, Table of.* **D.-recumbent Position.** See *Postures, Table of.* **D. Reflex.** See *Reflexes, Table of.* **D. semi-recumbent Posture.** See *Postures, Table of.*

Dorsalis pedis (*dor-sa'-lis pe'-dis*). See *Arteries, Table of.*

Dorsen (*dor'-sen*) [*dorsum*, the back]. Belonging to the dorsum in itself.

Dorsicollar (*dor-se-kol'-ar*) [*dorsum*, the back; *collum*, the neck]. In biology, having to do with the back and neck.

Dorsicumbent (*dor-se-kum'-bent*) [*dorsum*, the back; *cubare*, to lie down]. In biology, supine; or lying upon the back.

Dorsigerous (*dor-sij'-er-us*) [*dorsum*, the back; *gerere*, to carry]. In biology, bearing the young upon the back.

Dorsigrade (*dor'-sig-rād*) [*dorsum*, the back; *gradi*, to walk]. In biology, applied to animals that walk upon the back of the toes, as the armadillo.

Dorsi-lumbar (*dor-si-lum'-bar*). See *Dorso-lumbar.*

Dorsimesad (*dor-si-me'-sad*) [*dorsum*, back; μέσον, the middle]. Toward the dorsimeson. See *Position and Direction, Table of.*

Dorsimesal (*dor-si-me'-sal*) [*dorsum*, back; μέσον, the

middle]. Pertaining to the dorsimeson. See *Position and Direction, Table of.*

Dorsi-meson (*dor-si-me′-son*) [*dorsum*, the back; *μέσον*, the middle]. The dorsal edge of the meson or median plane of the body. The dorsal, mesal, or median line. Cf. *Ventrimeson*; also *Position and Direction, Table of.*

Dorsiparous (*dor-sip′-ar-us*) [*dorsum*, the back; *parere*, to produce]. Applied to plants that bear fruit on the back of the leaves (ferns), or animals hatching young upon the back (toads).

Dorsi-scapular (*dor-si-skap′-u-lar*) [*dorsum*, back; *scapula*, the shoulder]. Relating to the dorsum of the scapula.

Dorso- (*dor′-so-*) [*dorsum*, back]. A prefix used in connection with the names of such organs as have their attachment to or about the back.

Dorsocephalad (*dor-so-sef′-al-ad*) [*dorsum*, back; *κεφαλή*, head]. Toward the dorsal aspect of the head.

Dorsodynia (*dor-so-din′-e-ah*) [*dorsum*, back; *ὀδύνη*, pain]. Omodynia; scapulodynia; pain in the dorsal region; rheumatism of the muscles of the shoulders and upper back.

Dorso-lumbar (*dor-so-lum′-bar*) [*dorsum*, back; *lumbus*, loin]. Relating to the back and the loins.

Dorso-sacral Position. See *Postures, Table of.*

Dorso-thoracic (*dor-so-tho-ra′-sik*) [*dorsum*, back; *θώραξ*, thorax]. Relating to the back and the thorax.

Dorstenia (*dor-ste′-ne-ah*). See *Contrayerva.*

Dorsulum (*dor′-su-lum*) [dim. of *dorsum*, the back]. The second dorsal sclerite of the thorax in certain insects.

Dorsum (*dor′-sum*) [L.]. 1. The back. The rounded part of the back. 2. Any part corresponding to the back; as the *dorsum* of the foot, hand, tongue, scapula, or penis; in many cases, the upper surface is thus designated.

Dorsumbonal (*dor-sum′-bo-nal*) [*dorsum*, the back; *umbo*, a boss]. In biology, pertaining to both the dorsal and umbonal regions in a bivalve mollusc.

Dosage (*do′-sāj*) [*δόσις*, a portion given]. A system or method of dosing. See *Posology.*

Dose (*dōs*) [*δόσις*, a portion]. The measured portion of medicine to be taken at one time. **D., Divided,** a mode of administration in which a drug is to be taken in fractional portions at short intervals. **D., Maximum,** the largest portion of medicine ordered to produce a given result, or the largest dose consistent with safety. In this work both minimum and maximum dosage is given under each medicine or preparation. **D., Minimum,** the smallest quantity of a medicine that will produce physiologic effects.

GAUBIUS' TABLE

Of Proportion of Dose According to Age.

For an adult, suppose the dose to be					. . 1,	or 60	grains
An individual under 1 year will require					1/12,	" 5	"
"	"	"	2 years	"	1/8,	" 8	"
"	"	"	3 "	"	1/6,	" 10	"
"	"	"	4 "	"	1/4,	" 15	"
"	"	"	7 "	"	1/3,	" 20	"
"	"	"	14 "	"	1/2,	" 30	"
"	"	"	20 "	"	2/3,	" 40	"
For one of 21 to 60, the full dose, or					. . 1,	" 60	"

Above this age, an inverse gradation must be observed.

Dosimeter (*do-sim′-et-er*) [*δόσις*, a dose; *μέτρον*, a measure]. A drop-meter; an instrument for measuring minute quantities of a liquid.

Dosimetric (*do-sim-et′-rik*) [*δόσις*, a dose; *μέτρον*, a measure]. Relating to or characterized by dosimetry.

Dosimetry (*do-sim′-et-re*) [*δόσις*, dose; *μέτρον*, a measure]. The accurate and systematic measurement of a dose or prescribed portion; the use of drugs in exact and definite doses.

Dosiology, or Dosology (*do-se-ol′-o-je*, or *do-sol′-o-je*) [*δόσις*, dose; *λόγος*, science]. Posology; the science of doses.

Dosis (*do′-sis*). See *Dose.*

Dossil (*dos′-il*) [ME., *dosil*, a spigot]. A pledget or tuft, as of lint.

Dotage (*dōt′-āj*) [ME., *dotren*]. Feebleness of mind; senility.

Dothienenteritis, or Dothinenteritis (*doth-e-en-en-ter-i′-tis*, or *doth-in-en-ter-i′-tis*) [*ὀοθιήν*, a boil; *ἔντερον*, bowel; *ιτις*, inflammation]. Enteric fever, or the enteritis that accompanies it.

Double (*dub′-l*) [ME., *doublen*, to double]. Two-fold. In pairs. **D. Athetosis,** a manifestation of infantile spastic paraplegia. **D. Chin.** See *Buccula.* **D. Consciousness,** periodic amnesia; a periodic failure of memory involving all the intellectual functions and the character of the individual; that condition in which a patient seems to have two distinct but alternating lives; it is seen mostly in somnambulists and hypnotics. **D. Flap Amputation.** See *Amputation.* **D. Hearing.** See *Diplacusis.* **D. Monsters.** Same as *Composite Monsters, q. v.* **D. Personality,** an abnormal condition in which the subject feels as if he were two distinct personalities, the one alternating continually with the other. It is a symptom of insanity and of poisoning by certain drugs. **D. Staining,** in microscopy, the impregnation of a structure with two colors in order to show its details. Bacteriologically the application of such staining-reagents as will stain the spores one color and the rods another. **D. Touch,** the exploration of the vaginal and rectal walls by inserting the thumb into the one cavity, and the index finger into the other, so that, *e. g.*, the presence of any abnormal growth may be ascertained. **D. Vinegar.** See *Vinegar.* **D. Vision.** See *Diplopia.* **D. Vitriol,** a mixture of copper and iron sulphates crystallized together. **D. Voice.** See *Diphthongia.* **D. Wedge,** an instrument used in dentistry for removing an artificial crown from the root of a tooth upon which it has been set.

Doubler (*dub′-ler*). See *Doubling.*

Doublet (*dub′-let*) [ME., *dublet*]. In optics, a system consisting of two lenses.

Doubling (*dub′-ling*) [ME., *doublen*, to double]. A term given to that duplication of dispensary statistics that results from patients coming twice or oftener with different troubles in the course of a year. Such patients are termed "*doublers.*"

Doubly (*dub′-le*) [ME., *doublen*, to double]. In a two-fold manner. **D. Contoured,** in microscopy, an object is doubly contoured when it is bounded by two, usually parallel, dark lines with a lighter band between them.

Doubt (*dowt*) [ME., *doute*, fear]. Uncertainty; fear. **D., Insanity of,** mental disorder in which the patient is affected by morbid doubts and fears, and subjects himself to introspective questionings.

Doubting (*dowt′-ing*) [ME., *doute*, fear]. Fearing. **D. Mania,** a form of volitional disorder in which the reflexive mechanism of the will is over-irritable and reacts to slight stimuli, producing a constant succession of contradictory, absurd, or useless acts.

Douche (*doosh*) [Fr.]. A stream of water directed against a part, or one used to flush a cavity of the body.

Douglas's Cul-de-sac or Pouch. See *Pouch.* **D. Line.** See *Lines, Table of.* **D. Semilunar Fold,** a thin curved margin that forms the lower part of the posterior wall of the sheath of the abdominal rectus muscle.

Dourine (*doo′-rin*) [Fr.]. Syphilis in the horse.

D'Outrepont's Version. In obstetrics, indirect version, the head being seized from without by the hand corresponding to its position, while the other hand, well oiled and folded together like a cone, is introduced into the uterine cavity, grasps the presenting shoulder and pushes it toward the side on which the breech is situated.

Dover's Powder. Pulvis ipecacuanhæ compositus. See *Opium*.

Dowel (*dow'-el*) [Fr., *douille*, a socket]. In dentistry, the piece of wood or metal uniting any artificial crown to the root of a natural tooth.

Dowell's Operation. See *Operations, Table of.*

Doyère, Eminence, Hillock, Papilla, or **Tuft of.** See *Sarcoglia.*

Dracæna (*dra-se'-nah*) [δράκαινα, dragon]. A genus of liliaceous plants, often tree-like. **D. cinnabari** and **D. schizantha** (both E. Africa) and **D. draco** (mainly W. African) afford a part of the so-called dragon's blood of commerce. See *Dragon's Blood.*

Dracol (*dra'-kol*). Same as *Anisol.*

Dracontiasis (*dra-kon-ti'-as-is*) [δράκων, dragon]. Guinea-worm Disease; a skin-disease due to the presence of the fully developed nematode worm, *dracunculus medinensis*, and characterized by the development of deep vesicles or abscesses. The disease is endemic in India and various parts of Africa and other tropical regions. The female worm is cylindric, $\frac{1}{10}$ inch in diameter and about 30 inches long, or even much longer. It may be felt like a cord of soft string under the skin. When about to make its escape it produces itching and discomfort, followed by an abscess. The embryo of the worm gains entrance into the human body and there develops with the named results. See *Parasites (Animal), Table of.*

Dracunculus (*dra-kun'-ku-lus*) [dim. of *draco*, a dragon, serpent]. A genus of thread-worms, belonging to the family *Filariidæ*. See *Parasites (Animal), Table of.* **D. medinensis.** See *Dracontiasis.*

Draft, Draught (*draft*) [AS., *dragon*, to draw]. 1. A quantity of liquid, especially a medicine drunk at one gulp. 2. A mild blister; a poultice. **D., Black,** compound infusion of senna. **D., Chopart's,** a mixture containing balsam of copaiba, alcohol, peppermint water, syrup of balsam of tolu, and sweet spirit of niter. **D., Effervescing,** one containing sodium or potassium bicarbonate and a vegetable acid.

Dragée (*drah-zhā'*) [Fr.]. A sugar-coated pill, bolus, or comfit; a sugared confection.

Dragendorff's Tests. See *Tests, Table of.*

Dragendorff and Kossow's Test. See *Tests, Table of.*

Dragon Root (*drag'-on root*). Indian Turnip. The root of *Arum triphyllum*, acrid, expectorant, and diaphoretic. Dose of the fld. ext. ♏xv–℥j. Unof.

Dragon's Blood (*drag'-onz blud*). 1. The astringent resin of *Calamus rotang* and *C. draco*, E. Indian rattan-palms. 2. The resin of various species of *Dracæna, q.v.* 3. The resin of *Pterocarpus draco*, a W. Indian tree. The various kinds of dragon's blood are astringent, but are now used mainly in the arts and in making court-plasters. See *Pigments, Conspectus of.*

Drain [ME., *drainen*, to drain]. A channel that receives the drainage or waste water of one building or set of premises. In surgery, a material that affords a channel of exit for the discharge from a wound or cavity. **D.-throat,** a sore-throat produced by the poison of scarlet fever, and other poisons introduced into the system by breathing the air from defective drains.

Drainage (*drān'-aj*) [ME., *drainen*, to drain]. 1. The provision, by means of tubes or strands of fibers, of a channel of exit for the discharge from a wound or cavity. 2. See *Sewage.* **D. Anchor,** a rubber filament inserted in an abscess or cavity. **D.-tube,** a rubber tube with perforations for draining wounds or cavities. **D.-tube, Decalcified,** a decalcified bone (*e. g.*, of a chicken, etc.) used as a drainage-tube.

Dram, or **Drachm** (*dram*) [δραχμή, a Greek weight]. The eighth part of the apothecaries' ounce, equal to 60 grains or 3.8 grams. Also the one-sixteenth part of the avoirdupois ounce, equal to 27.34 grains. **D., Fluid,** the eighth part of a fluidounce, equal to 60 minims.

Dramatism (*drăm'-at-izm*) [δρᾶμα, a drama]. Insanely stilted and lofty speech or behavior.

Draper's Test. See *Tests, Table of.*

Drastic (*dras'-tik*) [δράειν, to draw]. 1. A powerful and irritating purgative, such as scammony or gamboge. 2. Severe, harsh, powerful.

Draught (*draft*). See *Draft.*

Draw [ME., *drawen*, to draw]. To digest and cause to discharge; said of a poultice. In dentistry, to remove a tooth from its socket. In andrology, to remove the urine from the bladder by means of a catheter. **D.-bench,** a bench for drawing wire, so constructed as to confine a wire-plate at one end, with a roller and windlass at the other end for drawing the wire through the plate.

Drawer, Gold. An apparatus for use in the dental laboratory to collect gold scraps and filings.

Drayman's Bottom. An enlargement of the bursa situated over the tuberosity of the ischium.

Dream (*drēm*) [ME., *dremen*, to dream]. 1. An involuntary series of images, emotions, and thoughts presented to the mind during sleep. 2. To be conscious of such manifestations. **D., Waking,** an illusion or hallucination. **D., Wet,** a term given to the emission of semen during sleep.

Dreamy (*dre'-me*) [ME., *dremen*, to dream]. Full of dreams. **D. State,** a common psychic aura of epilepsy in which the patient experiences a sensation of strangeness or sometimes of terror. It may be associated with flashes of light or auditory auræ.

Drechsel's Test. See *Tests, Table of.*

Drechsler's Test. See *Tests, Table of.*

Drench [ME., *drenchen*, to drench, drown]. In veterinary practice, a draught of medicine.

Drepanidium (*dre-pan-id'-e-um*) [δρεπάνη, a sickle]. The sickle-shaped young of certain protozoans. **D. ranarum,** a (probably) parasitic cytozoön of frogs' blood.

Dressed Mouth (*drest mowth*). That condition produced by the fraudulent practice of filing the teeth, used to make an old horse appear young.

Dresser (*dres'-er*) [ME., *dressen*, to make straight]. An attendant (in English hospitals, usually a student) whose special duty it is to dress and bandage wounds, and attend to other ward work.

Dressing (*dres'-ing*) [ME., *dressen*, to make straight]. 1. The application of a bandage, lint, or other substance to a wound or ulcer. 2. The material so applied. 3. In metallurgy, the mechanical treatment that an ore receives after being brought to the surface; concentration.

Dressler's Disease. See *Diseases, Table of.*

Drewsen's Test. See *Tests, Table of.*

Drill (*dril*) [AS., *thyrelian*, to pierce]. A surgical instrument used in perforating bones, calculi, or teeth. **D.-bone,** a flat osteoma. **D.-bow,** a bow and string for rotating a drill-stock, effected by passing the string around it, and moving it backward and forward. **D.-stock,** an instrument for holding and turning a drill, either by the thumb and finger or by a handle. **D.-stock, Flagg's,** an instrument for drilling into the

pulp-cavity of a tooth for the purpose of giving egress to matter formed there in the process of suppuration of the pulp.

Drimys (*dri'-mis*) [δριμύς, piercing]. A genus of magnoliaceous trees, largely S. American. **D. granatensis, D. mexicana,** and **D. winteri** afford *Winter's Bark*, an aromatic and stimulant tonic, formerly in repute as an alterative. Unof.

Drink [ME., *drinken*, to drink]. To swallow a liquid. The liquid that is swallowed. A draught.

Dripping Sheet (*drip'-ing shet*). A means of reducing temperature in fever, entirely distinct from the wet pack. The patient is placed erect in a tub containing twelve inches of water at 100°. A linen sheet (the coarser the better) is dipped in water at 70°, which is reduced daily two degrees until 48° is reached. This sheet is thrown over the patient from behind, covering the head and body, so that it clings to the person. The attendant now makes rapid passes with both hands, beginning anteriorly and posteriorly, so as to produce friction and afflux of blood to the surface. Occasionally cold water at from 40° to 70° is thrown on from a cup and friction renewed. The procedure is also said to be useful in anemia.

Drivelling (*driv'-el-ing*) [ME., *drinclen*]. 1. An involuntary flow of the saliva, as in old age, infancy, idiocy, and mental stupor. 2. Senile weakness of mind.

Drivers' Spasm (*dri'-verz spazm*). See *Spasm.*

Dromograph (*drom'-o-graf*) [δρόμος, a course; γράφειν, to write]. An instrument for registering the velocity of the blood-current.

Drop. See *Gutta* and *Minim.* 1. To let fall in globules or drops, as a liquid. 2. To let fall from the womb. 3. A spheric mass of fluid-material. **D.-culture,** in bacteriology, a culture prepared by placing a drop of the infected material in a culture-medium. **D.-meter.** See *Dosimeter.* **D.-serene.** See *Gutta serena.* **D.-shoulder,** the condition in which one shoulder is on a much lower level than the other; not uncommonly met with in hysterical girls.

Dropped Hand, or **Wrist** (*dropt hand* or *rist*). A form of paralysis from lead-poisoning, consisting in the inability to contract the extensors of the forearm. **D. Foot,** a deformity, especially observed in alcoholic peripheral neuritis, and dependent upon weakness of the flexors of the foot.

Dropper (*drop'-er*) [ME., *droppen*, to drop]. A bottle, tube, or pipet, fitted for the emission of a liquid drop by drop. See *Stopper-dropper.*

Dropsical (*drop'-sik-al*) [ὑδρωψ, dropsy]. Affected with or pertaining to dropsy.

Dropsy (*drop'-se*) [ὑδρωψ, dropsy]. See *Hydrops.* **D. of Belly.** See *Ascites.* **D. of Brain.** See *Hydrocephalus.* **D., Cardiac,** that due to failure of compensation in cardiac disease. **D., False,** an accumulation of liquid in a cavity of an organ from obstruction of the outlet; a retention-cyst. **D. of Chest.** See *Hydrothorax.* **D. of Peritoneum,** ascites, hydroperitoneum. **D. of Pericardium,** hydropericardium. **D. of Spine.** See *Spina bifida* and *Hydrorrhachis.* **D. of Testicle.** See *Hydrocele.* **D. of Uterus.** See *Hydrometra.*

Drosera (*dros'-er-ah*) [δροσερός, dewy]. Sundew; the *D. rotundifolia*, native of U. S. and Europe. An antispasmodic, useful in whooping-cough and other spasmodic coughs. Dose of the fluid extract ɱv–xx; of the tincture (1 in 10) ɱv–xv. Unof.

Droserin (*dros'-er-in*) [δροσερός, dewy]. A ferment resembling pepsin and found in the digestive secretions of most of the insectivorous plants.

Drown [ME., *drownen*, to drown]. To deprive of life by immersion in a fluid.

Drowning (*drown'-ing*) [ME., *drownen*, to drown]. Depriving of life by immersion in a fluid. **D., Intra-uterine.** See *Intra-uterine.* **D., Treatment of.** See *Artificial Respiration.*

Drowsy (*drow'-ze*) [AS., *drūsan*, to sink]. Inclined to sleep; sleepy.

Drug [ME., *drugges*]. A substance, simple or compound, natural or prepared, single or mixed with other substances used as a medicine. **D., Antagonistic,** one that neutralizes the action of another by a process other than chemic. **D.-eruptions.** See *Dermatitis medicamentosa.* **D.-habit,** the acquiring of a tolerance for a drug after long administration, by which its physiologic action in normal dose is abolished. This may be avoided by intermitting the remedy from time to time.

Druggist (*drug'-ist*) [ME., *drugges*]. One who deals in drugs.

Drum [ME., *drumme*]. The tympanum. The labyrinth of a bird. **D.-belly.** See *Tympanites.* **D. of Ear.** See *Tympanum.* **D.-head.** See *Membrana tympani.*

Drumin (*drum'-in*) [Drummond, a botanist]. A name given to the alkaloid extractive of *Euphorbia drummondii*, an Australian plant. It is said to be a local anesthetic, and is claimed, also, to be an impure calcium oxalate. Unof. See *Anesthetic.*

Drummers' Palsy (*drum'-erz pawl'-ze*). A form of occupation-neurosis, dependent upon the constrained attitude of the hand in beating a drum.

Drummond's Whiff. See *Signs and Symptoms, Table of.*

Drumstick-bacillus. See *Bacteria, Synonymatic Table of.*

Drunkard (*drunk'-ard*). One given to excessive indulgence in spirituous drinks. **D.'s Liver,** a cirrhotic liver. **D.'s Pneumonia,** a grave form of pneumonia occurring in drunkards; it is usually fatal.

Drunkenness (*drunk'-en-nes*) [AS., *druncen*, drunken]. Acute or habitual alcoholic intoxication. See *Alcoholism, Dipsomania, Inebriety.*

Drupe (*drūp*) [δρύπα, an over-ripe olive]. In biology, a stone-fruit, as the cherry, peach, and plum.

Drupelet (*drūp'-let*) [δρύπα, an over-ripe olive]. A little drupe.

Drupetum (*dru-pe'-tum*) [*drupa*, a drupe]. In biology, an aggregation of drupes, as in a blackberry.

Druse (*drūs*) [Ger.]. A wound that does not communicate with any surface; a rupture of the tissues with no superficial lesion.

Dry (*dri*) [ME., *drye*]. 1. Without moisture. 2. Barren. 3. To evaporate. **D.-ash System.** See *Dry-earth System.* **D. Belly-ache.** See *Girdle-pain.* **D. Caries.** See *Onychomycosis.* **D. Cupping.** See *Cupping.* **D.-earth System,** *Dry-ash System;* a method of disposing of feces by mingling with them dry earth or ashes in sufficient quantity to absorb all moisture from them, so as to render them inodorous and to prevent decomposition. **D. Gangrene.** See *Gangrene.* **D. Itch.** Synonym of *Lichen.* **D. Labor,** one in which there is but a slight discharge of liquor amnii. **D. Mouth.** See *Xerostomia.* **D.-nurse,** a nurse who attends and feeds a child, but does not suckle it. **D. Pile,** a hemorrhoid that does not bleed. **D. Pleurisy,** pleurisy without effusion. **D.-scall,** a synonym of psoriasis. **D.-swimming,** swimming exercise in the air, a useful gymnastic measure. **D. Tetter.** See *Psoriasis.* **D. Wine,** a wine containing little or no sugar. See *Wines.*

Dryer's Test. See *Tests, Table of.*

Drying Oils. See *Oils and Fats.*

Drysdale's Cells or Corpuscles. Certain microscopic cells in ovarian fluid, generally round, sometimes oval in form, transparent, containing fine granules, but no nucleus. They have been described as pathognomonic of ovarian cysts, but this is disputed.

Dualin (*du'-al-in*) [*dual*, of two]. An explosive composed of a mixture of nitro-glycerin 50 parts and nitrated sawdust 50 parts. *Giant powder* and *rend-rock* are similar mixtures.

Dualism (*du'-al-izm*) [*duo*, two]. A system by which natural phenomena are explained upon two principles. **D., Chancrous,** the theory of the existence of two forms of chancre—the non-infecting, or soft chancre, and the infecting, or true (hard) chancre.

Dualistic (*du-al-is'-tik*) [*dual*, of two]. Characterized by duality. **D. Theory of the Composition of Carbon-compounds;** every chemic compound is composed of two groups, electrically different, and these are further made up of two different groups or elements. The *Electro-chemic, dualistic theory of Berzelius* was prevalent in Germany until about 1860.

Duality (*du-al'-it-e*) [*dualitas*, dual]. Dualism; the supposed distinction, and potentially independent action, of each of the cerebral hemispheres.

Dubini's Disease. "Electric chorea;" myelitis convulsiva; a malady met with in Italy, differing from chorea in the character of the movements, which are sudden and shock-like; in the course of the disease, which is progressive and often fatal; and in the addition of muscular palsy and wasting. Its etiology and pathology are obscure. See *Diseases, Table of.*

Dublin Method. See *Treatment, Methods of.*

Dubois' Caustic. See *Caustic.*

Duboisia (*du-bois'-e-ah*) [after *Dubois*, a French botanist]. The leaves of *D. myoporoides*, an Australian tree. It resembles belladonna in physiologic and therapeutic effects. **D., Ext.** Dose gr. ⅙–¼. **D., Ext. Fld.** Dose ♏ v–x. **D., Tinct.** Dose ♏ v–xx.

Duboisin (*du-bois'-in*)[after *Dubois*, a French botanist], $C_{70}H_{23}N_6O$. An alkaloid from *Duboisia myoporoides*, identical with hyoscyamin.

Dubrueil's Operation. See *Operations, Table of.*

Duchenne's Disease. See *Diseases, Table of.* **D. Paralysis.** See *Diseases, Table of.* **D.-Aran Type of Muscular Atrophy.** See *Diseases, Table of.*

Duck-bill Forceps. See *Forceps.* **D. Speculum.** See *Speculum.*

Duckett's Closet. See *Sewage, Disposal of.*

Duck-foot (*duk'-foot*). Synonym of *Flat-foot.*

Duck-legged (*duk-leg'-ed*). Having very short legs.

Duck-weed Disease (*duk'-wēd dis-ēz'*). A German name for tuberculosis in cattle.

Duckworth's Theory. The *neuro-humoral theory* of the origin of gout. It is that there is a basic, arthritic stock, a diathetic habit, of which gout and rheumatism are two distinct branches. The gouty diathesis is expressed in (*a*) an abnormality of the nerve-centers, which may be inherited or acquired; and (*b*) a peculiar incapacity for normal elaboration within the whole body, whereby uric acid is formed at times in excess or is incapable of being duly transformed into more soluble and less noxious products.

Duct, or **Ductus** [*ducere*, to lead]. A tube for the conveyance of the fluids of the body. **D., Aberrant,** a small, blind, coiled tube, 2 to 14 inches in length, running from the lower portion of the canal of the epididymis. **D., Aberrant Bile,** one of a number of biliary ducts, occasionally found in the left lateral ligament of the liver. They are not surrounded by lobules and are the remains of hepatic substance, present at an early stage of development. **D., Acoustic,** the external auditory meatus. **D., Adipose,** one of the sacs in cellular tissue containing the fat. **D., Air,** in biology, one of the intercellular spaces in aquatic plants, containing air. **D., Alimentary.** See *D., Thoracic.* **D., Alveolar,** one of the infundibula of the bronchioles. **D., Annular,** in biology, one of the ring-shaped thickenings of the cells of vascular tissue. **D. of Arantius.** See *D. venosus.* **D., Archinephric.** See *D., Mesonephric.* **D., Arterial.** See *D. arteriosus.* **D. arteriosus,** a short vessel in the fetus between the main pulmonary artery and the aorta. It becomes obliterated at birth. **D., Auditory,** the space between the membrana tectoria and the membrana basilaris of the cochlea. **D. of Bartholin,** the larger and longer of the sublingual ducts, opening into the mouth near to, or in common with, Wharton's duct. **D. of Bellini,** one of the excretory tubes of the kidneys. **D., Biliary.** See *D., Common Bile.* **D. of Botal.** See *D. arteriosus.* **D., Branchial,** in *Myxontes*, a short tube between the branchial pouch and the intestinal cavity. **D., Canalicular,** one of the smaller galactophorous ducts of the mammæ. **D., Cement,** in *Cirripedia*, one of a number of tubes that pass through the antennæ from the cement-glands. **D. choledochus.** See *D., Common Bile.* **D., Cochlear.** See *Canal, Cochlear.* **D., Common Bile,** a duct about three inches long formed by the union of the cystic and hepatic ducts, and conveying the bile to the duodenum. **D. of Cuvier,** in the fetus, one of two short transverse venous trunks, on either side, opening into the auricle of the heart, each being formed by the union of a superior vein, the primitive jugular, and an inferior vein. The right one becomes the superior vena cava; the left one disappears. **D., Cysthepatic.** See *Hepato-cystic.* **D., Cystic,** the excretory duct of the gall-bladder; it is about 1½ inches long, runs backward, downward, and to the left and unites with the hepatic duct to form the common bile-duct. **D. of Darwin.** See *D., Cement.* **D., Definitive,** one of the straight milk-ducts in the nipple. **D., Efferent.** Same as *Canal, Deferent.* **D., Egestive.** See *D., Excretory.* **D., Ejaculatory,** a duct about an inch long, on either side of the body, formed by the union of the vas deferens and the seminal vesicle. The semen passes through it into the urethra. **D., Endolymphatic,** a tubular process of the membranous labyrinth of the ear, passing through the aqueduct of the vestibule into the cranial cavity, where it terminates below the dura mater in a blind enlargement, the sacculus endolymphaticus. **D., Esophago-cutaneous,** in biology, a duct joining the esophagus with the branchial pore, and thus with the exterior. **D., Excretory,** the tube through which the secretion of a gland is discharged. **D., Galactophorous,** one of the 15 or 20 milk-ducts of the lobes of the mammary glands. They converge toward the areola, and terminate upon the surface of the nipple in small depressions. **D., Gall.** See *D., Bile, D., Hepatic,* and *D., Cystic.* **D. of Gärtner,** the canal of Gärtner. See *Canal.* **D., Genital,** the genital canal. See *Canal.* **D., Guttural,** the Eustachian tube. **D., Hepatic,** a duct, 1½ inches long, formed at the margin of the transverse fissure of the liver by the right and left hepatic ducts. It unites with the cystic duct to form the common bile-duct. **D., Hepatic, Left,** a duct arising from the left lobe of the liver, and joining the right hepatic duct to form the common hepatic duct. **D., Hepatic, Middle,** an occasional branch of the hepatic duct, conveying the bile from the quadrate lobe of the liver. **D., Hepatic, Right,** a duct arising from the right lobe of the liver, and joining the left hepatic duct, to form the common hepatic duct. **D., Hepato-cystic,** one of the biliary ducts emptying

directly into the gall-bladder. **D., Hepato-pancreatic,** a duct conveying the secretions of the liver and pancreas into the intestinal canal; the common bile-duct. **D., Hermaphrodite,** a duct that in hermaphroditic animals receives the male and female elements. **D., Hemithoracic,** an ascending branch of the thoracic duct, given off high in the thorax, and opening either into the right lymphatic duct or close to the angle of union of the right subclavian and right internal jugular veins. **D. inferens,** in certain *Edentata*, one of the ducts leading from the submaxillary glands to a common receptacle for the secretion of the gland. **D., Intercellular,** the intercellular canal. See *Canal.* **D., Interlobular, Bile,** one of the ducts situated between the lobules of the liver. They are of two varieties, small and large. **D., Intralobular, Bile,** one of the intralobular canals. See *Canal.* **D., Lachrymal.** See *D., Nasal.* **D., Lactiferous.** See *D., Galactophorous.* **D., Leydig's.** See *D., Mesonephric* and *D., Urogenital.* **D., Lymph.** See *D., Thoracic.* **D., Lymphatic.** See *D., Thoracic.* **D., Lymphatic, Left.** See *D., Thoracic.* **D., Lymphatic, Right,** the vessel that receives the lymph from the absorbent vessels of the right arm, the right side of the head and neck, the chest, lung and right side of the heart, and also from the upper surface of the liver. It terminates at the junction of the right subclavian and internal jugular veins. **D., Mammary.** See *D., Galactophorous.* **D., Mesonephric,** an embryonic duct belonging to the mesonephron, and formed by the longitudinal fission of a portion of the segmental duct. In the male, it becomes the vas deferens, while in the female it almost entirely disappears. **D., Metanephric,** the *Ureter*, *q. v.* **D., Milk.** See *D., Galactophorous.* **D., Muco.** See *Canal, mucous.* **D., Mucous.** See *Canal, mucous.* **D. of Müller,** a tube (on either side of the body) formed by the undivided portion of the segmental duct, and of the longitudinal tubes into which it divides. From them in the female are developed the oviducts, uterus and vagina, while in the male they atrophy and disappear. **D., Nasal,** the duct, ½ an inch long, that conveys the tears from the lachrymal sac into the inferior meatus of the nose. **D., Naso-lachrymal.** See *D., Nasal.* **D., Nuckian,** one of the excretory ducts of the orbital gland of the dog. **D., Omphalic.** See *D., Vitelline.* **D., Omphalo-mesenteric.** See *D., Vitelline.* **D., Pancreatic,** a duct that extends from the pancreas to the duodenum at the point where the common bile-duct enters the bowel. **D., Pancreatic, Accessory,** the excretory duct of the lesser pancreas, opening into the pancreatic duct or into the duodenum, close to the orifice of the common bile-duct. **D., Pancreatic, Supplementary.** See *D., Pancreatic, Accessory.* **D., Parotid.** See *D. of Stensen.* **D. of Pecquet,** the thoracic duct. **D., Pneumatic,** in fishes, the tube that connects the swimming-bladder with the esophagus. **D., Pronephric.** See *D., Segmental.* **D., Prostatic,** one of the ducts conveying the secretion of the prostate into the urethra. **D., Reticulate,** in biology, an aggregation of parenchymatous tissue-cells, in which the thickenings assume the form of a network. **D. reuniens,** a small duct leading from the saccule to the membranous labyrinth of the cochlea. **D. of Rivini,** one of the ducts of the sublingual gland. **D., Roriferous.** See *D., Thoracic.* **D., Sacculo-utricular,** a small canal connecting the saccule of the internal ear with the utricle. **D. of Santorini.** Same as *D., Pancreatic, Accessory.* **D., Scalariform,** in biology, one of numerous parallel narrow and elongated bordered pits in plant-cells set close together like the rounds of a ladder. **D., Secretory,** one of the smaller ducts of a gland, tributaries of the excretory duct. **D., Segmental,** in embryology, a tube, on either side of the body, situated between the visceral and parietal layers of the mesoblast, opening anteriorly into the body-cavity, and posteriorly into the cloaca. **D., Seminal.** See *D., Ejaculatory.* **D., Spermathecal,** in certain *Mollusca*, the duct that connects the spermatheca with the hermaphrodite duct. **D., Spermatic,** the *Vas deferens*; *q. v.* **D., Spiral,** in biology, the prosenchymatous cell-tissue, the walls of which are marked by spiral thickenings. **D. of Steno.** See *D. of Stensen.* **D., Stenon's.** See *D. of Stensen.* **D., Stenonine.** See *D. of Stensen.* **D. of Stensen,** I. a duct about 2½ inches long, conveying the secretion of the parotid gland into the mouth, opening on the inner side of the cheek, about opposite to the second upper molar tooth. 2. See *Canal, Incisive.* **D., Sublingual.** See *D. of Rivini* and *D. of Bartholin.* **D., Tear,** the nasal duct. **D., Testicular,** the vas deferens, *q. v.* **D., Thoracic,** a duct 18 to 20 inches long, extending from the receptaculum chyli, in front of the vertebræ as far as the seventh cervical vertebra, where it curves down over the subclavian artery and empties into the left subclavian vein at its junction with the left internal jugular vein. It receives the lymph and chyle not received by the right lymphatic duct. **D., Thyroglossus,** in the embryo, a duct that terminates upon the tongue as the foramen cecum, and leads to the rudiments of the thyroid body. **D., Trabecular,** in biology, prosenchymatous tissue-cells, in which thickenings cross the lumen of the cell. **D., Urogenital,** in biology, a duct that receives the urine and the genital products. **D., Uropygial,** in birds, a duct leading from the uropygial gland. **D., Uroseminal.** See *D., Uro-genital.* **D. venosus,** the smaller, shorter, and more posterior of the two branches into which the umbilical vein divides after entering the abdomen. It empties directly into the ascending vena cava. After the birth of the fetus it becomes obliterated. **D., Vitellarian,** the canal in which an ovum receives its investment of albuminoid substance. **D., Vitelline,** a temporary channel of communication between the alimentary canal of the embryo and the umbilical vesicle. **D., Vitello-intestinal.** See *D., Vitelline.* **D. of Wharton,** the duct, about two inches long, of the sublingual gland, opening in the mouth at the side of the frenum linguæ. **D. of Wirsung,** the pancreatic duct. **D., Wolffian,** the mesonephric duct. **D., Yellow.** See *Canal, Eschricht's.*

Ductule (*duk'-chūl*) [*ductulus*, a small duct]. A small duct, as the straight seminal ducts.

Dudgeon's Recipe. A formula for varnish to preserve sphygmographic and cardiographic tracings. It consists of one ounce of gum dammar dissolved in six ounces of rectified benzolin.

Dudley's Operation. See *Operations, Table of.* **D. Tests.** See *Tests, Table of.*

Duflos' Tests. See *Tests, Table of.*

Dugas' Test. A method of diagnosis in dislocation of the shoulder. If the hand of the affected side is made to clasp the opposite shoulder, the elbow cannot be made to touch the front of the chest.

Dugong Oil (*du'-gong*). The fixed oil afforded by the dugong, *Halicore australis*, a marine sirenian mammal. It is regarded as a good substitute for cod-liver oil.

Duhring's Disease, or **Impetigo.** See *Impetigo, Dermatitis herpetiformis*, and *Diseases, Table of.*

Dulcamara (*dul-kam-a'-ra*) [*dulcamara*, bitter-sweet]. Bittersweet. The young branches of *D. solanum*, containing several glucosids and an alkaloid. Its properties are not well understood. It causes nausea,

emesis and convulsive muscular movements, and in toxic doses is a narcotic poison. It is now employed in psoriasis and similar skin-diseases. **D., Fld. Ext.** Dose ʒj. **D., Decoctum,** unof., 10 per cent. strength. Dose ℥j–ij.

Dulcamarin (*dul-kam-a'-rin*) [*dulcamara*, bitter-sweet] $C_{22}H_{34}O_{10}$. An alkaloid of *Bittersweet*. It is a yellow, amorphous powder, with a sweetish-bitter taste, sparingly soluble in water, freely so in alcohol and acetic acid, insoluble in ether and chloroform.

Dulcin (*dul'-sin*). See *Dulcitol.*

Dulcite (*dul'-sīt*). See *Dulcitol.*

Dulcitol (*dul'-sit-ol'*) [*dulcis*, sweet] $C_6H_{14}O_6$. Dulcin, dulcite; an hexahydric alcohol occurring in various plants, and obtained from dulcitol manna (originating from Madagascar manna). It is made artificially by the action of sodium amalgam upon milk-sugar and galactose. It crystallizes in large monoclinic prisms, having a sweet taste. It is sparingly soluble in water, and melts at 188° C. It is said to be two hundred times as sweet as sugar.

Dull (*dul*) [ME., *dul*, stupid]. 1. Slow of perception. 2. Not resonant on percussion. 3. Not bright in appearance. 4. Not sharp; blunt.

Dullness (*dul'-nes*) [ME., *dul*, stupid]. The quality of being dull, in any sense; lack of resonance on percussion.

Dulong and Petit's Law. See *Law.*

Dulse (*duls*) [Gael., *duileasg*, dulse]. A popular name for various edible sea-weeds, such as *Rhodymenia palmata*. These are popularly esteemed as pectoral remedies. Unof.

Dumas, Method of. A method for the determination of nitrogen. In a glass tube (from 70 to 80 cm. long) sealed at one end, place a layer (about 1 cm.) of dry, primary sodium carbonate or magnesite, then pure cupric oxid (6 cm.), afterwards a mixture of the substance with the cupric oxid; then again pure granular cupric oxid (from 20 to 30 cm.), and finally fill the tube with pure copper turnings (about 20 cm.). In the open extremity of the tube is placed a rubber cork, bearing a gas-delivery tube, which extends into a mercury bath. The back part of the combustion-tube, containing the carbonate, is heated first, to expel the air from all parts of the apparatus. A graduated cylinder, filled with mercury, is placed over the extremity of the exit-tube; into the tube containing mercury several cubic centimeters of concentrated potassium hydroxid are introduced by means of a pipet. The metallic copper and the layer of cupric oxid in the anterior portion of the tube are first heated and then gradually the mixture. When the combustion is completed, heat is applied to another part of the sodium carbonate layer. The graduated vessel, containing pure nitrogen, is placed in a large cylinder of water, allowed to stand a short time until the temperature is equalized, when the volume of gas is read and the temperature of the surrounding air and the barometer-height are noted.

$$G = \frac{V}{760}\left\{\frac{(h - w)}{1 + 0.00367} \times 0.0012562\right.$$

G = the weight of the nitrogen volume in grams. V = the absorbed volume in cubic centimeters. h = the barometric pressure. w = the tension of aqueous vapor at the temperature 1°C. 0.0012562 = the weight, in grams, of 1 c.c. of nitrogen at 0°C., and 760 mm. pressure.

Dumb (*dum*) [ME., *dumb*, mute]. Unable to utter articulate speech. **D. Ague,** a popular expression for ague or malarial sickness marked by obscure symptoms. **D.-bell,** a weight consisting of two iron balls connected by a shaft, used in exercise for health and development. **D.-bell Crystals,** crystals of calcium oxalate, sometimes seen in the urine. **D.-cane,** the *Caladium seguineum*, or *Dieffenbachia seguinea*, a W. Indian plant; when bitten it causes the lips and mouth to swell, and thus may produce temporary inability to speak. The plant is used in preparing an ointment, and is said to be useful in dropsies.

Dumbness (*dum'-nes*) [ME., *dumb*, mute]. Inability to utter articulate speech.

Dumetose (*du'-met-ōs*) [*dumus*, a bramble]. In biology, belonging to a thicket; bush-like.

Dumont's Blue. Same as *Smalts.*

Dumose(*du'-mōs*) [*dumus*, a thorn-bush]. In biology, bushy, or pertaining to a bush.

Dumoutier's Horizontal Plane. See *Plane.*

Duncan's Operation. See *Operations, Table of.*

Dung [ME., *dung*, dung]. Excrement; feces; ordure. **D.-bath.** See *Pigments, Colors, and Dye-stuffs.* **D.-hill,** a heap of dung.

Dunga (*dun'-gah*). Synonym of *Dengue.*

Dunging (*dung'-ing*). See *Pigments, Colors, and Dye-stuffs.*

Dunham's Solution. A culture-medium composed of sodium chlorid, 5 parts; dried peptone, 1 part; distilled water, 100 parts.

Duodenal (*du-o-de'-nal*, or *du-od'-en-al*) [*duodeni*, twelve each]. Relating to the duodenum. **D. Ulcer,** ulceration of the duodenum. It may be *acute*, as after severe burns or scalds, or after exposure to extreme cold; or (more commonly) it may be *chronic*, occurring usually in old alcoholic males. Its most frequent seat is in the first part of the duodenum, either on the anterior or posterior wall. It is probably due to the action of the gastric juice upon the intestinal wall which has been devitalized as the result of some form of malnutrition. Perforation and fatal peritonitis may ensue if the ulcer be situated on the anterior wall.

Duodenitis (*du-o-den-i'-tis*) [*duodeni*, twelve each; *ιτις*, inflammation]. Inflammation of the duodenum.

Duodeno-cholecystotomy (*du-o-de'-no-ko-le-sis-tot'-o-me*) [*duodeni*, twelve each; *χόλη*, bile; *κύστις*, bladder; *στόμα*, mouth]. An operation for establishing an artificial communication between the gall-bladder and duodenum.

Duodeno-enterostomy (*du-o-de'-no-en-ter-os'-to-me*) [*duodeni*, twelve each; *ἔντερον*, bowel; *στόμα*, mouth]. The establishment of an artificial communication between the duodenum and some portion of the small intestine.

Duodeno-jejunal (*du-o-de'-no-jej-u'-nal*) [*duodeni*, twelve each; *jejunus*, dry]. Pertaining to the duodenum and the jejunum.

Duodeno-renal (*du-o-de'-no-re'-nal*) [*duodeni*, twelve each; *ren*, the kidney]. Relating to the duodenum and to the kidney.

Duodenostomy (*du-o-de-nos'-to-me*) [*duodenum; στόμα*, a mouth]. The operation of opening the duodenum, and the attachment of the lips of the intestinal slit to the walls of the abdomen, in order to form an artificial mouth for the introduction of nutriment.

Duodenotomy (*du-o-den-ot'-o-me*) [*duodenum; τέμνειν*, to cut]. Surgical incision of the duodenum.

Duodenum (*du-o-de'-num*, or *du-od'-en-um*) [*duodeni*, twelve each; so called because it is about twelve finger-breadths long]. The first part of the small intestine beginning at the pylorus.

Duotal (*du'-o-tal*). Guaiacol carbonate, $C_{15}O_5H_{14}$, a crystalline substance; it is used in tuberculosis. Dose gr. iij–viij, three times a day.

Duplay's Operation. See *Operations, Table of.*

Duplicana (*du-plik-a'-nah*) [*duplicare*, to double]. A double tertian ague.

Duplication (*du-plik-a'-shun*). Same as *Reduplication*, *q. v.*

Duplicature (*du'-plik-a-chur*) [*duplicare*, to double]. The reflection, or folding of a membrane upon itself.

Duplicity (*du-plis'-it-e*) [*duplicitas*, doubleness]. The condition of being duplex or double.

Dupuytren's Contraction. See *Diseases, Table of.* **D. Hydrocele.** See *Diseases, Table of.* **D. Ointment**, an ointment used to correct baldness. It contains ox-marrow 250, lead acetate 4, balsam of Peru 8, diluted alcohol 30, tinct. of camphor, 1½, tinct. of cloves and tinct. of cinnamon, each 1. **D. Operation.** See *Operations, Table of.* **D. Splint**, a splint used in the treatment of Pott's fracture of the leg. **D. Suture.** See *Suture.*

Dura (*du'-rah*) [*durus*, hard]. The *Dura mater*, *q. v.* **D. mater**, the outer membrane of the brain and spinal cord. It is divided into the *cerebral* and *spinal* or *rhachidian* dura, and its cerebral portion is in part identical with the endocranium. **D. m. testis**, the tunica albuginea of the testis.

Durærematoma (*dur-em-at-o'-mah*). See *Durematoma.*

Dural (*du'-ral*) [*durus*, hard]. Pertaining to the dura.

Duramen (*dur'-am-en*) [*durare*, to harden]. In biology, heart-wood.

Durande's Solvent. A solvent for biliary calculi; it consists of three parts of ether and two of turpentine, administered in capsules immediately before meals. **D. Treatment.** See *Treatment, Methods of.*

Duration (*du-ra'-shun*) [*durare*, to last]. Continuance in time. **D. of Life**, several methods of ascertaining the duration of life are employed: 1. The Mean Age at Death; 2. the Probable Duration of Life; 3. the Mean Duration of Life; 4. the Expectation of Life, or mean after-lifetime; and 5. the number living out of which one dies annually. According to the English Life-table No. 3, the mean age at death is 40.9 years, but this test is, for several reasons, fallacious, though it is of exceptional interest when the deaths from various diseases are considered. See *Probable D. of L.*, *Expectation of Life*, and *Life-table.*

Durematoma (*dur-em-at-o'-mah*) [*dura*, hard; *αἷμα*, blood; *ὄμα*, tumor: *pl.*, *Durematomata*]. Hematoma of the dura; an accumulation of blood between the dura and arachnoid.

Durene (*du'-rēn*) [*durus*, hard] $C_{10}H_{14}$. A hydrocarbon, present in coal-tar. It is a crystalline substance that possesses a camphor-like odor; it melts at 79–80° C., and boils at 190° C.

Dürer, Angle of. See *Angle.* **D., Plane of.** See *Plane.*

Durham's Tube. The lobster-tail tube largely used in tracheotomy.

Durilic Acid (*du-ril'-ik*). See *Acid, Durilic.*

Duro-arachnitis (*du'-ro-ar-ak-ni'-tis*) [*durus*, hard; *ἀράχνη*, a spider; *ιτις*, inflammation]. Inflammation of the dura and arachnoid membrane.

Duroziez' Murmur. See *Signs and Symptoms, Table of.*

Dusart-Blondlot's Test. See *Tests, Table of.*

Dust-occupations. Those that from the nature of the particles of the dust produced may give rise to pneumoconiosis, tuberculosis, or bronchitis.

Dutch (*duch*) [ME., *Dutche*]. Pertaining to Holland. **D. Bitters.** See *Latifia.* **D. Gold**, an alloy of copper and zinc. **D. Liquid.** See *Ethene Chlorid.* **D. Mineral**, copper beaten out into very thin leaves. **D. White.** Same as *Hamburg White.*

Duval's Operation. See *Operations, Table of.*

Du Verger, Suture of. See *Suture.* **D. Method.** See *Operations, Table of.*

Duverney, Foramen of. See *Foramina, Table of.* **D. Glands.** See *Gland.*

Dware's Test. See *Tests, Table of.*

Dwarf (*dworf*) [ME., *dwarf*]. A being characterized by completed physical development, but having the various parts of unnaturally small dimensions, owing to insufficient growth. This condition is frequently associated with sterility and impotence. See *Nanism*, *Nanus.* **D. Elder**, the *Aralia hispidia.* Its root is a valuable diuretic. Dose of fld. ext. ʒj-ij. Unof. **D. Tape-worm.** See *Tænia nana.*

Dyad (*di'-ad*). See *Quantivalence.*

Dyaster (*di-as'-ter*) [*δίς*, two; *ἀστήρ*, star]. In biology, the karyokinetic figure assumed by the aster of a dividing nucleus before the formation of the stars at the ends of the nuclear spindle. It is the sixth stage of *Karyokinesis.*

Dye (*di*) [ME., *dyen*, to dye]. To color a substance by immersing it in some coloring-matter. The material used as a coloring-substance. **D.-stuffs.** See *Pigments*, *Colors*, and *Dye-stuffs.*

Dyer's Broom. See *Pigments, Conspectus of.*

Dyerism (*di'-er-izm*) [*Dyer*, the physician who proposed it]. A simple means of giving exercise to all the ocular muscles at once. It consists merely in reading a certain definite small amount daily, and increasing that amount systematically as the strength of the eyes increases.

Dyerizing (*di'-er-īz-ing*). See *Dyerism.*

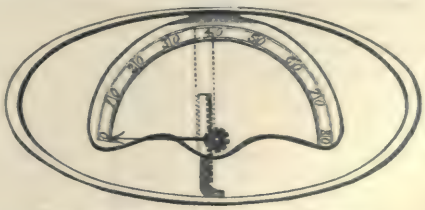
Dynam (*di'-nam*). See *Dyne.*

Dynamia (*di-na'-me-ah*) [*δύναμις*, power]. 1. Ability to resist diseases, or to withstand the effects of any strain, physical or mental. 2. The sthenic character of any attack of disease.

Dynamic (*di-nam'-ik*) [*δύναμις*, energy]. Pertaining to energy. In medicine, a synonym of *Sthenic*, *q. v.* **D. Squint.** See *Insufficiency.*

Dynamics (*di-nam'-iks*). See *Mechanics.*

Dynamite (*di'-nam-īt*) [*δύναμις*, power]. An explosive consisting of nitro-glycerin incorporated with infusorial earth, to give it consistency. It is eight times as powerful as gunpowder.



Dynamization (*di-nam-iz-a'-shun*) [*δύναμις*, power]. The so-called potentizing of medicines by comminution and agitation.

Dynamo (*di'-nam-o*) [*δύναμις*, power]. A dynamo-electric machine; a machine that generates dynamic, or current electricity, instead of static electricity; one in which the current is generated by revolving coils of insulated wire through the field of a magnet intensified by the same current.

Dynamogeny (*di-nam-oj'-en-e*) [*δύναμις*, energy; *γενᾶν*, to beget]. The production of energy; the physiologic generation of force.

Dynamograph (*di-nam'-o-graf*) [*δύναμις*, power; *γράφειν*, to write]. An instrument designed to measure and graphically record muscular strength.

Dynamometer (*di-nam-om'-et-er*) [*δύναμις*, power; *μέτρον*, a measure]. An instrument designed to

DYNAMOMETER OF MATHIEU. (*Landois.*)

measure force, or one for the measurement of muscular strength, particularly of the hand.

Dyne (*dīn*) [*δύναμις*, power]. A force sufficient to

impart a velocity of one centimeter per second to a mass of one gram. See *Electric Units*.

Dys- [δυς-,] a prefix implying difficulty, illness, badness; it may be represented by *bad*, *hard*, *difficult*, *painful*.

Dysacousma (*dis-ak-oos'-mah*) [δυς, painful; ἀκουσία, hearing]. A sensation of pain or discomfort caused by loud or even moderate noises.

Dysacusia, or **Dysacousis** (*dis-ak-oo'-ze-ah* or *-sis*) [δυς, hard; ἀκουσία, hearing]. Hardness or difficulty of hearing.

Dysæsthesia (*dis-es-the'-ze-ah*). See *Dysesthesia*.

Dysalbumose (*dis-al'-bu-mōz*). See *Albumose*.

Dysanagnosia (*dis-an-ag-no'-ze-ah*) [δυς, hard; ἀνάγνωσις, recognition, reading]. Word-blindness; dyslexia.

Dysaphe (*dis'-af-e*) [δυς, painful; ἀφή, touch]. Morbid state of the sense of touch.

Dysapocatastasis (*dis-ap-o-kat-as'-tas-is*) [δυς, hard; ἀποκατάστασις, reëstablishment]. Morbid restlessness and dissatisfaction.

Dysaponotocy (*dis-ap-o-not'-o-se*) [δυς-, difficult; ἄπονος, painless; τόκος, birth.]. Painless, but difficult, labor.

Dysarthria (*dis-ar'-thre-ah*) [δυς-, difficult; ἄρθρον, articulation]. Impairment of the power of speech-articulation, from disease of the medulla and pons. **D. literalis.** Synonym of *Stammering*.

Dysarthrosis (*dis-ar-thro'-sis*) [δυς-, bad; ἄρθρον, a joint]. 1. A deformed joint. 2. A false-joint. 3. A dislocation of a joint.

Dysbasia (*dis-ba'-ze-ah*) [δυς-, difficult; βάσις, a step]. Difficulty of walking. (Proposed instead of abasia, as in the affection there is rarely absolute inability to walk.)

Dysbulia (*dis-bu'-le-ah*) [δυς-, difficult; βούλεσθαι, to will]. Impairment of will-power.

Dyscataposis (*dis-kat-ap'-o-sis*). Synonym of *Hydrophobia*.

Dyschroa, or **Dyschrœa** (*dis'-kro-ah* or *-kre'-ah*) [δυς-, bad; χροά, color]. Discoloration, especially of the skin.

Dyschromatopsia (*dis-kro-mat-op'-se-ah*) [δυς-, ill; χρῶμα, color; ὄψις, vision]. Difficulty in distinguishing colors.

Dyschromia (*dis-kro'-me-ah*) [δυς-, ill; χρῶμα, color]. Discoloration, especially of the skin.

Dyschylia (*dis-ki'-le-ah*) [δυς-, ill; χυλός, chyle]. Disorder of the chyle.

Dyscinesia (*dis-sin-e'-ze-ah*) [δυς-, ill; κίνησις, motion]. Difficult or painful motion.

Dyscoria (*dis-ko'-re-ah*) [δυς-, bad; κόρη, pupil]. Abnormality of the form of the pupil.

Dyscrasia (*dis-kra'-ze-ah*) [δυς-, bad; κρᾶσις, combination]. A depraved or abnormal state; an abnormal or impure condition of the blood, due to general disease.

Dyscrasic, Dyscratic (*dis-kraz'-ik, dis-krat'-ik*) [δυς-, bad; κράσις, combination]. Of the nature of, or affected with a dyscrasia.

Dysecœa, or **Dysecoia** (*dis-es-e'-ah*, or *dis-ek-oi'-ah*) [δυσηκοία, deafness]. Hardness of hearing.

Dysenteria (*dis-en-te'-re-ah*). See *Dysentery*. **D. splenica.** Synonym of *Melena*.

Dysenteric (*dis-en-ter'-ik*) [δυς-, bad; ἔντερον, the bowels]. Of the nature of or affected with dysentery.

Dysentery (*dis'-en-ter-e*) [δυς-, bad; ἔντερον, the bowels]. An acute specific disease marked by inflammation of the solitary glands and follicles of the large intestine, with tormina and tenesmus, and the frequent passage of scanty and bloody stools. Death may result from asthenia, or peritonitis from perforation. Toward the close of grave cases of the disease the stools may become watery, black (the so-called "*meat-washings*"), and of an offensive gangrenous odor. Dysentery is prevalent in all malarious regions, and is also likely to occur among troops when the food is poor and irritating, and the drinking-water impure. **D., Algid,** that form characterized by great feebleness or absence of the pulse-beat, cyanosis, aphonia, suppression of urine, cold surface, and an early fatal issue. **D., Amebic,** that in which the *Ameba coli* is found in the stools. **D., Hemorrhagic,** a grave bowel-disease in India, marked by profuse hemorrhages from the bowels, with collapse. **D., Sporadic,** a mild type occurring in temperate climates. **D., White,** an epidemic variety, with muco-purulent stools.

Dysepulotic (*dis-ep-u-lot'-ik*) [δυς-, bad; ἐπουλωτικός, healing]. Cicatrizing slowly and imperfectly.

Dysesthesia (*dis-es-the'-ze-ah*) [δυς-, difficult; αἴσθησις, sensation]. Dulness of any sensation, especially that of touch. 2. Painfulness of any sensation not normally painful. **D. interna,** amnesia. **D. receptiva,** pain or distress felt in the vertex or occiput, often with a feeling "as if the head were being opened and shut."

Dysgenesis (*dis-jen'-es-is*) [δυς-, hard; γένεσις, generation]. In biology, the second of Broca's four degrees of fecundity—in the union of two species. Cf. *Agenesis*, *Paragenesis*, *Eugenesis*.

Dysgeusia (*dis-ju'-se-ah*) [δυς-, ill; γεῦσις, taste]. Morbidity or perversion of the sense of taste.

Dysgrammatism (*dis-gram'-at-izm*) [δυς-, difficult; γράμμα, a letter]. Inability to make the proper use of words. It is a symptom of certain cerebral diseases.

Dysgraphia (*dis-graf'-e-ah*) [δυς-, difficult; γράφειν, to write]. 1. Inability to write, as a result of a brain-lesion. 2. Imperfect configuration of an organ.

Dyshidrosis (*dis-hid-ro'-sis*). See *Dysidrosis*.

Dysidrosis (*dis-id-ro'-sis*) [δυς-, bad; ἱδρωσις, sweating]. Excessive activity of the sweat-glands, in association with a retention of their secretion, probably due to some neurotic disorder. See *Chiropompholyx*, *Pompholyx*.

Dyskinesia (*dis-kin-e'-se-ah*) [δυς-, difficult; κίνησις, movement]. Impairment of the power of voluntary motion. See *Discinesia*.

Dyslalia (*dis-la'-le-ah*) [δυς-, difficult; λαλεῖν, to talk]. Impairment or difficulty of speaking, due to some non-central lesion (such as a defect of the vocal bands or of the palate).

Dyslexia (*dis-leks'-e-ah*) [δυς-, difficult; λέξις, reading]. Morbid or aphasic difficulty or fatigue in reading.

Dyslochia (*dis-lo'-ke-ah*) [δυς-, bad; λόχια, the lochia]. An abnormal condition of the lochial discharge.

Dyslogia (*dis-lo'-je-ah*) [δυς-, difficult; λόγος, speech]. Difficulty in speech, not so much with individual words as with the expression of ideas; it is due to some central lesion. See also *Alogia*.

Dyslysin (*dis'-lis-in*) [δυς-, difficult; λύειν, to dissolve], $C_{24}H_{36}O_3$. A resinous anhydrid of cholalic acid. It is insoluble in water, alcohol, and alkalies. It is a non-crystalline substance soluble in an excess of ether.

Dysmenorrhea (*dis-men-or-e'-ah*) [δυς, difficult; μήν, month; ῥέειν, to flow]. Obstructed or difficult menstruation. **D., Congestive,** a form of painful menstruation in which often no lesion can be found, the pain being due to an intense congestion of the pelvic viscera. In other cases there exists some morbid condition that is aggravated by the menstrual congestion. **D., Intermediate,** pain occurring regularly each month, but not at the menstrual period. **D., Mechanical.** See *D., Obstructive*. **D., Membranous,**

painful discharge of the menstrual decidua in one or more large pieces, instead of after undergoing disintegration. **D. Mixture.** See *Guaiac Mixture, Fenner's.* **D., Neuralgic.** See *D., Spasmodic.* Also, a term applied to *Neurotic dysmenorrhea, q. v.* **D., Neurotic,** a peculiar form of dysmenorrhea occurring in women of neurotic temperament and marked by neuralgic pains, not confined to the pelvis, but distributed over the body. **D., Obstructive,** that due to mechanical obstruction to the free escape of the menstrual fluid. It is usually due to contraction of the cervical canal, associated with anteflexion of the uterus. **D., Ovarian,** that form in which the pain is apparently entirely in the ovaries. It is aching or burning in character and referred to the *ovarian center,* a spot at the level of and about two inches internal to the anterior superior iliac spine. **D., Spasmodic,** that form of dysmenorrhea due to spasmodic uterine contraction. It is often associated with deficient uterine development.

Dysmerogenesis (*dis-mer-o-jen'-es-is*) [δυς-, bad; μέρος, a part; γεννᾶν, to beget]. In biology, a variety of budding in which the various buds are very dissimilar.

Dysmimia (*dis-mim'-e-ah*) [δυς-, difficult; μιμεῖσθαι, to mimic]. Aphasic difficulty in using signs or symbols in lieu of words.

Dysmnesia (*dis-mne'-ze-ah*) [δυς-, difficult; μνήσις, memory]. Impairment or defect of the memory.

Dysmorphia (*dis-mor'-fe-ah*) [δυς-, ill; μορφή, form]. Deformity.

Dysmyotonia (*dis-mi-o-to'-ne-ah*) [δυς-, bad; μῦς, a muscle; τόνος, tone]. 1. Atony of the muscles. 2. Excessive tonicity in muscles; myotonia.

Dysneuria (*dis-nu'-re-ah*) [δυς-, bad; νεῦρον, nerve]. Nervous disorder or distress; sense-impairment.

Dysnusia (*dis-nu'-ze-ah*) [δυς-, bad; νοῦς, mind]. Weakness or impairment of the mind.

Dysodia (*dis-o'-de-ah*) [δυσωδία; δυς-, ill; ὄζειν, to smell]. Fetor; stench; ill smell. Also a synonym of *Rhinitis atrophica, q. v.*

Dysodontiasis (*dis-o-don-ti'-as-is*) [δυς-, bad; ὀδοντίασις, dentition]. Difficult dentition.

Dysodynia (*dis-o-din'-e-ah*) [δυς-, ill; ὀδύνη, pain]. Ineffective labor-pains.

Dysopia (*dis-o'-pe-ah*) [δυσωπία; δυς-, bad; ὤψ, eye]. Defective or painful vision. **D. tenebrarum.** Synonym of *Hemeralopia.*

Dysorexia (*dis-or-eks'-e-ah*) [δυς-, ill; ὄρεξις, appetite]. A depraved or unnatural appetite.

Dysosmia (*dis-oz'-me-ah*) [δυς-, ill; ὀσμή, odor]. 1. An unpleasant or fetid odor. 2. Loss or impairment of the sense of smell.

Dysosphresia (*dis-os-fre'-ze-ah*) [δυς-, ill; ὀσφρησις, smell]. Impairment of the sense of smell.

Dysostosis (*dis-os-to'-sis*) [δυς-, ill; ὀστέον, bone]. Defective formation of bone.

Dyspareunia (*dis-par-oo'-ne-ah*) [δυσπάρευνος, ill-mated]. Painful or difficult performance of copulation from physical incompatibility.

Dyspepsia (*dis-pep'-se-ah*) [δυς-, difficult; πέπτειν, to digest]. Impaired or imperfect digestion. It may be *acute,* from some error in diet, or *chronic,* due to catarrh of the mucous coat of the stomach, the presence of abnormal ferments, or to other slowly-acting pathologic conditions of the viscus. **D., Atonic,** a derangement of the stomach, with disorder of its functions, due to insufficient quantity or impaired quality of the gastric juice, or to deficient action of the gastric muscles. **D., Colonic.** See *Enteritis, Membranous.* **D., Duodenal.** See *Enteritis, Membranous.* **D., Follicular.** Synonym of *Enteritis, Membranous.* **D., Intestinal,** due to defects in the pancreatic, biliary, or intestinal secretions, or to deficient peristalsis. It is marked by borborygmi, flatulence, etc. **D., Irritative,** the catarrhal form of imperfect gastric digestion. **D., Nervous,** that form characterized by sensations of distress and uneasiness during digestion, although the act is accomplished within the physiologic time-limit. It occurs most frequently in those of the neurotic constitution. **D., Smokers'.** See *D., Tobacco.* **D., Tobacco,** that due to excessive use of tobacco.

Dyspepsodynia (*dis-pep-so-din'-e-ah*). Synonym of *Gastralgia.*

Dyspepsy (*dis-pep'-se*). See *Dyspepsia.*

Dyspeptic (*dis-pep'-tik*) [δυς-, difficult; πέπτειν, to digest]. 1. Relating to or affected with dyspepsia. 2. One who has dyspepsia.

Dyspeptone (*dis-pep'-tōn*) [δυς-, difficult; πέπτειν, to digest]. An insoluble and unassimilable product of the gastric digestion of proteids. See *Metapeptone* and *Hemiprotein.*

Dysperistalsis (*dis-per-is-tal'-sis*) [δυς-, painful; περί, around; στάλσις, compression]. Violent peristaltic action of the intestine.

Dyspermatism (*dis-per'-mat-izm*) [δυς-, difficult; σπέρμα, seed]. Difficulty of depositing the sperm within the vagina.

Dyspermia (*dis-perm'-e-ah*). See *Dysspermia.*

Dysphagia (*dis-fa'-je-ah*) [δυς-, ill; φαγεῖν, to eat]. Difficulty in swallowing, or inability to swallow. **D., Convulsive.** Synonym of *Esophagismus.* **D. globosa,** globus hystericus. **D. hysterica.** Synonym of *Globus hystericus.* **D. spastica,** dysphagia due to hysteric spasm of the esophagus or pharynx.

Dysphasia (*dis-fa'-ze-ah*) [δυς-, ill; φάσις, speech]. Imperfect or disconnected speech, arising from loss of or faulty arrangement of words, and dependent upon a central lesion.

Dysphonia (*dis-fo'-ne-ah*) [δυς-, difficult; φωνή, voice]. A condition of defective voice; hoarseness. It is due to some acute or chronic inflammatory condition, new-growths, paralysis, or ulcerations of the vocal bands. **D. clericorum,** chronic glandular laryngitis; clergyman's sore-throat, *q.v.* **D. spastica,** speakers' cramp; stammering of the vocal bands.

Dysphoria (*dis-fo'-re-ah*) [δυς-, difficult; φέρειν, to bear]. Impatience and restlessness; mental anxiety; fidgets.

Dysphrasia (*dis-fra'-zhe-ah*) [δυς-, ill; φράσις, speech]. Imperfect speech, due to impairment of the mental powers. Kussmaul's term for a mental condition in which the emotion is opposed to the words designed to express it.

Dysphrenia (*dis-fre'-ne-ah*) [δυς-, bad; φρήν, mind]. Any mental disorder.

Dyspnea (*disp-ne'-ah*) [δυς-, difficult; πνέειν, to breathe]. Difficult or labored breathing, arising from various causes, as laryngeal or tracheal obstruction, heart-disease, kidney-disease, lung-disease, or anemia. It may be either *inspiratory* or *expiratory,* according as it is mainly dependent upon the muscles of inspiration or expiration; or it may be *general,* that is, both inspiratory and expiratory. **D., Asthmatic,** that due to asthma. **D., Cardiac,** that due to heart-disease. **D., Postural.** See *Orthopnea.* **D., Renal,** that due to renal disease. **D., Uremic,** that due to uremia. **D., Rhythmic.** See *Cheyne-Stokes Respiration.*

Dyspneic (*disp-ne'-ik*) [δυς-, difficult; πνέειν, to breathe]. Affected with or caused by dyspnea. **D. Coma.** See *Coma diaceticum.*

Dysspermia (*dis-sper'-me-ah*) [δυς-, ill; σπέρμα, seed]. An imperfect or abnormal condition of the semen.

Dysstasia, or **Dystasia** (*dis-ta'-ze-ah*) [δυς-, ill; στάσις, standing]. Difficulty in standing. A term

proposed for astasia, as in this affection there is rarely absolute inability to stand. **D. Dysbasia.** See *Astasia-abasia.*

Dystaxia (*dis-taks'-e-ah*) [δυς-, bad; τάξις, regulation, order]. Ataxia, or partial ataxia.

Dysteleologic (*dis-te-le-o loj'-ik*) [δυς-, ill; τέλεος, perfect; λόγος, science]. Pertaining to *Dysteleology.*

Dysteleology (*dis-te-le-ol'-o-je*) [δυς-, ill; τέλεος, perfect; λόγος, science]. The study of rudimentary and useless organs, such as the vermiform appendix.

Dysthanasia (*dis-than-a'-ze-ah*) [δυς-, painful; θάνατος, death]. A slow and painful death.

Dysthelasia (*dis-thel-a'-ze-ah*) [δυς-, ill; θηλάξειν, to suck]. Difficulty in sucking or in giving suck.

Dysthesia (*dis-the'-ze-ah*) [δυσθετέειν, to do, or feel ill]. 1. Ill condition, especially ill health due to a non-febrile disorder of the blood-vessels. 2. Impatience; fretfulness; ill-temper in the sick.

Dysthetic (*dis-thet'-ik*) [δυσθετέειν, to do or feel ill]. Of the nature of a dysthesia; cachectic.

Dysthymia (*dis-thīm'-e-ah*) [δυς-, bad; θυμός, mind]. Melancholy or mental perversion. **D. algetica,** mental perversion due to peripheral nerve-irritation. **D. neuralgica,** mental perversion due to facial or other neuralgias.

Dystithia (*dis-tith'-e-ah*) [δυς-, difficult; τιτθή, a nipple]. Difficulty of nursing or inability to nurse at the breast.

Dystocia (*dis-to'-se-ah*) [δυς-, difficult; τόκος, birth]. Difficult labor. **D., Fetal,** difficult labor due to such fetal irregularities as displacement of the arm, excessive size, plural pregnancy, monsters, etc. **D., Maternal,** due to some defect on the side of the mother, as pelvic deformity or disease.

Dystonia (*dis-to'-ne-ah*) [δυς-, ill; τόνος, tone]. Disorder or lack of tonicity.

Dystopia (*dis-to'-pe-ah*) [δυς-, ill; τόπος, place]. Displacement of any organ.

Dystrophia (*dis-tro'-fe-ah*). See *Dystrophy.*

Dystrophic (*dis-tro'-fik*) [δυς-, bad; τρόφη, nourishment]. Poorly nourished.

Dystrophoneurosis (*dis-trŏf-o-nu-ro'-sis*) [δυς-, bad; τόρφη, nourishment; νεῦρον, a nerve; νόσος, disease]. A disturbance of nutrition caused by abolition or perversion of nervous influence; or a nervous disease caused by ill-nutrition.

Dystrophy (*dis'-tro-fe*) [δυς-, bad; τρόφη, nourishment]. Imperfect or faulty nourishment. **D., Primary Muscular.** See *Atrophy, Idiopathic Muscular.*

Dystropodextrin (*dis-tro-po-deks'-trin*) [δυς-, bad; τρέπειν, to turn; *dexter*, right]. A starchy material existing in normal blood, and but slightly soluble.

Dysulotous (*dis-u'-lo-tus*) [δυσούλωτος; δυς-, bad; οὐλή, scar]. Healing with difficulty.

Dysuria (*diz-u'-re-ah*) [δυς-, ill; οὖρον, urine]. Difficult or painful urination; it may be due to calculi, cystitis, spasm, stricture.

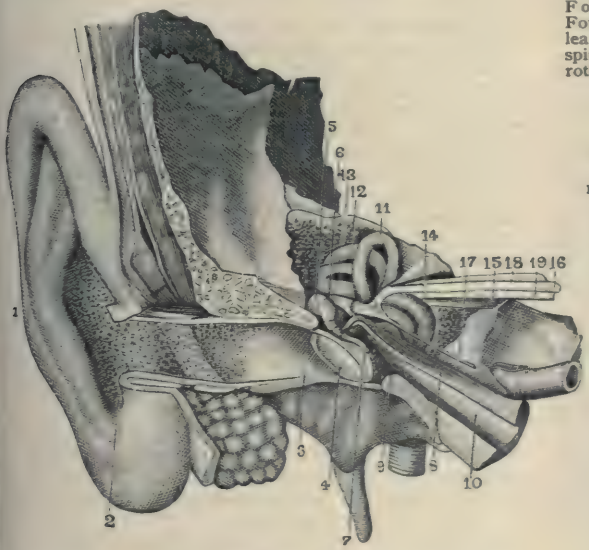
Dysuric (*diz-u'-rik*) [δυς-, ill; οὖρον, urine]. Affected with or relating to dysuria.

Dysury (*diz'-u-re*). Same as *Dysuria.*

E

E. Abbreviation of *Eye* and *Emmetropia.*

E. M. F. Abbreviation of *Electro-motive Force.*



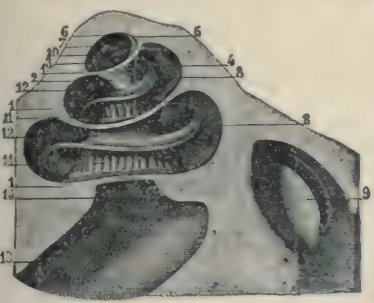
Ext. Abbreviation of *Extractum.*

Eagle-wood (*e'-gl-wood*). See *Agallochum.*

Ear (*ēr*) [ME., *ere*, ear]. The organ of hearing. It consists of the outer or external ear, the middle ear or tympanum, and the internal ear or labyrinth. Illustrated details are shown in the annexed cuts. **E.-ache.** See *Otalgia.* **E.-bone,** an auditory ossicle. **E., Cat's,** a deformity of the ear, causing it to resemble the ear of a cat. **E.-cough,** reflex cough from irritation or disease of the ear. **E.-crystal,** an otolith. **E.-deformities.** That insane, imbecile, and idiotic persons often have deformities of the external ear is a fact well established. Among the named deformities are the following: *Blainville's ear* designates asymmetry of the two ears. *Cagot ear* is an ear with no lower lobe; but it is asserted that this is a peculiarity of the Lapps, and not of the Cagots. *Darwin's ear* lacks the upper part of the helix, and the remainder of the helix contains nodules of cartilage. *Morel's ear* is large, flattened down, as if ironed, with a thin rim and depressed folds. In *Stahl's ear* the helix is flattened and masked with the anti-helix, neither the fossa ovalis nor the fossa scaphoidea being visible. In *Wildermuth's ear* the anti-helix is unduly prominent. See also *Hæmatoma auris* and *Diseases, Table of.* **E., Drum of.** See *Tympanum.* **E.-dust,** the otoconia, *q. v.* **E.-finger,** the little finger. **E., Flap,** a deformity of the ear in which it is pendulous, as in certain animals. **E.-giddiness,** a synonym of *Ménière's Disease.* **E.-hole,** the external auditory meatus. **E., Inflammation of.** See *Otitis.* **E., Internal,** the *Labyrinth, q. v.* **E.-lobe,** the lobe of the ear. **E., Middle.** See *Tympanum.* **E.-sneezing,** sneezing produced by inflammation of the ear. **E.-spoon,** a curet used in removing cerumen. **E.-stone.** See *Otolith.* **E.-trumpet,** an instrument for gathering a larger number of waves of sound to a focus, and thus improving the hearing of those partially deaf. **E.-tumor,** *Hæmatoma auris, q. v.* **E.-vertigo,** a synonym of *Ménière's Disease.* **E.-vomiting,** reflex vomiting from auditory disease. **E.-wax.** See *Cerumen.* **E.-wig,** an insect (*Forficula auricularia*) erroneously supposed to have a fondness for secreting itself in the external auditory meatus.

Earth (*erth*) [ME., *erthe*, earth]. In chemistry, a name given to various metallic oxids or silicates, not soluble in water and not affected by great heat. **E., Alkaline,** the oxids and hydrates of calcium, magnesium, strontium, barium, and other metals of the same group. **E.-bath,** a sand bath. See *Bath.* **E., Cimolian.** See *Cimolian.* **E.-closet,** a privy in which the dejecta are disposed of by the *Dry-earth System, q. v.* **E.-cure,** the therapeutic use of earth, soil, mud, or sand. **E.-dressing,** a dressing of earth for wounds, bruises, etc. It has marked deodorizing powers. **E., Fuller's,** a clay used as an absorbent dressing for sores. See also *Ammotherapy, Bole.*

E.-worm, a common soil-inhabiting worm, *Lumbricus terrestris*. An oily liniment prepared from earth-worms is vulgarly held in high esteem as a relaxant for contracted tendons. In Russia a preparation of earth-worms is highly valued as a diuretic.

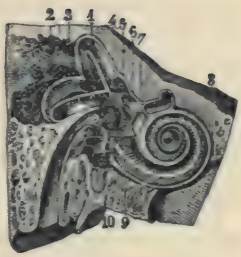


THE EAR.

1. Pinna, or auricle. 2. Concha. 3. External auditory canal. 4. Membrana tympani. 5. Incus. 6. Malleus. 7. Manubrium mallei. 8. Tensor tympani. 9. Tympanic cavity. 10. Eustachian tube. 11. Superior semicircular canal. 12. Posterior semicircular canal. 13. External semicircular canal. 14. Cochlea. 15. Internal auditory canal. 16. Facial nerve. 17. Large petrosal nerve. 18. Vestibular branch of auditory nerve. 19. Cochlear branch.

AUDITORY OSSICLES.

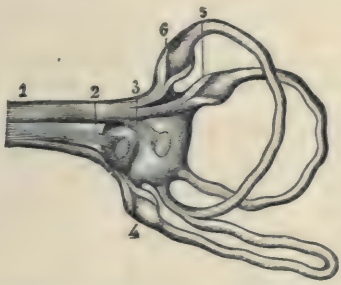
1. Head of Malleus. 2. Processus brevis. 3. Processus gracilis. 4. Manubrium. 5. Long process of incus. 6. Articulation between incus and stapes. 7. Stapes.



COCHLEA (LAMINA SPIRALIS OSSEA).

1, 1. Surrounding bony structure. 2. Semi-infundibuliform lamella. 3. Its concave surface. 4. Concave border in which it terminates. 5. Anterior extremity of this border. 6. Cupola, superior two-thirds removed. 7. Inferior portion of base of semi-infundibuliform lamella. 8, 8. Lamina spiralis ossea. 9. Its origin. 10. Its beak or terminal portion. 11, 11. Scala tympani. 12. Scala vestibuli. 13. Internal auditory canal. 14. Fossa at the base of the modiolus.

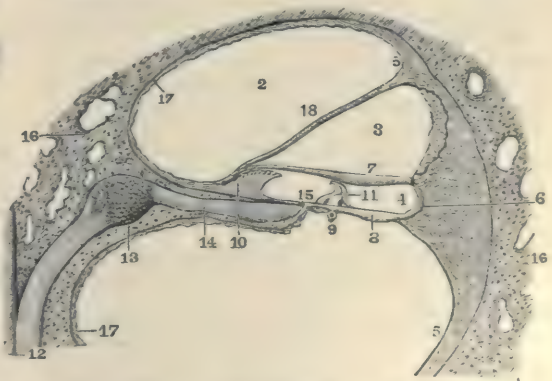
OSSEOUS LABYRINTH OF THE EAR (LAMINA SPIRALIS OSSEA).



1, 2, 3. Semicircular canals. 4. Vestibule. 5. Ampulla. 6. Fovea semi-elliptica. 7. Fovea hemispherica. 8. Cochlea. 9. Origin of lamina spiralis ossea. 10. Foramen rotundum.

OSSEOUS AND MEMBRANOUS LABYRINTH OF THE EAR.

1. Vestibular branch of auditory nerve. 2. Branch for sacculus. 3. Branch for utriculus. 4. Branch for ampulla of membranous posterior semicircular canal. 5. Branch for ampulla of external canal. 6. Branch for ampulla of superior canal. 7. Cochlear branch of auditory nerve. 8. Cochlea.



MEMBRANOUS LABYRINTH OF THE EAR.

Distribution of the vestibular branch of the auditory nerve to the membranous labyrinth; membranous vestibule and semicircular canals. ×3.

1. Vestibular branch. 2. Saccular branch. 3. Utricular branch. 4. Branch to ampulla of external membranous semicircular canal. 5. Branch to ampulla of superior membranous semicircular canal.

COCHLEA.

1. Scala tympani. 2. Scala vestibuli. 3. Anterior or triangular canal. 4. Posterior or quadrilateral canal. 5, 5. Spiral ligament. 6. External spiral sulcus. 7. Membrana tectoria, or membrane of Corti. 8. Membrana basilaris. 9. Spiral vessel. 10. Limbus laminæ spiralis. 11. Pillars of organ of Corti. 12. Branch of cochlear nerve. 13. Ganglion spirale. 14. Branch of cochlear nerve between the lamellæ of the lamina spiralis ossea. 15. One of the orifices by which this branch penetrates the canal of Corti. 16. Part of bony cochlea. 17. Lining periosteum. 18. Membrane of Reissner.

Easton's Syrup. See *Ferrum.*

Eat (*ēt*) [AS., *etan*, to eat]. To masticate and swallow food.

Eau (*o*) [Fr.]. Water. **E. de Cologne**, cologne water. **E. de Vie**, brandy; alcoholic spirit.

Eberth's Bacillus. See *Bacteria, Synonymatic Table of.* **E's. Lines.** See *Lines, Table of.*

Ebner's Glands. See *Gland.*

Eboli's Test. See *Tests, Table of.*

Ebonite (*eb'-on-īt*) [*ebon*, ebony]. Black hard rubber. See *Vulcanite.*

Ebracteate (*e-brak'-te-āt*) [*e*, priv.; *bractea*, a thin plate]. In biology, destitute of bracts.

Ebrietas (*e-bri'-et-as*) [L.]. Synonym of *Alcoholism.*

Ebriety, Ebriosity (*e-bri'-et-e, e-bre-os'-et-e*). Synonym of *Alcoholism.*

Ebstein's Theory. A theory as to the origin of gout. He claims that a nutritive tissue-disturbance is the primary change, leading to necrosis, and in the necrotic areas the urates are deposited. **E.'s Treatment.** See *Treatment, Methods of.*

Ebullition (*eb-ul-lish'-un*). See *Boiling.*

Ebur (*e'-bur*) [L.]. Ivory. **E. dentis**, dentine, *q.v.*

Eburnation (*e-bur-na'-shun*) [*ebur*, ivory]. 1. Increase of the earthy constituents of bone causing greater size and density of the same. 2. Ossification of a cartilage; calcareous infiltration of a tumor.

Eburneous (*e-bur'-ne-us*) [*ebur*, ivory]. In biology, ivory-white.

Ecalcarate (*e-kal'-kar-āt*) [*e*, priv.; *calcar*, a spur]. In biology, destitute of a spur or spur-like process.

Ecarinate (*e-kar'-in-āt*) [*e*, priv.; *carina*, keel]. In biology, destitute of a carina or keel-like structure.

Ecaudate (*e-kaw'-dāt*) [*e*, priv.; *cauda*, a tail]. In biology, tailless; without a tail-like appendage. See *Acaudal.*

Ecballium (*ek-bal'-e-um*). See *Elaterium.*

Ecblepharos (*ek-blef'-ar-os*) [ἐκ, out; βλέφαρον, eyelid]. An ancient form of artificial eye.

Ecbloma (*ek-blo'-mah*) [ἐκ, out; βάλλειν, to cast]. An abortion; an aborted fetus.

Ecbolic (*ek-bol'-ik*) [ἐκβολή, a throwing out]. 1. Abortifacient. 2. A substance used to produce abortion, or to facilitate parturition; an abortifacient.

Ecbolin (*ek'-bol-in*) [ἐκ, out; βολή, a throw]. An alkaloid said to be one of the active principles of ergot. Little is known about it.

Ecbolium (*ek-bo'-le-um*) [ἐκβόλιον; ἐκ, out; βάλλειν, to throw: *pl.*, *Ecbolia*]. Any abortifacient drug.

Eccentric (*ek-sen'-trik*) [ἐκ, out; κέντρον, center]. 1. See *Excentric.* 2. Odd or peculiar in behavior, but free from insanity. **E. Amputation.** See *Amputation.* **E. Convulsion**, one due to peripheral irritation.

Eccentricity (*ek-sen-tris'-it-e*) [ἐκ, out; κέντρον, center]. 1. Oddness or peculiarity of behavior without true insanity. 2. A peculiarity.

Ecchondroma (*ek-kon-dro'-mah*) [ἐκ, out; χόνδρος, cartilage: *pl.*, *Ecchondromata*]. A cartilaginous tumor; a chondroma.

Ecchondrosis (*ek-kon-dro'-sis*) [ἐκ, out; χόνδρος, cartilage: *pl.*, *Ecchondroses*]. A cartilaginous outgrowth.

Ecchondrotome (*ek-kon'-dro-tōm*) [ἐκ, out; χόνδρος, cartilage; τομός, cutting]. An instrument for the surgical removal of cartilaginous growths.

Ecchymoma (*ek-e-mo'-mah*) [ἐκχύμωμα, an ecchymosis: *pl.*, *Ecchymomata*]. A tumor made up of extravasated blood.

Ecchymosis (*ek-e-mo'-sis*) [ἐκχυμόεσθαι, to extravasate blood]. An effusion of blood into the subcutaneous tissues. It is marked by a purple coloration of the skin, the color gradually changing to brown, green, and yellow. It is often the result of traumatism. See, also, *Purpura.*

Ecchymotic (*ek-e-mot'-ik*) [ἐκχυμόεσθαι, to extravasate blood]. Relating to or looking like ecchymosis.

Ecchysis (*ek'-kis-is*) [ἔκχυσις, a pouring out]. Any skin-disease characterized by effusion into the dermal tissue.

Eccoprosis (*ek-o-pro'-sis*) [ἐκ, out; κόπρος, feces]. Gentle purgation; defecation.

Eccoprotic (*ek-o-prot'-ik*) [ἐκ, out; κόπρος, feces]. 1. Gently aperient. 2. Any aperient remedy; a purgative.

Eccrinology (*ek-rin-ol'-o-je*) [ἐκρίνειν, to excrete; λόγος, science]. The science of excretion, including its physics, physiology, and pathology.

Eccyesis (*ek-si-e'-sis*) [ἐκ, out; κύησις, pregnancy]. Extra-uterine gestation.

Eccyliosis (*ek-se-le-o'-sis*) [ἐκ, out; κυλίειν, to roll]. Any disorder of development.

Ecdemic (*ek-dem'-ik*) [ἐκδημος, away from home]. Applied to diseases originating in a distant locality; not endemic.

Ecdemiomania (*ek-de-me-o-ma'-ne-ah*), or **Ecdemomania** (*ek-de-mo-ma'-ne-ah*) [ἐκδημος, away from home; μανία, madness]. Insanity marked by a desire for wandering.

Ecdemionosus (*ek-de-me-on'-o-sus*) [ἐκδημέειν, to wander; νόσος, disease]. Ecdemiomania.

Ecderon (*ek'-der-on*) [ἐκ, out; δέρος, skin]. 1. That layer of skin or mucous membrane that lies outside of the enderon. 2. The outermost or epithelial layer of skin or mucous membrane.

Ecderonic (*ek-der-on'-ik*) [ἐκ, out; δέρος, skin]. Belonging to or of the nature of the ecderon.

Ecdysis (*ek'-dis-is*) [ἐκδύειν, to cast off]. In biology, the sloughing or casting off of the skin.

Ecgonin (*ek'-go-nin*), $C_9H_{15}NO_3+H_2O$. An alkaloid produced in the decomposition of cocain by HCl. It is very soluble in water, more sparingly in alcohol, and consists of prismatic crystals that melt at 205° C.

Echidnin (*e-kid'-nin*) [ἔχιδνα, viper]. 1. Serpent-poison; the poison or venom of the viper and other similar serpents. 2. A nitrogenous and venomous principle found in the poison-secretion of various serpents.

Echinacea (*ek-in-a'-se-ah*) [ἐκῖνος, a hedgehog]. A genus of coarse composite plants of N. America. **E. angustifolia.** Black Sampson. The root of a perennial herb growing in the U. S. It is claimed that it possesses marked alterative value in strumous and syphilitic conditions. Dose of the fluid extract ♏xv–xxx. Unof.

Echinate (*ek'-in-āt*) [*echinatus*, prickly, from *echinus*, a hedgehog]. Beset with prickles.

Echinochrome (*e-ki'-no-krōm*) [ἐχῖνος, a sea-urchin; χρῶμα, color]. In biology, a brown pigment of respiratory function found by MacMunn in the perivisceral fluid of *Echinus.*

Echinochromogen (*e-ki-no-kro'-mo-jen*) [ἐχῖνος, a sea-urchin; χρῶμα, color; γένης, producing]. In biology, the chromogen causing the deepening of color in echinochrome on exposure to air.

Echinococcus (*e-ki-no-kok'-us*) [ἐχῖνος, a hedgehog; κόκκος, a berry]. In biology, the same as **E. veterinorum**, the hydatid of the *Tænia echinococcus* of the dog, the most universally distributed of all the hydatids. It is found mainly in the liver and in the lungs of cattle. See *Parasites (Animal), Table of.*

Echinopedium (*e-ki-no-pe'-de-um*) [ἐχῖνος, a sea-urchin; παιδίον, dim. of παις (παιδ-), a child]. In biology, Huxley's term for the bilaterally symmetric larva of an echinoderm just as it leaves the egg. It in many ways resembles a worm-larva. Cf. *Pluteus.*

Echinoplacid (*e-ki-no-plas'-id*) [ἐχῖνος, a sea-urchin; πλάξ, a plate]. In biology, applied to echinoderms having spines on the madreporic plate.

Echinorhyncus (*e-ki-no-rin'-kus*) [ἐχῖνος, hedgehog; ῥύγχος, beak]. A worm parasitic within certain animals and occasionally found in man. **E. gigas** is the best-known species. **E. hominis** is smaller, and is perhaps an immature form of the other. See *Parasites* (*Animal*), *Table of*.

Echinulate (*e-kin'-u-lāt*) [*echinulus*, dim. of *echinus*, a hedgehog]. In biology, beset with prickles of small size.

Echitamin (*e-kit'-am-in*), $C_{22}H_{28}N_2O_4$. An amorphous alkaloid of *Dita*, with a paralyzing power comparable to that of curare. It is also called *Ditain*.

Echitenin (*e-kit'-en-in*), $C_{20}H_{27}NO_4$. An amorphous, brown alkaloid of *Dita*, soluble in alcohol and water.

Echlorophyllose (*e-klo-ro-fil'-ōs*) [ε, priv.; χλωρός, yellowish-green; φύλλον, a leaf]. In biology, destitute of chlorophyl.

Echma (*ek'-mah*) [ἔχμα, a stoppage: *pl.*, *Echmata*]. A stoppage or obstruction.

Echmasis (*ek'-mas-is*) [ἐχμάζειν, to hinder: *pl.*, *Echmases*]. An obstruction or an obstructive disease.

Echmatic (*ek-mat'-ik*) [ἐχμάζειν, to hinder]. Due to or marked by an echmasis or an echma.

Echo (*ek'-o*) [ἠχώ, a sound]. A reverberated sound. **E.-sign**, a symptom of epilepsy and other brain-conditions in which there is a repetition of the closing word or words of a sentence. It is regarded as the result of perverted will, or impaired or defective inhibition. **E.-speech**, a peculiar method of utterance in one type of hypnotism.

Echokinesia, Echokinesis (*ek-o-kin-e'-ze-ah*, or *-e'-sis*) [ἠχώ, echo; κίνησις, motion]. Imitative unwilled action, like that observed in palmus or latah. See *Palmus* and *Habit-spasm*.

Echolalia (*ek-o-la'-le-ah*) [ἠχώ, echo; λαλιά, talk]. An aphasic symptom consisting in a repetition of words spoken to the patient by others.

Echometer (*ek-om'-et-er*) [ἠχώ, sound; μέτρον, a measure]. A stethoscope.

Echopathy (*ek-op'-ath-e*) [ἠχώ, echo; πάθος, disease]. Any automatic and purposeless repetition of a word or sound heard or of an act seen.

Echophotony (*ek-o-fot'-o-ne*) [ἠχώ, echo; φῶς, light; τόνος, tone]. The production of the sensation of color by the stimulus of aërial waves, or sound. See *Phonism*, *Photism*.

Echophrasia (*ek-o-fra'-ze-ah*) [ἠχώ, echo; φράσις, speech]. Same as *Echolalia*.

Echos (*e'-kos*) [ἦχος, sound]. Any subjective sensation, as of a sound that has no objective cause.

Echoscope (*ek'-o-skōp*) [ἠχώ, sound; σκοπεῖν, to examine]. A stethoscope.

Echuja (*ek'-u-jah*). An apocynaceous plant, *Adenium boehmianum*, of Africa. It is extremely poisonous.

Echujin, Echugin (*ek'-u-jin*). A poisonous glucosid from the plant called *Echuja*; it has much the same effects as strophanthin.

Eciomania (*ek-e-o-ma'-ne-ah*). See *Oikiomania*.

Ecker's Angle. See *Angle*. **E. Fissure.** See *Fissure*.

Eclampsia (*ek-lamp'-se-ah*) [ἐκλάμπειν, to shine or burst forth; from the suddenness of the attack]. 1. A sensation as of a light flashing before the eyes. [Obsolete]. 2. Any epileptiform seizure, especially one in which consciousness is not lost. 3. Puerperal convulsion. A convulsive or epileptiform seizure suddenly coming on in a woman prior to or during labor, or in the puerperal state. The convulsions are first tonic and then clonic, and finally affect the involuntary muscles as well as the voluntary; consciousness is lost, and the attack is followed by coma or sleep. The etiology is obscure, the attack generally repeated, the prognosis grave. The term eclampsia is also used as a general designation for convulsions, and besides the puerperal form described there are the infantile and uremic types. See *Convulsions*. **E. nutans**, the *nodding spasm* or *salaam convulsion* of young children. In this affection the head and upper part of the body are bowed forward several times in succession. The attacks tend to occur in paroxysms, during which the child suffers temporarily from disordered consciousness.

Eclampsic (*ek-lamp'-sik*). See *Eclamptic*.

Eclamptic (*ek-lamp'-tik*) [ἐκλάμπειν, to shine or burst forth]. Relating to, affected with, or of the nature of, eclampsia.

Eclectic (*ek-lek'-tik*) [ἐκλεκτικόσις, selection]. Pertaining to a choosing or selection. Applied by a certain school of physicians to themselves, to denote their principle or plan of selecting or choosing that which is good from all other schools.

Eclecticism (*ek-lek'-tis-izm*) [ἐκλεκτικόσις, selection]. The doctrine and practice of the *Eclectics*.

Eclegm (*ek'-lem*) [ἔκλεγμα, an electuary]. An electuary.

Eclegma, or Ecleigma (*ek-leg'-mah*, *ek-lig'-mah*) [ἐκ, out; λείχειν, to lick: *pl.*, *Eclegmata*]. An electuary.

Eclimia (*ek-lim'-e-ah*) [ἔκλιμία]. Same as *Bulimia*.

Eclipsis (*ek-lip'-sis*) [ἔκλειψις, a dying out]. A sudden failure; trance; catalepsy; a sudden and transient loss or impairment of consciousness.

Eclysis (*ek'-lis-is*) [ἔκλυσις, a release, a loosening]. Any loosening, as of the bowels. Also a slight amount of, or merely a tendency to, syncope. It is present in anemia of the brain.

Ecmnesia (*ek-mne'-ze-ah*) [ἐκ, out; μνῆσις, memory]. The dropping out of the memory of the events of a certain portion of time.

Ecnea (*ek-ne'-ah*) [ἐκ, out; νοῦς, mind]. Insanity.

Ecoid (*e'-koid*) [οἶκος, house]. A blood-shadow; the colorless stroma or framework of red corpuscles of the blood that have been deprived of their hemoglobin; a shadow-corpuscle.

Economy (*e-kon'-o-me*) [οἶκος, house; νόμος, a law]. A general name for the human being considered as a whole.

Ecorticate (*e-kor'-tik-āt*) [ε, priv.; *cortex*, bark]. In biology, destitute of a cortical layer.

Ecouvillon (*a-koo-ve'-yon(g)*) [Fr.]. See *Ecouvillonage*.

Ecouvillonage (*a-koo-ve-yon-ahzh'*) [Fr.]. The operation of cleansing, and carrying medicinal agents to, the inside of the uterus by means of a brush.

Ecphlysis (*ek'-flis-is*) [ἐκφλύζειν, burst out: *pl.*, *Ecphlyses*]. Any vesicular eruption.

Ecphractic (*ek-frak'-tik*) [ἐκφρακτικός, clearing obstruction]. 1. Removing obstructions. 2. An ecphractic medicine.

Ecphronia (*ek-fro'-ne-ah*) [ἐκ, out of; φρήν, mind]. Insanity.

Ecphyadectomy (*ek-fi-ad-ek'-to-me*) [ἐκφύας, appendage; ἐκτομή, excision]. Excision of the vermiform appendix.

Ecphyaditis (*ek-fi-ad-i'-tis*) [ἐκφύας, appendage; ιτις, inflammation]. Inflammation of the vermiform appendix; appendicitis. This term has also been used to include typhlitis, perityphlitis, etc.

Ecphyas (*ek'-fi-as*) [ἐκφύας, an offshoot]. The vermiform appendix.

Ecphyma (*ek-fi'-mah*) [ἐκ, out; οἰσεσθαι, to grow: *pl.*, *Ecphymata*]. An excrescence on the skin.

Ecphysesis (*ek-fiz-e'-sis*) [ἐκ, out; φυσάνειν, to blow]. Rapid breathing.

Ecphysis (*ek'-fis-is*) [ἐκ, out; φύσις, growth]. In biology, applied by Bate to the branch of any particular crustacean limb; as *coxecphysis*, a branch springing from the coxa; *basecphysis*, a branch springing from the base.

Ecptoma (*ek-to'-mah*) [ἐκ, out; πίπτειν, to fall: *pl.*, *Ecptomata*]. Any falling of a part or organ.

Ecpyesis (*ek-pi-e'-sis*) [ἐκ, out; πυεῖν, to suppurate: *pl.*, *Ekpyeses*]. 1. Any suppuration or abscess. 2. Any pustular skin-disease.

Ecpyetic (*ek-pi-et'-ik*) [ἐκ, out; πυεῖν, to suppurate]. Promoting suppuration.

Écrasement (*a-krahz'-mon(g)*) [Fr.]. Surgical removal of a part or growth by means of the écraseur.

Écraseur (*a-krah-zer'*) [Fr.]. An instrument used in the amputation of parts, and consisting of a chain or wire-loop, tightened by a screw, whereby the tissue is slowly crushed apart rather than cut, thus rendering the operation easier and bloodless.

Ecrodactylia (*ek-ro-dak-til'-e-ah*) [ἔκροος, escape; δάκτυλος, digit]. Same as *Ainhum*.

Ecstaltic (*ek-stal'-tik*) [ἐκ, out; στέλλειν, to send]. Sent out from a nerve-center; applied specially to nerve-impulses originating from the spinal cord.

Ecstasy (*eks'-ta-se*) [ἔκστασις, a trance]. A derangement of the nervous system characterized by an exalted visionary state, absence of volition, insensibility to surroundings, a radiant expression, and immobility in statuesque positions. It is also called *Catus-extasis* and *Catalepsia spuria*.

Ecstrophy (*ek'-stro-fe*) [ἐκ, out; στρέφειν, to turn]. Eversion; the turning inside-out of a part.

Ectad (*ek'-tad*) [ἐκτός, external; *ad*, to]. On or toward the ectal part.

Ectal (*ek'-tal*) [ἐκτός, external]. At some surface or aspect farther from a supposed center than that with which a given object is compared. External, superficial. See *Position and Direction, Table of.*

Ectasia (*ek-ta'-se-ah*). See *Ectasis*.

Ectasis (*ek'-tas-is*) [ἔκτασις, extension]. Abnormal distention or dilatation of a part.

Ectatic (*ek-tat'-ik*) [ἔκτασις, extension]. Characterized by ectasis.

Ectental (*ek-ten'-tal*) [ἐκτός, outward; ἐντός, inward]. Pertaining to the line of union between the ectoderm and the entoderm. **E. Line.** See *Lines, Table of.*

Ectethmoid (*ek-teth'-moid*) [ἐκτός, out from; ἠθμοειδής, sieve-like]. Either one of the lateral cellular masses of the ethmoid bone.

Ecthyma (*ek-thi'-mah*) [ἔκθυμα, a pustule]. An inflammatory skin-disease attended with an eruption of large, flat pustules, which are usually flaccid and of a yellowish or yellowish-red color. They vary in size from a ten-cent piece to a silver quarter-dollar, and are surrounded by a distinct inflammatory areola. Brownish crusts are formed, which on removal leave a slightly excoriated moist surface. The eruption appears as a rule on the legs and thighs where the hairs are thick; it occurs in crops, and may persist for an indefinite period. It is probably due to inoculation with microörganisms, and is prone to occur after local irritation.

Ecthymiform (*ek-thi'-mif-orm*) [ἔκθυμα, a pustule; *forma*, form]. Resembling ecthyma.

Ectillotic (*ek-til-ot'-ik*) [ἐκ, out; τίλλειν, to pluck]. Depilatory; causing the hairs to fall; removing corns from the feet.

Ectiris (*ek-ti'-ris*) [ἐκτός, outward; ἶρις, the rainbow]. That part of Descemet's membrane that lies in front of the iris.

Ecto- (*ek'-to-*) [ἐκτός, without]. A prefix signifying without, upon the outer side.

Ectobatic (*ek-to-bat'-ik*) [ἐκτός, out; βαίνειν, to go]. Efferent; centrifugal; moving ectad or distad.

Ectoblast (*ek'-to-blast*) [ἐκτός, outside; βλαστός, a bud]. In biology, a simple, sensitive, covering, and protecting cell-layer; the ectoderm.

Ectobliquus (*ek-to-bli'-kwus*) [ἐκτός, outward; *obliquus*, slanting]. The external oblique muscle of the abdomen. See *Muscles, Table of.*

Ectocardia (*ek-to-kar'-de-ah*) [ἐκτός, out; καρδία, the heart]. Abnormality of position of the heart.

Ectocarotid (*ek-to-kar-ot'-id*) [ἐκτός, out; κάρος, stupor]. The external carotid artery. See *Arteries, Table of.*

Ectocarpous (*ek-to-kar'-pus*) [ἐκτός, outside; καρπός, fruit]. In biology, applied to such animals as have the reproductive organs located in the ectoderm.

Ectoceliac, or **Ectocelian** (*ek-to-se'-le-ak, ek-to-se'-le-an*) [ἐκτός, out; κοιλία, the belly]. Occurring or situated outside a ventricle of the brain.

Ectocelic (*ek-to-se'-lik*) [ἐκτός, outside; κοιλία, a hollow]. In biology, applied to structures placed outside the body-cavity in a cœlenterate.

Ectochoroidea, or **Ectochorioidea** (*ek-to-ko-roi'-de-ah*, or *ek-to-ko-re-oi'-de-ah*) [ἐκτός, out; χοριοειδής, like a membrane]. The outer layer of the choroid, composed mainly of fibro-connective tissue.

Ectocinerea (*ek-to-sin-e'-re-ah*) [ἐκτός, out; *cinereus*, ashy]. The gray substance of the cortex of the brain. Cf. *Entocinerea*.

Ectocondyle (*ek-to-kon'-dil*) [ἐκτός, out; κόνδυλος, condyle]. An external condyle.

Ectocornea (*ek-to-kor'-ne-ah*) [ἐκτός, out; *corneus*, horny]. The corneal conjunctiva.

Ectocyst (*ek'-to-sist*) [ἐκτός, out; κύστις, a cyst]. The thick, laminated, translucent, and highly elastic membrane of an hydatid cyst. It is lined by a thin cellular membrane called the *endocyst*. The outer layer of the cenecium (or common dermal system) of a colony of Polyzoa.

Ectoderm (*ek'-to-derm*) [ἐκτός, outside; δέρμα, skin]. In biology, the primitive outer wall of the body; the animal germinal layer; the term was first applied to the outer of the two membranes of a hydroid zoöphyte. See *Blastoderm*.

Ectoentad (*ek-to-en'-tad*) [ἐκτός, without; ἐντός, within; *ad*, to]. From without inward.

Ectogastrocnemius (*ek-to-gas-trok-ne'-me-us*) [ἐκτός, without; γαστροκνημία, the calf of the leg]. The gastrocnemius externus muscle. See *Muscles, Table of.*

Ectogenous (*ek-toj'-en-us*) [ἐκτός, out; γεννᾶν, to produce]. Developed outside the body (said of certain pathogenic bacteria and of enthetic poisons).

Ectogluteus (*ek-to-glu-te'-us*) [ἐκτός, without; γλουτός, the rump]. The external gluteus muscle. See *Muscles, Table of.*

Ectolecithal (*ek-to-les'-ith-al*) [ἐκτός, outside; λέκιθος, yolk]. In embryology, applied to such eggs as have the formation-yolk enclosed in a superficial layer of food-yolk.

Ectomere (*ek'-to-mēr*) [ἐκτός, out; μέρος, a share]. Any one of the cells of the ovum that are destined to take part in forming the ectoderm.

Ectopagia (*ek-to-pa'-je-ah*) [ἐκτός, out; πάγος, a fixture]. The condition of being ectopagous; an ectopagous monstrosity.

Ectopagous (*ek-top'-ag-us*) [ἐκτός, out; πάγος, a fixture]. Of the nature of or pertaining to an ectopagus.

Ectopagus (*ek-top'-ag-us*) [ἐκτός, out; πάγος, a fixture]. A monomphalic twin monstrosity united laterally the full extent of the thorax.

Ectoparasite (*ek-to-par'-as-īt*) [ἐκτός, outside; παράσιτος, a parasite]. In biology, a parasite that lives on the exterior of its host.

Ectoparasitic (*ek-to-par-as-it'-ik*) [ἐκτός, out; παράσιτος, a parasite]. Of the nature of or pertaining to an ectoparasite.

Ectopatagium (*ek-to-pat-aj'-e-um*) [ἐκτός, outside; πατάγειον, the border of a garment]. In biology, that part of the wing-membrane or patagium of a bat which is limited to the manus; it is also called *dactylopatagium*.

Ectophyte (*ek'-to-fīt*) [ἐκτός, out; φυτόν, a plant]. An external parasitic plant-growth.

Ectophytic (*ek-to-fit'-ik*) [ἐκτός, out; φυτόν, a plant]. Of the nature of or pertaining to an ectophyte.

Ectopia (*ek-to'-pe-ah*) [ἔκτοπος, displaced]. An abnormality of position. **E. cordis.** See *Ectocardia*. **E. lentis,** dislocation or congenital malposition of the crystalline lens. **E. oculi,** abnormal position of the eyeball in the orbit. **E. testis,** abnormal position of the testicle. **E. vesicæ,** protrusion of the bladder through the wall of the abdomen.

Ectopic (*ek-top'-ik*) [ἔκτοπος, displaced]. Pertaining to ectopia; displaced. See also *Teratism*. **E. Gestation.** See *Gestation*.

Ectoplasm (*ek'-to-plazm*) [ἐκτός, without; πλάσσειν, to form]. In biology, the outer, hyaline, more compact layer of protoplasm in a cell or unicellular organism, as distinguished from the granular endoplasm.

Ectopy (*ek'-to-pe*). Same as *Ectopia*.

Ectoretina (*ek-to-ret'-in-ah*) [ἐκτός, out; *retina*, retina]. The external and pigmentary layer of the retina.

Ectosarc (*ek'-to-sark*) [ἐκτός, outside; σάρξ, flesh]. In biology, same as *Ectoplasm, q. v.*

Ectoskeleton (*ek-to-skel'-et-un*). Same as *Exoskeleton*.

Ectosome (*ek'-to-sōm*) [ἐκτός, outside; σῶμα, body]. In biology, applied to the outer region of a sponge, which forms the covering of the choanosome, or middle region, with its flagellated chambers.

Ectosporous (*ek-to-spo'-rus*) [ἐκτός, outside; σπόρος, seed]. See *Exosporous*.

Ectosteal (*ek-tos'-te-al*) [ἐκτός, out; ὀστέον, a bone]. Relating to, situated or occurring outside of, a bone.

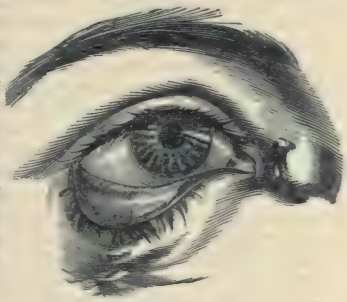
Ectostosis (*ek-tos-to'-sis*) [ἐκτός, out; ὀστέον, a bone]. The growth of bone from without; ossification that begins at the perichondrium, or future periosteum.

Ectotheca (*ek-toth'-ek-ah*) [ἐκτός, outside; θήκη, case]. In biology, applied to the capsule of such compound gonophores as those of *Laomedea;* also to such thecæ or asci as are exposed, *e. g.* those of discomycetous fungi and gymnocarpous lichens.

Ectoxemia (*ek-toks-ē'-me-ah*) [ἐκ, out; τοξικόν, poison; αἷμα, blood]. Toxemia not originating within the organism; blood-poisoning from some cause not existing within the organism.

Ectozoön (*ek-to-zo'-on*) [ἐκτός, out; ζῶον, an animal: *pl.*, *Ectozoa*]. An external animal parasite; an ectoparasite.

Ectrodactylia, Ectrodactylism (*ek-tro-dak-til'-e-ah, ek-tro-dak'-til-izm*) [ἔκτρωμα, abortion; δάκτυλος, finger]. Congenital absence of any of the fingers or toes.



Ectrogenic (*ek-tro-jen'-ik*) [ἔκτρωμα, abortion; γεννᾶν, to produce]. Due to some loss of tissue, as from traumatism or surgical operation. See also *Teratism*.

Ectrogeny (*ek-troj'-en-e*) [ἔκτρωμα, abortion; γεννᾶν, to produce]. Loss or absence of any part or organ.

Ectroma (*ek-tro'-mah*) [ἔκτρωμα, abortion: *pl.*, *Ectromata*]. An aborted ovum or fetus.

Ectromelus (*ek-trom'-el-us*) [ἔκτρωσις, abortion; μέλος, limb]. A single autositic monster characterized by the presence of aborted or imperfectly-formed limbs. Examples of this anomaly show every degree of arrested development, from entire absence of the limb to simple shortening.

Ectropion (*ek-tro'-pe-on*) [ἐκ, out; τρέπειν, to turn]. An everted eyelid; abnormal eversion of an eyelid; also, an everted state of the cervical portion of the endometrium. **E., Cicatricial,** due to destruction of part of the skin of the lid, with cicatricial contraction. **E. luxurians,** an old name for ectropion, with a proud-flesh appearance of the conjunctiva. **E., Paralytic,** that due to paralysis of the orbicularis palpebrarum. **E., Sarcomatous.** See *E. luxurians*. **E., Senile,** found only in the lower lid, due to relaxation of the orbicularis palpebrarum muscle. **E., Spastic,** due to spastic contraction of the fibers of the orbicular muscle lying near the margin of the orbit.

Ectropion.

Ectropium (*ek-tro'-pe-um*). Same as *Ectropion*.

Ectrosis (*ek-tro'-sis*) [ἔκτρωσις, abortion]. An abortion, or the production of an abortion.

Ectrotic (*ek-trot'-ik*) [ἐκ, out; τιτρώσκειν, to wound]. Tending to cut short; abortive; abortifacient.

Ectylotic (*ek-til-ot'-ik*) [ἐκ, away; τύλος, callus]. Tending to remove warts or indurations.

Eczema (*ek'-ze-mah*) [ἐκζέειν, to boil over]. Tetter; Moist Tetter; an acute or chronic, non-contagious, catarrhal inflammatory disease of the skin, characterized by multiformity of lesion, and the presence, in varying degrees, of itching, infiltration, and discharge. The skin is reddened, the redness shading off insensibly into the surrounding unaffected skin. When well-marked, the skin is fissured, with crusting, leathery infiltration, and scaling. Eczema occurs in skins that are particularly susceptible to the action of external irritants. **E. ani**—of the anus—a troublesome variety common in children; it may simulate condylomata. **E. articulorum,** eczema of the flexor surfaces of the joints. **E. aurium,** a common, troublesome, pustular form affecting the ears. **E. barbæ,** a form resembling sycosis, but more superficial. It attacks the bearded portion of the face, but may spread. **E. capitis,** a variety confined to the head. It is usually seen in children; is diffuse, pustular, impetiginous, not itchy, and may be associated with pediculi and seborrhea. **E. circumscriptum parasiticum,** a name given by Crocker to a form of eruption that looks like a dry eczema, but has a border more sharply defined than is usual in *E. squamosum*. It occurs chiefly on the legs below the knee, and is constituted of minute papules aggregated into a uniform moderately red, scaly patch, with sharply defined borders. It is a chronic disease, and is probably parasitic in origin. **E. crurum,** a form occurring in old people as a result of varicosity of the veins of the leg, and not associated with eczema elsewhere. The skin is much infiltrated, red, scaly, with indolent ulcers. **E. crustosum,** eczema with the formation of thin and pale-yellowish crusts. If these crusts are thick and dark in color from capillary bleeding the condition is termed *E. impetiginosum*. This latter form occurs frequently on the scalp and face of strumous children.

E., Diabetic, from the irritation of diabetic urine. **E., Epidemic.** See *Dermatitis, Epidemic Exfoliative.* **E. epizoötica,** a disease of domesticated animals due to a microörganism, attended with a characteristic eczematous lesion of the skin and a catarrhal condition of the respiratory tract. It is also called *Foot-and-Mouth Disease.* See *Streptocytus of Schottelius* under *Bacteria, Synonymatic, Table of.* **E. erythematosum,** the mildest form of eczema, in which the skin is reddened, slightly swollen, infiltrated, and tense, from active congestion; the color of the patches is more vivid, and their edges are less well defined, than in true erythema. It is seen in its most typical form on the face. **E. faciei,** an acute or chronic form affecting the face; it resembles erysipelas, but is attended with no rise of temperature. **E. fissum,** *E. rimosum;* a form affecting the hands and skin over the articulations, and characterized by the formation of deep, painful cracks or fissures. **E. folliculare,** a form confined largely to the neighborhood of the hair-follicles, where irritable, acuminate papules may persist for prolonged periods. **E. genitalium,** an acute form common in men; it is attended with great swelling and edema, with excoriation. **E. hypertrophicum,** *E. verrucosum;* a form characterized by permanent hypertrophy of the papillæ of the skin, giving rise to general or limited warty outgrowths. This variety results from a tendency to passive congestion. See *Granuloma fungoides.* **E. impetiginodes.** See *E. pustulosum.* **E. impetiginosum.** See *E. crustosum.* **E., Infantile,** a form commencing usually within six months of birth, and making its appearance first upon the head or face. **E. intertrigo,** a form of *E. erythematosum* occurring in the groins, on the inner surfaces of the nates, below the mammæ, etc. It is due to uncleanliness. See *Erythema intertrigo.* **E. labiorum,** a very obstinate variety affecting the lips, and associated with painful fissures. **E. madidans,** *E. rubrum;* weeping eczema; large, raw, weeping surfaces studded with red points. It follows *E. vesiculosum.* **E. mammæ,** a variety common in nursing primiparæ; it is at first vesicular, then squamous, with painful fissures and much crusting. It is very obstinate. **E. manuum,** a common form implicating the whole of both hands. The acute variety is most marked along the edges of the fingers, where deep-seated vesicles abound; the chronic form chiefly involves the palms and knuckles. **E. marginatum,** Hebra's term for the most severe form of ringworm of the body. Its seats are the groins, axillæ, fork, and occasionally the popliteal spaces. Its lesion is marked by a well-defined, festooned, raised margin. **E. meatus,** eczema of the external auditory passage. **E. mercuriale,** that form due to the irritation produced by mercury. **E. narium,** a form affecting the nostrils. **E. palmare,** or **E. palmarum,** confined to the palm of the hand. It is also called *Psoriasis palmæ.* **E. palpebrarum,** *Tinea tarsi;* an obstinate form affecting the eyebrows; it is common in scrofulous children. **E. papillomatosum.** Same as *E. verrucosum.* **E. papulosum,** *Lichen simplex;* a form associated with the formation of minute intensely-itching papules of a deep-red color and firm consistence, arranged in irregularly-shaped groups. They are about the size of a pin's head, acuminate, of a bright-red color. Vesicles may form on their summits (*Lichen agrius*). When they are grouped in oval or roundish patches, a form not uncommon on the external aspect of the forearm and hands and on the calves, it is *Lichen circumscriptus.* **E. pedum,** eczema of the feet. **E. plantarum,** confined to the sole of the foot. **E. pustulosum,** *E. impetiginodes;* the stage of eczema in which the vesicles develop into pustules that are usually of larger size than the preceding vesicles. This is most common in strumous children. **E. rimosum.** See *E. fissum.* **E. rubrum.** See *E. madidans.* **E. sclerosum,** a chronic form of eczema in which there is induration and thickening of the tissues. **E., Seborrheic.** See *Dermatitis, Seborrheic.* **E. seborrhœicum.** Synonym of *Seborrhea.* **E. solare,** that form due to irritation from the rays of the sun. **E. spargosiforme,** a variety of *E. sclerosum* in which the thickening is so very great that a condition indistinguishable from *Elephantiasis arabum* is produced. **E. squamosum,** a form in which the surfaces of ill-defined irregular patches are covered with more or less adherent scales of shed epithelium. This is often seen on the neck and limbs. **E. sulphure,** that form due to the irritation produced by sulphur. **E. tarsi,** a form affecting the edges of the eyelids. **E. tuberosum.** Synonym of *Granuloma fungoides.* **E. umbilici,** a tractable form resembling syphilitic disease of the same part. **E. unguium,** involvement of the nails in chronic *E. manuum.* The nails are rough, dull, brittle, and punctate. **E. unisquamosum,** a rare form having its seat at the root of the nose between the eyebrows. The secretion takes the form of a single epidermic lamella that covers the whole of the affected surface. **E. verrucosum.** See *E. hypertrophicum.* **E. vesiculosum,** a stage of vesicular formation in the course of eczema. It is the most common form of the disease. It is best seen on the flexor aspect of the limbs, between the fingers, back of the ears, etc. The vesicles, minute at first and closely aggregated, coalesce and rupture, exuding a clear plasmic fluid that stains and stiffens linen. The burning and itching are worse at night, and the excoriated surfaces continue to weep for a few days, when they gradually heal by crusting. **E., Weeping.** See *E. madidans.*

Eczematoid (*ek-zem'-at-oid*) [ἐκζέειν, to boil over]. Resembling an eczema.

Eczematosis (*ek-zem-at-o'-sis*) [ἐκζέειν, to boil over: *pl., Eczematoses*]. Any eczematous skin-disease.

Eczematous (*ek-zem'-at-us*) [ἐκζέειν, to boil over]. Of the nature of or affected with eczema.

Eczemogenous (*ek-zem-oi'-en-us*) [ἐκζέειν, to boil over; γενᾶν, to produce]. Giving rise to eczema.

Edeagra (*e-de-a'-grah*) [αἰδοῖα, the genitals; ἀγρα, a seizure]. Pain or gout in the genitalia.

Edeatrophia (*e-de-at-ro'-fe-ah*) [αἰδοῖα, genitals; ἀτροφία, a wasting]. Atrophy or wasting of the genital organs.

Edeauxe (*e-de-awks'-e*) [αἰδοῖα, genitals; αὔξε, increase]. Swelling or hypertrophy of the genitals.

Edebohl's Position or Posture. See *Postures, Table of.*

Edeitis (*e-de-i'-tis*) [αἰδοῖα, genitals; ιτις, inflammation]. Inflammation of the genital organs.

Edema (*e-de'-mah*) [οἴδημα: οἰδέειν, to swell]. Swelling, especially such as is due to the effusion of serous fluid into areolar tissues. See *Anasarca.* **E., Acute Circumscribed.** See *E., Angio-neurotic* and *Urticaria œdematosa.* **E., Acute Idiopathic.** See *E., Angio-neurotic.* **E., Acute Non-inflammatory.** See *E., Angio-neurotic.* **E., Angio-neurotic,** Giant urticaria; a vaso-motor disorder, characterized by the abrupt occurrence of edematous swelling of variable extent, sometimes accompanied by gastro-intestinal crises. There may be a marked hereditary feature in the disease. Death may result from edema of the larynx. **E., Brown,** the brownish fluid that flows from the cut surface of a lung in the state of brown induration. **E., Filtration,** a peculiar sort of edema

of the conjunctiva observed after operations or injuries that have produced a perforation in the most anterior sections of the sclera. It is due to the oozing of the aqueous humor between the lips of the wound and under the conjunctiva. **E., Intermittent.** See *E., Angio-neurotic.* **E., Malarial.** See *E., Angio-neurotic.* **E., Malignant,** the term applied by Koch to a parasitic form of gangrenous inflammation that occurs at times after serious bone-injuries, etc. It is characterized by the rapid spread, the septic character of the inflammatory product, and the speedy destruction of the tissue involved, with the formation of gas. It is also called *Gangrenous emphysema.* **E., Menstrual.** See *E., Angio-neurotic.* **E. neonatorum,** a disease resembling somewhat sclerema neonatorum, the skin, however, being less generally involved and less edematous, filled with a serous fluid, and assuming a livid or purplish, rather than a whitish tint, as in sclerema. The disease begins before the third day of life, with drowsiness, and then the edema appears in the extremities, especially the legs, gradually spreading upward. **E., Solid,** a form of edema in which puncture gives exit not to serum, but to a sanious, stringy, lymphoid material.

Edematous (*e-dem'-at-us*) [οἴδημα, edema]. Marked by edema; swollen; puffy.

Edentate (*e-den'-tāt*) [*e*, priv.; *dens*, a tooth]. In biology, toothless, as an entire leaf, or a member of the *Edentata* among mammals.

Edentation (*e-den-ta'-shun*) [*e*, without; *dens*, a tooth]. A deprivation of teeth.

Edentulous (*e-den'-tu-lus*) [*e*, without; *dens*, a tooth]. Without teeth (applied to one who has lost his teeth). See *Caries of the Teeth.*

Edeocephalus (*e-de-o-sef'-al-us*) [αἰδοῖα, genitals; from the resemblance of the proboscis to a penis; κεφαλή, head]. A variety of single autositic monsters of the species otocephalus, in which there is synopsia, absence of the mouth, very rudimentary jaws, and the presence of a proboscis.

Edeodynia (*e-de-o-din'-e-ah*) [αἰδοῖα, genitalia; ὀδύνη, pain]. Any pain in the reproductive organs.

Edeogargalismus (*e-de-o-gar-gal-iz'-mus*) [αἰδοῖα, genitals; γαργαλισμός, a tickling]. Masturbation.

Edeography (*e-de-og'-ra-fe*) [αἰδοῖα, the genitals; γράφειν, to write]. A description of the genitalia.

Edeology (*e-de-ol'-o-je*) [αἰδοῖα, genitals; λόγος, science]. A treatise or monograph on the organs of generation.

Edeomania (*e-de-o-ma'-ne-ah*) [αἰδοῖα, genitals; μανία, madness]. Nymphomania; satyriasis.

Edeomycodermitis (*e-de-o-mi-ko-der-mi'-tis*) [αἰδοῖα, genitals; μύκος, mucus: δέρμα, skin; ιτις, inflammation]. Inflammation of the mucous membrane of any of the genital organs.

Edeopsophy (*e-de-op'-so-fe*) [αἰδοῖα, genitals; ψοφεῖν, to utter a noise]. The emission of sounds from the genital organs (as from the bladder or vagina).

Edeopsy (*e'-de-op-se*). Same as *Edeoscopy.*

Edeoptosis (*e-de-op-to'-sis*) [αἰδοῖα, genitals; πτῶσις, a fall]. Prolapse of some portion of the genital apparatus.

Edeoscopy (*e-de-os'-ko-pe*) [αἰδοῖα, the genitals; σκοπεῖν, to inspect]. An inspection or professional examination of the genital organs.

Edeotomy (*e-de-ot'-o-me*) [αἰδοῖα, genitals; τόμη, a cutting]. The anatomy or dissection of the genital organs.

Edgeweed (*ej'-wēd*). A composite-flowered plant, *Sericocarpus tortifolius*, of the Southern U. S. It is used as a remedy for colic in horses. Unof.

Edible (*ed'-ib-l*) [*edibilis*, eatable]. A qualification applied to food, the condition of which is good and wholesome.

Edison-Lalande Cell. See *Cell.*

Edriopthalmous (*ed-re-off-thal'-mus*) [ἑδριον, dim. of ἑδρα, a seat; ὀφθαλμός, eye]. In biology, having fixed, sessile eyes, not borne on a movable stalk.

Educt (*e'-dukt*) [*e*, out; *ducere*, to draw]. A compound that exists in any substance and is extracted from it by a chemic or pharmaceutic process; opposed to *product*, which designates a body that is produced by a process similar to that used in its extraction.

Edulcorant (*e-dul'-kor-ant*) [*e*, out; *dulcorare*, to sweeten]. Sweetening; corrective of acidity or of acrimony.

Edulcoration (*e-dul-kor-a'-shun*) [*edulcare*, to sweeten]. In chemistry, the act or process of sweetening; the removal of soluble or saline matters by washing.

Effeminacy (*ef-em'-in-as-e*). See *Feminism.*

Effemination (*ef-em-in-a'-shun*) [*effeminare*, to make womanish]. The state of being effeminate.

Effera (*ef'-er-ah*) [*efferus*, fierce, wild]. Sauvage's name for a certain genus of exanthematous diseases.

Efferent (*ef'-er-ent*) [*efferens*, carrying from]. Of *nerves*, conveying impulses from the central nervous system to some tissue; motor; secretory. Of *blood-vessels*, conveying blood from the tissues toward the heart, veins, or from the gills. Of *lymphatics*, the vessels leaving or conveying lymph from the lymphatic glands. Compare *Afferent.*

Effervescent (*ef-er-ves'-ent*) [*effervescere*, to boil up]. Susceptible of being made to effervesce, or to dissolve with foaming and with the escape of a gas, such as carbon dioxid.

Effervescing (*ef-er-ves'-ing*) [*effervescere*, to boil up]. Boiling up; foaming. **E. Powders.** See *Seidlitz Powders.*

Effleurage (*ef-flur-azh'*) [Fr.]. In massage, centripetal strokings, *i. e.*, toward the body or heart. These may be made with the palm of one hand, the palms of both hands, the thumb, or the tips of the fingers. Effleurage increases the circulation in the venous blood-vessels and the lymphatics, thereby causing absorption.

Efflorescence (*ef-lor-es'-ens*) [*efflorescere*, to bloom]. 1. The flowering of plants. 2. The formation of minute crystals on the surface of certain crystalline bodies, due to the loss of a part or the whole of their water of crystallization. 3. The breaking-out of characteristic eruption of an exanthematous disease.

Effluent (*ef-lu'-ent*) [*effluere*, to flow out]. An outflow. The fluid discharged from works for the treatment of sewage.

Effluvia (*ef-lu'-ve-ah*) [L.]. Plural of *Effluvium*, *q.v.* **E., Telluric,** emanations arising from the earth.

Effluvium (*ef-lu'-ve-um*) [*effluere*, to flow out: *pl.*, *Effluvia*]. Any subtle emanation from a substance or person, especially one that is offensively odoriferous.

Efflux (*ef'-fluks*), or **Effluxion** (*ef-fluk'-shun*) [*effluxio: effluxus*, an outflow]. 1. An outflow; that which flows out. 2. Abortion, or the escape of the embryo from the womb during a very early stage of pregnancy.

Effracture (*ef-frak'-chūr*) [*ex*, out; *fractura*, a fracture]. Fracture of the cranium, with depression of one or more fragments.

Effusion (*ef-u'-zhun*) [*effundere*, to pour out]. A pouring-out. The abormal secretion or transfer of a liquid from its natural organ or place; effused material.

Effusive (*ef-u'-siv*) [*effundere*, to pour out]. Attended with or of the nature of an effusion.

Egertic (*e-jer'-tik*) [ἐγερτικός, wakening]. Causing wakefulness.

Egest (*e-jest'*) [*egerere*, to discharge]. To void, as excrement; to defecate.

Egesta (*e-jes'-tah*) [*pl.* of *egestum*, fecal matter]. The discharges of the bowels or other emunctory organs.

Egestion (*e-jes'-chun*) [*egestio*, that which is voided]. Defecation; the expulsion of excrements or excretion.

Egg (*eg*) [ME., *egge*, an egg]. See *Ovule*. **E.-albumin**, a native albumin, or proteid constituent of the human body, of which the unboiled white of egg is the type. It is distinguished from serum-albumin by its precipitation when shaken with ether, and by its appearance unchanged in the urine when injected under the skin or into the intestine. **E.-apparatus**; in biology, the oösphere and the two companion-cells (called the synergidæ) in the upper end of the embryo-sac, are termed the egg-apparatus. **E.-cells**, *primordial ova*; large, spheroidal, granular cells embedded at intervals in the layer of the germ-epithelium of the ovary. They eventually become the ovules of the Graafian follicle. **E.-cords**, dippings inward into the ovarian substance of the specialized columnar epithelium covering the ovary; these prolongations carry highly-specialized cells, each of which develops into an immature Graafian follicle containing an immature ovum. **E.-nog**, a nutritious preparation made by adding the beaten yolk of egg and a little spirit to a tumblerful of milk, stirring well, adding sugar and the white of the egg separately beaten. **E.-shell Crackling**, a peculiar crackling produced by pressure upon a soft tumor springing from the medulla or cancellated tissue of a long bone, and surrounded by a thin bony capsule. **E.-tube.** See *Oviduct*. **E.-water**, a nutritious food for infants having summer diarrhea. It consists of the white of a fresh egg, a pint of cold water (previously boiled), a teaspoonful of brandy, and a small pinch of salt.

Egilops (*e'-jil-ops*) [αἴξ, a goat; ὤψ, eye]. Abscess, with perforation, at the inner canthus of the eye, supposed to be a result of lachrymal fistula. See *Anchylops*.

Eglandular (*e-glan'-du-lar*) [*e*, priv.; *glandula*, a gland]. In biology, destitute of glands.

Eglandulose (*e-glan'-du-lōs*) [*e*, priv.; *glandula*, a gland]. Same as *Eglandular*.

Egobronchophony (*e-go-brong-koff'-o-ne*) [αἴξ, a goat; βρόγχος, a bronchus; φωνή, a voice]. A combination of egophony and bronchophony.

Egophony (*e-goff'-o-ne*) [αἴξ, a wild goat; φωνή, the voice]. In auscultation, a term meaning a modification of bronchophony, in which the voice has a bleating character like that of a kid. It is heard in pleurisy with slight effusion, usually near the inferior angle of the scapula.

Egregorsis (*eg-re-gor'-sis*) [ἐγρήγορσις; ἐγείρειν, to wake]. Morbid wakefulness; insomnia.

Egyptian (*e-jip'-shun*) [αἰγύπτιος, Egyptian]. Pertaining to Egypt. **E. Blue.** See *Pigments, Conspectus of*. **E. Chlorosis.** See *Anchylostomiasis*. **E. Ophthalmia.** See *Ophthalmia, Purulent*. **E. Ulcers.** See *Ægyptia Ulcera*.

Ehrenritter's Ganglion. See *Ganglia, Table of*.

Ehrlich's Anilin-water Solution. See *Stains, Table of*. **E. Method**, the use of a saturated solution of anilin in water, as a mordant for better fixing the anilin dyes used in staining bacteria. **E. Test.** See *Tests, Table of*. **E.-Biondi's Fluid.** See *Biondi's Fluid*.

Eichhorst's Corpuscles. See *Corpuscles*.

Eichstedt's Disease. Synonym of *Tinea versicolor*, *q. v.*; see also *Diseases, Table of*.

Eidam Cheese (*i'-dam*). See *Cheese*.

Eidoptometry (*i-dop-tom'-et-re*) [εἶδος, appearance; ὀπτέος, seen; μέτρον, measure]. The estimation of the acuity of vision.

Eilema (*i-le'-mah*) [εἴλημα; εἰλειν, to twist: *pl.*, *Eilemata*]. A pain or colic of the bowels; volvulus; tormina.

Eiloid (*i'-loid*) [εἴλειν, to coil; εἶδος, form]. Having a coiled texture resembling the coils of an intestine; applied to certain skin-tumors.

Einbrodt's Test. See *Tests, Table of*.

Einhorn's Method. 1. A method of ascertaining the condition of the gastric secretion. An apparatus termed a *stomach-bucket*, consisting of a small oval silver vessel, 1¾ cm. long and ¾ cm. wide, is attached to a silk thread, in which at a distance of 40 cm. from the bucket a knot is made. The patient swallows the bucket, and when the knot enters the mouth the operator knows that the bucket is in the stomach. It is withdrawn after remaining there five minutes, and its contents are tested. Resistance to its removal may be overcome by having the patient expire deeply or swallow once. 2. See *Gastrodiaphany*.

Eisanthema (*īs-an-the'-mah*) [εἰς, into; ἄνθημα, inflorescence: *pl.*, *Eisanthemata*]. Same as *Enanthema*.

Eisel (*i'-sel*) [ME.]. An old name for vinegar.

Eisodic (*īs-od'-ik*). Same as *Esodic*.

Eisophobia (*i-so-fo'-be-ah*). Synonym of *Agoraphobia*.

Eisophoria (*i-so-fo'-re-ah*). Same as *Esophoria*.

Eispnea (*īs-pne'-ah*) [εἰσπνοή, a breathing into]. Inspiration; the inhaling of the breath.

Ejaculation (*e-jak-u-la'-shun* [*ejaculatio*, a throwing out]. The ejection of the semen. **E.-center.** See *Center*.

Ejaculator (*e-jak'-u-la-tor*) [*ejaculare*, to throw out]. The accelerator urinæ. See *Muscles, Table of*.

Ejaculatorium (*e-jak-u-la-to'-re-um*) [L.]. A syringe.

Ejaculatory (*e-jak'-u-la-tor-e*) [*ejaculatio*, a throwing out]. Throwing. **E. Duct.** See *Ductus ejaculatorius*.

Ejecta, or **Ejectamenta** (*e-jek'-tah, e-jek-tam-en'-tah*) [L., *pl.*]. Things or materials cast out; excretions or excrementitious matters.

Ejection (*e-jek'-shun*) [*ejectio*, a casting out]. The casting out of excretions or of excrementitious matters; that which is cast out.

Elaboration (*e-lab-or-a'-shun*) [*elaborare*, to take pains with]. Careful and exact working. In physiology, any anabolic process, such as that of making crude food into higher tissue-products.

Elaidic Acid (*e-la-id'-ik*). See *Acid*.

Elaidin (*e-la'-id-in*) [ἔλαις, the olive-tree], $C_{57}H_{104}O_6$. A white, crystalline, fatty substance, isomeric with olein, produced by the action of HNO_3 upon certain oils, especially castor-oil.

Elain (*e-la'-in*). See *Eleoptene*.

Elaphrium (*e-la'-fre-um*) [ἐλαφρός, light]. A genus of burseraceous trees. **E. copalliferum** produces a variety of copal. **E. elemiferum** is one of the sources of Mexican elemi; **E. excelsum** and **E. tomentosum**, of South America, afford tacamahac.

Elastic (*e-las'-tik*) [ἐλαύνειν, to urge forward]. Returning to the original form after change of form by external traction or force. **E. Bandage**, an India-rubber bandage exerting continuous compression of a part. **E. Stocking**, an India-rubber stocking exerting continuous pressure. **E. Tissue**, a variety of connective tissue having elastic properties, and of which some ligaments are composed.

Elastin (*e-las'-tin*) [ἐλαύνειν, to urge forward]. An albuminoid substance, the fundamental element of elastic tissue. It yields 36 to 45 per cent. of leucin and ½ per cent. of tyrosin. **E.-peptone.** See *Deutero-elastose*.

Elastose (*e-las'-tōs*) [ἐλαύνειν, to urge forward]. One

. of the forms of peptone resulting from the gastric digestion of elastin.

Elater (*el'-at-er*) [ἐλατηρ, a driver, hurler]. In biology, (*a*) one of the thread-like, usually spirally-coiled, bodies found in the sporangia of mosses, liverworts, and equisetum. They serve for the dispersion of spores. (*b*) One of the free filaments of the capillitium of the slime-moulds. (*c*) One of the elastic anal bristles of the insect called spring-tail.

Elaterin, or **Elaterinum** (*el-at'-er-in, el-at-er-i'-num*) [ἐλατήριος, driving away], $C_{20}H_{28}O_5$. A neutral principle obtained from *Elaterium ecballium*, or squirting cucumber. It occurs in colorless, hexagonal prisms, that are odorless and have a bitter taste. It is a powerful hydragogue cathartic. In toxic doses, it causes emesis, spasmodic respiration, and death. Dose gr. $\frac{1}{15}$–$\frac{1}{12}$. **E., Pulv., Comp.** (B. P.), contains elaterin 1, sugar of milk 39. Dose gr. j–v. **E., Trituratio,** elaterin 10, sugar of milk 90 parts, thoroughly mixed. Dose gr. ss–j.

Elaterium (*el-at-e'-re-um*) [ἐλατήριος, driving away]. A powerful hydragogue cathartic, being the dried sediment from the juice of the squirting cucumber, *Ecbalium elaterium* of Europe. Dose ⅛ gr. every two hours; of the tincture, gtt. x–xxx.

Elbow (*el'-bo*) [ME., *elbowe*]. The elbow-joint; the articulation of the arm and forearm. That part of the forearm and arm adjacent to the elbow-joint. **E.-jerk**, one of the reflexes. See *Reflexes, Table of.*

Elcoplasty (*el'-ko-plas-te*). See *Helcoplasty.*

Elcosis (*el-ko'-sis*). See *Helcosis.*

Elder (*el'-der*). See *Sambucus.* **E., Dwarf.** See *Dwarf Elder.*

Elecampane (*el-e-kam'-pān*). See *Inula.*

Election (*e-lek'-shun*) [*electio*, a choosing]. Selection or choice, as of points (*points of election*) to be operated upon; consideration of circumstances, such as age, condition in life, occupation, sex, etc., in determining whether to proceed with a proposed surgical operation or not. Such operations are called *Operations of Election* or *of Complaisance.* **E., Triangle of,** the *Superior Carotid Triangle.* See *Triangles, Table of.*

Electrepeter (*e-lek-trep'-et-er*) [ἤλεκτρον, amber; τρέπειν, to turn]. An obsolete term for "commutator," *q. v.*

Electric, or **Electrical** (*e-lek'-trik,* or *e-lek'-trik-al*) [ἤλεκτρον, amber]. Having the nature of or produced by electricity. **E. Aura,** a current of electrified air. **E. Brush,** a wire brush used as an electrode. **E. Commutator,** an instrument for automatically interrupting or reversing the flow of an electric current, making and breaking the same with desired frequency. **E. Chorea.** See *Dubini's Disease.* **E. Depilation,** the permanent removal of hair from any part of the body by the electrolytic destruction of the hair-follicles. **E. Discharger,** the instrument that directs the charge from a condenser through an object. **E. Endosmosis,** cataphoresis. **E. Fustigation,** application of electricity through a metallic brush. **E. Head-bath,** application of electricity by means of an umbrella-shaped electrode surrounding the head, but separated from it by a distance of from one-half to one inch. **E. Inertia,** a term sometimes employed instead of electro-magnetic inertia. **E. Insolation.** See *E. Sunstroke.* **E. Insulation,** the placing of non-conducting material with respect to a conductor so as to prevent the loss of a charge or the leakage of a current. **E. Irritability,** irritability of nervous or muscular tissue to an electric discharge. **E. Megaloscope,** an apparatus for the medical exploration of the cavities of the body. **E. Moxa,** a burn made on the skin by electricity. **E. Probe,** a metallic conductor inserted into the track of a wound in order to ascertain the exact position of a bullet, or other foreign metallic substance. **E. Prostration.** See *E. Sunstroke.* **E. Reactions,** the response of muscles and nerves to electric stimulation. **E. Shock,** the physiologic shock produced in an animal by an electric discharge. **E. Shower-bath,** a device for general electrization; one of the poles is immersed in a tub containing an alkaline solution. The patient stands beneath this reservoir on a metallic stool connected with the other pole. The falling water completes the circuit, dispersing the current over the whole body. **E. Sphygmograph,** an instrument for electrically recording the characters of the pulse. **E. Sterilization,** sterilizing a solution by depriving it of whatever germs it may contain by means of electric currents. **E. Sunstroke,** the physiologic effects, similar to those produced by exposure to the sun, experienced by those exposed for a long while to the intense light and heat of the voltaic arc. **E. Test,** the application of electricity to ascertain the existence or non-existence of central lesions after railway injuries. It must be borne in mind that cutaneous insensibility or absence of response in the muscles is not positive proof of organic lesion; hence the so-called electric test is not so absolutely relied upon as formerly.

Electric Units. The lowest integral electric values. They are as follows:—**Ampère,** the unit of measurement of an electric current. It is the electro-motive force of one volt produced in a circuit having one ohm of resistance, equal to $\frac{1}{10}$ C. G. S. electro-magnetic unit. It is sufficient to deposit .3 grain of copper per minute on the plate of a copper voltameter, or to decompose sufficient acidulated water to generate 10.32 c. c. of mixed hydrogen and oxygen per minute. For convenience the $\frac{1}{1000}$ part is used in medicine, namely, the *milliampère.* This equals 1 volt divided by 1000. **Ampère-hour,** a unit of electric quantity equal to one ampère flowing for one hour; it is the equivalent of 3600 coulombs. **C. G. S. System,** Centimeter-gram-second Units,—the system of fundamental units in which a centimeter is adopted as the unit of length, a gram as the unit of mass, and a second as the unit of time. **Coulomb,** the unit of measurement of electric quantity; the quantity of electricity that passes during one second through a conductor having a resistance of one ohm, with one volt of electromotive force. The *micro-coulomb* is the millionth part of this amount. **Unit of Current,** a conductor one cm. long which, if bent into an arc of one cm. radius, will act with the force of one degree on a unit magnet pole at the center. **Dyne,** the unit of force; *i. e.*, the force which if it acted for one second on a mass of one gram would, if the mass was previously at rest, give it a velocity of one centimeter per second; or if it was previously in motion in the direction of the force, would in that time alter its velocity by that amount. **Erg.** See *Unit of Work.* **Ergten,** 10,000,000,000 ergs. **Farad,** the unit of electric capacity. Practically, a capacity sufficient to hold one coulomb of current having a potential of one volt. The *micro-farad,* $\frac{1}{1000000}$ part of the theoretic farad, is commonly used. A practical form of condenser of one farad capacity consists of 300 leaves of tinfoil, each 16 centimeters in diameter, separated by leaves of mica. The entire surface has an area of about 1.1 sq. meters. **Joule,** the unit of electric energy or work. The volt coulomb. It equals 10,000,000 ergs. **Unit Magnet Pole,** a magnet having a strength of pole sufficient to repel a similar pole at a distance with a force of one degree. **Megalerg,** 1,000,000 ergs. **Megavolt,** 1,000,000 volts. **Micro-coulomb.**

See *Coulomb*. **Microfarad.** See *Farad*. **Microvolt**, one millionth part of a volt. **Milliampère.** See *Ampère*. **Ohm**, the unit of resistance. Practically, it is the resistance of a pure silver wire one meter in length and one millimeter in diameter. The theoretic or absolute unit is $\frac{1}{1000000000}$ part of the unit practically used. **Volt**, the unit of electro-motive force, or the force sufficient to cause a current of one ampère to flow against a resistance of one ohm. The following is the voltage of several popular cells: Smee, 0.65; Bunsen, 1.90; Daniell, 1.05; Callaud, 0.60; Leclanche, 1.50. **Volt-ampère**, the unit of electric work. It is the amount of pressure developed by a current of one ampère having an electromotive force of one volt. Its mechanical equivalent is about 44.2 foot-pounds per minute. It is sometimes called a *Watt*. **Volt-coulomb**, the unit of electric work. **Watt.** See *Volt-ampère*. **Weber**, an ampère. **Unit of Work**, the erg; it is equal to the work required to move a body through one centimeter against a force of one dyne. The reciprocal relations of these electric units may be expressed thus:—

1 volt × 1 coulomb = ... 1 joule
1 volt × 1 ampère = ... 1 watt
1 volt × 1 ohm = ... 1 ampère
1 ampère × 1 ohm = ... 1 volt
1 volt × 1 ampère × 1 ohm = ... 1 watt
1 volt × 1 ampère × 1 ohm × 1 second = ... 1 joule
1 ampère × 1 second = ... 1 coulomb

Electricity (*e-lek-tris'-it-e*) [ἤλεκτρον, amber]. One of the forces of nature developed or generated by chemism, magnetism, or friction, and probably a mode of ethereal vibration, closely analogous to and convertible into heat and light. It has been largely employed in its various forms for therapeutic purposes. Most animal and vegetable fibers (living) contract when an electric current is passed through them, and, in fact, no substance is known that does not offer some resistance to the passage of an electric current. By the *Conducting Power* of a substance is meant the ability of a given length and area of a cross-section of that substance to conduct electricity, as compared with an equal length and area of a cross-section of some other substance, such as pure silver or copper. This power may, in various substances, be pronounced, partial, or absent. *Good* conductors are silver, copper, other metals, charcoal; *partial* conductors are water, the human body, cotton, wood, marble, paper; *non-conductors*, oils, porcelain, dry wood, silk, resins, dry air, shellac, gutta-percha, ebonite, paraffin, glass. **E., Animal**, free electricity in the body. **E., Chemic.** See *E., Galvanic*. **E., Faradic**, that produced by induction. **E., Franklinic**, frictional or static electricity. **E., Frictional**, that produced by friction. **E., Galvanic**, that which is generated by chemic action in a galvanic cell. **E., Inductive**, that produced in a body by proximity to an electrified body without contact. **E., Magnetic**, that developed by bringing a conductor near the poles of a magnet. See *Current*. **E., Medical**, that used for therapeutic purposes. **E., Static**, frictional electricity. **E., Voltaic**, same as galvanic or chemic electricity.

Electrization (*e-lek-triz-a'-shun*) [ἤλεκτρον, amber]. The application of electricity to the body. **E., General**, the therapeutic application of electricity to all parts of the surface of the body.

Electrize (*e-lek'-trīz*) [ἤλεκτρον, amber]. To treat by means of electricity.

Electrizer (*e-lek'-tri-zer*) [ἤλεκτρον, amber]. A metal disc of copper and zinc, or silver and zinc applied to the surface of the body, and connected with copper wire, exciting, through the perspiration, a feeble galvanic current.

Electro- (*e-lek'-tro-*) [ἤλεκτρον, amber]. A Greek word used as a prefix to denote connection with or relation to electricity. **E.-anesthesia**, inability to perceive the sensation made by electricity upon the skin. **E.-biology**, the science of the electric relations and laws of organic beings. **E.-bioscopy.** See *Bioscopy*. **E.-centesis**, the use of electrolysis to cause absorption of effusions, as in pleurisy. **E.-chemistry**, the science of the inter-relations and laws of electricity and chemistry. **E.-cystoscopy**, examination of the bladder by means of electric illumination. **E.-diagnosis**, diagnosis by means of the exaggeration or diminution of the reaction of the excitable tissues of the body when subjected to the varying influences of electric currents. **E.-esthesia**, ability to perceive the sensation made by the reception of an electric discharge; it may co-exist with local anesthesia, or with loss of the power to perceive other sensations. **E.-magnet**, a mass of soft iron surrounded by a coil of wire. **E.-magnetic Inertia**, a term sometimes employed instead of inductance or the self-induction of a current. **E.-magnetism**, magnetism induced within iron, steel, or nickel, by introducing it within a coil through which a current is passing. **E.-massage**, the transmission of a current of electricity through a kneading instrument; the use of labile currents applied by means of a rolling or wheel electrode, or by a sponge or brush. **E.-motive**, pertaining to the mechanic or motor effects of electricity. **E.-motor Force**, that which sets electricity in motion; the difference of potential between two points. It is estimated in volts. **E.-muscular**, pertaining to the action of electricity upon muscles. **E.-muscular Contractility**, the contractile response of a muscle to an electric current. **E.-muscular Sensibility**, the impression upon a sensory nerve by electric irritation. **E.-otiatria**, electricity applied to the treatment of diseases of the ear. **E.-pathology**, the study of morbid conditions by the aid of electric irritation. **E.-physiology**, the study of electric reactions, properties, and relations of organs and organic tissues. **E.-puncturation**, or **E.-puncture**, the use of needles as electrodes, which are thrust into an organ, or tumor, *e. g.*, into the cavity of an aneurysm, with the object of coagulating the contained blood. **E.-sensibility**, an effect produced on a sensory nerve by its electrization. **E.-statics**, the science of static electricity, or that developed by friction and induction. **E.-thanasis**, a word proposed for death by electricity. **E.-therapeutic Bath.** See *Bath*. **E.-therapeutics**, the science and art of the application of electricity for therapeutic purposes. **E.-therapy.** See *E.-therapeutics*. **E.-thermometry**, the determination of the radiation of body-heat by means of an electric thermoscope. **E.-vital**, pertaining both to electricity and to the phenomena of life. **E.-vitalism**, the theoretic identification of the vital forces with electricity.

Electrode (*e-lek'-tröd*) [ἤλεκτρον, amber; ὁδός, a way]. The instruments, fastened to the conducting cords of a battery, that are used in the application of electricity to the body. The standard sizes of electrodes generally adopted in therapy are, according to Erb, as follows:—

1. Fine electrode, ... ½ cm diameter.
2. Small " . . . . . 2 " "
3. Medium " . . . . . 7·5 " "
4. Large " . . . . . 6 × 2 "
5. Very large . . . . . 8 × 16 "

E., Brush, one end fitted with a camel's-hair pencil. **E., Clay**, a therapeutic electrode of clay shaped to fit the part of the body to be treated. **E., Electrotherapeutic**, the therapeutic electrode is generally

placed nearer the organ or part to be treated than the indifferent electrode. **E., Indifferent,** the electrode that is employed merely to complete the circuit; not directly concerned in the treatment or diagnosis. **E., Non-polarizable,** zinc wires treated and so arranged as to prevent electrolysis. See *Anode* and *Cathode*.

Electrogenesis (*e-lek-tro-jen'-es-is*) [ἤλεκτρον, amber; γένεσις, production]. Results following the application of electricity to the spinal cord or nerve after the withdrawal of the electrodes.

Electrolysis (*e-lek-trol'-is-is*) [ἤλεκτρον, amber; λύσις, solution]. The dissolution of a chemic compound by an electric current; the discussion of any morbid growth by means of an electro-chemic current. It is used in the treatment of hydrocele and some other surgical affections.

Electrolytic (*e-lek-tro-lit'-ik*) [ἤλεκτρον, amber; λύσις, solution]. Relating to electrolysis.

Electrometer (*e-lek-trom'-et-er*) [ἤλεκτρον, electricity; μέτρον, a measure]. An instrument for the measurement of differences of electric potential.

Electrophonize (*e-lek-trof'-on-īz*) [ἤλεκτρον, amber; φόνος, a killing]. To inflict capital punishment by means of electricity.

Electrophony (*e-lek-trof'-o-ne*) [ἤλεκτρον, amber; φόνος, a killing]. Capital punishment by means of electricity.

Electrophorus (*e-lek-trof'-or-us*) [ἤλεκτρον, amber; φέρειν, to carry] An instrument used to generate small quantities of static electricity.

Electropoion Fluid (*e-lek-tro-poi'-on*) [ἤλεκτρον, amber; ποιεῖν, to make]. A battery fluid made by dissolving 1 lb. of potassium bichromate in a mixture of water 10 lbs. to sulphuric acid (commercial) 2½ lbs.

Electroscope (*e-lek'-tro-skōp*) [ἤλεκτρον, amber; σκοπεῖν, to view]. An instrument for detecting the presence of static electricity and determining whether it is positive or negative.

Electrostixis (*e-lek-tro-stiks'-is*) [ἤλεκτρον, amber; στίξις, puncture]. Electro-puncture, *q. v.*

Electrothanasize (*e-lek-tro-than'-as-īz*) [ἤλεκτρον, amber; θανατόειν, to kill]. To produce death by electricity, but not as capital punishment.

Electrothanatose (*e-lek-tro-than'-at-ōs*) [ἤλεκτρον, amber; θάνατος, death]. Same as *Electrothanasize*.

Electrothanatosis (*e-lek-tro-than-at-o'-sis*) [ἤλεκτρον, amber; θανάτωσις, a putting to death]. Death by electricity.

Electrotisis (*e-lek-trot'-is-is*) [ἤλεκτρον, amber; τίσις, penalty]. Capital punishment by electricity.

Electrotistic (*e-lek-tro-tis'-tik*) [ἤλεκτρον, amber; τίσις, penalty]. Pertaining to capital punishment by means of electricity.

Electrotistis (*e-lek-tro-tis'-tis*). An incorrect form of *Electrotisis*, *q. v.*

Electrotome (*e-lek'-tro-tōm*) [ἤλεκτρον, amber; τέμνειν, to cut]. The circuit-breaker of an electric battery; especially one that acts automatically.

Electrotonic (*e-lek-tro-ton'-ik*) [ἤλεκτρον, amber; τόνος, tension]. Relating to or of the nature of electrotonus. **E. Effect,** an altered condition of excitability of a nerve produced when in the electrotonic state.

Electrotonus (*e-lek-trot'-o-nus*) [ἤλεκτρον, amber; τόνος, tension]. The change of condition in a nerve during the application of a current of electricity. A decrease in the electro-motive force of a nerve, effected by sending a current through the nerve in the opposite direction to the nerve-current, is termed the *negative phase* of electrotonus, while an increase in the electro-motive force of a nerve, effected by sending a current through a nerve in the same direction as the nerve-current, is termed the *positive phase* of electrotonus. See *Anelectrotonus*, *Catelectrotonus*, and *Electrogenesis*. **E., Law of.** See *Law*.

Electrovection (*e-lek-tro-vek'-shun*) [ἤλεκτρον, amber; *vehere*, to carry]. Electric endosmosis; the introduction of medicaments into the system by means of the electric current; cataphoresis.

Electrozemia (*e-lek-tro-ze'-me-ah*) [ἤλεκτρον, amber; ζημία, penalty]. A word proposed for capital punishment by electricity; electrotisis.

Electuary (*e-lek'-chu-a-re*) [*electuarium*, an electuary]. A soft or pasty confection. See *Confectio*.

Eleidin (*el-e'-id-in*) [ἐλαία, olive-oil]. A material that forms the elliptic granules of the superficial cells of the stratum granulosum of the epidermis. It is called also keratohyalin.

Element (*el'-em-ent*) [*elementum*, a first principle]. In chemistry, a body that cannot be decomposed into simpler substances. The recognized elements now number about 73. See *Table of Elements*, on p. 416. The term is applied in biology to the ultimate microscopic structures of a tissue. In electricity, one of the generating plates in a galvanic cell. **E., Mendelejeff's Classification of,** the classification of elements according to their atomic weights. See *Elements, Table of, Note*.

Elementary (*el-e-men'-ta-re*) [*elementum*, a first principle]. Pertaining to an element. **E. Cell,** an embryonic corpuscle. Also, a synonym of *Leukocyte*, *q. v.*

Elemi (*el'-em-i*) [Arab]. A concrete resinous exudation probably derived from the *Canarium commune*, although its botanic source is still undetermined. It contains a crystalline resin, *Elemin* or *Amyrin*. Its action is similar to those of the turpentines generally. **E., Unguent.** (B. P.), elemi and simple ointment; it is used as an application to indolent sores and boils. Many other resins are known to commerce as *elemi*. In general, the *elemis* are softer than the *copals;* and they may be classed together as a group of somewhat hard oleo-resins. See *Resins*.

Eleocharis (*e-le-ok'-ar-is*) [ἕλος, marsh; χαίρειν, to rejoice]. A genus of sedges or cyperaceous plants; the spike-rushes. **E. palustris,** a plant very common in Europe, Asia, and N. America, is a popular astringent remedy, useful for diarrhea and for hemorrhages. The root, tops, and seeds are used. Unof.

Eleoptene (*el-e-opt'-ēn*) [ἔλαιον, oil; πτηνός, volatile]. The permanent liquid principle of volatile oils. See *Stearoptene*.

Eleosaccharum (*e-le-o-sak'-ar-um*) [L.: *pl.*, *Eleosaccharа*]. Same as *Oleosaccharum*.

Elephant Leg. See *Elephantiasis arabum*.

Elephant's Foot (*el'-e-fants foot*). Any plant of the genus *Elephantopus*, order Compositæ. The U. S. has several species. *Elephantopus tomentosus* is diuretic, expectorant, and emetic. Dose of the fld. ext. ɱv–xxx. Unof. *E. carolinianus* is tonic and febrifuge, and so are various tropical species.

Elephantiasis (*el-e-fan-ti'-as-is*) [ἐλέφας, an elephant]. *Elephantiasis arabum; Barbadoes leg; Tropical big leg; spargosis; elephant leg; morbus elephas; bucnemia tropica; pachydermia:* a chronic affection of the cutaneous and subcutaneous tissues, often occurring as an endemic or sporadic disease, due to obliteration of lymph-vessels, resulting in febrile and other systemic symptoms, redness, tumefaction, and infiltration of the affected part, and the eventual production of a well-marked hypertrophy that may become gigantic. It is most common in the leg and genitals. **E. græcorum.** See *Leprosy*. **E. indica.** Synonym of *E. arabum*. **E. telangiectodes,** a rare vascular form of elephantiasis arabum of congenital origin but of later development.

TABLE OF CHEMIC ELEMENTS.

Arranged alphabetically from data of advance sheets of Funk and Wagnall's Standard Dictionary [copyrighted]. (Published by permission.)

Number.	Name.	Derivation.	Symbol.	Atomic Weight.	Specific Gravity.*	Fusing-point or Melting-point. Deg. C. and F.	Valence.	Discovered.	By whom.	Where and how found.
1	Aluminum, ...	L. *alumen*, alum.	Al	27.0	2.58	1160° F.; 627° C.	III	1828	Wöhler.	In many rocks. (The most abundant metal.)
2	Antimony (*stibium*),	L. *antimonium.*	Sb	120.0	6.70	432° C.; 808° F.	V	1450	Valentine.	Chiefly as sulphid, and in various metallic ores.
	Argentum, ...	See *Silver.*								
3	Arsenic, ...	L. *arsenicum.*	As	75.0	5 71	Ab't 500°C.; 932° F.	V	1694	Schroeder.	Native, as sulphid, and in various metallic ores.
	Aurum, ...	See *Gold.*								
4	Barium, ...	Gr. βαρύς, heavy.	Ba	137.0	3.75	Above redness.	II	1808	Davy.	In barite and witherite.
	Beryllium, ...	See *Glucinum.*								
5	Bismuth, ...	Ger. (unknown origin).	Bi	208.9	9.80	268° C.; 517° F.	V	1450	Basil Valentine.	Native, as sulphid, and in rare minerals.
6	Boron, ...	*Borax.*	B	11.0	2.6	Very high.	III	1808	Davy.	In borax and various minerals.
7	Bromin, ...	Gr. βρῶμος, stench.	Br	79.95	3.19	—7.2° C.; —20° F.	I or VII	1826	Balard.	Mainly in sea-water and other natural brines.
8	Cadmium, ...	Gr. καδμεία, calamin.	Cd	112.0	8.65	321° C.; 609° F.	II	1817	Stromeyer.	In small amount in zinc ores.
9	Calcium, ...	L. *calx*, lime.	Ca	40.0	1.6 to 1.8	Bright redness.	II	1808	Davy	In limestone, and abundantly in other rocks.
10	Carbon, ...	L. *carbo*, charcoal.	C	12.0	3.52‡	Infusible	IV	. .	Prehistoric.	In coal, limestone, and all organic matter.
11	Cerium, ...	Planet *Ceres.*	Ce	140.2	6.7	Below silver.	III or IV	1803	Berzelius.	In cerite and other rare minerals.
12	Cesium, ...	L. *cæsius*, sky-blue spectrum.	Cs	132.9	1.88	26.5° C.; 80° F.	I	1860	Bunsen.	In lepidolite, pollucite, and mineral springs.
13	Chlorin, ...	Gr. χλωρός, green.	Cl	35.45	1.33†	—75.6 C.; —103° F.	I or VII	1774	Scheele.	In common salt (NaCl), and other chlorids.
14	Chromium, ...	Gr. χρῶμα, color.	Cr	52.1	7.3	Above platinum.	II or VI	1797	Vauquelin.	Mainly in chrome-iron ore.
15	Cobalt, ...	Ger. *kobold*, goblin.	Co	59.0	8 96	1500° C.; 2732° F.	II or VIII	1733	Brandt.	In many metallic ores.
16	Columbium (*niobium*), ...	*Columbia.*	Cb	94.0	Above 7	. . . . .	V	1801	Hatchett.	In columbite and other rare minerals.
17	Copper (*cuprum*), .	L. *Cyprus.*	Cu	63.6	8.9	1054° C.; 1931° F.	I or II	. .	Prehistoric.	Native, and in many ores.
18	Erbium, ...	*Ytterby*, a town in Sweden.	Er	166.3	. . .	. . . . .	III	1843	Mosander.	In rare minerals, as gadolinite, etc.
	Ferrum, ...	See *Iron.*								
19	Fluorin, ...	L. *fluor*, *fluere*, to flow.	F	19.0	. . .	. . . . .	I or VII	1771	Scheele.	In fluorite (CaF_2) and other minerals.
20	Gadolinium, . . .	*Gadolin*, a Russian chemist.	Gd	156.1	. . .	. . . . .	III	1886	Marignac.	In rare minerals, as gadolinite, etc.
21	Gallium, ...	L. *Gallia*, France.	Ga	69.0	5.95	30.1° C.; 86° F.	III	1875	Boisbaudran.	In certain zinc-blendes.
22	Germanium, . . .	L. *Germania*, Germany.	Ge	72.3	5.47	900° C.; 1652° F.	IV	1886	Winkler.	In argyrodite, a rare mineral.
23	Glucinum (*beryllium*), ...	Gr. γλυκύς, sweet.	Gl	9.0	1 85	Above redness	II	1828	Wöhler.	In beryl and several rare minerals.
24	Gold (*aurum*), . .	Anglo-Saxon.	Au	197.3	19 3	1045° C.; 1913° F.	I or III	. .	Prehistoric.	Generally free, rarely combined, in various ores.
	Hydrargyrum, . .	See *Mercury.*								
25	Hydrogen, ...	Gr. ὕδωρ; γεννᾶν, water-forming.	H	1.008	0.025†	—200° C.†; —328° F.	I	1766	Cavendish.	Mainly in water (H_2O).
26	Indium, ...	From its *indigo* spectrum.	In	113.7	7.4	176° C.; 348° F.	III	1863	Reich and Richter.	In certain zinc ores.
27	Iodin, ...	Gr. ἰώδης, violet.	I	125.85	4.95	114° C.; 238° F.	I or VII	1811	Courtois.	Mainly in ashes of seaweeds.
28	Iridium, ...	L. *iris*, a rainbow.	Ir	193.1	22.4	1950° C.; 3542° F.	II or IV	1803	Tennant.	In iridosmin.
29	Iron (*ferrum*), . .	Anglo-Saxon *iren.*	Fe	56.0	8.0	1600° C.; 2912° F.	II or IV	. .	Prehistoric.	As oxid and sulphid, and in nearly all rocks.
	Kalium, ...	See *Potassium.*								
30	Lanthanum, . . .	Gr. λανθάνειν, to conceal.	La	138 2	6.1	. . . . .	III	1839	Mosander.	In cerite and other rare minerals.
31	Lead (*plumbum*), .	Anglo-Saxon.	Pb	206.95	11.36	326° C.; 850° F.	II or IV	. .	Prehistoric.	In galena (PbS) and other ores.
32	Lithium, ...	Gr. λίθος, a stone.	Li	7.02	0.585	180° C.; 356° F.	I	1817	Arfvedson.	In lepidolite, spodumene, and some rare minerals.
33	Magnesium, . . .	*Magnesia*, district in Thessaly.	Mg	24.3	1.75	Ab't 430° C; 806° F.	II	1829	Bussy.	In sea-water, magnesite, and many rocks.
34	Manganese, ...	L. *magnes*, magnet.	Mn	55.0	7 2	Above iron.	II or VII	1774	Gahn.	In pyrolusite and many other minerals
35	Masrium, ...	Arabic name for Egypt.	Ms	228.	. . .	. . . . .	II	1890	Johnson Pacha.	In bed of old river in upper Egypt, in Masrite.
36	Mercury (*hydrargyrum*), ...	Name of planet.	Hg	200.0	13.596	—38 8° C.; —38° F.	I or II	. .	Prehistoric.	Native, and in cinnabar (HgS).
37	Molybdenum, . .	Gr μόλυβδος, lead.	Mo	96.0	8.6	Very high.	II or VI	1782	Hjelm.	Mainly as molybdenite (MoS_2).

38	Neodymium, . .	Gr. *νεος*, new, and *δίδυμος*, twin.	Nd	140.5	About 6.5	. . . . .	III or IV	1885	Welsbach.	In cerite and other rare minerals.
39	Nickel, ...	Ger. *Kupfernickel*.	Ni	58.0	8.9	1450° C.; 2642° F.	II or VIII	1751	Cronstedt.	In many metallic ores.
	Niobum, ...	See *Columbium*.								
40	Nitrogen, ...	Gr., niter-forming.	N	14.03	0.38 ‖	. . . . .	V	1772	Rutherford.	In the atmosphere and organic matter.
41	Osmium, ...	Gr. *ὀσμη*, odor.	Os	190.08	22.48	Nearly infusible.	II or VII	1803	Tennant.	In iridosmin and native platinum. [bined.)
42	Oxygen, ...	Gr. *ὀξυς*; *γεννάν*, acid-forming.	O	16.0	1.11 ‡	. . . . .	II or VI	1774	Priestley.	Free in air (Forms one-half the earth's crust, com-
43	Palladium, ...	Planet *Pallas*.	Pd	106.6	12.1	1500° C.; 2732° F.	II or IV	1804	Wollaston.	Native, and with platinum and gold.
44	Phosphorus, . . .	Gr. *φωσφόρος*, light-bearing.	P	31.0	1.84	44.2° C.; 112° F.	V	1669	Brandt.	In bones, and in apatite and many minerals.
45	Platinum, ...	Span *platina*, dim. of *plata*,	Pt	195.0	21.5	1775° C.; 3225° F.	II or IV	1741	Wood.	Mainly as native platinum in river-gravels.
	Plumbum, ...	See *Lead*. [silver.								
46	Potassium (*kalium*).	Eng. *potash*.	K	39.11	0.86	62.5° C.: 144.5° F.	I	1807	Davy.	In wood-ashes and many rocks.
47	Prascodymium, . .	Gr. *πράσον*, green, and *δίδυμος*.	Pr	143.5	About 6.5	. . . . .	III or IV	1885	Welsbach.	In cerite and other rare minerals.
48	Rhodium, ...	Gr. *ρόδον*, rose.	Rh	103.0	12.1	2000° C.; 3632° F.	II or VIII	1804	Wollaston.	With platinum and iridosmin.
49	Rubidium, ...	L. *rubidus*, red (its spectrum).	Rb	85.5	1.52	38.5° C.; 101.5° F.	I	1860	Bunsen.	In lepidolite and some mineral springs.
50	Ruthenium, . . .	Rus. *Ruthenia*.	Ru	101.6	12.26	Nearly infusible.	II or VII	1845	Claus	With platinum and iridosmin.
51	Samarium, ...	*Samarski*, a Russian savant.	Sm	150.0	. . .	. . . . .	III	1879	Boisbaudran.	In samarskite, cerite, and other rare minerals.
52	Scandium, ...	*Scandinavia*.	Sc	44.0	. . .	. . . . .	III	1879	Nilson.	In gadolinite and other rare minerals.
53	Selenium, ...	Gr. *σελήνη*, moon.	Se	79.0	4.5	217° C.; 425° F.	II or VI	1817	Berzelius.	Mainly in sulphur as an impurity. [oxygen
54	Silicon, ...	L. *silex*, flint.	Si	28.4	2.48	Alb'e 800° C.; 1500° F	IV	1823	Berzelius.	In quartz (SiO_2). Most abundant element after
55	Silver (*argentum*),	Anglo-Saxon *seolfor*.	Ag	107.9	10.5	954° C.; 1750° F.	I	. .	Prehistoric.	Native, and in many ores.
56	Sodium (*natrium*),	Eng. *soda*.	Na	23 05	0.97	95.6° C.; 204 ° F.	I	1807	Davy.	In common salt (NaCl) and many rocks.
	Stannum, ...	See *Tin*								
	Stibium, ...	See *Antimony*.								
57	Strontium, ...	*Strontian*, a town in Scotland.	Sr	87.6	2.5	Red heat.	II	1808	Davy.	In celestite and strontianite. [phates.
58	Sulphur, ...	L. *sulphur*	S	32 06	2.07	114.5° C.; 235° F.	II or VI	. .	Prehistoric.	Native, and in many natural sulphids and sul-
59	Tantalum, ...	*Tantalus* (Gr. Myth.).	Ta	182.6	Above 10	. . . . .	V	1802	Ekeberg.	In tantalite and other rare minerals.
60	Tellurium, ...	L. *tellus*, earth.	Te	125.0	6.23	455° C.; 851° F.	II or VI	1782	Reichenstein.	In several rare minerals.
61	Terbium, ...	*Ytterby*, a town in Sweden.	Tb	160.0	. . .	. . . . .	III	1843	Mosander.	In rare minerals, as gadolinite, etc.
62	Thallium, ...	Gr. *θαλλός*, budding twig.	Tl	204.18	11.19	239.9° C.; 561° F.	I or III	1862	Crookes.	In pyrites and in flue-dust of sulphuric-acid works.
63	Thorium, ...	God *Thor*.	Th	232.6	11.23	Almost infusible.	IV	1828	Berzelius.	In thorite and other rare minerals
64	Thulium, ...	*Thule*, Northland.	Tu	170.7	. . .	. . . . .	III	1879	Cleve.	In rare minerals, as gadolinite, etc.
65	Tin (*stannum*), . .	Anglo-Saxon.	Sn	119.0	7.25	233° C.: 551° F.	II or IV	. .	Prehistoric.	Mainly in cassiterite (SnO_2) [amounts.
66	Titanium, ...	L. *Titanes*, sons of the earth.	Ti	48.0	. . .	Not fusible.	IV	1789	Gregor.	Widely diffused in rocks and clays, in small
67	Tungsten (*wolframium*), . .	Swed., heavy stone.	W	184.0	19.26	Very high.	IV or VI	1781	d'Elhujar.	Mainly in wolframite ($MnFeWO_4$).
68	Uranium, ...	Planet *Uranus*.	U	239.6	18.69	Very high.	II or VI	1789	Klaproth.	In pitch-blende and other rare minerals.
69	Vanadium, ...	Goddess *Vanadis* (Freya).	V	51.4	5.87	In oxyhydric flame.	V	1830	Sefstrom.	In vanadinite and other rare minerals.
	Wolframium, . . .	See *Tungsten*.								
70	Ytterbium, ...	*Ytterby*, a town in Sweden.	Yb	173.0	. . .	. . . . .	III	1878	Marignac.	In rare minerals, as gadolinite, etc.
71	Yttrium, ...	*Ytterby*, a town in Sweden.	Yt	89.1	. . .	. . . . .	III	1828	Wohler.	In gadolinite and other rare minerals.
72	Zinc (*zincum*), . .	Ger. *zink*.	Zn	65.3	7.12	433° C.; 811.5° F.	II	1520	Paracelsus.	In ores, as oxid, silicate, sulphid, and carbonate.
73	Zirconium, ...	Ar. *zarkun*, gold-colored.	Zr	90.06	4.15	Above sulphur.	IV	1824	Berzelius.	In zircon and other rare minerals.

In the foregoing table the alphabetic, instead of the Mendelejeff classification, has been followed. Formerly elements were grouped according to their resemblance to some member, as the Potassium group, Li, Na, K, Rb, and Cs; the Calcium group, Ca, Sr, and Ba; the Magnesium group, Gl, Mg, Zn, and Cd; the Aluminum group, Al, Yt, Ga, Zr, Er, In, La, Pr, Nd, and Th; the Iron group, Fe, Co, Ni, U, Ce; the Manganese group, Va, Cr, Mn, and Mo; the Antimony group, Sb and Bi; the Tin group, Ti, Cb, Sn, Ta, and W; the Silver group, Cu, Ag, Hg, Tl, and Pb; and the Platinum group, Rh, Ru, Pd, Au, Pt, Ir, and Os. Since the acceptance of the periodic law, elements have been arranged in the order of their atomic weights, and each group shows indications of an arithmetic progression. In the Mendelejeff classification, the following are the groupings: Group I, with Valence 1, H, Li, Na, K, Rb, Cs. Group II, with Valences II, Gl, Mg, Ca, Zn, Sr, Cd, Ba, Hg. Group III, with Valences III, B, Al, Sc, Ga, Yt, In, La, Nd, Pr, Sm, Gd, Tb, Er, Tu, Yb, Tl. Group IV, with Valences IV, C, Si, Ti, Ge, Zr, Sn, Ce, Ph, Th. Group V, with Valences V, N, P, V, As, Cb, Sb, Ta, Bi. Group VI, with Valences VI, O, S, Cr, Se, Mo, Te, W, U. Group VII, with Valences VII, F, Cl, Mn, Br, Ru, I, Os. Group VIII, with various Valences, Fe, Ni, Co, Cu, Rh, Pd, Ag, Ir, Pt, Au.

* The factors in the columns of specific gravities and melting-points naturally vary with the form which the element takes (*e.g.*, in carbon the specific gravity varies as diamond, charcoal, or lampblack is taken), but as far as possible the factor of the most typical form is given.

† Of the liquid element. ‡ Diamond. ‖ Of the liquid at 0° C. ‡ Of the liquid at —181° C.

Elephantoid Fever (*el-e-fan'-toid*). See *Fever.*

Elephas (*el'-e-fas*) [L.]. Synonym of *Elephantiasis arabum.*

Eleuthera Bark (*e-lu'-ther-ah*). See *Cascarilla.*

Eleutheropetalous (*e-lu-ther-o-pet'-al-us*) [ἐλεύθερος, free; πέταλον, a leaf, a petal]. Polypetalous. The same as choripetalous.

Eleutherophyllous (*e-lu-ther-o-fil'-us*) [ἐλεύθερος, free; φύλλον, a leaf]. In biology, made up of distinct leaves; polypetalous or polysepalous.

Elevator (*el'-e-va-tor*) [*elevare*, to lift]. 1. The same as *Levator*. See *Muscles, Table of.* 2. An instrument used in surgery and dentistry. **E. Disease**, one of the professional neuroses, due to constant traveling in an elevator.

Elimination (*e-lim-in-a'-shun*) [*e*, out; *limen*, threshold]. Excretion; the process of putting forth or out.

Eliquation (*el-ik-wa'-shun*) [*eliquare*, to melt out]. The separation of one substance from another by fusion or melting.

Elixir (*e-liks'-er*) [Arab., *el iksir*, the philosopher's stone]. A sweetened, aromatic, spirituous preparation, which is practically a flavored syrup designed as an excipient for extracts and tinctures. There are many *elixirs*, only two of which are official in the U. S. P.; in the N. F. more than seventy are described. **E. aromaticum**, aromatic elixir, comp. spirit of orange 12 c.c., syrup 375 c.c., precipitated calcium phosphate 15 gm., deodorized alcohol and distilled water, q. s.

Elixiviation (*e-liks-iv-e-a'-shun*). See *Lixiviation.*

Elkodermatosis (*el-ko-der-mat-o'-sis*) [ἕλκος, an ulcer; δέρμα, skin; νόσος, disease]. An ulcerative skin-affection.

Ellagic Acid (*el-aj'-ik*). See *Acid.*

Elliot's Bassorin Paste. A paste used in the treatment of eczema. It consists of bassorin, 10 drams; dextrin, 6 drams; glycerin, 2 drams; water, sufficient to make 25½ drams. It should be prepared cold.

Elliptic, Elliptical (*el-ip'-tik, -al*) [ἔλλειψις, ellipse]. Having the form of an ellipse. **E. Amputation.** See *Amputation.*

Ellis's Curved Line. See *Line.* **E., Ligament of.** See *Ligament.*

Ellison's Ventilating Bricks. See *Ventilation.*

Elm. See *Ulmus* and *Fremontia.*

Elocution (*el-o-ku'-shun*) [*e*, out of; *loqui*, to speak]. The choice, arrangement, and delivery of words and language, including the use of the voice, the action of the lungs, diaphragm, gesture, etc.

Elocutionist (*el-o-ku'-shun-ist*) [*e*, out of; *loqui*, to speak]. One who is skilled in the art of elocution. **E.'s Cramp.** See *Cramp.*

Elodea (*el-o-de'-ah*) [ἑλώδης, marshy]. The marsh St. John's Worts; a genus of hypericaceous plants. **E. virginica**, common in the U. S. and Canada, is a popular stomachic. Unof.

Elodes (*e-lo'-dēz*) [ἑλώδης, swampy; ἕλος, a swamp]. Marsh or paludal fever; malarial fever.

Elsberg, Plastidules of. See *Heredity.*

Elutriation (*e-lu-tre-a'-shun*) [*elutriare*, to wash out]. A water-sifting process whereby the coarser particles of an insoluble substance are separated from the finer.

Ely's Operation. See *Operations, Table of.* **E.'s Table.** See *Pregnancy.*

Elythritis (*el-ith-ri'-tis*). See *Vaginitis.*

Elytratresia (*el-it-rat-re'-ze-ah*) [ἔλυτρον, sheath; ἄτρητος, imperforate]. Atresia of the vagina; colpatresia.

Elytreurynter (*el-it-ru-rin'-ter*) [ἔλυτρον, sheath; εὐρύνειν, to make broad]. Same as *Colpeurynter.*

Elytritis (*el-it-ri'-tis*) [ἔλυτρον, the vagina; ιτις, inflammation]. Inflammation of the vagina.

Elytrocele (*el'-it-ro-sēl*) [ἔλυτρον, sheath; κήλη, hernia]. Colpocele; vaginal hernia.

Elytroclasia (*el-it-ro-kla'-se-ah*) [ἔλυτρον, sheath; κλάειν, to break]. Rupture of the vagina.

Elytroncus (*el-it-rong'-kus*). Same as *Elytrophyma.*

Elytrophyma (*el-it-ro-fi'-mah*) [ἔλυτρον, sheath; φῦμα, a tumor]. Swelling or tumor of the vagina.

Elytroplastic (*el-it-ro-plas'-tik*) [ἔλυτρον, sheath; πλάσσειν, to form]. Relating to elytroplasty.

Elytroplasty (*el'-it-ro-plas-te*) [ἔλυτρον, sheath; πλάσσειν, to form]. Plastic operation upon the vagina, especially for vesico-vaginal fistula.

Elytropolypus (*el-it-ro-pol'-ip-us*) [ἔλυτρον, sheath; πολύπους, polypus]. Vaginal polypus.

Elytroptosis (*el-it-rop-to'-sis*) [ἔλυτρον, sheath; πτῶσις, a falling]. Prolapse of the vagina.

Elytrorrhagia (*el-it-ror-a'-je-ah*) [ἔλυτρον, sheath; ῥηγνύναι, to burst forth]. Hemorrhage from the vagina.

Elytrorrhaphy (*el-it-ror'-a-fe*) [ἔλυτρον, sheath; ῥαφή, a seam]. Suture of the vaginal wall. An operation to close the opening of the vagina in procidentia uteri.

Elytrorrhea (*el-it-ror-e'-ah*) [ἔλυτρον, sheath; ῥοία, a flow]. A vaginal leukorrhea.

Elytrostenosis (*el-it-ro-ste-no'-sis*) [ἔλυτρον, sheath; στένωσις, a contraction]. Colpostenosis; vaginal stricture.

Elytrotome (*el-it'-ro-tōm*) [ἔλυτρον, sheath; τομή, a cutting]. An instrument for performing elytrotomy.

Elytrotomy (*el-it-rot'-o-me*) [ἔλυτρον, sheath; τομή, a cutting]. Surgical incision of the vaginal wall.

Elytrum, Elytron (*el'-it-rum, -tron*) [ἔλυτρον, a cover, case: *pl.*, *Elytra*]. In biology, one of the wing-covers, wing-sheaths, or modified fore-wings of beetles; also one of the scales on the back of certain worms.

Emaciation (*e-ma-se-a'-shun*) [*emaciare*, to make lean]. Loss of the fat and fulness of the flesh of the body. Leanness.

Emaculation (*e-mak-u-la'-shun*) [*emaculare*, to remove spots]. The removal of freckles or other spots from the face.

Emanation (*em-an-a'-shun*) [*emanare*, to issue]. 1. Emission; radiation. 2. That which flows or issues from a substance; effluvium.

Emandibulate (*e-man-dib'-u-lāt*) [ε, priv.; *mandibula*, mandible]. In biology, without mandibles, or at least with soft and minute mandibles.

Emansio (*e-man'-se-o*) [L.]. A failing. **E. mensium**, delayed menstruation; amenorrhea.

Emarginate (*e-mar'-jin-āt*) [*emarginatus*, to deprive of the edge]. In biology, applied to a leaf or feather the margin of which is broken, notched, nicked, or otherwise modified.

Emasculation (*e-mas-ku-la'-shun*) [*emasculare*, to make impotent]. Removal of the testicles; impotence. See, also, *Eviration.*

Embalming (*em-bahm'-ing*) [Fr., *en*, in; *bauma*, balsam]. The treatment of a cadaver with antiseptic and preservative substances to keep it from putrefying.

Embedding (*em-bed'-ing*). The fixation, in order to preserve it intact, of a tissue-specimen in a firmer medium before freezing or otherwise hardening and section.

Embelia (*em-be'-le-ah*) [*Embel*, a German traveler]. A genus of shrubs. **E. ribes**, a myrtaceous shrub that grows in Asia; it is reputed to have anthelmintic properties. Dose of the powdered fruit, ʒj–iv; of the fluid extract, ʒj–iv. Unof.

Emblica (*em'-blik-ah*) [L.]. A genus of euphorbiaceous trees. **E. officinalis**, a tree of India; its fruit, the *Emblica myrobalan* (see *Myrobalan*), is astringent and vermifuge, the seed is febrifuge, and the bark is also medicinal. Unof.

Emboitment (*on(g)-bwat'-mon(g)*) [OF., *emboister*, to inclose, as in a box]. In biology, Bonnet's doctrine that each germ includes the germs of all generations that shall succeed it.

Embolemia (*em-bol-e'-me-ah*) [ἔμβολος, thrown in; αἷμα, blood]. A state of the blood in which it is said that emboli are readily formed.

Embolic (*em-bol'-ik*) [ἔμβολος, thrown in]. Relating to, associated with, or caused by an embolus.

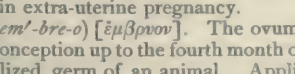
Emboliform (*em-bol'-if-orm*) [ἔμβολος, an embolus; *forma*, form]. Resembling an embolus.

Embolism (*em'-bo-lizm*) [ἔμβολος, an embolus]. The obstruction of an artery or capillary, usually by a blood-clot or embolus, brought from another point by the blood-current. These emboli may be fragments of vegetation from the valves of the heart, clots from a thrombosis or aneurysm, or fragments of atheromatous tissue. Around the seat of an embolus thrombosis occurs with the production of an infarct, *q. v.* **E., Air**, by a bubble of air. **E., Capillary**, obstruction of capillaries by micrococci. This occurs in pyemia. **E., Fat**, the entrance into the circulation of fluid fat after extensive injuries. Death often follows. The symptoms are restlessness, anxiety, slight dyspnea, accelerated breathing, quickening of the pulse; cyanosis, delirium, and insomnia, followed by coma, are graver symptoms. The temperature may remain subnormal or it may rise. **E., Infective**, the emboli are metastatic. This occurs in pyemia and ulcerative endocarditis. **E., Multiple**, numerous small emboli. **E., Paradoxical**, embolism of an artery by a venous thrombus, as may occur in a patulous foramen ovale. **E., Pyemic.** See *E., Infective.* **E., Retinal**, occurring in the arteria centralis retinæ, followed by sudden loss of vision. **E., Venous**, occurring in veins, especially of the lungs and liver.

Emboloid (*em'-bo-loid*) [ἔμβολος, an embolus; εἶδος, likeness]. Resembling an embolus.

Embololalia (*em-bo-lo-la'-le-ah*) [ἔμβολος, a thing thrown in; λαλιά, talk]. The morbid intercalation of words, often meaningless, into the speech.

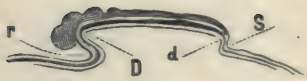
Embolophrasia (*em-bo-lo-fra'-ze-ah*) [ἔμβολος, insertion; φράσις, speech]. Embololalia.



Embolus (*em'-bo-lus*) [ἔμβολος; ἐν, in; βάλλειν, to throw]. 1. A clot of blood, or plug of other material, brought by the blood-current from a distant artery, and forming an obstruction at its place of lodgment. 2. Wilder's term for the *nucleus emboliformis*.

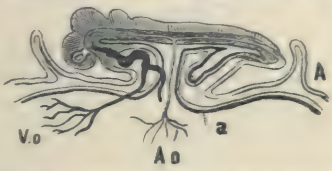
Emboly (*em'-bo-le*) [ἐμβολή, insertion]. In embryology, the process of invagination that gives rise to a gastrula from a blastosphere or vesicular morula.

Embrocation (*em-bro-ka'-shun*) [ἐμβρέχειν, to soak in]. A fluid external application for some injured or diseased part.



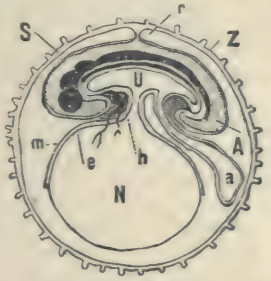
Embryectomy (*em-bre-ek'-to-me*) [ἔμβρυον, embryo; ἐκτομη, a cutting out]. The surgical removal of the embryo in extra-uterine pregnancy.

Embryo (*em'-bre-o*) [ἔμβρυον]. The ovum and the product of conception up to the fourth month of pregnancy; the fertilized germ of an animal. Applied in botany to the rudimentary plant within the seed. **E.-sac.** In biology, (*a*) the cell in the nucleus of the ovule of flowering-plants, that contains the germinal vesicles and finally the embryo; (*b*) the protoconch or primitive shell of certain cephalopods.



SCHEME OF A LONGITUDINAL SECTION OF AN EARLY EMBRYO.

E. Epiblast. m. Mesoblast. e. Hypoblast.



SCHEME OF THE FORMATION OF THE HEAD- AND TAIL-FOLDS.

r. Head-fold. D. Anterior extremity of the future intestinal tract. S. Tail-fold, first rudiment of the cavity of the rectum.

SCHEME OF A LONGITUDINAL SECTION THROUGH AN EMBRYO AFTER THE FORMATION OF THE HEAD- AND TAIL-FOLDS.

Ao. Omphalo-mesenteric arteries. Vo Omphalo-mesenteric veins. a. Position of the allantois. A. Amniotic fold.

SCHEME OF A LONGITUDINAL SECTION THROUGH A HUMAN OVUM.

Z. Zona pellucida. S. Serous cavity. r. Union of the amniotic folds A. Cavity of the amnion. a. Allantois. N. Umbilical vesicle. m. Mesoblast. h. Heart. U. Primitive intestine.

SCHEME OF HUMAN EMBRYO, WITH THE VISCERAL ARCHES STILL PERSISTENT.

A. Amnion. V. Fore-brain. M. Mid-brain. H. Hind-brain. N. After-brain. U. Primitive vertebræ. a. Eye. p. Nasal pit. S. Frontal process. y. Internal nasal process. n. External nasal process. r. Superior maxillary process of the first visceral arch. 1, 2, 3, and 4. The four visceral arches, with the visceral clefts between them. o. Auditory vesicle. h. Heart, with e, primitive aorta, which divides into the five aortic arches f. Descending aorta. om. Omphalic-mesenteric artery. b. The omphalo-mesenteric arteries of the umbilical vesicle. c. Omphalo-mesenteric vein. L. Liver with venæ advehentes and revehentes. D. Intestine. f. Inferior cava. T. Coccyx. all Allantois, with z, one umbilical artery; and x, an umbilical vein.

Embryocardia (*em-bre-o-kar'-de-ah*) [ἔμβρυον, embryo; καρδία, the heart]. An affection of the heart, characterized by a heart-beat like that of a fetus. It is usually associated with tachycardia, and a condition of collapse and cyanosis. See *Cyematocardia.*

Embryoctony (*em-bre-ok'-to-ne*) [ἔμβρυον, embryo; κτείνειν, to kill]. The destruction of the living fetus; the procurement of abortion.

Embryogenesis (*em-bre-o-jen'-es-is*), **Embryogeny** (*em-bre-oj'-en-e*) [ἔμβρυον, an embryo; γένης, producing]. That department of biology which deals with the development of the fecundated germ.

Embryograph (*em'-bre-o-graf*) [ἔμβρυον, embryo; γράφειν, to write]. A form of microscope and camera lucida for use in drawing outlines and figures in embryologic study.

Embryography (*em-bre-og'-ra-fe*) [ἔμβρυον, embryo; γράφειν, to write]. A description of embryos.

Embryologic (*em-bre-o-loj'-ik*), **Embryological** (*em-bre-o-log'-ik-al*) [ἔμβρυον, embryo; λόγος, science]. Relating to embryology.

Embryologist (*em-bre-ol'-o-jist*) [ἔμβρυον, embryo; λόγος, science]. One skilled in the science of embryology.

Embryology (*em-bre-ol'-o-je*) [ἔμβρυον, embryo; λόγος, science]. The science of the evolution of the embryo, or the study of fetal development.

Embryon (*em'-bre-on*). Same as *Embryo.*

Embryonal (*em-bre-o'-nal*). Same as *Embryonic.*

Embryonic (*em-bre-on'-ik*) [ἔμβρυον, embryo]. Pertaining to the embryo. **E. Area,** in embryology, an opaque circular spot that forms on the blastoderm. **E. Connective Tissue,** the primitive condition of connective tissue when first formed, consisting of small, round cells. **E. Spot.** See *E. Area.*

Embryotega (*em-bre-ot'-e-gah*) [ἔμβρυον, an embryo; τέγος, a roof]. In biology, a small lid or cap covering the micropyle in certain seeds.

Embryotome (*em'-bre-o-tōm*) [ἔμβρυον, embryo; τομή, section]. An instrument used in embryotomy.

Embryotomy (*em-bre-ot'-o-me*) [ἔμβρυον, embryo; τομή, section]. An operation for reduction of the size of the fetus to render possible its transmission through the birth-canal. See *Cephalotripsy, Craniocłasm, Basiotribe, Basilyst, Decollation, Decapitation, Exenteration, Evisceration, Lamination, Perforation, Spondylotomy, Transforation.*

Embryotoxon (*em-bre-o-toks'-on*) [ἔμβρυον, embryo; τόξον, a bow]. A condition resembling *arcus senilis,* sometimes seen at birth.

Embryotrophe (*em'-bre-o-trōf*) [ἔμβρυον, the embryo; τροφή, nourishment]. In biology, the food-yolk.

Embryotrophy (*em-bre-ot'-ro-fe*) [ἔμβρυον, embryo; τροφή, nourishment]. The nutrition of the fetus.

Embryulcia (*em-bre-ul'-se-ah*) [ἔμβρυον, embryo; ἕλκειν, to draw]. 1. Forcible extraction of the fetus. 2. The operation of embryotomy

Embryulcus (*em-bre-ul'-kus*) [ἐμβρυουλκός]. A blunt hook, or obstetric forceps.

Emerald-green. See *Chrome-green, Mittler's Green, Schweinfurt Green, Brilliant Green.*

Emergence (*e-mer'-jens*) [*e*, out; *mergere*, to merge; to rise out]. In biology, one of those structures occurring in higher plants, analogous to hairs, but differing from true hairs in not originating from single epidermal cells; they constitute a transition between trichomes in the stricter sense of the term, and leaves or secondary axes.

Emergency (*e-mer'-jen-se*) [*emergere*, to rise up]. A sudden, pressing, and unforeseen occasion for action; an accident or condition unlooked for, and calling for prompt decision.

Emergent (*e-mer'-jent*) [*emergere*, to rise up]. Sudden, unforeseen, and urgent; calling for prompt decision and action; as an *emergent* case.

Emerod (*em'-ér-od*). See *Hemorrhoid.*

Emesis (*em'-es-is*) [ἔμεσις; ἐμέειν, to vomit]. Vomiting.

Emetatrophia (*e-met-at-ro'-fe-ah*) [ἔμεσις, vomiting; ἀτροφία, wasting]. Atrophy or wasting, due to persistent vomiting.

Emetic (*e-met'-ik*) [ἐμετικός, causing vomiting]. 1. Having the power to induce vomiting. 2. An agent causing emesis, or a dose of such an agent. **E., Direct,** one acting directly on the nerves of the stomach. **E., Indirect,** or **E., Systemic,** one acting through the blood upon the vomiting-center, or by reflex action from other peripheral sources.

Emeticology. See *Emetology.*

Emetin (*em'-et-in*). See *Ipecacuanha.*

Emeto-catharsis (*em'-et-o-kath-ar'-sis*) [ἔμεσις, vomiting; καθαίρειν, to purge]. Vomiting and purgation at the same time, or produced by a common agent.

Emeto-cathartic (*em'-et-o-kath-ar'-tik*) [ἔμεσις, vomiting; καθαίρειν, to purge]. Having power to induce emeto-catharsis.

Emetology (*em-et-ol'-o-je*) [ἔμετος, vomiting; λόγος, science]. The study or science of the physiology, pathology, and therapeutics of vomiting, and of the nature of emetics.

Emetomania (*em-et-o-ma'-ne-ah*) [ἔμετος, vomiting; μανία, madness]. Insane desire for frequent emetics.

Emetomorphin (*em-et-o-mor'-fin*) [ἔμετος, vomiting; *Morpheus*, the god of sleep]. Apomorphia.

Emetophobia (*em-et-o-fo'-be-ah*) [ἔμετος, vomiting; φόβος, fear]. Morbid dread or fear of vomiting.

Emiction (*e-mik'-shun*) [*e*, out; *mingere*, to void urine]. Urination.

Emictory (*e-mik'-tor-e*) [*e*, out; *mingere*, to void urine]. 1. Promoting the secretion of urine. 2. A diuretic medicine.

Emigration (*em-ig-ra'-shun*) [*e*, out; *migrare*, to wander]. The outward passage of a wandering-cell or leukocyte through the wall of a blood-vessel; diapedesis.

Eminence (*em'-in-ens*) [*eminentia*, an eminence]. A rounded or protuberant part of an organ, especially of a bone. **E., Canine.** See *Canine.* **E., Collateral,** a triangular elevation in the paracele (lateral ventricle) collocated with the collateral fissure and between the hippocamp and the calcar. **E. of Doyère.** See *Doyère* and *Sarcoglia.* **E. facialis,** an eminence in the angle formed by the striæ and sulcus ventriculi. **E., Frontal,** the two eminences of the frontal bone above the superciliary ridges. **E., Ilio-pectineal,** a ridge on the upper surface of the pubic bone. **E., Nasal,** the prominence above the root of the nose between the superciliary ridges. **E., Occipital,** the ridge in the paracele (lateral ventricle) corresponding to the occipital fissure; distinct in the fetus, it is commonly obliterated in the adult; also called bulbus cornu posterioris. **E., Parietal,** the eminence of the parietal bone.

Eminential (*em-in-en'-shal*) [*eminentia*, an eminence]. Relating to an eminence.

Emissarium (*em-is-a'-re-um*) [L.]. A term for any canal or channel conveying a fluid outward. It is applied especially to the veins of the skull.

Emission (*e-mish'-un*) [*emittere*, to send forth]. An ejaculation, or sending forth.

Emmena (*em-e'-nah*) [ἔμμηνα, menses]. Menses, *q.v.*

Emmenagogue (*em-en'-ag-og*) [ἔμμηνα, the menses; ἀγωγός, leading]. A medicine that stimulates the menstrual flow. **E., Direct,** one acting directly on the generative organs. **E., Indirect,** one acting only through other functions and indirectly.

Emmenia (*em-e'-ne-ah*) [L.]. The menses.

Emmeniopathy (*em-en-e-op'-a-the*) [ἔμμηνα, menses; πάθος, illness]. Any disorder of menstruation.

Emmenology (*em-en-ol'-o-je*) [ἔμμηνα, menses; λόγος, science]. That branch of science that treats of menstruation.

Emmenorrhea (*em-en-or-e'-ah*) [ἔμμηνα, menses; ῥοία, a flowing]. The menses.

Emmerich, Bacillus of. See *Bacteria, Table of.*

Emmert's Suture. See *Suture.*

Emmet's Method. See *Treatment, Methods of.* **E. Operation.** See *Trachelorrhaphy*, and *Operations, Table of.*

Emmetrope (*em'-et-rōp*) [ἐν, in; μέτρον, measure; ὤψ, eye]. A person whose eyes are emmetropic.

Emmetropia (*em-et-ro'-pe-ah*) [ἐν, in; μέτρον, measure; ὤψ, the eye]. Normal or perfect vision. The condition of an eye whose shape and refractive media are such that, with suspended accommodation, parallel rays of light are brought to a focus upon the retina. For practical tests, rays of light from a point 20 feet away are considered as parallel.

Emmetropic (*em-et-rop'-ik*) [ἐν, in; μέτρον, measure; ὤψ, eye]. Characterized by emmetropia.

Emodin (*em'-o-din*) [Hind., *emodi*, rhubarb], $C_{15}H_{10}O_5$. A glucosid that occurs with chrysophanic acid in the bark of wild cherry, in cascara sagrada, and in the root of rhubarb. It consists of orange-red crystals, melting at 245-250° C.

Emollient (*e-mol'-yent*) [*emollire*, to soften]. 1. Softening; relaxing and soothing. 2. A substance used by external application to soften the skin; or, internally, to sooth an irritated or inflamed surface. **E. Cataplasm.** Same as *Species emollientes.*

Emoptoë (*em-op'-to-e*). See *Hemoptysis.*

Emotion (*e-mo'-shun*) [*emotio*, agitation]. Mental feeling, or sentiment, with the associated agitation, and often with more or less bodily commotion. With the emotions, desire, impulse, and will are intimately associated.

Emotional (*e-mo'-shun-al*) [*emovere*, to move out]. Pertaining to the mental condition of feeling. **E. Insanity**, insanity characterized by exaggeration and exaltation of feelings.

Empansement (*on(g)-pon(g)s'-mon(g)*) [Fr.]. A disease of sheep marked by abdominal swelling.

Empathema (*em-path-e'-mah*) [ἐν, in; πάθημα, suffering: *pl.*, *Empathemata*]. A dominant or ungovernable passion or source of suffering. **E. atonicum**, hypochondriasis. **E. entonicum**, active mania. **E. inane**, harebrained and purposeless passion and excitement.

Emphlysis (*em'-flis-is*) [ἐν, in, on; φλύσις, eruption: *pl.*, *Emphlyses*]. Any vesicular or exanthematous eruption.

Emphractic (*em-frak'-tik*) [ἐμφράττειν, to obstruct]. 1. Obstructive; closing the pores of the skin. 2. Any agent that obstructs the function of an organ, especially the excretory function of the skin.

Emphraxis (*em-fraks'-is*) [ἔμφραξις, obstruction]. Obstruction; infarction; congestion.

Emphyma (*em-fi'-mah*) [ἐν, in; φῦμα, growth: *pl.*, *Emphymata*]. A tumor.

Emphysema (*em-fis-e'-mah*) [ἐμφυσάειν, to inflate]. The abnormal collection of air in the connective tissue of a part, causing swelling and crepitation. **E., Cutaneous**, that occurring in the connective tissues beneath the skin, usually of the face. **E., Gangrenous.** See *Edema, Malignant.* **E., Interlobular**, a form of emphysema following the course of the interlobular septa. This condition is due to traumatism, as after tracheotomy, or in direct injury to the lungs. **E., Pulmonary**, a chronic condition of the lungs in which there is a dilatation of the alveoli with destruction of the alveolar walls, resulting in a loss of the normal elasticity of the lung-tissue. This is associated with more or less marked dyspnea, with hacking cough, and defective aëration of the blood, giving rise to a certain degree of cyanosis. The chest becomes full and round —"*barrel-shaped*"—and a line of distended veins may often be seen surrounding the body at the lower margin of the ribs, constituting the so-called "*emphysematous girdle.*" There is a hyper-resonant note over the chest, with feeble inspiratory sound and numerous râles of all kinds. Hypertrophy and dilatation of the right heart are frequent complications. The margins of the lungs are often the seat of large bullæ due to extensive destruction of the alveolar tissue. The most frequent causes of emphysema are whooping-cough and chronic lung-affections attended with severe coughing-spells. **E., Surgical.** See *Aëродermectasia.*

Emphysematous (*em-fis-em'-at-us*) [ἐμφυσάειν, to inflate]. Affected with or of the nature of emphysema. **E. Girdle.** See *Emphysema.*

Emphytriatreusis (*em-fit-re-at-ru'-sis*) [ἔμφυτος, innate; ἰάτρευσις, treatment]. The treatment of disease by an untrained person, whether clairvoyant, medium, trance-doctor, telepathist, mesmerist, or seventh son of a seventh son.

Empiric (*em-pir'-ik*) [ἐμπειρικός, experiential, practical]. One practising medicine without philosophic or scientific principles, simply from the results of his own experience, or that of others. As commonly used it is nearly synonymous with quack.

Empiricism (*em-pir'-is-izm*) [ἐμπειρικός, experimental, practical]. 1. Dependence upon experience or observation. 2. Quackery.

Empiricist (*em-pir'-is-ist*) [ἐμπειρικός, experimental, practical]. One who depends upon experience in the treatment of disease.

Emplastrum (*em-plas'-trum*) [ἐμπλάσσειν, to plaster up: *pl.*, *Emplastra*]. A plaster. In pharmacy, a cohesive, tenacious substance, insoluble in water, used as an excipient and containing a prescribed medicinal substance intended to be spread in a thin layer upon chamois, kid, or muslin. The excipient is usually lead oleate or Burgundy pitch. (See *Lead* and *Pix.*) There are 13 official *emplastra.* **E. califaciens.** See *Cantharis.*

Empresiomania (*em-pre-se-o-ma'-ne-ah*) [ἐμπρησις, conflagration; μανία, mania]. Pyromania; insane desire to burn houses or other articles; maniacal incendiarism.

Empresmomania (*em-pres-mo-ma'-ne-ah*) [ἐμπρησμός, a burning; μανία, madness]. Same as *Empresiomania.*

Empresmus (*em-pres'-mus*) [ἐμπρησμός, a burning]. Inflammation; phlogosis.

Emprosthotonia (*em-pros-thot-o'-ne-ah*). Same as *Emprosthotonos.*

Emprosthotonos (*em-pros-thot'-o-nus*) [ἔμπροσθεν, forward; τόνος, tension]. Tonic muscular spasm that bends the upper and lower parts of the body forward; it is one of the symptoms in some cases of tetanus, etc.

Emptysis (*emp'-tis-is*) [ἐμπτύειν, to spit upon]. Hemorrhage from the lungs; hemoptysis.

Empyema (*em-pi-e'-mah*) [ἐν, in; πύον, pus]. Pus in the pleural cavity or in the chest. It may be *primary*, which is rare, or *secondary.* There is associated a hectic type of fever, with chills and sweating. If not treated it will rupture spontaneously through the lung or chest-wall. Empyema is most frequently encoun-

tered in children, but may occur from pleurisy, tuberculosis, septic conditions, and infectious fevers in any individual. **E. necessitatis,** an empyema in which the pus burrows between the interscostal spaces and appears as a subcutaneous tumor. **E., Pulsating,** empyema attended with pulsation of the chest-wall.

Empyemic (*em-pi-em′-ik*). See *Empyematous.*

Empyesis (*em-pi-e′-sis*) [ἐμπυέειν, to suppurate]. A pustular eruption, as smallpox; any disease characterized by phlegmonous pimples gradually filling with purulent fluid.

Empyocele (*em-pi′-o-sēl*) [ἐν, in; πύον, pus; κήλη, tumor]. A purulent scrotal tumor.

Empyomphalus (*em-pi-om′-fal-us*) [ἐν, in; πύον, pus; ὀμφαλός, navel]. A collection of pus at or about the navel.

Empyreumatic (*em-pi-ru-mat′-ik*) [ἐμπύρευμα, a live coal; ἔμπυρος, on fire]. Obtained from some organic substance by the aid of strong heat; as an empyreumatic oil.

Emulgent (*e-mul′-jent*) [*emulgere*, to milk out]. 1. Draining; applied to the renal arteries as draining out the urine. 2. An emulgent vessel. 3. Any remedy that stimulates the emunctory organs. **E. Veins.** See *Vein.*

Emulsin (*e-mul′-sin*) [*emulgere*, to milk out], 10 ($C_9H_{18}N_2O_6$) + S (*Bull*). A ferment contained in bitter almonds. It is also called *Synaptase.* Its union with amygdalin forms hydrocyanic acid. See *Amygdalin.*

Emulsio (*e-mul′-se-o*) [L.: *pl.*, *Emulsiones*]. See *Emulsion.*

Emulsion (*e-mul′-shun*) [*emulsio*, emulsion]. Water or other liquid in which oil, in minute subdivision of its particles, is suspended. The U. S. P. and N. F. together contain formulæ of some 19 *emulsiones.*

Emulsionize (*e-mul′-shun-īz*) [*emulgere*, to milk out]. To transform into an emulsion. The pancreatic juice *emulsionizes* fats.

Emulsive (*e-mul′-siv*) [*emulgere*, to milk out]. Forming or readily entering into an emulsion.

Emunctory (*e-munk′-tor-e*) (*emungere*, to blow the nose, to wipe out]. 1. Excretory; excreting or removing effete matters and waste-products. 2. Any organ or part that has an excretory or purifying function, as the liver, kidneys, bowel, skin, or lungs.

Emydin (*em′-id-in*) [ἐμύς, the fresh-water tortoise]. A white proteid substance procured from the yolk of the eggs of turtles.

Enamel (*en-am′-el*) [ME., *enamaile*, enamel]. 1. The vitreous substance of the crown of the teeth. See *Teeth.* 2. A vitreous substance used for painting on porcelain, glass, and for covering metals with various kinds of ornamental work. It is composed of coloring matters which consist of metallic oxids, fluxes of vitrifiable substances, as silicates, borates, or boro-silicates. See *Porcelain Teeth.* **E.-blue.** See *Smalts.* **E.-cell.** See *Ameloblast.* **E.-chisel,** a dental instrument shaped like a chisel, with a straight or oblique edge, and used for cutting away the enamel and dentine of the teeth. **E.-column, E.-fiber, E.-prism, E.-rod,** any one of the minute six-sided prisms of which the enamel of a tooth is composed. **E.-cuticle.** See *Cuticula dentis.* **E.-germ,** an *Ameloblast, q. v.*

Enanthema (*en-an-the′-mah*) [ἐν, in; ἄνθημα, bloom, eruption: *pl.*, *Enanthemata*]. An eruption within the body, in distinction from *Exanthema.*

Enanthematous (*en-an-them′-at-us*) [ἐν, in; ἄνθημα, bloom, eruption]. Of the nature of or accompanied by an enanthema.

Enanthesis (*en-an′-the-sis*) [ἐν, in; ἀνθεῖν, to bloom]. 1. An eruption of the skin, not connected with an internal disease. 2. An exanthematous rash.

Enanthylic Acid (*en-an-thil′-ik*). See *Acid.*

Enantioblastous (*en-nan-te-o-blas′-tus*) [ἐναντίος, opposite; βλαστός, germ]. In biology, applied to the embryo of orthotropous seeds when placed at the end opposite the hilum.

Enantiomorphous (*en-an-te-o-mor′-fus*)[ἐναντίος, opposite; μορφή, form]. Similar but contrasted or reversed in form. Thus the two hands are *enantiomorphous.*

Enarthrodia (*en-ar-thro′-de-ah*). See *Enarthrosis.*

Enarthrodial (*en-ar-thro′-de-al*) [ἐν, in; ἄρθρον, a joint]. Having the character of an enarthrosis.

Enarthrosis (*en-ar-thro′-sis*) [ἐν, in; ἄρθρον, joint]. A ball-and-socket joint, like that of the hip; a variety of diarthrosis. See *Diarthrosis.*

Enation (*e-na′-shun*) [*enasci*, to be born]. In biology, having outgrowths resulting from excessive development. In ethnology, maternal relationship.

Encanthis (*en-kan′-this*) [ἐν, in; κάνθος, canthus]. A reddish-colored morbid growth in the inner canthus of the eye.

Encapsulation (*en-kap-su-la′-shun*) [*en*, in; *capsula*, a capsule]. Fixation as in a capsule; the absorption of a bacillus in a giant-cell; the enclosure of a foreign body in a tough sheath.

Enceinte (*on(g)-sant′*) [Fr., *incincta*, girdled]. With child; pregnant.

Encephal (*en-sef′-al*). Same as *Encephalon, q. v.*

Encephalalgia (*en-sef-al-al′-je-ah*) [ἐγκέφαλος, the brain; ἄλγος, pain]. Pain in the head.

Encephalatrophic (*en-sef-al-at-rōf′-ik*) [ἐγκέφαλος, brain; ἀτροφία, wasting]. Relating to brain-atrophy.

Encephalic (*en-sef-al′-ik*) [ἐγκέφαλος, the brain]. Pertaining to the encephalon.

Encephalin (*en-sef′-al-in*) [ἐγκέφαλος, the brain]. A nitrogenous glucosid extracted from brain-tissue.

Encephalion (*en-sef-a′-le-on*) [dim. of ἐγκέφαλος, the brain]. The cerebellum.

Encephalitic (*en-sef-al-it′-ik*) [ἐγκέφαλος, the brain; ιτις, inflammation]. Relating to or affected with encephalitis.

Encephalitis (*en-sef-al-i′-tis*) [ἐγκέφαλος, brain; ιτις, inflammation]. Inflammation of the encephalon; brain-fever.

Encephalocele (*en-sef′-al-o-sēl*) [ἐγκέφαλος, brain; κήλη, tumor]. A hernia of the brain through a cranial fissure.

Encephalocœle (*en-sef′-al-o-sēl*) [εγκέφαλος, brain; κοιλία, hollow]. A ventricle of the brain.

Encephalodialysis (*en-sef-al-o-di-al′-is-is*) [ἐγκέφαλος, brain; διάλυσις, dissolution]. Softening of the brain.

Encephalodynia (*en-sef-al-o-din′-e-ah*) [ἐγκέφαλος, brain; ὀδύνη, pain]. Same as *Encephalalgia.*

Encephaloid (*en-sef′-al-oid*) [ἐγκέφαλος, brain; εἶδος, like]. 1. Resembling brain-tissue. 2. Soft carcinoma. See *Carcinoma.*

Encephalolith (*en-sef′-al-o-lith*) [ἐγκέφαλος, brain; λίθος, stone]. A calculus of the brain; a brain-stone.

Encephalolithiasis (*en-sef-al-o-lith-i′-as-is*) [ἐγκέφαλος, brain; λιθίασις, the formation of calculi]. The formation of brain-stones.

Encephalology (*en-sef-al-ol′-o-je*) [ἐγκέφαλος, brain; λόγος, science]. The anatomy, physiology, and pathology of the brain.

Encephaloma (*en-sef-al-o′-mah*)[ἐγκέφαλος, brain; ὄμα, tumor: *pl.*, *Encephalomata*]. 1. Tumor of the brain; hernia cerebri. 2. Encephaloid carcinoma.

Encephalomalacia (*en-sef-al-o-mal-a′-se-ah*) [ἐγκέφαλος, brain; μαλακία, softening]. Softening of the brain-substance.

Encephalomere (*en-sef'-al-o-mēr*) [ἐγκέφαλος, brain; μέρος, share]. Any one of the succession of natural segments of axial parts into which the brain is divisible.

Encephalometer (*en-sef-al-om'-et-er*) [ἐγκέφαλος, brain; μέτρον, measure]. An instrument for measuring the cranium and locating certain brain-regions.

Encephalo-myelopathy (*en-sef'-al-o-mi-el-op'-ath-e*) [ἐγκέφαλος, brain; μυελός, marrow; πάθος, disease]. Any disease that is both an encephalopathy and a myelopathy; any cerebro-spinal disease.

Encephalon (*en-sef'-al-on*) [ἐν, in; κεφαλή, the head]. The contents of the cranium. The brain.

Encephalonarcosis (*en-sef-al-o-nar-ko'-sis*) [ἐγκέφαλος, brain; ναρκόειν, to benumb]. Stupor from some brain-lesion.

Encephaloncus (*en-sef-al-ong'-kus*) [ἐγκέφαλος, brain; ὄγκος, a tumor]. See *Encephalophyma*.

Encephalopathy (*en-sef-al-op'-ath-e*) [ἐγκέφαλος, brain; πάθος, disease]. Any disease of the brain.

Encephalophyma (*en-sef-al-o-fi'-mah*) [ἐγκέφαλος, brain; φῦμα, a growth]. A tumor of the brain.

Encephalorrhagia (*en-sef-al-or-a'-je-ah*) [ἐγκέφαλος, brain; ῥηγνύναι, to break forth]. Cerebral hemorrhage.

Encephalotome (*en-sef'-al-o-tōm*) [ἐγκέφαλος, brain; τομή, section]. An instrument for slicing the encephalon for examination or preservation.

Encephalotomy (*en-sef-al-ot'-o-me*) [ἐγκέφαλος, brain; τομή, section]. 1. The anatomy or dissection of the brain; surgical incision of the brain. 2. Obstetric craniotomy.

Enchondroma (*en-kon-dro'-mah*) [ἐν, in; χόνδρος, cartilage; ὄμα, tumor: *pl.*, *Enchondromata*]. 1. A tumor arising from or resembling cartilage in texture, etc.; chondroma. 2. A cartilaginous growth within an organ or tissue.

Enchondrosis (*en-kon-dro'-sis*) [ἐν, within; χόνδρος, cartilage: *pl.*, *Enchondroses*]. An outgrowth of cartilage from an osseous or cartilaginous structure; the process by which an enchondroma is developed.

Enchylema (*en-ki-le'-mah*) [ἐν, in; χυλός, juice]. In biology, the basal substance of a cell-nucleus (Kernsaft); it is a hyaline, fluid, granular substance, containing the other nuclear elements.

Enchymatous (*en-kim'-at-us*) [ἐν, in; χεῖν, to pour]. In biology, applied to cells that are distended by infusion, as glandular epithelia.

Enclave (*en-klav'*, *on(g)-klahv'*) [Fr.]. Any substance enclosed within a foreign tissue, as an oil-globule in a cell; any exclave (*q. v.*) considered in relation to the part that surrounds it.

Enclavement (*on(g)-klahv'-mon(g)*) [Fr.]. Retention due to a constriction; impaction, as of the head in the pelvic strait.

Enclitic (*en-klit'-ik*) [ἐγκλιτικός, leaning on]. Not synclitic.

En Clou (*on(g)-kloo'*) [Fr.]. See *Culture*.

Encoleosis (*en-ko-le'-o-sis*) [ἐν, in; κόλεος, sheath]. Invagination.

Encolpitis (*en-kol-pi'-tis*) [ἐν, in; κόλπος, vagina]. Mucous vaginitis.

Encraty (*en'-krat-e*) [ἐγκράτεια, mastery]. Self-control; continence or strict temperance.

Encyclic, Encyclical (*en-sik'-lik*, *en-sik'-lik-al*) [ἐν, in; κύκλος, a circle]. In biology, applied to flowers having the organs arranged with an equal number of parts, in alternate whorls; isomerous.

Encysted (*en-sist'-ed*) [ἐν, in; κύστις, a bag]. Enclosed in a cyst, or capsule. Aneurysms, herniæ, or tumors may become encysted.

Encystment (*en-sist'-ment*) [ἐν, in; κύστις, a bag]. The process of becoming encysted.

End [ME., *ende*]. The terminal point of a thing. **E.-bud**, or **E.-bulb**, the terminal bulb of a nerve in the skin. **E.-bulb of Krause.** See *Corpuscle*. **E.-plate**, the expanded terminal of a motor nerve upon a bundle of muscular fibers. **E.-organ**, the general name for the terminal organ or part of a sensory nerve-fiber, of whatever kind.

Endangeitis (*end-an-je-i'-tis*) [ἔνδον, within; ἀγγεῖον, vessel; ιτις, inflammation]. Inflammation of the endangium.

Endangium, or Endangeion (*end-an'-je-um*, *-on*) [ἔνδον, within; ἀγγεῖον, vessel]. The intima or inmost coat of a blood-vessel. See *Intima*.

Endanthem (*end-an'-them*) [ἔνδον, within; ἀνθεῖν, to bloom]. A term applied to a mucous exanthem.

Endarteritis (*end-ar-ter-i'-tis*) [ἔνδον, within; ἀρτηρία, artery; ιτις, inflammation]. Inflammation of the intima, or innermost coat of an artery. The *acute form* is rare, and only occurs in the aorta and the larger arteries. Ulceration is very rarely present. The *chronic form*, also named *Atheroma*, and *Arteritis deformans*, is a peculiar change or degeneration occurring in the arterial coats of the aged, and is preceded by a fatty degeneration of the tissues of the arteries. Syphilis is supposed to play an important part in the production of this condition. The immediate cause, however, is mechanical irritation due to the force of the circulation. The fatty débris and the cholesterin that are formed during the degenerative process accumulate in spaces beneath the intima and constitute the so-called *atheromatous abscesses*. The so-called *atheromatous ulcer* is formed by one of these abscesses breaking through the intima. The sequelæ of *atheromatous degeneration* are very grave. Aneurysm, thrombosis, embolism, and apoplexy frequently result, and hence, the ultimate prognosis is bad. **Arterio-capillary Fibrosis**, or **Arterio-sclerosis**, is a peculiar change occurring in the small vessels throughout the body, and consisting in a thickening of the adventitia and intima by a deposit of a hyaline-fibroid material which diminishes the caliber of the vessels, increases the arterial tension, and thus gives rise to the hypertrophy of the heart that is present in this condition.

Endeictic (*en-dik'-tik*) [ἐν, in; δεικνύναι, to show]. Symptomatic; serving as an indication.

Endeixis (*en-dīks'-is*) [ἔνδειξις, a pointing out]. A symptom, sign, or indication.

Endemann and Prochazka's Test. See *Tests*.

Endemic (*en-dem'-ik*) [ἐν, in; δῆμος, a people]. A term applied to diseases that exist among small numbers of persons or within a limited area. An *endemic* disease may or may not become epidemic; it is in general due to some local cause. **E. Colic.** See *Colic*.

Endemicity, or Endemism (*en-dem-is'-it-e*, or *en'-dem-izm*) [ἐν in; δῆμος, a people]. The quality of being endemic.

Endemiology (*en-dem-e-ol'-o-je*) [ἐν, in; δῆμος, a people; λόγος, science]. The science of endemic diseases.

Endepidermis (*end-ep-e-der'-mis*) [ἔνδος within; ἐπί, upon; δέρμα, the skin]. The inner layer of the epidermis.

Endermatic (*en-der-mat'-ik*) [ἐν, in; δέρμα, the skin]. Within the skin. Pertaining to a method of administering medicines through the skin, by rubbing, etc.

Endermic (*en-der'-mik*). Same as *Endermatic*.

Enderon (*en'-der-on*) [ἐν, in; δέρος, skin]. The true skin or derm, together with the non-epithelial portion of the mucous membrane.

Enderonic (*en-der-on'-ik*) [ἐν, in; δέρος, skin]. Pertaining to or of the nature of the enderon.

Endexoteric (*en-deks-o-ter'-ik*) [ἔνδον, within; ἐξωτερικός, outer]. Due both to internal and external causes.

Endo- (*end'-o-*) [ἔνδον, within]. A prefix, meaning within.

Endo-arteritis (*en-do-ar-ter-i'-tis*). See *Endarteritis.*

Endo-auscultation (*en-do-aws-kul-ta'-shun*) [ἔνδον, within; *auscultare*, to listen to]. A method of auscultation devised by Bianchi by using the ordinary esophageal tube passed into the stomach, to auscult the gullet and stomach, and through them, to a certain degree, the heart and lungs.

Endoblast (*en'-do-blast*) [ἔνδον, within; βλαστός, a germ]. The cell-nucleus, or cytoblast. See *Hypoblast.*

Endoblastic (*en-do-blas'-tik*) [ἔνδον, within; βλαστός, a germ]. Relating to the endoblast.

Endocardiac, Endocardial (*en-do-kar'-de-ak, en-do-kar'-de-al*) [ἔνδον, within; καρδία, the heart]. Relating to the endocardium; situated within the heart.

Endocarditic (*en-do-kar-dit'-ik*) [ἔνδον, within; καρδία, the heart]. Pertaining to or affected with endocarditis.

Endocarditis (*en-do-kar-di'-tis*) [ἔνδον, within; καρδία, the heart; ιτις, inflammation]. Inflammation of the endocardium or lining membrane of the heart. Acute rheumatism is the most frequent cause, though pneumonia, gout, or any infectious disease may precede. The valves are nearly always the parts affected, and usually those of the left heart. The disease is prone to terminate fatally or result in permanent injury to the valves. Fibrinous deposits or vegetations project into the cavity of the heart; the thickened endocardium is liable to become atheromatous, with chronic ulceration. · *Acute* endocarditis may be divided into *simple* and *malignant*. *Chronic endocarditis* includes chronic disease of the valves of the heart. There is a fibrous or cirrhotic thickening of the latter, associated with contraction and calcification. Usually this chronic disease, like the acute, is confined to the left heart, and it is generally rheumatic in origin. **E., Malignant** or **Ulcerative.** Also called *diphtheric, infectious*, and *septic endocarditis*. A rapidly fatal type due to septic infection. It is marked by high fever, chills, and profound prostration. This is followed by the development of a murmur, purpuric skin-eruptions, hematuria, delirium, convulsions, hemiplegia, enlargement of the spleen, the typhoid state, and death. Frequently no cause can be found. Ulcerations are found around and in the valves, and in these ulcers micro-organisms are present in large quantities. **E. polyposa,** a form of ulcerative endocarditis in which there is an excessive deposit of fibrin, producing polypoid masses. **E. pustulosa,** a form of ulcerative endocarditis in which minute abscesses occur in the substance of the valves. **E., Simple,** the ordinary variety of acute endocarditis, usually associated with a mitral systolic murmur. **E., Chronic,** associated with valvular lesions. The following forms are met with: 1. *Aortic Incompetence;* 2. *Aortic Stenosis* or *Obstruction;* 3. *Mitral Incompetence;* 4. *Mitral Stenosis;* 5. *Pulmonary Incompetence;* 6. *Pulmonary Stenosis* or *Obstruction;* 7. *Tricuspid Incompetence;* 8. *Tricuspid Stenosis;* 9. *Combined valvular disease.* **Aortic Incompetence** is produced by a retraction of the edges of the valves, which have become rigid and thickened; as a result the aorta is not shut off from the left ventricle during the diastole, and there is a leaking backward of blood into that cavity. A *diastolic* murmur is thus produced. This is frequently associated with a marked degree of arterio-sclerosis. Sudden death occurs in aortic incompetence more frequently than in any other valvular affection. The pulse is the so-called Corrigan or water-hammer pulse. **Aortic Stenosis** or **Obstruction** is due to thickening and curling, with calcification of the valves. This usually occurs in the aged. A systolic murmur is produced, accompanied in the late stages of the disease by a tendency to syncope, giddiness, and anemia. The pulse is slow and small, but regular. **Mitral Incompetence,** the most frequent of all valvular lesions, is due to curling of the valve-cusps or to shortening of the chordæ tendineæ. There is usually produced an immense hypertrophy of the walls of the ventricles. Late in the disease compensation fails and general edema ensues. Dyspnea is a frequent symptom, associated with cyanosis and albuminuria. The murmur is systolic in time; the pulse is normal during the stage of compensation, afterward small and irregular. This is a common form among children. **Mitral Stenosis,** due to fibrous thickening and contraction of the mitral cusps. The opening may be reduced to a mere fissure. If due to a thickening and shortening of the chordæ tendineæ the thickened and adherent valves are drawn in a funnel-shape toward the floor of the ventricle. Mitral stenosis usually occurs in women. A presystolic murmur is produced, associated with duplication of the second sound. **Pulmonary Incompetence,** the rarest of valvular diseases, may be due to congenital abnormalities, or may follow some diseased condition, as malignant endocarditis. The murmur is diastolic in time. **Pulmonary Stenosis** or **Obstruction,** usually congenital, is due to fetal heart-disease. The patients usually die before they are ten or twelve years old. A systolic murmur is produced. **Tricuspid Incompetence** is due to endocarditis or to dilatation of the right ventricle and tricuspid orifice. Compensation is never adequate, and hence venous stasis, cyanosis, and dropsy soon follow. A systolic murmur is produced. **Tricuspid Stenosis** is a rare condition and usually secondary to mitral stenosis. It is marked by a presystolic murmur. **Combined Valvular Disease;** frequently two of the foregoing murmurs may coëxist. The most usual combinations are as follows: 1. Aortic obstruction and regurgitation; 2. Mitral obstruction and regurgitation; 3. Mitral obstruction and tricuspid regurgitation; 4. Aortic obstruction and mitral regurgitation; 5. Double valvular disease at aortic and mitral orifices (four murmurs). **E. ulcerosa,** the ulcerative form of endocarditis. **E. verrucosa,** a form of endocarditis characterized by the production of endocardial vegetations situated mostly upon the curtains of the cardiac valves. It is seen usually upon the left side of the heart.

Endocardium (*en-do-kar'-de-um*) [ἔνδον, within; καρδία, the heart]. The colorless, transparent membrane lining the interior of the heart.

Endocarp (*en'-do-karp*) [ἔνδον, within; καρπός, fruit]. In biology, the inner hard and stony membranous or fleshy layer of a pericarp; *e.g.*, the stone of a peach.

Endocarpoid (*en-do-kar'-poid*). In biology, applied to lichens that have the apothecia immersed in the thallus.

Endocelarium (*en-do-se-la'-re-um*) [ἔνδον, within; κοιλία, the belly]. In biology, the visceral epithelium of the body-cavity.

Endocervical (*en-do-ser'-vik-al*) [ἔνδον, within; *cervix*, neck]. Relating to the inside of the uterine cervix.

Endocervicitis (*en-do-ser-vis-i'-tis*) [ἔνδον, within; *cervix*, neck; ιτις, inflammation]. Inflammation within the canal of the cervix uteri.

Endochondral (*en-do-kon'-dral*) [ἔνδον, within; χόνδρος, cartilage]. Situated or occurring within a cartilage.

Endochorion (*en-do-ko'-re-on*) [ἔνδον, within; χόριον, the chorion]. The inner chorion; the vascular layer of the allantois.

Endochorionic (*en-do-ko-re-on'-ik*) [ἔνδον, within; χόριον, the chorion]. Relating to the endochorion.

Endochrome (*en'-do-krōm*) [ἔνδον, within; [χρῶμα, color]. In biology, the coloring-matter, other than green, of the endoplasm of a cell, or that of diatoms or of flowers.

Endochylema (*en-do-ki'-lem-ah*) [ἔνδον, within; χύλος, juice]. In biology, the semi-fluid substance filling the protoplasmic reticulum of a cell.

Endochyme (*en'-do-kīm*) [ἔνδον, within; χυμός, juice]. In biology, the formative cell-sap elaborated from the chyme.

Endoclinal (*en-do-kli'-nal*) [ἔνδον, within; κλίνειν, to lean]. In biology, having the clinode, an organ analogous to the hymenium, inclosed in a conceptacle.

Endocolpitis (*en-do-kol-pi'-tis*) [ἔνδον, within; κόλπος, vagina]. Same as *Encolpitis*.

Endocone (*en'-do-kōn*) [ἔνδον, within; κῶνος, cone]. In biology, one of the internal cones formed by the siphon-sheaths in certain cephalopods.

Endocranitis (*en-do-kra-ni'-tis*) [ἔνδον, within; κρανίον, the skull; ιτις, inflammation]. Inflammation of the endocranium; pachymeningitis externa.

Endocranium (*en-do-kra'-ne-um*) [ἔνδον, within; κρανίον, the skull]. That part of the cerebral dura that adheres to the inner surface of the cranial bones. One of the processes projecting into the cephalic cavity, as the *tentorium* or *cephalophragma*.

Endocyemate (*en-do-si'-em-āt*) [ἔνδον, within; κύημα, an embryo]. In embryology, applied to that form of development in which the embryo is invaginated in a fold of the blastodermic membrane, an amnion being formed; the opposite of *Epicyemate*.

Endocyesis (*en-do-si-e'-sis*) [ἔνδον, within; κυεῖν, to conceive: *pl.*, *Endocyeses*]. In biology, the process that gives rise to an endocyemate embryo.

Endocyma (*en-do-si'-mah*) [ἔνδον, within; κῦμα, a fetus]. A form of double monstrosity in which the parasite is contained within the body of the autosite.

Endocyst (*en'-do-sist*) [ἔνδον, within; κύστις, bladder]. In biology, the endoderm or inner layer of the cenecium or common dermal system of a colony of Polyzoa. See *Ectocyst*.

Endoderm (*en'-do-derm*) [ἔνδον, within; δέρμα, skin]. In biology, the simple nutritive cell-layer lining the cavity of the primitive intestine, the enteron, and its modifications or derivatives. The vegetative germinal layer. See *Blastoderm*.

Endodermis (*en-do-der'-mis*) [ἔνδον, within; δέρμα, skin]. In biology, the layer of cells surrounding a fibro-vascular cylinder.

Endodontitis (*en-do-don-ti'-tis*) [ἔνδον, within; ὀδούς, a tooth; ιτις, inflammation]. Inflammation of the lining membrane of a tooth.

Endogastritis (*en-do-gas-tri'-tis*) [ἔνδον, within; γαστήρ, stomach; ιτις, inflammation]. Inflammation of the mucous membrane of the stomach.

Endogen (*en'-do-jen*) [ἔνδον, within; γεννᾶν, to produce]. A plant, the growth of which is by means of new matter deposited in the interior of the trunk or branch. A member of one of the great primary classes of flowering-plants; a monocotyledon. See *Exogen*.

Endogenous (*en-doj'-en-us*) [ἔνδον, within; γένης, producing]. In biology, applied to the stems of monocotyledons and their manner of growth; also to spore-formation or cell-formation inside of a parent-cell.

Endognathal (*en-dog'-na-thal*) [ἔνδον, within; γνάθος, jaw]. In biology, applied to the pulpiform appendages formed by the modification of the three terminal joints of the third thoracic limb in certain crustaceans.

Endognathion (*end-og-na'-the-on*) [ἔνδον, within; γνάθος, jaw]. The middle portion of the superior maxilla.

Endogonium (*en-do-go'-ne-um*) [ἔνδον, within; γόνος, seed]. In biology, a gonidium formed inside of a receptacle or parent-cell, as in the *Saprolegnieæ*, *Mucorini*, *Vaucheria*.

Endo-laryngeal (*en-do-lar-in'-je-al*) [ἔνδον, within; λάρυγξ, the larynx]. Within the larynx. **E. Operations**, operations performed within the larynx.

Endolemma (*en-do-lem'-ah*) [ἔνδον, within; λέμμα, husk]. Same as *Neurilemma*.

Endolymph (*en'-do-limf*) [ἔνδον, within; *lympha*, water]. The fluid of the membranous labyrinth of the ear.

Endolymphangeal (*en-do-lim-fan'-je-al*) [ἔνδον, within; *lympha*, lymph; ἀγγεῖον, vessel]. Situated or belonging within a lymph-vessel; as an endolymphangeal nodule.

Endolymphic (*en-do-lim'-fik*) [ἔνδον, within; *lympha*, lymph]. Relating to or of the nature of endolymph.

Endomersion (*en-do-mer'-shun*). See *Objective*.

Endomesoderm (*en-do-me'-so-derm*) [ἔνδον, within; μέσος, middle; δέρμα, skin]. In biology, applied to two cells that appear on the side of the blastopore in the embryos of molluscs and annelids, giving rise by division to the two primitive mesoderm cells, and to a portion of the lining of the mesenteron.

Endometrial (*en-do-me'-tre-al*) [ἔνδον, within; μήτρα, the womb]. Pertaining to the endometrium; situated within the uterus.

Endometritis (*en-do-me-tri'-tis*) [ἔνδον, within; μήτρα, the womb; ιτις, inflammation]. Inflammation of the endometrium. **E., Cervical**, of the cervical portion. It gives rise to the condition known as *erosion*, *ulceration*, or *granular degeneration of the cervix*, a very frequent condition. There is leukorrhea, pain in the back, and congestion of the cervix and pelvic viscera, with metrorrhagia or menorrhagia, or both, together with some failure of the general health. This condition is due to traumatism, usually in parturition. **E., Chronic Purulent**, occurs in old women and is marked by an accumulation of pus in the uterine cavity with a purulent leukorrhea. **E., Corporeal**, that of the body of the uterus. **E., Decidual**, of the decidual membrane of the impregnated uterus. It may be *diffuse* (thickening and development of connective tissue) or *polypoid* (with polypoid growths). **E., Fungous**, that in which the lining membrane is hypertrophied, with the formation of vascular granulations. This is also called *hemorrhagic endometritis*. **E., Hemorrhagic.** See *E., Fungous*.

Endometrium (*en-do-me'-tre-um*) [ἔνδον, within; μήτρα uterus]. The lining membrane of the uterus.

Endometry (*en-dom'-et-re*) [ἔνδον, within; μέτρον, measure]. The measurement of the interior of an organ or cavity, as of the cranium.

Endomyocarditis (*en-do-mi-o-kar-di'-tis*) [ἔνδον, within; μῦς, muscle; καρδία, heart; ιτις, inflammation]. Inflammation of both endocardium and myocardium.

Endomysial (*en-do-miz'-e-al*) [ἔνδον, within; μῦς, muscle]. Pertaining to or of the nature of endomysium.

Endomysium (*en-do-miz'-e-um*) [ἔνδον, within; μῦς, muscle]. The extension of the perimysium between the muscular fibers.

Endonephritis (*en-do-nef-ri'-tis*) [ἔνδον, within; νεφρός, kidney; ιτις, inflammation]. Synonym of *Pyelitis*.

Endoneural (*en-do-nu'-ral*) [ἔνδον, within; νεῦρον, nerve]. Relating to or situated within the interior of a nerve.

Endoneurial (*en-do-nu'-re-al*) [ἔνδον, within; νεῦρον, a nerve]. Relating to the endoneurium.

Endoneurium (*en-do-nu′-re-um*) [ἔνδον, within; νεῦρον, a nerve]. The connective-tissue sheath uniting the fibers of a fasciculus (or funiculus) of a nerve.

Endoparasite (*en-do-par′-as-īt*) [ἔνδον, within; παράσιτος, parasite]. An entozoan or internal parasite; one living within its host.

Endoparasitic (*en-do-par-as-it′-ik*) [ἔνδον, within; παράσιτος, a parasite]. Of the nature of an endoparasite.

Endopatagium (*en-do-pat-a′-je-um*) [ἔνδον, within; παταγεῖον, the border of a woman's gown]. In biology, that part of the wing-membrane of a bat lying between the body, the humerus, the lower extremity, and a hypothetic line drawn downward from the elbow and intersecting the free margin of the membrane. (Allen.)

Endopathic (*en-do-path′-ik*) [ἔνδον, within; πάθος, disease]. Pertaining to the origin of disease from conditions or causes not derived from without. See *Exopathic*.

Endopericarditis (*en-do-per-ik-ar-dī′-tis*) [ἔνδον, within; περί, around; καρδία, the heart; ιτις, inflammation]. Inflammation of both endocardium and pericardium.

Endoperimyocarditis (*en-do-per-e-mi-o-kar-dī′-tis*) [ἔνδον, within; περί, around; μῦς, muscle; καρδία, heart; ιτις, inflammation]. Inflammation of endocardium, pericardium, and myocardium.

Endoperineuritis (*en-do-per-e-nu-rī′-tis*) [ἔνδον, within; περί, around; νεῦρον, a nerve; ιτις, inflammation]. Inflammation of both endoneurium and perineurium.

Endophlebitis (*en-do-fle-bī′-tis*) [ἔνδον, within; φλέψ, vein; ιτις, inflammation]. Inflammation of the inner coat of a vein or veins.

Endophleum (*en-do-fle′-um*) [ἔνδον, within; φλοιός, bark]. In biology, the liber, or inner bark; bast.

Endophragm (*en′-do-fram*) [ἔνδον, within; φράγμα, a partition]. In biology, a partition formed by the chitinous plates projecting inward from the lateral wall of the somites of a crustacean.

Endophyllous (*en-do-fil′-us*) [ἔνδον, within; φύλλον, leaf]. In biology, enclosed within a sheath, as the young leaves of monocotyledons.

Endophyte (*en′-do-fīt*) [ἔνδον, within; φυτόν, a plant]. Same as *Entophyte*.

Endophytous (*en-dof′-it-us*) [ἔνδον, within; φυτόν, a plant]. In biology, applied to the larvæ of certain insects that bore into the stems and roots of plants.

Endoplasm (*en′-do-plazm*) [ἔνδον, within; πλάσμα, a thing formed]. In biology, the inner granular protoplasm of a protozoan or of a histologic cell.

Endoplast (*en′-do-plast*) [ἔνδον, within; πλαστός, formed]. In biology, the nuclear body of a protozoan; the homologue of the nucleus of a histologic cell. (Huxley.)

Endoplastule (*en-do-plas′-tūl*) [ἔνδον, within; πλαστός, formed]. In biology, a small oval or rounded body, often found attached to the endoplast of a protozoan; the homologue of the nucleolus of a histologic cell. Cf. *Entoblast*.

Endopleura (*en-do-ploo′-rah*) [ἔνδον, within; πλευρά, a rib: *pl.*, *Endopleuræ*]. In biology, the delicate seed-coat; it is also called tegmen.

Endopleurite (*en-do-ploo′-rīt*) [ἔνδον, within; πλευρά, a rib]. In biology, one of the lateral apodemal partitions arising from the interepimeral membrane connecting every pair of somites in certain crustaceans.

Endopodite (*en-dop′-o-dīt*) [ἔνδον, within; πούς, foot]. In biology, the inner of the two main divisions of the crustacean limb; when fully developed it consists of seven joints, becoming in the thoracic region an ambulatory limb.

Endoptile (*en-dop′-til*) [ἔνδον, within; πτίλον, feather, down, leaf]. Same as *Monocotyledonous*.

Endorhizal (*en-do-rī′-zal*) [ἔνδον, within; ῥίζα, root]. In biology, applied to monocotyledonous embryos having the radicle enclosed within a sheath.

Endosalpingitis (*en-do-sal-pin-jī′-tis*) [ἔνδον, within; σάλπιγξ, trumpet, tube; ιτις, inflammation]. Inflammation of the lining membrane of a Fallopian tube.

Endosarc (*en′-do-sark*) [ἔνδον, within; σάρξ, flesh]. In biology, the inner protoplasm of a protozoan; also applied by Hincks to a tissue derived from the endocyst (the inner layer of the common dermal system of a colony of Polyzoa), and composed, for the most part, of fusiform cells, constituting the connection between the polypides.

Endoscope (*en′-do-skōp*) [ἔνδον, within; σκοπεῖν, to observe]. An instrument for the examination of a body-cavity through its natural outlet.

Endoscopy (*en-dos′-ko-pe*) [ἔνδον, within; σκοπεῖν, to observe]. The practice or process of using the endoscope. The examination of cavities or organs within the body by means of an endoscope.

Endosiphon (*en-do-sī′-fun*) [ἔνδον, within; σίφων, a tube]. In biology, the inner siphon of a cephalopod.

Endoskeleton (*en-do-skel′-et-un*) [ἔνδον, within; σκελετόν, a dry body]. In biology, as distinguished from exoskeleton, applied to the internal skeletal structures of any animal, whether they are bony, cartilaginous, chitinous, calcareous, or silicious, if covered by flesh and integument.

Endosmometer (*en-dos-mom′-et-er*) [ἔνδον, within; ὠσμός, a thrusting; μέτρον, a measure]. An instrument for measuring endosmosis.

Endosmose (*en′-dos-mōs*). Same as *Endosmosis*.

Endosmosis (*en-dos-mo′-sis*) [ἔνδον, within; ὠσμός, impulsion]. The passage of a liquid from without inward, through a porous septum or diaphragm; inward osmosis. See *Osmosis*. **E., Electric**, cataphoresis.

Endosmotic (*en-dos-mot′-ik*) [ἔνδον, within; ὠσμός, a thrusting]. Pertaining to endosmosis. **E. Equivalent**, the weight of distilled water that passes into the flask of the endosmometer in exchange for a known weight of the soluble substance. This, *e. g.*, for salt is 4.3; for sugar 7.1.

Endosome (*en′-do-sōm*) [ἔνδον, within; σῶμα, body]. In biology, the inner layer of the body of a sponge, developed from the endoderm and associated mesoderm.

Endosperm (*en′-do-sperm*) [ἔνδον, within; σπέρμα, seed]. In biology, the albumin of a seed.

Endospore (*en′-do-spōr*) [ἔνδον, within; σπόρος, seed]. In biology, (1) a bacterium-spore formed by free cell-formation, as distinguished from an arthrospore; (2) the inner coat of a spore.

Endosteal (*end-os′-te-al*) [ἔνδον, within; ὀστέον, a bone]. Relating to endosteum.

Endosteitis (*end-os-te-ī′-tis*) [ἔνδον, within; ὀστέον, a bone; ιτις, inflammation]. Inflammation of the endosteum.

Endosternite (*en-do-ster′-nīt*) [ἔνδον, within; στέρνον, the breast-bone]. In biology, a sternal piece of the endothorax developed to support a series of muscles in various arthropods.

Endosteum (*end-os′-te-um*) [ἔνδον, within; ὀστέον, bone]. The vascular membranous layer of connective tissue lining the medullary cavity of bones; the internal periosteum.

Endostoma (*en-dos′-to-mah*) [ἔνδον, within; στόμα, the mouth: *pl.*, *Endostomata*]. In biology, a structure found in certain crustaceans behind and giving support to the labrum.

Endostoma (*end-os-to′-mah*) [ἔνδον, within; ὀστέον, bone: *pl.*, *Endostomata*]. A bony tumor within a bone, or in a cavity surrounded by bone.

Endostome (*en'-do-stōm*) [ἔνδον, within; στόμα, the mouth]. In biology, the orifice of the inner coat of an ovule.

Endostosis (*end-os-to'-sis*) [ἔνδον, within; ὀστέον, bone: *pl.*, *Endostoses*]. Ossification of a cartilage.

Endostracum (*en-dos'-trak-um*) [ἔνδον, within; ὄστρακον, shell]. In biology, the inner layer of the exoskeleton of a crustacean.

Endostyle (*en'-do-stīl*) [ἔνδον, within; στῦλος, a column]. In biology, an organ for the secretion of mucus, forming the ventral edge of the branchial sac, and extending from the peripharyngeal bands anteriorly to the posterior end of the sac of Ascidians; it is also called the *hypobranchial groove*.

Endotheca (*en-do-the'-kah*) [ἔνδον, within; θήκη, a case: *pl.*, *Endothecæ*]. In biology, the inner layer of the lining investment of the visceral chamber of a coral.

Endothecium (*en-do-the'-se-um*) [ἔνδον, within; θήκη, a case]. In biology, the tapetum or inner lining of an anther-cell.

Endothelial (*en-do-the'-le-al*) [ἔνδον, within; θηλή, nipple]. Pertaining to endothelium.

Endothelioid (*en-do-the'-le-oid*) [ἔνδον, within; θηλή, a nipple; εἶδος, form]. Resembling endothelium.

Endothelio-inoma (*en-do-the'-le-o-in-o'-mah*) [ἔνδον, within; θηλή, a nipple; ἴς, a fiber; ὄμα, a tumor: *pl.*, *Endothelio-inomata*]. A malignant inoma or fibroma of endothelial origin.

Endotheliomyoma (*en-do-the'-le-o-li-o-mi-o'-mah*) [ἔνδον, within; θηλή, nipple; λεῖος, smooth; μῦς, muscle; ὄμα, tumor: *pl.*, *Endotheliomyomata*]. Endothelial and malignant leiomyoma; myosarcoma.

Endothelioma (*en-do-the-le-o'-mah*) [ἔνδον, within; θηλή, a nipple; ὄμα, a tumor: *pl.*, *Endotheliomata*]. A tumor of the endothelium, usually, if not always, a sarcoma or malignant growth.

Endotheliomyxoma (*en-do-the'-le-o-miks-o'-mah*) [ἔνδον, within; θηλή, nipple; μύξα, mucus; ὄμα, a tumor: *pl.*, *Endotheliomyxomata*]. Endothelial and malignant myxoma.

Endotheliorhabdomyoma (*en-do-the'-le-o-rab-do-mi-o'-mah*) [ἔνδον, within; θηλή, nipple; ῥάβδος, a rod; μῦς, muscle; ὄμα, a tumor: *pl.*, *Endotheliorhabdomyomata*]. Endothelial and malignant rhabdomyoma.

Endothelium (*en-do-the'-le-um*) [ἔνδον, within; θηλή, nipple]. The internal lining membrane of serous, synovial, and other internal surfaces; the homologue of epithelium.

Endothermic (*en-do-ther'-mik*) [ἔνδον within; θέρμη, heat]. Relating to the absorption of heat. **E. Substances**, or **Compounds**, those of which the formation is attended with an absorption of heat.

Endothoracic (*en-do-tho-ra'-sik*) [ἔνδον, within; θώραξ, thorax]. Situated or occurring within the thorax.

Endothorax (*en-do-tho'-raks*) [ἔνδον, within; θώραξ, a breastplate; the chest]. In biology, the interior framework, or apodemal system of the cephalothoracic region of a crustacean, furnishing processes for the support of the soft parts.

Endyma (*en'-dim-ah*) [ἔνδυμα, garment]. The ependyma, or lining epithelial membrane of the ventricles of the brain, and of the cavity of the spinal cord.

Endymal (*en'-dim-al*) [ἔνδυμα, garment]. Relating to the endyma.

Endysis (*en'-dis-is*) [ἔνδυσις, a putting on]. In biology, the process of acquiring plumage by a bird.

Enecation (*en-ek-a'-shun*) [*e*, out; *necare*, to kill]. Destruction of life; complete exhaustion.

Enechema (*en-ek-e'-mah*) [ἐν, in; ἦχημα, sound, ringing] Tinnitus aurium.

Enecia (*e-ne'-she-ah*) [ἠνεκής, continuous]. A continuous fever.

Enema (*en'-em-ah*) [ἔνεμα; ἐν, in; ἰέναι, to send: *pl.*, *Enemata*, *Enemas*]. A rectal injection for therapeutic or nutritive purposes.

Enepidermatic, or **Enepidermic** (*en-ep-e-der-mat'-ik*, or *-der'-mik*) [ἐν, in; ἐπιδέρμις, the epidermis]. Pertaining to the treatment of disease by applications to the skin.

Energy (*en'-er-ge*) [ἐνέργεια; ἐν, in; ἔργον, work]. The power or force displayed by an organism. The capacity for doing work. **E., Conservation of**, the law that the various forms of energy can be transformed one into the other without loss. **E., Kinetic**, the power of a body in motion. **E., Potential**, the possible power of a body at rest. Physiologically, its measure is the amount of heat that may be obtained by complete combustion of the chemic compounds representing the potential energy.

Enervate (*e-ner'-vāt*) [*enervare*, to weaken]. To weaken.

Enervation (*e-ner-va'-shun*) [*enervatio*, weakness]. 1. Weakness; lassitude; languor from lack of nerve-stimulus; neurasthenia; the reduction of the strength. 2. The removal of a section of a nerve.

Enervose (*e-ner'-vōs*) [*enervus*, without nerves]. In biology, applied to leaves destitute of nerves or veins.

Eneuresis (*en-u-re'-sis*). See *Enuresis*.

Engagement-stage of Labor. See *Descent-stage*.

Engastrius (*en-gas'-tre-us*) [ἐν, in; γαστήρ, belly]. A monstrosity in which one fetus is included within the peritoneal cavity of another.

Engelmann's Middle Disc. A light disc, separating two darker discs of a muscle-case. It is also called *Hensen's disc*.

Engenesis (*en-jen'-es-is*) [ἐν, in; γενέσθαι, to be produced]. In biology, the fourth of Broca's four degrees of fecundity in the union of two species. Cf. *Agenesis*, *Dysgenesis*, *Paragenesis*.

Engine (*en'-jin*) [ME., *engin*, a mechanical contrivance]. An apparatus for producing some mechanical effect. **E., Dental**, a foot-power machine, embracing the following devices and combinations: The use of a flexible wire shaft, with a flexible sheath over it. See *Dental Engine*. **E., Surgical**, an electric or foot-power machine, used with a flexible wire shaft. It is employed in surgery, in drilling, boring, and smoothing bone, etc.

Engle System. See *Cremator*.

English (*ing'-glish*) [ME., *English*]. Belonging or pertaining to England. **E. Cholera.** See *Cholera*. **E. Disease.** Synonym of *Rhachitis*. **E. Position.** See *Postures*, *Table of*. **E.-red.** See *Colcothar* and *Venetian-red*. **E. Sweating Fever.** See *Anglicus sudor*. **E. Teeth**, artificial teeth with beautiful coloring, and soft translucency, rendering them well adapted for matching the natural teeth.

Engomphosis (*en-gom-fo'-sis*) [ἐν, in; γόμφος, nail]. Gomphosis, *q. v.*

Engorged (*en-gorjd'*) [Fr., *engorgement*, a choking up]. Congested. **E. Papilla.** See *Choked Disc*.

Engorgement (*en-gorj'-ment*) [Fr., *engorgement*, a choking up]. Over-distention of the vessels of a part, with stagnation of the circulation. Vascular congestion.

Enlargement (*en-larj'-ment*). See *Auxe*, *Auxesis*, *Hypertrophy*.

Enlarger (*en-lar'-jer*). See *Amplifier*.

Enneagynous (*en-e-aj'-in-us*) [ἐννέα, nine; γυνή, a woman]. In biology, applied to flowers having nine pistils.

Enneander (*en-e-an'-der*) [ἐννέα, nine; ἀνήρ, a man]. In biology, applied to a flower having nine stamens.

Enneapetalous (*en-e-ap-et'-al-us*) [ἐννέα, nine; πέταλον, a leaf]. In biology, applied to a flower having nine petals.

Enneaspermous (*en-e-as-per'-mus*) [ἐννέα, nine; σπέρμα, seed]. In biology, applied to fruits having nine seeds.

Enodal (*e-no'-dal*) [*e*, priv.; *nodus*, a knot]. In biology, without nodes or joints.

Enoinomania (*en-oi-no-ma'-ne-ah*) [ἐν, in; οἶνος, wine; μανία, madness]. Delirium tremens.

Enomania (*e-no-ma'-ne-ah*) [οἶνος, wine; μανία, madness]. Excessive use of or desire for intoxicating liquors; insanity due to intoxication. Also, delirium tremens. See *Methomania*.

Enophthalmia (*en-off-thal'-me-ah*) [ἐν, in; ὀφθαλμός, eye]. Retraction of the eyeball in the orbit.

Enophthalmos (*en-off-thal'-mos*) [ἐν, in; ὀφθαλμός, the eye]. Recession of the eyeball into the orbit.

Enosomania (*en-os-o-ma'-ne-ah*) [ἔνοσις, trembling; μανία, madness]. Insanity marked by terror, the patient expecting for himself the most dreadful visitations.

Enostosis (*en-os-to'-sis*) [ἐν, in; ὀστέον, bone]. A tumor within the medullary canal of a bone, or a bony tumor originating in bone.

En Piqûre (*on(g) pik-eer'*) [Fr.]. See *Culture*.

Ensate (*en'-sāt*) [*ensis*, a sword]. In biology, sword-shaped; ensiform.

Ensiform (*en'-sif-orm*) [*ensis*, a sword; *forma*, form]. Shaped like a sword. **E. Appendix**, the sword-shaped, cartilaginous process of the sternum; the xiphoid cartilage.

Ensisternal (*en-sis-ter'-nal*) [*ensis*, sword; στέρνον, the breast-bone]. Pertaining to the ensisternum.

Ensisternum (*en-sis-ter'-num*) [*ensis*, sword; στέρνον, the breast-bone]. The xiphisternum or ensiform cartilage.

Ensomphalic (*en-som-fal'-ik*) [ἐν, in; σῶμα, body; ὀμφαλός, navel]. Pertaining to an ensomphalus. See also *Teratism*.

Ensomphalus (*en-som'-fal-us*) [ἐν, in; σῶμα, body; ὀμφαλός, navel]. A double monstrosity, with practically complete and functional organs, but united by some more or less superficial bond.

Enstactum (*en-stak'-tum*) [ἐν, in; στάζειν, to drop: *pl.*, *Enstacta*]. A liquid collyrium.

Enstrophe (*en'-stro-fe*) [ἐν, in; στρέφειν, to turn]. Inversion, as of the margin of an eyelid.

Entad (*en'-tad*) [ἐντός, within; *ad*, to]. From without inward; toward a center; the opposite of *Ectad*.

Ental (*en'-tal*) [ἐντός, within]. A surface, aspect, or structure farther from the periphery or nearer the center than that with which it is contrasted. Deep, internal, profound. Compare the opposite, *Ectal*; also *Position and Direction*, *Table of*.

Entasia, or **Entasis** (*en-ta'-se-ah*, or *en'-tas-is*) [ἔντασις, a straining]. A generic term for spasmodic muscular action; tonic spasm.

Entatic (*en-tat'-ik*) [ἐντατικός, causing straining]. Causing spasm or strain; aphrodisiac.

Entera (*en'-ter-ah*). Plural of *Enteron*, *q. v.*

Enteradenography (*en-ter-ad-en-og'-ra-fe*) [ἔντερον, intestine; ἀδήν, gland; γράφειν, to write]. A treatise on the intestinal glands.

Enteradenology (*en-ter-ad-en-ol'-o-je*) [ἔντερον, intestine; ἀδήν, gland; λόγος, science]. The anatomy, physiology, and pathology of the intestinal glands.

Enteragra (*en-ter-a'-grah*) [ἔντερον, intestine; ἄγρα, seizure]. Gout in the intestine.

Enteralgia (*en-ter-al'-je-ah*) [ἔντερον, intestine; ἄλγος, pain]. Pain in the bowels. **E. inflammatoria.** Synonym of *Acute Intestinal Catarrh*.

Enterectasis (*en-ter-ek'-tas-is*) [ἔντερον, intestine; ἔκτασις, dilatation]. Dilatation of some part of the small intestine.

Enterectomy (*en-ter-ek'-to-me*) [ἔντερον, intestine; ἐκτομή, excision]. Excision of a part of the small intestine.

Enterelcosis (*en-ter-el-ko'-sis*) [ἔντερον, intestine; ἕλκωσις, ulceration]. Ulceration of the bowel.

Enterepiplocele (*en-ter-ep-ip'-lo-sēl*) [ἔντερον, intestine; ἐπίπλοον, caul; κήλη, hernia]. Hernia in which both bowel and omentum are involved.

Enterepiplomphalocele (*en-ter-ep-ip-lom-fal'-o-sēl*) [ἔντερον, bowel; ἐπίπλοον, caul; ὀμφαλός, navel; κήλη, hernia]. Umbilical hernia, with protrusion of the omentum.

Enteric (*en-ter'-ik*) [ἐντερικός; ἔντερον, bowel]. Pertaining to the intestines. **E. Fever**, typhoid fever. To demonstrate bacilli of enteric fever see *Gaffky's Method* and *Woodhead's Method*, under *Stains*, *Table of*.

Enterischiocele (*en-ter-is'-ke-o-sēl*) [ἔντερον, intestine; ἰσχίον, ischium; κήλη, hernia]. Intestinal hernia through the great sciatic notch.

Enteritic (*en-ter-it'-ik*) [ἔντερον, bowel; ιτις, inflammation]. Relating to enteritis.

Enteritis (*en-ter-i'-tis*) [ἔντερον, bowel; ιτις, inflammation]. Inflammation of the small intestine. **E., Chronic Exudative.** Synonym of *E.*, *Pseudo-membranous*. **E., Membranous.** Synonym of *E.*, *Pseudo-membranous*. **E., Pellicular.** Synonym of *E.*, *Pseudo-membranous*. **E., Pseudo-membranous**, a non-febrile affection of the bowel, consisting in a peculiar, and usually persistent, morbid condition of the intestinal mucous membrane, marked by the periodic formation of viscous, shreddy, or tubular exudates composed chiefly of mucin, on the discharge of which temporary amelioration of the accompanying acute digestive and nervous symptoms occurs. The disease appears mainly in middle life and usually in females.

Entero- (*en'-ter-o-*) [ἔντερον, bowel]. A prefix denoting relation to the intestines.

Entero-anastomosis (*en'-ter-o-an-as-to-mo'-sis*) [ἔντερον, bowel; ἀναστομόειν, to bring to a mouth]. The surgical creation of an anastomosis between two parts of the intestine; or the union of two parts of the intestine after the excision of a segment.

Enterobrosis (*en-ter-o-bro'-sis*) [ἔντερον, bowel; βρῶσις, an eating]. Perforation or ulceration of the intestine.

Enterocele (*en'-ter-o-sēl*) [ἔντερον, bowel; κήλη, tumor]. A hernia containing a loop of intestine. **E., Rectal**, having a covering of the rectal wall. **E., Vaginal**, having a covering of the vaginal wall.

Enterocentesis (*en-ter-o-sen-te'-sis*) [ἔντερον, intestine; κέντησις, puncture]. Surgical puncture of the intestine.

Enterochlorophyl (*en'-ter-o-klo'-ro-fil*) [ἔντερον, bowel; χλωρός, yellowish-green; φύλλον, a leaf]. MacMunn's term for a chlorophyl found by him in the so-called livers of many invertebrates.

Enterocholecystostomy (*en-ter-o-ko-le-sis-tos'-to-me*) [ἔντερον, bowel; χολή, bile; κύστις, cyst; στόμα, mouth]. Same as *Cholecystenterostomy*.

Entero-cholecystotomy (*en-ter-o-ko-le-sis-tot'-o-me*). Same as *Cholecystenterotomy*.

Enterocleisis (*en-ter-o-klis'-is*) [ἔντερον, bowel; κλεῖσις, a closing]. Occlusion of the bowel.

Enteroclysis (*en-ter-ok'-lis-is*) [ἔντερον, bowel; κλύσις, a drenching]. Injection of nutrient-material into the intestine in cholera, collapse, etc.; more generally, any rectal enema or clyster.

Enteroclyster (*en-ter-o-klis'-ter*) [ἔντερον, bowel; κλύσμα, a clyster]. A rectal clyster or enema.

Entero-colitis (*en-ter-o-ko-li'-tis*) [ἔντερον, bowel; κόλον, the colon; ιτις, inflammation]. Inflammation of the small intestine and of the colon.

Enterocystocele (*en-ter-o-sis'-to-sēl*) [ἔντερον, intestine; κύστις, bladder; κήλη, tumor]. Hernia involving the urinary bladder and the intestine.

Enterodynia (*en-ter-o-din'-e-ah*) [ἔντερον, bowel; ὀδύνη, pain]. Pain referred to the intestines.

Entero-epiplocele (*en'-ter-o-e-pip'-lo-sēl*). See *Enter-epiplocele.*

Enterogastritis (*en-ter-o-gas-tri'-tis*) [ἔντερον, intestine; γαστήρ, belly; ιτις, inflammation]. Inflammation of the stomach and intestine.

Enterogastrocele (*en-ter-o-gas'-tro-sēl*) [ἔντερον, bowel; γαστήρ, belly; κήλη, tumor]. A hernia containing the gastric and intestinal walls; abdominal hernia.

Enterography (*en-ter-og'-ra-fe*) [ἔντερον, intestine; γράφειν, to write]. A treatise on or a description of the intestines.

Enterohematin (*en-ter-o-he'-mat-in*) [ἔντερον, intestine; αιμάτινος, of blood]. In biology, a coloring-matter found in many invertebrates (*e.g.*, the livers of molluscs), the mother-substance of histohematin. It is the same as the *Hemochiomogen* and *Helicorubin* of Krukenberg.

Enterohemorrhage (*en-ter-o-hem'-or-āj*) [ἔντερον, intestine; αἷμα, blood; ῥηγνύναι, to burst forth]. Intestinal hemorrhage.

Enterohydrocele (*en-ter-o-hi'-dro-sēl*) [ἔντερον, intestine; ὕδωρ, water; κήλη, hernia]. Hydrocele complicated with intestinal hernia.

Entero-ischiocele (*en-ter-o-is'-ke-o-sēl*) [ἔντερον, intestine; ἰσχίον, ischium; κήλη, tumor]. Same as *Enter-ischiocele.*

Enterolith (*en'-ter-o-lith*) [ἔντερον, bowel; λίθος, a stone]. A concretion formed in the digestive-tube.

Enterolithiasis (*en-ter-o-lith-i'-as-is*) [ἔντερον, bowel; λιθίασις, the formation of calculi]. The formation of intestinal calculi.

Enterology (*en-ter-ol'-o-je*) [ἔντερον, bowel; λόγος, science]. The science of the intestinal viscera; the anatomy, physiology, pathology, and hygiene of the intestines.

Enteromalacia (*en-ter-o-mal-a'-se-ah*) [ἔντερον, bowel; μαλακία, softness]. Pathologic softening of the bowel-walls.

Enteromenia (*en-ter-o-me'-ne-ah*) [ἔντερον, bowel; μῆν, month]. Vicarious menstruation by the bowel.

Enteromerocele (*en-ter-o-me'-ro-sēl*) [ἔντερον, bowel; μηρός, thigh; κήλη, hernia]. Femoral hernia involving the intestine.

Enteromesenteric (*en-ter-o-mez-en-ter'-ik*) [ἔντερον, bowel; μέσος, middle; ἔντερον, bowel]. Pertaining to the intestine and the mesentery.

Enteron (*en'-ter-on*) [ἔντερον, intestine: *pl.*, *Entera*]. 1. The intestinal or alimentary canal, exclusive of those parts that are of ectodermal origin. 2. The intestine.

Enteroncus (*en-ter-ong'-kus*) [ἔντερον, bowel; ὄγκος, mass]. A tumor of the bowel.

Enteroneuria (*en-ter-o-nu'-re-ah*) [ἔντερον, intestine; νεῦρον, nerve]. An intestinal disease dependent upon some neurosis.

Enteropathy (*en-ter-op'-ath-e*) [ἔντερον, bowel; πάθος, disease]. Any disease of the intestines.

Enteroperistole (*en-ter-o-per-is'-to-le*) [ἔντερον, bowel; περιστολή, a winding about]. 1. Peristaltic motion of the bowels. 2. Any constrictive obstruction of the intestinal-tube.

Entero-peritonitis (*en-ter-o-per-it-on-i'-tis*) [ἔντερον, bowel; περιτόναιον, the peritoneum; ιτις, inflammation]. Combined inflammation of the intestines and adjacent peritoneum; inflammation of the peritoneal coat of the intestine.

Enteropexia (*en-ter-o-peks'-e-ah*) [ἔντερον, bowel; πῆξις, fixation]. Fixation of a portion of the intestine to the abdominal wall, for the relief of enteroptosis, splanchnoptosis, etc.

Enterophlogia (*en-ter-o-flo'-je-ah*) [ἔντερον, bowel; φλογία, a burning]. Synonym of *Acute Intestinal Catarrh.*

Enterophlogosis (*en-ter-o-flo-go'-sis*) [ἔντερον, bowel; φλόγωσις, a burning]. Synonym of *Acute Intestinal Catarrh.*

Enterophthisis (*en-ter-off'-this-is*) [ἔντερον, bowel; φθίσις, wasting]. Intestinal tuberculosis.

Enteroplastic (*en-ter-o-plas'-tik*) [ἔντερον, bowel; πλαστικός, formed]. Pertaining to enteroplasty.

Enteroplasty (*en'-ter-o-plas-te*) [ἔντερον, bowel; πλάσσειν, to form]. Any plastic operation upon the intestine to repair injuries of its walls.

Enteroplegia (*en-ter-o-ple'-je-ah*) [ἔντερον, bowel; πληγή, a stroke]. Paralysis of the bowels.

Enteroplex (*en'-ter-o-pleks*) [ἔντερον, bowel; πλέξειν, to interlace]. See *Enteroplexia.*

Enteroplexia, or **Enteroplexy** (*en-ter-o-pleks'-e-ah*, or *en'-ter-o-pleks-e*) [ἔντερον, intestine; πλέξειν, to interlace]. A method of treatment of wounds of the intestine in which union of the bowel is obtained by different means, but particularly by an apparatus, the *enteroplex*, without the use of needle and thread. The enteroplex is formed of two aluminum rings so constructed that they will fit the one into the other. These are inserted into the cut ends of the bowel, and then the two are pressed together, the intestinal walls being brought into apposition.

Enteroproctia (*en-ter-o-prok'-she-ah*) [ἔντερον, intestine; πρωκτός, anus]. The existence of an artificial anus, or of an opening into the bowel for fecal discharge.

Enteroptosis (*en-ter-op-to'-sis*) [ἔντερον, bowel; πτῶσις, a fall]. Glénard's term for a combination of neurasthenia with gastro-intestinal disturbance and prolapse of the abdominal organs, particularly the transverse colon, with looseness of the mesenteric and peritoneal attachments. It is also called *Splanchnoptosis.*

Enterorrhagia (*en-ter-or-a'-je-ah*) [ἔντερον, bowel; ῥηγνύναι, to burst forth]. Intestinal hemorrhage. Excessive discharge of any kind from the intestine.

Enterorrhaphy (*en-ter-or'-a-fe*) [ἔντερον, bowel; ῥαφή, suture]. Suture, or stitching, of the intestine.

Enterorrhea (*en-ter-or-e'-ah*) [ἔντερον, intestine; ῥοία, a flow]. Diarrhea.

Enterorrhexis (*en-ter-or-eks'-is*) [ἔντερον, bowel; ῥῆξις, rupture]. Rupture of the bowel.

Enterosarcocele (*en-ter-o-sar'-ko-sēl*) [ἔντερον, intestine; σάρξ, flesh; κήλη, a hernia]. Intestinal hernia with sarcocele.

Enterosepsis (*en-ter-o-sep'-sis*) [ἔντερον, bowel; σῆψις, putrefaction]. Intestinal toxemia or sepsis. A condition of unusual activity in the contents of the intestinal canal, by which the ptomaïnes of putrefaction are produced in such manner, or in such quantity, that they are absorbed and give rise to a state of intoxication.

Enterosis (*en-ter-o'-sis*) [ἔντερον, bowel; νόσος, disease: *pl.*, *Enteroses*]. Any intestinal disease.

Enterostenosis (*en-ter-o-ste-no'-sis*) [ἔντερον, bowel; στένωσις, contraction]. Stricture or narrowing of the intestinal canal.

Enterostomy (*en-ter-os'-to-me*) [ἔντερον, bowel; στόμα, mouth]. Incision and suture of the small intestine to the abdominal wall for introduction of food by this artificial mouth, in case of impossibility of food-entrance by the normal route.

Enteroteratoma (*en-ter-o-ter-at-o'-mah*) [ἔντερον, bowel; τέρας, monster; ὄμα, tumor]. A solid tumor of the umbilicus in new-born infants, composed of the remains of the omphalic duct.

Enterotome (*en'-ter-o-tōm*) [ἔντερον, bowel; τομός, cutting]. The name of various instruments used in cutting-operations upon the intestine.

Enterotomy (*en-ter-ot'-o-me*) [ἔντερον, bowel; τέμνειν, to cut]. Incision, dissection, or anatomy of the intestine.

Enterozoön (*en-ter-o-zo'-on*) [ἔντερον, intestine; ζῷον, an animal: *pl.*, *Enterozoa*]. A parasite of the intestine.

Entheomania (*en-the-o-ma'-ne-ah*) [ἔνθεος, inspired; μανία, madness]. Mania in which the patient believes himself to be inspired; religious insanity.

Enthetic (*en-thet'-ik*) [ἐντιθέναι, to put in]. Introduced; coming from without; applied especially to syphilitic and other specific contagious diseases. The list of enthetic diseases given by Dr. Hartshorne, in Pepper's "System of Medicine," is as follows: 1. Only produced by contact or inoculation—primary syphilis, gonorrhea, vaccinia, hydrophobia. 2. Contagious also by atmospheric transmission through short distances—variola, varioloid, varicella, measles, diphtheria, scarlatina, rötheln, mumps, whooping cough, typhus, relapsing fever. 3. Endemic, occasionally epidemic—malarial fever, dengue, yellow fever. 4. The zymotic or enthetic diseases—influenza, cerebrospinal fever, erysipelas, puerperal fever, tropical dysentery, typhoid fever, cholera, plague.

Entiris (*en-ti'-ris*) [ἐντός, within; ἶρις, rainbow]. The uvea of the iris, forming its inner and pigmentary layer.

Entoblast (*en'-to-blast*) [ἐντός, within; βλαστός, a bud, germ]. In biology, the nucleolus or germinal spot of a histologic cell. Cf. *Endoplastule.*

Entobliquus (*en-to-bli'-kwus*) [ἐντός, within; *obliquus*, oblique]. The obliquus internus muscle of the abdomen. See *Muscles, Table of.*

Entobranchiate (*en-to-brang'-ke-āt*) [ἐντός, within; βράγχια, gills]. In biology, having internal or concealed branchia.

Entocarotid (*en-to-kar-ot'-id*) [ἐντός, within; κάρος, stupor]. The internal carotid artery. See *Arteries, Table of.*

Entocele (*en'-to-sēl*) [ἐντός, within; κήλη, hernia]. Internal hernia (as through the diaphragm); ectopia; morbid displacement of an internal organ.

Entoceliac, or **Entocelian** (*en-to-se'-le-ak*, or *en-to-se'-le-an*) [ἐντός, within; κοιλία, hollow]. Situated within a brain-cavity or ventricle.

Entochoroidea, or **Entochorioidea** (*en-to-ko-roi'-de-ah*, or *-ko-re-oi-de'-ah*) [ἐντός, within; χοροειδής, like a membrane]. The inner lining of the choroid membrane of the eye, made up mainly of capillaries.

Entocinerea (*en-to-sin-e'-re-ah*) [ἐντός, within; *cinereus*, ashy]. Cineritious or gray brain-substance surrounding the cavities of the brain and spinal cord.

Entocondylar (*en-to-kon'-dil-ar*) [ἐντός, within; κόνδυλος, a condyle]. Pertaining to an inner condyle,

Entocondyle (*en-to-kon'-dīl*) [ἐντός, within; κόνδυλος, a condyle]. An inner condyle, as of the humerus or the femur.

Entoconid (*en-to-ko'-nid*) [ἐντός, within; κῶνος, cone]. The inner and posterior cusp of a lower molar tooth.

Entocornea (*en-to-kor'-ne-ah*) [ἐντός, within; *corneus*, horny]. That part of Descemet's membrane that lines and adheres to the inner surface of the cornea.

Entocuneiform (*en-to-ku'-ne-if-orm*) [ἐντός, within; *cuneus*, a wedge; *forma*, form]. The inner cuneiform bone of the foot.

Entocyte (*en'-to-sīt*) [ἐντός, within; κύτος, cell]. The contents of a cell, including nucleus, nucleolus, granulations, etc.

Entoderm (*en'-to-derm*) [ἐντός, within; δέρμα, skin]. Same as *Endoderm.*

Entoectad (*en-to-ek'-tad*) [ἐντός, within; ἐκτός, external; *ad*, to]. From within outward.

Entogastric (*en-to-gas'-trik*) [ἐντός, within; γαστήρ, stomach]. Relating to the interior of the stomach.

Entoglossal (*en-to-glos'-al*) [ἐντός, within; γλῶσσα, tongue]. Situated within the tongue.

Entogluteus (*en-to-glu-te'-us*) [ἐντός, within; γλουτός, the rump]. The gluteus minimus muscle. See *Muscles, Table of.*

Entojugular Vein (*en-to-ju'-gu-lar*) [ἐντός, within; *jugular*, a little yoke]. The internal jugular vein. See *Vein.*

Entomere (*en'-to-mēr*) [ἐντός, within; μέρος, a part]. In embryology, one of the cells forming the center of the mass of blastomeres in the developing mammalian ovum, the outer blastomeres being called *ectomeres.*

Entomion (*en-to'-me-on*) [ἐντομή, notch]. See *Craniometric Points.*

Entomogenous (*en-to-moj'-en-us*) [ἔντομον, an insect; γενής, produced]. In biology, applied to fungi growing upon or within insects. Cf. *Entomophytous.*

Entomography (*en-to-mog'-ra-fe*) [ἔντομον, an insect; γράγειν, to write]. A written treatise on insects.

Entomology (*en-to-mol'-o-je*) [ἔντομον, insect; λέγειν, to speak]. That department of zoölogy devoted to the description of insects.

Entomophilous (*en-to-moff'-il-us*) [ἔντομον, insect; φιλέειν, to love]. Insect-loving or insect-attracting. **E. Flowers**, flowers attracting insects by their secretions and thus securing cross-fertilization through the insects that carry the pollen to other flowers.

Entomophytous (*en-to-moff'-it-us*) [ἔντομον, insect; φυτός, grown]. In biology, applied to fungi that grow upon or within the bodies of insects. Cf. *Entomogenous.*

Entomosis (*en-to-mo'-sis*) [ἔντομον, insect; νόσος, disease]. Any disease due to parasitic insects.

Entomotaxy (*en-to-mo-taks'-e*) [ἔντομον, insect; τάξις, arrangement]. The systematic preparation and arrangement of insects.

Entomotomy (*en-to-mot'-o-me*) [ἔντομον, insect; τομή, a cutting]. Insect anatomy.

Entomozoaria (*en-to-mo-zo-a'-re-ah*) [ἔντομον, an insect; ζῷον, a living being]. A type of bilateral animals nearly equivalent to the *Arthropoda.*

Entonia (*en-to'-ne-ah*) [ἐντονία, tension]. Rigidity or tension of a voluntary muscle; tonic spasm.

Entonic (*en-ton'-ik*) [ἐντονία, tension]. Characterized by entonia, or by violent tonic spasm.

Entoparasite (*en-to-par'-as-it*) [ἐντός, within; παράσιτος, parasite]. An internal parasite; an entozoan or entophyte.

Entopectoralis (*en-to-pek-tor-a'-lis*) [ἐντός, within; *pectoralis*, of the breast]. The pectoralis minor muscle. See *Muscles, Table of.*

Entoperipheral (*en-to-per-if'-er-al*) [ἐντός, within; περιφέρειν, to carry around]. Originating or situated within, and not upon the periphery.

Entophthalmia (*en-toff-thal'-me-ah*) [ἐντός, within; ὀφθαλμία, a disease of the eyes]. Inflammation of the internal parts of the eyeball.

Entophyte (*en'-to-fīt*) [ἐντός, within; φυτόν, a plant]. An internal parasite of vegetable nature; as a schizomycete or bacterium.

Entoplastic (*en-to-plas'-tik*) [ἐντός, within; πλάσσειν, to form]. Same as *Endoplastic.*

Entoplastron (*en-to-plas'-tron*) [ἐντός, within; *plastron*, a breastplate: *pl.*, *Entoplastra*]. In biology, the internal clavicular scute, or anterior median piece of the plastron of a chelonian.

Entoptic (*en-top'-tik*) [ἐντός, within; ὀπτικός, pertaining to vision]. Pertaining to the internal parts of the eye. **E. Phenomena**, visual phenomena caused by peculiarities or imperfections of the eye itself, such as *muscæ volitantes*.

Entoptoscopic (*en-top-to-skop'-ik*) [ἐντός, within; ὤψ, eye; σκοπεῖν, to inspect]. Relating to entoptoscopy.

Entoptoscopy (*en-top-tos'-ko-pe*) [ἐντος, within; ὤψ, eye; σκοπεῖν, to inspect]. The investigation or observational study of the interior of the eye, or of the shadows within the eye.

Entorectomy (*en-tor-ek'-to-me*) [ἔντερον, bowel; ἐκτομή, excision]. Resection of a diseased portion of the bowel.

Entoretina (*en-to-ret'-in-ah*) [ἐντός, within; *retina*, retina]. The innermost layer of the retina, itself composed of five layers, and an inner limiting membrane.

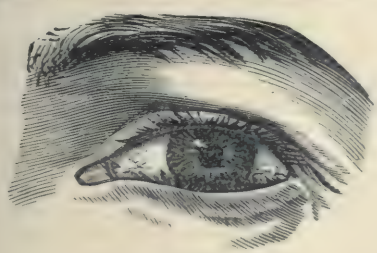
Entorrhagia (*en-tor-a'-je-ah*) [ἐντός, within; ῥηγνύναι, to burst forth]. Internal hemorrhage.

Entosternite (*en-to-ster'-nīt*). See *Endosternite*.

Entosthoblast (*en-tos'-tho-blast*) [ἔνθοσθε, from within; βλαστός, germ]. The supposed nucleus of a nucleolus.

Entostosis, or **Entosteosis** (*en-tos-to'-sis*, *-tos-te-o'-sis*) [ἐντός, within; ὀστέον, bone]. An osseous growth within a medullary cavity.

Entotic (*en-tot'-ik*) [ἐντός, within; οὖς, ear]. Pertaining to the internal ear. **E. Phenomena**, sounds caused by abnormalities of the auditory mechanism itself.



Entotriceps (*en-tot'-re-seps*) [ἐντός, within; τρεῖς, three; κεφαλή, head]. The internal head or division of the triceps muscle of the arm.

Entozoal (*en-to-zo'-al*) [ἐντός, within; ζῷον, an animal]. Caused by or dependent upon entozoa.

Entozoön (*en-to-zo'-on*) [ἐντός, within; ζῷον, an animal: *pl.*, *Entozoa*]. An animal parasite living within another animal.

Entrails (*en'-trels*) [M.E., *entraile*]. The bowels and abdominal viscera.

Entropium (*en-tro'-pe-um*). See *Entropion*.

ENTROPION.

Entropion (*en-tro'-pe-on*) [ἐν, in; τρέπειν, to turn]. Inversion of the eyelid, so that the lashes rub against the globe of the eye, producing inflammation, pannus, etc. It may be cicatricial, organic, or spastic in origin. **E., Superciliary**, the incurvation of the hairs of the eyebrow into the palpebral fissure and against the conjunctiva, causing the same symptoms as are present in ordinary entropion.

Enucleation (*e-nu-kle-a'-shun*) [*e*, out of; *nucleus*, a kernel]. The operation of exsecting or shelling-out from its seat or capsule a tumor, etc. **E. of Eye**, excision of the eyeball from the orbit.

Enucleator (*e-nu'-kle-a-tor*) [*e*, out of; *nucleus*, a kernel]. An instrument used in performing enucleation.

Enuresis (*en-u-re'-sis*) [ἐνουρέειν, to be incontinent of urine]. Incontinence of urine. A frequent affection of early childhood, due to a variety of pathologic conditions, including the presence of ascarides, phimosis, and vulvitis. **E. nocturna**, involuntary emptying of the bladder during sleep.

Envelop (*en'-vel-ōp*) [Fr., *enveloppe*]. An investing membrane, or layer.

Environment (*en-vi'-ron-ment*) [Fr. *environner*, to surround]. The totality of influences acting upon the organism from without. See *Evolution, Factors of*.

Enzoötic (*en-zo-ot'-ik*) [ἐν, in, or among; ζῷον, animal]. Affecting beasts in a certain district; as an enzoötic disease.

Enzoöty (*en-zo'-o-te*) [ἐν, in, among; ζῷον, an animal]. An enzoötic disease.

Enzyme (*en'-zīm*) [ἐν, in; ζύμη, leaven]. 1. Kühne's name for the soluble ferments. 2. Any ferment formed within the living organism. 3. Any chemic or hydrolytic ferment, as distinguished from organized ferments, such as yeast. Enzymes are most active between 30° and 35° C., and are destroyed by boiling.

Enzymic (*en-zi'-mik*) [ἐν, in; ζύμη, leaven]. The nature of the action of an enzyme.

Enzymosis (*en-zi-mo'-sis*) [ἐν, in; ζύμη, leaven]. The action of an enzyme.

Enzymotic (*en-zi-mot'-ik*) [ἐν, in; ζύμη, leaven]. Pertaining to enzymes.

Eonosos, or **Eonosus** (*e-on'-o-sos*, or *-sus*) [ἠώς, morning; νόσος, illness]. See *Morning Sickness*.

Eosin (*e'-o-sin*) [ἠώς, the dawn], $C_{20}H_8Br_4O_5$. Tetrabromfluorescein; an important dye produced by the action of bromin on fluorescein suspended in glacial acetic acid. It occurs in red or yellowish-red crystals, and is used as a stain in histology. See *Fuchsin*. **E. colors.** See *Pigments, Conspectus of*.

Eosinophile (*e-o-sin'-o-fil*) [*eosin* from ἠώς, dawn; φιλεῖν, to love]. In bacteriology and histology, applied to microbes or histologic elements showing a peculiar affinity for eosin-stain.

Eosinophilous (*e-o-sin-off'-il-us*) [ἠώς, dawn; φιλεῖν, to love]. Staining readily with eosin. Applied to certain granules in the lymphoid blood-cells that stain with acid anilin-dyes.

Epactal (*e-pak'-tal*) [ἐπακτός, brought in]. Intercalated; supernumerary; Wormian. **E. Cartilages.** See *Cartilage*.

Epanetus (*e-pan'-et-us*) [ἐπάνετος, relaxing]. Remittent fever.

Epanisognathous (*ep-an-is-og'-na-thus*) [ἐπί, upon; ἄνισος, unequal; γνάθος, jaw]. In biology, having the upper teeth narrower than the lower ones.

Epapophysis (*ep-ap-off'-is-is*) [ἐπί, upon; ἀπόφυσις, apophysis]. A median process placed dorsad of the centrum of a vertebra.

Eparterial (*ep-ar-te'-re-al*) [ἐπί, upon; ἀρτηρία, artery]. Situated above an artery.

Epaxial (*ep-aks'-e-al*) [ἐπί, on; *axes*, axis]. Situated or extending over an axis.

Epencephal (*ep-en'-sef-al*). See *Epencephalon*.

Epencephalic (*ep-en-sef-al'-ik*) [ἐπί, on; ἐγκέφαλος, brain]. Pertaining to the epencephalon.

Epencephalon (*ep-en-sef'-al-on*) [ἐπί, on; ἐγκέφαλος, brain]. The after-brain or hind-brain; the cerebellum and pons taken together; or, as some define it, the cerebellum, pons, and oblongata taken together.

Ependyma (*e-pen'-dim-ah*) [ἐπένδυμα, an upper garment]. The lining membrane of the cerebral ventricles and of the central canal of the spinal cord; endyma.

Ependymal (*e-pen'-dim-al*) [ἐπένδυμα, an upper garment]. Pertaining to the ependyma.

Ependymitis (*e-pen-dim-i′-tis*) [ἐπένδυμα, an upper garment; ιτις, inflammation]. Inflammation of the ependyma.

Ephebic (*ef-e′-bik*) [ἐφηβικός, belonging to puberty]. Pertaining to youth, adolescence, or puberty.

Ephebology (*ef-e-bol′-o-je*) [ἔφηβος, youth; λόγος, science]. The science of youth, adolescence, and puberty.

Ephedra (*ef′-e-drah*) [ἐπί, upon; ἕδρα, a seat]. A genus of gnetaceous plants with four N. American, several S. American, and many other species. See *Tepopote*. **E. antisyphilitica**, and **E. trifurca**, of Texas, etc., are used in gonorrhea, urethritis, and leukorrhea, and as vulneraries. **E. andina**, of S. America, and **E. distachia (or vulgaris)**, **E. equisetina**, **E. flava**, **E. fragilis**, and **E. monostachya**, of the old world, have similar properties.

Ephedrin (*ef′-e-drin*) [ἐπί, upon; ἕδρα, a seat]. The active principle of *Ephedra vulgaris*, proposed as a mydriatic by Nagai. It is a cardiac depressant and harmless mydriatic. The dose of the hydrochlorate in collyria gr. ss in ℥iij distilled water. For instillation gtt. ij–iij. Unof.

Ephelis (*ef′-el-is*) [ἐφηλίς; ἐπί, on; ἥλος, wart: *pl.*, *Ephelides*]. A freckle. See *Lentigo*.

Ephemera (*ef-em′-er-ah*) [ἐφήμερος, daily]. The name given by old physicians to short and slight febrile attacks occurring in the lying-in period. These fevers were of frequent occurrence, and of slight significance. They indicated a small amount of septic infection. **E. maligna**. See *Anglicus sudor*.

Ephemeral (*e-fem′-er-al*) [ἐφήμερος, living a day]. Temporary. Applied to fevers that pass away in a day.

Ephesis (*ef′-es-is*) [ἔφεσις, a longing]. A longing; lust.

Ephialtes (*ef-e-al′-tēz*) [ἐφιάλτης; ἐπί, upon; ἁλλειν, to leap]. See *Nightmare*.

Ephidrosis (*ef-id-ro′-sis*) [ἐπί, upon; ἵδρωσις, sweating]. Perspiration. See *Hyperidrosis*. **E. cruenta**, bloody sweat. See *Hematidrosis*. **E. flava**, yellow sweat. **E. lactea**, white or milky sweat. **E. nigra**, black sweat. **E. tincta**. See *Chromidrosis*. **E. viridis**, greenish sweat.

Ephippium (*ef-ip′-e-um*) [ἐφίππιον, saddle-cloth; ἐπί, on; ἵππος, horse: *pl.*, *Ephippia*]. 1. Same as *Sella turcica*. 2. In biology saddle-shaped capsules formed from the carapace of adult cladocera, and containing the winter (or ephippial) eggs.

Epian (*e′-pe-an*) [Fr., a raspberry]. The yaws; frambesia, *q. v.*

Epiblast (*ep′-e-blast*) [ἐπί, upon; βλαστός, a sprout]. The external or upper layer of the blastoderm, called, also, the *ectoderm* or *neuro-epidermal layer*, from which is developed the central nervous system and epidermal tissues, including the epithelium of the sense-organs.

Epiblema (*ep-e-ble′-mah*) [ἐπί, upon; βάλλειν, to throw; to throw over or to cloak]. In biology, the imperfectly-formed epidermis in submerged plants and on the extremities of growing roots.

Epibole (*e-pib′-o-le*). See *Epiboly*.

Epiboly (*e-pib′-o-le*) [ἐπί, upon; βάλλειν, to throw]. In biology, a term introduced by Salenka to indicate the enclosure of the large yolk-mass by the overgrowth of cleavage-cells. Cf. *Emboly*.

Epibranchial (*ep-e-brang′-ke-al*) [ἐπί, upon; βράγχια, gills]. In biology, applied to various structures; as that portion of the carapace of a crustacean that forms part of the roof of the branchial chamber; the terminal horn of the hyoid bone of a bird, etc.

Epibulbar (*ep-e-bul′-bar*) [ἐπί, upon; βολβός, bulbus, bulb]. Situated upon the globe of the eye; as an epibulbar tumor.

Epicalyx (*ep-e-ka′-liks*) [ἐπί, upon; κάλυξ, calyx: *pl.*, *Epicalyces*]. In biology, an involucre resembling an exterior or accessory calyx.

Epicanthis (*ep-e-kan′-this*) [ἐπικανθίς: *pl.*, *Epicanthides*]. See *Epicanthus*.

Epicanthus (*ep-e-kan′-thus*) [ἐπί, on; κανθός, angle of the eye]. A fold of skin passing from the nose to the eyebrow over the inner canthus of the eye.

Epicardium (*ep-e-kar′-de-um*) [ἐπί, upon; καρδία, heart]. The visceral layer of the pericardium.

Epicarp (*ep′-e-karp*) [ἐπί, upon; καρπός, fruit]. In biology, the outer skin of a fruit.

Epicele, Epicœle (*ep′-i-sēl*) [ἐπί, upon; κοιλία, belly]. 1. In biology, applied to such a body-cavity as that of vertebrates or that represented by the atrium of an ascidium. 2. The cephalic portion of the fourth ventricle, constituting the cavity of the epencephal.

Epicentral (*ep-e-sen′-tral*) [ἐπί, upon; κέντρον, center]. In biology, adhering to a vertebral centrum, as some of the scleral spines in the herring.

Epicerebral (*ep-e-ser′-e-bral*) [ἐπί, upon; *cerebrum*, the brain]. Situated over or on the cerebrum; as the epicerebral space between the brain and the pia.

Epichilium (*ep-e-kil′-e-um*) [ἐπί, upon; χεῖλος, lip, brim: *pl.*, *Epichilia*]. In biology, applied to the upper portion of the lip of an orchid.

Epichorion (*ep-e-ko′-re-on*) [ἐπί, upon; χόριον, the chorion]. 1. The decidua reflexa. 2. The epidermis.

Epiclidium (*ep-e-klid′-e-um*) [ἐπί, upon; κλείδιον, clavicle: *pl.*, *Epiclidia*]. In biology, a separate ossification of the distal end of the clavicle in birds; according to Parker it represents the precoracoid of reptiles.

Epiclinal (*ep-e-kli′-nal*) [ἐπί, upon; κλίνη, a bed]. In biology, placed upon the receptacle.

Epicœlia (*ep-e-se′-le-ah*). See *Epicele*.

Epicoma, Epicomus or **Epicome** (*e-pik′-o-mah*, *e-pik′-o-mus*, *e-pik′-o-me*) [ἐπί, upon; κόμη, hair]. A parasitic monstrosity having an accessory head united to the principal fetus by the summit.

Epicondylar (*ep-e-kon′-dil-ar*) [ἐπί, upon; κόνδυλος, a condyle]. Relating to an epicondyle.

Epicondyle (*ep-e-kon′-dil*) [ἐπί, upon; κόνδυλος, a condyle]. 1. Any supracondylar eminence upon a bone, as the humerus. 2. Less correctly, the external condyle of the humerus.

Epicondylo-cubitalis (*ep-e-kon′-dil-o-ku-bit-a′-lis*) [ἐπικόνδυλος, an epicondyle; *cubitum*, the elbow]. The anconeus muscle. See *Muscles, Table of*.

Epicondylo-radialis (*ep-e-kon′-dil-o-ra-de-a′-lis*) [ἐπικόνδυλος, an epicondyle; *radius*, the radius]. The supinator brevis muscle. See *Muscles, Table of*.

Epicotyl (*ep-e-kot′-il*) [ἐπί, on; κοτυληδών, a cup-shaped hollow (cotyledon)]. In biology, the stem of a young plant between the cotyledons and the lowest true leaves.

Epicranial (*ep-e-kra′-ne-al*) [ἐπί, upon; κρανίον, the cranium]. Relating to the epicranium.

Epicranium (*ep-e-kra′-ne-um*) [ἐπί, upon; κρανίον, cranium]. The structures covering the cranium.

Epicrisis (*ep-e-kri′-sis*) [ἐπίκρισις, determination]. The phenomena of disease succeeding the crisis; a secondary crisis.

Epicrusis (*ep-e-kru′-sis*) [ἐπί, upon; κρούσις, stroke]. 1. Massage by strokes or blows; percussion; therapeutic scourging.

Epicyemate (*ep-e-si-e′-māt*) [ἐπί, upon; κύημα, an embryo]. In embryology, applied to that form of development in which the embryo remains outside and above the yolk-vesicle. It is characteristic of fishes and batrachians.

Epicyesis (*ep-e-si-e′-sis*) [ἐπι, over; κυέειν, to be pregnant]. Superfetation.

Epicystic (*ep-e-sis'-tik*) [ἐπί, upon; κύστις, bladder]. Suprapubic; situated above the urinary bladder.

Epicystitis (*ep-e-sis-ti'-tis*) [ἐπί, upon; κύστις, bladder; ιτις, inflammation]. Inflammation of the tissues above the bladder.

Epicystotomia (*ep-e-sis-to-to'-me-ah*). Same as *Epicystotomy*.

Epicystotomy (*ep-e-sis-tot'-o-me*) [ἐπί, upon; κύστις, a bladder; τέμνειν, to cut]. Suprapubic incision of the bladder.

Epicyte (*ep'-e-sīt*) [ἐπί, upon; κύτος, cell]. The cell-wall or hyaline cuticle of cells.

Epidemesis (*ep-e-dem-e'-sis*) [ἐπιδήμησις]. Same as *Epidemia*.

Epidemia (*ep-e-de'-me-ah*) [ἐπιδημία, an epidemic]. Any epidemic disease, or epidemic of disease. **E. puerorum.** Synonym of *Whooping-cough*.

Epidemic (*ep-e-dem'-ik*) [ἐπί, upon; δῆμος, people]. A term applied to diseases that involve large numbers of persons, or spread over a wide area, in contradistinction to *Endemic*.

Epidemicity (*ep-e-dem-is'-it-e*) [ἐπί, upon; δῆμος, a people]. The quality of being epidemic.

Epidemiography (*ep-e-de-me-og'-ra-fe*) [ἐπιδήμιος, epidemic; γράφειν, to write]. A description of epidemic diseases.

Epidemiologic (*ep-e-dem-e-o-loj'-ik*) [ἐπιδήμιος, epidemic; λόγος, science]. Relating to epidemiology.

Epidemiology (*ep-e-dem-e-ol'-o-je*) [ἐπιδήμιος, epidemic; λόγος, science]. The science of epidemic diseases.

Epidemy (*ep'-e-dem-e*). See *Epidemia*.

Epiderm (*ep'-e-derm*). See *Epidermis*.

Epiderma (*ep-e-der'-mah*) [ἐπί, upon; δέρμα, skin: *pl.*, *Epidermata*]. Any abnormal outgrowth from the epidermis.

Epidermal (*ep-e-der'-mal*) [ἐπί, upon; δέρμα, skin]. Relating to or composed of epiderm.

Epidermatic, Epidermic (*ep-e-der-mat'-ik, -der'-mik*) [ἐπί, upon; δέρμα, skin]. Relating to the epidermis. **E. Method,** a method of administering medicinal substances by applying them to the skin. It is also called *Iatraliptic method*.

Epidermatoid (*ep-e-der'-mat-oid*) [ἐπί, upon; δέρμα, skin; εἶδος, likeness]. Resembling the epidermis.

Epidermic (*ep-e-der'-mik*). Same as *Epidermatic*. **E. Erythema.** See *Acrodynia*. **E. Globes.** See *Cancer-nests*. **E. Grafting.** See *Reverdin's Operation* in *Operations, Table of*. **E. Pearls.** See *Cell-nests*.

Epidermidomycosis (*ep-e-der'-mid-o-mi-ko'-sis*) [ἐπιδερμίς, epiderm; μύκης, fungus]. A disease due to the growth of parasitic fungi upon the skin.

Epidermin (*ep-e-der'-min*) [ἐπί, upon; δέρμα, skin]. A base for ointments prepared by melting one-half ounce of white wax in a warm mortar and triturating with this one-half ounce of powdered gum arabic until a homogeneous paste is obtained. To this is added a boiling mixture of one-half ounce each of water and glycerin and the whole is stirred until cold. Epidermin, thus prepared, is a semi-fluid, creamy substance, which, when exposed to the air in a thin layer, forms a strongly adherent, flexible pellicle or coating. When medicaments are to be added they are always previously rubbed up in glycerin.

Epidermis (*ep-e-der'-mis*) [ἐπί, upon; δέρμα, the skin]. The outer layer of the skin. The scarf-skin, consisting of a layer of horny cells, that protects the true skin. It has neither blood-vessels nor nerve-filaments. **E., Appendages of,** a generic name for the hair, nails, etc., growing from the epiderm.

Epidermization (*ep-e-der-miz-a'-shun*) [ἐπιδερμίς, epiderm]. 1. The formation of epiderm. 2. Skin-grafting.

Epidermolysis (*ep-e-der-mol'-is-is*) [ἐπιδερμίς, epiderm; λύσις, separation]. Acantolysis bullosa; Dermatitis bullosa; a rare skin-disease in which bullæ form upon the slightest pressure. The disease shows itself in infancy, and occurs especially upon the hands and feet. The lesion begins as a red spot, which is itchy; in two hours a bulla forms, enlarges, and then gradually subsides, drying into a scale. It is most pronounced in summer.

Epididymal, or Epididymic (*ep-e-did'-em-al, -im-ik*) [ἐπί, upon; δίδυμοι, the testes]. Relating to the epididymis.

Epididymis (*ep-e-did'-im-is*) [ἐπί, upon; δίδυμοι, the testes]. The small body lying above the testes. The superior end is the *globus major*, the inferior, the *globus minor*.

Epididymitis (*ep-e-did-im-i'-tis*) [ἐπιδιδυμίς, epididymis; ιτις, inflammation]. Inflammation of the epididymis.

Epidosis (*e-pid'-o-sis*) [ἐπίδοσις]. Enlargement; increase; exacerbation.

Epidrome (*e-pid'-ro-me*) [ἐπιδρομή, a running upon]. Active, or (more often) passive, congestion.

Epidural (*ep-e-du'-ral*) [ἐπί, upon; *durus*, hard]. Upon or over the dura. **E. Space,** the space outside the dura mater of the spinal cord and brain.

Epifolliculitis (*ep-e-fol-ik-u-li'-tis*) [ἐπί, upon; *folliculus*, a follicle; ιτις, inflammation]. Inflammation seated about the hair-follicles of the scalp.

Epigamic (*ep-e-gam'-ik*) [ἐπί, upon; γάμος, marriage]. In biology, applied to those bright tints and patterns displayed by many animals during courtship. Cf. *Allepigamic*.

Epigaster (*ep-e-gas'-ter*) [ἐπί, upon; γαστήρ, belly] The large intestine; hindgut.

Epigastralgia (*ep-e-gas-tral'-je-ah*) [ἐπιγάστριον, epigastrium; ἄλγος, pain]. Pain in the epigastrium.

Epigastric (*ep-e-gas'-trik*) [ἐπί, upon; γαστήρ, belly]. Relating to the epigastrium. **E. Reflex.** See *Reflexes, Table of*.

Epigastrium (*ep-e-gas'-tre-um*) [ἐπί, upon; γαστήρ, stomach]. The upper and middle part of the abdominal surface; the epigastric region.

Epigastrius (*ep-e-gas'-tre-us*) [ἐπί, upon; γαστήρ, the stomach]. A form of double-monstrosity, in which one fetus in an undeveloped condition is contained within the epigastric region of the other.

Epigea, or Epigæa (*ep-e-je'-ah*) [ἐπί, upon; γαῖα, earth]. A genus of trailing ericaceous plants. **E. repens,** trailing arbutus of N. America, has valuable diuretic properties. See *Trailing Arbutus*.

Epigeal (*ep-e-je'-al*) [ἐπί, upon; γεῖα, γέα, the earth]. In biology, growing on or out of the ground, or living near the surface of the ground.

Epigenesis (*ep-e-jen'-es-is*) [ἐπί, upon; γένεσις, generation]. In biology, the theory that holds the embryo to be the result of the union of the male and female elements, and the fully formed organism the result of a gradual process of differentiation, in distinction to the theory of encasement, preformation, or evolution, which held the embryo to prēexist enfolded in a minute form within the germ.

Epigenous (*e-pij'-en-us*) [ἐπί, upon; γένης, produced]. In biology, growing upon the surface or upper side of a leaf or other part, as many fungi. Cf. *Epiphyllous*.

Epigeous (*ep-e-je'-us*) [ἐπί, upon; γέα, the earth]. In biology, growing on or near the ground. Same as *Epigeal*.

Epiglottic (*ep-e-glot'-ik*) [ἐπί, upon; γλωττίς, glottis]. Relating to the epiglottis.

Epiglottiditis (*ep-e-glot-id-i'-tis*) [ἐπιγλωτίς, epiglottis; ιτις, inflammation]. Inflammation of the epiglottis.

Epiglottis (*ep-e-glot'-is*) [ἐπί, upon; γλωττίς, glottis]. A thin fibro-cartilaginous valve that aids in preventing food and drink from passing into the larynx.

Epiglottitis (*ep-e-glot-i'-tis*). See *Epiglottiditis*.

Epignathous (*e-pig'-na-thus*) [ἐπί, upon; γνάθος, jaw]. In biology, hook-billed; applied to birds in which the upper half of the beak overreaches the under half and is deflected over it.

Epignathus (*e-pig'-na-thus*) [ἐπί, upon; γνάθος, jaw]. A twin monstrosity in which the parasite is united to the superior maxillary bone of the autosite.

Epigonium (*ep-e-go'-ne-um*) [ἐπί, upon; γονή, seed]. In biology, the old archegonium in mosses and *Hepaticæ*, after the capsule has developed.

Epigynous (*e-pij'-in-us*) [ἐπί, upon; γυνή, a woman]. In biology, growing upon the ovary.

Epihippic Fever (*ep-e-hip'-ik*) [ἐπι, upon; ἵππος, horse]. See *Fever*.

Epilation (*ep-il-a'-shun*) [*e*, out of; *pilus*, a hair]. The extraction of hair.

Epilatorium (*e-pil-at-o'-re-um*)[L.]. An application for permanently removing hair.

Epilatory (*e-pil'-at-o-re*) [*e*, out of; *pilus*, a hair]. 1. Extracting the hairs; depilatory. 2. An epilatorium.

Epilemma (*ep-e-lem'-ah*) [ἐπί, upon; λέμμα, husk: *pl.*, *Epilemmata*]. The neurilemma of very small branches or funiculi of nerve-filaments.

Epilepsia (*ep-e-lep'-se-ah*). See *Epilepsy*. **E. cursiva.** See *Epilepsy, Accelerative*. **E. gravis.** See *Grand mal*. **E. larvata.** See *Epilepsy, Masked*. **E. mitis.** See *Petit mal*. **E. saltatoria.** Synonym of *Chorea*. **E. vertiginosa,** *Petit mal, q. v.*

Epilepsy (*ep'-il-ep-se*) [ἐπίληψις, a laying hold of]. A nervous affection characterized by sudden loss of consciousness and power of coördination of motion with tonic and clonic convulsions, the paroxysms lasting but a short time. This form of the disease is the "true" affection, the **haut mal** or **grand mal** of the French. The **petit mal** (*abortive epilepsy, epileptic vertigo*) is less severe, and may consist of only a slight loss of consciousness, with retained coördination of motion. The so-called *epileptiform seizure* is a localized convulsion without loss of consciousness. See *Epilepsy, Jacksonian*. An epileptic seizure is often introduced by an *aura*, a peculiar sensation preceding the spasmodic seizure, which is quickly followed by the characteristic *epileptic cry*. The origin of the epileptic attack is in all probability a powerful discharge of energy from the cortical cerebral cells. The disease is most common in females, and is influenced by heredity and age; it is rare for it to occur after forty years of age. Traumatism and severe mental strain may act as exciting causes. **E., Accelerative,** *Epilepsia cursiva;* epilepsy in which the patient runs before falling down in a fit. **E., Acute Infantile,** a name given to the eclampsia of infants. **E., Cardiac,** paroxysmal tachycardia. **E., Cortical.** See *E., Jacksonian*. **E., Focal.** See *E., Jacksonian*. **E., Jacksonian,** spasmodic contractions in certain groups of muscles due to local disease of the cortex, always confined to one-half of the body and with retention of consciousness. **E., Masked,** *E. larvata*, the less severe form of true epilepsy, in which the patient does not fall. **E., Partial,** *E., Jacksonian, q. v.* **E., Peripheral.** Same as *E., Jacksonian*. **E., Pleural.** See *Pleural*. **E., Procursive,** there is propulsion of the body in some special direction. **E., Reflex,** due to some reflex neurosis. **E. of the Retina,** a temporary anemia of the retina occasionally observed during an epileptiform seizure. **E., Saturnine,** epileptiform convulsions due to lead-poisoning. **E., Sensory,** *Thalamic epilepsy;* a form of epilepsy in which sensory disturbances predominate; it is believed to be due to a lesion of the optic thalamus. **E., Spinal,** paroxysms of clonic spasm in the lower extremities sometimes observed in the course of spastic paraplegia. **E., Symptomatic.** See *E., Jacksonian*. **E., Thalamic.** See *E., Sensory*. **E., Toxic,** that induced by toxic substances in the blood.

Epileptic (*ep-il-ep'-tik*) [ἐπίληψις, a laying hold of]. Pertaining to or like epilepsy. Also one affected with epilepsy. **E. Aura.** See *Aura*. **E. Cry,** the vocal sound or cry in epilepsy, from laryngeal spasm. **E. Equivalents,** instead of the convulsive attacks in epilepsy there may from time to time be transient psychic disturbances that consist in states of either excitement or depression. These are the so-called *epileptic equivalents*. **E. Hemiplegia,** sometimes follows the fit, especially after unilateral convulsions. **E. Interval,** the period of time between the epileptic paroxysms. During this period there are in the majority of cases, if not in all, some abnormal manifestations, as disorders in the cardiac rhythm, irregularity in the pupils, and cerebral disorders. **E. Mania,** slight maniacal tendencies following or taking the place of the fit. **E. Seizure.** See *Epilepsy*. **E. State,** a state of profound and sometimes comatose depression, with frequently recurring epileptic attacks, often speedily fatal. **E. Vertigo,** giddiness is a common sensation of epilepsy, but is erroneously applied to attacks of minor epilepsy.

Epileptiform (*ep-il-ep'-tif-orm*) [ἐπίληψις, a laying hold of; *forma*, form]. Resembling epilepsy in the symptoms. **E. Tic,** a variety of facial neuralgia accompanied by spasmodic movements of the face. This occurs in the degenerative period of life, and especially in those who present a decided family history of insanity.

Epileptiginous (*ep-il-ep-tij'-in-us*). Same as *Epileptogenous*.

Epileptogenous (*ep-il-ep-toj'-en-us*) [ἐπίληψις, epilepsy; γεννᾶν, to produce]. Producing epilepsy. **E. Zone,** Brown-Séquard's term for that portion of the skin of the face and neck of guinea-pigs which, if irritated after section of the spinal cord near the twelfth dorsal vertebra, will give rise in a short time to epileptiform convulsions.

Epileptoid (*ep-il-ep'-toid*) [ἐπίληψις, a laying hold of; εἶδος, likeness]. 1. Resembling epilepsy. 2. A person subject to various nervous attacks of the general nature of epilepsy.

Epilobium (*ep-il-o'-be-um*) [ἐπί, upon; λοβός, a pod, a lobe]. A genus of herbs including the *willow-herb*, a demulcent, tonic, and astringent drug.

Epilose (*ep'-il-ōs*) [*e*, priv.; *pilosus*, hairy]. Without hair; bald.

Epilymph (*ep'-e-limf*) [ἐπί, upon; *lympha*, water]. The fluid between the bony and the membranous labyrinths.

Epimerite (*ep-e-me'-rīt*) [ἐπί, upon; μηρός, thigh]. In biology, an anterior, deciduous, proboscis-like, prehensile organ, attached to the protomerite or anterior segment of a septate gregarine.

Epimeron (*ep-e-me'-ron*) [ἐπί, upon; μηρός, thigh]. In biology, one of the lateral pieces helping to form the pleuron, or a part of the segment of an arthropod, often giving attachment to the legs.

Epimylis (*e-pim'-il-is*) [ἐπί, over; μύλη, millstone]. The patella.

Epinasty (*ep'-e-nas-te*) [ἐπί, upon; ναστός, pressed close]. In biology, curvature produced by excessive growth on the upper side of an extended organ.

Epinephritis (*ep-e-nef-ri′-tis*) [ἐπί, upon; νεφρός, kidney; *itis*]. Inflammation of a supra-renal capsule.

Epineural (*ep-e-nu′-ral*) [ἐπί, upon; νεῦρον, a nerve]. In biology, applied to structures attached to a neural arch.

Epineurium (*ep-e-nu′-re-um*) [ἐπί, upon; νεῦρον, a nerve]. The nerve-sheath, or sheath of any of the larger fascicles of nerve-tissue.

Epinyctis (*ep-in-ik′-tis*) [ἐπί, upon; νύξ, night]. A pustule appearing or becoming worse at night.

Epiopticon (*ep-e-op′-tik-on*) [ἐπί, upon; ὀπτικός, of seeing]. In biology, a ganglionic swelling in the optic nerve of insects (Hickson).

Epiotic (*ep-e-ot′-ik*) [ἐπί, above; οὖς, ear]. Situated above or on the cartilage of the ear.

Epipastic (*ep-e-pas′-tik*) [ἐπιπάσσειν, to sprinkle]. Designed to be sprinkled upon some surface; sprinkled with some substance; applied to plasters sprinkled with some agent, as cantharides, used as a vesicant.

Epipedometer (*ep-e-pe-dom′-et-er*) [ἐπίπεδον, surface; μέτρον, measure]. An instrument for use in measuring various complex deformities of the body.

Epipetalous (*ep-e-pet′-al-us*) [ἐπί, upon; πέταλον, leaf or petal]. In biology, applied to stamens or other structures when borne upon the petals.

Epipharynx (*ep-e-far′-inks*) [ἐπί, upon; φάρυγξ, pharynx]. In biology, the median projection on the internal surface of the upper lip of an insect.

Epiphenomenon (*ep-e-fe-nom′-en-on*) [ἐπι, on; φαινόμενον, phenomenon: *pl.*, *Epiphenomena*]. An exceptional sequence or unusual complication arising in the course of a disease.

Epiphora (*e-pif′-or-ah*) [ἐπιφορά; ἐπί, upon; φέρειν, to bear]. A habitual or persistent overflow of tears, due to over-secretion or impeded outflow through the normal channels of excretion. Lachrymation, *q. v.*

Epiphyllous (*ep-e-fil′-us*) [ἐπί, upon; φύλλον, a leaf]. In biology, borne on a leaf, as certain fungi. Cf. *Epigenous.*

Epiphyseal, or **Epiphysial** (*ep-e-fiz′-e-al*) [ἐπί, upon; φύειν, to grow]. Relating to or of the nature of an epiphysis.

Epiphyseitis (*ep-e-fiz-e-i′-tis*) [ἐπίφυσις, an epiphysis; ιτις, inflammation]. Inflammation of an epiphysis, or of the epiphyseal part of a bone.

Epiphysis (*e-pif′-is-is*) [ἐπί, upon; φύειν, to grow]. A process of bone attached for a time to another bone by cartilage, but in most cases soon becoming consolidated with the principal bone. **E. cerebri,** the pineal gland.

Epiphysitis (*e-pif-is-i′-tis*). See *Epiphyseitis.*

Epiphyte (*ep′-e-fit*) [ἐπί, upon; φύτον, a plant]. In biology, a plant growing on another plant, but not nourished by it; also, a parasitic plant living upon another plant; also, a plant parasitic upon an animal.

Epiplasm (*ep′-e-plazm*) [ἐπί, upon; πλάσμα, plasma]. In the sporangium of many fungi, a part of the protoplasm remaining after formation of the spores.

Epiplastron (*ep-e-plas′-tron*) [ἐπί, upon; F., *plastron*, a breastplate]. In biology, one of the two anterior lateral plates of the plastron of a turtle; probably the homologue of the clavicle of other vertebrates.

Epiplerosis (*ep-e-ple-ro′-sis*) [ἐπί, upon; πλήρωσις, filling]. Engorgement; repletion; distention.

Epipleura (*ep-e-plu′-rah*) [ἐπί, upon; πλευρά, a rib]. In biology, variously used to designate a structure superposed upon a rib, as the spines of certain fishes, the hooked processes or splint-bones passing from rib to rib in birds, or the inflexed outer border of a beetle's elytrum.

Epiplexus (*ep-e-pleks′-us*) [ἐπί, upon; *plexus*, a network]. The choroid plexus of the epicele.

Epiplocele (*e-pip′-lo-sēl*) [ἐπίπλοον, caul; κήλη, hernia]. Omental hernia.

Epiploenterocele (*e-pip-lo-en-ter′-o-sēl*) [ἐπίπλοον, caul; ἔντερον, intestine; κήλη, hernia]. A hernia containing both omentum and intestine.

Epiploenteroöscheocele (*ep-ip-lo-en-ter-o-os′-ke-o-sēl*) [ἐπίπλοον, caul; ἔντερον, intestine; ὄσχεον, scrotum; κήλη, hernia]. Intestinal and omental hernia into the scrotum.

Epiploic (*ep-ip-lo′-ik*) [ἐπίπλοον, caul]. Relating or belonging to the epiploön.

Epiploischiocele (*ep-ip-lois′-ke-o-sēl*) [ἐπίπλοον, caul; ἰσχίον, hip; κήλη, hernia]. Omental hernia through the sciatic notch or foramen.

Epiploitis (*e-pip-lo-i′-tis*) [ἐπίπλοον, caul; ιτις, inflammation]. Inflammation of the omentum; omental peritonitis.

Epiplomerocele (*ep-ip-lo-mer′-o-sēl*) [ἐπίπλοον, caul; μηρός, thigh; κήλη, hernia]. Femoral hernia containing omentum.

Epiplomphalocele (*ep-ip-lom-fal′-o-sēl*) [ἐπίπλοον, caul; ὀμφαλός, navel; κήλη, hernia]. Umbilical hernia with protruding omentum.

Epiploön (*e-pip′-lo-on*) [ἐπί, upon; διπλόος, double: *pl.*, *Epiploa*]. The great omentum. **E., Gastrocolic,** the great omentum. **E., Gastro-hepatic,** the lesser omentum.

Epiploscheocele (*ep-ip-los′-ke-o-sēl*) [ἐπίπλοον, caul; ὄσχεον, scrotum; κήλη, hernia]. Omental hernia descending into the scrotum.

Epipodite (*e-pip′-o-dīt*) [ἐπί, upon; πούς (ποδ-), foot]. A third appendage of the limb of a crustacean, articulating with the coxopodite, and passing into the branchial chamber; it is also called the *flabellum.*

Epipodium (*ep-e-po′-de-um*) [ἐπί, upon; πούς (ποδ-), foot]. In biology, one of the lateral appendages of the foot in certain molluscs, as the wing-like structures of pteropods.

Epipsyche (*ep-is-i′-ke*) [ἐπί, after; ψυχή, soul]. Applied by Haeckel to the oblongata proper.

Epipteric (*ep-ip-ter′-ik*) [ἐπί, upon; πτερόν, a wing]. Situated over the alisphenoid. **E. Bone.** See *Bone.*

Epipterous (*e-pip′-ter-us*) [ἐπί, upon; πτερόν, a wing]. In biology, winged at the top; applied to seeds.

Epirrhizous (*ep-e-ri′-zus*) [ἐπί, upon; ῥίζα, root]. In biology, growing upon roots.

Episcleral (*ep-e-sklē′-ral*) [ἐπί, upon; σκληρός, hard, sclerotic]. Situated on the outside of the sclerotic coat.

Episcleritis (*ep-e-skle-ri′-tis*) [ἐπί, upon; σκληρός, hard; ιτις, inflammation]. A localized inflammation of the subconjunctival tissues.

Episeio- (*ep-is′-e-o-*). For words thus beginning, see *Episio-.*

Episeioncus (*ep-e-si-ong′-kus*) [ἐπίσειον, pubes; ὄγκος, a mass]. A tumor in the pubic region, or of the labia.

Episeitis (*ep-is-e-i′-tis*). See *Episioitis.*

Episematic (*ep-e-sem-at′-ik*) [ἐπί, upon; σῆμα, a sign]. In biology, applied to that form of mimetic coloration which serves as a signal of recognition to other individuals and thus enables them to escape; as the white tail of the rabbit. (Poulton.)

Episiocele (*ep-e-si′-o-sēl*) [ἐπίσειον, pubes; κήλη, hernia]. Pudendal hernia; vulvar protrusion.

Episioclisia (*ep-e-si-o-klis′-e-ah*) [ἐπίσειον, pubes; κλείσις, locking, closure]. Surgical closure of the vulva.

Episiohematoma (*ep-e-si-o-hem-at-o′-mah*) [ἐπίσειον, pubes; αἷμα, blood; ὄμα, tumor: *pl.*, *Episiohematomata*]. Hematoma of the vulva or pudenda.

Episioitis (*ep-e-si-o-i′-tis*) [ἐπίσειον, pubes; ιτις, inflammation]. Inflammation of the pudenda.

Episioplasty (*ep-e-si′-o-plas-te*) [ἐπίσειον, pubes; πλάσσειν, to form]. A plastic operation upon the pubic region, or on the vulva.

Episiorrhagia (*ep-e-si-or-a′-je-ah*) [ἐπίσειον, the pubes; ῥηγνύναι, to break forth]. Hemorrhage from the vulva.

Episiorrhaphy (*ep-e-si-or′-a-fe*) [ἐπίσειον, pubes; ῥαφή, seam]. An operation for the cure of prolapsed uterus or procidentia uteri.

Episiostenosis (*ep-e-si-o-ste-no′-sis*) [ἐπίσειον, pubes; στενός, narrow]. Contraction or narrowing of the vulva, whether surgical or pathologic.

Episiotomy (*ep-is-e-ot′-o-me*) [ἐπίσειον, vulva; τομή, section]. Incision through the vulva in childbirth, to prevent rupture of the perineum and to facilitate labor.

Epispadias (*ep-e-spad′-e-as*) [ἐπί, above; σπάειν, to pierce]. Abnormal opening of the urethra upon the upper part of the penis, either on the dorsum or on the glans.

Epispasis (*e-pis′-pas-is*) [ἐπί, upon; σπάσις, a drawing]. An eruption or skin-affection due to medical treatment; a drug-exanthem.

Epispastic (*ep-e-spas′-tik*) [ἐπί, upon; σπάσις, a drawing]. 1. Rubefacient, or vesicatory. 2. A vesicatory or substance producing a blister.

Episperm (*ep′-e-sperm*) [ἐπί, upon; σπέρμα, seed]. In biology, the outer seed-coat, also called the testa.

Episplenitis (*ep-e-splen-i′-tis*) [ἐπί, upon; σπλήν, spleen; ιτις, inflammation]. Inflammation of the fibrous coat of the spleen.

Epistasis (*e-pis′-tas-is*) [ἐπί, upon; ἵστασθαι, to stand]. A scum or film of substance floating on the surface of urine.

Epistaxis (*ep-is-taks′-is*) [ἐπιστάζειν, to distil]. Hemorrhage from the nose.

Episternite (*ep-e-ster′-nīt*) [ἐπί, upon; στέρνον, breastbone]. In biology, applied to the lateral pieces of the segment of an arthropod; a pleurite; specifically one of the valves of the ovipositor in orthopterous insects.

Episternum (*ep-e-ster′-num*) [ἐπί, upon; στέρνον, breast-bone]. In biology, variously applied to designate a part above or anterior to the sternum; as the presternum of a mammal, the epiplastron of a turtle, or the anterior of the three pieces of the pleuron of an insect.

Epistoma (*e-pis′-to-mah*) [ἐπί, upon; στόμα, mouth]. In biology, variously used to designate some part placed above, or anterior to the mouth, as the osseous portion of the metope or facies of a macrurous crustacean, that lies immediately in front of the oral aperture.

Epistrophe (*e-pis′-tro-fe*) [ἐπί, upon; στρέφειν, to turn]. In biology, applied to the arrangement assumed by chlorophyl-grains under the influence of light, on those surfaces of the cell-wall that are at right angles to the plane of incident light.

Epistropheus (*ep-is-tro′-fe-us*, *e-pis′-tro-phūs*) [ἐπιστροφεύς]. A synonym of the axis, or second cervical vertebra.

Epithalline (*ep-e-thal′-in*) [ἐπί, upon; θαλλός, a branch]. In biology, growing upon the thallus.

Epitheca (*ep-e-the′-kah*) [ἐπί, upon; θήκη, a case]. In biology, a secondary calcareous investment or tegumentary secretion surrounding the theca of certain corals.

Epithecium (*ep-e-the′-se-um*) [ἐπί, upon; θήκη, a case]. In biology, the surface of the fruiting-disc in certain lichens and fungi.

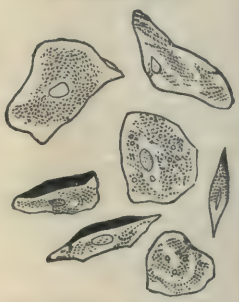
Epithelial (*ep-e-the′-le-al*) [ἐπί, upon; θηλή, a nipple]. Pertaining to epithelium; made up of the elements of epithelium. **E. Pearls.** See *Pearls*.

Epithelicell (*ep-e-the′-le-sel*) [ἐπί, upon; θηλή, a nipple; *cella*, a cell]. An epithelial cell.

Epithelioid (*ep-e-the′-le-oid*) [ἐπί, upon; θηλή, nipple; εἶδος, likeness]. Resembling epithelium.

Epithelioma (*ep-e-the-le-o′-mah*) [ἐπί, upon; θηλή, nipple; ὄμα, a tumor: *pl.*, *Epitheliomata*]. Carcinoma involving skin or mucous membrane. **E. molluscum.** Synonym of *Molluscum contagiosum*.

Epithelium (*ep-e-the′-le-um*) [ἐπί, upon; θηλή, nipple]. The cuticle or cellular-structure of mucous surfaces, and also of the skin of the body. **E. chrotale,** the ectoderm. **E., Ciliated,** a form in which the cells bear vibratile filaments or cilia at their free extremities. **E., Columnar,** distinguished by prismatic-shaped or columnar cells. **E., Nucleated,** consisting of circular or hexagonal cells, each containing a nucleus.



Ciliated Cells.

Columnar Cells.

Goblet-cells.

Squamous-cells.

E., Pavement, or **Cuboidal,** cubical or polygonal cells covering the surface like the stones of a pavement. **E., Squamous,** the cells have been reduced to flattened, scaly plates. **E., Stratified,** the cells are arranged in distinct layers. **E., Tessellated.** Same as *E., Pavement*. **E., Transitional,** intermediate between simple and stratified.

Epithem (*ep′-ith-em*) [ἐπίθημα, a poultice: *pl.*, *Epithemata*]. Any local application; as a compress, fomentation, lotion, or poultice; from this definition some writers exclude salves, plasters, and ointments.

Epithema (*ep-ith-e′-mah*). See *Epithem*.

Epithesis (*e-pith′-es-is*) [ἐπιτιθέναι, to lay on]. The surgical correction of deformed or crooked limbs.

Epithyme (*ep′-ith-īm*) [ἐπί, upon; θύμος, thyme]. The European plant, *Cuscuta epithymum*, so called as growing parasitically upon thyme; it is said to be useful in melancholy, jaundice, and constipation.

Epithymia (*ep-e-thi′-me-ah*) [ἐπιθυμία, longing]. Any natural longing or desire; a yearning.

Epitrichium (*ep-e-trik′-e-um*) [ἐπί, upon; τρίχιον, hair]. A superficial cellular layer of epidermis, found in embryonic and fetal life.

Epitrochlea (*ep-e-trok′-le-ah*) [ἐπί, upon; τροχιλέα, a pulley]. The internal condyle of the humerus.

Epixylous (*e-piks′-il-us*) [ἐπί, upon; ξύλον, wood]. In biology, applied to fungi or other plants that grow upon wood.

Epizoicide (*ep-e-zo′-is-īd*) [ἐπί, upon; ζῷον, an animal; *cædere*, to kill]. A drug or preparation that destroys external parasites.

Epizoön (*ep-e-zo'-on*) [ἐπί, upon; ζῷον, an animal: *pl.*, *Epizoa*]. An animal living as a parasite upon another; an external parasite, as distinguished from an *Entozoön*.

Epizoötic (*ep-e-zo-ot'-ik*) [ἐπί, upon; ζῷον, animal]. 1. Affecting the lower animals epidemically. 2. A contagious, or generally prevalent disease affecting animals.

Epizoöty (*ep-e-zo'-o-te*) [ἐπί, upon; ζῷον, animal]. An epizoötic disease.

Eponychium (*ep-o-nik'-e-um*) [ἐπί, upon; ὄνυξ, fingernail]. A horny condition of the epidermis from the second to the eighth month of fetal life, indicating the position of the future nail.

Eponym (*ep'-o-nim*) [ἐπώνυμος, named after a person]. A term derived from the name of a person. See *Table of Eponymic Diseases*, under *Disease*.

Epoöphorectomy (*ep-o-o-for-ek'-to-me*) [ἐπωόφορον, epoöphoron; ἐκτομή, excision]. Surgical removal of the epoöphoron.

Epoöphoron (*ep-o-off'-or-on*) [ἐπί, upon; ᾠοφόρος, laying eggs]. Same as *Parovarium*.

Epostoma (*ep-os-to'-mah*) [ἐπί, upon; ὀστέον, bone]. An exostosis.

Epsilon-bacillus. See *Bacteria, Synonymatic Table of*.

Epsom Salts (*ep'-sum*). See *Magnesium*.

Epstein's Dressing. A method of dressing the umbilical cord. It consists of the ordinary linen quadrangular belly-plastron with a central cap-like receptacle for the umbilical stump.

Epulis (*ep-u'-lis*) [ἐπί, upon; οὖλα, the gums]. A hard, fibrous tumor of the alveolar processes of the jaws.

Epulosis (*ep-u-lo'-sis*) [ἐπουλωσις: ἐπί, upon; οὐλή, scar]. Cicatrization; a cicatrix.

Epulotic (*ep-u-lot'-ik*) [ἐπί, upon; οὐλή, scar]. 1. Promoting epulosis or cicatrization. 2. A remedy or application that promotes the healing of wounds or sores.

Equation (*e-kwa'-shun*) [*æquare*, to make equal]. In chemistry, a collection of symbols so arranged as to indicate that if the bodies represented by the symbols be brought together a chemic reaction will take place. **E., Personal**, an allowance for individual peculiarity or error in an observer's work, in order to render it approximately accurate.

Equator (*e-kwa'-tor*) [*æquare*, to make equal]. An imaginary circle surrounding a sphere. **E. of a cell**, the boundary of the plane through which division takes place. **E. of the eye**, the *æquator oculi*; the boundary of the transverse and central vertical plane of the eye. **E. of a Lens**, the angular edge at the meeting of the anterior and posterior surfaces of the lens.

Equatorial (*e-kwa-tor'-e-al*) [*æquare*, to make equal]. Pertaining or belonging to an equator. **E. Plate.** See *Karyokinesis* and *Plate*.

Equilibration (*e-que-lib-ra'-shun*) [*æquilibrare*, to balance equally]. Equipoise; even balance.

Equilibrism (*e-quil'-ib-rizm*) [*æquilibris*, evenly balanced]. The opinion that every voluntary act may be counteracted by an opposing inhibitory volition.

Equilibrium (*e-kwe-lib'-re-um*) [*æquus*, equal; *libro*, balance]. An even balancing of a body or condition. **E., Stable**, when, after slight disturbance, the body will return to its original condition or position. **E., Unstable**, when it will not so return.

Equination (*e-kwin-a'-shun*) [*equinus*, of a horse]. 1. Inoculation with the virus of equine smallpox. 2. Inoculation with the virus of equinia.

Equinia (*e-kwin'-e-ah*) [*equus*, a horse]. Glanders. Farcy. A contagious, specific disease, with both local and general symptoms, derived from the horse or ass. It affects chiefly the skin, mucous membranes and lymphatics, and begins with a purulent nasal discharge, the respiratory, ocular and oral membranes being further successively involved. It is of microbic origin. See *Bacillus mallei*, in *Bacteria, Synonymatic Table of*.

Equinist (*ek'-kwin-ist*) [*equus*, a horse]. One who believes in the equine origin of a disease, *e. g.*, of tetanus.

Equipollent (*e-kwip'-o-lent*) [*æquus*, equal; *pollere*, to be strong]. Of equal power or efficiency; said, for example, of opposing muscles, or of parents in their influence upon offspring.

Equisetum (*ek-wis-e'-tum*) [*equus*, a horse; *sæta*, bristle]. A genus of cryptogamous plants; the horsetails, or scouring rushes. **E. hiemah** and **E. palustre**, of Europe and N. America, are reputed to be effective and harmless diuretics.

Equitant (*ek'-wit-ant*) [*equitare*, to ride]. In biology, literally, riding. Applied to leaves, like those of the iris, which are vertical and folded lengthwise, so that each leaf, toward the base, overlaps or straddles the next; also applied to the longitudinally folded antennæ of certain insects.

Equivalence, Equivalency (*e-kwiv'-al-ens, e-quiv'-al-en-se*) [*æquus*, equal; *valere*, to be worth]. Equality of valence or saturating-power. See *Valence*. In chemistry, the property possessed by an element or radical of combining with another element or radical or of replacing it in a compound body in definite and unalterable proportions. It is sometimes used as synonymous with *valence* or *quantivalence*.

Equivalent (*e-kwiv'-al-ent*) [*æquus*, equal; *valere*, to be worth]. Of equal valency. **E. Focus.** See *Focus*.

Equivocal (*e-kwiv'-o-kal*) [*æquus*, equal; *vox*, sound]. Of doubtful significance, as equivocal symptoms.

Eradication (*e-rad-ik-a'-shun*) [*e*, out; *radicare*, to root]. Complete or thorough removal.

Eradiculose (*e-rad-ik'-u-lōs*) [*e*, priv.; *radicula*, a rootlet]. In biology, destitute of rootlets or rhizoids.

Erasene (*er'-as-ēn*) [*eradere*, to scratch out; from the power of erasing grease-spots]. A trade-name for California abietene. See *Abietene*.

Erasion (*e-ra'-shun*) [*e*, out; *radere*, to scrape]. The act of scraping or cureting.

Erb's Point. See *Point*. **E. Reaction of degeneration.** Deviation from the normal formula of muscular response to galvanism. **E. "Upper-arm type" of palsy.** A myotrophy characterized by paralysis of the deltoid and often of the supraspinatus and infraspinatus, the biceps, brachialis anticus, and the supinators. See *Diseases, Table of*.

Erbium (*ur'-be-um*) [L.]. A rare element; symbol Er. See *Elements, Table of*.

Erdmann's Test. See *Tests, Table of*.

Erdmann and Uslar's Test. See *Tests, Table of*.

Erect (*e-rekt'*) [*erectus*, set up]. Upright; in the state of erection. **E. Posture.** See *Postures, Table of*.

Erecthites (*e-rek-thi'-tēz*) [ἐρεχθίτης, groundsel]. A genus of composite plants. **E. hieracifolia.** Fireweed; a coarse composite-flowered plant common in waste-lands in N. America; it is astringent and tonic. Unof.

Erectile (*e-rek'-til*) [*erigere*, to set up]. Pertaining to or possessing the characteristic stiffening, rigidity, or erection. **E. Glossitis.** See *Glossitis, Parenchymatous*. **E. Tissue**, that which is capable of erection; consisting of a network of expansile capillaries that under stimulus becomes engorged with blood.

Erection (*e-rek'-shun*) [*erigere*, to set up]. The condition of temporary and functional fulness and firmness of the penis, clitoris, etc., due to sexual excitement, friction, etc., the mechanism consisting in an overfilling of the blood-vessels with inhibition of the

return circulation. **E.-center.** See *Center*. **E., Persistent.** Synonym of *Priapism, q. v.*

Erectopatent (*e-rek-to-pa'-tent*) [*erectus*, erect; *patens*, spreading]. In biology, intermediate between erect and spreading, as the fore-wings of a butterfly in repose.

Erector (*e-rek'-tor*) [*erigere*, to erect]. Any muscle, the function of which it is to erect or elevate a part. See *Muscles, Table of.* **E. pili,** the unstriped muscular fibers causing the erection of the hair and the phenomenon called *goose-flesh* or *goose-skin.*

Eremacausis (*er-em-ak-aw'-sis*) [ἤρεμα, slowly; καῦσις, burning]. Slow oxidation or gradual decay, without combustion.

Eremoblast (*er-e'-mo-blast*) [ἐρῆμος, solitary; βλαστός, a germ, sprout]. A unicellular plant.

Eremophobia (*er-em-o-fo'-be-ah*) [ερῆμος, desolate; φόβος, fear]. The same as *Agoraphobia, q. v.*

Erethin (*er'-e-thin*) [ἐρεθίξειν, to irritate]. The name given by Klebs to that constituent of tuberculin which occasions fever.

Erethism (*er'-e-thizm*), **Erethismus** (*er-e-thiz'-mus*) [ἐρεθισμός, irritation]. An abnormal heightening of nervous irritability. **E. ebriosorum.** Synonym of *Delirium tremens.* **E. hydrophobia.** Synonym of *Hydrophobia.* **E. tropicus.** See *Insolation.*

Erethismal (*er-e-thiz'-mal*) [ἐρεθισμός, irritation]. Of the nature of an erethism.

Erethismic (*er-e-thiz'-mik*), or **Erethistic** (*er-e-this'-tik*) [ἐρεθισμός, irritation]. Relating to, or affected with, erethism.

Erg [ἔργον, work]. See *Electric Units.*

Ergasiomania (*ur-gas-e-o-ma'-ne-ah*) [ἐργασία, work; μανία, madness]. Mania for performing operations.

Ergasiophobia (*ur-gas-e-o-fo'-be-ah*) [ἐργασία, work; φόβος, fear]. Timidity in operating. A dread of operations.

Ergogenesis (*ur-go-jen'-es-is*) [ἔργον, work; γένεσις, production]. Same as *Ergogeny.*

Ergogenetic (*ur-go-gen-et'-ik*) [ἔργον, work; γένεσις, production]. Of the nature of, or pertaining to, ergogeny.

Ergogeny (*ur-goj'-en-e*) [ἔργον, work; γένεσις, production]. In biology, the energy, both potential and kinetic, involved in the adaptive processes of living organisms; it includes both *kinetogeny* and *statogeny* (Ryder).

Ergograph (*ur'-go-graf*) [ἔργον, work; γράφειν, to write]. A recording ergometer. An instrument for recording the extent of movement produced by a contracting muscle, or the amount of work it is capable of doing.

Ergometer (*ur-gom'-et-er*) [ἔργον, work; μέτρον, measure]. A variety of dynamometer.

Ergostat (*ur'-go-stat*) [ἔργον, work; ἱστάναι, to stand]. An apparatus for testing muscular strength.

Ergot, or Ergota (*ur'-got*, or *ur-go'-tah*) [Fr., *ergot*, a spur: *gen.*, *Ergotæ*]. 1. In farriery, the horny stub below the pastern joint, hidden by the fetlock of the horse. 2. The hippocampus minor. 3. A fungus, *Claviceps purpurea*, parasitic upon rye. It contains *sphacelinic acid, ergotinic acid,* and *cornutin*, to which its properties are due. It is a powerful excito-motor, hemostatic, and gastro-intestinal irritant, but is used most frequently to promote uterine contraction in childbirth. It is valuable internally in amenorrhea and atonic spermatorrhea; topically in gonorrhea, conjunctivitis and inflammations of mucous membranes. Its effects are most prompt by hypodermatic injection. Dose gr. x–ʒj. **E., Ext., Fld.,** prepared with dilute hydrochloric acid, alcohol, and water. Dose ʒss–ij. **E., Ext., Liquid** (B. P.). Dose ♏x–xxx. **E., Ext.,—Ergotin.** Dose gr. ij–xx, hypodermatically gr. ¼–v. **E., Infus.** (B. P.). Dose ʒ j–ij. **Injectio Ergotinæ Hypodermica** (B. P.), ergotin 1, camphor-water, 2. Dose subcutaneously ♏iij–x. **E., Tinctura** (B. P.). Dose ♏x–ʒj. **E., Vinum,** 15 per cent. Dose ʒj–ʒj. **Sclerotinic Acid,** thought to be identical with ergotinic acid.

Ergotin (*ur'-go-tin*) [Fr., *ergot*, a spur]. 1. A precipitate or extract prepared from the tincture of *Secale cereale;* it is an emmenagogue, and parturient. Dose $\frac{1}{16}$ to ½ grain, repeated as may be needed. Unof. The name is applied in commerce to many different preparations of ergot; often to the *extractum ergotæ*, U. S. P. 2. $C_{50}H_{52}N_2O_5$. An amorphous, brown alkaloid found in ergot. It is probably the same as ecbolin.

Ergotinin (*ur-got'-in-in*) [Fr., *ergot*, a spur], $C_{35}H_{40}N_4O_6$. An alkaloid from ergot of rye, occurring in white needles; it is effective in hemorrhage, in erysipelas, and in certain brain-affections. For hypodermatic injection, $\frac{1}{60}$ to $\frac{1}{15}$ gr. is used, dissolved in lactic acid and water.

Ergotism (*ur'-got-izm*) [Fr., *ergot*, a spur]. The constitutional effects of overdoses of ergot or of the persistent use of food containing ergot. These are manifested by severe cramps, chiefly in the muscles of the leg, ending in tonic contraction of these muscles—the *spasmodic* form; and secondly by gangrene of the extremities—the *gangrenous form.* The symptoms may be acute or chronic. See *Pellagra.*

Ergotol (*ur'-got-ol*) [Fr., *ergot*, a spur]. A proprietary liquid preparation of ergot, recommended for hypodermatic injection.

Ergten (*erg'-ten*) [ἔργον, work]. See *Electric Units.*

Erianthous (*er-e-an'-thus*) [ἔριον, wool; ἄνθος, flower]. In biology, woolly-flowered.

Erichsen's Disease. See *Diseases, Eponymic Table of.* **E. Operation.** See *Operations, Table of.*

Ericolin (*er-ik'-o-lin*) [ἐρείκη, heath], $C_{34}H_{56}O_{21}$. A substance found in *Uva ursi.* It is an amorphous, yellowish glucosid with a bitter taste, yielding with diluted acids sugar and an essential oil—*ursone.*

Erigeron (*er-ij'-er-on*) [ἠριγέρων, groundsel: *gen.*, *Erigerontis*]. Fleabane. The plant *E. canadense*, having physiologic actions like those of oil of turpentine, but less irritant. It is efficient as a hemostatic in menorrhagia. **E. bellidifolium** and **E. philadelphicum** afford similar oils, and have the same properties. **E., Ol.,** the essential volatile oil of erigeron. Dose ♏x–ʒ ss. Unof.

Eringo (*er-ing'-o*). See *Eryngo.*

Eriodictyon (*er-e-o-dik'-te-on*) [ἔριον, wool; δίκτυον, a net]. Yerba Santa or Mountain-balm. The leaves of *E. glutinosum*, a shrub of California, an excellent expectorant, and valuable as an excipient for quinin, the taste of which it largely conceals. It is useful in bronchial affections. **E., Ext. Fld.** Dose ♏xv–ʒj. **E., Ext.** Dose gr. ij–x. **E. tomentosum** and **E. angustifolium** have the same uses. The latter are unofficial.

Eriophorous (*er-e-off'-or-us*) [ἔριον, wool; φέρειν, to bear]. In biology, wool-bearing.

Eriophyllous (*er-e-off'-il-us*) [ἔριον, wool; φυλλόν, a leaf]. In biology, woolly-leaved.

Erlangen Blue. Same as *Berlin Blue.*

Erlau Green. Same as *Bremen Green.*

Erlicki's Fluid. A hardening-fluid used especially for tissues of the central nervous system. It consists of potassium bichromate, 2.5 parts; cupric sulphate, 0.5 parts; water, 100 parts.

Erodent (*e-ro'-dent*) [*e*, out; *rodere*, to gnaw]. 1. Caustic; causing erosion. 2. A caustic application or agent.

Erogenic, or Erogenous (*er-o-jen'-ik* or *er-oj'-en-us*) [ἔρως, love; γεννᾶν, to produce]. Producing or stimulating the sexual appetite.

Eromania (*er-o-ma'-ne-ah*). See *Erotomania.*

Erose (*e-rōs'*) [*erodere*, to gnaw off]. In biology, irregularly toothed, as if gnawed.

Erosion (*e-ro'-zhun*) [*erosio; erodere*, to eat out]. Disintegration of tissue by mechanical, chemic, or morbid action. **E. of the Cervix,** an ulcerated condition of the neck of the womb resulting from chronic endometritis. It is also called *ulceration* or *granular degeneration of the cervix.*

Erostrate (*e-ros'-trāt*) [ε, priv; *rostrum*, a beak]. In biology, not beaked.

Erotia (*e-ro'-she-ah*) [L.]. A genus of composite-flowered plants. **E. lanata,** white sage or winter-fat; a composite-flowered forage-plant of the Western U. S.; valued locally in intermittent fevers. Unof.

Erotic (*er-ot'-ik*) [ἔρως, love]. Pertaining to the sexual passion.

Eroticism (*er-ot'-is-izm*) [ἔρως, love]. An erotic disposition; erotic display; tendency to erotomania.

Eroticomania (*er-o-tik-o-ma'-ne-ah*) [ἐρωτικός, loving; μανία, madness]. Same as *Erotomania.*

Erotocism (*er-ot'-o-sizm*). Same as *Erotomania, q. v.*

Erotomania (*er-ot-o-ma'-ne-ah*) [ἔρως, love; μανία, madness]. Morbid, abnormal exaggeration of love generally; more limited to the imaginative than to the carnal aspect of the sentiment; insanely-perverted sexual feeling. See *Nymphomania* and *Satyriasis.* **E. personalis.** Synonym of *Satyriasis* and of *Nymphomania.*

Erotomaniac (*er-ot-o-ma'-ne-ak*) [ἐρῶς, love; μανία, madness]. A patient who is afflicted with erotomania.

Erratic (*er-at'-ik*) [*erraticus*, wandering]. Moving about from place to place; irregular; strange or unusual; eccentric, peculiar.

Errhine (*er'-in*) [ἐν, in; ῥίς, the nose]. 1. Causing discharges from the nose. 2. A medicine that, applied to the mucous membrane of the nose, increases nasal secretions. A sternutatory.

Error (*er'-or*) [L., "wandering"]. Displacement or perversion in any function; aberration, mental or optic.

Erskine's Method. See *Treatment, Methods of.*

Erubescence (*er-u-bes'-ens*) [*erubescentia*, blushing]. Redness of the skin.

Eruca (*er-oo'-kah*) [L., a caterpillar; a colewort]. A genus of cruciferous plants. **E. sativa,** the garden rocket, an herb of Asia and Europe, used as a salad. It is a stimulant and diuretic, and is considered to be aphrodisiac and galactagogue. Unof.

Erucic Acid (*er-oo'-sik*). See *Acid.*

Eruciform (*er-oo'-sif-orm*) [*eruca*, a caterpillar; *forma*, form]. In biology, said of larvæ, spores, etc., that are shaped like a caterpillar.

Erucivorous (*er-u-siv'-or-us*) [*eruca*, a caterpillar; *vorare*, to eat]. In biology, applied to birds and other animals that feed upon caterpillars.

Eructation (*e-ruk-ta'-shun*) [*eructare*, to belch]. Belching.

Erugation (*er-oo-ga'-shun*) [*erugatio; e*, out; *ruga*, wrinkle]. The removal of wrinkles.

Erugatory (*er-oo'-gat-or-e*) [*e*, out; *ruga*, a wrinkle]. 1. Tending to remove wrinkles. 2. A remedy for wrinkles.

Erugineous (*er-oo-jin'-e-us*). Same as *Eruginous.*

Eruginose (*er-oo'-jin-ōs*). Same as *Eruginous.*

Eruginous (*er-oo'-jin-us*) [*æruginosus; ærugo*, rust]. Having the nature or the color of verdigris.

Erumpent (*e-rum'-pent*) [*erumpere*, to break out]. In biology, applied to parts or organs that appear as if bursting out.

Eruption (*e-rup'-shun*) [*erumpere*, to burst out]. A bursting forth of any kind or from any part, but applied especially to the chief symptom of certain skin-diseases, consisting in pimples, vesicles, rash, etc.; the breaking forth of a tooth from the gum.

Eruptive (*e-rup'-tiv*) [*erumpere*, to burst out]. Attended by an eruption, as an eruptive fever.

Eruthrocyte (*er-ūth'-ro-sīt*). Incorrect form of *Erythrocyte, q.v.*

Eryngo (*er-ing'-go*) [ἠρύγγη, a thistle]. Any plant of the umbelliferous genus *Eryngium*, especially **E. campestre** and **E. maritimum** of Europe. These plants, with others of the genus, were formerly made into sweetmeats, and were regarded as polychrest remedies, but were especially prized as aphrodisiacs. Unof.

Erysipelas (*er-is-ip'-el-as*) [ἐρυθρός, red; πέλλα, skin]. An acute, specific, constitutional febrile disease, with a peculiar redness and inflammation of the skin and subcutaneous tissue, generally of the face. It is due to streptococci. The period of incubation varies from a few hours to three or four days. The symptoms are an initial chill or rigor, malaise, high temperature, vomiting or nausea, and the characteristic rash, with a well-defined margin, upon the skin. It may terminate fatally. Albumin may appear in the urine. At the conclusion of the attack desquamation takes place, either branny or in flakes. The development of erysipelas is favored by filth, over-crowding, and defective ventilation. One attack rather predisposes to subsequent attacks. **E. carbunculosum.** Synonym of *Anthrax.* **E. malignum internum,** an acute, suppurative, rapidly spreading inflammation of cellular tissue beginning in the pelvis after parturition. It is one form of puerperal fever. It is usually rapidly fatal. Antisepsis properly applied at the time of delivery will prevent its occurrence. **E. migrans,** wandering erysipelas. **E. phlegmonodes,** a form of erysipelas in which there is pus-formation, with marked constitutional symptoms. **E., Recurrent,** *pseudo-erysipelas*, a frequent disease in strumous children, but occurring also in adults, and especially in women. It is entirely confined to the face, especially around the nose and upper lip, and is unattended with marked constitutional symptoms. It is not amenable to treatment, and is very prone to recur. **E. simplex,** the ordinary facial form of erysipelas. **E. suffusum.** Synonym of *Erythema.* **E., Wandering,** a chronic or subchronic form in which the process successively disappears from one part of the body to appear at another part.

Erysipelatous (*er-is-ip-el'-at-us*) [ερυθρός, red; πέλλα, skin]. Of the nature of or affected with erysipelas.

Erysipeloid (*er-is-ip-el'-oid*) [ἐρυθρός, red; πέλλα, skin; εἶδος, likeness]. A peculiar affection of the palms of the hands or soles of the feet, characterized by zones of violaceous-red eruption with burning and itching; it is due to wound-infection.

Erythanthema (*er-ith-an'-the-mah*) [ἐρυθρός, red; ἄνθημα, a flowing]. A skin-disease marked by redness. The term is variously applied by some to denote an eruptive disease depending upon vaso-motor, or other nervous disorder. It is used to designate a class of cutaneous efflorescences that have in common a basis of erythema.

Erythema (*er-ith-e'-mah*) ['Ερύθημα, a blush]. Rose rash: a redness of the skin that may be made to disappear temporarily by pressure. **E. ab igne,** a form of *E. hyperemicum* produced by the constant irritation of artificial heat. It occurs as rings and gyrate patterns on the front of the legs, and is of a deep-red color, gradually becoming browner in tint. This pig-

mentation is permanent. **E. annu**lare, a form of *E. multiforme* in which the lesions sh[ink and desquamate at the center, but continue to ext[nd at the periphery by a raised margin. It is also [alled *E. circinatum*. These rings may wander over the entire body, intersecting each other and forming elab[orate figures with crescentic edges (*E. gyratum*). [Occasionally new rings develop concentrically around [older ones. The forms and varieties of color produced give rise to the name *E. iris*. **E. bullosum.** See *E. vesiculosum*. **E. circinatum.** See *E. annulare*. **E. congestivum,** *E. hyperæmicum;* a mere congestion of the skin; the simplest form of erythema. Swelling is absent or insignificant in the congested areas, and the tint of redness varies from the b[rightest red to a rosy or purple hue. **E. endemic[um.** See *Pellagra*. **E., Epidemic.** See *Acrodynia*. **E. exudativum,** an acute or sub-acute non-co[ntagious, inflammatory skin-disease, characterized by the development of symmetrically distributed, ra[ised erythematous patches, usually discrete, varyi[ng greatly in form and size, accompanied by slight [transudation of blood or by copious hemorrhage[s into the skin, occasionally terminating as ves[icles or blebs, and specially liable to relapse. This may be attended with constitutional rheumatic symptoms. **E. figuratum,** is marked by efflorescence in gyrate lines. **E. fugax,** a variety of *E. hyperæmicum;* it consists in a transitory redness of a patchy character, suddenly appearing on the face and trunk of young individuals and gradually disappearing in a few minutes or hours. It is frequently associated with indigestion, worms, etc. **E. furfuracea.** Synonym of *Pityriasis rosea*. **E. gangrænosum,** a term applied to spontaneous patches of superficial gangrene or ulceration seen chiefly in hysterical women. They are undoubtedly self-induced, and are asymmetric, usually on the left side, and in easily accessible positions. **E. gyratum.** See *E. annulare*. **E. hyperæmicum.** See *E. congestivum*. **E. induratum,** a variety of *E. exudativum* attacking the calf, or the leg immediately below, more frequently than the front of the legs. It occurs either in diffuse, ill-defined patches or in nodules, bright-red at first but gradually assuming a violet hue. The nodules may be superficial or deep, a quarter of an inch to an inch or more in diameter, and may be slowly absorbed, or necrose and slough out, leaving a very indolent ulcer. The condition is most common in strumous individuals. **E. intertrigo,** *intertrigo; eczema intertrigo;* a chronic form of *E. hyperæmicum* resulting from pressure or the rubbing together of folds of skin. It is common in infants and fat adults. **E. iris,** *Herpes iris*. See *E. annulare*. **E. keratodes,** a diffuse condition of tylosis of the palms and soles. **E. leve,** a common skin-affection, a variety of *E. hyperæmicum*, likely to appear upon the tense skin of dropsical parts. It may go on to dermatitis and sloughing. **E. marginatum,** an infrequent variety of *E. multiforme*, which generally begins as a flat disc a quarter or half an inch in diameter, and very rapidly enlarges at the periphery, subsiding *pari passu* in the center. It joins similar adjacent lesions, and in a few days traverses the circumference of a limb, or a large area on the trunk, leaving a fawn-colored pigmentation that slowly disappears. **E. multiforme,** *E. polymorphe;* a variety of *E. exudativum*, common in young adults of either sex, and appearing especially in spring and autumn. The eruption first appears almost invariably on the backs of the hands and feet thence spreading to the forearms and legs. In severe cases the trunk and face, and even the mucous membranes may be affected. The lesions consist of flat or slightly convex papules, sharply defined, deep-red or purplish in color, varying in size from a pin's head up, partially disappearing on pressure. This is the commonest form (*E. papulatum*). If the papules coalesce to form larger lesions the condition is described as *E. tuberculatum*. **E. nodosum,** *dermatitis contusiformis;* a further development of *E. tuberculatum*. Multiple (seldom more than a dozen) raised, rosy patches, round or oval in the direction of the limb, from one-half to three inches in diameter, suddenly develop along both tibiæ, and often along the ulnar side of the forearms. They are exquisitely tender, tense and shining. The condition chiefly occurs in children and delicate young women. See *Bacillus of Demme* under *Bacteria, Synonymatic Table of*. **E. papulatum.** See *E. multiforme*. **E. paratrimma,** the erythema that appears over a bony prominence, etc., immediately before the formation of a bed-sore. It is a variety of *E. hyperæmicum*. **E. pellagrosum.** A synonym of *Pellagra*. **E. pernio.** See *Pernio*. **E. polymorphe.** See *E. multiforme*. **E. purpuricum,** *Purpura thrombotica;* a variety of erythema resembling *Peliosis rheumatica*, but characterized by its erythematous appearance and the absence of alteration by pressure. It is attended with no general symptoms, or with slight pains in some of the joints, or with edema of the legs. **E. roseola,** a variety of *E. hyperæmicum;* it consists in the development of congestive patches of a delicate rose-color, scarcely raised above the surface of the skin, varying in size from a split-pea to a finger-nail, and either diffused over the whole surface of the body or in figured groups. It is common in young children in association with digestive troubles. Its different stages have been called *Roseola infantilis, æstivalis, autumnalis, annulata*, but these terms are not now generally used. **E. scarlatiniforme,** a variety of *E. hyperæmicum;* it appears as a vivid, punctiform eruption, sharply defined in places, attended with high temperature, often seen after injuries or surgical operations. It is followed by furfuraceous desquamation. **E. scarlatiniforme desquamativum,** a more pronounced form of *E. scarlatiniforme*, with a greater tendency to be diffuse instead of punctiform, of longer duration, and with a great liability to recur at certain seasons. The mucous membranes are often involved and desquamation occurs in large flakes. **E. simplex,** a variety of *E. hyperæmicum;* characterized by a congestive redness of moderate intensity. It appears as diffuse or circumscribed, variously-sized lesions, which are usually not raised above the integument. It may be idiopathic or symptomatic; and if the latter, brought about by a great number of external irritants, including heat and cold, etc. **E. solare,** *E. simplex* due to the heat of the sun. **E. tuberculatum.** See *E. multiforme*. **E. tuberosum.** Same as *E. tuberculatum*. **E. urticans,** the early or pink stage of the urticarial wheal. It is a variety of *E. hyperæmicum*. **E. vesiculosum,** the occurrence of vesication in the progress of *E. multiforme*. If the blebs are large the condition is termed *E. bullosum*.

Erythematous (*er-ith-em'-at-us*) [ἐρύθημα, a blush]. Of the nature of erythema.

Erythemoid (*er-ith-em'-oid*), **Erythematoid** (*er-ith-em'-at-oid*) [ἐρύθημα, erythema; εἶδος, resemblance]. Resembling erythema.

Erythrasma (*er-ith-raz'-mah*) [ἐρυθρός, red]. A rare disease of the skin, always attacking the axillæ or inguinal regions, or the nates. It forms reddish or brownish, sharply defined, slightly raised, desquamating patches, that cause no itching or inconvenience. It is due to the microörganism, *Microsporon minutissimum*, and is readily curable.

Erythremelalgia (*er-ith-rem-el-al'-je-ah*). See *Erythromelalgia.*

Erythremia (*er-ith-re'-me-ah*) [ἐρυθρός, red; αἷμα, blood]. 1. The normal condition of the arterial blood. 2. Arterial blood in the veins.

Erythrin (*er'-ith-rin*) [ἐρυθρός, red], $C_{20}H_{22}O_{10}$. An ether-like derivative of orsellinic acid. It occurs in the lichen *Roccella fusciformis*, and is extracted from it by means of milk of lime. It crystallizes with 1½ molecules of water and is soluble with difficulty in hot water. Exposure to the air causes it to assume a red color.

Erythrina (*er-ith-ri'-nah*) [ἐρυθρός, red]. A genus of leguminous trees, shrubs and herbs, of some 25 species, three or more of which grow in the U. S. **E. coralodendron**, coral tree of tropical America, is sedative, hypnotic, diuretic, purgative, vermifuge and pectoral. Other species have similar properties. Unof.

Erythrine (*er'-ith-rin*) [ἐρυθρός, red]. Red.

Erythrism (*er'-ith-rizm*) [ἐρυθρός, red]. In biology, applied to conditions of dichromatism in which the normal colors of the integument are affected by an excess of red pigment, as often shown in the plumage of a bird.

Erythrite (*er'-ith-rit*). See *Erythrol.*

Erythroblast (*er-ith'-ro-blast*) [ἐρυθρός, red; βλαστός, germ]. A rudimentary red blood-corpuscle.

Erythrocarpus (*er-ith'-ro-kar'-pus*) [ἐρυθρός, red; καρπός, fruit]. In biology, red-fruited.

Erythrochloropia (*er-ith'-ro-klo-ro'-pe-ah*) [ἐρυθρός, red; χλωρός, green; ὤψ, eye]. A form of subnormal color-perception in which green and red are the only colors correctly distinguished.

Erythrochloropy (*er-ith'-ro-klor'-o-pe*) [ἐρυθρός, red; χλωρός, green]. Ability to distinguish red and green colors only.

Erythrocruorin (*er-ith'-ro-kru'-or-in*) [ἐρυθρός, red; *cruor*, blood]. Same as *Hemoglobin.*

Erythrocyte (*er-ith'-ro-sit*) [ἐρυθρός, red; κυτός, cell]. A red blood-corpuscle.

Erythrocytosis (*er-ith'-ro-si-to'-sis*) [ἐρυθρός, red; κυτός, cell]. The formation of red blood-corpuscles.

Erythrodermia (*er-ith'-ro-der'-me-ah*) [ἐρυθρός, red; δέρμα, skin]. Abnormal redness of the skin.

Erythrodermitis (*er-ith'-ro-der-mi'-tis*) [ἐρυθρός, red; δέρμα, skin; ιτις, inflammation]. A chromodermatosis characterized by erythema and superficial dermatitis.

Erythrodextrin (*er-ith'-ro-deks'-trin*) [ἐρυθρός, red; *dexter*, right]. A dextrin formed by the action of saliva on starch. It yields a red color with iodin.

Erythrogen (*er-ith'-ro-jen*) [ἐρυθρός, red; γεννᾶν, to produce]. A green substance that has been found in unhealthy bile, and which (apparently without good reason) has been regarded as "the base of the coloring-matter of the blood."

Erythroglucin (*er-ith-ro-glu'-sin*). See *Erythrol.*

Erythrogranulose (*er-ith-ro-gran'-u-lōs*) [ἐρυθρός, red; *granulum*, a little grain]. A granular substance, found in starch-grains, coloring red with iodin.

Erythroid (*er'-ith-roid*) [ἐρυθρός, red; εἶδος, resemblance]. Reddish; of a red color.

Erythrol (*er'-ith-rol*) [ἐρυθρός, red], $C_4H_{10}O_4$. Also called *Erythroglucin*, *Erythrite* or *Phycite*. A principle which exists as erythrin (orsellinate of erythrite) in many lichens and some algæ. It forms large quadratic crystals that dissolve readily in water, with difficulty in alcohol, and are insoluble in ether. It is a polyhydric alcohol with a sweet taste melting at 126° C. and boiling at 330° C.

Erythrolein (*er-ith-ro'-le-in*) [ἐρυθρός, red; *oleum*, oil], $C_{26}H_{22}O_4$. A fatty liquid compound contained in litmus. It is soluble in alcohol, ether, and alkalies, and in dyeing yields a purple color.

Erythrolitmin (*er-ith-ro-lit'-min*) [ἐρυθρός, red; Dan., *lac*, lac; *moes*, pulp], $C_{26}H_{33}O_{13}$. A red coloring-matter obtained from litmus; it is crystalline and soluble in alcohol.

Erythromelalgia (*er-ith-ro mel-al'-je-ah*) [ἐρυθρός, red; μέλος, limb; ἀλγος, pain]. Red neuralgia; terminal neuritis. A variety of chronic dermatalgia characterized by burning and then aching pain of a part, usually one or more extremities, intensified by warmth and accompanied by flushing and local fever.

Erythrophage (*er-ith'-ro-fāj*) [ἐρυθρός, red; φαγεῖν, to eat]. Any one of the phagocytic cells which, lying about a hemorrhagic area, take up the pigment of the blood or even red-corpuscles. They are remarkable for their brilliant color (red to golden).

Erythrophlein (*er-ith-rof'-le-in*) [ἐρυθρός, red; φλοιός, bark]. A poisonous alkaloid from Casca bark.

Erythrophleum (*er-ith-ro-fle'-um*). See *Casca Bark.*

Erythrophobe (*er-ith'-ro-fōb*) [ἐρυθρός, red; φοβεῖν, to fear]. One fearing or disliking red colors.

Erythrophobia (*er-ith-ro-fo'-be-ah*) [ἐρυθρός, red; φόβος, fear]. Morbid intolerance of red colors: sometimes observed after operations for cataract.

Erythrophyl (*er-ith'-ro-fil*) [ἐρυθρός, red; φύλλον, leaf]. In biology, a red coloring-matter found in autumn leaves, ripe fruits, etc. It is also called *Phyllerythrin* and *Phyterythrin.*

Erythropia (*er-ith-ro'-pe-ah*) [ἐρυθρός, red; ὤψ, vision]. A condition in which objects appear as if colored red.

Erythropsia (*er-ith-rop'-se-ah*) [ἐρυθρός, red; ὄψις, vision]. An abnormality of vision in which all objects appear red; red vision; it has been observed in alcoholic ataxia with optic atrophy, after subcutaneous injections of strychnin.

Erythropsin (*er-ith-rop'-sin*) [ἐρυθρός, red; ὤψ, vision]. An organic substance of the retina. In the presence of light it is believed to form different combinations, constituting color-perception. It is called *visual purple* and *Rhodopsin*, *q. v.*

Erythrorhetin (*er-ith-ro-ret'-in*) [ἐρυθρός, red; ῥετίνη, resin], $C_{38}H_{36}O_{14}$. The red resin of rhubarb.

Erythrose (*er'-ith-rōs*) [ἐρυθρός, red], $C_4H_8O_4$. Tetrose. A substance derived from erythrol. It is probably a mixture of an aldose and a ketose. It is next to the lowest glucose. See *Carbohydrates*, *Table of.*

Erythrosin (*er'-ith-ro-sin*) [ἐρυθρός, red], $C_{20}H_{18}N_2O_8$. A compound produced by the action of HNO_3 on tyrosin. It is used as a coloring-matter. See *Pigments*, *Conspectus of.*

Erythrosis (*er-ith-ro'-sis*) [ἐρυθρός, red]. Arterial plethora, or the redness of the skin due to it.

Erythroxylin (*er-ith-roks'-il-in*) [ἐρυθρός, red; ξύλον, wood]. A precipitate from the tincture of *Erythroxylon coca.* It is a nervine and stimulant. Dose ¼ to 1 grain. Unof.

Erythroxylon (*er-ith-roks'-il-on*) [ἐρυθρός, red; ξύλον, wood: *gen.*, *Erythroxyli*]. Coca, Cuca. The leaves of *E. coca*, a shrub indigenous to the Andes. (Not to be confounded with *cocoa.*) It contains an alkaloid, *Cocain*, $C_{17}H_{21}NO_4$, *q. v.*, to which its properties are mainly due. It is an aromatic tonic and cerebral stimulant, developing a remarkable power of enduring hunger and fatigue. Large doses cause hallucinations. Its effects are similar to those of coffee, but are more intense. It is much used by the natives for sustenance during long journeys. The leaves, smoked, are beneficial in hay-fever. **E. coca** (B. P.). Dose gr. ij–xv. **E., Ext., Fld.** Dose ʒ ss–ij. **Extractum Cocæ Liquid** (B. P.). Dose ʒ ss–ij. Wines and elixirs of coca are numerous.

Erythruria (*er-ith-ru'-re-ah*) [ἐρυθρός, red; οὖρον, urine]. The passage of reddish urine. Hematuria.

Esbach's Test. See *Tests, Table of.*

Eschar (*es'-kar*) [ἐσχάρα, a scab]. The slough or scab following cauterization, burns, etc.

Escharodermitis (*es-kar-o-der-mi'-tis*) [ἐσχάρα, a scab; δέρμα, skin; ιτις, inflammation]. A skin-inflammation marked by the formation of eschars.

Escharosis (*es-kar-o'-sis*) [ἐσχάρωσις]. The formation of an eschar; escharotic action.

Escharotic (*es-kar-ot'-ik*) [ἐσχαρωτικός]. 1. Caustic; productive of a slough or scab. 2. A substance that, applied to the skin, produces an eschar. A caustic.

Eschel Blue. See *Smalts.*

Escherich, Bacillus of. See *Bacteria, Synonymatic Table of.*

Eschka's Test. See *Tests, Table of.*

Eschomelia (*es-ko-me'-le-ah*) [ἔσχατος, worst; μέλος, a limb]. A monstrosity in which there is a defective limb.

Eschricht's Yellow Canals. See *Canals.*

Eschrolalia (*es-kro-la'-le-ah*) [αἰσχρός, shameful; λαλιά, speech]. Same as *Coprolalia.*

Eschromythesis (*es-kro-mi-the'-sis*) [αἰσχρός, base; μυθίζειν, to utter]. The utterance of obscene language by delirious or insane patients.

Eschscholtzia (*esh-sholts'-e-ah*) [after *Eschscholtz*, a German zoölogist]. A genus of papaveraceous herbs. **E. californica,** California Poppy, a plant growing in California, is recommended as an excellent and harmless soporific and analgesic. Dose of the fluid extract, ♏xv–xxx. Unof.

Esculapian (*es-ku-la'-pe-an*) [*Æsculapius*, the god of medicine]. 1. Medical; pertaining to medicine. 2. A physician.

Esculetin (*es-ku-le'-tin*) [*Æsculus*, the Italian oak], $C_9H_6O_4$. A substance present in the bark of the horse-chestnut, partly free, and partly as the glucosid *esculin*, from which it is prepared by decomposition with acids or ferments. It crystallizes with a molecule of water in fine needles or leaflets.

Esculin (*es'-ku-lin*) [*Æsculus*, the Italian oak], $C_{15}H_{16}O_9$. A glucosid contained in the bark of the horse-chestnut, *Æsculus hippocastanum*. It crystallizes in fine needles with 1½ H_2O, and melts when anhydrous at 205 C.; it is soluble with difficulty in water and alcohol.

Eserin (*es'-er-in*) [*Esere*, native name of the plant or bean], $C_{15}H_{21}N_3O_2$. A poisonous alkaloid derived from *Physostigma, q. v.* It is chiefly used to produce myosis, to lessen intra-ocular tension, etc.

Esiphonal (*e-si'-fun-al*) [*e*, priv.; σίφων, a tube]. Having no siphons, as certain shells; asiphonate.

Esmarch's Bandage, or Apparatus. An elastic rubber bandage used upon a limb to be amputated, in order to drive the blood out of it by the pressure of progressive application of turns about the limb toward the trunk. **E.'s Operation.** See *Operations, Table of.* **E.'s Paste,** a caustic paste composed of one part each of white arsenic and sulphate of morphin, eight parts of calomel, and forty-eight of gum arabic. **E.'s Tubes,** test-tubes lined by a thin layer of gelatin for culture-purposes.

Esmarching (*es'-mark-ing*) [after *Esmarch*, a German surgeon]. The application of the Esmarch bandage, so as to drive the blood out of a part or member.

Esocolitis (*es-o-ko-li'-tis*) [ἔσω, within; κόλον, colon]. Inflammation of the mucous membrane of the colon; dysentery.

Esoderm (*es'-o-derm*) [ἔσω, within; δέρμα, skin]. In biology, the delicate membrane forming the ental surface of the integuments of insects.

Esodic (*e-sod'-ik*) [ἐς, into; ὁδός, way]. Afferent or centripetal; conveying impressions toward the central nervous system—applied to certain nerves and nerve-filaments.

Esoenteritis (*es-o-en-ter-i'-tis*) [ἔσω, inward; ἔντερον, bowel; ιτις, inflammation]. Inflammation of the mucous membrane of the intestines.

Esogastritis (*es-o-gas-tri'-tis*) [ἔσω, inward; γαστήρ, belly; ιτις, inflammation]. Inflammation of the mucous membrane of the stomach.

Esogenetic (*es-o-jen-et'-ik*) [ἔσω, within; γεννᾶν, to produce]. Produced or arising within the organism.

Esophagalgia (*e-sof-ag-al'-je-ah*) [οἰσοφάγος, esophagus; ἄλγος, pain]. Pain in the esophagus.

Esophageal (*e-sof-aj'-e-al* or *e-sof-aj-e'-al*) [οἰσοφάγος, esophagus]. Pertaining or belonging to the esophagus. **E. Glands.** See *Gland.* **E. Plexus.** See *Plexus.*

Esophagectomy (*e-sof-aj-ek'-to-me*) [οἰσοφάγος, esophagus; ἐκτομή, a cutting out]. Extirpation of cancer of the gullet with resection of the walls of the organ.

Esophagectopy (*e-sof-aj-ek'-to-pe*) [οἰσοφάγος, esophagus; ἔκτοπος, away from a place]. Displacement of the esophagus.

Esophagism (*e-sof'-aj-izm*), **Esophagismus** (*e-sof-aj-iz'-mus*) [οἰσοφάγος, esophagus]. Spasmodic contraction of the esophagus.

Esophagitis (*e-sof-aj-i'-tis*) [οἰσοφάγος, esophagus; ιτις, inflammation]. Inflammation of the esophagus.

Esophagocele (*e-sof'-aj-o-sēl*) [οἰσοφάγος, esophagus; κήλη, hernia]. An abnormal distention of a portion of the esophagus or of the entire tube; hence it may be general, annular, or pouched.

Esophagodynia (*e-sof-aj-o-din'-e-ah*) [οἰσοφάγος, esophagus; ὀδύνη, pain]. Same as *Esophagalgia.*

Esophagomalacia (*e-sof-aj-o-mal-a'-se-ah*) [οἰσοφάγος, esophagus; μαλακία, softness]. Morbid softening of the esophagus.

Esophagomycosis (*e-sof-aj-o-mi-ko'-sis*) [οἰσοφάγος, esophagus; μύκης, a fungus]. Mycotic disease of the esophagus.

Esophagopathy (*e-sof-aj-op'-ath-e*) [οἰσοφάγος, esophagus; πάθος, disease]. Any disease of the esophagus.

Esophagoplegia (*e-sof-aj-o-ple'-je-ah*) [οἰσοφάγος, esophagus; πληγή, a stroke]. Paralysis of the esophagus.

Esophagorrhagia (*e-sof-aj-or-a'-je-ah*) [οἰσοφάγος, esophagus; ῥηγνύναι, to break forth]. Hemorrhage from the esophagus.

Esophagoscope (*e-sof-aj'-o-skōp*) [οἰσοφάγος, esophagus; σκοπεῖν, to view]. An instrument for examining the interior of the esophagus by artificial light.

Esophagoscopy (*e-sof-aj-os'-ko-pe*) [οἰσοφάγος, esophagus; σκοπεῖν, to view]. Examination of the interior of the esophagus.

Esophagospasm (*e-sof'-aj-o-spazm*). See *Esophagismus.*

Esophagostenosis (*e-sof-aj-o-ste-no'-sis*) [οἰσοφάγος, esophagus; στένωσις, constriction]. Constriction of the esophagus.

Esophagostomy (*e-sof-aj-os'-to-me*) [οἰσοφάγος, esophagus; στόμα, mouth]. The formation of an artificial opening in the esophagus.

Esophagotome (*e-sof-aj'-o-tōm*) [οἰσοφάγος, esophagus; τέμνειν, to cut]. An instrument devised for cutting into the esophagus.

Esophagotomy (*e-sof-aj-ot'-o-me*) [οἰσοφάγος, esophagus; τομή, a cutting]. Opening of the esophagus by an external incision.

Esophagus (*e-sof'-ag-us*) [φέρειν, οἴσειν, to carry; φαγεῖν, to eat]. The gullet. The musculo-membranous canal, about nine inches in length, extending from the pharynx to the stomach.

Esophoria (*es-o-fo'-re-ah*) [ἔσω, inward; φορεῖν, to bear]. See *Heterophoria.*

Esorhinus (*es-or-in'-us*) [εἴσω, within; ῥίς, nose]. Lissauer's term for a skull in which the angle formed between the lines running from the premaxillary point and the incisive foramen to the naso-frontal point is between 0° and 20°.

Esoteric (*e-so-ter'-ik*) [ἐσωτερός, within; ἐσωτερικός, secret, mysterious]. Arising within the organism.

Esotropia (*e-so-tro'-pe-ah*) [ἔσω, inward; τρέπειν, to turn]. Convergent strabismus. See *Strabismus.*

Essence (*es'-ens*) [*essentia*, essence]. 1. That quality of a thing giving it peculiarity of power. 2. The peculiar qualities of a drug extracted and reduced to a small compass. 3. A solution of an essential oil in alcohol.

Essential (*es-en'-shal*) [*essentia*, essence]. Pertaining to the essence of a substance. Pertaining to the peculiar and distinctive characteristic of a disease. **E. Oils**; the essential or volatile oils (*attars*) are found extensively distributed throughout the vegetable kingdom. They occur in almost all parts of the plants except the cotyledons of the seeds. They impart the peculiar and characteristic odors to the plants, furnish the perfumes, spices, and aromatics, and many of them possess valuable medicinal properties. Chemically, essential oils are often divided roughly into three classes,—oils composed of hydrocarbons only, oils containing hydrocarbons mixed with oxygenated products, and oils containing sulphur compounds. A more exact, but still quite general, chemic division is the following: 1. Oils consisting chiefly of *terpenes* ($C_{10}H_{16}$) and oxidized products allied thereto; examples, oil of turpentine, oil of lemon, oil of camphor. 2. Oils consisting chiefly of *cedrenes* ($C_{15}H_{24}$) and oxidized products allied thereto; examples, oil of cedar, oil of cubebs, oil of cloves. 3. Oils consisting chiefly of *aromatic aldehyds* and allied bodies; examples, oil of bitter almonds, oil of cinnamon. 4. Oils consisting chiefly of *ethereal salts*. These may be either (*a*) oxygen salts, as in oil of wintergreen, or (*b*) sulphur salts, as in oil of mustard, oil of garlic. **E. Paralysis**, paralysis without characteristic anatomic lesions.

Ester (*es-ter*). Any compound ether in which both an alcohol radical and an acid radical are present. **E. Halogen**, a derivative of the alcohols, obtained by heating them with the hydrogen haloids, or with the halogen derivatives of phosphorus. **E. Haloid**, also called *alkylogen*; any product of the action of the halogen hydrid on the alcohols. The haloid esters are perfectly analogous to the true esters produced by the action of alcohols and oxygen acids.

Esthacyte (*es'-thas-īt*) [αἰσθάνεσθαι, to perceive; κύτος, a cell]. In biology, one of the sense-cells of a sponge, granular, spindle-shaped, bearing palpocils.

Esthematology (*es-them-at-ol'-o-je*) [αἴσθημα, a perception; λόγος, science]. The science of the sensations and of the sense-apparatus.

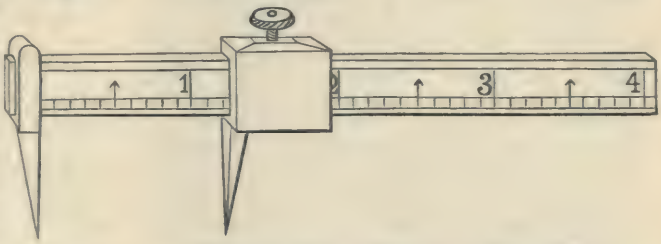
Esthesia (*es-the'-ze-ah*) [αἴσθησις, sensation]. 1. Capacity of perception; feeling, or sensation. 2. Any nervous disease that affects the senses or perceptions.

Esthesin (*es'-thes-in*) [αἴσθησις, sensibility], $C_{35}H_{69}NO_8$. A feebly basic body, said by Thudichum to be obtainable from brain-tissue.

Esthesiodermia (*es-the-ze-o-der'-me-ah*) [αἴσθησις, sensation; δέρμα, skin]. An affection of the skin with disturbance of the sensory function, which may be decreased, increased, or abolished.

Esthesiogen (*es-the'-ze-o-jen*) [αἴσθησις, sensation; γεννᾶν, to produce]. Any material, as a metal, which in certain states of the body appears to have a specific effect upon the sensibility of the patient.

Esthesiogenic (*es-the-ze-o-jen'-ik*) [αἴσθησις, sensation; γεννᾶν, to produce]. Relating to the production of sensations.



Esthesiogeny (*es-the-ze-oj'-en-e*) [αἴσθησις, sensation; γεννᾶν, to produce]. The production of altered or perverted sensations.

Esthesiography (*es-the-ze-og'-ra-fe*) [αἴσθησις, sensation; γράφειν, to write]. A description of the organs of sensation and perception.

Esthesiology (*es-the-ze-ol'-o-je*) [αἴσθησις, a feeling; λόγος, science]. A treatise on, or the science of, the senses.

Esthesiomania (*es-the-ze-o-ma'-ne-ah*) [αἴσθησις, feeling; μανία, madness]. Insanity marked by perverted moral feeling and by purposeless eccentricities.

Esthesiometer (*es-the-ze-om'-et-er*) [αἴσθησις, sensation; μέτρον, a measure]. An instrument for measuring tactile sensibility.

ESTHESIOMETER OF SIEVEKING. (*From Aitkin.*)

Esthesiometry (*es-the-ze-om'-et-re*) [αἴσθησις, sensation; μέτρον, measure]. The measurement or estimation of tactile sensibility.

Esthesioneurosis (*es-the-se-o-nu-ro'-sis*) [αἴσθησις, perception; νεῦρον, nerve]. Any nervous disease in which there are disorders of sensation.

Esthesis (*es-the'-sis*) [αἴσθησις, sensation]. Sensibility; sense-perception; a feeling or sense-impression.

Esthesodic (*es-the-sod'-ik*) [αἴσθησις, sensation; ὁδός, a way]. Serving to convey sense-impressions, as to the brain.

Esthetophore (*es-thet'-o-for*) [αἰσθητός, sensible; φέρειν, to bear]. In biology, the hypothetic physical basis of consciousness (Cope).

Esthiomene (*es-the-om'-en-e*) [ἐσθιομένη, eating]. Lupus exedens; lupus of the vulva; a very rare and chronic disease commencing during the menstrual period. It is a form of ulceration accompanied by fibrous overgrowths of the surrounding and adjacent tissues. It produces hard, cicatricial tissue on healing. There is a process of imperceptible disintegration of the tissues, but no sloughing. Death may result from hemorrhage or perforation into the peritoneal cavity or bladder.

Esthiomenous (*es-the-om'-en-us*) [ἐσθιομένη, eating]. Corroding; phagedenic.

Esthophysiology (*es-tho-fiz-e-ol'-o-je*) [αἴσθησις, sensation; φύσις, nature; λόγος, science]. The physiology of sensation and of the sense-apparatus.

Estival (*es'-tiv-al*) [*æstas*, summer]. In biology, produced in summer.

Estivation (*es-tiv-a'-shun*) [*æstivare*, to pass the summer]. In biology, (*a*) the dormant condition of certain plants and animals during the summer; (*b*) the arrangement of the floral organs in the bud.

Estlander's Method. See *Treatment, Methods of.* **E. Operation.** See *Operations, Table of.*

Estromania (*es-tro-ma'-ne-ah*) [οἶστρος, gad-fly; lust; μανία, madness]. Same as *Nymphomania.*

Estrual (*es'-tru-al*) [οἶστρος, gad-fly]. Pertaining to estruation.

Estruation (*es-tru-a'-shun*) [οἶστρος, gad-fly]. The condition of being under the influence of intense sexual passion.

Estrum, Estrus (*es'-trum, es-trus*) [οἶστρος, gad-fly]. Any vehement passion or desire; the sensation in animals occurring at the crisis of coition. The orgasm.

Estuarium (*es-tu-a'-re-um*) [*æstus*, heat]. A vapor-bath. Also a stove designed to apply warm, dry air to all parts of the body at the same time.

Estuation (*est-u-a'-shun*) [*æstuatin*, heat]. Heat; boiling; fever; a heated state.

Esypus (*es'-ip-us*) [οἰσυπος]. The yolk or suint of wool. See *Suint.*

Ethal (*e'-thal*) [*æther*, the upper air], $C_{16}H_{33}OH$. Cetyl alcohol; a substance separated from spermaceti by Chevreul, and named by him. It is a solid, fusible at nearly the same point as spermaceti, and on cooling crystallizes in plates. It is susceptible of union with various bases, with which it forms salts or soaps.

Ethaldehyd (*eth-al'-de-hid*). See *Acetaldehyd.*

Ethane (*eth'-ān*) [*æther*, the upper air]. Paraffin; any one of the products of the dry distillation of wood, turf, bituminous shales, lignite, and bituminous coal, and other coals rich in hydrogen. The ethanes are thus present in illuminating gas and the light tar-oils. Petroleum contains them already formed. The lowest members, up to butane, are gases at ordinary temperatures, soluble in alcohol and ether. The intermediate members form colorless liquids of faint, characteristic odor, insoluble in water, but miscible with alcohol and ether. The higher members are crystalline solids (paraffins), soluble in alcohol, and more readily in ether. The specific gravities of the liquid and solid hydrocarbons increase with the molecular weights, but they are always less than the specific gravity of water. The boiling-points, too, rise with the molecular weights. The isomerids of normal structure possess the highest boiling-points; the lowest are those of the quaternary hydrocarbons. (For *Table of Ethanes* see under *Hydrocarbons.*)

Ethene (*e'-thēn*). Same as *Ethylene.* **E. Chlorid.** See *Anesthetic.*

Ether (*e'-ther*) [*æther*; *αἰθήρ*, the upper air]. 1. The tenuous subtle fluid filling space and interpenetrating all bodies; the medium of transmission of the vibratory activities called light, heat, electricity, and magnetism. 2. A thin, colorless, volatile, and highly inflammable liquid; in composition a di-ethylic oxid $(C_2H_5)_2O$, known also as ethylic ether. It is used mainly as a solvent for fats and oils, and as an anesthetic. Internally it is anodyne, antispasmodic, diaphoretic, and narcotic. Inhaled it is an anesthetic, and a cardiac stimulant in toxic doses, paralyzing the respiratory centers. See also *Anesthetic.* The term is used also to designate a large class of organic compounds. See *Table* annexed. **E., Acetic,** has properties like those of ethylic ether. Dose ♏ x–℥j. **E., Commercial,** contains 94 per cent. of ether. It is unfit for use except as a solvent. **E. fortior,** should contain 94 per cent. of ethylic oxid. Dose ♏ x–℥j. **E., Hydriodic,** unof. Dose for inhalation ♏ xv. **E., Hydrobromic,** unof. Dose ♏ x–℥j. **E. Oleum,** contains equal parts of ether and heavy oil of wine. **E., Spt., of,** ether 32.5 and alcohol 67.5. **E., Comp. Spt. of,** Hoffman's anodyne. Ether 32.5, alcohol 65, ethereal oil 2.5 per cent. Dose ♏ v–℥j. **E. nitrous, Spirit,** *sweet spirit of niter*, a solution of ethyl nitrite in alcohol. Dose ℥ ss–℥ ss. There is also a large class of mainly volatile compounds known as ethers which are products of the union of two monovalent alcohol radicals through the agency of an oxygen atom. They are the oxids of the alcohol radicals, and are neutral, volatile bodies, nearly insoluble in water. The lowest members are liquid; the highest are solids. **E.-acids,** the so-called neutral esters. They are not volatile; are soluble in water, and yield bases with salts. **E.-drinking, E.-intoxication,** a form of tippling somewhat common in some parts of Ireland. Thus taken, ether is similar in effects to alcohol, but more rapid in action, and its use is attended with profound moral degeneration. **E., Mixed,** ether containing different alcohol radicals. **E., Simple,** ether containing two similar alcohol radicals.

TABLE OF ETHERS.

OF THE FATTY COMPOUNDS.

NAME.	FORMULA.	PHYSICAL CONDITION.	BOILING-POINT (CENTIGRADE).	SPECIFIC GRAVITY.
Methyl, . . .	$(CH_3)_2O$	Gas, normally. Liquid at —23° C.		
Ethyl, ...	$(C_2H_5)_2O$	Liquid.	35°	0.736 at 0°.
Propyl, . . .	$(C_3H_7)_2O$	Liquid.	60–62°	
Butyl, ...	$(C_4H_9)_2O$			
Amyl, ...	$(C_5H_{11})_2O$	Liquid.	176°	0.779.
Cetyl, ...	$(C_{16}H_{33})_2O$	Solid.	300°	
Vinyl, ...	$(C_2H_3)_2O$		39°	
Allyl, ...	$(C_3H_5)_2O$		85°	
Vinyl ethyl, .	$C_2H_3\,O\,C_2H_5$	Liquid.	35.5°	
Allyl ethyl, .	$C_3H_5.O.C_2H_5$	Liquid.	66°	

Ethereal (*e-the'-re-al*) [*æther*, the upper air]. Pertaining to the ether or to ether.

Ethereomania (*e-the-re-o-ma'-ne-ah*) [*æther*, ether; μανία, madness]. The mania for drinking ether; ether-intoxication.

Ethereomaniac (*e-the-re-o-ma'-ne-ak*) [*æther*, ether; μανία, madness]. One who is addicted to the use of ether as a stimulant.

Etherify (*e'-ther-if-i*) [*æther*, ether; *facere*, to make]. To convert into ether.

Etherism (*e'-ther-izm*) [*æther*, ether]. The phenomena produced upon the animal economy by the administration of ether.

Etherization (*e-ther-iz-a'-shun*) [*æther*, ether]. The administration of ether to produce anesthesia. This is effected by inhalation of the vapor.

Etheromania (*e-ther-o-ma'-ne-ah*) [*æther*, ether; μανία, madness]. See *Ethereomania.*

Ethics (*eth'-iks*) [ἠθικός, moral]. The science of human feelings, thoughts, and actions relating to duty or

morality. **E., Medical,** the duties a physician owes to himself, his profession and his fellow-men.

Ethidene (*eth'-id-ēn*) (*æther*, ether], C_2H_4. Ethylidene; a bivalent radicle. **E. Chlorid,** or **Dichlorid,** a colorless, transparent, oily fluid, tasting and smelling like chloroform, with a specific gravity of 1.174 at 17° C., and boiling at 60° C. It is prepared from aldehyd by acting upon it with pentachlorid of phosphorus; it is also formed as a bye-product in the preparation of chloral, and is separated by distillation and subsequent fractionation. It is insoluble in water, but soluble in alcohol, chloroform, ether, and oils. It is less inflammable than chloroform, but rapidly decomposes. It has been used as a general anesthetic. See *Anesthetic.* **E. Diethylate.** See *Acetal.*

Ethiopification (*e-thē-op-if-ik-a'-shun*) [*aiθιοψ*, an Æthiopian; *facere*, to make]. A darkening of the skin such as sometimes results from the misuse of mercurial, silver, or arsenical remedies.

Ethmocephalus (*eth-mo-sef'-al-us*) [*ἠθμός*, ethmoid; *κεφαλή*, head]. A variety of single autositic monsters of the species cyclocephalus, in which there is a representative of the nose in the shape of a proboscis terminating anteriorly in two imperfect nostrils or in a single opening. There are two eyes and two eye-sockets.

Ethmocranial (*eth-mo-kra'-ne-al*) [*ἠθμός*, ethmoid; *κρανίον*, skull]. Relating to the ethmoid and to the rest of the cranium.

Ethmofrontal (*eth-mo-frun'-tal*) [*ἠθμός*, ethmoid; *frontalis*, front]. Relating to the ethmoid and frontal bones.

Ethmoid (*eth'-moid*) [*ἠθμός*, a sieve; *εἶδος*, likeness]. The cribriform bone of the nose, perforated for the transmission of the olfactory nerve; it forms a part of the base of the skull.

Ethmoid or **Ethmoidal** (*eth'-moid*, *eth-moi'-dal*) [*ἠθμός*, a sieve; *εἶδος*, likeness]. Relating to the ethmoid bone.

Ethmoiden (*eth-moi'-den*) [*ἠθμός*, a sieve; *εἶδος*, likeness]. Belonging to the ethmoid bone in itself.

Ethmoiditis (*eth-moid-i'-tis*) [*ἠθμός*, a sieve; *εἶδος*, likeness; *ιτις*, inflammation]. Inflammation of the ethmoid bone, or of the ethmoid sinuses.

Ethmoplecosis (*eth-mo-ple-ko'-sis*) [*ἠθμός*, sieve; *πλέκειν*, to twine; *νόσος*, disease]. Any disease attacking the cellular tissue.

Ethmoturbinal (*eth-mo-tur'-bin-al*) [*ἠθμός*, a sieve; *turbo*, a top]. Relating to the turbinal portions of the ethmoid bone, forming what are known as the superior and middle turbinated bones.

Ethmyphe (*eth'-mif-e*) [*ἠθμός*, sieve; *ὑφή*, web]. The connective tissue.

Ethmyphitis (*eth-mif-i'-tis*) [*ἠθμός*, sieve; *ὑφή*, web; *ιτις*, inflammation]. Inflammation of the ethmyphe or connective tissue; cellulitis.

Ethnic (*eth'-nik*) [*ἔθνος*, a race]. Pertaining to race. **E. Idiocy.** See *Idiocy, Ethnic.*

Ethnology (*eth-nol'-o-je*) [*ἔθνος*, a nation; *λόγος*, science]. The comparative study of the races of mankind.

Ethoxycaffeïn (*eth-oks-e-kaf'-e-in*), $C_{10}H_{14}N_4O_3$. A remedy recommended to relieve the pain of herpes zoster, migraine, and neuralgia. In overdoses it has a toxic effect; gr. viij causes drunkenness and vomiting. Dose gr. iv. Unof.

Ethusa (*e-thu'-sah*) [*αἴθειν*, to burn]. A genus of umbelliferous plants. **E. cynapium,** or fools' parsley, has poisonous qualities. It was formerly used as an emmenagogue. Unof.

Ethusin (*e-thu'-sin*) [*αἴθειν*, to burn]. A poisonous alkaloid obtainable from *Ethusa cynapium*, or fools' parsley.

Ethyl (*eth'-il*) [*αἰθήρ*, ether; *ὕλη*, material], C_2H_5. The hypothetic radicle of alcohol. **E. Blue.** See *Pigments, Conspectus of.* **E. Bromid,** C_2H_5Br, Bromethyl; monobromethane. A rapid and transient anesthetic. Narcosis is produced in one-half to one minute, and does not last much longer. See *Anesthetic.* **E. Bromid, Liq.,** 1 in 200, used in angina pectoris. Dose ʒss–ij. Unof. **E. Chlorid,** C_2H_5Cl, Chloric Ether. An anesthetic resembling chloroform in action. It is sometimes followed by corneal opacity. See *Anesthetic.* Unof. **E. Eosin.** Same as *Primrose.* **E. Green.** See *Pigments, Conspectus of.* **E. Iodid.** C_2H_5I. Hydriodic Ether. Used to relieve the dyspnea of bronchitic asthma and edematous laryngitis. Dose to be inhaled, ɱ v, three or four times daily. Unof. **E. Purple.** See *Pigments, Conspectus of.*

Ethylamin (*eth-il'-am-in*) [*αἰθήρ*, ether; *ὕλη*, material; *amin*]. A non-poisonous ptomaïne formed in putrefying yeast, in wheat-flour, and in the distillation of beet-sugar residues. It is a strongly ammoniacal liquid, boiling at 18.7° C., and is miscible with water in every proportion; it is combustible, and possesses strong basic properties.

Ethylene (*eth'-il-ēn*) [*αἰθήρ*, ether; *ὕλη*, matter]. Olefiant gas, C_2H_4. A colorless, poisonous gas having an unpleasant, suffocating smell. It burns with a bright luminous flame, and when mixed with air explodes violently. It is one of the constituents of illuminating gas, and has strong affinities, especially for chlorin, with which it unites to form an oily compound. **E. Blue.** See *Pigments, Conspectus of.* **E. Bromid,** a light brownish-colored liquid with the formula, $C_2H_4Br_2$. It has been used with great benefit in epilepsy in ¾ to 2¼ minim doses two or three times daily Unof. **E. Chlorid.** See *Ethene chlorid.*

Ethylidene (*eth-il'-id-ēn*). See *Ethidene.*

Ethylidenediamin (*eth-il'-id-ēn-di'-am-in*). $C_2H_4.(NH_2)_2$. A poisonous ptomaïne obtained from decomposing haddock. Injections of the ptomaïne in mice and guinea-pigs produce abundant flow of secretion from the nose, mouth, and eyes; the pupils dilate and the eyeballs project. Violent dyspnea follows and continues until death, which does not take place for twenty-four hours or more. The heart is stopped in diastole.

Etiolate (*e'-te-o-lāt*) [F., *étioler*, to blanch]. In biology, to blanch or be whitened by the exclusion of light.

Etiolation (*e-te-o-la'-shun*) [Fr., *étioler*, to blanch]. The paleness or blanching, in plants or animals, from confinement in darkness.

Etiolin (*e'-te-o-lin*) [Fr., *étioler*, to blanch]. The yellow pigment of etiolate leaves.

Etiology (*e-te-ol'-o-je*) [*αἰτία*, a cause; *λόγος*, science]. A treatise on, or pertaining to, the causes of disease.

Etrotomy (*e-trot'-o-me*) [*ἦτρον*, pelvis; *τομή*, section]. A name proposed for pelvic section. Cf. *Pubetrotomy.*

Euanthol (*u-an'-thol*) [*εὖ*, well; *ἄνθος*, a flower; *oleum*, oil], $C_7H_{14}O$. Euanthylic aldehyd, a product of the distillation of castor-oil; it is a liquid of pungent odor, boiling at from 153° to 154° C.

Eucalin (*u'-kal-in*) [*εὖ*, well; *καλύπτειν*, to cover], $C_6H_{12}O_6$. A glucose arising from the fermentation of melitose. Its properties are similar to those of inosite. It is non-fermentable, and dextrorotatory.

Eucalyptol (*u-kal-ip'-tol*) [*εὖ*, well; *καλύπτειν*, to cover], $C_{10}H_{18}O$. An antiseptic camphor, prepared from the essential oil derived from the distillation of the leaves of *E. globulus*, and other species of the genus. It is used in bronchitis and chronic catarrh; and also in ear-diseases and in urethritis, and externally in various liniments and washes. Dose ɱiv, in capsules, three times daily. Unof.

Eucalyptus (*u-kal-ip'-tus*) [*εὖ*, well; *καλύπτειν*, to cover]. The leaves (lanceolate, after three years' growth) of *E. globulus*, or Blue Gum, native to Australia, but now cultivated in California. It contains a volatile oil, that yields *eucalyptol*, a camphor, by distillation. It is an aromatic bitter, promoting digestion. It is highly antiseptic and anti-malarial, and is valuable in atonic dyspepsia and in intermittent fevers. **E., Ext.** Dose gr. iij–x. **E., Fld. Ext.**, alcoholic. Dose ♏x–ʒj. **E. Gum** (B. P.); also called Australian Kino; a red gum from the bark of the *E. corymbosa*, *E. resinifera*, and *E. rostrata* of Australia. It is intensely astringent, and valuable in the treatment of relaxed throat. Dose gr. ij–x. The genus *Eucalyptus* embraces many species of trees and shrubs, nearly all of which appear to have useful medicinal properties. **E. Honey**, honey gathered by bees from the flowers of various species of *Eucalyptus*. It is highly aromatic, containing eucalyptol (17 per cent.), cymol, and a terpene. It is valued in Australian domestic practice as a cure for almost all catarrhal troubles. **E. Manna**, a variety of manna produced in Australia from *E. viminalis*, *E. mannifera*, and *E. dumosa*. **E. Ol.**, the volatile oil. Dose ♏v–xxx, in capsules or emulsion. **E., Tinct.** Unof. Dose ʒss–ij. **E. Unguentum** (B. P.). Seldom used.

Eucheuma (*u-ku'-mah*) [*εὐχυμος*, well-flavored]. A genus of sea-weeds. **E. gelatinæ** and **E. spinosum**, from S. E. Asian seas, afford some part of the agar-agar of commerce.

Euchlorin (*u-klo'-rin*) [*εὖ*, well; *χλωρός*, greenish]. A mixture of chlorous acid and free chlorin.

Euchroic Acid (*u-kro'-ik*). See *Acid*.

Euchylia (*u-kil'-e-ah*) [*ηὖ*, well; *χυλός*, the chyle]. A normal condition of the chyle.

Euchymia (*u-kim'-e-ah*) [*εὖ*, well; *χυμός*, juice]. A healthy condition of the fluids of the body.

Eucinesia, Eukinesia (*u-kin-e'-se-ah*) [*εὖ*, well; *κίνησις*, motion]. Normal power of movement.

Eucrasia (*u-kra'-ze-ah*) [*εὖ*, well; *κρᾶσις*, mixture]. Good health; a sound constitution; the reverse of dyscrasia.

Eucyclic (*u-sik'-lik*) [*εὐ*, well; *κύκλος*, a circle]. In biology, applied to flowers, the organs in each whorl of which equal in number, and alternate with, those of the adjoining whorl.

Eudiometer (*u-de-om'-et-er*) [*εὐδία*, calm weather; *μέτρον*, measure]. An instrument for ascertaining the purity of the air, and for the analysis of gases.

Eudipleural (*u-de-plu'-ral*) [*εὖ*, well; *δίς*, two; *πλευρά*, side]. In biology, bilaterally symmetric.

Euesthesia (*u-es-the'-ze-ah*) [*εὖ*, well; *αἰσθησις*, sensation]. The sense of well-being; vigor and normal condition of the senses.

Eugenesis (*u-jen'-es-is*) [*εὖ*, well: *γένεσις*, generation]. In biology, fertility.

Eugenia (*u-je'-ne-ah*) [after Prince *Eugene* of Savoy]. A genus of more than 500 species of myrtaceous trees and shrubs, mostly tropical. **E. caryophylata** yields *cloves*, *q. v.* *Pimenta* is a product of **E. pimenta**. Various other species are medicinal, and some afford edible fruits. **E. cheken.** See *Cheken*.

Eugenic Acid (*u-jen'-ik*). See *Eugenol*.

Eugenin (*u'-jen-in*). See *Caryophyllus*.

Eugenol (*u'-jen-ol*) [*eugenia*; *oleum*, oil], $C_{10}H_{12}O_2$. Eugenic Acid; a substance that occurs in clove-oil, and in allspice. It is an aromatic oil that boils at 247° C. It is antiseptic, and a local anesthetic in dentistry. Dose gr. xv, well diluted. Unof.

Eukinesia (*u-kin-e'-se-ah*). See *Eucinesia*.

Eulachon Oil, or Eulachoni Oleum (*u'-lak-on*, or *u-lak-o'-ni o'-le-um*) [native name in North Pacific islands]. Candle-fish Oil. The oil of the fish *Thaleichthys pacificus*, or candlefish. It is less disagreeable than cod-liver oil, for which it is often substituted. Dose ʒj–iv. Unof.

Eulyptol (*u-lip'-tol*). An antiseptic substance composed of six parts of salicylic acid and one part each of carbolic acid and essence of eucalyptus. It does not produce albuminates when applied to wounds. Dose internally, ʒij–iiss per diem. See *Eucalyptus*.

Eumerism (*u'-mer-izm*) [*εὖ*, well; *μέρος*, a part]. In biology, opposed to dysmerism; an aggregate of eumeristic parts.

Eumeristic (*u-mer-is'-tik*) [*εὖ*, well; *μερίζειν*, to divide]. In biology, applied to an aggregation of like parts arranged in a regular series, as a tapeworm.

Eumerogenesis (*u-me-ro-jen'-es-is*) [*εὖ*, well; *μέρος*, division; *γένεσις*, generation]. In biology, development by fission, or the multiplication of like parts, producing a regular series.

Eumeromorph (*u'-mer-o-morf*) [*εὖ*, well; *μέρος*, a division; *μορφή*, shape]. An organism resulting from eumerogenesis, as an arthrosporous bacillus-filament.

Eunuch (*u'-nuk*) [*εὐνοῦχος*, guardian of the couch]. One from whom the genital organs have been removed or mutilated so as to render him impotent.

Eunuchism (*u'-nuk-izm*) [*εὐνοῦχος*, guardian of the couch]. The condition of being a eunuch.

Euonymin (*u-on'-im-in*) [*εὐώνυμος*, having a good name]. A precipitate from the tincture of Wahoo, *Euonymus americanus*; it is tonic, laxative, and expectorant. Dose ½ to 3 grains. Unof.

Euonymus (*u-on'-im-us*) [*εὐώνυμος*, having a good name]. 1. A genus of celastraceous shrubs and trees. 2. Wahoo. The bark of *E. atropurpureus* is an astringent tonic and purgative, resembling rhubarb, jalap, aloes, etc., but rather milder. It is beneficially employed in dropsy and hepatic affections. **E., Ext.** Dose gr. j–v. **E., Ext., Fld.** Dose ʒ ss–ij. **E., Tinct.** (1 in 5). Dose ♏x–xl. *E. americanus* has similar properties.

Eupareunia (*u-par-u'-ne-ah*) [*εὖ*, well; *πάρευνος*, spouse]. Sexual compatibility.

Eupathia, or Eupatheia (*u-path-i'-ah*) [*εὐπάθεια*; *εὖ*, well; *πάθος*, feeling]. 1. Euphoria. 2. Sensitiveness to impressions.

Eupatorin (*u-pat-o'-rin*) [*εὐπατόριον*, agrimony]. 1. A precipitate from the tincture of Thoroughwort, *Eupatorium perfoliatum*; it is aperient, emetic, febrifuge and tonic. Dose 1 to 3 grains. Unof. 2. A crystalline glucosid from *Eupatorium cannabinum* of Europe. See also *Eupurpurin*.

Eupatorium (*u-pat-o'-re-um*) [*εὐπατόριον*, agrimony]. A genus of composite-flowered plants. In pharmacy, *Eupatorium* denotes the leaves and flowering-tops of *E. perfoliatum*, thoroughwort, or boneset. It is a bitter tonic, diaphoretic, aperient and emetic, of value in remittent and typhoid fevers, and thought, also, to be a teniafuge. **E., Fld. Ext.** Dose ♏x–ʒj. **E. purpureum**, trumpet-weed, another American species, has similar qualities (see *Eupurpurin*), but is more markedly diuretic, as is also *E. amarissimum*, of the U. S. Many other species of this large genus are actively medicinal.

Eupepsia (*u-pep'-se-ah*) [*εὖ*, well; *πέπτειν*, to digest]. Sound or normal digestion.

Eupeptic (*u-pep'-tik*) [*εὖ*, well; *πέπτειν*, to digest]. Possessing a good digestion; promoting digestion.

Euperistalsis (*u-per-is-tal'-sis*) [*εὖ*, well; *περι*, around; *στάλσις*, compression]. The quiet peristaltic movements of the intestines in health. See *Peristalsis*.

Euphonia (*u-fo'-ne-ah*) [*εὖ*, well; *φονή*, voice]. A normal, good, and clear condition of the voice.

Euphony (*u'-fon-e*). See *Euphonia.*

Euphorbia (*u-for'-be-ah*) [εὐφόρβιον, an African plant]. A genus of some 700 species of trees, shrubs and herbs, mostly with a milky, acrid, or poisonous juice. **E. resinifera,** of Africa affords *euphorbium.* **E. lathyris,** yields oil of euphorbia, an active, but uncertain cathartic. From **E. drummondii,** drumin is prepared. In **N. America, E. corollata, E. ipecacuanha, E. vulgaris, E. prostrate,** and other native species have been employed in medicine, there being about 100 species in the U. S. **E. pilulifera,** of S. America and Australia, has reputed value in asthma and cardiac dyspnea. Dose of the extract gr. j.; of the fluid extract ʒ ss–j; of the tincture ʒ ss–j; to be used with great caution. **E. piscidia,** of tropical America, a virulent poison, is locally employed as a caustic. Many other species are actively medicinal.

Euphorbin (*u-for'-bin*) [εὐφόρβιον, an African plant]. A precipitate from a tincture of the root of *Euphorbia corollata;* it is an emetic, expectorant, vermifuge and arterial sedative. Dose ¼ to 3 grains. Unof.

Euphorbium (*u-for'-be-um*) [εὐφόρβιον, an African plant]. An acrid gum-resin afforded by *Euphorbia resinifera* and *E. officinarum.* It is strongly purgative and vesicant, and is now mainly employed in veterinary medicine.

Euphoria (*u-for'-e-ah*) [εὐφορος, easily carried]. 1. The sense of well-being or health. 2. Ability to endure pain.

Euphoric (*u-for'-ik*) [εὐφορος, easily carried]. Marked by or pertaining to euphoria.

Euphorin (*u'-for-in*) [εὐφορος, easily carried], $C_9O_2H_{11}$. Phenyl-urethan, derived from anilin, a white crystalline powder, nearly insoluble in water, soluble in weak alcohol. It is recommended as a safe and rapid antipyretic in doses of from 5 to 30 grains daily. Unof. See *Phenyl-urethan.*

Euphrasia (*u-fra'-ze-ah*) [εὐφρασία, delight]. Eyebright. A small annual, formerly much used in eye-affections. It is of utility as an astringent lotion in conjunctivis, and invaluable in breaking up nasal catarrh and in hay-fever. **E., Tinct.,** strength 1.9. Dose ♏ j–v.

Euphthalmin (*ūf-thal'-min*) [εὐ, well; ὀφθαλμός, eye]. $C_{17}H_{25}NO_3$. HCl, the hydrochlorate of the amygdalic acid derivative of the unstable n-methyl-vinyl-diacetone-alkamin. It is a colorless, crystalline powder, which freely dissolves in cold water. The instillation of two or three drops of a 2 per cent. solution in the eye produces within 20 to 30 minutes mydriasis of intermediate intensity, which vanishes after 2 or 3 hours. The accommodation is but slightly, if at all, affected.

Eupitton (*u'-pit-on*), $C_{25}H_{26}O_9$. Eupittonic acid. An aurin into which six methoxyl groups have been introduced. It forms orange-yellow crystals, melting with decomposition, at 200° C.

Euplastic (*u-plas'-tik*) [εὐ, well; πλάσσειν, to form]. Susceptible of being transformed into sound, healthy, and permanent tissue.

Eupnea (*ūp-ne'-ah*) [εὐ, well; πνέειν, to breathe]. Normal and easy respiration.

Eupurpurin (*u-pur'-pu-rin*) [εὐ, well; *pupura,* purple]. A precipitate from the tincture of *Eupatorium purpureum;* it is diuretic, stimulant, astringent, and tonic. Dose 1 to 4 grains. Unof.

Eurhipidurous (*u-rip-id-u'-rus*) [εὐ, well; ῥιπίς, a fan; οὐρά, tail]. In biology, applied to such birds as have a fan-like arrangement of the tail-feathers.

Eurhodins (*u'-ro-dinz*). Dyes derived from the phenazins by the introduction of one or more amido-groups. They are feeble bases

European Cholera. Synonym of *Cholera.*

Europhen (*u'-ro-fen*). A preparation of iodin recommended as a substitute for iodoform. It is a valuable antiseptic, antisyphilitic, and antituberculotic. In skin-diseases, a 5 to 10 per cent. ointment is employed. It is used hypodermatically in doses of gr. ¼–iss. Chemically, it contains one atom of iodin joined to two molecules of isobutylcresol. Unof. **E.-aristol,** a preparation of europhen with aristol; a substitute for iodoform.

Eurycephalic, or Eurycephalous, (*u-ris-ef-al'-ik, u-ris-ef'-al-us*) [εὐρύς, wide; κεφαλή, head]. Broad-headed; having a very wide skull.

Eurycerous (*u-ris'-er-us*) [εὐρύς, broad; κέρας, a horn]. In biology, having broad horns.

Eurychasmus (*u-rik-as'-mus*) [εὐρύς, broad; χάσμα, a chasm]. Lissauer's term for a skull in which the angle formed between the lines joining the point of the wing of the vomer and the posterior nasal spine and anterior margin of the foramen magnum is between 153° and 154°.

Eurythermal (*u-rith-er'-mal*) [εὐρύς, wide; θέρμη, heat]. Capable of sustaining a great range of temperature.

Eusomphalus (*u-som'-fal-us*) [εὐ, good; ὀμφαλός, navel]. A double monstrosity in which the vital functions of each individual are independent, and in which each has a distinct umbilicus.

Eustachian (*u-sta'-ke-an*) [εὐσταχυς, rich in corn]. Pertaining to the Italian anatomist, Eustachio. **E. Artery.** See *Arteries, Table of.* **E. Catheter,** an instrument for dilating and otherwise treating the Eustachian tube; it is introduced along the floor of the nose. **E. Tube,** the canal extending from the tympanum to the pharynx. **E. Valve,** a prolongation or continuation of the lining membrane of the post-cava into the right auricle of the fetal heart to about half of its breadth. Its function is to direct the blood from the post-cava across the auricle toward the foramen ovale.

Eustachius, Canal of. See *Canal.*

Eustomatous (*u-sto'-mat-us*) [εὐ, well; στόμα, mouth]. In biology, having a well-formed oral aperture.

Eustrongylus (*u-stron'-jil-us*) [εὐ, well; στρογγύλος, round]. A genus of parasitic nematode worms. **E. gigas.** See *Thread-worms,* and *Parasites* (*Animal*), *Table of.*

Eusystole (*u-sis'-to-le*) [εὐ, well; συστολή, contraction]. A normal contraction of the cardiac cavities.

Eutaxia (*u-taks'-e-ah*) [εὐ, well; τάξις, order]. A normal condition of the body.

Euthanasia (*u-than-a'-ze-ah*) [εὐ, well; θάνατος, death]. An easy or calm death.

Euthycoryphus (*u-thik-or'-if-us*) [εὐθύς, straight; κορυφή, the head]. Lissauer's term for a skull in which the parietal angle is between 142° and 151°.

Euthymetopus (*u-thim-et'-o-pus*) [εὐθύς, straight; μέτωπον, the forehead]. Lissauer's term for a skull in which the angle between the lines joining the metopion and bregma and nasion is between 141° and 151.5°.

Euthymia (*u-thīm'-e-ah*) [εὐ, well; θυμός, mind]. Tranquility; cheerfulness.

Euthyopisthocranius (*u-the-o-pis-tho-kra'-ne-us*) [εὐθύς, straight; ὀπισθοχράνιον, the occiput]. Lissauer's term for a skull in which the angulus summi occipitis is between 154° and 172°.

Euthyuranus (*u-the-u'-ran-us*) [εὐθύς, straigat; οὐρανός, the roof of the mouth]. Lissauer's term for a skull in which the angulus summi palati is between 163.5° and 180°.

Eutocia (*u-to'-ke-ah*) [εὐ, well; τόκος, childbirth]. An easy natural delivery.

Eutrophic (*u-tro'-fik*) [*εὖ*, well; *τρέφειν*, to nourish]. Pertaining to eutrophy; promoting the nutritive process; well-nourished.

Eutrophy, or **Eutrophia** (*u'-tro-fe*, or *u-tro'-fe-ah*) [*εὖ*, well; *τρέφειν*, to nourish]. A state of normal or healthy nutrition; the condition of being well nourished.

Eutropic (*u-trop'-ik*) [*εὖ*, well; *τρέπειν*, to turn). In biology, turning or revolving with the sun.

Euxanthin (*ū-zan'-thin*) [*εὖ*, well; *ξανθός*, yellow], $C_{19}H_{16}O_{10}$. The essential constituent of *Purrée*, *q. v.* It forms small yellow crystals.

Euxanthinic Acid (*ū-zan-thin'-ik*). See *Acid.*

Evacuant (*e-vak'-u-ant*) [*evacuare*, to empty]. 1. Promoting evacuation. 2. A medicine that increases the secretion or evacuation of an organ, especially the bowels. A purgative.

Evacuation (*e-vak-u-a'-shun*) [*evacuatio*, a voiding]. Defecation; the act of voiding; that which is voided.

Evalvular (*e-val'-vu-lar*) [*e*, priv.; *valva*, a valve]. In biology, destitute of valves.

Evaporation (*e-vap-or-a'-shun*) [*e*, priv.; *vapor*, vapor]. In pharmacy, the process of converting a liquid into vapor by the agency of heat.

Eve and Lingard, Bacillus of. See *Bacteria, Synonymatic Table of.*

Evectics (*e-vek'-tiks*) [*εὐεκτικός*, in good health]. An old name for hygiene; the science of good health.

Even-headed (*ē'-ven hed'-ed*). Neither right-headed nor left-headed. Even-headedness is a condition common among the lower animals, and among idiots, imbeciles, and races of men of low development.

Evening Primrose (*ēv'-ning prim'-rōz*). The flowering tops of *Œnothera biennis*, recommended for asthma with gastric irritability. Dose of the fld. ext. ʒss–ʒj. Unof.

Eventration (*e-ven-tra'-shun*) [*e*, out of; *venter*, the belly]. Extrusion of the abdominal viscera, especially in a monstrosity. The term is used also as a synonym of *Pendulous Abdomen*, *q. v.*

Evergreen-oak (*ev'-ur-grēn-ōk*). See *Oak-bark.*

Everitt's Salt. A compound of iron and potassium cyanid. **E.'s Test.** See *Tests, Table of.*

Everlasting (*ev-ur-las'-ting*). A popular name for certain plants of the genera *Gnaphalium* and *Antennaria*, small composite-flowered plants. *A. divica* of Europe is antibechic. *A. margaritarea* of N. America is tonic and astringent, and is considered a good sudorific. *A. plantaginifolia* has similar qualities. See also *Life-everlasting.*

Evernia (*e-vur'-ne-ah*) [*εὖ*, well; *ἔρνος*, sprout]. A genus of parmeliaceous lichens. **E. prunastri.** See *Acid, Everninic.*

Everninic Acid (*ev-ur-nin'-ik*). See *Acid.*

Eversion (*e-ver'-shun*) [*eversio*, a turning out]. A turning outward. **E. of the Eyelid,** a folding of the lid upon itself for the purpose of exposing the conjunctival surface or sulcus. See also *Ectropium.*

Evertebral (*e-ver'-te-bral*) [*e*, priv., *vertebra*, a vertebra]. Not vertebral in character, nor derived from vertebræ.

Evidence (*ev'-id-ens*) [*evidens*, clear]. In legal medicine, the means by which the existence or non-existence or the truth or falsehood of an alleged fact is ascertained or made evident; proof, as of insanity. **E., Circumstantial,** evidence the conclusions based upon which are beyond actual demonstration. **E., Conclusive or Positive,** evidence that admits of no doubt. **E., Expert,** that given before a jury by an expert in any science, art, profession, or trade.

Evil (*ē'-vil*) [ME., *evel*, ill]. 1. A disease. 2. Synonym of *Scrofula.*

Eviration (*ev-ir-a'-shun*) [*evirare*, to castrate]. 1. Castration. 2. Emasculation; a form of sexual perversion in which there is a deep and permanent assumption of feminine qualities, with corresponding loss of manly qualities. The opposite of this is termed *Defemination.*

Evisceration (*e-vis-er-a'-shun*) [*e*, out; *viscera*, the bowels]. The removal of the viscera. **E. of the Eye,** removal of the entire contents of the globe of the eye, leaving the sclerotic intact,—an operation in place of enucleation, and following which some operators insert a glass or metallic shell-globe, called an *artificial vitreous*, to preserve the shape, etc., of the eye-ball. **E., Obstetric,** the removal of the abdominal or thoracic viscera of the fetus in embryotomy.

Evolution (*ev-o-lu'-shun*) [*evolutio; evolvere*, to unroll]. 1. The development or temporary growth and organic change that take place in the uterus during pregnancy. 2. In biology, (1) the doctrine of incasement or preformation of the early physiologists, which supposed that all parts of the fully-formed animal or plant were present in a minute form in the germ. Cf. *Epigenesis.* (2) The doctrine of descent often spoken of as Darwinism, based upon the capacity of every plant and animal to produce other individuals of a like kind, but varying to a greater or less degree according to the differentiation induced by special environment and natural selection. Cf. *Pangenesis, Blastogenesis, Epigenesis, Ontogeny, Phylogeny, Natural Selection.* **E., Factors of,** the recognized factors of evolution are at least five, viz.: (1) Pressure of an *environment* affecting function and function affecting structure, and the changed structure and function inherited and integrated through successive generations. (2) *Use and disuse* of organs reacting on growth-force and producing change in form, structure, and size of parts, and such change inherited and integrated through successive generations. (3) *Natural selection* among individuals of those most in accord with an ever-changing environment—or, as it has been otherwise called, "*survival of the fittest.*" (4) *Sexual selection:* the selection by the female, among varying male individuals, of the strongest or the most attractive. Among mammals, the selection is mainly of the strongest, as decided by *battle;* among birds, of the most attractive, as determined by splendor of color or beauty of song. (5) *Physiologic selection,* or selection of those varieties the individuals of which are fertile among themselves, but sterile or less fertile with other varieties and with the parent stock. This has also been called "*segregate fecundity*" by Gulick and *homogamy* by Romanes. These five factors are not universally recognized. The first two are Lamarckian, the second two Darwinian factors. In the Lamarckian factors the changes occur *during individual life*, and the offspring is supposed to inherit them unchanged. In the Darwinian factors, on the contrary, the *changes are in the offspring*, and the individuals during life are supposed to remain substantially unchanged. The fifth factor has been brought forward by Romanes and Gulick and is not yet universally recognized. (6) To these recognized factors of organic evolution must now be added, in *human evolution*, another and far higher factor, viz., conscious, voluntary *coöperation in the work of evolution*, conscious striving for the betterment of the individual and of the race. This factor consists essentially in the *formation and pursuit of ideals.* This is called a factor, but it is also much more than a factor. It stands in place of nature herself—it is a higher, rational nature using all the factors of physical nature for its own higher purposes. To distinguish the evolution determined by this factor from organic evolution, it is called *progress.* Underlying all these factors as their nec-

essary condition, and therefore themselves not called factors, are two opposite operative principles, viz., *heredity and variability*. Like the conservative and progressive elements in society, one tends to fixedness, the other to change. The one initiates change, the other accumulates its effects in successive generations. The one tries all things, the other holds fast to whatever is good. They are both equally necessary to the successful operation of any or all of the factors. **E., Ontogenetic,** the development of an embryo from an egg. **E., Phylogenetic,** the evolution of species. **E., Spontaneous,** a term expressive of the unaided occurrence in childbirth of a series of changes, whereby a shoulder-presentation is transformed within the pelvis into a combined breech-and-shoulder-presentation and delivery effected.

Evulsion (*e-vul'-shun*) [*evulsio; evellere*, to pluck out]. The forcible tearing or plucking away of a part, as a polypus, tonsil, etc.

Ewald's Test-breakfast. A method used in ascertaining the condition of the gastric juice. It consists of 35 to 70 grams of white bread and 300 cm. of water, or a cup of weak tea without milk or sugar.

Ewald and Boas's Method. A method of removing the contents of the stomach. It is carried out by causing the patient to make forcible voluntary contraction of the abdominal muscles, steady pressure being applied to the epigastrium.

Exacerbation (*eks-as-er-ba'-shun*) [*exacerbatio; exacerbare*, to be violent]. Increased or paroxysmal violence of the symptoms of a disease.

Exaggerated (*eks-aj'-er-a-ted*) [*exaggerare*, to heap up]. Larger; more marked; increased. **E. Breathing.** See *Breath-sounds*. **E. Lithotomic Posture.** See *Postures, Table of*.

Exalbuminous (*eks-al-bu'-min-us*) [*ex*, priv.; *albumen*, the white of an egg, from *albus*, white]. In biology, applied to seeds in which the nutritive matter, endosperm or albumin, is stored within the embryo.

Exalgin (*eks-al'-jin*) [ἐξ, out; ἄλγος, pain], $C_9H_{11}NO$. Methylacetanilid; a benzene derivative allied to phenacetin. It is a valuable analgesic and antipyretic in doses of one-half to four grains. Unof.

Exalt (*eks-awlt'*) [*exaltare*, to lift up; exalt]. In chemistry, to purify or refine.

Exaltation (*eks-awl-ta'-shun*) [*exaltatio*, an uplifting]. 1. Increase of functional activity. 2. Increase of mental activity. 3. A morbid mental state characterized by self-satisfaction, ecstatic joy, abnormal cheerfulness, or optimism, or by delusions of grandeur.

Examination (*eks-am-in-a'-shun*) [*examinare*, to examine]. Investigation, as for the purpose of diagnosis; it is variously qualified as *bimanual, digital, oral, physical*, etc.

Exangia, or **Exangeia** (*eks-an-je'-ah*) [ἐξ, out; ἀγγεῖον, vessel]. Any dilatation or distention of a blood-vessel, such as aneurysm, varix, or capillary enlargement.

Exanimation (*eks-an im-a'-shun*) [*ex*, out; *anima*, spirit]. Real or apparent death; fainting.

Exannulate (*eks-an'-u-lāt*) [*ex*, priv; *annulus*, a ring]. In biology, applied to ferns, the sporangium of which lacks the annulus.

Exanthema, or **Exanthem** (*eks-an'-them-ah*, or *eks'-an-them*) [ἐξάνθημα, eruption: *pl.*, *Exanthemata*]. 1. An eruption upon the skin. 2. Any exanthematous or eruptive fever. 3. In biology, any irregular spot on the surface of a leaf or other organ. A *Table of the Exanthemata* is appended on page 450. **E., Syphilitic.** See *Roseola, Syphilitic*.

Exanthematic (*eks-an-them-at'-ik*). See *Exanthematous*. **E. Typhus.** See *Typhus Fever*.

Exanthematology (*eks-an-them-at-ol'-o-je*) [ἐξάνθημα, eruption; λόγος, science]. The science of the exanthematous diseases.

Exanthematous (*eks-an-them'-at-us*) [ἐξάνθημα, eruption]. Of the nature of or characterized by exanthema, or eruption; of the nature of an eruptive fever.

Exanthesis (*eks-an-the'-sis*) [ἐξάνθησις, a blossoming: *pl.*, *Exantheses*]. 1. The breaking out or the appearance of an exanthem. 2. Any exanthematous disease. **E. rosalia arthrodynia.** Synonym of *Dengue*.

Exanthropia (*eks-an-thro'-pe-ah*) [ἐξ, out; ἄνθρωπος, men]. Morbid dislike of human society; apanthropia.

Exarteritis (*eks-ar-ter-i'-tis*) [ἐξ, out; ἀρτηρία, artery; ιτις, inflammation]. Inflammation of the outer coat of an artery.

Exarthrima (*eks-ar-thrim'-ah*) [ἐξ, out; ἄρθρον, joint: *pl.*, *Exarthrimata*]. Luxation or dislocation of a joint.

Exarticulate (*eks-ar-tik'-u-lāt*) [*ex*, priv.; *articulare*, to join]. In biology, applied to limbs, antennæ, palpi, or other appendages destitute of joints.

Exarticulation (*eks-ar-tik-u-la'-shun*) [*ex*, out; *articulus*, joint]. 1. Luxation of a joint. 2. Amputation at a joint.

Excandescentia (*ex-kan-des-en'-she-ah*) [*ex*, out; *candescere*, to glow]. Angry or furious mania; a paroxysm of insane fury.

Excarnation (*eks-kar-na'-shun*) [*ex*, out; *caro*, flesh]. The removal of superfluous tissue from an anatomic preparation.

Excaudate (*eks-kaw'-dāt*) [*ex*, priv.; *cauda*, tail]. In biology, tailless.

Excavation (*eks-kav-a'-shun*) [*excavare*, to hollow out]. A hollow or cavity, as in the lungs or in a tissue. **E. of the Optic Nerve,** a hollowing or "cupping" of the disc, or optic nerve-entrance, that may be *physiologic* or *congenital*, and without particular significance; or *pathologic*, the result of glaucoma, optic atrophy, etc.

Excavator (*eks'-kav-a-tor*) [*excavare*, to hollow out]. A dental instrument for opening and forming cavities and removing decayed matter from them; *e. g.*, the hatchet, hoe, and chisel.

Excentric (*eks-sen'-trik*) [*ex*, out; *centrum*, center]. 1. See *Eccentric*. 2. Out of the center or median line. **E. Pains,** radiating pains, symptomatic of spinal disease, due to irritation of the posterior nerve-roots. The pains are felt to be in the peripheral organs, hence the name.

Excerebration (*eks-ser-e-bra'-shun*) [*ex*, out; *cerebrum*, brain]. The removal of the fetal brain in the process of embryotomy.

Excipient (*ek-sip'-e-ent*) [*excipere*, to take up]. In pharmacy, any substance used to give an agreeable or convenient form to the ingredients of a prescription.

Exciple (*ek'-sip-l*) [*excipulum*, a receiving-vessel]. That part of a lichen forming the rim of the perithecium, or immediately surrounding it.

Excision (*ek-sizh'-un*) [*excisio*, a cutting out]. The operation of removing a part or tissue by cutting; a cutting out.

Excitability (*ek-sīt-ab-il'-it-e*) [*excitare*, to rouse]. The property of reacting to stimulus.

Excitant (*ek-si'-tant*) [*excitare*, to rouse]. A remedy that stimulates the activity of an organ.

Excitation (*ek-si-ta'-shun*) [*excitare*, to rouse]. The act of stimulating or irritating. **E., Direct,** in electrotherapeutics, the excitement of a muscle by placing an electrode on the muscle itself. **E., Indirect,** the excitement of a muscle through its nerve.

TABLE OF THE EXANTHEMATA.

NAME.	PERIOD OF INCUBATION.	STAGE OF INVASION.	TIME OF APPEARANCE OF ERUPTION.	CHARACTER OF ERUPTION.	DURATION OF ERUPTION.	LOCATION.	DESQUAMATION.	DURATION OF DISEASE.	CONVALESCENCE.
Erysipelas.	Few hours to 3 or 4 days.	1 to 3 days.	Within 24 hours.	Efflorescence; bright-red; polished; with well-defined, raised margin.	4 to 8 days.	Face.	Branny, or in large flakes.	1 to 3 weeks.	Crisis.
Measles.	10 to 12 days.	4 days.	4th day.	Maculæ; small, dark-red, with crescentic borders. Complete in 24 hours.	4 to 5 days.	Face; then downward over body.	Branny. 8–11 days.	3 weeks.	Crisis.
Rötheln.	8 to 17 days.	24 to 48 hours.	Within 48 hours.	Maculæ; rose-colored; rounded; discrete.	3 days.	Face and scalp; then downward over body.	Slightly branny.	4 to 7 days.	Crisis.
Scarlatina.	1 to 21 days.	1 to 2 days.	Within 24 hours.	Diffuse; scarlet; punctate.	7 to 10 days.	Neck, chest, face; then over body.	Scales or large flakes. About one week.	2 to 3 weeks.	Lysis.
Typhoid Fever.	5 to 35 days.	6 to 8 days.	7th day.	In crops. Rose-colored, lenticular spots.	Each crop 3 to 5 days. Last 10 to 20 days or throughout the whole course of the fever.	Abdomen, chest, and back.	Slightly branny or none.	3 to 4 weeks.	Lysis.
Typhus Fever.	4 to 12 days.	5 days.	Usually 5th day; may be on 3d or not till 7th day.	Measly spots; petechiæ; streaks; color, mulberry-red.	Few days, or may last throughout the course of the disease.	Sides of chest and abdomen; arms; back.	Slightly branny.	2 to 4 weeks.	Crisis.
Varicella.	4 to 14 days.	1 to 2 days.	Within 12 to 24 hours.	In crops. Vesicles.	5 to 8 days.	Back, chest, arms.	Crusts. 5–8 days.	2 weeks.	Lysis.
Variola.	8 to 14 days.	3 days.	4th day.	Umbilicated pustules.	21 to 25 days.	Face, and over body.	Crusts. 12–22 days.	4 to 5 weeks.	Lysis.

Excito- (*ek-si'-to-*) [*excitare*, to rouse]. A Latin prefix denoting *stimulation* or *excitation*. **E.-motor,** exciting or arousing motor function; also, a drug or agent that increases activity of the motor nerve-centers. **E.-nutrient,** arousing or quickening the processes of nutrition. **E.-reflex,** pertaining to a reflex action that ends in muscular action. **E.-secretory,** arousing the function or process of secretion. **E.-vaso-motor,** carrying stimulus to vaso-motor centers.

Excitor (*ek-si'-tor*) [*excitare*, to rouse]. One who or that which stimulates or excites.

Exclave (*eks-klāv'*, *eks-klahv'*) [Fr.]. A detached portion of any organ, as of a pancreas or ovary.

Exclusion (*eks-klu'-zhun*) [*excludere*, to shut out]. A shutting out. **E., Diagnosis by,** the reaching of a final or most probable diagnosis by successively excluding one hypothesis after another, as impossible, from a consideration of the symptoms.

Excochleation (*eks-kok-le-a'-shun*) [*ex*, out; *cochlea*, shell, spoon]. The scraping out of material with the curet.

Excoriation (*eks-ko-re-a'-shun*) [*ex*, from; *corium*, the skin]. 1. Abrasion or removal, partial or complete, of a limited portion of the skin. 2. A lesion of the skin in which, as a rule, the surface is denuded only as far as the stratum mucosum. It heals without leaving a scar. It is usually seen in pruritic diseases.

Excreation (*ex-kre-a'-shun*). See *Exscreation.*

Excrement (*eks'-kre-ment*) [*excernere*, to separate; to excrete]. An excreted substance; the feces.

Excrement (*eks'-kre-ment*) [*excrescere*, to grow out]. An old name for the hair, nails, etc.

Excrementitious (*eks-kre-men-tish'-us*) [*excernere*, to separate; to excrete]. Pertaining to the excrement.

Excrescence (*eks-kres'-ens*) [*excrescere*, to grow out]. An abnormal outgrowth upon the body. See *Cauliflower Excrescence.*

Excreta (*eks-kre'-tah*) [*pl.; excernere*, to separate]. The natural discharges of the body, particularly those of the bowels; feces.

Excretin (*eks'-kre-tin*) [*excernere*, to separate], $C_{20}H_{36}O$. One of the constituents of feces. It occurs in little leaves or tufts mixed with needles, insoluble in cold or hot water, soluble in hot alcohol and ether; its reaction is neutral.

Excretion (*eks-kre'-shun*) [*excretio; excernere*, to excrete]. The separation of the waste products of an organ, or of the body as a whole, out of the blood. The material so excreted.

Excretory (*eks'-kre-tor-e*) [*excretio; excernere*, to excrete]. Pertaining to excretion. **E. Duct,** a canal conveying the excretion from the excretory organ to the discharging point. See *Duct.*

Excurrent (*eks-kur'-ent*) (*ex*, out; *currere*, to run]. Leading or going outward, as an *excurrent* canal.

Excurvation (*ex-kur-va'-shun*) [*ex*, out; *curvare*, to curve]. A deformity of the eyelid affecting almost

exclusively the upper palpebra, and one in which the tarsal cartilage becomes turned outward. It occasionally develops in protracted cases of granular conjunctivitis.

Exedent (*ek'-se-dent*) [*exedens; ex*, out; *edere*, to eat]. Rodent; eating away the tissues.

Exelcysmos (*eks-el-sis'-mos*) [ἐξ, from; ἑλκύειν, to draw]. Extraction, as of teeth.

Exencephalocele (*eks-en-sef'-al-o-sēl'*) [ἐξ, out; ἐγκέφαλον, brain; κήλη, hernia]. Cerebral hernia; an exencephalous tumor; a mass of brain-substance outside of the cranial cavity.

Exencephalon (*eks-en-sef'-al-on*), Same as *Exencephalus*.

Exencephalus (*eks-en-sef'-al-us*) [ἐξ, out; ἐνκέφαλος, brain]. A species of single autositic monsters characterized by a malformed brain, situated, at least in part, without the cranial cavity, the bony walls of which are themselves imperfect. The specimens of this nature are divided into two main classes—those with and those without a spinal fissure. 2. A variety of autositic monsters of the foregoing species in which there is an arrested development of the cranial bones, with protrusion of the brain, associated with an extensive spina bifida.

Exenteratio bulbi. See *Exenteration of the Orbit*.

Exenteration (*eks-en-ter-a'-shun*) [ἐξ, out; ἔντερων, intestine]. 1. Removal of the intestines or thoracic viscera in embryotomy. 2. In ophthalmology, the operation of evisceration of the contents of the eyeball, leaving the globe as a stump in the orbit. **E. of the Orbit**, the removal of the contents of the orbital cavity.

Exenteritis (*eks-en-ter-i'-tis*) [ἐξ, out; ἔντερον, bowel; ιτις, inflammation]. Inflammation of the outer or peritoneal coat of the intestine.

Exercise (*eks'-er-siz*) [*exercere*, to keep busy]. Functional activity of the muscles; often applied to such activity when its purpose is the preservation or restoration of the health. **E., Active**, that exerted by the will of the patient. **E., Passive**, when the part is moved by another, or acted upon, as in massage. **E. Bones**, Rider's bones; osseous growths occasionally found in the muscles.

Exeresis (*eks-er'-es-is*) [ἐξ, out; αἱρέειν, to take]. Surgical removal, as by excision or extraction; evacuation.

Exfetation (*eks-fe-ta'-shun*) [*exfetatio*]. Ectopic or extrauterine fetation.

Exfoliation (*eks-fo-le-a'-shun*) [*exfoliatio; exfoliare*, to shed leaves]. The lamellar (or other) separation of bone or other tissue from the living structure in *Dry Necrosis*, etc.

Exhalant (*eks-ha'-lant*) [*exhalare*, to breathe out]. 1. Serving for exhalation; exhaling. 2. A pore or organ of exhalation.

Exhalation (*eks-hal-a'-shun*) [*exhalare*, to breathe out]. The process of giving off or exhaling vaporous or effluvial matters; the vapor, subtle particles, etc., given off by the body through the skin or lungs.

Exhaustion (*eg-zawst'-yun*) [*exhaurire*, to pour out]. Great loss of vital and nervous power from fatigue or protracted disease.

Exhibit (*ek-zib'-it*) [*exhibere*, to give]. To administer as a medicine.

Exhibition (*ek-zib-ish'-un*) [*exhibere*, to give]. In legal medicine, the exposing of the genitalia in public places.

Exhibitionism (*ek-zib-ish'-un-izm*) [*exhibere*, to give]. A perversion of the sexual feeling that leads the patient to expose the genital organs.

Exhibitionist (*ek-zib-ish'-un-ist*) [*exhibere*, to give]. An insane person who wilfully and indecently exposes himself.

Exhilarant (*ek-zil'-ar-ant*) [*exhilarare*, to cheer]. An agent to enliven and cheer the mind. **E. Gas**, nitrous oxid gas.

Exhumation (*ex-hu-ma'-shun*) [*ex*, out of; *humus*, the ground]. The digging up after interment of a dead body, for examination in medico-legal inquiries, or for reinterment.

Exindusiate (*eks-in-du'-se-āt*) [*ex*, priv.; *induere*, to put on; *indusium*, the covering of the fruit-dots in ferns]. In biology, applied to such ferns as lack the indusium.

Exner's Solution. See *Stains, Table of*.

Exocardiac, or Exocardial (*eks-o-kar'-de-ak*, or *eks-o-kar'-de-al*) [ἔξω, out; καρδία, heart]. Originating or situated outside of the heart.

Exocarditis (*eks-o-kar-di'-tis*) [ἔξω, out; καρδία, heart; ιτις, inflammation]. Inflammation of the outer surface of the heart. Also a synonym of *Pericarditis*.

Exocarp (*eks'-o-karp*) [ἔξω, outside; καρπός, fruit]. In biology, the outer layer of a pericarp when the latter consists of more than one layer.

Exoccipital (*eks-ok-sip'-it-al*) [*ex*, out; *occiput*, the occiput]. Lying to the side of the foramen magnum. **E. Bone**, the neurapophysial or condyloid part of the occipital bone, with which in adult life it is consolidated.

Exocelar (*eks-o-se'-lar*) [ἔξω, outside; κοιλία, body-cavity]. In biology, situated on the outer or somatic wall of the body-cavity.

Exocelarium (*eks-o-se-la-re'-um*) [ἔξω, outside; κοιλία, body-cavity]. In biology, the epithelium of the outer wall of the body-cavity.

Exocelum (*eks-o-se'-lum*) [ἔξω, outside; κοιλία, the body-cavity]. In biology, the extra-embryonic part of the body-cavity shut off by the somatic and splanchnic stalks at the umbilicus. (Sevenka.)

Exochorion (*eks-o-ko'-re-on*) [ἔξω, outside; χορίον, chorion]. The external layer of the chorion.

Exocolitis (*eks-o-ko-li'-tis*) [ἔξω, out; κόλον, colon; ιτις, inflammation]. Inflammation of the outer or peritoneal coat of the colon.

Exocranium (*eks-o-kra'-ne-um*) [ἔξω, out; κρανίον, *cranium*]. The outer surface of the skull; the pericranium.

Exodic (*eks-od'-ik*) [ἔξω, out; ὁδός, a way]. Transmitting impulses outward from the central nervous system; efferent; centrifugal.

Exodontosis (*eks-o-don-to'-sis*). See *Exostosis of the Teeth*.

Exodyne (*eks'-o-din*) [ἔξω, out of; ὀδύνη, pain]. A mixture of acetanilid 90, sodium salicylate 5, and sodium bicarbonate 5; it is used as an anodyne.

Exogamy (*eks-og'-am-e*) [ἔξω, outside; γάμος, marriage]. The law that forbids marriage between persons of the same family. (Lang.)

Exogastritis (*eks-o-gas-tri'-tis*) [ἔξω, out; γαστήρ, belly; ιτις, inflammation]. See *Perigastritis*.

Exogen (*eks'-o-jen*) [ἔξω, outside; γενής, producing]. In biology, one of the two primary classes of flowering-plants, characterized by the growth of the stems in concentric layers; more properly called Dicotyledons.

Exogenetic (*eks-o-jen-et'-ik*) [ἔξω, outward; γεννᾶν, to produce]. Due to an external cause; not arising within the organism.

Exogenous (*eks-oj'-en-us*) [ἔξω, out; γεννᾶν, to produce]. Of the nature of an exogen; growing by accretions to the outer surface.

Exognathite (*eks-og'-nāth-īt*). See *Basecphysis*.

Exogonium (*eks-o-go'-ne-um*). See *Jalap*.

Exometritis (*eks-o-me-tri'-tis*) [ἔξω, out; μήτρα, womb; ιτις, inflammation]. Perimetritis; less correctly, parametritis. See *Metritis*.

Exomphalos (*eks-om'-fal-os*) [ἐξ, out; ὀμφαλός, navel]. Undue prominence of the navel; also, umbilical hernia.

Exoneural (*eks-o-nu'-ral*) [ἐξω, out; νεῦρον, nerve]. Occurring or situated outside of the nervous apparatus.

Exopathic (*eks-o-path'-ik*) [ἐξώ, out; πάθος, disease]. Pertaining to those causes of disease coming from without or beyond the organism. See, also, *Endopathic*.

Exoperidium (*eks-o-per-id'-e-um*) [ἔξω, outside; *peridium* (from πηρίδιον, dim. of πήρα, a leather pouch), the covering of the spore-case]. The outer peridium of a fungus having more than one, as the earth-star.

Exophoria (*eks-o-for'-e-ah*). See *Heterophoria*. **E., Pseudo-**, an outward tending of the eyes excited by lessening the activity of the accommodative centers, as when hyperopia has been corrected by convex lenses. This condition also exists in uncorrected myopia.

Exophthalmic (*eks-off-thal'-mik*) [ἐξ, out; ὀφθαλμός, eye]. Pertaining to exophthalmos. **E. Goiter.** See *Goiter*.

Exophthalmometer (*eks-off-thal-mom'-et-er*) [ἐξ, out; ὀφθαλμός, eye; μέτρον, measure]. An instrument for measuring the degree of exophthalmus.

Exophthalmos, Exophthalmus (*eks-off-thal'-mos,-mus*) [ἐξ, out; ὀφθαλμός, eye]. Abnormal prominence or protrusion of the eyeballs. **E., Pulsating,** that characterized by a bruit and pulsation, due to an aneurysm that pushes the eye forward.

Exoplasm (*eks'-o-plazm*) [ἔξω, outside; πλάσσειν, to form]. In biology, the outer protoplasm of a unicellular organism or histologic cell.

Exopodite (*eks-op'-o-dit*) [ἔξω, outside; πούς (ποδ-), foot]. In biology, the outer of the two main divisions of the typical crustacean limb or appendage. Cf. *Endopodite* and *Basecphysis*.

Exorhinus (*eks-or-i'-nus*) [ἐξω, without; ῥίς, nose]. Lissauer's term for a skull in which the angle between the lines joining the nasion and the alveolar point and rhinion is between 1° and 20.5°.

Exormia (*eks-or'-me-ah*) [ἐξορμάειν, to go forth]. Any papular skin-disease.

Exoskeleton (*eks-o-skel'-et-un*) [ἔξω, outside; σκελετόν, a dried body]. In biology, the outer envelop of many of the lower forms of life for the protection and attachment of organs, representing an integument modified by the deposition of chitin, lime, or other hardening substance. See *Dermoskeleton*.

Exosmose (*eks'-os-mōs*). See *Exosmosis*.

Exosmosis (*eks-os-mo'-sis*) [ἐξ, out; ὠσμός, thrust]. Outward osmosis. See *Endosmosis* and *Osmosis*.

Exosmotic (*eks-os-mot'-ik*) [ἐξ, out; ὠσμός, thrust]. Pertaining to or characterized by exosmosis.

Exospore (*eks'-o-spor*) [ἔξω, outside; σπόρος, seed]. In biology, the outer coat of a spore.

Exostome (*eks'-os-tōm*) [ἔξω, outside; στόμα, mouth]. In biology, the orifice in the outer coat of the ovule, or the outer peristome of a moss.

Exostosis (*eks-os-to'-sis*) [ἐξ, out; ὀστέον, bone]. Abnormal enlargement or growth of bone, especially a deposit of bony tissue upon the surface of a pre-existing bone. **E. of the Teeth,** exostosis dentium; exodontosis. An outgrowth from a tooth. The only part of a tooth subject to exostosis is the root, and the development of the affection usually commences at or near the extremity; extending from thence upward, it sometimes covers a greater or less portion of the external surface. **E., Ivory,** a bony outgrowth of extreme hardness and of small size, rarely exceeding that of a small walnut. It springs usually from the exterior of one of the cranial bones. Histologically, it is marked by the absence of Haversian canals.

Exostotic (*eks-os-tot'-ik*) [ἐξ, out; ὀστέον, bone]. Of the nature of exostosis.

Exoteric (*eks-o-ter'-ik*) [ἐξωτερικός, external]. Synonymous with *Exopathic*.

Exoterorhinus (*eks-o-ter-or-i'-nus*) [ἐξώτερος, outside; ῥίς, nose]. Lissauer's term for a skull in which the angle between the lines joining the nasion and the alveolar point and rhinion is between 22.5° and 45°.

Exotheca (*eks-o-the'-kah*) [ἔξω, outside; θήκη, a case]. In biology, the proper calcareous investment of the visceral chamber of a coral.

Exothecium (*eks-o-the'-se-um*) [ἔξω, outside; θήκη, a case]. In biology, the epidermis of the anther.

Exothyropexy (*eks-o-thi'-ro-peks-e*) [ἐξω, without; θυρεός, a shield; πῆξις, fixation]. Partial extrusion of goiter, with subsequent atrophy from constriction, cicatrization, etc.

Exotic (*eks-ot'-ik*) [ἐξωτικός, foreign]. Pertaining to plants and products from another country.

Exotropia (*eks-o-tro'-pe-ah*). See *Strabismus*.

Expansive (*eks-pan'-sif*) [*expandere*, to spread out]. Comprehensive; wide-extending. **E. Delirium,** insane over-estimation of one's mental or bodily powers. See *Exaltation*.

Expectant (*eks-pek'-tant*) [*expectare*, to look out for]. Awaiting or expecting; applied to a plan of treatment consisting in watching the progress of a disease, and not interfering with therapeutic measures, unless warranted by special symptoms.

Expectation (*eks-pek-ta'-shun*) [*expectare*, to expect]. Same as *Expectant*. **E. of Life,** the average number of years that persons of a given age, taken one with another, live, assuming that they die according to a given table of the probabilities of life. It thus has no relation to the most probable life of a single given individual. **E. of L., Complete,** the addition of one-half year to the curtate expectation to allow for that portion of a year lived by each person in the year of his death. **E. of L., Curtate,** the average number of whole or completed years lived by each person.

Expectorant (*eks-pek'-to-rant*) [*ex*, out; *pectus*, breast]. 1. Promoting expectoration. 2. A remedy that promotes expectoration.

Expectoration (*eks-pek-tor-a'-shun*) [*ex*, out; *pectus*, breast]. 1. The ejection from the mouth of saliva or material brought into it by the air-passages. 2. The fluid or semi-fluid matters from the lungs and air-passages expelled by coughing and spitting. **E., Prune-juice.** See *Prune-juice*. **E., Rusty.** See *Rusty Expectoration*.

Expellent (*eks-pel'-ent*) [*expellere*, to drive out]. A medicine that has power to expel a *materies morbi*.

Experiment (*eks-per'-im-ent*) [*experimentare*, to experiment]. A trial or test.

Experimentum (*eks-per-im-en'-tum*) [L.]. Same as *Experiment*. **E. mirabile of Kirchner,** a hypnotic phenomenon in animals, a hen, *e.g.*, remaining in a fixed position when the head is pressed down and a chalk line made from its beak.

Expert (*eks'-pert*) [*expertus*, proved]. A person especially qualified in a science or art. **E., Medical,** a physician peculiarly fitted by experience or special learning to render an authoritative opinion in medico-legal or diagnostic questions.

Expiration (*eks-pi-ra'-shun*) [*expirare*, to breathe out]. The act of breathing forth, or expelling air from the lungs.

Expiratory (*eks-pi'-rat-or-e*) [*expirare*, to breathe out]. Relating to or concerned in the expiration of air.

Expire (*eks-pīr'*) [*expirare*, to breathe out]. To breathe out; to die.

Explanate (*eks'-plan-āt*) [*explanare*, to flatten, spread out]. In biology, spread out, flattened; applied to parts usually rolled or folded.

Exploration (*eks-plor-a'-shun*) [*explorare*, to search out]. The searching out the condition of a diseased organ or part by means of auscultation, palpation, percussion, etc. Also the searching of a wound to learn its nature, course, etc., and if foreign bodies may be present. Also the examination of the female genital organs by the finger or instrument for diagnostic purposes.

Explorator, Explorer (*eks'-plor-a-tor, ex-plor'-er*) [*explorare*, to search out]. An instrument for use in exploration. **E., Electric,** an instrument for detecting a bullet by means of the electric current.

Exploratory (*eks-plor'-at-or-e*) [*explorare*, to search out]. Pertaining to exploration. **E. Puncture,** the puncture of a cavity or tumor and extraction therefrom of some of the contents to learn their nature. **E. Trocar,** one especially adapted for exploratory puncture.

Explosion (*eks-plo'-zhun*) [*explodere*, to drive away]. 1. The sudden expansion of a body of small volume into great volume, with the resulting effects. 2. The sudden and violent occurrence of any symptom or function.

Explosive (*eks-plo'-siv*) [*explodere*, to drive away]. See *Consonants*. **E. speech,** speech characterized by suddenness and explosiveness of enunciation.

Exposure (*eks-po'-zhūr*) [*exponere*, to expose]. 1. The act of laying bare, as the genitals. 2. The state of being open to some action or influence, as of cold or wet.

Expression (*eks-presh'-un*) [*expressus; exprimere*, to press out]. 1. A pressing out. The forcible separation of liquids from solids by pressure. 2. The recognizable manifestation through the facial lineaments or the voice of any subjective feeling. **E. of Fetus** or **Placenta,** assisting the expulsion of fetus or placenta by pressure upon the abdominal walls.

Expulsion (*eks-pul'-shun*) [*expulsio; expellere*, to drive out]. The act of driving out. **E., Spontaneous,** the extrusion of the fetus or the placenta without external aid.

Expulsive (*eks-pul'-siv*) [*expellere*, to drive out]. Pertaining to the extrusion or driving out of the fetus in childbirth, the voiding of the feces, urine, etc.

Exsanguination (*ek-sang-gwin-a'-shun*) [*ex*, priv.; *sanguis*, blood]. The forcible expulsion of blood from a part, as before amputation.

Exsanguine (*ek-sang'-gwin*) [*ex*, priv.; *sanguis*, blood]. Bloodless.

Exsanguinity (*ek-sang-gwin'-it-e*) [*ex*, priv.; *sanguis*, blood]. Bloodlessness; extreme pallor.

Exscinded (*ek-sin'-ded*) [*ex*, out; *scindere*, to cut]. In biology, terminating abruptly in an angular notch.

Exscreation (*ek-skre-a'-shun*) [*ex*, out; *screare*, to hawk]. The act of clearing the throat by hawking and spitting.

Exsculptate (*eks-kulp'-tāt*) [*exsculpere*, to carve out]. In biology, presenting a sculptured appearance.

Exsert, Exserted (*ek'-sert, ek-ser'-ted*) [*exserere*, to thrust out]. In biology, projecting, as a stigma beyond the anthers.

Exsertus (*ek-ser'-tus*) [L.]. Protruding; sometimes applied to teeth that protrude. See *Dens exsertus*.

Exsiccatæ, Exsiccati (*ek-sik-at'-e, -i*) [*exsiccare*, to dry up]. In biology, the dried plants of an herbarium.

Exsiccation (*ek-sik-a'-shun*) [*ex*, out; *siccus*, dry]. The process of depriving a solid of its moisture or volatile constituents by the agency of moderate heat.

Exsiccative (*ek-sik'-at-iv*) [*exsiccare*, to dry up]. 1. Having a strong drying tendency. 2. A desiccating or drying remedy or application.

Exsiccator (*ek'-sik-a-tor*) [*exsiccare*, to dry up]. A closed glass vessel containing a tray of H_2SO_4, used to dry and cool substances preparatory to weighing.

Exspuition (*eks-pu-ish'-un*) [*ex*, out; *spuere*, to spit]. Expectoration; spitting.

Exstipulate (*ek-stip'-u-lāt*) [*ex*, without; *stipula*, a stipule]. In biology, destitute of stipules.

Exstrophy (*eks'-tro-fe*) [ἐκστρέφειν, to evert]. 1. The turning of a hollow organ inside out; the state of being turned inside out. 2. Congenital absence of the anterior wall of the bladder and abdomen with extroversion of the bladder.

Exsuccation (*ek-suk-ka'-shun*) [*ex*, out; *succus*, juice]. Same as *Ecchymosis*.

Exsuccous (*ek-suk'-us*) [*ex*, without; *succus*, juice, sap]. In biology, juiceless. Also written *Exuccous*.

Exsufflation (*ek-suf-la'-shun*) [*ex*, out; *sufflare*, to blow]. Forced discharge of the breath.

Exta (*eks'-tah*) [L., *pl.*]. The viscera, especially those of the chest.

Extension (*eks-ten'-shun*) [*extendere*, to stretch out]. 1. The opposite of *flexion;* the straightening of a flexed limb by the natural and functional process; the state of a limb that is not flexed. 2. Traction made upon a fractured or dislocated limb in order to bring the parts into proper apposition. **E., Angular,** a method of reducing and maintaining old dislocations of the hip. **E., Counter-,** traction upon the trunk or the trunk-end of a fractured limb in addition to extension. **E., Double,** traction applied to both limbs in hip-joint disease, etc. **E. Stage in Labor,** one of the stages of labor, consisting in the bending of the fetal head, the occiput toward the back.

Extensor (*eks-ten'-sor*) [*extendere*, to extend]. That which stretches out or extends. **E. Muscles.** See *Muscles, Table of.* **E. Tetanus,** in general spasms the extensor muscles overcome the flexors, and the spasm thus becomes an *extensor tetanus*.

Extenuation (*eks-ten-u-a'-shun*) [*ex*, out; *tenuis*, thin]. Thinness; leanness of body; delicacy.

Extern (*eks'-tern*) [*externus*, outward]. 1. Outside; outside the gates of a hospital. 2. An out-door patient. 3. A medical student, or graduate, who attends to out-door charity cases. **E. Maternity,** a lying-in in a private house.

Externalization (*eks-tern-al-iz-a'-shun*) [*externus*, outward]. The process of externalizing, or embodying. **E. of Sensation.** See *Sensitivisation*.

Externomedian (*eks-ter-no-me'-de-an*) [*externus*, outward; *medius*, middle]. In biology, outside the median line.

Extesticulate (*eks-tes-tik'-u-lāt*) [*ex*, out; *testiculus*, a testicle]. To castrate.

Extinction (*eks-tink'-shun*) [*extinguere*, to extinguish]. Complete abeyance or final loss, as of the voice; also, incomplete loss.

Extine (*eks'-tin*) [*externus*, outside]. In biology, the outer coat of a pollen-grain. Also *Exine* (Schacht).

Extirpation (*eks-ter-pa'-shun*) [*extirpare*, to root out]. Thorough excision or out-rooting of a part, as of a gland, a tumor, the uterus, the ovaries, etc. **E. of the Eyeball,** complete removal of the globe of the eye. Enucleation.

Extra- (*eks'-trah-*) [L.]. A prefix, meaning *outside, without.* **E.-axillary,** in biology, applied to a branch or bud somewhat out of the axil. **E.-current,** the induced electric current. **E.-enteric.** In biology, perivisceral. **E.-neural,** situated or occurring outside of a nerve. A term applied to certain nervous

affections of which the true seat is more or less remote from the point which manifests the symptoms of nerve-embarrassment. **E.-ocular,** outside the eye, or eyeball; in biology, applied to those antennæ of insects that are located at a distance from the eyes. **E.-pelvic,** situated or occurring outside the pelvis. **E.-polar Region,** that lying outside the electrodes, as opposed to the **Intra-polar Region,** or **area,** that lying within or directly beneath the electrodes. **E.-uterine,** without the uterus. **E.-u. Pregnancy.** See *Pregnancy.* **E.-u. Life,** that after birth.

Extracapsularium (*eks-trah-kap-su-la'-re-um*) [*extra*, beyond, outside; *capsula*, capsule: *pl.*, *Extra-capsularia*]. In biology, that portion of a radiolarian outside the central capsule.

Extracardial (*eks-trah-kar'-de-al*) [*extra*, without; *καρδία*, heart]. Situated or occurring outside of the heart.

Extracloacal (*eks-trah-klo-a'-kal*) [*extra*, without; *cloaca*, a sewer]. In biology, situated outside the cloaca.

Extracostal (*eks-trah-kos'-tal*) [*extra*, without; *costa*, a rib]. Outside of the ribs. **E. Muscle,** any external intercostal muscle. See *Muscles, Table of.*

Extracrureus (*eks-trah-kru'-re-us*) [*extra*, outside; *crus*, a leg]. The vastus externus muscle. See *Muscles, Table of.*

Extract, Extractum (*ex'-trakt, -trakt'-um*) [*extractus; extrahere*, to extract: *pl.*, *Extracta*]. In pharmacy, a solid or semi-solid preparation, made by extracting the soluble principles of a drug and evaporating the solution to a proper consistence. Alcohol and water are the most common solvents. There are 33 official extracts. **E., Alcoholic,** that in which alcohol is the solvent. **E., Aqueous,** that prepared by using water as the solvent. **E., Fluid,** in pharmacy, an alcoholic or hydro-alcoholic solution of the solid principles of a vegetable drug, of such strength that 1000 grams of the drug are fully represented by one liter of the fluid extract. There are 88 official fluid extracts, besides 53 in the *N. F.*

Extraction (*ex-trak'-shun*) [*extractio; ex*, out; *trahere*, to draw]. The drawing out of a body, as a calculus, a fetus, or a tooth. Also, the pharmaceutic process of making an extract, chiefly by the action of some menstruum, as alcohol, ether, or water. **E. of Cataract,** removal of the cataractous lens by surgical operation. The methods proposed or practised are almost numberless. **Daviel's Method,** improved by *Beer*, consists in making a semicircular flap (upward in Daviel's, downward in Beer's) in the cornea, or at the margin, with rupture of the capsule and expression of the lens. This method is being revived and, with modification, adopted by a large number of modern operators, and is called the **Flap-extraction.** The **Discission-operation** is used in soft cataract, and consists in introducing a needle, whereby the capsule is broken and the aqueous humor gains access to the lens-substance, which is then absorbed or removed by suction. In **v. Graefe's Peripheral Linear Method,** the Graefe lance-knife enters the sclerotic 1.5 mm. from the corneal border, and 2 mm. below the horizontal tangent of the upper border of the cornea, and is at first directed downward, but the counterpuncture is finally made opposite the point of puncture. The cut upward is then made parallel to the plane of the iris, followed by an iridectomy, capsulotomy, and expression of the lens. The change in **v. Graefe's Modified Linear Extraction** consists chiefly in bringing the section to the corneo-scleral junction. **Needling,** or the **needle-operation.** See *Discission.* The **Simple Method,** now advocated by many ophthalmic surgeons, consists in a flap-forming section and an omission of the iridectomy. The **Suction Method** consists in the extraction of soft cataracts by sucking the lenticular matter through a syringe nozzle introduced into the lens-substance, or by other methods. See *Operations, Table of.*

Extractive (*eks-trak'-tiv*) [*ex*, out; *trahere*, to draw]. 1. In pharmacy, a substance which, during the process of making an extract from a vegetable or drug of vegetable origin, becomes dark, and finally insoluble. 2. Any one of a class of nitrogenous bodies (such as creatin and xanthin) that may be extracted in small amount from various animal tissues. By some writers they are classed as protein compounds.

Extractor (*eks-trak'-tor*) [*ex*, out; *trahere*, to draw]. An instrument for extracting bullets, sequestræ, etc. **E., Screw,** one armed with a screw-attachment; a *tirefond.*

Extractum (*eks-trak'-tum*). See *Extract.* **E. ferri pomatum,** or **E. pomi ferratum,** ferrated extract of apples; official in the German Pharmacy and given in the National Formulary; it is an extract of sour apples, 50 parts, with iron one part. It contains a crude malate of iron.

Extrafloral (*eks-trah-flo'-ral*) [*extra*, outside; *flos*, a flower]. In biology, placed without the flower.

Extrafoliaceous (*eks-trah-fo-le-a'-she-us*) [*extra*, outside; *folium*, leaf]. In biology, separated from the leaves.

Extralimital (*eks-trah-lim'-it-al*)[*extra*, outside; *limes*, bounds, limit]. In biology, not included in a given area, either on the surface of a plant or animal, or on the earth's surface.

Extramalleolus (*eks-trah-mal-e'-o-lus*) [*extra*, without; *malleolus*, a small hammer]. The outer malleolus of the ankle.

Extrambulacral (*eks-tram-bu-la'-kral*) [*extra*, without; *ambulacrum*, a walk, alley]. In biology, located outside the ambulacra.

Extramedullary (*eks-trah-me-dul'-ar-e*) [*extra*, without; *medulla*, marrow]. Situated or occurring outside of the medulla.

Extraneous (*eks-tra'-ne-us*) [*extraneus*, external]. Existing or belonging outside the organism. **E. Body,** a foreign or intrusive body, present within the organism.

Extraordinary (*eks-tror'-din-a-re*) [*extra*, beyond; *ordo*, rule]. Out of the common; special. **E. Ray.** See *Ray.*

Extrathecal (*eks-trah-the'-kal*) [*extra*, outside; *theca*, box, case]. In biology, located outside the theca.

Extravasation (*eks-trav-as-a'-shun*) [*extra*, outside; *vas*, a vessel]. Filtration or effusion of blood, serum or fluid from any vessel into adjacent tissues.

Extraversio gonadum (*eks-trah-ver'-ze-o go-na'-dum*) [L.]. In biology, pendent external gastro-genital pouches in certain *Medusæ.*

Extremital (*eks-trem'-it-al*) [*extremus*, outermost]. Situated towards, or pertaining to, an extremity; distal.

Extremity (*eks-trem'-it-e*) [*extremus*, outermost]. An arm or leg; the distal or terminal end or part of any organ; a hand or foot.

Extricate, Extricated (*eks'-trik-āt, -a'-ted*) [*extricare*, to disentangle]. In biology, applied to the normally extruded parts of certain insects, as the ovipositors.

Extrinsic (*eks-trin'-sik*) [*extrinsicus*, from without]. External, outward. **E. Muscles,** those attached to the trunk and extending to the limbs.

Extrorse (*eks-trors'*) [*extrorsus*, toward the outside]. In biology, turned outward or away from the body or central axis.

Extroversion (*eks-tro-ver'-shun*). See *Exstrophy.*

Extubation (*eks-tu-ba'-shun*) [*ex*, out; *tubus*, a pipe]. The removal of a laryngeal tube; opposed to intubation.

Extuberance (*ex-tu'-ber-ans*) [*ex*, out; *tuber*, mass]. A swelling or protuberance.

Extumescence (*eks-tu-mes'-ens*) [*ex*, out; *tumescere*, to swell]. A projection or swelling.

Exuber (*ex-u'-ber*) [*ex*, from; *uber*, breast: *pl.*, *Exuberes*]. A weaned child. Cf. *Sububer*.

Exudate (*eks'-u-dāt*) [*exudare*, to sweat]. Material that has filtered through the walls of vessels into the adjacent tissues.

Exudation (*eks-u-da'-shun*) [*exudare*, to sweat]. Filtration or oozing of the serum of the blood through the walls of the vessels; a mass formed by such filtration.

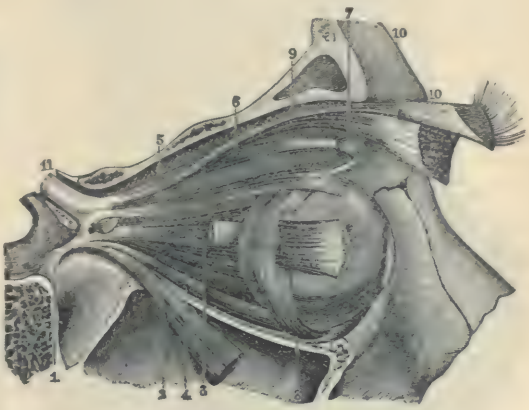
Exudative (*eks'-u-da-tiv*) [*exudare*, to exude]. Of the nature of or characterized by exudation.

Exulceration (*eks-ul-ser-a'-shun*) [*ex*, out; *ulcerare*, to ulcerate]. A superficial ulceration.

Exumbilication (*eks-um-bil-ik-a'-shun*) [*exumbilicatio*; *ex*, out; *umbilicus*, navel]. Marked protrusion of the navel.

Exumbral (*eks-um'-bral*) [*ex*, out; *umbra*, shade]. In biology, all those parts lying above the free margin of the umbrella of Medusæ; the opposite of *subumbral*.

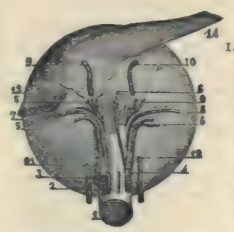
Exumbrella (*eks-um-brel'-ah*) [*ex*, out; *umbrella*, the disc of acalephs]. In biology, the convex outer surface of the umbrella in *Medusæ*.



Exuviæ (*eks-u'-ve-e*) [L.]. Cast-off matters; shreds of epidermis; also, sloughed materials.

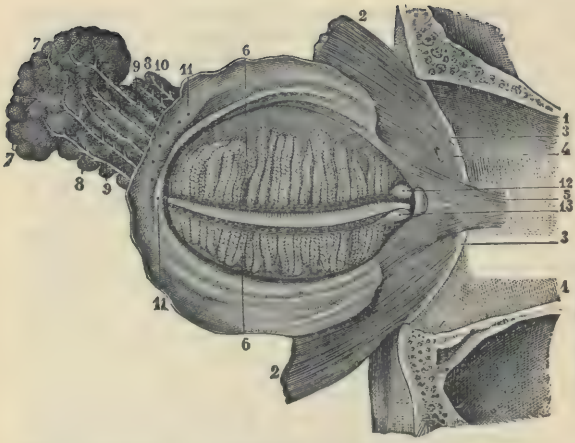
Exuviate (*eks-u'-ve-āt*) [*ex*, out; *uere*, to put on; from *induviæ*, clothes]. To moult, shed, or slough off skin, shells, hairs, or feathers of animals.

Exuviation (*eks-u-ve-a'-shun*) [*exuviæ*, slough; *exuere*, to put off]. The shedding of the deciduous teeth, or other epidermal part.



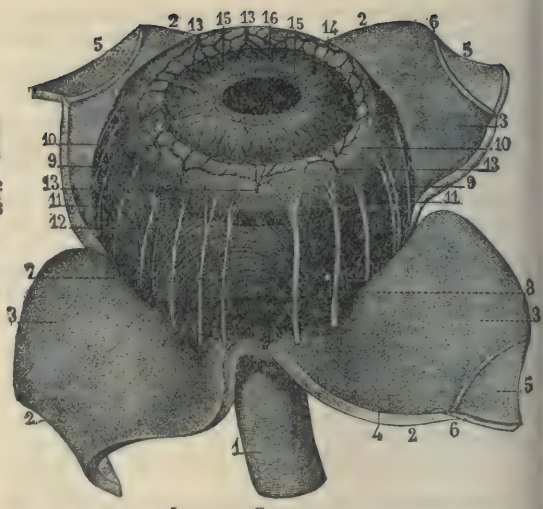
Eyckmann's Test. See *Tests, Table of.*

Eye (*i*) [ME., *eye*]. The organ of vision. **E., Accommodation of.** See *Accommodation*. **E., Appendages of,** the eyelids, brows, and lachrymal apparatus. **E., Apple of,** formerly the eyeball; the pupil. **E., Artificial,** a thin shell of glass, celluloid, or other substance, colored like the natural eye, placed in the socket after enucleation. **E., Compound,** the organ of vision formed of several crystal spheres, as in the lower crabs. **E., Diagrammatic, of Listing,** a diagram of the eye for the more exact calculation of the passage of rays of light through the eye. **E., Pineal** or **Epiphysial,** the rudimentary median eye in some lizards. **E., Schematic,** an ideal or normal eye. **E.-ball,** the globe of the eye. **E.-ball, Dislocation of.** See *Dislocation*. **E.-bone,** a sclerotal, *q. v.* **E.-bright.** See *Euphrasia*. **E.-brow,** the supercilium, the connective tissue, skin, and hairs above the eye. The hairs serve chiefly to prevent the sweat from falling into the eye. **E.-cells,** cup-shaped cells of porcelain, enameled black, to place over the eye after operations. **E.-current,** the normal electric current that passes from the cornea (positive) to the optic nerve (negative) under the stimulus of light. **E.-doctor,** an oculist. **E.-drops.** See *Collyrium*. Also an old name for tears. **E.-glass,** a lens worn in one eye. *Eye-glasses, pince-nez,* worn instead of spectacles, and held in position by a spring acting upon the bridge of the nose. **E.-ground,** a synonym of the fundus oculi or internal aspect of the vitreous chamber of the eye. **E.-lashes,** the cilia; the hairs of the eyelid. **E.-lashes, Evulsion of,** pulling out the lashes. **E.-lashes, Transposition of,** shifting an excised strip of cilia and lid-edge containing the hair-bulbs to a new position, or otherwise altering the direction of the lashes by operation. **E.-lens,** the lens of a microscope to which the eye is applied; an eye-piece. **E.-lid,** the protective covering of the eyeball, composed of skin, glands, connective and muscular tissue, the tarsus and conjunctiva, with the cilia at the free edge. **E.-lid Closure.** See *Reflexes, Table of*. **E.-piece.** Synonym of *Ocular*. **E.-point,** the point above an ocular or simple microscope where the greatest number of emerging rays cross. **E.-salve,** a medicated salve for the eyes. **E.-shade, Ward's,** a circular disc of black rubber connected by an arm with the tube of the microscope. It enables the observer to keep both eyes open. **E.-speculum,** an instrument for retracting the eyelids. **E.-stone,** a small calcareous disc, the operculum of various Gasteropod molluscs (Turbinidæ); or sometimes a flattened concretion from the stomach of a European crawfish (*Lapillus cancri*). In domestic practice it is placed under the eyelid for the removal of a foreign body that has found its way into the eye. **E.-strain,** the excess and abnormalism of effort, with the resultant irritation, caused by ametropia or heterophoria. It is applied also to the effects of excessive use of normal eyes. **E.-souffle,** a murmur said to be heard in anemia by means of the stethoscope on the globe of the eye. **E.-teeth,** the canine teeth of the upper jaw; dog-teeth. **E.-wash,** a medicated water for the eye; a collyrium. **E.-water,** a collyrium; also the aqueous humor. **E.-winker,** an eyelash.



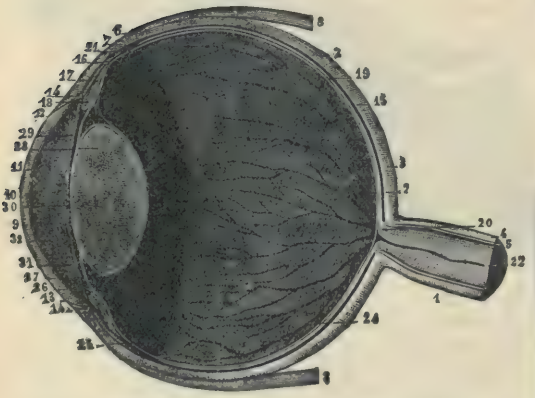
Muscles of the Eye. Tendon or Ligament of Zinn.

1. Tendon of Zinn. 2. External rectus divided. 3. Internal rectus. 4. Inferior rectus. 5. Superior rectus. 6. Superior oblique. 7. Pulley for superior oblique. 8. Inferior oblique. 9. Levator palpebræ superioris. 10, 10. Its anterior expansion. 11. Optic nerve.



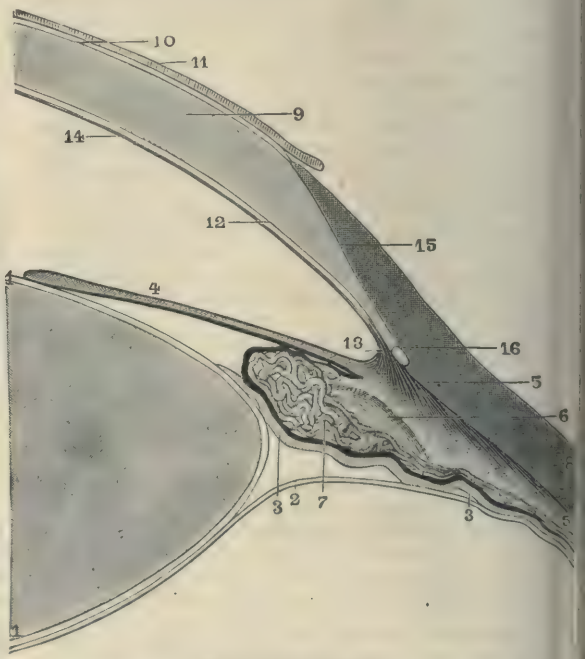
Posterior Hemisphere of the Globe of the Eye.

1. Optic nerve. 2. Central artery of the retina. 3. Short, posterior, and external ciliary arteries. 4. Short, posterior, and internal ciliary arteries. 5, 5, 6, 6, 6. External and internal posterior ciliary arteries. 7. Posterior long ciliary artery, and long ciliary nerve. 8. Artery and nerve of opposite side. 9, 10. Superior and external choroid veins. 11, 12. Inferior choroid veins. 13. Attachment of inferior oblique muscle. 14. Tendon of superior oblique.



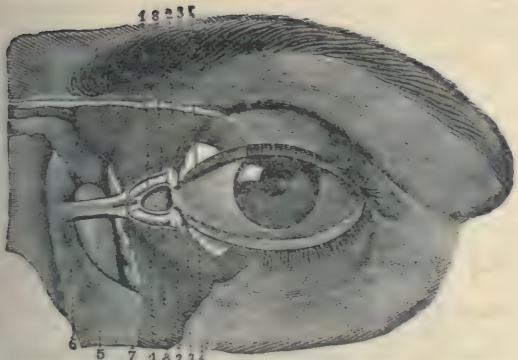
THE LACRYMAL AND MEIBOMIAN GLANDS, AND ADJACENT ORGANS OF THE EYE.

1, 1. Inner wall of orbit. 2, 2. Inner portion of orbicularis palpebrarum. 3, 3. Attachment to circumference of base of orbit. 4. Orifice for transmission of nasal artery. 5. Muscle of Horner (tensor tarsi). 6, 6. Meibomian glands. 7, 7. Orbital portion of lacrymal gland. 8, 9, 10. Palpebral portion. 11, 11. Mouths of excretory ducts. 12, 13. Lacrymal puncta.



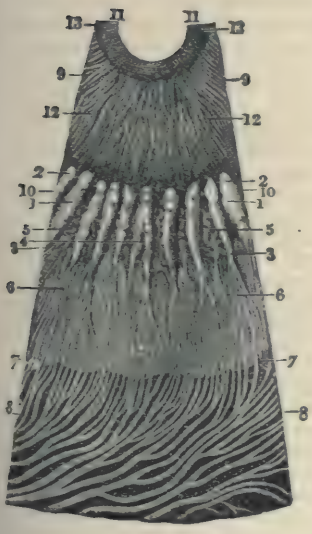
IRIS AND CHOROID.

1. Optic nerve. 2, 2, 2, 2. Sclerotic, divided in four equal parts and turned back. 3, 3. Pigmentary granulation of its inner layer. 4. Section of lamina fusca. 5, 5, 5, 5. Cornea, divided in four equal parts. 6, 6. Canal of Schlemm 7. Outer surface of choroid. 8. Superior and internal trunk of vasa vorticosa. 9, 9. Irregular border limiting the choroid zone posteriorly. 10, 10. Anterior half of this zone; ciliary muscle. 11, 11. Ciliary nerves 12. Long ciliary artery. 13, 13, 13, 13. Anterior ciliary arteries. 14. Iris. 15. Small arterial circle of iris. 16. Pupillary orifice.



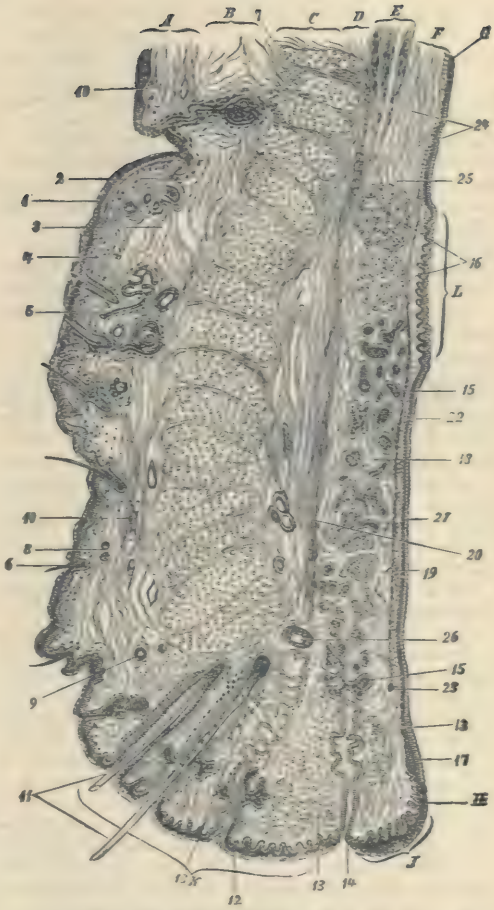
VERTICAL SECTION OF EYE IN ITS ANTERO-POSTERIOR AXIS.

1. Optic nerve. 2. Middle portion of sclerotic. 3. Posterior portion. 4. External of optic nerve 5. Internal tunic. 6. Sclerotic beneath insertion of superior rectus. 7. Sclerotic in advance of insertion of superior rectus. 8, 8. Superior and inferior recti. 9 Cornea. 10. Its central portion. 11. Posterior elastic lamina. 12. Junction of cornea and sclerotic superiorly. 13. Inferior junction. 14, 14. Canal of Schlemm. 15. Choroid. 16. Choroidal zone and ciliary processes. 17. Ciliary muscle. 18. Ciliary body. 19. Retina. 20. Origin of retina. 21. Its anterior limit. 22. Central artery of retina. 23. Branches of central artery. 24. Hyaloid membrane. 25. Zone of Zinn. 26. Posterior wall of canal of Petit, formed by hyaloid membrane. 27. Anterior wall of same canal, formed by the zone of Zinn. 28. Crystalline lens. 29. Iris. 30. Pupil. 31. Posterior chamber. 32. Anterior chamber.



THE CILIARY MUSCLE.

1, 1. Crystalline lens. 2. Hyaloid membrane. 3, 3 Zone of Zinn. 4. Iris. 5, 5. Radiating portion of ciliary muscle. 6. Section of circular portion. 7. Venous plexus of a ciliary process. 8. Sclerotic. 9. Middle layer of cornea. 10. Anterior hyaline layer of cornea. 11. Epithelial covering of this layer. 12. Posterior hyaline layer of the cornea, or membrane of Descemet. 13. Fibers in which this layer terminates, or ligamentum pectinatum 14. Epithelial covering of posterior hyaline layer. 15. Junction of sclerotic and cornea. 16. Section of canal of Schlemm.



RELATIONS OF THE EYE AND THE LACRYMAL EXCRETORY APPARATUS.

1, 1. Canaliculi. 2, 2. Puncta lacrymalia. 3, 3. Inner extremity of tarsal cartilage. 4, 4. Free borders of lids. 5. Lacrymal sac. 6. Attachment to maxillary bone of superior tendon. 7. Bifurcation of lacrymal sac. 8, 8. Two branches.

SECTION OF CILIARY BODY AND IRIS.

1, 1. Ciliary processes. 2, 2. Their base or rounded extremity. 3, 3. Their apex. 4. A process with bifurcated extremity. 5, 5. Reticulated folds, or ciliary processes of the second order. 6, 6. Venules that emanate from these. 7, 7. Ora serrata of choroid. 8, 8. Veins of choroid. 9. Section of iris. 10, 10. Circumference of iris. 11, 11. Small ring of iris. 12, 12. Large ring of iris.

VERTICAL SECTION THROUGH THE UPPER EYELID.

A. Cutis. 1. Epidermis. 2. Corium. B, 3. Subcutaneous connective tissue. C, 7. Orbicularis muscle. D. Loose submuscular connective tissue. E. Insertion of H. Müller's muscle. F. Tarsus. G. Conjunctiva. J. Inner; K. Outer edge of the lid. 4. Pigment cells. 5. Sweat-glands. 6. Hair follicles. 8, 23. Sections of nerves. 9. Arteries. 10. Veins. 11. Cilia. 12. Modified sweat-glands. 13. Circular muscle of Riolan. 14. Meibomian gland. 15. Section of an acinus of the same. 16. Posterior tarsal glands 18, 19. Tissue of the tarsus. 20. Pretarsal or submuscular connective tissue. 21, 22. Conjunctiva, with its epithelium. 24. Fat. 25. Loosely-woven posterior end of the tarsus. 26. Section of a palpebral artery.

F

F. Abbreviation of *Fahrenheit;* also of *Fac.*, make, and of *Fiat*, let there be made.

Fl., or **Fld.** Abbreviation of *Fluid.*

Ft. Abbreviation of *Fiat*, let there be made.

Faam (*fah-ahm'*) [native Asian]. The plant *Angræcum fragrans*, used in Asia and in France as a substitute for tea.

Faba Ignatii (*fa'-bah ig-na'-she-i*). See *Ignatia.*

Fabella (*fa-bel'-ah*) [dim. of *faba*, a bean]. A sesamoid fibro-cartilage or small bone occasionally developed in the gastrocnemius muscle at the posterior aspect of the knee-joint.

Fabiana (*fa-be-an'-ah*). See *Pichi.*

Face (*fās*) [*facies*, the face]. A name applied to the lower and anterior part of the head, including the eyes, nose, mouth, cheeks, lips, etc. **F.-ache.** See *Tic douloureux.* **F., Hippocratic.** See *Facies.* **F.-plug,** a small layer of cerumen lying on the membrana tympani. **F.-presentation,** a presentation of the fetal face in labor.

Facet (*fas'-et*) [Fr., *facette*, a little face]. A small plane surface. The articulating surface of a bone. Also, the flat surface occasionally seen on calculi, caused by friction upon each other. In biology, a segment of the compound eye of an insect.

Facial (*fa'-shal*) [*facialis*, of the face]. Pertaining to the face, as *facial* paralysis. **F. Angle,** the divergence between a line drawn from the upper jaw tangent to the forehead, and another to the external auditory foramen. **F. Artery.** See *Arteries, Table of.* **F. Nerve.** See *Nerves, Table of.* **F. Palsy,** or **Paralysis.** See *Paralysis.* **F. Spasm.** See *Spasm.* **F. Trophoneurosis.** Synonym of *Atrophy, Progressive Unilateral Facial.* **F. Vein.** See *Vein.*

Facies (*fa'-she-ēz*) [L., face]. Appearance, especially that of the face. **F., Cardiac,** an anxious expression occasionally seen in the early stages of chronic valvular disease. **F. hepatica,** a peculiar earthy appearance of the face, often observed in organic disease of the liver. **F. hippocratica,** the Hippocratic countenance, indicative of the rapid approach of dissolution; the nose seems pinched, the temples hollow, the eyes sunken, the ears leaden and cold, the lips relaxed, the skin livid. **F. ovarina,** the characteristic expression of women suffering from ovarian disease. The features are emaciated and sunken, the expression anxious, the forehead furrowed, the eyes hollow, the nostrils open and sharply defined, the lips long and compressed, the angles of the mouth depressed, with wrinkles encircling them. **F. stupida,** the typhoid face.

Factitious (*fak-tish'-us*) [*factitius; facere*, to make]. Made by art. Artificial, as factitious teeth, etc.

Facultas (*fak-ul'-tas*) [L.]. See *Faculty.*

Facultative (*fak'-ul-ta-tiv*) [*facultas*, capability]. Pertaining to acquired power. Possessing a power that is only incidentally or occasionally exercised. In bacteriology, amphibious as to oxygen, or capable of living either with or without free oxygen. **F. aërobia.** See *Aërobia.* **F. anaërobia.** See *Anaërobia.* **F. Hyperopia,** a division of manifest hyperopia. **F. Parasite,** applied to such a bacterium, dipterous larva, etc., as may at times play the part of a parasite. **F. Saprophyte,** applied to a fungus that is normally non-parasitic but occasionally parasitic.

Faculty (*fak'-ul-te*) [*facultas*, capability]. A special action of the mind through the instrumentality of an organ or organs; any function, particularly any acquired, modified, or facultative function. Also, the corps of professors and instructors of a university and its colleges. **F., Medical,** the corps of professors and instructors of a medical college.

Fæcal, Fæces (*fe'-kal, fe'-sēz*). See *Fecal, Feces.*

Fæcula (*fek'-u-lah*). See *Fecula.*

Fæx (*feks*) [L., "lees": *pl.*, *Fæces*]. The dregs or sediment of any liquid. **F. sacchari,** treacle or molasses.

Fag [origin uncertain]. Exhaustion; tire. See *Brain-fag.*

Fagara (*fag-a'-rah*) [L.]. The genus *Xanthoxylon*, *q. v.*

Fagin (*fa'-jin*) [*fagus*, a beech-tree]. A principle contained in the husks of the nuts of the common beech (*Fagus*). It is said to be poisonous and narcotic.

Fagopyrum (*fag-o-pi'-rum*). See *Buckwheat.*

Fagus (*fa'-gus*) [L., "beech-tree:" *gen.*, *Fagi*]. A genus of cupuliferous trees; the beeches. **F. sylvatica,** the common beech. The bark is said to be antipyretic, the nuts anthelmintic and anticalculous. Unof.

Faham (*fah'-ahm*). Same as *Faam.*

Fahrenheit's Thermometer. See *Thermometer.*

Faint (*fānt*) [*fingere*, to feign; ME., *faynt*, weak]. A condition of languor. Also, a state of syncope or swooning.

Fainting (*fānt'-ing*) [*fingere*, to feign; ME., *faynt*, weak]. A swoon; the act of swooning. **F. Sickness.** Synonym of *Epilepsy.*

Faintness (*fānt'-nes*). See *Syncope.*

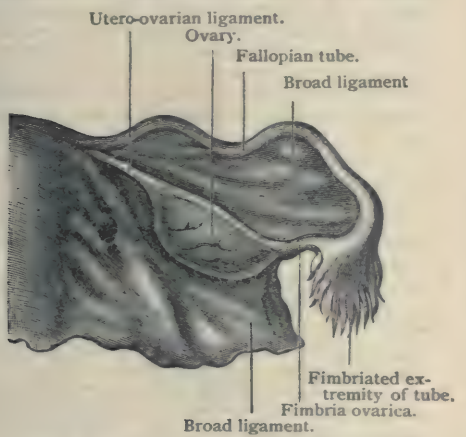
Faith-cure (*fāth'-kūr*). The system or practice of attempting or pretending to cure diseases by religious faith and prayer alone. "It differs from mind-cure, in that the faith-curers have no mind, while the mind-curers have no faith." **F.-doctor.** See *F.-healer.* **F.-healer,** one who practises the faith-cure.

Falcate (*fal'-kāt*) [*falx*, a sickle]. In biology, sickle-shaped.

Falcial (*fal'-se-al*) [*falx*, a sickle]. Relating to the falx cerebri.

Falcicula (*fal-sik'-u-lah*). See *Falcula.*

Falciform (*fal'-sif-orm*) [*falx*, a sickle; *forma*, form]. Having the shape of a sickle. **F. Ligament.** See *Ligament.* **F. Process,** a process of the dura mater that separates the hemispheres of the brain; the falx. See also *Ligament, Femoral, of Hey.*



Falcula (*fal'-ku-lah*) [dim. of *falx*, a sickle]. The falx cerebelli.

Fall (*fawl*) [ME., *fallen*, to fall]. To be dropped in birth, as a lamb. **F.-drink,** a Swiss and German cordial, of exceedingly varied composition and flavored with many aromatic and other herbs, as arnica, achillea, asperula, etc. It is regarded as a sovereign remedy for bruises and the effects of falls. Unof. **F. Fever.** Synonym of *Typhoid Fever, q. v.* **F.-rhéotome,** an arrangement whereby a weight injures a muscle, and at the same time breaks and makes a galvanometer circuit; by this instrument it was shown that the demarcation-current took a certain time to develop.

Fallacia (*fal-a'-se-ah*) [L.]. An insane delusion; an hallucination. **F. auditoria,** a delusion as to hearing. **F. optica,** any visual illusion.

Falling (*fawl'-ing*) [ME., *fallen*, to fall]. Dropping; losing one's equilibrium. **F.-sickness,** a common term for epilepsy. **F. of Womb.** See *Uterus* and *Prolapsus.*

Fallopian (*fal-o′-pe-an*) [*Fallopius*, an Italian anatomist]. Of or pertaining to Fallopius. **F. Artery.** See *Arteries, Table of.* **F. Tubes.** See *Oviducts.*

RIGHT FALLOPIAN TUBE. (*After Morris.*)

Fallopius, Aqueduct of. See *Aqueduct.* **F., Arch of.** See *Arch.* **F., Canal of.** See *Aqueduct.* **F., Hiatus of,** an opening in the petrous portion of the temporal bone, for the transmission of the petrosal branch of the Vidian nerve.

Fallow Wards. Certain wards in hospitals that are occasionally cleared of patients and are then temporarily disused.

False (*fawls*) [*falsus*, deceptive]. Not genuine. Feigning or closely counterfeiting. **F. Amnion,** the vesicula serosa, which disappears as the chorion is developed. **F. Ankylosis,** ankylosis due to rigidity of the soft tissues. **F. Bittersweet.** See *Climbing Staff-tree.* **F. Conception.** See *F. Germ.* **F. Germ,** a mole, *q. v.* **F. Gromwell,** the root of *Onosmodium virginianum*, reputed to be tonic and diuretic. Dose of the fld. ext. ♏xv–℥ss. Unof. **F. Hearing.** See *Pseudacousma.* **F. Image,** the image of the deviating eye, in diplopia. **F. Joint,** a result of non-union of a fractured bone. **F. Measles.** Synonym of *Rötheln*, *q. v.* **F. Membrane,** a fibrinous exudate upon a surface, as the fauces. **F. Pains,** pains that precede true labor-pains. **F. Passage,** a passage formed by the laceration of any canal, *e. g.*, the urethra, caused by the forcible introduction of a catheter or other instrument in the wrong direction. **F. Pelvis,** the portion of the pelvic cavity situated above the linea ileo-pectinea. **F. Peritonitis,** hysterical manifestations simulating peritonitis. **F. Pneumonia,** peripneumonia notha. **F. Pox.** Synonym of *Varicella.* **F. Ribs.** See *Ribs.* **F. Water,** a collection of fluid in catarrhal endometritis.

Falsetto (*fawl-set′-o*) [Ital.]. A voice both high-pitched and peculiarly modified as to quality; the highest register of the human voice. It is more obvious in the male than in most female voices.

Falsification (*fawl-sif-ik-a′-shun*) [*falsus*, deceptive; *facere*, to make]. The fraudulent adulteration of foods or medicines; counterfeiting.

Falx (*falks*) [L.]. A sickle. Same as *Falx cerebri.* In biology, variously used to designate falciform structures; *e. g*, the poison-fangs of a serpent or the cheliceræ of a spider. **F. cerebelli,** the falcula; a sickle-like process between the lobes of the cerebellum. **F. cerebri,** the sickle-like process of the dura, separating the hemispheres of the cerebrum.

Famelic (*fam-el′-ik*) [*famelicus*, hungry]. Marked by extreme hunger; effective in overcoming the sensation of hunger.

Famelica (*fam-el′-ik-ah*) [*famelicus*, hungry]. Febris famelica; fever accompanied by hunger.

Fames (*fa′-mēz*) [L.]. Hunger. **F. bovina,** bulimia. **F. canina** ("dog-hunger"), bulimia. **F. lupina,** ("wolf-hunger"), extreme bulimia.

Family (*fam′-il-e*) [*familia*, a household]. The persons belonging to a household. In biology, a class of genera similar in organic structure. **F. Ataxia.** See *Paramyoclonus multiplex.* **F. Diseases,** those diseases that are hereditary.

Famine (*fam′-in*) [*fames*, hunger]. Severe and continued hunger. Also, a general scarcity of food, which results in the starvation of many people. **F. Bread,** a lichen, *Umbilicaria arctica*, found in frozen regions, and serviceable, in extremity, as human food. **F. Fever.** Same as *Relapsing Fever*, *q. v.*

Fanaticism (*fan-at′-is-izm*) [*fanaticus*, pertaining to a temple]. Perversion and excess of the religious sentiment. It often trenches upon the domain of insanity; and is sometimes an outcome, at other times a cause, of mental disease.

Fang [ME., *feng*, a catch]. In biology, any prehensile part or organ. See *Teeth.*

Fantome (*fan′-tum*). See *Phantom.*

Far [E. dial.]. The young of swine; a litter of pigs.

Far [ME., *fer*, at a distance]. At a distance. **F. Point.** See *Punctum remotum.* **F.-sightedness,** a colloquial term for *Hypermetropia.*

Farabeuf's Operation. See *Operations, Table of.*

Farad (*far′-ad*) [after Michael *Faraday*, a chemist]. The unit of electric capacity. Practically a capacity sufficient to hold one coulomb of current having a potential of one volt. The micro-farad, $\frac{1}{1000000}$ of the theoretic farad, is commonly used. A practical form of condenser of one farad capacity consists of 300 leaves of tinfoil, each 16 centimeters in diameter, separated by leaves of mica. The entire surface is about of 1.1 sq. meters area. See *Electric Units.*

Faradic (*far-ad′-ik*) [named from its discoverer, Michael Faraday]. Pertaining to induced electric currents. **F. Current,** the induced electric current. See *Current.* **F. Induction** is brought about by a current of electricity passing through a wire exciting a wave of electricity in a second wire placed near or parallel with it at the instant of opening and closing the circuit.

Faradimeter (*far-ad-im′-et-er*) [*Faraday*; μέτρον, a measure]. An instrument for measuring the strength of an induced electric current.

Faradism (*far′-ad-izm*) [after Michael Faraday, a chemist]. 1. Induced electricity. 2. The application of induced currents to the treatment of disease.

Faradization, or Faradism (*far-ad-iz-a′-shun*, or *far′-ad-izm*) [after Michael Faraday, a chemist]. The application of the induced current to a diseased part, or for disease.

Farado-puncture (*far-ad-o-punkt′-chūr*) [*Faraday*; *punctura*, a puncture]. The passage of a faradic current into the tissues by acupuncture.

Farcimen (*far-si′-men*) [*farciminum*, farcy: *pl.*, *Farcimina*]. Farcy; also, a farcy-bud.

Farcin (*far′-sin*) [Fr.]. Same as *Farcy.*

Farcinia (*far-sin′-e-ah*). Synonym of *Equinia.*

Farcinoma (*far-sin-o′-mah*) [*farciminum*, farcy; ὄμα, a tumor: *pl.*, *Farcinomata*]. A farcy-bud, or glanderous tumor; less correctly, farcy, or glanders.

Farctus (*fark′-tus*) [L., a "stuffing"]. Emphraxis; congestion; infarction.

Farcy (*far′-se*). See *Equinia* and *Bacillus of Nocard*, under *Bacteria, Synonymatic Table of.* **F.-bud,** or

F.-button. A nodular swelling in the course of a lymphatic vessel in glanders.

Fardel-bound (*far'-del-bownd*) [*fardel*, a load; ME., *bounden*]. 1. A term applied to neat cattle or sheep affected with inflammation of the abomasum, or of the omasum, with impaction of food in the latter. Fardel-bound cattle are said to have "lost the cud."

Farding-bag (*far'-ding-bag*). The first stomach of a ruminant animal; the paunch or rumen.

Farfara (*far'-far-ah*). See *Coltsfoot.*

Farina (*far-ē'-nah*) [*farina*, meal]. The ground or powdered fecula of seeds, especially that of corn, barley, rye, and wheat. In biology, applied to the pollen of flowers, and to the powdery substance found on certain insects.

Farinaceous (*far-in-a'-she-us*) [*farina*, meal]. Having the nature of or yielding flour. Also, applied to very fine furfuraceous exfoliations.

Farinose (*far'-in-ōs*) [*farina*, meal]. In biology, covered with a flour-like powder, as certain leaves and insects.

Farrant's Solution. See *Mounting Fluids*, and *Media.*

Farre's Tubercles. See *Signs and Symptoms, Table of.*

Farriery (*far'-yer-e*) [*ferraria*, pertaining to iron]. The art of treating the diseases of horses; veterinary surgery.

Farrow (*far'-o*) [ME., *farh*, *faren*, a little pig]. 1. A little pig. 2. To bring forth, as pigs.

Fascia (*fash'-e-ah*) [*fascia*, a band: *pl.*, *Fasciæ*]. The membranous, fibrous covering of muscles and other organs. In biology, applied to any broad, transverse band of color on the hair, feathers, scales, or stems. **F., Anal.** See *F., Ischio-rectal.* **F. of Arm** (*Brachial*), invests the muscles of the arm attached to the clavicle, acromion, and spine of the scapula. **F., Cervical, Deep,** invests the muscles of the neck and encloses the vessels and nerves. **F., Cervical, Superficial,** that just beneath the skin. **F., Cloquet's.** See *Septum crurale.* **F., Cranial,** a firm, dense layer, adherent to the skin and occipito-frontalis muscle. **F., Cremasteric,** forms a looped, thin covering of the spermatic cord. **F., Cribriform,** the sieve-like covering of the saphenous opening. **F. dentata,** a serrated band of cinerea of the hippocampal gyrus of the cerebrum. **F. of the Dorsum of the Foot,** forms a sheath for the dorsal tendons of the foot. **F., Iliac,** lines the back part of the abdominal cavity, covering the psoas and iliacus muscles. **F., Infundibuliform,** the funnel-shaped membrane enclosing the spermatic cord and testis in a distinct pouch. **F., Intercolumnar,** from the margins of the external abdominal ring, forming a sheath for the cord and testis. **F., Intercostal,** a thin, firm layer of fascia covering the outer surface of the external intercostal and the inner surface of the internal intercostal muscles. **F., Ischio-rectal,** covers the perineal aspect of the levator ani muscle. **F. lata,** the dense fibrous aponeurosis surrounding the thigh, called the *Deep F. of the Thigh.* **F., Deep, of Leg,** continuous with the last, surrounds the leg. **F., Lumbar,** the posterior aponeurois of the transversalis muscle, divided into three layers. **F. of Mamma,** part of the superficial fascia of the thorax, which divides into two layers, one passing in front, and one behind the mamma. **F. nodosa,** *Packer's Knot*, a knotted bandage formerly used to make compression over the temporal artery. **F., Obturator,** continuation of the pelvic, surrounding the obturator muscle. **F., Pelvic,** lines the cavity of the pelvis, continuous with the transversalis and the iliac fascia. **F., Perineal,** the *deep*, called the triangular ligament, closes the front part of the outlet of the pelvis; it is attached to the pubes and rami of the ischium. **F., Plantar,** the fibrous membrane of the sole of the foot. **F., Recto-vesical,** the visceral layer of the pelvic fascia, investing the prostate, bladder, and rectum. **F., Spermatic,** a thin fascia attached to the external abdominal ring, and prolonged down over the outer surface of the chorda testis. **F. spirales.** See *Ascia.* **F., Temporal,** a strong fibrous investment covering the temporal muscle. **F., Transversalis,** a fascia continuous with the iliac and pelvic fasciæ, and lying between the transversalis muscle and the peritoneum.

Fascial (*fash'-e-al*) [*fascialis*, of a fascia]. Pertaining to or of the nature of a fascia.

Fasciate (*fash'-e-āt*) [*fascia*, a bundle or band]. In biology, banded; also applied to monstrous stems that grow flat.

Fasciation (*fash-e-a'-shun*) [*fasciatio; fascia*, a bandage]. The art or act of bandaging.

Fascicle (*fas'-ik-l*) [dim. of *fascis*, a bundle]. In biology, a bundle, as a compact inflorescence or a cluster of leaves. See *Fasciculus.*

Fasciculate, or **Fasciculated** (*fas-ik'-u-lāt, fas-ik'-u-la-ted*) [*fasiculus*, a little bundle]. Arranged in fasciculi, or little bundles.

Fascicule (*fas'-ik-ūl*) [*fasciculus*, a small bundle]. In biology, applied to brush-like bundles of hairs often seen on caterpillars, etc.

Fasciculus (*fas-ik'-u-lus*) [dim. of *fascis*, a bundle: *pl.*, *Fasciculi*]. A little bundle, as the fasciculus of fibers that compose a nerve. **F., Olivary.** See *Fillet, Olivary.* **F. of Türck,** the crossed pyramidal tract of the spinal cord.

Fascination (*fas-in-a'-shun*) [*fascinatio*, a bewitching]. A form of incomplete hypnotism, intermediate between somnambulism and catalepsy; the alleged controlling influence of one person over another.

Fasciola (*fas-i'-o-lah*) [L., a small bandage]. The dorsal continuation of the fascia dentata of the cerebrum. **F. hepatica.** See *Trematodes.* **F. hepaticum.** See *Distoma hepaticum.*

Fasciole (*fas'-e-ōl*) [*fasciola*, a small bandage]. In biology, a narrow transverse band or stripe.

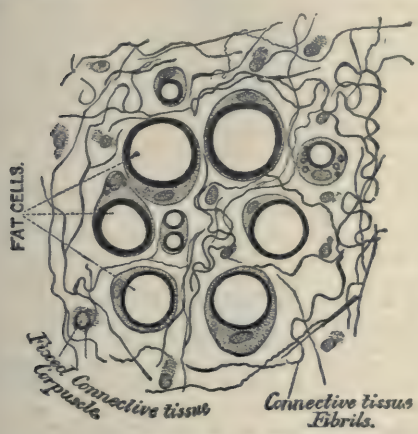
Fascioliasis (*fas-e-o-li'-as-is*) [*fasciola*, a small bandage]. A term employed in England for *Distomiasis* (Wiame), or *Distomatosis* (Zundel).

Fasciotomy (*fash-e-ot'-o-me*). See *Aponeurotomy.*

Fast [ME., *fast*, firm, stiff; *fasten*, to fast]. Fixed; immovable; close; sound, as sleep; to abstain from food; abstinence from food. **F. Color.** See *Pigments, Colors, and Dye-stuffs* **F.-blue.** Same as *Alkali Blue, Coupier's Blue, Methylene-blue.* See *Pigments, Conspectus of.* **F.-brown.** See *Pigments, Conspectus of.* **F.-green.** See *Pigments, Conspectus of.* **F.-red.** See *Pigments, Conspectus of.* **F.-yellow.** Same as *Acid Yellow.* See *Pigments, Conspectus of.*

Fastidium (*fas-tid'-e-um*) [L., "a loathing"]. A loathing for food or drink.

Fastigatum (*fas-tig-a'-tum*). See *Nucleus fastigii.*



Fastigiate, Fastigiated (*fas-tij'-e-āt, -a'-ted*) [*fastigatus*, sloping, pointed]. In biology, tapering gradually; close, parallel.

Fastigium (*fas-tij'-e-um*) [L., "summit"]. 1. The acme of any disease. 2. A dorsal extension of the adult epicele into the cerebellum; its cephalic and caudal slopes meet like a gable-roof, whence its name.

Fasting (*fast'-ing*) [ME., *fasten*, to fast]. The partial or complete abstinence from food. **F.-cure.** See *Limotherapy.* **F.-mania,** a prevalent or epidemic practice of absolute and complete fasting, mainly for exhibition and profit, such as occurred in 1890–91. Fifty-five days appears to be the extreme limit reached as yet by any professional abstainer from food. **F.-**

girls, hysterical women who, for the sake of gaining sympathy and attention, pretend to fast, but for the most part secretly obtain food.

Fat [ME., *fat*, fat]. See *Adeps*, *Tissue*, and *Oil*. **F.-ball**, a mass of fatty substance on the dorsal aspect of the buccinator muscle; called also *Bichat's fat-ball*. **F.-cell**, a form of connective-tissue cell containing oil-globules. **F.-column**, a columnar-shaped space filled with adipose tissue found in the thicker portion of the cutis vera. **F.-necrosis**, a peculiar form of

FAT-CELLS. × 340.

necrosis of a tissue occurring in pin-point sized areas of a dead-white color. It is seen usually in the interlobular pancreatic tissue, mesentery, omentum, and abdominal fatty tissue generally, and frequently in connection with pancreatic disease. **F.-rickets**, that form of rickets in which there is not excessive emaciation.

Fatal (*fa'-tal*) [*fatalis; fatum*, fate, destiny, death]. Ending with death; mortal; deadly; as a *fatal* accident or attack.

Fatigue (*fa-tēg'*) [*fatigo*, weariness]. Weariness, tiredness. That condition of diminished capacity for work produced in a muscle by prolonged activity. **F.-diseases**, those caused by constant repetition of certain movements, such as *Tailors' cramp*, *Writers' cramp*, *Scriveners' palsy*, etc. See *Cramp*, and *Spasm*. **F.-stuffs**, decomposition products that have accumulated in the muscular tissue during exhaustive efforts; among them are phosphates, phosphoric acid, carbonic acid, and perhaps glycerin-phosphoric acid.

Fatty (*fat'-e*) [ME., *fat*, fat]. A qualification applied to certain carbon derivatives, including fats and fatty acids. They were better called marsh-gas or methane derivatives, as they can all be obtained from methane, CH_4. See *Acids*, *Fatty*. **F. Degeneration.** See *Degeneration*. **F. Heart.** See *Heart*. **F. Nutmeg.** Same as *Nutmeg Liver*.

Fatuity (*fat-u'-it-e*) [*fatuitas*, foolishness]. Amentia or dementia.

Fauces (*faw'-sēz*) [L.]. The gullet or windpipe. The space surrounded by the palate, tonsils, and uvula. In biology, the throat of a monopetalous flower or the cavity of a gasteropod shell as exposed in the first whorl. **F., Isthmus of**, the space at the back of the mouth enclosed by the margin of the palate, the back of the tongue, the pillars of the soft palate and the tonsils. **F., Pillars of**, the folds of mucous membrane between the base of the uvula and the posterior border of the tongue.

Fauchard's Disease. See *Diseases, Table of*.

Faucial (*faw'-se-al*) [*fauces*, the gullet]. Pertaining to the fauces.

Faucitis (*faw-si'-tis*) [*fauces*, the gullet; *ιτις*, inflammation]. Inflammation of the fauces; isthmitis.

Fault (*fawlt*) [ME., *faut*, a lack]. In electricity, any failure in the proper working of a circuit due to ground-contacts, cross-contacts, or disconnections. These may be of three kinds: 1. Disconnections; 2. Earths; 3. Contacts.

Fauna (*faw'-nah*) [*Faunus*, the god of agriculture: *pl.*, *Faunæ* or *Faunas*]. The entire animal life of any geographic area or geologic period.

Faunorum ludibria (*fawn-o'-rum lu-dib'-re-ah*) [L., "sport of the fauns"]. An old designation for nightmare and for epilepsy.

Favaginous (*fav-aj'-in-us*) [*favus*, a honeycomb]. Resembling favus; having a honeycombed surface.

Favella (*fav-el'-ah*) [*favilla*, embers: *pl.*, *Favellæ*]. In biology, an irregular mass of spores embedded in a gelatinous material, and constituting a form of sporocarp found in the Florideæ.

Faveolate (*fav-e'-o-lāt*) [*favus*, honeycomb]. Favose, honeycombed; same as alveolate.

Faveolus (*fav-e'-o-lus*) [*favus*, a honeycomb: *pl.*, *Faveoli*]. In biology, a pit or cell like that of the honeycomb.

Faviform (*fav'-if-orm*) [*favus*, honeycomb; *forma*, form]. Resembling a honeycomb; a designation of certain ulcerated surfaces.

Favous, or **Favose** (*fav'-us* or *fav-ōs'*) [*favus*, honeycomb]. Resembling a honeycomb; resembling favus; alveolate; filled with polygonal depressions.

Favulus (*fav'-u-lus*) [dim. of *favus*, a honeycomb: *pl.*, *Favuli*]. Any one of the honeycomb-like depressions or alveoli of the gastric mucous membrane.

Favus (*fa'-vus*) [*favus*, honeycomb]. *Tinea favosa; Honeycomb Ringworm*, a parasitic skin-disease due to the presence of a vegetable parasite, the *Achorion schönleinii*, which, growing in the epidermis, hair, and nails, causes varying grades of inflammation, alterations of structure, and, when occurring upon hairy parts, partial or complete loss of hair. It is characterized by the presence of variously-sized, sulphur-yellow, cup-shaped crusts, having a peculiar musty odor, which are found on microscopic examination to be composed almost entirely of the elements of the fungus. **F.-cup**, any one of the cup-shaped crusts that characterize favus.

Faxwax (*faks'-waks*) [*fax*, hair; Ger., *wachsen*, to grow]. The ligamentum nuchæ, or the material of which it is composed. It is also called *paxwax*.

Fear (*fēr*) [ME., *feer*]. An emotion of dread; apprehension; the feeling which in its intenser manifestations is called terror or fright.

Feather (*feth'-er*) [AS., *fedher*]. One of the epidermal appendages of birds. **F. Respiration-register.** See *Anesthetic*.

Feature (*fe'-chūr*) [*facturą*, a making]. Any single part or lineament of the face.

Febricity (*fe-bris'-it-e*) [*febris*, a fever]. Feverishness.

Febricula (*fe-brik'-u-lah*) [L., dim. of *febris*, fever]. A term indicating a slight and short fever, most frequently encountered among children. The rash that accompanies it is very similar to that of scarlet fever.

Febrifacient (*feb-re-fa'-se-ent*) [*febris*, a fever; *facere*, to make]. Causing fever.

Febriferous (*fe-brif'-er-us*) [*febris*, a fever; *ferre*, to bear]. Causing or conveying fever.

Febrific (*fe-brif'-ik*) [*febris*, a fever]. Febrifacient.

Febrifugal (*fe-brif'-u-gal*) [*febris*, fever; *fugare*, to dispel]. Removing or dispelling fever.

Febrifuge (*feb'-rif-ūj*) [*febris*, fever; *fugare*, to dispel]. 1. Antipyretic; cooling; lessening or relieving fever. 2. An agent that lessens fever.

Febrile (*fe'-bril*) [*febrilis; febris*, a fever]. Pertaining to or having the symptoms of a fever.

Febrility (*fe-bril'-it-e*) [*febris*, a fever]. The quality of being febrile; feverishness.

Febris (*fe'-bris*) [L.]. See *Fever*. **F. bullosa.** Synonym of *Pemphigus*. **F. catarrhalis.** Synonym of *Influenza*. **F. dysenterica.** Synonym of *Dysentery*. **F. famelica.** See *Famelica*. **F. flava.** See *Fever, Yellow*. **F. nigra.** Synonym of *Fever, Cerebro-spinal*. **F. recurrens.** Synonym of *Fever, Relapsing*. **F. remittens.** See *Fever, Remittent*.

Fecal (*fe'-kal*) [*fæx*, sediment]. Pertaining to or consisting of feces.

Fecaline (*fe'-kal-ēn*). Same as *Fecaloid*.

Fecaloid (*fe'-kal-oid*) [*fæx*, feces; εἶδος, likeness]. Resembling feces.

Feces (*fe'-sēz*) [*fæx*, sediment]. The dregs of a liquor, as wine. Also, the alvine discharges or excretions of the bowels.

Fechner's Law. See *Law*.

Fecula (*fek'-u-lah*) [dim. of *fæx*, sediment]. The starchy part of a seed. Also the sediment subsiding from an infusion.

Feculent (*fek'-u-lent*) [*fæculentus*, impure]. Abounding in or of the nature of feces; excrementitious; sedimentary; muddy.

Fecundate (*fe'-kun-dāt*) [*fecundare*, to fecundate]. To impregnate; to render pregnant.

Fecundation (*fe-kun-da'-shun*) [*fecundatio; fecundus*, fruitful]. Fertilization; impregnation; the act of making fruitful. **F., Artificial,** impregnation by means of artificial intromission of the spermatic fluid into the vagina or uterus.

Fecundity (*fe-kun'-dit-e*) [*fecunditas*, fruitfulness]. The capability of reproduction. **F., Segregate.** See *Homogamy*.

Fed. See *Cross-circulation Experiment*.

Feeble (*fe'-bl*)[ME., *feble*, weak]. Lacking strength; weak. **F.-minded,** idiotic.

Feed (*fēd*) [ME., *fedan*, to nourish]. 1. To supply with food; to graze; to eat. 2. Food, especially that for lower animals; fodder.

Feeder (*fe'-der*) [ME., *fedan*, to nourish]. 1. An instrument used in the forcible feeding of insane patients who obstinately refuse to eat. 2. See *Cross-circulation Experiment*.

Feeding (*fe'-ding*) [ME., *fedan*, to nourish]. The taking of food or aliment. **F., Artificial,** the introduction of food into the body by means of artificial devices, such as the stomach-pump or in the form of an enema. Also, the nourishing of a child by food other than the mother's milk. **F-bottle,** a glass flask armed with a rubber nipple, used in feeding liquid food to infants. **F.-cup,** a cup used in the forcible feeding of the insane. **F., Forcible,** the administration of aliment by compulsion to such patients as refuse to take food in the natural manner. **F.-gland,** a chyle-gland or "salivary gland" of working bees. **F.-groove,** a narrow trough on the tongue of a worker bee, along which the honey is brought by compression of the honey-sac. **F. by the Rectum,** the introduction of food into the rectum in the form of an enema or suppository. **F.-system.** See *Rest-cure*.

Feel (*fēl*) [ME., *felen*, to feel]. To have a sensation of; to try by touch; to have perception by means of the sense of touch.

Feeler (*fēl'-er*) [ME., *felen*, to feel]. See *Antenna*.

Feeling (*fēl'-ing*) [ME., *felen*, to feel]. The sense of touch; any emotion or sensibility; any conscious state of nervous activity; any sensation.

Feet (*fēt*). The plural of *Foot*, *q. v.* **F., Frosted.** See *Chilblain*.

Fegaritis (*feg-ar-i'-tis*) [Sp.; ιτις, inflammation]. An old name for a form of gangrenous stomatitis.

Fehling's Method. A method of dressing the umbilical cord. The stump is wrapped in cotton-wool powdered with a mixture of salicylic acid one part, and starch five parts. It becomes mummified. **F.'s Solution,** a solution for testing for sugar in the urine; as this solution does not keep well, Prof. Holland advises its manufacture as follows: To be kept in two distinct parts. (*a*) Take copper sulph. 34.64 gms. and water enough to make 500 c.c. M. . (*b*) Pure Rochelle salt 173 gms.; sol. sodium hydrate (sp. gr., 1.33), 100 c.c., and water enough to make 500 c.c. For use, mix equal volumes, and thus make Fehling's solution. See *Copper*. **F.'s Test for Sugar.** See *Tests, Table of*.

Feigned Disease. See *Disease*.

Fel [L.]. Bile. **F. bovis,** or **F. bovinum,** ox-gall. The biliary liquid of the domestic ox, *Bos taurus*. It is a dark-green, ropy substance, consisting mainly of sodium glycocholate and sodium taurocholate, together with cholesterin. It is a tonic, antiseptic, and purgative, useful in emulsifying the fatty portions of food. **F. b. inspissatum,** 100 parts fresh ox-gall, strained and evaporated to 15 parts. Dose gr. v–xv. **F. b. purificatum,** ox-gall 3, alcohol 1 part. This should stand 24 hours before straining; then evaporate to the consistence of a pilular mass. Dose gr. v–xv.

Fell's Method. A method of forced respiration in cases of narcotic poisoning or drowning, by means of an apparatus consisting of a tracheotomy-tube attached to a bellows. **F.'s Paste, Caustic,** or **Cancer-salve,** a famous salve formerly used in epithelioma. Its formula was: chlorid of zinc and powdered sanguinaria root, of each one ounce; starch, enough to make a paste; apply on pieces of kid leather or wash-leather.

Fellator (*fel'-at-or*). See *Passivism*.

Fellatrice (*fel-at-rēs'*) [Fr.]. The female agent in irrumation, who receives the male organ in her mouth and by friction with the lips or tongue produces the orgasm.

Fellic Acid (*fel'-ik*) [*fel*, bile], $C_{23}H_{40}O_4$. A constituent of the bile.

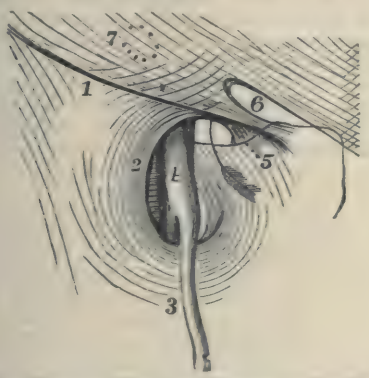
Fellmongers' Disease. Anthrax; so called as attacking dealers in fells, or pelts, and skins.

Fellows' Syrup of Hypophosphites. A proprietary preparation. Each dram contains hypophosph. of iron gr. j, quinin gr. ¾, strychnin gr. $\frac{1}{64}$, calcium and manganese āā gr. j, potassium q. s. Dose ʒj. Unof.

Felo-de-se (*fe'-lo-de-se*) [Sp.]. A suicide. Also, any one who commits an unlawful malicious act, the consequence of which is his own death.

Felon (*fel'-on*). See *Paronychia*.

Felt [*feltrum*, felt]. A fabric of hair or wool entangled together by beating and rolling. Felt splints are employed in surgery.



Female (*fe'-māl*) [*feminea, femella; femina*, woman]. Belonging to the sex that conceives and bears young. In surgery, denoting that part of a double-limbed instrument that receives the complementary part. **F. Catheter,** a catheter having a short tube with a slight curve to correspond to the female urethra.

Feminism (*fem'-in-ism*) [*femina*, a woman]. Arrested development of the male organs of generation, accompanied by various mental and physical approximations to the characters of the female sex.

Feminity (*fem-in'-it-e*), or **Femininity** (*fem-in-in'-it-e*) [*femina*, a woman]. The sum of those qualities that distinguish the female sex.

Feminonucleus (*fem-in-o-nu'-kle-us*) [*femina*, woman; *nucleus*, a kernel]. The embryonic female nucleus, as distinguished from the corresponding male nucleus.

Femoral (*fem'-or-al*) [*femur*, the thigh bone]. Pertaining to the femur. **F. Arch**, that formed by Poupart's ligament. **F. Artery.** See *Arteries, Table of.* **F. Canal.** See *Canal.* **F. Hernia.** See *Hernia.* **F. Ligament of Hey.** See *Ligament.* **F. Ring**, the abdominal end of the femoral canal, normally

THE FEMORAL RING AND SAPHENOUS OPENING.
(*After Holden.*)
(The arrow is introduced into the femoral ring).
1. Crural arch. 2. Saphenous opening of the fascia lata. 3. Saphena vein. 4. Femoral vein. 5. Gimbernat's ligament. 6. External abdominal ring. 7. Position of internal ring.

closed by the crural septum and the peritoneum. **F. Sheath**, a continuation downward of the fasciæ that line the abdomen. It contains the femoral vessels. **F. Vein.** See *Vein.*

Femoren (*fem'-or-en*) [*femur*, the thigh-bone]. Belonging to the femur in itself.

Femorocele (*fem'-or-o-sēl*) [*femur*, femur; κήλη, hernia]. Femoral hernia.

Femoro-rotulian (*fem'-or-o-ro-tu'-le-an*) [*femur*, the thigh-bone; *rotula*, the patella]. Pertaining to the femur and the rotula or patella.

Femoro-tibial (*fem'-or-o-tib'-e-al*) [*femur*, the thigh-bone; *tibia*, the shin-bone]. Relating to the femur and the tibia.

Femur (*fe'-mer*) [L., *pl.*, *Femora*, or *Femurs*]. The thigh-bone, the longest and heaviest bone of the body, articulating with the acetabulum and the tibia. See *Bones, Table of.*

Fenestra (*fe-nes'-trah*) [L., a window]. 1. In anatomy, a name given to two apertures of the ear, the *F. ovalis* and *F. rotunda.* 2. The open space in the blade of a forceps. 3. An opening in a bandage or dressing for drainage, etc.

Fenestral, or **Fenestrate** (*fe-nes'-tral*, *fe'-nes-trāt*) [*fenestra*, a window]. Having apertures or openings.

Fenestrated (*fe-nes'-tra-ted*) [*fenestra*, a window]. Perforated. **F. Membrane of Henle**, the outer membrane of the inner coat of the arteries.

Fenestrella (*fe-nes-trel'-ah*) [dim. of *fenestra*, a window: *pl.*, *Fenestrellæ*]. In biology, a transparent spot in the wing-cover of certain insects.

Fenestrule (*fe-nes'-trūl*) [*fenestra*, a window]. In biology, a small open space, as between the anastomosing branches of the cenecium of a polyzoan.

Fenger's Operations. See *Operations, Table of.*

Fennel (*fen'-el*) [ME., *fenel*]. An umbelliferous plant, *Fœniculum capillaceum*, native to the Old World and common in cultivation. Its dried fruit (*Fœniculum*, U. S. P.) is aromatic and carminative, but is chiefly used as a corrigent, as for senna and rhubarb. See *Fœniculum.*

Fenner's Guaiac-mixture. See *Guaiac-mixture.*

Fenugreek (*fen'-u-grēk*) [*fœnum*, hay; *græcum*, Greek]. The leguminous plant, *Trigonella fœnumgræcum*; also its mucilaginous and oily seed; it is used in plasters and poultices, and is valued in veterinary practice, chiefly as a vehicle for other medicines.

Fenwick's Operation. See *Operations, Table of.*

Feraconitin (*fer-ak-on'-it-in*). Same as *Pseudaconitin*, *q. v.*

Feral (*fe'-ral*) [*feralis*, deadly]. Deadly or fatal; as a *feral* disease.

Fergusson's Method. See *Treatment, Methods of.* **F.'s Operations.** See *Operations, Table of.*

Ferine (*fe'-rin*) [*ferinus*, wild; *fera*, a beast]. Noxious, malignant, or violent; as a *ferine* disease.

Ferment (*fer'-ment*) [*fermentum*, leaven, yeast]. Any microörganism, proteid, or other chemic substance capable of producing fermentation, *i. e.*, the oxidation and disorganization of carbohydrates. Cf. *Enzym; Zymase.* **F., Organized**, or **Living**, one that grows and multiplies at the expense of the substance in which it occurs—this takes place only so long as the ferment is living. Yeast is the representative of this class, causing fermentation by splitting up sugar into CO_2 and alcohol. See *Fermentation.* **F., Unorganized**, or **Non-living**, a nitrogenous body produced within the body by the vital activity of the protoplasm of the cells. These ferments are soluble in water and glycerin, and can be precipitated by alcohol. The following is a list of this class: **Ptyalin**, in saliva, converts starch into maltose. **Pepsin**, in gastric juice, converts proteids into peptones in an acid medium. There are also in the gastric juice **milk-curdling**, **fat-splitting**, and **lactic acid** ferments, whose functions are indicated by their names. In the pancreatic juice, there are **F., Diastatic** or **Amylopsin**, converting starch into maltose; **Trypsin**, converts proteids into peptones in an alkaline medium; **F., Emulsive**, emulsify fats; **F., Fat-splitting**, or **Steapsin**, splits fats into glycerin and fatty acids, and **F., Milk-curdling.** In the intestinal juice, there are **F., Diastatic**, which changes maltose into glucose; **F., Proteolytic**, which changes fibrin into peptone; **Invertase**, which changes cane-sugar into grape-sugar; and *F., Milk-curdling*, and *F., Diastatic*, are also found in blood, chyle, liver, milk, etc. **Pepsin** and other ferments are also found in muscle and urine; and, lastly, a **Fibrin-forming F.** is also found in blood.

Fermentation (*fer-men-ta'-shun*) [*fermentum*, leaven]. The decomposition of complex molecules under the influence of ferments (organized) or zymazes or enzyms (unorganized), frequently accompanied by the assimilation of one or more molecules of water (hydrolysis). Processes of oxidation and deoxidation sometimes accompany fermentation. The ordinary transformation termed *eremacausis* or *decay*, is an oxidation process. Putrefaction is applied especially to those fermentations involving nitrogenous matter and accompanied by the disengagement of offensive gases. In these cases, the growth of one or more species of microbes is correlated with the chemic changes in the medium. **F., Acetic**, the fermentation whereby weak alcoholic solutions are converted into vinegar, caused by the *Bacillus aceti*, etc. **F., Albuminoid**; the agents of this decomposition are the *Bacillus albuminis*, *B. catenula*, *B. claviformis*, *B. distortus*, *B. filiformis*, *B. geniculatis*, *B. scaber*, *B. tenuis*, *B. urocephalus*, etc. **F., Ammoniacal**; the agent of the ammoniacal fermentation of urine is the *Micrococcus ureæ.* **F., Butyric**, the conversion of butter-fat into butyric acid, due to a microbe, *Bacillus butyricus.* **F., Gluconic**; glucose is transformed by the action of the *Micrococcus oblongus.* **F., Lactic**, the decomposition or "souring" of milk, caused by the microbe, *Bacillus lacticus.*

F., Propionic; the *Bacillus cavicida* decomposes saccharine solutions, producing propionic acid. **F., Putrefactive,** the decomposition commonly known as putrefaction, caused by various microbes, especially the *Micrococcus pyogenes* (*albus*, *aureus*, *citreus*, *tenuis*, *salivarius*, etc.). **F., Test.** See *Tests*, *Table of.* **F., Viscous,** the change produced in the culture-medium by the *Micrococcus viscosus*, a gummy substance being developed.

Fermentemia (*fer-men-te'-me-ah*) [*fermentum*, leaven; *αἷμα*, blood]. The abnormal presence of a ferment in the blood.

Fermentogen (*fer-ment'-o-jen*) [*fermentum*, leaven; *γενν̄ᾶν*, to produce]. Any substance (like pepsinogen or trypsinogen) that on the reception of the appropriate stimulus is changed into a ferment.

Fern [ME., *ferne*]. Any cryptogamous plant of the order *Filices.* See *Aspidium.*

Ferntickle (*fern'-tik-il*) [Prov. Eng.]. A freckle; ephelis.

Ferralum (*fer-al'-um*) [*ferrum*, iron; *alumen*, alum]. A proprietary disinfectant, consisting largely of the sulphate of iron and aluminum.

Ferramentum (*fer-am-en'-tum*) [L., an iron implement: *pl.*, *Ferramenta*]. A surgical instrument of iron or steel.

Ferran, Peronospora of. See *Peronospora.*

Ferrein, Canal of. See *Canal.* **F., Pyramids of.** See *Pyramid.* **F., Tubule of.** See *Pyramid.*

Ferri- (*fer'-i-*) [*ferrum*, iron]. A prefix that indicates the *ferric*, as distinguished from *ferrous* compounds. Containing iron as a quadrivalent element.

Ferrier's Snuff. A snuff used in acute rhinitis. Its formula is hydrochlorate of morphin gr. ij, powdered acacia ʒij, and subnitrate of bismuth, ʒvj. See *Bismuth.*

Ferro- (*fer'-o-*) [*ferrum*, iron]. A prefix used with the names of certain (*ferrous*) compounds and salts of iron.

Ferrocyanid (*fer-o-si'-an-id*) [*ferrum*, iron; *cyanogen*]. A compound of ferrocyanogen with an element or radical. That of potassium (*Potassii ferrocyanidum*) is official; that of iron was so formerly. That of zinc (*Zinci ferrocyanidum*) is sometimes given as a medicine. Dose gr. 1–4, in pill. **F. of Potassium and Acetic Acid Test.** See *Tests*, *Table of.*

Ferrocyanogen (*fer-o-si-an'-o-jen*) [*ferrum*, iron; *cyanogen*]. The quadrivalent radical, $Fe(CN)_6$.

Ferrous (*fer'-us*) [*ferrum*, iron]. Containing iron as a bivalent element. Cf. *Ferric.*

Ferrozone (*fer'-o-zōn*) [*ferrum*, iron; *ὄζειν*, to smell]. A material consisting in part of iron protosulphate; it is used as a precipitant for sewage.

Ferruginous (*fer-u'-jin-us*) [*ferrugo*, rust; *ferrum*, iron]. Same as *Chalybeate.*

Ferrule (*fer'-ul*) [*ferrum*, iron]. A metallic hoop placed around a broken tooth; an instrument used with an attached lever in aligning irregularly placed teeth.

Ferrum (*fer'-um*) [L.: *gen.*, *Ferri*]. Iron. *Fe* = 56. Quantivalence II, IV. A metal having a luster varying from silver-white to gray. In pharmacy, a fine non-elastic, soft wire is used. Externally many of the soluble salts of iron make excellent styptic and astringent lotions. **F. reductam,** *Quevenne's Iron*, iron by hydrogen, occurs as a fine powder obtained by the reduction of ferric oxid by hydrogen. It is a constituent of the blood, to the red corpuscles of which it gives color. It is an irritant in large or long-continued doses. In small doses it is a stimulant and slightly astringent tonic. It is highly valuable in anemia, but contra-indicated in plethora. Dose gr. j–v. **F. reducti, Trochisci** (B.P.), each containing gr. 1 of iron. **Ferri acetat., Liq.,** a 33 per cent. solution in water. **F. acetat., Liq., fort** (B.P.). Dose ♏ j–viij. **F. acetat., Tinct.,** has liq. ferri acetat 50, alcohol 30, acetic ether 20 parts. It is styptic and stimulant. Dose ♏ x–ʒ ij. **F. bromid.,** $FeBr_2$. Dose gr. v–xx. **F. bromidi, Syr.,** contains 10 per cent. of ferric bromid. It is a sedative tonic, recommended in nervous disorders. Dose ♏ v–xxx. **F. carb. saccharat.,** contains 15 per cent. of ferrous carbonate. It is a stimulant to digestion. Dose gr. ij–x, with food. **F. carb., Massa,** Vallet's mass; ferrous sulphate 100, sodium carbonate 110, honey 38, sugar 25, syrup and distilled water āā q. s. ad fac. 100 parts. Dose gr. iij to v, after food. **F. carb., Pil.** (B.P.). Dose gr. v–xx. **F., Mist., aromat.** (B.P.). Dose ʒj–ij. **F., Mistura, comp.,** Griffith's mixture; ferrous sulphate 6, myrrh, sugar, āā 18, potassium carbonate 8, spt. lavender 50, rose-water 900. This is essentially a carbonate of iron. Dose ʒss. **F., Pilulæ, comp.,** Griffith's pill, containing each, ferrous sulphate gr. ¾, sodium carb. gr. ¾, myrrh gr. iss, syrup q. s. Dose gr. ij to vj. **F. chloridum,** $Fe_2Cl_6.12H_2O$, strongly acid, astringent, hemostatic, and styptic. It is never used internally. **F. chlorid., Liq. (Liq. fer. perchloridi,** B.P.), an aqueous solution containing 38 per cent. of the salt. Dose ♏ij–x; rarely used. **Liq. fer. perchlor. fort.** (B.P.), a powerful styptic. $Fe_2(C_6H_5O_7)_26H_2O$. **F. chlorid., Tinct.,** contains liq. ferri chlor. 25, alcohol q. s. It is very commonly used, and is one of the best tonic preparations. Dose ♏v–xx. **Tinct. fer. perchloridi** (B.P.). Dose ♏x–xx. **F. citras,** soluble in water, insoluble in alcohol; a mild stimulant. Dose gr. ij–v. **F. citras, Liq.,** a solution of ferri citrat., 35 per cent. in strength. Dose ♏ v–xv. **F. citras, Vinum,** ammonio-ferric citrate 4, tinct. orange peel, syrup, āā 12, stronger white wine 72 parts. Dose ʒj–ij. **F. hypophosphis,** $Fe_2(H_2PO_2)_6$, ferric hypophosphite, soluble in very dilute hydrochloric acid. Dose gr. v–x. **F. iodidum saccharat.,** soluble in water. It is a tonic. Dose gr. v–xxv. **F. iodid., Pil.,** contains reduced iron, iodin, liquorice, sugar, acacia, and water, coated with balsam of tolu in ether. Dose j–ij pills. **F. iodidi, Syr.,** contains 10 per cent. of the iodid. Dose ♏v–xxx. **F. lactas,** $Fe(C_3H_5O_3)_2.3H_2O$, ferrous lactate,—best solvent, sodium citrate. Dose gr. j–iij. **F. nitratis, Liq.,** aqueous, contains 6 per cent. of the salt; it is styptic and astringent. Dose ♏v–xv. **F. oxalas,** $FeC_2O_4.H_2O$. Dose gr. ij in pill. **F. oxid. hydratum (Ferri peroxid. hydrat.** B.P.), $Fe(HO)_6$, ferric hydrate, prepared by adding aq. ammoniæ 8 parts to a solution of ferric sulphate 10 parts. It is an antidote for arsenical poisoning, and should be prepared as needed. Dose ʒj. **F. oxid. hydrat. cum magnesia,** should be prepared as needed from sol. ferric sulphate 1000 gr., water 2000 grains, to which is added magnesia 150 gr., water ʒ xxxij. It is an antidote for arsenic. **F., Emplastrum,** strengthening-plaster; ferric hydrate 9, olive-oil 5, Burgundy pitch 14, lead-plaster 72. **F., Trochisci,** have each of ferric hydrate dried gr. v, vanilla gr. $\frac{1}{10}$, sugar and mucilage of tragacanth q. s. Dose j–iij each day. **F. phosphas,** $Fe_3P_2O_8.8H_2O$, an adjuvant to laxative pills, gr. v–x. **F. phosphat., Syr.** (B.P.). Dose ʒj. **Fox's Pill** (B.P.), Blaud's Pill. See *Pill.* **F. pyrophosphas,** tasteless and non-astringent. Dose gr. ij–v. **F. subchloridi, Syr.** (B.P.). Dose ʒss–j. **F. sulphas,** $FeSO_4.7H_2O$, *copperas*, protosulphate of iron, ferrous sulphate, astringent and irritating. It is an ingredient of pil. aloes et ferri, *q. v.* **F. sulph. exsiccat.,** $FeSO_4.H_2O$. Dose gr. ss–ij in pill. **F. sulph. granulatus (Ferri sulphas granulata,** B. P.), FeS-

$O_4.7H_2O$, the foregoing precipitated from its solution by alcohol. Dose gr. ss–ij. **F. subsulph., Liq.**, $Fe_4O(SO_4)_5$, Monsel's solution, an aqueous solution of basic sulphate of iron, powerfully astringent, styptic and hemostatic; it is rarely given internally. Dose ♏iij–x. **F. valerianas,** $Fe_2(C_5H_9O_2)_6$, valerianate of iron, soluble in alcohol. Dose gr. j–iij, in pill. **F. et ammonii citras,** citrate of iron 3, water of ammonia 1 part. Dose gr. ij–v. **F. et ammonii sulphas,** ammonic sulphate of iron, ferric alum. This is the least astringent of the sulphates. Dose gr. ij–v. **F. et ammonii tartras (F. tartaratum,** B.P.), ammonic tartrate of iron. Dose gr. v–xx. **F. et potassii tartras,** the least disagreeable of all iron preparations. Dose gr. v–x. **F. et quininæ citras,** contains 12 per cent. of quinin. It is astringent and stimulant. Dose gr. iij–v. **F. et quin. cit., Liq.,** of doubtful value. Dose ♏v–xv. **F. et quin. citras solubilis,** used in preparing vinum ferri amarum. **F., Vinum amarum,** bitter wine of iron, contains sol. citrate of iron and quinin 8, tinct. orange-peel 12, syrup 36, stronger white wine 44. It is a good substitute for the various "elixirs of calisaya and iron." Dose ʒj–iv. **F. et strychninæ citras,** contains 1 per cent. of strychnin. It is astringent and stimulating. Dose gr. j–iij. **F. et ammonii acetat. Liq.,** Basham's mixture, contains tinct. fer. chlorid 2, acetic acid 3, liq. ammonii acet. 20, elixir aurantii 10, syrup 15, water 50 parts. It is very agreeable, tonic and diuretic. Dose ʒij–v. *Unofficial preparations.*—**F. albuminas.** Dose gr. x–xxx. **F. arsenias,** $Fe_3As_2O_8$ (not to be confounded with arsen*it* of iron). Dose gr. $\frac{1}{10}$–$\frac{1}{5}$. **F. dialysatum,** dialyzed iron, a ten per cent. oxychlorid in water. It is astringent and styptic, but only feebly chalybeate. Dose ♏x–xxx. **Liq. ferri dialyzat.** (B.P.). Dose ♏x–xxx. **F. et manganesii iodidi, Syr.,** containing in each fluid ounce 50 grains of iodids in proportion of 3 of iron to 1 of manganese. Dose ♏x–xxx–ʒj. **F. et manganesii phosphat., Syr.,** syrup of phosphate of iron and manganese. Each dram contains 2 gr. phosph. of iron and 1 grain of manganese. Dose ʒj. **F., Mistura, aromat.,** pale cinchona bark 4, calumba 2, cloves 1, iron-wire 2, tinct. cardamom. comp. 12, tinct. orange-peel 2, water of peppermint 50. Dose ℥j–ij. **F., Mist., laxans,** ferrous sulphate gr. ij, magnesium sulphate ʒj, dilute sulphuric acid ♏iij, spt. chloroform ♏xx, water of peppermint ad ℥j. **F., Mist., salicylat.,** olei gaultheriæ ♏xxxij, tr. ferri chlorid fʒiv, sodii salicylat. ʒiv, acid. citric. gr. x, glycerin. fʒj, liq. ammonii citrat. (B. P.) q. s. ad fʒiv; iron to be added last in mixing. **Ferro-salin., Mist.,** magnesium sulphate ℥j, potassium bitartrate ʒj, dried sulphate of iron gr. x, water ℥xxxij. Dose a wineglassful. **F. phosphatum, quininæ et strychninæ, Syr.,** Easton's syrup, unof. Each ʒj contains gr. j phosph. of iron, gr. j quinin, and gr. $\frac{1}{36}$ strychnin. **F. Salicylas.** Dose gr. j–v. **F. Tersulphatis, Liq.,** solution of ferric sulphate, used in making other iron preparations.

Fertile (*fer'-til*) [*fertilis*, fruitful]. Prolific, fruitful. In botany, applied to flowers having a pistil.

Fertilization (*fer-til-iz-a'-shun*) [*fertilis*, fruitful]. Impregnation; fecundation; the initial act of sexual reproduction; it consists essentially in the union of two cells possessing respectively male and female qualities.

Fertilizing Pouch (*fer'-til-iz-ing powch*). A folded apparatus connected with the oviduct of queen bees.

Ferula (*fer'-u-lah*) [L., "a rod"]. 1. Giant fennel. A genus of the order Umbelliferæ. See *Asafetida, Galbanum, Sumbul, Sagapenum.* 2. A splint.

Fervor (*fer'-vor*) [L., "heat"]. Fever-heat; it is defined as being more than *calor* and less than *ardor.*

Fessitude (*fes'-it-tūd*) [*fessus*, weary]. A sensation of weariness.

Fester (*fes'-ter*) [ME., *fester*]. 1. Any small or superficial ulceration. 2. To inflame slightly.

Festination (*fes-tin-a'-shun*) [*festinare*, to hasten]. A symptom of paralysis agitans and other diseases in which the patient shows in walking a tendency to take quicker and quicker steps. Propulsion or retropulsion are coincident symptoms.

Fetal (*fe'-tal*) [*fetus*, an offspring]. Pertaining to the fetus.

Fetation (*fe-ta'-shun*) [*fetus*, a fetus]. 1. The formation of a fetus. 2. Pregnancy.

Fetich, Fetish (*fe'-tish*). Any material object regarded with veneration or awe.

Fetichism, Fetishism (*fe'-tish-izm*) [Fr., *fetich*]. The term applied by Binet to the sexual perversion exhibited by collectors of napkins, shoes, etc. He maintains that these articles play here the part of the fetish in early theology. The favors given by the women to the knights in the Middle Ages were both tokens of remembrance and sexual excitants of satisfaction. Fetichism is the association of lust with the idea of certain portions of the female person, or with certain articles of female attire. It is designated as *dress-f., hair-f., hand-f., glove-f., shoe-f.*, etc., according to the object worshiped.

Fetichist (*fe'-tish-ist*) [Fr., *fetich*]. An individual whose sexual interest is confined exclusively to parts of the female body, or to certain portions of female attire.

Feticide (*fe'-tis-id*) [*fetus*, an unborn offspring; *cædere*, to kill]. The killing by intent of the fetus in the womb.

Fetid (*fe'-tid*, or *fet'-id*) [*fetere*, to become putrid]. Having a foul odor. **F. Stomatitis.** Synonym of *Ulcerative Stomatitis.*

Fetiferous (*fe-tif'-er-us*) [*fetus*, a fetus; *ferre*, to bear]. Pregnant.

Fetiparous (*fe-tip'-ar-us*) [*fetus*, a fetus; *parere*, to produce]. Giving birth to a fetus.

Fetlock (*fet'-lok*) [ME., *fitlokes*]. A tuft of hair growing behind the pastern-joint of horses. **F.-joint,** the joint of a horse's leg next to the foot.

Fetlow (*fet'-lo*) [E., dial]. A kind of whitlow or felon, seen upon cattle.

Fetometry (*fe-tom'-et-re*) [*fetus*, offspring; *μέτρον*, measure]. The measurement of the fetus, especially of its cranial diameters. The measurements usually made are as follows:—

TABLE OF MEASUREMENTS.

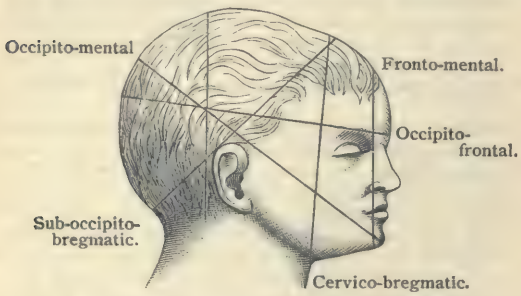
1. OF THE CHILD.

Length,	50	cm.	(20 in)
Bisacromial,	12	"	(4.8 ")

2. HEAD.

Bitemporal,	8	cm.	(3¼ in)
Biparietal,	9¼	"	(3¾ ")
Occipito-frontal,	11¾	"	(4½ ")
" -mental,	13½	"	(5¼ ")
Trachelo-bregmatic,	9½	"	(3½ ")
Circumference, occipito-frontal	34½	"	(13 8 ")

Weight of Child 2737 grms. (7½ pounds).



Fetor (*fe'-tor*) [L.]. Stench; offensive odor. **F. narium.** Synonym of *Ozena.*

Fetter-bone (*fet'-er-bōn*). In farriery, the same as great pastern. See *Pastern.*

Fettered (*fet'-erd*). In biology, applied to animals, as the seal, which have the hind limbs modified so as to unfit them for walking.

Fetus (*fe'-tus*) [*fetus*, offspring]. The young of viviparous animals in the womb; the embryo in the later stages of development. The following is a table of the development of the embryo and fetus in the

different months of pregnancy. *First Month.* Indistinguishable from ovum of other mammals. It is a flattened vesicle. The embryo is nourished by a yelk-sac which, even at the end of the first month, is larger than the cephalic extremity of the fetus. The

DIAMETERS OF THE FETAL HEAD. (*Tarnier.*)

visceral arches are distinct. The heart, first traces of liver and kidneys, eyes, rudimentary extremities, oral and anal orifices are formed. The spinal canal closes (spina bifida results if this fails to occur at this time). Length, 1 cm., or .4 inch. *Second Month.* Grows to 4 cm. in length (1.57 inches), and is about the size of a pigeon's egg. The visceral clefts close, except the first, which forms the external auditory meatus, tympanum, and Eustachian tube. At this time arrest of development results in hare-lip, umbilical hernia, or exomphalos. Eyes, nose, and ears are distinguishable. The first suggestion of hands and feet appears, and these are webbed. External genitals also now develop, but sex is not to be differentiated. *Third Month.* Maternal blood affords nourishment; 9 cm. long (3.6 inches), and about the size of a goose-egg. Fingers and toes lose their webbed character and nails appear as fine membranes. Points of ossification are found in most of the bones. The neck separates the head from the trunk, and sex is determined by the appearance of the uterus. Weight, 30 grms. = 463 grains. *Fourth Month.* 16 cm. = 6 in. in length. Lanugo is present. Intestines contain meconium. Sex is well defined. Weight, 55 grms. = 848.76 grains. *Fifth Month.* 25 cm. = 10 in. Vernix caseosa appears in places. The face is senile in appearance and wrinkled. Eyelids begin to open. Quickening occurs. Heart-sounds are heard. Weight, 273 grms. = 10.8 oz. *Sixth Month.* 30 cm. = 12 in. Hair grows longer. Eyebrows and lashes appear. The testicles approach the inguinal rings. Weight, 715 grms. = 23 oz. *Seventh Month.* 35 cm. = 14 in. Pupillary membrane disappears. Weight, 1213 grms. = 39 oz. *Eighth Month.* 40 cm. = 16 in. Down on the face begins to disappear. The left testicle has descended. Ossification begins in the lower epiphysis of the femur. The nails do not project beyond the finger-tips. Weight, 1617 grms. = 4⅛ lbs. *Ninth Month.* 45 cm. = 18 in. Subcutaneous fat increases. Diameters of the head about 1 to 1½ cm. less than at term. Weight, 1990 grms. = 5⅛ lbs. *Mature Fetus.* 50 cm. long = 20 inches; weight, 2737 grms. = 7⅓ lbs. Skin is rosy; lanugo has disappeared. The nails are perfect and project beyond the finger tips. The eyes are opened. The center of ossification in the lower epiphysis of femur is 5 mm. in diameter, while that of the cuboid bone is just beginning to show. Diameters of head are normal. **F., Amorphous.** See *Anideus.* **F. Anideus.** See *Anideus.* **F. in fetu** (fetus within the fetus), the name applied to those interesting inclusions in which the stronger fetus in its growth has included within its organism the parts of the weaker fetus. **F. papyraceus,** the name given to the malformation resulting in a twin-pregnancy, when, owing to an inequality in the circulation of the embryos, the weaker fetus dies, and by the continually increasing pressure of the growing fetus is flattened more and more against the uterine walls, until the mass has a thickness little greater than stout parchment. **F., Position of,** the position occupied by the fetus in the mother's womb. It may be oblique, transverse, or longitudinal. Also, the position occupied by the fetus with reference to the mother's pelvis. See *Table* (p. 467). **F., Presentation of,** that part of the fetus that presents in labor. See *Presentation.*

LENGTHS AND WEIGHTS OF THE FETUS AT DIFFERENT STAGES OF ITS DEVELOPMENT.

1st month,	1 cm.	.4 in.						
2d "	4 "	1.57 "						
3d "	9 "	3.6 "	30	grms.	463	grains.		
4th "	16 "	6 "	55	"	848 76	"		
5th "	25 "	10 "	273	"	10 8	ozs.		
6th "	30 "	12 "	715	"	23	"		
7th "	35 "	14 "	1213	"	39	"		
8th "	40 "	16 "	1617	"	4⅓	lbs.		
9th "	45 "	18 "	1990	"	5⅛	"		
10th "	50 "	20 "	2737	"	7⅓	"		

Feuillea (*fu-il'-e-ah*) [after Louis *Feuillet,* a French naturalist]. A genus of cucurbitaceous climbing plants. The seeds of **F. cordifolia,** of Jamaica, are emetic and purgative. **F. trilobata,** of Brazil, has similar qualities. Unof.

Fever (*fe'-ver*) [*febris,* a fever]. A systemic disease or symptom of disease whose distinctive characteristic is elevation of temperature, accompanied also by quickened circulation, increased katabolism or tissue-waste, and disordered secretions. **F., Abdominal.** See *F., Typhoid.* **F., Adeno-nervous.** Synonym of *Plague, q. v.* **F., Adeno-typhoid.** Synonym of *F., Mediterranean.* **F., African.** See *F., Yellow,* and *Dengue.* Also the same as *F., Congo.* **F. and Ague.** See *F., Intermittent.* **F., Amatory.** See *Amatory.* **F., Anomalous,** one the symptoms of which are irregular. **F., Aquamalarial.** Same as *F., Malarial.* **F., Ardent,** a non-specific, continued fever occurring in hot climates, in which the ordinary symptoms of febricula are exaggerated. See *Ardent.* **F., Articular.** See *Dengue.* **F., Asthenic,** one with a low-fever temperature, weak circulation, and great loss of nervous force. **F., Ataxic.** See *F., Typhus.* **F., Atypic.** See *F., Anomalous.* **F., Ballast,** fever on shipboard; said to be due to decaying organic matter in the ballast. **F., Barbadoes.** Synonym of *F., Yellow.* **F., Barcelona.** Synonym of *F., Yellow.* **F.-bark.** See *Alstonia.* **F., Bilious,** one accompanying affections of the digestive organs. **F., Black.** Synonym of *Cerebro-spinal meningitis.* **F., Blackwater,** a fever occurring on the west coast of Africa, and characterized by attacking only those who have already suffered from malarial fever. There is a chill followed by lumbar pain, slight jaundice, fever, and the passage of porter-like urine. Bilious vomiting may occur, and death with uremic symptoms. It occurs in paroxysms—in other words, it is a paroxysmal hemoglobinuria. **F., Bladdery.** 1. A vulgar name for *Pemphigus.* 2. Same as *F., Catheter.* **F.-blister,** a vesicular or pustular dermal eruption seen near the mouth, after a febrile disturbance, often occurring after a common cold. See *Herpes facialis* and *H. labialis.* **F., Boa Vista.** Synonym of *F., Yellow.* **F., Bona,** a form of malignant malarial fever in Algeria. **F., Bouquet.** Synonym of *Dengue.* **F., Brain,** fever associated with cerebral disturbance, or with inflammation of the cerebral meninges. **F.,**

TABLE OF THE POSITIONS AND PRESENTATIONS OF THE FETUS.

Presentation.	Frequency.	Varieties.	Symbol.	Frequency of Varieties.	Position of Fetus.	Position of Fetal Heart-sounds.	Mortality.	
							Fetal.	Maternal.
Vertex.	95 per cent. of all cases.	Left occipito-anterior.	L.O.A	70 per cent.	Occiput to left acetabulum, forehead to right sacro-iliac joint; back to left; extremities to right, above.	One inch below, and to left of umbilicus.	5 per cent.	Less than 1 per cent.
		Left occipito-posterior.	L.O.P.		Occiput to left sacro-iliac joint, forehead to right acetabulum; back in left flank; extremities to right, anteriorly.	In left flank, below a transverse line through umbilicus.	Over 9 per cent.	
		Right occipito-anterior.	R.O.A.		Occiput to right acetabulum, forehead to left sacro-iliac joint; back to right; extremities to left, above.	Near median line, below umbilicus.	Over 9 per cent.	
		Right occipito-posterior.	R O.P.	30 per cent.	Occiput to right sacro-iliac joint, forehead to left acetabulum; back in right flank; extremities to left, anteriorly.	In right flank, below a transverse line through umbilicus.	5 per cent.	
Face.	½ of 1 per cent.	Left mento-anterior.	L.M.A.	Second in frequency.	Chin to left acetabulum, forehead to right sacro-iliac joint; back to right; extremities to left.	Left side of abdomen, below umbilicus.	13 to 15 per cent.	6 per cent.
		Left mento-posterior.	L.M.P		Chin to left sacro-iliac joint, forehead to right acetabulum; back to right; extremities to left.	Left side of abdomen, below umbilicus.		
		Right mento-anterior.	R.M.A.		Chin to right acetabulum, forehead to left sacro-iliac joint; back to left; extremities to right.	Right side of abdomen, below umbilicus.		
		Right mento-posterior.	R.M.P.	Most common.	Chin to right sacro-iliac joint, forehead to left acetabulum; back to left; extremities to right.	Right side of abdomen, below umbilicus.		
Brow.	¼ of 1 per cent.	Left fronto-anterior.	L.F.A.		Brow to left acetabulum; chin to right sacro-iliac joint; back to left; extremities to right, above.	Left side of abdomen, below umbilicus.	30 per cent.	10 per cent.
		Left fronto-posterior.	L.F.P.		Brow to left sacro-iliac joint; chin to right acetabulum; back to left; extremities to right, above.	Left side of abdomen, below umbilicus.		
		Right fronto-anterior.	R.F.A.		Brow to right acetabulum; chin to left sacro-iliac joint; back to right; extremities to left, above.	Right side of abdomen, below umbilicus.		
		Right fronto-posterior.	R.F.P.		Brow to right sacro-iliac joint; chin to left acetabulum; back to right; extremities to left, above.	Right side of abdomen, below umbilicus.		
Shoulder.	½ of 1 per cent.	Left dorso-anterior.	L.D.A.	Most common.	Head in left iliac fossa, back anterior; extremities on right side, in upper part of abdomen.	Left side of abdomen, below umbilicus.	Almost 50 per cent.	11 per cent.
		Left dorso-posterior.	L.D.P.		Head in left iliac fossa, back posterior; extremities on right side, in upper part of abdomen.	Frequently cannot be heard.		
		Right dorso-anterior.	R.D.A.		Head in right iliac fossa, back anterior; extremities on left side, in upper part of abdomen.	Right side of abdomen, below umbilicus.		
		Right dorso-posterior.	R.D.P.		Head in right iliac fossa, back posterior; extremities on left side, in upper part of abdomen.	Right side of abdomen, below umbilicus toward the flank.		
Breech.	3 to 4 per cent. of all cases.	Left sacro-anterior.	L.S.A.	Most common.	Sacrum to left acetabulum; back to left anterior; abdomen to right posterior.	Left side of abdomen, above umbilicus.	30 per cent.	Less than 1 per cent.
		Left sacro-posterior.	L.S.P.		Sacrum to left sacro-iliac joint; back to left posterior; abdomen to right anterior.	Left side of abdomen, above umbilicus and toward the back.		
		Right sacro-anterior.	R.S.A.		Sacrum to right acetabulum; back to right anterior; abdomen to left posterior.	Right side of abdomen, above umbilicus.		
		Right sacro-posterior.	R.S P.		Sacrum to right sacro-iliac joint; back to right posterior; abdomen to left anterior.	Right side of abdomen, above umbilicus and toward the back.		

Breslau, a contagious, epidemic disease in Breslau in the middle of the 18th century. Its nature is not known. **F., Brokenwing.** Synonym of *Dengue*. **F., Bucket.** Synonym of *Dengue*. **F., Bulam.** Synonym of *F., Yellow*. **F., Burdwan**, a form of Indian malarial fever. **F.-bush.** Spice-wood. The bark and fruit of *Lindera benzoin*, an aromatic stimulant and tonic. Its properties are due to a volatile oil. Dose of the fld. ext. of the bark ʒj–ij; of the berries ♏xx–ʒj. Unof. **F.-bush, California.** See *Garrya*. **F., Camp.** See *F., Typhus*. **F., Carbuncular.** Synonym of *Anthrax*. **F., Catarrhal**, one with a catarrhal affection of the air-passages. Synonym of *Influenza*. **F., Catheter**, a severe remittent fever sometimes following the passage of the catheter or sound. **F., Cerebro-spinal**, a malignant epidemic fever characterized by spasmodic contraction of the muscles of the neck, retraction of the head, hyperesthesia, etc., with lesions of the cerebral and spinal membranes; it is due to a specific poison. **F., Cesspool.** Synonym of *F., Typhoid*. **F., Chagres.** Synonym of *F., Yellow*, or *F., Malarial*. **F., Chickahominy.** A synonym of *F., Typho-malarial*. **F., Child-bed.** See *F., Puerperal*. **F., Colorado.** Synonym of *Dengue*. **F., Congestive**, a malignant form of a remittent or intermittent malarial fever. Also a synonym of *Cerebro-spinal Meningitis*. **F., Congo**, African fever. A form of fever, of malarial origin, and often of pernicious type, that prevails on parts of the W. African coast. **F., Contagious.** Synonym of *F., Typhus*. **F., Continued**, one in which there is a slowly continuous rise of temperature until a not high acme is reached, whence the fever ends fatally or slowly subsides. **F., Country.** See *F., Florida*. **F., Cretan.** Same as *F., Malta*. **F., New, of Crete.** Synonym of *F., Mediterranean*. **F., Dandy.** Synonym of *Dengue*. **F., Date.** Synonym of *Dengue*. **F., Deccan.** Synonym of *F., Pernicious Malarial*. **F., Diary.** Synonym of *F., Ephemeral*. **F., Dothienteric.** Synonym of *F., Typhoid*. **F., Dynamic.** Synonym of *F., Relapsing*. **F., Elephantoid**, a name given to the severe febrile symptoms that often attend the onset of *Elephantiasis arabum*. **F., Enteric.** See *F., Typhoid*. **F., Epidemic Catarrhal.** Synonym of *Influenza*. **F., Epidemic Gastro-rheumatic.** Synonym of *Dengue*. **F., Epihippic**, influenza in the horse. **F., Eruptive**, that accompanied or succeeded by an eruption on the skin. Examples are *F., Scarlet, Measles, Rötheln, Smallpox, Vaccination, Varicella, Erysipelas, Dengue*. **F., Eruptive Epidemic, of India.** Synonym of *Dengue*. **F., Essential.** See *F., Idiopathic*. **F., Famine.** See *F., Relapsing*. **F., Feco-malarial.** See *F., Mediterranean*. **F.-few**, the herb *Pyrethrum parthenium*, a stimulant tonic with emmenagogue and anthelmintic properties. Dose of the fld. ext. ʒj–ij. Unof. **F., Five-day.** Synonym of *F., Relapsing*. **F., Florida**, Country Fever; a form of fever occurring in tropical or sub-tropical countries, resembling malaria or typhoid fever. It is due to the prolonged action of high temperatures. **F., Gastric**, a term used indefinitely to indicate any febrile ailment associated with abdominal symptoms. It may be a simple febricula or some graver affection. **F., Gastrobilious.** See *F., Mediterranean*. **F., Gibraltar.** Synonym of *F., Mediterranean*. **F., Hay**, a disease of the mucous membranes of the nasal and respiratory passages, also at times involving the conjunctiva and eyeball. It is marked by catarrhal inflammation, coryza, and abundant lachrymation, with well-marked asthmatic attacks and great depression. It is due to the pollen of the grains and other grasses, and to dust, odors, perfumes, and irritating substances acting upon a hypersensitive Schneiderian membrane in those with a marked nervous constitution. It is also attributed to the influence of microbes that float in the air. Climate seems to be a potent factor in the etiology in certain cases. **F., Heat.** Synonym of *Insolation*. **F.-heat**, the heat of fever. **F., Hectic.** Synonym of *Tabes mesenterica*. Also the fever that accompanies pulmonary tuberculosis and other diseases attended with suppuration. **F., Hemo-gastric.** See *F., Yellow*. **F., Hospital.** See *F., Typhus*. **F., Idiopathic**, one the cause of which escapes detection. **F., Inflammatory.** Synonym of *Anthrax*. **F., Intermittent**, one in which the symptoms intermit, with intermediate periods of freedom from the febrile attack. This is the common form of malarial fever. **F., Italian.** Synonym of *Influenza* and of *F., Mediterranean*. **F., Jail.** Synonym of *F., Typhus*. **F., Jungle**, a remittent fever of India. **F., Kendal.** Synonym of *F., Yellow*. **F., Leghorn.** Synonym of *F., Yellow*. **F., Lent.** Synonym of *F., Typhoid*. **F., Levant.** Synonym of *F., Relapsing*. **F., Low**, fever of an asthenic type. **F., Lung**, acute croupous pneumonia. **F., Lying-in.** Synonym of *F., Puerperal*. **F., Maculated.** Synonym of *F., Typhus*. **F., Malarial**, a febrile condition of periodic character dependent upon the presence of the hematozoa malariæ. **F., Malarial Typhoid**, typhoid fever modified by simultaneous malarial infection. **F., Malignant**, a severe and fatal form of any fever. **F., Malta.** See *F., Mediterranean*. **F., Marsh.** Synonym of *F., Malarial*. **F., Mediterranean**, Gastrobilious Fever; Feco-malarial Fever; Malta Fever; Italian Fever; Neapolitan Fever; Cretan Fever; Rock Fever; Gibraltar Fever; a specific febrile disease occurring particularly on the Mediterranean coast, and characterized by long, irregular pyrexia, frequent relapses, rheumatic complications, constipation, and the absence of ulceration of Peyer's patches. It has an incubation period of from six to nine days. The temperature may rise to 104° or 106° F., and in fatal cases to 110° F. The course is often prolonged to from three months to a year or more. The mortality rate is about two per cent. **F., Mesenteric.** Synonym of *Tabes mesenterica*. **F., Miasmatic.** Synonym of *F., Malarial*. **F., Miliary**, an affection formerly very common, occurring in an epidemic form, with a prodromal stage of two or three days, during which there is great irritation of the skin, debility, and a feeling of suffocation. This is followed by profuse sweating, high fever, precordial and epigastric distress, and the appearance on the third or fourth day of a rash, first upon the neck and breast, consisting of numerous round or irregular spots, in the center of which vesicles arise that finally burst and form crusts. Desquamation and slow convalescence follow. **F., Military.** Synonym of *F., Typhus*. **F., Milk**, a form of slight puerperal septicemia, formerly thought to be due to the formation of milk in the mother's breast. **F., Mountain.** Synonym of *F., Typhoid*. **F., Mucous.** A synonym of *F., Typhoid, q. v.* **F., Neapolitan.** See *F., Mediterranean*. **F., New.** Synonym of *F., Malta*. **F., Night-soil.** Synonym of *F., Typhoid*. **F., Ochlotic.** Synonym of *F., Typhus*. **F., Paludal.** See *F., Intermittent*. **F., Panama**, an endemic fever on the Isthmus of Panama; pernicious malarial fever. **F., Periodic.** See *F., Intermittent*. **F., Pernicious**, a malignant fatal type of remittent or intermittent malarial fever. **F., Peyerian.** Synonym of *F., Typhoid*. **F., Prison**, typhus fever. **F., Puerperal**, Metria; an acute, heterogenetic, contagious febrile affection of women in child-bed. It is due to the in-

troduction of germs and septic material into the system, the poisonous agents finding entrance through the wounds and lacerations of the genital tract consequent upon parturition. In some cases these wounds take on an unhealthy condition with the formation over them of a whitish or grayish pellicle; they then form the so-called *diphtheric ulcers*, although they bear no relation to true diphtheria. In other cases there may start up a gangrenous condition spreading rapidly to the adjoining tissues. Virchow calls this variety *Erysipelas Malignum Internum*, *q. v.* It may assume a number of other forms, all of which are of a greater or lesser degree of gravity. **F., Puking.** Synonym of *Milk-sickness*. **F., Pulmonic.** A synonym of *Croupous Pneumonia*. **F., Putrid.** Synonym of *F., Typhus*. **F., Pyogenic.** Synonym of *Strangles*. **F., Pythogenic.** Synonym of *F., Typhoid*. **F., Quinin,** fever produced by large doses of quinin; it is attended with hematuria, dysuria, dyspnea, threatened collapse. **F., Red.** Synonym of *Dengue*. **F., Relapsing,** Famine Fever; an acute specific febrile disease characterized by a short paroxysm of fever, ending in crisis, followed by a well-marked remission, and that by a relapse on or about the fourteenth day. The fever is high and the patient restless; there is no characteristic eruption; but the patient emits a peculiar musty odor like that of burning straw. Epistaxis, often profuse, is present. A crisis is usual on the seventh day and is attended usually by some critical discharge. In seven days, or a little sooner, the relapse occurs, lasting from a few hours to seven days or more. During convalescence there may be a flaky desquamation. There is always in this disease marked enlargement of the spleen; the liver also is enlarged, as well as the kidneys. The disease is due to the presence in the blood of a specific spirillum, which is only seen during the paroxysms. **F., Remittent,** a paroxysmal fever with exacerbations and remissions, but not intermissions; usually applied specifically to remittent malarial fever. **F., Rheumatic.** See *Rheumatism*. **F., Rock.** Synonym of *F., Mediterranean*. **F., Scarlet.** See *Scarlatina*. **F., Septic,** one due to the admission of septic matter into the system. **F., Seven-day.** Synonym of *F., Relapsing*. **F., Seventeen-day.** Synonym of *F., Relapsing*. **F., Ship.** Synonym of *F., Typhus*. **F., Shoddy,** an illness occurring among shoddy-grinders. The symptoms are headache, malaise, dryness of the fauces, and difficulty of breathing. The acute symptoms subside in six or eight hours, but cough and expectoration remain as a chronic condition. **F., Siam.** Synonym of *F., Yellow*. **F., Simple Continued,** a continued, noncontagious fever, varying in duration from one to twelve days, and usually ending in recovery. **F., Solar.** Synonym of *Dengue*. **F.-sore,** a colloquial name for necrosis of the tibia; also a fever-blister. **F., Spirillum.** Synonym of *F., Relapsing*. **F., Splenic.** Synonym of *Anthrax*. See *Pustula maligna*. **F., Sthenic,** fever characterized by abnormal increase of the cardiac and vital activities. **F., Stiff-necked.** Synonym of *Dengue*. **F., Sudoral.** Synonym of *F., Mediterranean*. **F., Summer,** hay-fever. **F., Sun.** Synonym of *Insolation*. **F., Three-day.** Synonym of *Dengue*. **F., Traumatic,** that following traumatism, surgical or accidental. **F.-twig.** See *Climbing Staff-tree* and *Celastrus*. **F., Typhoid,** Enteric Fever; an acute continued fever due to a specific virus, the bacillus typhosis, and characterized by peculiar intestinal lesions, splenic enlargement, maculæ on the skin (rose spots), headache, delirium, diarrhea, prostration, etc. The morbid changes are chiefly in the lower part of the ileum, occasionally in the upper part of the colon, and consist in a necrotic inflammatory infiltration of the follicular structures and neighboring parts, commonly called "Peyer's patches," with a catarrhal inflammation of the rest of the intestinal mucous membrane. The stools are the characteristic liquid ocher-colored passages, resembling pea-soup. Epistaxis is frequently an early symptom. The duration of the disease is usually about four weeks. There may be, however, an abortive form of the disease ending at from the eighth to the fourteenth day. The *afebrile form*, which is rare, may have a normal or even subnormal temperature throughout the entire course. Perforation of the bowel, peritonitis, hemorrhage, and tympanites are some of the complications of the disease. Relapses occur in a certain proportion of the cases. The poison of typhoid fever usually enters the system through the drinking-water, or milk, or by inhaling effluvia from drains. Direct contagion from the sick to the healthy plays but a small part in the dissemination of typhoid fever. See *Table of Exanthemata*. **F., Typhoid, Ambulatory,** the latent form, with illy-defined symptoms, so that the patient scarcely feels ill enough to go to bed. The prognosis in this form of the disease is often grave. **F., Typhoid, Atypical.** Synonym of *F., Mediterranean*. **F., Typhoid, Canine,** a peculiar form of typhoid fever occurring only among patients who have been previously subject to malaria. The period of invasion is from one to three days, during which the patient complains of general discomfort and constipation. This is followed by a rapid development of the fever, the temperature almost immediately reaching 104° F. After the third day diarrhea, epistaxis, and intestinal hemorrhage occur. The fever subsides at the end of the first week, though the diarrhea and enlargement of the spleen continue. The pulse is always slow. **F., Typhoid, Intermittent.** Synonym of *F., Mediterranean*. **F., Typho-malarial,** a malarial fever with typhoid symptoms. **F., Typhus,** an acute, specific, epidemic, contagious, exanthematous fever, probably due to a specific infecting germ, and characterized by a peculiar petechial eruption, depression of the vital powers, profound cerebral manifestations, and absence of any discoverable lesion. It terminates by crisis on or about the fourteenth day, or by death from exhaustion or coma. See *Exanthemata, Table of*. **F., Typhus, Abdominal.** Synonym of *F., Typhoid*. **F., Typhus, Walking,** typhus fever in which the vital powers are not greatly reduced, so that the patient does not go to bed. **F., Urinary,** the febrile disturbance that follows the use of the catheter or bougie, or other operation upon the urinary organs, or any distinct impression made upon the urethra or bladder by some other means than these. Urinary fever varies in severity, from a slight chill and moderate rise of temperature to a well-marked chill with considerable rise of temperature. **F., Vitular.** See *Collapse, Parturient*. **F., Vitulary.** See *Collapse, Parturient*. **F.-wort.** See *Triosteum*. **F., Wound.** Synonym of *F., Traumatic*. **F., Yellow,** an acute, specific, infectious, contagious, paroxysmal, malignant fever, occurring mainly in subtropical regions, and characterized by three stages —the febrile, the remission, and the collapse. The poison of the disease is destroyed by frost. The period of incubation varies from one to fourteen days. The onset is sudden, the temperature high. There is a tendency to hemorrhage from the nose, mouth, vagina, kidneys, or stomach; the skin and conjunctivæ acquire a yellow tint or even a deep olive or mahogany color. There may be vomiting of altered blood. In fatal cases there is found a granular

degeneration of the liver-cells. One attack of the disease protects against subsequent seizures; negroes display a peculiar immunity to the disease.

Feverish (*fe'-ver-ish*) [*febris*, fever]. Somewhat affected with fever; febrile.

Fexism (*feks'-izm*) [Austrian]. A form of cretinism seen in Styria (Austria); its victims are locally called *fexi*.

Fiber (*fi'-ber*) [*fibra*, a thread]. A filamentary or thread-like structure. Applied to the thread-like filaments of muscular, cartilaginous, and tendinous tissues. **F., Axial,** the central or axial band of a nerve-fiber; it is called also the *band of Remak* and the axis-cylinder. **F., Beale's,** a spinal nerve-fiber seen in sympathetic ganglion-cells. It becomes a medullated nerve. **F., Bühlmann's,** peculiar lines formed in carious teeth due to the *Bacterium lineola*. **F., Gottstein's,** the external ciliated cells and nerve-fibers of the auditory nerve in the cochlea. **F. of Corti.** See *Corti*. **F. of Gerdy,** a transverse band of fibers supporting the hand crosswise and forming the web of the fingers. **F. of Müller,** a supporting connective tissue that unites the various layers of the retina. **F. of Remak,** certain pale and non-medullated nerve-fibers, found mostly in branches of the sympathetic nerve. **F. of Sharpey,** delicate processes or rods that pass through and rivet together the concentric laminæ of bone. **F., Sustentacular.** See *F. of Müller*. **F. of Tomes,** elongated and branched processes of the odontoblasts of the pulp, filling the dentinal tubules of teeth.

Fibra (*fi'-brah*) [L.: *pl.*, *Fibræ*]. Same as *Fiber*.

Fibration (*fi-bra'-shun*) [*fibra*, fiber]. Fibrous construction; arrangement of fibers.

Fibril, or Fibrilla (*fi'-bril*, or *fi-bril'-ah*) [dim. of *fibra*, a fiber]. A small fiber or component filament of a fiber. A name applied to minute nerve-filaments.

Fibrillar (*fi'-bril-ar*) [*fibrilla*, a small fiber]. Pertaining to fibrillæ. **F. Contractions,** spontaneous contractions successively taking place in different bundles of muscular fibers; they are characteristically observed in progressive muscular atrophy.

Fibrillary (*fi'-bril-a-re*). Same as *Fibrillar*.

Fibrillation (*fi-bril-a'-shun*) [*fibrilla*, a small fiber]. The quality of being fibrillar; also a fibrillar contraction; the acquirement of new fibrils. **F. of New Tissue,** the appearance of fibrillæ in new-formed tissue.

Fibrin (*fi'-brin*) [*fibra*, a fiber]. A native albumin or proteid, a substance that, becoming solid in shed blood, plasma, and lymph, causes coagulation of these fluids. It then exists in the shape of innumerable, excessively delicate, closely packed, microscopic, doubly refractive fibrils, entangling the blood-corpuscles, as in a spider's web, and with them forming the blood-clot or *placenta sanguinis*. Fibrin forms about 0.2 per cent. of the blood and is insoluble in water and ether. It is changed into syntonin by dilute hydrochloric acid. **F.-ferment,** a ferment obtainable from blood-serum after clotting has occurred. It does not exist in the living, circulating blood. Its activity is destroyed by heating to 70° F.

Fibrination (*fi-brin-a'-shun*) [*fibra*, a fiber]. The acquirement of an abnormal amount of fibrin.

Fibrinogen (*fi-brin'-o-jen*) [*fibra*, a fiber; *γεννᾶν*, to produce]. A native proteid of the globulin class, obtained from blood-plasma, serous transudations, etc. According to Schmidt it is one of the chief elements in the formation of fibrin (the other being Paraglobulin), which occurs dissolved in the plasma, aided by a fibrin-ferment.

Fibrinogenic (*fi-brin-o-jen'-ik*) [*fibra*, a fiber; *γεννᾶν*, to produce]. Of the nature of fibrinogen.

Fibrinogenous (*fi-brin-oj'-en-us*) [*fibra*, a fiber; *γεννᾶν*, to produce]. Forming or producing fibrin.

Fibrinoplastic (*fi-brin-o-plas'-tik*) [*fibra*, a fiber; *πλάσσειν*, to form]. Of the nature of fibrinoplastin.

Fibrinoplastin (*fi-brin-o-plas'-tin*). See *Paraglobulin*.

Fibrinous (*fi'-brin-us*) [*fibra*, a fiber]. Of the nature of or containing fibrin.

Fibrinuria (*fi-brin-u'-re-ah*) [*fibra*, a fiber; *οὖρον*, urine]. The presence of fibrin in the urine to an extent that causes its coagulation after the liquid has been voided. It usually occurs in the course of villous cancers of the bladder, or after the use of cantharides.

Fibro- (*fi'-bro-*) [*fibra*, a fiber]. A prefix used to denote fibrous structure.

Fibro-areolar (*fi-bro-ar-e'-o-lar*) [*fibra*, fiber; *areola*, dim. of *area*, an open space]. Containing both fibrous and areolar tissues.

Fibroblast (*fi'-bro-blast*) [*fibra*, fiber; *βλαστός*, germ]. A connective-tissue cell.

Fibro-bronchitis (*fi-bro-brong-ki'-tis*) [*fibra*, fiber; *βρόγχος*, the windpipe; *ιτις*, inflammation]. Bronchitis with the expectoration of fibrinous casts.

Fibro-carcinoma (*fi-bro-kar-sin-o'-mah*) [*fibra*, fiber; *καρκίνωμα*, carcinoma: *pl.*, *Fibrocarcinomata*]. A carcinoma with fibrous elements.

Fibro-cartilage (*fi-bro-kar'-til-āj*) [*fibra*, a fiber; *cartilago*, gristle]. Cartilage with more or less copious intermixture of fibrous elements.

Fibro-cartilaginous (*fi-bro-kar-til-aj'-in-us*) [*fibra*, fiber; *cartilago*, gristle]. Composed of or containing fibro-cartilage.

Fibro-cellular (*fi-bro-sel'-u-lar*) [*fibra*, fiber; *cella*, cell]. Both fibrous and cellular; fibro-areolar.

Fibro-chondritis (*fi-bro-kon-dri'-tis*) [*fibra*, fiber; *χόνδρος*, cartilage; *ιτις*, inflammation]. Inflammation of fibro-cartilage.

Fibrocyst (*fi'-bro-sist*) [*fibra*, fiber; *κύστις*, cyst]. A fibroma that has undergone cystic degeneration.

Fibro-elastic (*fi-bro-e-las'-tik*) [*fibra*, fiber; *ἐλαστικός*, elastic]. Consisting partly of fibrous elastic tissue.

Fibro-enchondroma (*fi-bro-en-kon-dro'-mah*) [*fibra*, fiber; *ἐν*, in; *χόνδρος*, cartilage; *ὄμα*, tumor: *pl.*, *Fibro-enchondromata*]. An enchondroma containing fibrous elements.

Fibro-glioma (*fi-bro-gli-o'-mah*) [*fibra*, fiber; *γλία*, glue; *ὄμα*, tumor: *pl.*, *Fibrogliomata*]. A tumor consisting in part of fibrous and in part of glious elements.

Fibroid (*fi'-broid*) [*fibra*, fiber; *εἶδος*, likeness]. A term applied to such structures as possess a fibrous appearance, but cannot be separated into fibers. Also, a fibroid tumor. **F. Heart,** a chronic form of myocarditis in which there is a development of fibrous connective tissue in the cardiac muscle. **F. Induration.** See *Induration*. **F. Phthisis,** the very chronic form of phthisis, in which the inflammatory products have taken on a fibroid change.

Fibroin (*fi'-bro-in*) [*fibra*, fiber], $C_{15}H_{23}N_3O_6$. An albuminoid; a white, shining substance, the chief constituent of the cocoons of insects and spider-web. See also *Fibrorin*.

Fibro-lipoma (*fi-bro-lip-o'-mah*) [*fibra*, fiber; *λίπος*, fat; *ὄμα*, tumor: *pl.*, *Fibro-lipomata*]. A neoplasm constituted of both fibrous and fatty elements.

Fibroma (*fi-bro'-mah*) [*fibra*, a fiber; *ὄμα*, a tumor: *pl.*, *Fibromata*]. 1. Any fibrous-tissue tumor; it is called also *inoma*. 2. See *Molluscum fibrosum*. **F., Concentric,** a soft, red, vascular form of uterine fibroma, forming a general enlargement of the uterus, concentrically surrounding the uterine cavity. It contains a relatively greater abundance of muscular tissue than the other varieties of fibromata. **F. fungoides.** See

Granuloma fungoides and *Mycosis*. **F. lipomatodes.** Same as *Xanthoma*, *q. v.* **F. molluscum.** Synonym of *Molluscum fibrosum*. **F. simplex.** Synonym of *Molluscum fibrosum*.

Fibromyitis (*fi-bro-mi-i'-tis*) [*fibra*, fiber; μῦς, muscle; ιτις, inflammation]. Inflammation of a muscle, leading to its fibrous degeneration.

Fibro-myoma (*fi-bro-mi-o'-mah*) [*fibra*, fiber; μῦς, muscle; ὄμα, a tumor: *pl.*, *Fibro-myomata*]. A tumor composed of fibrous and muscular tissue.

Fibromyxoma (*fi-bro-miks-o'-mah*) [*fibra*, fiber; μύξα, mucus; ὄμα, a tumor: *pl.*, *Fibromyxomata*]. A fibroma that is undergoing a myxoid change.

Fibroplastic (*fi-bro-plas'-tik*) [*fibra*, fiber; πλάσσειν, to form]. Showing a tendency toward the formation of fibers; a term applied to certain cases of spindle-celled sarcoma.

Fibrorin (*fi-bror'-in*) [*fibra*, fiber]. In biology, the substance of which the webs of spiders are composed.

Fibro-sarcoma (*fi-bro-sar-ko'-mah*) [*fibra*, fiber; σάρξ, flesh; ὄμα, tumor: *pl.*, *Fibro-sarcomata*]. A spindle-celled sarcoma, with elements that cause it to resemble a fibroma.

Fibro-serous (*fi-bro-se'-rus*) [*fibra*, fiber; *serum*, whey]. Having the qualities of a fibrous and serous structure. **F.-s. Membranes,** thin, transparent, glistening structures forming closed sacs, that contain certain organs. They are the peritoneum, the two pleuræ, the pericardium, the tunica vaginalis testis, the arachnoid, and synovial membranes.

Fibrosis (*fi-bro'-sis*) [*fibra*, fiber]. The development of interstitial fibrous tissue; it occurs as a disease-process in the coats of the smaller blood-vessels at about middle life. **F., Arterio-capillary.** See *Endarteritis*.

Fibrous (*fi'-brus*) [*fibra*, a fiber]. Containing fibers; of the character of a fiber.

Fibula (*fib'-u-lah*) [L., a buckle]. The smaller or splint-bone at the outer part of the lower leg articulating above with the tibia, and below with the astragalus and tibia. It forms the external malleolus.

Fibular (*fib'-u-lar*) [*fibula*, a buckle]. Relating to the fibula.

Fibulare (*fib-u-la'-re*) [L.: *pl.*, *Fibularia*]. Same as *Calcaneum*.

Fibulen (*fib'-u-len*) [*fibula*, a buckle]. Belonging to the fibula in itself.

Fibulo-calcaneal (*fib-u-lo-kal-ka'-ne-al*) [*fibula*, a buckle; *calcaneum*, the heel]. Pertaining to or connecting the fibula and the calcaneum.

Ficarin (*fik'-ar-in*) [*ficus*, a fig]. A neutral principle obtained from the common ficary; it is used internally and externally for piles.

Ficary (*fik'-ar-e*) [*ficaria; ficus*, a fig; a hemorrhoid]. The *Ranunculus ficaria*, pilewort, a common European herb, long a popular remedy for piles.

Fick's Angle. See *Angle*.

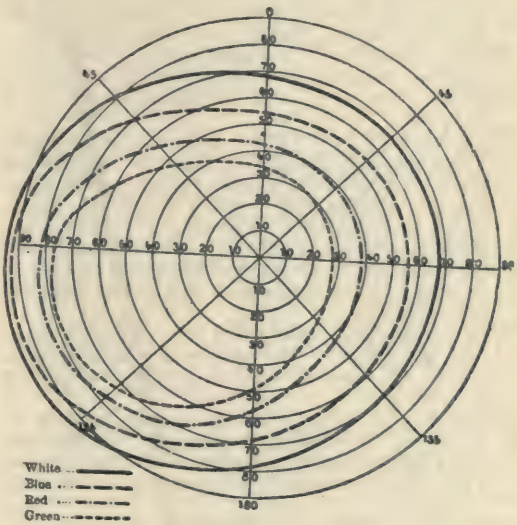
Ficoin (*fi'-ko-in*) [*ficus*, a fig]. Doliariin, or cradin; a form of papayin, or vegetable pepsin, obtained from various species of *Ficus*.

Ficosis (*fi-ko'-sis*). See *Sycosis*.

Ficus (*fi'-kus*) [L., a fig-tree]. 1. The fig. The fleshy receptacle of *F. carica*, native to Asia Minor, and cultivated throughout Europe and tropical America. It contains 62 per cent. of grape-sugar when dry. It is somewhat laxative and fairly nutritious, and is a constituent of *Confectio sennæ*. The genus *Ficus* contains many species. Forms of papayin (cradin, doliariin) occur in several species. Others afford caoutchouc, lac, etc. 2. A hemorrhoidal or condylomatous tumor.

Fiddle, Scotch (*fid'-l*) [ME., *fidel*]. The itch.

Fiddler's Muscle. See *Fidicinal*.



Fidgets (*fij'-ets*) [dim. of *fidge*]. Uneasiness; restlessness; dysphoria, *q. v.*

Fidicinal Muscle. See *Muscles, Table of*.

Fidispinalis (*fid-is-pi-na'-lis*) [*fidicinus*, for playing on stringed instruments; *spina*, the back]. The muscle called multifidus spinæ. See *Muscles, Table of*.

Field (*feld*) [ME., *feeld*]. Any space or area, especially the field of vision. **F., Contraction of the,** occurs in certain retinal and cerebral affections. **F.-glass,** in an eye-piece, the lens farthest from the eye. **F.-hospital,** a temporary hospital on a battle-field. **F. of Vision,** sometimes spoken of simply as *the field*. The extent of indirect vision with fixation of the visual axis upon one point. Its limit for white light is about 90° outward, 70° inward and above, and 60° downward. **The F. for Colors** is more restricted; that for blue is nearly as large as that for white, while that for red and green is more narrow. **F., Testing the.** See *Perimeter*.

Fifth Nerve. See *Trifacial*. **F. Ventricle.** See *Ventricle*.

FIELD OF VISION OF THE LEFT EYE.

Fig [ME., *fig*, a fig]. See *Ficus*. **F.-wart.** See *Verruca acuminata*. **F.-wort,** the herb *Scrophularia nodosa*, an alterative, diuretic, and anodyne. It is sometimes used in the form of an ointment for piles. Dose of the fld. ext. ʒss–j. Unof.

Figure of Eight. See *Bandage*.

Fila (*fi'-lah*) [L.]. Plural of *Filum*, *q. v.*

Filament (*fil'-am-ent*) [*filum*, a thread]. A small, thread-like structure or part of an organ, as a muscle, nerve, or tendon. **F., Spermatic,** the caudal filament of a spermatozoön.

Filamentation [L., *filum*, a thread]. Thread formation. A peculiar reaction produced in certain bacteria (bacillus coli communis, proteus, etc.) when they are brought in contact with blood-serum, and consisting in the formation of long interlacing threads. The reaction is best obtained when the bacteria are suspended in serum derived from the same individual from whose body the bacteria were obtained (so-called "homologous" serum).

Filaria (*fi-la'-re-ah*) [*filum*, a thread]. A genus of nematode or thread-worms of the family *Filariidæ*. See *Parasites* (*Animal*), *Table of*. **F. bancrofti.** See

Thread-worms and *Parasites* (*Animal*), *Table of.* **F. conjunctivæ** has been taken from the human conjunctiva; it is found chiefly in Africa. **F. lentis** has been found in cataractous lenses. **F. medinensis.** See *Thread-worms*, *Guinea-worm*, and *Parasites* (*Animal*), *Table of.* **F. sanguinis hominis,** Crawcraw; the embryo of a nematode worm native to the Guinea coast of Africa, which, entering the blood and lymphatics, causes abscesses in the lymphatic glands, certain forms of *Elephantiasis*, *q. v.*, *lymph-scrotum*, if the lymphatics of the scrotum are involved, or *chyluria*, if those of the pelvis are obstructed. See *Parasites* (*Animal*), *Table of.* **F. sanguinolenta.** See *Thread-worms* and *Parasites* (*Animal*), *Table of.*

Filariasis (*fi-lar-i'-as-is*) [*filum*, a thread]. A diseased state due to the presence in human blood of *Filaria sanguinis*, or of an entozoön of some allied species.

File (*fīl*) [ME., *file*, a file]. See *Raspatory*, *Xyster.* **F.-cutter's Disease,** a form of pneumonokoniosis. **F., Dental,** Odontorine; Scalprum dentarum; Lima dentaria; a tooth-file; an instrument for the removal of a portion of one or more teeth. There are files for separating incisor, bicuspid, and molar teeth, etc.

Filhos, Caustic of. A cauterizing paste composed of quicklime and caustic potash mixed with alcohol.

Filices (*fil'-is-ēz*) [L., *pl.* of *Filix*, a fern]. Ferns. See *Filix.*

Filiform (*fil'-if-orm*) [*filum*, a thread; *forma*, form]. Thread-like. **F. Bougie.** See *Bougie.* **F. Papillæ,** the smallest and most numerous of the papillæ of the tongue, occurring over its whole surface. **F. Apparatus,** in biology, the longitudinally striated, homogeneous, strongly refractive, cellulose cap, often found at the apex of each of the two cells (*synergidæ*) forming a part of the germinal apparatus or egg-apparatus of plants.

Filipuncture (*fil-e-punk'-chūr*) [*filum*, thread; *punctura*, a puncture]. The passing into an aneurysmal sac of wire-threads, hairs, or the like, to promote coagulation.

Filix (*fi'-liks*) [L.: *pl.*, *Filices*]. A general name for any fern. **F. femina,** or **feminea,** the fern now called **Asplenium filix femina,** female fern or spleenwort. See *Asplenium.* **F. mas,** male fern. See *Aspidium.*

Filixolin (*fi-liks'-o-lin*) [*filex*, fern; *oleum*, oil]. The fatty oil of *Male Fern.*

Filleau's Method. See *Treatment, Methods of.*

Fillet (*fil'-et*) [Fr., *filet*, a thread]. A loop-shaped bandage; a tape loop passed through the handles of an obstetric forceps, or about some part of the fetus, for the purpose of making traction. Also see *Lemniscus.* **F., Olivary,** a fasciculus of nerve-fibers enclosing the olivary body of the medulla. **F. Test.** See *Death, Signs of.*

Filling (*fil'-ing*) [ME., *fillen*, to fill]. The material used in closing cavities in carious teeth.

Film [ME., *fylme*, a film]. A pellicle or thin skin; an opacity of the cornea.

Filoplume (*fil'-lo-plūm*) [*filum*, thread; *pluma*, a feather]. In biology, an extremely slender, thread-like feather, usually destitute of vane, very abundant on common poultry.

Filo-pressure (*fi'-lo-presh'-ūr*) [*filum*, a thread; *pressura*, a pressing]. Compression of a vessel by means of a wire or a thread.

Filovaricosis (*fi-lo-var-ik-o'-sis*) [*filum*, a thread; *varix*, a dilated vein]. A varicosity of the axis-cylinder of a nerve-fiber, or the formation of one.

Filter (*fil'-ter*) [*filtrum*, felt]. An apparatus for straining and removing from water or other liquid solutions the impurities it may contain. **F. Paper,** a paper of close, firm mesh, much used by pharmacists for filtration.

Filth [ME., *filthe*, foulness]. Foul, offensive matter. **F.-disease,** any disease due to filth. **F.-dread.** See *Mysophobia* and *Rupophobia.*

Filtration (*fil-tra'-shun*) [*filtrum*, felt]. The operation of straining through bibulous paper. The best white filter-paper should be used for filtering alkaline or alkaloidal solutions.

Filtrum (*fil'-trum*) [L., felt: *pl.*, *Filtra*]. 1. Felt, *q. v.* 2. A filter or strainer.

Filum (*fi'-lum*) [L.]. Any thread-like or filamentous structure; in surgery, a thread or wire. **F. coronarium,** a cord-like ridge that runs along the auricular opening of the heart. **F. terminale,** the terminal strands of the spinal cord, extending from the first lumbar vertebra through the cauda equina.

Fimbria (*fim'-bre-ah*) [Lat., a "fringe": *pl.*, *Fimbriæ*]. Corpus fimbriatum; tænia hippocampi; a zone consisting of alba alone, and forming, as it were, a margin for the hippocamp. There is one in each hemicerebrum between the hippocamp and the rima. **F. ovarica,** one of the fimbriæ of the Fallopian tube nearly double the length of the others, and characterized by the great size of its secondary fringes. It leads toward the ovary.

Fimbriæ (*fim'-bre-e*) [*fimbria*, a fringe]. Threads; a fringe. **F. of Fallopian Tube,** the fringe-like processes of the outer extremity of the oviduct.

Fimbrial (*fim'-bre-al*) [*fimbria*, a thread]. Relating to the fimbria or to fimbriæ.

Fimbriated (*fim'-bre-a-ted*) [*fimbria*, a thread]. Fringed; having a shred-like or fimbrial border.

Fimbriocele (*fim'-bre-o-sēl*) [*fimbria*, a thread; κήλη, hernia]. Hernia enclosing some or all of the fimbriæ of an oviduct.

Fimetarious (*fim-et-a'-re-us*) [*fimus*, dung]. In biology, growing on dung.

Finckler and Prior, Spirillum of. See *Bacteria, Synonymatic Table of.*

Fine (*fin*) [ME., *fin*, fine]. Opposed to coarse. **F. Adjustment.** See *Adjustment.*

Finger (*fing'-ger*) [ME., *finger*]. A digit of the hand. **F., Clubbed.** See *Clubbed Fingers.* **F., Insane,** a finger affected with a variety of chronic whitlow; it is seen in certain cases of confirmed brain-disorder. **F., Mallet,** a deformity of a finger characterized by deficient extension or undue flexion of the terminal phalanx. **F.-stall,** a rubber covering for a finger. **F., Transparent,** a small, round plate of glass set in a metal frame, used by Liebreich in place of digital pressure in lupus-examinations. A lens may be used in place of plain glass, thus illuminating the skin. **F., Trigger.** See *Trigger-finger.*

Fingers and Toes, Numbering of. Among anatomists the rule is almost universally followed of numbering from the thumb and great toe (pollux and hallux). Occasionally the index finger is considered number one.

Fining (*fī'-ning*) [ME., *fin*, fine]. A term applied to the "clearing" of wine. It consists in adding to muddy wine some albuminous or similar substance that will mix with the suspended matter and carry it to the bottom or bring it to the surface. The substances most generally employed are white of egg, ox-blood, and milk, or mixtures of these substances.

Finlay's Micrococcus. See *Bacteria, Synonymatic Table of.*

Finn (*fin*). The cysticercus or larva of a tape-worm.

Fiocca, Bacillus of. See *Bacteria, Synonymatic Table of.*

Fir (*fur*) [ME., *fir*, the fir-tree]. See *Abies*. **F.-balsam.** See *Abies balsamea*. **F.-wool**, a fiber prepared in Germany from pine-leaves. It has been recommended as a material for the clothing of invalids. **F.-wool Extract,** an extract prepared from the leaves of *Pinus sylvestris* in the process of separating fir-wool. It is used in chronic rheumatism. Unof. **F.-wool Oil** (*Oleum pini sylvestris*, B. P.), the fragrant volatile oil distilled from the leaves of *Pinus sylvestris*, used mainly by inhalation. Dose, for rheumatism, 10–20 drops, four times a day.

Fire (*fir*) [ME., *fire*]. The visible heat of burning bodies. **F.-damp,** the gas contained in coal, often given off in large quantities, and exploding, on ignition, when mixed with atmospheric air. **F. measles.** Synonym of *Rötheln*. **F.-weed.** See *Erechthites* and *Epilobium*.

Firing (*fir'-ing*) [ME., *fire*, fire]. The application, either slight or caustic, of a hot metallic cauter. The sterilization of a vessel or flask by the combustion of contained alcohol.

Firming (*furm'-ing*) [*firmus*, firm]. Hardening of the flesh of a slaughtered animal. Marked flaccidity of the flesh is a sign of an unhealthy condition of the meat.

First (*furst*) [ME., *first*]. Before all others; foremost in rank. **F. Intention.** See *Healing*. **F. Light Oil,** the fraction of coal-tar distilling at a temperature up to 170° C. It includes a small percentage of ammonia-liquor which is mechanically contained in the tar, and is separated from the tar-oils by being allowed to stand and settle out, when it is drawn off. The specific gravity of this fraction is about .975, and it is made up of benzene, toluene, and higher homologues, with phenol, cresol, naphthalene, etc.

Fischer's Operation. See *Operations, Table of*. **F.'s Test.** See *Tests, Table of*.

Fisetin (*fi-se'-tin*). Same as *Fustin*.

Fish [ME., *fisch*]. A vertebrate with gills and fins, inhabiting the water. **F.-berry.** See *Cocculus indicus*. **F.-gelatin.** See *Glue* and *Isinglass*. **F.-roe Bodies.** See *Fungus Foot*. **F.-skin Disease.** See *Ichthyosis*.

Fisher's Brain-murmur. See *Signs and Symptoms, Table of*. **F.'s Train-murmur.** See *Signs and Symptoms, Table of*.

Fissate (*fis'-āt*) [*fissus; findere*, to cleave]. In biology, applied to antennæ or other structures having the terminal portion divided or split into two parts.

Fissile (*fis'-il*) [*findere*, to split]. That which may be split or cleft. In biology, formed of plates or scales closely placed together.

Fission (*fish'-un*) [*fissus; findere*, to cleave]. In biology, spontaneous self-division of unicellular organisms or histologic cells, as a process of multiplication.

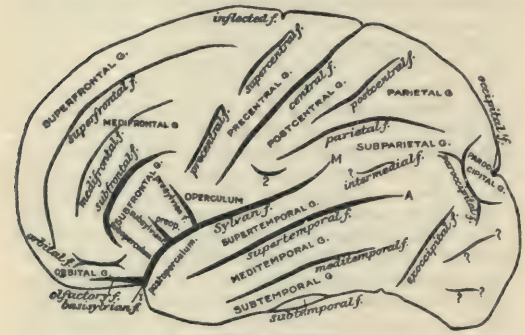
Fissipalmation (*fis-ip-al-ma'-shun*) [*fissus; findere*, to cleave; *palma*, palm]. In biology, applied to animals having the toes incompletely webbed.

Fissipara (*fis-ip'-ar-ah*) [*fissus; findere*, to cleave; *parus*, produce]. In biology, applied in a general way to all organisms that multiply by spontaneous self-division.

Fissiparation (*fis-ip-ar-a'-shun*) [*findere*, to split; *parere*, to produce]. A form of cell-division. See *Cell*.

Fissiparous (*fis-ip'-ar-us*) [*findere*, to split; *parere*, to produce]. Propagating by fission; applied to unicellular organisms or histologic cells that undergo spontaneous self-division in the process of multiplication. See *Fission*.

Fissural Integer (*fish'-ūr-al in'-te-jer*). See *Integer*.



Fissuration (*fish-ūr-a'-shun*) [*findere*, to split]. Same as *Fission*. Also applied to the arrangement of the fissures of various organs, such as the brain.

Fissure (*fish'-ūr*) [*fissura; findere*, to cleave]. A groove or cleft. A term applied to the clefts or grooves in various organs. **F., Abdominal,** a separation of the recti muscles of the abdomen, either above and below the umbilicus, or both. **F., Accessory,** the inferior end of the cartilaginous portion of the Eustachian tube. **F., Adoccipital** (*of Wilder*), an inconstant cerebral fissure, extending across the caudal portion of the precuneus, and forming an acute angle with the occipital fissure. **F., Ammon's,** during the early fetal period, a pyriform fissure in the lower portion of the sclerotic coat of the eye. **F., Amygdaline** (*of Wilder*), a cerebral fissure on the mesal aspect of the tip of the temporal lobe; it may be identical with the basirrhinal fissure of Owen; it is collocated with the amygdala. **F., Anal.** See *F. of the Anus*. **F., Anterior** (*of Burdach*), a cerebral fissure, probably the presylvian. **F., Anterior** (*of spinal cord*). See *F., Anterior Median* (*of spinal cord*). **F., Anterior Lateral** (*of spinal cord*), a groove on the ventro-lateral aspect of the spinal cord. **F., Anterior Median** (*of medulla oblongata*), the continuation of the ventral fissure of the cord into the oblongata, where it terminates at the pons in the foramen cecum. **F., Anterior Median** (*of spinal cord*), a deep longitudinal groove in the median line of the ventral aspect of the spinal cord. **F., Antero-lateral,** a slightly marked depression along the ventro-lateral column of the spinal cord, separating the latter into the ventral and lateral columns. **F., Antero-median.** See *F., Anterior Median* (*of spinal cord*). **F., Antero-parietal.** See *F., Precentral*. **F., Anti-tragohelicine,** a fissure between the helix and the antitragus of the external ear. **F., Antorbital** (*of Owen*), a transverse fissure on the orbital surface of the frontal lobe of the brain near its cephalic margin. **F. of the Anus,** a linear ulcer at the muco-cutaneous junction of the anus, giving rise to intense suffering on defecation. **F., Ape,** 1. The dorsal extension of an unusually deep occipital fissure. 2. An independent fissure on the lateral aspect of the cerebrum, between the occipital and temporal regions (*the exoccipital fissure of Wilder*). **F., Auricular,** an opening situated between the vaginal and mastoid processes of the petrous portion of the temporal bone, through which passes the auricular branch of the pneumogastric nerve. **F., Basirrhinal** (*of Owen*), a short fissure near the tip of the temporal lobe of the brain. **F., Basisylvian** (*of Wilder*), the stem of the Sylvian fissure on the ventral aspect of the cerebrum. **F. of Bichat.** See *F., Cerebral, Transverse*. **F., Branchial,** any one of the visceral clefts. **F. of Broca.** See *F., Limbic*. **F., Burdach's.** See *F., Anterior*, and *F., Superior*. **F. of Calamus scriptorius,** the termination of the mesal fissure of the fourth ventricle at the apex of the calamus. **F., Calcarine,** a fissure on the mesal aspect of the cerebrum, extending from near the occipital end and joining the occipital fissure; it is collocated with the calcar or hippocampus minor. **F., Callosal** (*of Owen*), the space between the dorsal surface of the callosum and the overhanging cortex. **F., Calloso-marginal,** one on the mesal surface of the cerebral hemisphere, dividing the area between the callosum and the margin into nearly equal parts; opposite to the splenium it turns in a dorsal direction. **F., Central,** a deep and constant fissure extending from the dorsal margin in a ventro-cephalic direction, at an angle of about 67° with the meson; it crosses the lateral aspect of the cerebrum at about the middle of its length; the fissure of Rolando. **F., Cephalic,** in *Schizonemertines*, a longitudinal fissure on each side of the head. **F., Cerebral, Great.** See *F., Cerebral,*

Transverse (*of the brain*). **F., Cerebral, Inferior.** See *F., Transverse, Inferior.* **F., Cerebral, Small.** See *F., Transverse, Inferior.* **F., Cerebral, Transverse.** See *F., Transverse* (*of brain*). **F., Cervical,** a congenital cleft in the cervical region, produced by a failure of union of the visceral clefts. **F., Choroidal.** See *F., Cerebral, Transverse.* **F., Circuminsular** (*of Wilder*), the groove surrounding the base of the insula. **F. of Clevenger.** See *F., Occipital, Inferior.* **F., Collateral,** a fissure on the mesal aspect of the cerebrum between the subcalcarine and subcollateral gyri; it is collocated with the collateral eminence. **F., Collateral, Inferior,** in lower animals, a slight depression in the spinal cord corresponding to the ventrolateral fissure in man. **F., Collateral, Superior,** in lower vertebrates, a groove in the spinal cord corresponding to the postero-lateral groove in man. **F., Constant** (*of Wilder*), any fissure of the adult cerebrum that is always present in a given species or group. Among the human constant fissures are: Calcarine, callosal, central, collateral, circuminsular, olfactory, hippocampal, Sylvian, transinsular, occipital, orbital, parietal, postcentral, precentral, subfrontal, supertemporal. **F., Coronal** (*of Owen*), on the lateral aspect of the carnivoral cerebrum, the frontal portion of the third arched fissure. **F., Cruciate,** in nearly all the carnivora, a fissure extending laterad, and forming, with its opposite, a Roman cross with the intercerebral fissure. **F., Dentate.** See *F., Hippocampal.* **F., Dorsal,** in embryology, the dorsal median fissure of the spinal cord. **F. of the Ductus venosus,** a fissure of the fetal liver, lodging the ductus venosus. It is indistinct in the adult. **F. of Ecker.** See *F., Occipital, Transverse.* **F., Ectoccipital** (*of Owen*), an illy-defined transverse fissure near the tip of the occipital lobe of the brain. **F., Ectofrontal** (*of Owen*), a fissure corresponding in position with the anterior fissure of Sylvius. **F., Ectorrhinal** (*of Owen*), a furrow just laterad of the base of the olfactory crus. **F., Ectosylvian** (*of Owen*), in Carnivora, the first or lowest arched fissure. **F., Ectotentorial** (*of Owen*), the outer fissure on the ventral surface of the occipital lobe. **F., Endomesognathica,** an occasional fissure in the superior maxilla, between the endognathion and mesognathion. **F., Entoccipital** (*of Owen*), an illy-defined fissure on the occipital lobe. **F., Entolambdoid.** See *F., Adoccipital.* **F., Entorbital** (*of Owen*), an inconstant fissure between the olfactory and orbital fissures. **F., Entorrhinal.** See *F., Ectorrhinal.* **F., Entotentorial.** See *F., Ectotentorial.* **F., Episylvian** (*of Wilder*), an inconstant dorsal branch of the Sylvian fissure. **F., Ethmoid,** the superior meatus of the nares. **F., Exoccipital** (*of Wilder*), the ape-fissure, *q. v.* **F., Falcial** (*of Owen*), a fissure on the mesal surface of the frontal lobe. **F., Fetal, Ocular,** in the embryonic eye, a fissure in the thick wall surrounding the lens. A coloboma results if it be not closed. **F., Fimbrial,** a small and constant depression between the fasciola and the fimbria. **F., Frontal** (*of Owen*), the precentral and supercentral fissures of man. **F., Frontal, First.** See *F., Frontal, Superior.* **F., Frontal, Inferior,** the subfrontal fissure. **F., Frontal, Superior,** the superfrontal fissure. **F., Frontal, Vertical.** See *F. of Rolando.* **F., Fronto-marginal,** an inconstant fissure in the fronto-marginal convolution. **F. for the Gall-bladder,** a shallow depression on the lower surface of the right lobe of the liver for the accommodation of the gall-bladder. **F. of Glaser.** See *F. of Glaserius.* **F. of Glaserius,** a small fissure in the outer wall of the tympanic cavity opening into the glenoid fossa. It lodges the processus gracilis of the malleus, and transmits the laxator tympani muscle and the anterior tympanic artery. **F., Glenoid.** See *F. of Glaserius.* **F., Hippocampal,** a constant fissure of the cerebrum extending from the splenium to near the tip of the temporal lobe; it is collocated with the hippocamp. **F., Horizontal.** See *F., Calcarine.* **F., Horizontal, Great** (*of brain*). See *F., Calcarine.* **F., Hyposylvian** (*of Wilder*), an inconstant ventral branch of the fissure of Sylvius. **F., Incisor,** a fissure separating the intermaxillary bone from the superior maxillæ. **F., Infero-lateral.** See *F., Calcarine.* **F., Inflected,** an inconstant indentation of the dorsal margin of the cerebrum, a little cephalad of the central fissure. **F., Infra-orbital.** See *F., Suborbital,* and *F., Spheno-maxillary.* **F., Insular** (*of Wilder*), one of the fissures crossing the insula. **F., Intragyral** (*of Wilder*), a small cerebral fissure occasionally developed between the larger fissures. **F., Intra-orbital,** in the dog's brain, a fissure between the olfactory bulb and the supraorbital fissure. **F., Intraparietal.** See *F., Parietal.* **F., Intraparacentral** (*of Wilder*), a nearly constant depression in the paracentral gyrus. **F., Intercerebral** (*of Wilder*), the great longitudinal fissure of the brain. **F., Intergyral** (*of Wilder*), a fissure between two cerebral gyri. **F., Interhemispheral.** See *F., Longitudinal, Great* (*of brain*). **F., Interhemispheric.** See *F., Longitudinal, Great* (*of brain*). **F., Interlamellar,** one of the fissures separating the lamellæ of the cerebellum. **F., Interlobar** (*of Wilder*), the fissures of the brain separating the lobes. **F., Interlobular,** the great longitudinal fissure of the cerebrum. **F., Interlobular, Great.** See *F. of Sylvius.* **F., Intermedial** (*of Jensen*), an inconstant fissure near the end of the fissure of Sylvius. **F., Interpalpebral.** See *F., Palpebral.* **F. Interparietal.** See *F., Parietal.* **F., Interpeduncular,** the depression between the crura cerebri. **F., of Jensen.** See *F., Intermedial.* **F., Lambdoid.** 1 (*of Owen*), the occipital fissure, *q. v.*; 2 (*of Wilder*), in the fetus, between the third and seventh months, a sharply defined transverse depression in the occipital lobe, collocated with the lambdoid suture. **F., Lateral,** a straight fissure between the suprasylvian and the longitudinal fissures. **F., Lateral** (*of Owen*), an inconstant fissure on the mesal surface of the frontal lobe. **F., Lateral** (*of spinal cord*). See *F., Antero-lateral.* **F., Lateral, Posterior** (*of spinal cord*). See *F., Postero-lateral.* **F., Limbic** (*of Broca*), the fissure surrounding Broca's great limbic lobe. It includes the supercallosal, precuneal, and part of the collateral fissures. **F., Longitudinal** (*of brain*). See *F., Longitudinal, Great* (*of brain*). **F., Longitudinal** (*of liver*), a deep fissure on the under surface of the liver, separating the right and left lobes. **F., Longitudinal, Great** (*of brain*), the deep mesal fissure that divides the cerebrum into two hemispheres. **F., Longitudinal, Medilateral.** See *F., Intercerebral.* **F., Longitudinal, Posterior** (*of spinal cord*), a deep, narrow groove, extending the whole length of the spinal cord, in the middle line posteriorly. **F., Longitudinal, Superior.** See *F., Intercerebral.* **F., Marginal** (*of Owen*), a fissure on the mesal surface of the cerebrum, forming the cephalic boundary of the paracentral convolutions. **F., Maxillary,** a fissure on the internal surface of the superior maxilla for the maxillary process of the palate bone. It extends obliquely downward and forward from the lower portion of the orifice of the antrum. **F., Medial,** a fissure parallel with and posterior to the fissure of Rolando. **F., Median, Posterior** (*of spinal cord*). See *F., Longitudinal, Posterior* (*of spinal cord*). **F., Me-**

difrontal (*of Owen*), an inconstant fissure, subdividing the medifrontal convolutions. **F., Meditemporal** (*of Wilder*), inconstant and irregular fissures, ventrad of the supertemporal fissure. **F., Meso-exognathic,** an occasional fissure in the superior maxilla between the exognathion and mesognathion. **F., Midfrontal.** See *F., Medifrontal.* **F., Midoccipital.** See *F.-Orbital.* **F., Midorbital.** See *F., Orbital.* **F.-needle,** a spiral needle for bringing together the lips of a wound. **F. of Nipple,** a linear ulceration radiating from the nipple during lactation. It results from improper care of the breast. **F., Occalcarine** (*of Wilder*), the common stem of which the occipital and calcarine fissures are branches. **F., Occipital.** 1 (*of Owen*), the mid-occipital fissure, an illy-defined, inconstant fissure on the dorso-caudal slope of the occipital lobe; 2 (*of Pansch*), a deep and constant fissure, situated between the parietal and occipital lobes of the brain; the occipito-parietal. **F., Occipital, Anterior** (*of Schwalbe*), a fissure between the occipito-temporal and the inferior temporo-sphenoidal lobes of the brain. **F., Occipital, External.** See *F., Ape.* **F., Occipital, Inferior** (*of Clevenger*), a small fissure between the second and third occipital convolutions. **F., Occipital, Transverse** (*of Ecker*), a transverse fissure on the dorsal surface of the occipital lobe of the brain; it is part of the paroccipital fissure. **F., Occipito-parietal.** See *F., Occipital.* **F., Occipito-temporal.** See *F., Collateral.* **F., Olfactory,** a depression on the ventral aspect of the frontal lobe, lodging the olfactory bulb and crus. **F., Orbital,** a fissure on the orbital surface of the frontal lobe external to the olfactory fissure. **F., Orbital, Anterior.** See *F., Spheno-maxillary.* **F., Orbital, Posterior.** See *F., Sphenoid.* **F., Orbito-frontal,** a partial fissure on the lateral aspect of the brain, separating the super-frontal and orbital convolutions. **F. of Owen.** See *Fissures, Antorbital, Basirrhinal, Callosal, Coronal, Ectoccipital, Ectofrontal, Octorrhinal, Ectosylvian, Ectotentorial, Entoccipital, Entorbital, Falcial, Frontal, Lambdoid, Marginal, Medifrontal, Occipital, Postfrontal, Posthippocampal, Postoccipital, Postorbital, Postseptal, Postsylvian, Rhinal, Septal, Subfalcial, Subsylvian, Supercallosal, Supersylvian.* **F., Palpebral,** the space between the eyelids extending from the outer to the inner canthus. **F. of Pansch.** See *F., Occipital.* **F. of Pansch and Dalton.** See *F., Parietal.* **F., Paracentral** (*of Wilder*), a fissure on the mesal surface of the cerebrum, surrounding the paracentral lobule. **F., Parallel.** See *F., Supertemporal.* **F., Parietal.** 1 (*of Wilder*), the parietal portion of the intraparietal fissure; 2 (*of Pansch and Dalton*), a fissure between the parietal lobules, beginning near the ventral end of the central fissure, and running to near the tip of the occipital lobe; it includes the parietal and paroccipital fissures. **F., Parieto-occipital.** See *F., Occipital.* **F., Parieto-occipital, External,** the lateral portion of the occipital fissure. **F., Paroccipital** (*of Wilder*), the occipital portion of the intraparietal fissure. **F., Peritoneal,** a fissure of the lateral mesoblastic plates of the embryo, constituting the rudiment of the great visceral cavity. **F., Perpendicular, External.** See *F., Parieto-occipital, External* and *F., Ape.* **F., Perpendicular, Internal,** the portion of the occipital fissure on the mesal surface of the hemisphere. **F., Petro-squamosal,** or **Petro-squamous,** a small fissure between the petrosa and internal surface of the squamosa. **F., Petro-tympanic,** a fissure in the tympanic ring, lodging the long process of the malleus. **F., Petroso-angular,** a fissure between the apex of the pyramidal portion of the petrosa and the great wing of the sphenoid. **F., Petro-basilar,** a fissure between the petrosa and the sphenoid and occiput, joining the middle lacerated and jugular foramina. **F.-plane,** a term employed to designate the entire length and depth of a fissure of the brain. **F., Pomatic** (*of Wilder*), in monkeys, a fissure crossing the cerebrum opposite the dorsal end of the occipital fissure; it forms the margin of the poma or occipital operculum. **F., Portal.** See *F., Transverse* (*of liver*). **F., Postcalcarine** (*of Wilder*), an inconstant vertical fissure at the occipital end of the cerebrum. **F., Postcentral,** a fissure just posterior and parallel to the central fissure. **F., Postero-intermediary,** a slight depression in the dorsal portion of the cervical region of the spinal cord. **F., Postero-lateral,** a groove on the posterior portion of the side of the spinal cord, corresponding to the line of emergence of the posterior roots of the spinal nerves. **F., Postero-median** (*of spinal cord*). See *F., Median, Posterior* (*of spinal cord*). **F., Postfrontal** (*of Owen*), the frontal fissure. **F., Posthippocampal** (*of Owen*). See *F., Calcarine.* **F., Postoccipital** (*of Owen*), an inconstant vertical fissure forming the anterior boundary of the superior occipital convolution. **F., Postorbital** (*of Owen*), a portion of the orbital fissure. **F., Postparoccipital** (*of Wilder*), an inconstant fissure in the occipital portion of the paroccipital gyrus. **F., Postseptal** (*of Owen*), a small vertical fissure on the mesal surface of the posterior portion of the occipital lobe. **F., Postsylvian** (*of Owen*), the supertemporal or parallel fissure. **F., Precentral,** a fissure running parallel with the ventral portion of the central fissure. **F., Precuneal,** a right-angled fissure in the precuneus. **F., Preoccipital,** a fissure on the ventral aspect of the brain, separating the occipital and temporal lobes. **F., Preorbital,** the antorbital fissure. **F., Preparoccipital** (*of Wilder*), a fissure in the parietal portion of the paroccipital gyrus. **F., Presylvian** (*of Wilder*), the anterior branch of the fissure of Sylvius. **F., Pterygoid,** the space between the lower ends of the pterygoid plates of the ethmoid. **F., Pterygo-maxillary,** a vertical fissure in the zygomatic fossa, opening above into the spheno-maxillary fossa. **F., Pterygopalatine.** See *F., Pterygoid.* **F., Purse-like** (*of Reil*), the vallicula, *q. v.* **F. of Reil.** See *F., Purse-like.* **F., Reticular.** See *F., Postcentral.* **F., Rhinal** (*of Owen*), the fissure separating the olfactory bulb and crus from the cerebrum proper. **F. of Rolando.** See *F., Central.* **F., Rostral,** in *Ungulates*, a fissure on the mesal aspect of the cerebrum. **F., Sagittal.** See *F., Intercerebral.* **F. of Santorini,** two transverse fissures in the cartilaginous auditory meatus. **F. of Schwalbe.** See *F., Occipital, Anterior, and F., Supercentral.* **F., Semilunar.** See *F., Calcarine.* **F., Septal** (*of Owen*), an inconstant fissure in the cuneus, posterior to the calcarine. **F., Sphenoid,** a triangular fissure between the greater and lesser wings of the sphenoid bone. It transmits the third, fourth, sixth, and ophthalmic division of the fifth, cranial nerves, and the ophthalmic vein. **F., Spheno-maxillary,** a fissure between the orbital plate of the sphenoid and the lateral margin of the superior maxilla. **F., Splenial,** a fissure in the brain of the dog near the splenius. **F., Subcentral** (*of Wilder*), an inconstant fissure at the ventral end of the postcentral fissure. **F., Subfalcial** (*of Owen*), a small fissure on the mesal surface of the frontal lobe. **F., Subfrontal,** a fissure between the middle and inferior frontal convolutions. **F., Suboccipital,** an inconstant fissure in the occipital convolution of the brain.

F., Suborbital, a fissure in the superior maxillary portion of the floor of the orbit. It is the upper termination of the infraorbital canal. **F., Subseptal,** a fissure on the cuneus between the calcarine and the collateral fissures. **F., Subsylvian.** 1 (*of Owen*), an inconstant fissure on the ventral aspect of the frontal lobe; 2 (*of Wilder*), the constant horizontal branch of the fissure of Sylvius. **F., Subtemporal,** an inconstant fissure in the middle temporal and subtemporal convolutions. **F., Superior** (*of Burdach*), a fissure of the cerebrum between the lateral surface of the insula and the ental surface of the operculum. **F., Supercallosal.** 1 (*of Wilder*), the cephalic portion of the calloso-marginal fissure; 2 (*of Owen*), the calloso-marginal fissure. **F., Supercentral** (*of Schwalbe*), the fissure parallel to and cephalad of the dorsal portion of the central fissure. **F., Superfrontal,** a fissure on the lateral aspect of the frontal lobe, marking off the second frontal convolution. **F., Superoccipital,** an irregular fissure in the upper portion of the occipital surface of the posterior lobe of the brain. **F., Superseptal,** a fissure in the cuneus, almost parallel with the occipital fissures. **F., Supersylvian** (*of Owen*), in Carnivora, the second arched fissure on the lateral surface of the cerebrum. **F., Supertemporal,** a constant fissure parallel with the fissure of Sylvius. **F., Suprasylvian.** See *F., Supersylvian.* **F. of Sylvius,** a deep fissure of the brain beginning on the outer side of the anterior perforated space, and extending outward to the surface of the hemisphere. It presents two short cephalic branches, subsylvian and presylvian, and a long caudal branch, which separate the parietal and temporo-sphenoidal lobes. The insula is situated between the divisions. **F., Sylvian.** See *F. of Sylvius.* **F., Temporal, First.** See *F., Supertemporal.* **F., Temporal, Inferior.** See *F., Subtemporal.* **F., Temporo-occipital.** See *F., Collateral.* **F., Temporosphenoidal,** a name applied to both the supertemporal and subtemporal fissures. **F., Temporosphenoidal, Superior.** See *F., Supertemporal.* **F., Tentorial.** See *F., Collateral.* **F., Transverse** (*of brain*), the transverse fissure separating the anterior from the posterior and middle portions of the brain. It transmits the folds of pia that form the choroid plexus. **F., Transverse** (*of cerebellum*). See *F., Horizontal* (*of cerebellum*). **F., Transverse** (*of liver*), a fissure crossing transversely the lower surface of the right lobe of the liver. It transmits the portal vein, hepatic artery and nerves, and hepatic duct. **F., Transverse, Great** (*of brain*). See *F., Transverse* (*of brain*). **F., Transverse, Inferior,** a fissure between the cerebellum and the oblongata. It transmits a fold of the pia to the fourth ventricle. **F., Transverse, Superior.** See *F., Transverse* (*of brain*). **F., Transinsular** (*of Wilder*), the deepest of the fissures crossing the insula. **F., Transtemporal,** one of the inconstant short fissures on the lateral surface of the temporal lobe. **F., Triradiate.** See *F., Orbital.* **F., Umbilical,** the anterior portion of the longitudinal fissure of the liver, separating the left and quadrate lobes. **F., Uncinate.** See *F., Collateral.* **F., Ventral.** See *F., Median, Anterior* (*of spinal cord*). **F., Wernicke's,** an inconstant vertical fissure on the lateral surface of the cerebrum midway between the end of the fissure of Sylvius and the caudal end of the cerebrum; the exoccipital fissure. **F. of Wilder.** See *Fissures, Adoccipital, Amygdaline, Basisylvian, Circuminsular, Constant, Episylvian, Exoccipital, Intercerebral, Insular, Interlobar, Intergyral, Intragyral, Intraparacentral, Lambdoid, Meditemporal, Paracentral, Paroccipital, Pomatic, Postcalcarine, Postparoccipital, Preparoccipital, Presylvian, Subcentral, Subsylvian, Supercallosal, Transinsular, Zygal.* **F., Zygal** (*of Wilder*), any fissure that presents a pair of branches at either end of a connecting bar. **F., Zygomatico-sphenoid,** a space between the orbital surface of the great wing of the sphenoid and the malar bone.

LATERAL ASPECT.—Preop. Preoperculum. 2. Subcentral fissure. MESAL ASPECT.—3. Cuneolus; the fissure cephalad of it is the adoccipital.

Fissured (*fish'-ūrd*) [*fissus; findere*, to cleave]. Cleft; split.

Fist [ME., *fist*, the fist]. 1. The firmly-closed hand. 2. Same as *Bovista.*

Fistula (*fis'-tu-lah*) [L., a "pipe"]. An abnormal, tube-like passage in the body. **F., Aërial,** a small opening in the neck communicating with the larynx, following imperfect closure of incised wounds of the throat. The voice is defective in consequence. **F., Anal,** an abnormal channel of communication between the bowel and the surface in the neighborhood of the anus. **F., Biliary,** an abnormal channel of communication with a biliary duct or the gall-bladder. **F., Blind,** a variety of anal, urinary, or other abnormal tract with but one opening. **F., Blind, External,** an anal fistula with but one opening, and that external. **F., Blind, Internal,** an anal fissure with but one opening, and that internal. **F., Blind, Urinary,** a suppurating track opening into the urethra, but without external opening. **F., Branchial,** an opening that extends from the surface of the neck to the pharynx; it is an unclosed branchial cleft, a relic of fetal life. **F., Complete,** one having two openings, an internal and external. **F., Fecal,** an abdominal fistula, communicating with the intestine. **F., Gastric,** an opening into the stomach, generally artificial, through the abdominal wall. It is sometimes used for feeding a patient who cannot swallow. **F., Horseshoe,** a variety of fistula in ano, the external opening being on

one side of the anus and the internal opening on the other. **F. in Ano.** See *F., Anal.* **F., Incomplete,** one with a single opening. **F., Mammary, or Milk,** a fistula of the mamma or of its ducts. In **F. recto-labial, recto-urethral, recto-vaginal,** and **recto-vesical,** the gut communicates by a fistulous track with the labia majora, the urethra, the vagina, or the bladder, respectively. **F., Thiry's,** an artificial intestinal fistula made by dividing the intestine in two places; the loop so cut out is still supplied with blood and nerves from its mesentery; it is emptied of its contents, and one end is closed by sutures, while the other is stitched to the abdominal wound, and the intestinal juice is thus collected. **F., True,** one that discharges the secretion of an organ. **F., Vella's,** is the same as Thiry's, except that both ends of the loop are left free and are sutured to the wound in the abdomen. **F., Vesical,** a fistula of the urinary bladder.

Fistular, Fistulate (*fis'-tu-lar, -lāt*) [*fistula*, a tube]. Fistulous; of the form or nature of a fistula.

Fistulatome (*fis'-tu-lat-ōm*) [*fistula*, a fistula; *τέμνειν*, to cut]. A cutting-instrument used in the operative treatment of fistula.

Fistulous (*fis'-tu-lus*) [*fistula*, a tube]. Of the nature of or affected with a fistula.

Fit [ME., *fit*, a struggle]. A popular name applied to any sudden paroxysm of a disease, but especially to one of epilepsy. **F., Nine-days',** Tetanus neonatorum.

Fivefinger (*fiv-fing'-er*). 1. The plant *Potentilla canadensis* (see *Potentilla*). 2. *Ampelopsis quinquefolia* (see *American Ivy*).

Fixation (*fiks-a'-shun*) [*fixus*, fixed]. A making firm or rigid. **F., Field of,** in optics, the region bounded by the utmost limits of distinct or central vision, and which the eye has under its direct control through its excursions, without movements of the head. **F.-forceps,** those used for fixing or holding a part in position during a surgical operation.

Fixator (*fiks-a'-tor*) [L.]. A term applied to a muscle that holds a part immovable, as the diaphragm.

Fixature (*fiks'-at-ūr*). See *Bandolin.*

Fixed (*fikst*) [*fixus*, firm]. Firm; immovable. **F. Idea,** a morbid belief, opinion, or conception, entertained constantly by certain insane patients, and more or less permanently dominating the entire mind. **F. Oils.** See *Olea fixa.*

Fixi dentes (*fiks'-i den'-tēz*) [L.]. The teeth of the second dentition.

Fixing (*fiks'-ing*) [*fixus*, fixed]. The first stage in the preparation of tissues for histologic or pathologic examination. The chief fixing agents are—corrosive sublimate, nitric acid, alcohol, osmic acid, Flemming's solution, Fol's solution, Müller's solution, picric acid, picro-sulphuric acid, acetate of copper. See *Stains, Table of.*

Fixuræ (*fiks-u'-re*) [*fixura*, fixure]. In biology, the fibrils by which lichens and many other thallophytes attach themselves to their substratum.

Flabby (*flab'-e*) [E. dial.]. Lax or flaccid; deficient in firmness.

Flabellarium (*flab-el-a'-re-um*) [*flabellum*, a fan]. A vibraculum; a whip-like process of a polyzoan.

Flabellate (*flab-el'-āt*) [*flabellum*, a fan]. In biology, fan-shaped; applied to leaves, antennæ, etc.

Flabellation (*flab-el-a'-shun*) [*flabellare*, to fan]. In surgery, the act of keeping a wound or fracture cool by fanning.

Flabelliform (*flab-el'-if-orm*). Same as *Flabellate.*

Flabellinerved (*flab-el'-in-urvd*) [*flabellum*, fan; *nervus*, a nerve]. In biology, applied to leaves, such as those of the Gingko tree, with veins or nerves radiating from a common point.

Flabellum (*flab-el'-um*) [L., fan]. The set of white fibers radiating from the stria terminalis of the cerebrum into the corpus striatum. See also *Epipodite.*

Flaccid (*flak'-sid*) [*flaccidus, flaccus*, flaccid]. See *Flabby.*

Flaccidezza (*flah-cke-det'-sah*) [Ital. for *flaccidity*]. Same as *Flacherie.*

Flaccidity (*flak-sid'-it-e*) [*flaccidus, flaccus*, flaccid]. Flabbiness; lack of normal reaction or firmness.

Flachérie, or Flachery (*flash'-er-e*) [Fr.]. A disease attacking silk-worms whose digestive apparatus is weakened by disease or heredity. It is said to be caused by a bacterium, *Micrococcus bombycis.* See *Micrococcus bombycis* and *Bacillus β* of Hofmann, under *Bacteria, Synonymatic Table of.*

Flag [ME., *flagge*]. One of various endogenous plants with ensiform leaves. In biology, a flagellum; a part of the reproductive apparatus of certain gasteropods (Helix) projecting from the *vas deferens.* **F., Blue.** See *Iris.* **F., Sweet.** See *Acorus.*

Flagellate (*flaj'-el-āt*) [*flagellum*, a whip]. In biology, furnished with slender, whip-like processes.

Flagellation (*flaj-el-a'-shun*) [*flagellare*, to whip]. 1. One of the many means used for the purpose of masochistic gratification in the sense of subjection to the woman; the lustful feeling arising from a mechanical irritation of the genito-spinal center. 2. Flogging, formerly used as a local stimulant and counter-irritant, and once employed in the control of the insane Latterly it has been recommended as a check for post partum hemorrhage. See *Percussion.*

Flagelliform (*flaj-el'-if-orm*) [*flagellum*, a whip; *forma*, form.] Having the form of a flagellum or whip-lash.

Flagellula (*flaj-el'-u-lah*) [dim. of *flagellum*, a whip]. A flagellate spore; a zoöspore.

Flagellum (*flaj-el'-um*) [L. a whip: *pl.*, *Flagella*]. Any long vibratile cilium. See also *Flag.* In biology, applied to the various long, slender, lash-like appendages of bacteria, zoöspores, infusoria, etc., and to slender runners, and tendrils of higher plants.

Flagg's Drill-stock. See *Drill-stock.*

Flail (*flāl*) [ME., *flaile*]. An arm or leg not under muscular control. **F.-joint,** a condition of preternatural mobility frequently following resection of a joint.

Flajan's Disease. Synonym of *Exophthalmic Goiter.*

Flake (*flāk*) [ME., *flake*, a flake]. A small, scale-like fragment, as of epidermis. **F. Manna,** the best and purest commercial manna, so called from its form.

Flambage (*flam-bahzh'*) [Fr.]. The singeing of wounds for therapeutic purposes.

Flank (*flank*) [ME., *flank*]. The part of the body between the ribs and the upper border of the ilium.

Flannagan Garbage-cart. See *Garbage-cart.*

Flannel Rash. See *Seborrhea corporis.*

Flap [ME., *flap*, a loose, flexible part]. A loose and partly detached portion of the skin or other soft tissue. **F. Amputation.** See *Amputation.* **F. Extraction.** See *Extraction of Cataract.* **F. Operation.** See *Operations, Table of.*

Flapless (*flap'-les*) [ME., *flap*, a loose, flexible part; *less*, a suffix signifying without]. Without flaps. **F. Amputation.** See *Operations, Table of.*

Flash-point. The temperature at which a petroleum oil gives off vapors which, mixing with air, cause an explosion or flash of flame, dying out, however, at once.

Flask [*φλάσκη*, a flask]. A narrow-necked, globular glass bottle. **F., Boiling,** a small flask, with a wide neck, provided on the side with an exit-tube; it is employed for determining the boiling-point. **F.-clamp,** an instrument in the form of a press, employed in vulcanite work for closing flasks after packing. **F.,**

Moulding. See *Moulding-flask.* **F.-press,** a screw-press for closing the sections of a vulcanite flask after packing. **F., Vulcanite,** in dentistry, an iron, brass, or bronze box for holding the model and teeth in the vulcanized-rubber process. It is generally divided into two sections, one of which is closed by an adjustable lid, the other having a bottom, and is locked by pins or bolts.

Flat [ME., *flat*]. Lying on one plane. **F.-ear.** See *Morel's Ear.* **F.-foot,** depression of the plantar arch; it differs from splay-foot or talipes valgus in that the sole is not everted. **F.-worm.** See *Tape-worm.*

Flatulence (*flat'-u-lentz*) [*flatulentia; flatus,* breath]. A condition marked by the presence of gases in the alimentary canal. It arises mainly from the fermentation of the contents of the stomach and intestines.

Flatulent (*flat'-u-lent*) [*flatus,* breath]. Characterized by, or attended with the presence of, flatulence.

Flatus (*flat'-us*) [L.]. A term applied to gases in the digestive tract.

Flavanilin (*flav-an'-il-in*) [*flavus,* yellow; *anilin*], $C_{16}H_{14}N_2$. A beautiful yellow dye produced by heating acetanilid with zinc chlorid to 270° C. It forms colorless crystals that become yellow on exposure to the air. See *Pigments, Conspectus of.*

Flavaurin (*flav-aw'-rin*). See *Pigments, Conspectus of.*

Flavescent (*flav-es'-ent*) [*flavescere,* to become yellow]. Yellowish.

Flavin (*flav'-in*) [*flavus,* yellow]. A yellow dye-stuff prepared from quercitron-bark by the action of H_2SO_4.

Flavophenin (*flav-o-fe'-nin*) [*flavus,* yellow; *phenyl*], $C_{26}H_{18}N_4O_6$. A yellow coloring-matter. See *Chrysamin.*

Flavopurpurin (*flav-o-pur'-pu-rin*) [*flavus,* yellow; *purpura,* purple], $C_{14}H_8O_5$. A coloring-matter occurring in golden-yellow, acicular crystals. See *Pigments, Conspectus of.*

Flavus (*flav'-us*) [L.]. Yellow.

Flaw [ME., *flawe,* a flake]. A disease in which the skin recedes from the nails.

Flax (*flaks*) [ME., *flax,* flax]. The best known and probably the most valuable of the bast-fibers, derived from the flax-plant, *Linum usitatissimum.* The linen fiber, when cleansed, has a blonde or even white color, a white, silky luster, and great strength. It is less pliant and elastic than cotton, but is a better conductor of heat. Chemically, it is, like cotton, a pure cellulose. **F., New Zealand,** a fiber obtained from the leaves of *Phormium tenax,* which acquires a length of one to two meters. The fiber, as prepared by hand-scraping, is soft, white, and of silky luster. Its chief value is for rope-making and for coarse textiles. The rope made from this fiber is, however, weakened when wet by sea-water, and must therefore be kept well-oiled. **F.-dresser's Phthisis,** a form of pneumonokoniosis. **F.-seed.** See *Linum.*

Flay (*fla*) [ME., *fleen,* to skin]. To skin.

Flea (*fle*) [ME., *flee,* a flea]. See *Pulex,* and *Parasites* (*Animal*), *Table of.* **F.-bane.** See *Erigeron.* **F.-bite,** the bite of a flea. **F.-powder.** See *Buhach.*

Fleam (*flem*) [φλέψ, a vein]. A phlebotome; a veterinarian's lancet for venesection.

Flechsig, Method of. A method of differentiating nerve-tracts in the brain and spinal cord. It consists in noting the successive periods at which the fibers of the tracts become medullated during the process of development. **F., Tract of.** See *Tract.*

Fleck's Disinfectant. A disinfectant solution containing copperas, 70 parts, and chlorinated lime 20 parts, in 1000 parts of water.

Fleece of Stilling. An interlacing of fibers passing from the cortex about the dentatum of the cerebellum.

Fleischl's Law. See *Law.*

Fleischmann's Bursa. The sublingual bursa.

Fleitmann's Test. See *Tests, Table of.*

Flema salada (*fla'-mah sal-a'-da*) [Sp.]. Synonym of *Acrodynia.*

Fleming's Tincture. An alcoholic preparation of aconite, stronger than the official tincture. Dose, two minims.

Flemming's Method. A method of preparing tissue for histologic study. Small bits of tissue are fixed in 0.1 to 0.5 per cent. solution of chromic acid, and the hardening completed with alcohol. **F.'s Mixture,** a mixture used in histologic investigations. Its composition is as follows: One per cent. solution of osmic acid, 10 parts; one per cent. solution of chromic acid, 25 parts; two per cent. solution of acetic acid, 5 parts, water 60 parts.

Flesh [ME., *flesh,* flesh]. The soft tissues of the body, especially the muscles. **F.-brush,** a brush for rubbing the surface of the body. **F., Goose.** See *Cutis anserina.* **F.-juice,** the juice derived from meat by expression. **F., Proud,** a colloquial term for the soft and inflamed granulations of the edges of a wound. **F.-wound,** a slight or superficial wound. **F.-worm.** See *Thread-worms.*

Fleshy (*flesh'-e*) [ME., *flesh,* flesh]. Mainly composed of muscular tissue.

Fleury's Method. See *Treatment, Methods of.*

Flexed-toe (*flekst'-to*). See *Hammer-toe.*

Flexibilitas (*fleks-ib-il'-it-as*) [L.]. Flexibility. **F. cerea,** a condition of the limbs in catalepsy in which they resist passive movement and seem as if made of wax.

Flexible (*fleks'-ib-l*) [*flexus,* bent]. That which may be bent. **F. Catheter,** a catheter made of flexible substance. **F. Collodion.** See *Pyroxylin.* **F. Pillar.** See *Pillar.*

Flexile (*flex'-il*) [*flexilis,* pliable]. Easily bent.

Flexion (*flek'-shun*) [*flexus,* bent]. The operation or process of bending; the condition of being bent; the opposite of extension. **F., Forcible,** in surgery, a mode of treating aneurysm by a forcible bending, as, for example, of the knee, so as to compress the popliteal artery, thereby reducing the volume of blood; also a means of breaking up articular adhesions by mechanical bending. **F. and Extension,** certain passive Swedish movements used principally for regulating the circulation in certain parts, and for relieving local congestion. **F.-stage of Labor,** one of the stages of labor, consisting in a bending of the fetal head forward toward the chest.

Flexor (*fleks'-or*) [*flexus,* bent]. Any muscle that bends a limb or part. See *Muscles, Table of.*

Flexuous (*fleks'-u-us*) [*flectere,* to bend]. In biology, alternately curved in opposite directions.

Flexura (*fleks-u'-rah*) [L., a bending]. A bending or curve in an organ. In veterinary anatomy, the so-called knee (in fact the wrist) of the horse.

Flexure (*fleks'-ūr*) [*flexura,* a bending]. A bending. **F., Sigmoid.** See *Sigmoid Flexure.*

Flighty (*fli'-te*) [Dan., *vlugtig,* volatile]. Slightly delirious.

Flint's Formula. See *Alimentation, Rectal.* **F.'s Murmur.** See *Signs and Symptoms, Table of.* **F.'s Pill,** a pill containing half a grain of iron combined with all the inorganic salts found in the blood in the normal proportion, except chlorid of sodium, which is in excess.

Floating (*flōt'-ing*) [ME., *floten,* to float]. Free to move around. **F. Kidney,** one that is misplaced or movable; wandering. **F. Liver,** a movable liver. **F. Ribs.** See *Ribs.* **F. Spleen,** one that is separate from its attachments, and displaced.

Flocci (*flok'-i*) [L.]. Plural of *floccus*, a tuft. **F. volitantes.** Same as *Muscæ volitantes.*

Floccillation (*flok-sil-a'-shun*) [*flocillatio*]. Same as *Carphology.*

Floccitation (*flok-sit-a'-shun*) [*floccitatio*]. Same as *Carphology.*

Floccose (*flok'-ōs*) [*floccus*, a flock of wool]. In biology, composed of or bearing tufts of woolly or long and soft hairs.

Floccular (*flok'-u-lar*) [*flocculus*, a little flock of wool]. Pertaining to the flocculus.

Flocculence (*flok'-u-lens*) [*floccus*, a lock of wool]. In biology, a soft, waxy excretion, resembling wool, found on certain insects, *e. g*, the woolly Aphis.

Flocculent (*flok'-u-lent*) [*floccus*, a flock of wool]. Flaky, downy, or woolly; coalescing in flocky masses.

Flocculus (*flok'-u-lus*) [dim. of *floccus*, a tuft of wool]. 1. A bilobular mass attached to the medipeduncle of the brain at the peduncular sulcus, and wedged, as it were, between the rounded contiguous angles of the cephalic and caudal regions of the cerebellum. Along with it is the *paraflocculus*, a single-lobed mass. Their functions and their representatives in other mammals are little known. 2. In biology, a small bunch of stiff hairs.

Floccus (*flok'-us*) [L., a flock or tuft of wool: *pl.*, *Flocci*]. In biology, a small tuft of woolly hairs.

Flood's Ligament. See *Ligament.*

Flooding (*flud'-ing*) [ME., *flood*, a flood]. A copious bleeding from the womb during, after, or just at childbirth; any excessive uterine hemorrhage.

Floor (*flor*) [ME., *floor*, floor]. The basal limit of any hollow organ or open space; as the *floor* of a ventricle, of the antrum, of an orbit, or of the pelvis. **F.-space**, the distance apart of beds required to afford proper ventilation in hospitals. It should be not less than $\frac{1}{12}$ of the cubic space.

Flora (*flo'-rah*) [*Flora*, the goddess of flowers]. The entire plant-life of any geographic area or geologic period.

Florence Lake. See *Pigments, Conspectus of.*

Florentine Lake. Same as *Florence Lake.*

Flores (*flo'-rēz*) [L.]. Plural of *flos*, a flower. 1. The flowers or blossoms of any plant used as a medicine. 2. A flocculent or pulverulent form assumed by certain medicines and chemicals after sublimation; as *flores sulphuris*, flowers of sulphur; *flores benzoës*, flowers of benzoin, or sublimated benzoic acid.

Florescence (*flor-es'-ens*) [*florescere*, to begin to bloom]. The opening of flowers; blossoming.

Floret (*flor'-et*) [*flos*, flower]. In biology, an individual flower of a head or cluster of flowers; it is also called *floscule.*

Florid (*flor'-id*) [*floridus*, abounding with flowers]. Bright-red in color; rosy; as a florid cheek, or countenance. **F. Phthisis.** See *Galloping Consumption.*

Florida (*flor'-id-ah*) [*floridus*, abounding with flowers]. One of the Southern states of the United States. **F. Allspice**, the leaves of *Calycanthus floridus*, a pleasant aromatic stimulant. Dose of the fld. ext., gtt. x–xxx. Unof. **F., Fever.** See *Fever.*

Florisugent (*flor-is-u'-jent*) [*flos*, flower; *sugere*, to suck]. Applied to birds and insects that suck the nectar of flowers.

Flos [L., a "flower"]. A flower. Singular of *Flores*, *q. v.*

Floscule (*flos'-kūl*) [dim. of *flos*, a flower]. See *Floret.*

Flour (*flowr*) [old spelling of *flower*]. A finely-ground meal; this may be from either wheat, rye, barley, oats, maize or Indian corn, and rice, although wheat-flour is used in far the largest amount. Wheat-flour contains starch, dextrin, cellulose, sugar, albumin, gliadin or gluten, mucin or mucedin, fibrin, cerealin, fat, mineral matter, and water. The first four are carbohydrates, or non-nitrogenous substances, and they form nearly three-fourths of the entire weight of the flour. The nitrogenous matter consists of at least five principles, three of which, gluten (or gliadin), mucin (or mucedin), and fibrin, constitute the bulk of the material known as crude gluten, which is the substance left when flour is kneaded with water and afterwards washed to remove the starch and any soluble substance. The remaining two nitrogenous principles, albumin and cerealin, are soluble in water, and are carried away with the starch in the process of washing. Crude gluten possesses a peculiar adhesiveness, arising from the presence of gliadin, which is a highly tenacious body, and which is not present in the same form in other cereal flours. The vegetable albumin is accompanied also by small amounts of legumin, or vegetable casein, which is also soluble in water. The *cerealin* is a soluble nitrogenized ferment occurring especially in the husk or bran of wheat and other cereals. It has a powerful fermentative action on starch, rapidly converting it into dextrin and other soluble bodies. The difference in the composition of

	Fine White Flour.		Coarse Wheat Bran.	
	In 100 parts.	In one pound.	In 100 parts	In one pound.
Water, . . .	13.0	2 ozs.. 35 grs.	14.0	2 ozs., 105 grs.
Fibrin, etc., .	10.5	1 oz., 297 grs	15.0	2 ozs., 175 grs.
Starch, etc., .	74.3	11 ozs., 388 grs	44.0	7 ozs., 17 grs.
Fat, ...	0.8	0 ozs., 57 grs.	4.0	0 ozs., 280 grs.
Cellulose, . .	0.7	0 ozs., 49 grs.	17.0	2 ozs., 316 grs.
Mineral matter, . .	0.7	0 ozs., 49 grs.	6 0	0 ozs , 422 grs.

the several parts of the wheat-grain is seen in the foregoing table given by Church. **F.-ball**, a much-used food for infants suffering from summer-complaint. It is made as follows:—Two or three pounds of wheat-flour, tied in a bag, are boiled continuously for 12 hours; the outer shell is then scraped off, and the inner, yellow portion (mainly dextrin) is grated and used to make a thin gruel.

Flourens' Doctrine. A theory that the whole of the cerebrum is concerned in every psychic process.

Flow (*flo*) [ME., *flowen*, to flow]. The free discharge of a liquid, as the blood.

Flower (*flow'-er*) [ME., *flowre*, flower]. See *Flos.*

Flower, Angle of. In craniometry, the naso-malar angle.

Fluctuation (*fluk-tu-a'-shun*) [*fluctuare*, to float or roll]. The wave-like motion of contained fluid upon pressure, or by succussion.

Fluid (*flu'-id*) [*fluere*, to flow]. A substance whose molecules move freely upon one another; any liquid constituent, or secretion of the body. See *Amniotic, Condy's, Culture, Labarraque's*, and other fluids. **F. Extract.** See *Extractum Fluidum.* **F.-ounce.** See *Weights.* **F.-dram.** See *Weights.* **F., Scarpa's**, the

endolymph. **F. Vein,** the name given to the eddies produced in a cavity of the heart by regurgitating blood coming in contact with the current entering the cavity in the normal direction. The oscillation of the particles of blood are attended with a blowing sound or murmur.

Fluigram (*floo'-e-gram*) [*fluidus*, fluid; γράμμα, a small weight]. In medicine and pharmacy the gram and the cubic centimeter are the most important metric units, and to express their close relationship the cubic centimeter has been very appropriately termed a *Fluigram.*

Fluke or F.-worm (*flūk*) [ME., *floke*, a fluke]. Any trematode worm; especially *Distoma hepaticum*, *q. v.* See *Trematodes*, and *Parasites* (*Animal*), *Table of.*

Fluor (*flu'-or*) [L., a flow]. 1. A liquid state. 2. The menstrual flux. **F. albus,** white flow; an old name for *Leukorrhea.* **F. muliebris.** Synonym of *Leukorrhea.*

Fluoranthene (*flu-or-an'-thēn*) [*fluor*, a flow], $C_{15}H_{10}$. Idryl; a substance that occurs in the "stubb-fat" obtained from the distillation of the "stubb." It crystallizes from alcohol in needles or plates, melting at 109-110° C., and dissolves readily in hot alcohol, ether, and carbon disulphid.

Fluorene (*flu-or-ēn'*) [*fluor*, a flow], $C_{13}H_{10}$. A substance found in coal-tar; it can be obtained by passing diphenylmethane through a combustion-tube heated to redness. It is very soluble in hot alcohol, less so in cold alcohol; it crystallizes in colorless plates having a violet fluorescence, melts at 113° C., and boils at 295° C.

Fluoresceïn (*flu-or-es'-e-in*) [*fluor*, a flow], $C_{20}H_{12}O_5 + H_2O$. Resorcinol-phthaleïn. An anhydrid of resorcin, prepared by heating phthalic anhydrid with resorcinol to 200° C. It occurs as a yellowish or dark-red powder decomposing at about 290° C. From it are derived the eosin coloring-matters, *q. v.*

Fluorescence (*flu-or-es'-ens*) [*fluere*, to flow]. A property possessed by certain substances, consisting in the emission of colors while light is being passed through them. Quinin, fluorspar, and several structures of the eye, possess this power. See also *Phosphorescence.*

Fluorescent Resorcinol. Same as *Resorcin Blue.*

Fluorescigenous (*flu-or-es-ij'-en-us*) [*fluere*, to flow; γεννᾶν, to produce]. Giving rise to fluorescence.

Fluorescin (*flu-or-es'-in*) [*fluere*, to flow], $C_{20}H_{14}O_5$. A colorless amorphous product of the reduction of fluoresceïn. On account of its neutral quality and green fluorescence, it has been used to study the movements of the intraocular fluids.

Fluorid (*flu'-or-id*) [*fluere*, to flow]. A basic salt of fluorin.

Fluorin (*flu'-or-in*) [*fluor*, a flow]. F = 19; quantivalence 1. One of the elements. It has not been isolated, but is probably a gas. All its salts are highly corrosive and poisonous in their full strength. See *Elements*, *Table of.* **Ammonium fluorid** is recommended by Lucas for hypertrophy of the spleen. Dose ♏v of a gr. iv to ʒj solution. Unof. **Hydrofluoric acid,** is an antiseptic and antiferment. Inhalations of the dilute vapor have been recommended in diphtheria and tuberculosis.

Fluorindenes (*flu-or-in'-dēnz*) [*fluor*, a flow]. A series of dye-stuffs closely allied to the indulins. They are produced by the protracted heating of azophenin or amidophenazin, alone or with orthodiamins. They dissolve in alcohol with beautiful fluorescence and form greenish-blue fluorescent salts.

Fluoroform (*flu-or'-o-form*) [*fluor*, a flow; *forma*, form], CHF_3. A gas, the fluorin analogue of chloroform.

Fluoroscope (*flu-or'-os-kōp*) [*fluere*, to flow; σκοπεῖν, to examine]. The instrument for holding the fluorescent screen in X-ray examination.

Fluoroscopy (*flu-or-os'-ko-pe*) [*fluere*, to flow; σκοπεῖν, to examine]. The process of inspecting the tissues by means of a fluorescent screen.

Flush [origin obscure]. A temporary redness, as the hectic flush, sometimes due to vasomotor paresis.

Flushing (*flush'-ing*) [origin obscure]. 1. A frequent symptom in the subjects of cardiac palpitation, and especially in Graves' disease. It implies a condition of vaso-motor irritability with a paresis of the arterioles in certain areas. It is often accompanied by local perspiration. It is seldom a marked symptom of organic disease. 2. The process of cleansing by a rapid flow of liquid.

Flux (*fluks*) [*fluxus*, flowing]. 1. An abnormal flow of any of the excretions of the body, especially the feces. Also, a synonym of *Dysentery.* 2. In chemistry, any highly-fusible substance or mixture, as the subborate of soda, employed in the fusion of metals. **F., Sebaceous.** See *Seborrhea.*

Fluxion (*fluk'-shun*) [*fluxus*, a flowing]. A gathering of blood or other fluid in one part of the body; congestion, or hyperemia.

Fluxus (*fluks'-us*) [L.]. A flow or a flowing. **F. cruentus.** Synonym of *Dysentery.* **F. dysentericus.** Synonym of *Dysentery.* **F. sebaceus.** Synonym of *Seborrhea.* **F. splenicus.** Synonym of *Melena.* **F. torminosus.** Synonym of *Dysentery.*

Fly (*fli*) [ME., *flye*, a fly]. A dipterous insect. For parasitic flies, see *Parasites* (*Animal*), *Table of.* **F.-agaric.** See *Agaricus muscarius.* **F.-blister, Flying Blister.** See *Blister.* **F.-poison.** See *Amianthium.* **F.-sickness.** See *Barcoo.*

Focal (*fo'-kal*) [*focus*, a point; a fire-place]. Pertaining to or occupying a focus. **F. Disease.** See *Disease.* **F. Hemorrhage,** localized hemorrhage, in contradistinction to diffuse or disseminated hemorrhage. **F. Meningitis,** meningitis involving but a small area of the membranes. **F. Myelitis,** localized myelitis, in contradistinction to diffuse or disseminated myelitis. **F. Sclerosis,** the chronic form, sometimes called *Sclerotic Myelitis.*

Focil (*fo'-sil*) [*focile*, a spindle]. Any bone of the forearm or leg. **F. majus,** the ulna. **F. majus cruris,** the tibia. **F. minus,** the radius. **F. minus cruris,** the fibula.

Focus (*fo'-kus*) [*focus*, a point: *pl.*, *foci*]. The principal seat of a disease. The point (called *principal focus*) to which converge the rays of light that pass through a convex lens or are reflected from a concave mirror. **F., Equivalent,** in microscopy, when the real image of an objective of a certain focal length is of the same size as that produced by a simple converging lens whose focal distance equals that of the objective, it is said to have an equivalent focus. **F., Negative,** or **Virtual,** the imaginary focus of an object placed within the principal focus. **Conjugate Foci,** interdependent foci.

Focusing (*fo'-kus-ing*) [*focus*, a point]. The mutual arrangement of an object and the optic parts of a microscope so that a clear image may be seen. **F. Down,** in microscopy, focusing by moving the objective down or toward the object, but at the risk of damaging it. **F. Up,** focusing by moving the objective up or away from the object.

Foderé's Test. See *Birth.*

Fœniculum (*fen-ik'-u-lum*) [L.: *gen.*, *Fœniculi*]. Fennel. The fruit of *F. vulgare*, with properties due to a volatile oil. It is a mild stimulant and aromatic carminative. **F., Aq.,** 2 parts of the oil in 1000 of

water. Dose ʒss–ʒj. **F., Ol.**, the volatile oil. Dose mij-v. See also *Fennel.*

Foerster's Shifting-type. See *Signs and Symptoms.*

Förster's Method. See *Cataract, Artificial Maturation of.* **F.'s Operation.** See *Operations, Table of.*

Fœtal (*fe'-tal*). See *Fetal.*

Fœtor (*fe'-tor*). See *Fetor.*

Fœtus (*fe'-tus*). See *Fetus.*

Fokker's Method. A method of estimating uric acid in the urine. 200 c.c. of urine are made strongly alkaline by sodium carbonate, and after an hour 20 c.c. of a concentrated solution of ammonium chlorid are added. The mixture is allowed to stand at a low temperature for 48 hours, when the precipitate that forms is collected on a weighed filter and washed. The filter is washed with dilute HCl (1 in 10), and the filtrate collected; this operation is repeated till all the acid urate on the filter is dissolved. The filtrates are mixed, allowed to stand for 6 hours, and the uric acid which then separates is collected on the same filter, washed twice with water, then with alcohol, till all acid reaction disappears, dried at 110° C., and weighed. To the weight obtained add 0.03 gram, and subtract the weight of the filter; the remainder is the weight of uric acid in 200 c.c. of urine.

Fol's Fixing-fluid. A modification of Fleming's solution, used, as is the latter, for the fixation of cells undergoing indirect cell-division. See *Stains, Table of.* **F.'s Yellow.** See *Pigments, Conspectus of.*

Fold (*fōld*) [ME., *fold*, a fold]. A term applied to the plication or doubling together of various parts of the body. **F., Aryteno-epiglottidean**, a fold of mucous membrane stretched between the sides of the epiglottis and the apex of the arytenoid cartilage. **F., Palpebral**, the fold formed by the reflection of the conjunctiva from the eyelids on to the eye. There are two folds, the superior and inferior. **F., Recto-vaginal**, the fold of the peritoneum in females descending in front of the rectum and behind the vagina. It corresponds with the *recto-vesical fold* of males. **F., Vater's**, the plica transversalis or transverse fold of the duodenum, situated just above the opening of the pancreatic and biliary ducts.

Folders (*fōl'-derz*) [ME., *fold*, a fold]. English usage for Pince-nez or "eye-glasses."

Folia (*fo'-le-ah*) [*pl. of folium*, leaf]. 1. Leaves; a term much used in pharmacopeias and dispensatories, and designating the leaves of such plants as are used in medicine. 2. The intervening thin plates between the crevices of greater or less depth (*rimulæ*) upon the entire surface of the adult cerebellum.

Foliaceous (*fo-le-a'-se-us*) [*folium*, a leaf]. Leaf-like.

Foliation (*fo-le-a'-shun*) [*foliare*, to put forth leaves]. The act of leafing out; frondescence.

Folie (*fo-le'*) [Fr.]. Insanity. **F. à deux** (*fo-le'-ah duh'*). [Fr.] See *Insanity, Communicated.* **F. Circulaire** (*fo-le'-ser-ku-lār'*). Cyclic insanity. **F. du Doute.** See *Doubt, Insanity of.* **F., Alternate.** Cyclic Insanity, *q. v.*

Foliicolous (*fo-le-ik'-o-lus*) [*folium*, a leaf; *colere*, to dwell]. In biology, growing upon leaves.

Foliole (*fo'-le-ōl*) [*folium*, a leaf.] In biology, a leaflet or leaflet-like organ.

Foliose (*fo'-le-ōs*) [*foliosus*, leafy]. Abounding in leaves, leaflets, or leaf-like appendages.

Folium (*fo'-le-um*) [L., a leaf: *pl.*, *Folia*]. 1. In biology, a leaf. At the time of Cæsalpinus it applied equally to sepals, petals, or ordinary leaves. 2. Any lamina or leaflet of gray matter, forming a part of the arbor vitæ of the cerebellum.

Folius, Process of. Process of Rau; a process at the junction of the handle with the neck of the malleus.

It passes anteriorly into the Glaserian fissure. It is about three-and-a-half lines long in the new-born infant. After birth it unites with the under wall of the Glaserian fissure.

Follette (*fol-et'*) [Fr.]. Synonym of *Influenza.*

Follicle (*fol'-ik-l*) [*folliculus*, dim. of *follis*, bellows]. 1. In anatomy, a very small secretory cavity or sac, as one of the follicles of Lieberkühn. 2. In biology, a simple pod, splitting only by the ventral suture. **F., Graafian**, one of the small vesicular bodies in the cortical layer of the ovary, consisting of flattened granular cells with oval nuclei and membrana propria, each about $\frac{1}{150}$ inch in diameter. **F., Sebaceous**, one of the sacs lying within the skin that secrete the oily fluid with which the skin is softened.

Follicular (*fol-ik'-u-lar*) [*folliculus*, a little follicle]. Relating or appertaining to a follicle.

Folliculitis (*fol-ik-u-li'-tis*) [*folliculus*, a follicle; ιτις, inflammation]. Inflammation of a group of follicles, as of the hair. **F. barbæ.** See *Sycosis.* **F. decalvans**, Quinquaud's Disease: a chronic folliculitis of the hairy parts, especially of the scalp, which leads to a cicatricial alopecia. The patches are about the size of a shilling, irregular in outline, and almost smooth and polished, but with some granular points at the periphery, and red points on the white, atrophied, cicatricially-depressed surface. **F. exulcerans.** See *Hydrosadenitis phlegmonosa.*

Folliculium (*fol-ik-u'-le-um*). The liquor folliculi. See *Liquor.*

Folliculose (*fol-ik'-u-lōs*) [*follis*, a bellows]. Full of follicles. Having the appearance of follicles.

Fomentation (*fo-men-ta'-shun*) [*fomentare*, to foment]. The application of cloths soaked in hot medicinal solutions, to reduce inflammation or to allay pain. Also, the application of hot dry cloths. Also, the medicament, or other material, so applied.

Fomes (*fo'-mēz*) [L. for "tinder": *pl.*, *Fomites*]. Any substance (as a garment, carpet, letter) capable of acting as the medium for the transmission of an infectious disease.

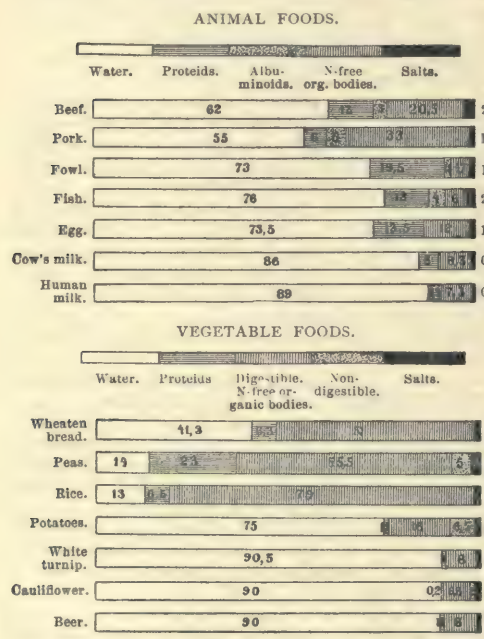
Fonifero (*fo-nif'-er-o*). See *Phonophore.*

Fons pulsatilis (*fons pul-sat'-il-is*) [L.]. See *Fontanel.*

Fontaine's Chamber. See *Anesthetic.*

Fontana, Canals of. See *Canal.* **F.'s Markings**, or **Striæ of.** Delicate microscopic transverse folds of nerve-fibers, to which is due the fact of the non-retraction of the fibers when divided. **F.'s, Spaces**, those between the processes of the ligamentum pectinatum iridis. See *Canal.*

Fontanel, or **Fontanelle** (*fon-tan-el'*) [dim. of *fontana*, a spring, from the appearance and feeling]. A



Fontanels of Fetal Skull.

membranous space of the infant's skull, from delayed ossification of the cranial bones. **F., Anterior**, that at the point of union of the frontal, sagittal, and coronal sutures. See also *Bregma.* **F., Posterior**, that at

the point of junction of the apex of the lambdoid and the sagittal sutures.

Fonticulus (*fon-tik'-u-lus*) [dim. of *fons*, fountain]. 1. The depression at the root of the neck, just cephalad of the sternum; more fully *fonticulus gutturis*. 2. A small artificial ulcer or issue.

Food [ME., *foode*]. Anything used for the nourishment or formation of tissue. The substances ordinarily employed as aliments. **F., Albumin-spring,** one that diminishes the metabolism of albuminates. **F.-accessories,** a term given to the various substances used as condiments, which give flavor to food or

stimulate the digestive secretions, as well as to the well-known stimulants, tea, coffee, cocoa, alcohol, etc. **Foods, Isodynamic.** Those producing an equal amount of heat. **F., Plastic,** proteids. **F., Respiratory,** fats and carbohydrates. (The nomenclature of the last two rests upon an erroneous theory.) **F., Classification of** (according to Yeo): —

Organic.

Nitrogenous.

1. ALBUMINATES.—Nitrogenous substances having the same or nearly the same chemic composition as albumin. *Examples.*—Albumin, fibrin, syntonin, myosin, globulin, casein, from the *animal;* gluten and legumin, from the *vegetable* kingdom.

(*a*). *Subordinate* nitrogenous substances referred to this class, and known as—

Gelatigenous substances, { Gelatin. Casein. Chondrin.

Non-nitrogenous.

2. FATS, OR HYDRO-CARBONS, containing carbon, hydrogen, and oxygen; the proportion of oxygen being insufficient to convert all the hydrogen into water. *Examples.*—Olein, stearin, margarin. (Butter is a familiar one.)

3. CARBO-HYDRATES, containing carbon, hydrogen, and oxygen; the two latter elements in the proportion to form water. *Examples.*—Starch, dextrin, cane-sugar, grape-sugar, lactose or milk-sugar.

(*a*). The *Vegetable acids*, oxalic, tartaric, citric, malic, acetic, and lactic, are by some authors referred to this class.

Inorganic.

4. MINERAL.—Water. *Salts.*—Sodium and potassium chlorids, calcium and magnesium phosphates, iron, etc.

F., Complete, a food that contains all the alimentary substances required for the support and maintenance of animal life. The only complete food afforded by the animal kingdom is eggs. **F.-cure,** dietetic treatment of disease. **F.-stuffs** or **F.-substances,** the materials, from both the animal and vegetable kingdoms, that may be employed for the purpose of supplying nourishment to the body, and providing the elements necessary for the formation of tissue. **F.-vacuole,** a temporary space often noticed in protozoa, containing nutritive matter. **F.-yolk,** all that portion of the yolk that does not undergo segmentation, but serves to nourish the embryo; nutritive protoplasm; deutoplasm.

Fool's Parsley. See *Ethusa.*

Foot [ME., *foot*]. 1. The terminal extremity of the leg; one of the organs of locomotion. In bimana and quadrumana it consists of the tarsus, metatarsus, and phalanges, or toes. 2. The base of a microscope. 3. A measure of length equal to twelve inches or 30.479 cm. **F.-clonus.** See *Clonus* and *Ankle-clonus.* **F.-bath,** a pediluvium. **F.-drop,** a falling of the foot due to a paralysis of the flexors of the ankle. It is seen in neuritis. See *Dropped Foot.* **F., Fungus.** Madura Foot; Mycetoma; Ulcus grave. An endemic disease of India affecting the foot, which increases in size, this increase being attended with the development of mammillated pustules, in each of which is a deep-seated sinus. The sinuses are lined by a distinct membrane, and contain characteristic "*fish-roe bodies*" of a white, yellowish, reddish, or blackish color. These bodies are composed mainly of fatty and caseous matters, the results of decomposition, encrusted with salts and blood-pigment. The bones are slowly absorbed, and gangrene or exhaustion may carry off the patient. The disease is most common in adult males. A fungus, *Chionypha carteri*, appears to be the active cause of the disease. **F.-halt,** a disease of sheep, said to be caused by worms in the foot. **F.-mange,** a parasitic disease of the heels and lower parts of the legs, especially the hind ones, of a horse, giving rise to great itching and irritation. It is due to an acarus, *Symbiotis equi*. **F.-and-mouth Disease,** a rare affection that occurs in sheep, cows, pigs, and horses, and is occasionally transmitted to man. It manifests itself by the appearance of vesicles and bullæ in the mouth and on

FOOT, PLANTAR ASPECT.

1. Inferior surface of calcaneum. 2. Inner tuberosity. 3. Outer tuberosity. 4. Angular depression between these tuberosities. 5. Inferior portion of head of astragalus. 6. Plantar surface of cuboid, for attachment of inferior calcaneo-cuboid ligament. 7. Tuberosity of cuboid. 8. Scaphoid. 9. Tuberosity of scaphoid. 10. Inferior portion of internal cuneiform. 11. Apex of middle cuneiform. 12. Apex of internal cuneiform. 13, 14, 15, 16, 17. First, second, third, fourth and fifth metatarsal bones. 18. Tuberosity of fifth metatarsal bone. 19. Two sesamoid bones. 20. First phalanx of great toe. 21. Last phalanx of great toe. 22, 22. First phalanges of remaining toes. 23, 23. Second and third phalanges of these toes.

the feet at the margins of the hoofs, and in cows, on the udder and teats. In man, vesicles form in the mouth, on the hands and feet. In two or three days, these rupture, discharging an opaque, yellowish fluid, and leaving dark-red ulcers. There are also fever, anorexia, pain on eating, swelling of the tongue, fetid breath, salivation, and derangement of digestion. See *Eczema epizoötica*, and *Streptocytus of Eczema epizoötica*, Schottelius, under *Bacteria, Synonymatic Table of*. **F.-phenomenon.** See *Ankle-clonus*. **F.-pound,** the work required to overcome a force equal to raising the weight of a pound through the space of a foot. See *Unit*. **F.-poundal,** the work done by a poundal acting through one foot. **F.-rot,** a disease of sheep, said to be due to pasturing in wet ground. One form is contagious; and the disease is said by some to be tuberculous in nature.

Footling (*foot'-ling*) [ME., *foote*]. With the foot or feet foremost; as a footling presentation in obstetrics.

Foramen (*fo-ra'-men*) [*forare*, to pierce]. A passage or opening, especially one in a bone. A *Table of Foramina* is appended.

TABLE OF FORAMINA.

Name.	Location.	Transmits.
Accessory transverse.	Anomalous foramina in the transverse processes of the cervical vertebræ.	An anomalous and accessory vertebral artery.
Acoustic.	The same as the internal auditory meatus.	The auditory and facial nerves.
Alveolar, anterior.	See *Dental, inferior*.	
Alveolar, inferior.	See *Dental, inferior*.	
Alveolar, posterior.	In the superior maxilla.	Superior posterior dental vessels and nerves.
Amplum pelveos.	See *Obturator*.	
Anonymous of Ferrein.	See *Hiatus Fallopii*.	
Anteorbital.	In mammals, an orifice in the cheek-bone in front of the orbit, corresponding to the infraorbital foramen of man.	Superior maxillary division of the trifacial nerve; occasionally the masseter muscle.
Antorbital.	See *Anteorbital*.	
Aortic.	An opening in the diaphragm.	The aorta.
Arachnoid.	See *Foramen of Magendie*.	
Atlantal.	In many animals, a hole through the ventral border of the atlas; only exceptionally present in man.	Suboccipital nerve; vertebral artery.
Atrio-ventricular, common.	In some animals, an auriculo-ventricular opening common to both auricles and ventricles.	Blood.
Auditory, external.	The external meatus of the auditory canal.	Sound-waves to tympanic membrane.
Auditory, internal.	See *Acoustic*.	
Auricular.	The mouth of the external auditory meatus.	Sound-waves to tympanic membrane.
Bartholin's.	See *Obturator*.	
Bochat's.	A supposed communication between the subarachnoid space and the cavity of the third ventricle of the brain.	
Botal or Botallo.	In the fetus, the opening between the two auricles of the heart, situated at the lower posterior portion of the septum auricularum.	Blood.
Carotic.	The inferior aperture of the carotid canal.	Carotid vessels.
Carotico-clinoid.	Sphenoid bone; an occasional foramen, formed by the union of the apices of the anterior and middle clinoid processes.	
Carotico-tympanic.	See *Canal, Carotico-tympanic*.	
Carotid, external.	The external aperture of the carotid canal.	Internal carotid artery and carotid plexus.
Carotid, internal.	The internal aperture of the carotid canal.	Internal carotid artery and carotid plexus.
Cavernous.	Sphenoid bone; a small passage.	The median vertebral vein.
Cecal, anterior.	Also called *prepontile fossa;* the depression at the cephalic margin of the pons.	
Cecal (of *frontal bone*).	Formed by the frontal bone and the crista galli of the ethmoid; a small foramen.	A vein, occasionally.
Cecal (of *medulla oblongata*).	See *Cecal, anterior*.	

TABLE OF FORAMINA.—*Continued.*

NAME.	LOCATION.	TRANSMITS.
Cecal (of *pharynx*).	Median line of posterior wall of the pharynx; a depression in the mucous membrane.	
Cecal, posterior.	A depression just below the pons.	The ventral median fissure terminates in this.
Cecal (of *retina*).	See *Fovea centralis.*	
Cecal, retro-anal.	See *Foveola coccygea.*	
Cecal (of *superior maxilla*).	See *Incisive.*	
Cecal (of *tongue*).	Posterior termination of the median raphé of tongue.	A number of small glands open into it.
Central.	See *Fovea centralis.*	
Central (of the cochlea).	See *Cochleæ centrale.*	
Central (of Sœmmerring).	See *Central (of the retina).*	
Cervical.	Transverse processes of the cervical vertebræ.	The vertebral artery and vein.
Clinoideo-carotic.	See *Carotico-clinoid.*	
Cochleæ centrale.	The largest of several openings at the base of the modiolus.	
Common, anterior.	See *Foramen of Monro.*	
Conarial.	The orifice of the conarial recess.	
Condylar, anterior.	See *Condyloid, anterior.*	
Condylar, posterior.	Behind the condyles of the occipital bone, opening externally into the occipital fossa.	Veins.
Condyloid, accessory.	A small foramen near the anterior condyloid foramen.	A vein, occasionally.
Condyloid, anterior (sometimes double).	Anterior to and to the outer side of each occipital condyle, passing downward, outward, and forward through the basilar process.	The hypoglossal nerve; occasionally a meningeal branch of the ascending pharyngeal artery.
Condyloid, posterior.	The fossa behind the occipital condyles.	A vein to the lateral sinus.
Coraco-scapular.	In some animals, an orifice formed by the articulation of the coracoid bone with the scapula.	
Cordiform.	In reptiles, the obturator foramen.	
Costo-transverse.	The space between the transverse process of a vertebra and the neck of its corresponding rib.	Branches of intercostal arteries and nerves.
Cotyloid.	A notch in the acetabulum converted into a canal by a ligament.	Vessels and nerves.
Cribrosa.	Small openings in the lamina cribrosa of the ethmoid bone.	Filaments of the olfactory nerves.
Cruro-popliteal, anterior.	An aperture in the upper part of the tibio-fibular interosseous membrane.	The anterior tibial vessels.
Dental, inferior.	The external aperture of the inferior dental canal, in the ramus of the inferior maxilla.	Inferior dental vessels and nerves.
Dextrum.	See *Quadrate.*	
Diaphragmatic.	Several canals through the diaphragm.	The esophagus, aorta, vagus nerves, inferior vena cava, and other structures.
Diaphragmatic, left inferior.	See *Aortic.*	
Diaphragmatic, left superior.	See *Esophageal.*	
Diploic.	Small openings in the inner plate of the cranial bones, leading from the cranial cavity into the diploë.	Veins.
Of Duverney.	See *Foramen of Winslow.*	
Emissary.	The skull.	The emissary veins.
Epiploic.	See *Foramen of Winslow.*	
Epitrochlear.	In many animals, on the inner condyle of the humerus; sometimes present or represented in man by a groove.	

TABLE OF FORAMINA.—*Continued.*

NAME.	LOCATION.	TRANSMITS.
Esophageal.	The diaphragm.	The esophagus.
Ethmoid, anterior.	A canal formed between the ethmoid and frontal bones.	The nasal branch of the ophthalmic nerve; anterior ethmoid vessels.
Ethmoid, posterior.	See *Canal, Ethmoid, posterior.*	Posterior ethmoid artery and vein.
Frontal.	The supra-orbital notch of the frontal bone when it is converted into a canal by an overlying process of bone.	Supraorbital vessels and nerves.
Fronto-ethmoid.	The foramen cecum in the suture between the frontal and ethmoid bones.	
Glandulosum Morgagni.	See *Foramen cecum (of tongue).*	
Of Huschke.	A perforation often found near the inner extremity of the tympanic plate; it is due to an arrest of development.	Connects the glenoid fossa of the temporal bone with the external auditory meatus.
Incisive.	See *Incisor*	
Incisor.	Aperture of the incisor canal in the alveolar margin.	Nerves and vessels to the incisor teeth.
Infra-maxillary.	The inferior dental canal, *q. v.*, under *Canal.*	
Infra-orbital.	In the superior maxilla, the external aperture of the infra-orbital canal.	The infraorbital nerve and artery.
Infra-pubic.	See *Obturator.*	
Innominate.	Temporal bone.	The Vidian nerve.
Intercarpal.	The carpus of batrachians.	
Interclinoid.	A canal formed by an anomalous process, connecting the middle and posterior clinoid processes of the sphenoid.	
Intermaxillary.	See *Incisor.*	
Interorbital.	In birds, a space in the bony plate separating the orbits.	
Intervertebral, anterior.	The aperture formed by the notches opposite to each other in the laminæ of adjacent vertebræ.	The spinal nerves and vessels.
Intervertebral, posterior.	The space between the articular processes of adjacent vertebræ, except the first cervical.	
Ischiadic, major.	See *Sacro-sciatic, great.*	
Ischiadic, middle.	An open space left between an anomalous and the normal sacro-spinal ligament.	
Ischiadic, minor or small.	See *Sacro-sciatic, small.*	
Ischio-pubic.	See *Obturator.*	
Jugular.	See *Lacerated, posterior.*	
Jugular, spurious.	An anomalous opening in the squamous portion of the temporal bone.	A vessel that connects the external jugular vein with an intracranial vessel.
Lacerated, anterior.	See *Sphenoid fissure.*	
Lacerated, inferior.	See *Spheno-maxillary fissure.*	
Lacerated, jugular.	See *Lacerated, posterior.*	
Lacerated, middle.	An irregular aperture between the apex of the petrous portion of the temporal bone and the body and great wing of the sphenoid, and the basilar process of the occipital bone.	The carotid artery and the large superficial petrosal nerve.
Lacerated, orbital.	The *Sphenoid Fissure, q. v.*	
Lacerated, posterior.	The space formed by the jugular notches of the occipital and temporal bones, divided into two portions.	The *posterior portion*, the internal jugular vein; the *anterior portion*, the 9th, 10th, and 11th cranial nerves, and the inferior petrosal sinus.
Lacerated, superior.	See *Sphenoid fissure.*	
Of Magendie.	An orifice in the membranous roof of the fourth ventricle.	
Magnum.	See *Magnum occipitale.*	

TABLE OF FORAMINA.—*Continued.*

NAME.	LOCATION.	TRANSMITS.
Magnum ischii.	The *Obturator foramen, q. v.*	
Magnum occipitale.	A large oval aperture, centrally placed in the lower and anterior part of the occipital bone.	The spinal cord and its membranes; the spinal accessory nerves; the vertebral arteries.
Malar.	The malar bone.	Nerves and vessels.
Mandibular.	See *Dental, inferior.*	
Mandibular, anterior.	See *Mental.*	
Mandibular, posterior.	See *Dental, inferior.*	
Mastoid.	A small foramen behind the mastoid process.	A small artery from the dura; a vein opening into the lateral sinus.
Mastoid, posterior.	See *Mastoid.*	
Maxillary, anterior.	See *Mental.*	
Maxillary, inferior.	See *Dental, inferior.*	
Maxillary, posterior.	See *Dental, inferior.*	
Maxillary, superior.	See *Canal, Dental, posterior.*	
Medium.	See *Lacerated, middle.*	
Medullæ spinalis.	See *Vertebral.*	
Medullary.	See *Nutrient.*	
Medullary (*of the vertebral column*).	See *Vertebral.*	
Of Meibomius.	See *Cecum* (*of the tongue*).	
Meningeal.	An anomalous opening in the squamous portion of the temporal bone.	A branch of the middle meningeal artery.
Mental.	A foramen in the inferior maxilla, external to the incisive fossa, midway between the upper and lower borders of the bone, and in the interval between the two bicuspid teeth.	Mental nerve and vessels.
Of Monro.	An opening behind the anterior pillars of the fornix through which the lateral ventricle of the brain communicates with the third ventricle.	The choroid plexus.
Monro, anterior of.	See *Foramen of Monro.*	
Monro, primitive.	The primitive foramen that connects the third with the lateral ventricle of the brain.	
Morgagni's.	See *Cecum* (*of tongue*).	
Nasal.	Small canals that perforate the nasal bones.	Vessels and nerves.
Nutrient.	The canal connecting the medullary cavity of the bone with its external surface.	The nutrient vessels.
Nutrient (of *femur*).	The aperture near the upper part of the linea aspera of the femur.	Nutrient artery.
Nutrient (of *humerus*).	The aperture slightly below the middle of the humerus.	The nutrient artery.
Nutrient (of *radius*).	The aperture on the anterior surface of the radius.	The nutrient artery.
Nutrient (of *ulna*).	The aperture on the anterior surface of the ulna.	The nutrient artery.
Obturator.	The large ovoid opening between the ischium and the pubis, internal and inferior to the acetabulum; it is partly closed in by a fibrous membrane.	Obturator vessels and nerves.
Occipital.	See *Magnum occipitale.*	
Occipital, superior.	See *Superior occipital.*	
Occipitale, magnum.	See *Magnum occipitale.*	
Oculi.	The pupil.	Rays of light.
Olfactory.	Numerous foramina in the cribriform plate of the ethmoid.	Olfactory nerves.
Omental, great.	The communication between the cavities of the greater and lesser omenta.	

TABLE OF FORAMINA.—*Continued.*

NAME.	LOCATION.	TRANSMITS.
Omental, lesser or small.	See *Foramen of Winslow.*	
Oödes.	See *Obturator.*	
Optic.	The canal at the apex of the orbit, the anterior termination of the optic groove, just beneath the lesser wing of the sphenoid bone.	Optic nerve; ophthalmic artery.
Optic (of the *choroid*).	The choroid.	The optic nerve-fibers pass through this to their expansion in the retina.
Optic (of the *sclera*).	The sclerotic coat of the eye.	The optic nerve.
Orbital, anterior internal.	See *Ethmoid, anterior.*	
Orbital, internal.	See *Canal, Ethmoid, anterior.*	
Orbital, superior.	See *Supraorbital.*	
Ossis pubis.	See *Obturator.*	
Oval (of the *heart*).	See *Foramen of Botal.*	
Oval (of the *hip*).	See *Obturator.*	
Oval (of *innominate bone*).	See *Obturator.*	
Oval (of the *sphenoid*).	An ovoid aperture near the posterior margin of the great wing of the sphenoid.	The inferior maxillary division of the trigeminal nerve; the small meningeal artery; occasionally, the small petrosal nerve.
Pacchionian.	The depressions on the inner surface of the skull.	For the Pacchionian bodies.
Palatine, anterior.	See *Canal, Incisor.*	
Palatine, great posterior.	The *Posterior palatine canal, q. v.*	
Palato-maxillary.	See *Canal, Palato-maxillary.*	
Of Panizza.	The communication between the right and left aortic arches of reptiles.	Blood.
Papillaria.	The opening of the uriniferous tubules at the apices of the pyramids of Malpighi.	Urine.
Parietal.	Near the posterior superior angle of the parietal bone; inconstant.	An emissary vein of the superior longitudinal sinus; occasionally a small branch of the occipital artery.
Pelvic, large.	See *Obturator.*	
Pneumatic.	In birds, a large aperture near one end of the long pneumatic bones communicating with the interior.	Permits the entrance of air.
Posterior.	See *Lacerated, posterior.*	
Postglenal.	See *Postglenoid.*	
Postglenoid.	In comparative anatomy, an opening immediately posterior to the root of the zygoma.	
Postpalatine.	The *Posterior palatine canal, q. v.*	
Pre-acetabular.	In the *Cheiroptera*, an opening formed by a process extending from the ilio-pectineal eminence to the anterior extremity of the ilium.	
Pro sinu petroso inferiore.	An anomalous roundish opening formed by adjacent portions of the petrous portion of the temporal bone and the occipital bone.	The inferior petrosal sinus.
Profundum.	See *Iter ad infundibulum.*	
Pterygo-palatine.	The external aperture of the pterygo-palatine canal.	Pterygo-palatine vessels; pharyngeal nerve.
Quadrate.	The diaphragm.	The inferior vena cava.
Repugnatoria.	In *Cheilognatha*, apertures of cutaneous glands on each side of the back, in rows.	Secrete a defensive corrosive fluid.

TABLE OF FORAMINA.—*Continued.*

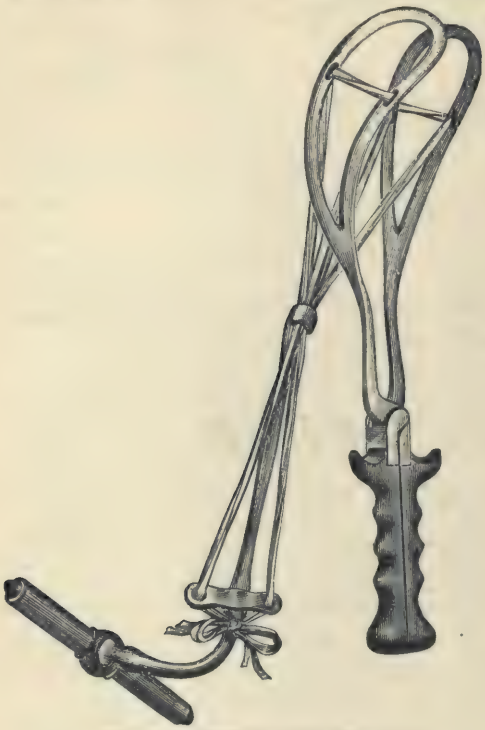
NAME.	LOCATION.	TRANSMITS.
Retina centrale.	See *Fovea centralis.*	
Of Rivini.	An opening in the tympanum, the existence of which is disputed.	
Rotundum.	See *Round.*	
Round.	A roundish opening in the great wing of the sphenoid bone.	The superior division of the fifth nerve.
Sacral, anterior (*four on either side*).	On anterior surface of sacrum, connecting with sacral canal.	The anterior branches of sacral nerves.
Sacral, posterior (*four on either side*).	The posterior surface of the sacrum, external to the articular processes.	Posterior branches of sacral nerves.
Sacro-sciatic, great.	The oval space between the lesser sacro-sciatic ligament and the innominate bone.	The pyriformis muscle, the gluteal, sciatic, and pudic vessels and nerves.
Sacro-sciatic, small.	The space included between the greater and lesser sacro-sciatic ligaments and the portion of the innominate bone between the spine and tuberosity of the ischium.	Internal obturator muscle; the internal pudic vessels and nerves.
Saphenous.	See *Saphenous Opening.*	
Scapular.	The supra-scapular notch, when it is converted into a foramen by a ligamentous or bony structure.	Suprascapular nerve and artery.
Of Scarpa.	Bony canals opening into the incisor canal.	The naso-palatine nerves.
Sclerotic, anterior.	The opening in the sclerotic which is filled in by the cornea.	
Sclerotic, posterior.	See *Optic* (*of the sclera*).	
Of Sœmmering.	See *Fovea centralis*, and *Central* (*of the retina*).	
Spheno-frontal.	In the cartilaginous basis of the skull, between the labyrinths of the ethmoid and the alæ parvæ of the sphenoid and the anterior sphenoid.	
Sphenoidal, anterior.	A rare anomalous opening in the pterygoid process of the sphenoid bone.	The internal maxillary artery.
Spheno-palatine.	The space between the sphenoid and orbital processes of the palate and sphenoid spongy bone; it opens into the nasal cavity.	Branches from Meckel's ganglion; the nasal branch of the internal maxillary artery.
Spheno-spinosum.	See *Spinosum.*	
Spinal.	See *Vertebral.*	
Spinosum.	The great wing of the sphenoid bone, near its posterior angle.	The middle meningeal artery.
Spöndli.	See *Spheno-frontal.*	
Of Stensen.	See *Canal, Incisor.*	
Sternal.	Near the inferior termination of the sternum; inconstant.	Vessel.
Stylo-mastoid.	Between the styloid and mastoid processes of the temporal bone, constituting the external aperture of the aqueduct of Fallopius.	Facial nerve; stylo-mastoid artery.
Suborbital.	The orifice at the anterior end of the infraorbital canal.	Infraorbital artery and nerve.
Subsacral.	See *Sacral, anterior.*	
Supersacral.	See *Sacral, posterior.*	
Supracondyloid.	See *Epitrochlear.*	
Supra-orbital.	A notch in the superior orbital margin at the junction of the middle with the inner third, sometimes converted into a foramen by a bony process or a ligamentous band. It is the orifice of a groove in the upper wall of the orbit.	Supra-orbital artery, veins, and nerve.
Supratrochlear.	The thin plate of bone between the olecranon and the coronoid fossa of the humerus; inconstant.	
Of Tarinus.	The *Hiatus Fallopii, q. v.*	
Of Thebesius.	Small depressions on the inner surface of the heart, especially in the right auricle.	Some of these are cul-de-sacs; others are the mouths of the venæ minimæ cordis.
Thyreoid.	See *Thyroid.*	

TABLE OF FORAMINA.—*Continued.*

NAME.	LOCATION.	TRANSMITS.
Thyroid.	1. A foramen in the ala of the thyroid cartilage, more or less completely covered by perichondrium. 2. See *Obturator.*	
Trachelian.	See *Vertebrarterial.*	
Transverse.	See *Vertebrarterial.*	
Venæ cavæ.	See *Quadrate.*	
Venæ saphenæ.	See *Saphenous Opening.*	
Venosum.	See *Quadrate.*	
Vertebral.	The space included between the body and arch of a vertebra	The spinal cord and its appendages.
Vertebrarterial.	The foramina in the transverse processes of the cervical vertebræ.	Vertebral artery and vein.
Vesalius.	A minute inconstant aperture at the root of the pterygoid process of the sphenoid bone.	A small vein.
Vicq d'Azyr's.	See *Foramen cecum, anterior and posterior.*	
Vidian.	See *Canal, Vidian.*	
Of the vomer.	The posterior aperture of the canal of the vomer.	
Of Winslow.	An aperture situated between the liver and stomach, bounded in front by the portal vein, hepatic artery and duct, behind, by the inferior vena cava, below, by the hepatic artery, and above, by the liver. It is formed by folds of the peritoneum, and establishes communication between the greater and lesser cavities of the peritoneum.	
Zygomatic, anterior.	See *Zygomatico-facial.*	
Zygomatic, external.	See *Zygomatico-facial.*	
Zygomatic, internal.	See *Zygomatico-temporal.*	
Zygomatic, posterior.	See *Zygomatico-temporal.*	
Zygomatic, superior.	See *Zygomatico-temporal.*	
Zygomatic, temporal.	See *Zygomatico-temporal.*	
Zygomatico-facial.	The aperture of the malar canal on the facial surface of the malar bone.	Malar division of temporo-malar branch of superior maxillary nerve.
Zygomatico-temporal.	The external aperture of the malar canal, on the temporal surface of the malar bone.	Malar division of temporo-malar branch of superior maxillary nerve.

Foraminated (*fo-ram'-in-a-ted*) [*foramen*, an opening]. Containing foramina.

Foraminiferous (*fo-ram-in-if'-er-us*). Same as *Foraminated.*



Forbes, Micrococcus of. See *Bacteria, Synonymatic Table of.* **F., Operation of.** See *Operations, Table of.*

Force (*fors*) [*fortis*, strong]. That which produces or arrests motion. The rate of transformation of energy in time. Whatever may be converted into motion (Robert Mayer).

Forced (*forst*) [*fortis*, strong]. Accomplished by an unusual exertion of force. **F. Feeding.** See *Suralimentation* and *Feeding.*

Forceps (*for'-seps*) [*forceps*, a pair of tongs]. An instrument with two blades and handles for purposes of seizing, traction, etc., in surgical, obstetric, and other operations. **F., Angular,** one bent for introduction into a canal. **F., Arterial,** one specially adapted for seizing an artery; many varieties are named after inventors. **F., Bone,** one exceptionally strong, for use in operations upon bones. **F., Bull-dog,** a forceps with sharp teeth (as for holding an artery). **F., Bullet,** one of peculiar construction, to extract bullets. **F., Cannula,** long, slender forceps enclosed in a tube, that opens by protruding the blades. **F., Catch,** a forceps with a catch on the handle. **F., Craniotomy,** the halves are crossed and adapted to embryotomy. **F., Dental,** adapted for extraction of teeth. This was probably among the first, and, perhaps, almost the only instrument employed for the extraction of teeth, until the invention of Garengeot, in the early part of the eighteenth century. But from the time of Celsus, down to this period, the forceps used for the extraction of teeth were so rude in their construction and so illy adapted for the purpose, that for the removal of the molar teeth the employment of the key-instrument became general, both among dentists and physicians. At the present time, however, forceps have been so greatly improved that the key is but little used. **F., Duck-bill.** See *Duckbill.* **F., Ectropion,** adapted for seizing the lid in operations for ectropion. **F., Gouge,** cutting-forceps for operations upon bone. **F., Hemostatic,** a forceps for controlling hemorrhage. **F., Iridectomy,** a delicate forceps for seizing the iris. **F., Midwifery,** or **Obstetric,** a forceps for grasping the fetal head in difficult labor and by traction aiding its exit; there is a great number of varieties. **F.,**

Rat-toothed, a form of forceps used in the removal

SIMPSON'S OBSTETRIC FORCEPS.
With Poullet Tape-attachment for Axis-traction.

of bullets, or other foreign bodies, from wounds. **F., Spring,** same as *F., Catch.*

Forcible (*for'-sib-l*) [*fortis*, strong]. With force or power. **F. Extension.** See *Extension.*

Forcipate, Forcipated (*for'-sip-āt, -a-ted*) [*forceps*, forceps]. In biology, forceps-like.

Forcipressure (*for'-se-presh'-ūr*) [*forceps*, a pair of tongs; *pressura*, a pressing]. The arrest of a minor hemorrhage by catching the end of the divided vessel with a pair of spring-forceps, the pressure being kept up for 24–36 hours.

Fore (*for*) [ME., *fore*, before]. Applied to the part that is in front or first. **F.-arm,** that part of the arm between the wrist and the elbow. **F.-brain,** the anterior of the encephalic vesicles into which the primary nervous axis of the embryo divides at an early stage; at a later stage, the prosencephalon. **F.-finger,** the index finger. **F.-foot,** the foot of a fore-limb. **F.-front,** the forehead. **F.-gut,** the cavity in the raised cephalic end of the embryo, called also headgut. The rudimentary pharynx and duodenum, with the intermediate portions of the future alimentary canal, are included in the foregut. **F.-head,** that part of the face between the orbits of the eyes, the hair above, and the temples at the sides. **F.-limb,** the pectoral limb of an animal. **F.-milk.** 1. The colostrum, *q. v.* 2. The first part of the milk taken from the teat at any one milking. It is less rich in butter than is the after-milk, or strippings. **F.-skin,** the prepuce, *q. v.*; the term sometimes designates also the dewlap occasionally seen upon the throat of an aged person. **F.-waters,** a name sometimes given to that portion of the amniotic sac and its contents in advance of the presenting part in labor.

Foreign (*for'-en*) [ME., *foren*, foreign]. Alien; exotic; not native; irrelevant. **F. Body,** a substance in a wound, organ, or cavity not normally present.

Forensic (*for-en'-sik*) [*forensis*, belonging to the forum]. Pertaining to a court of law. In medicine, that part of the science connected with judicial inquiry. Also, medical jurisprudence.

Forest's Method. See *Artificial Respiration.*

Forficate (*for'-fik-āt*) [*forfex*, scissors]. In biology, deeply-forked.

Fork [ME., *fork*, a fork]. A name frequently given to the space between the thighs.

Form [*forma*, shape]. The external shape or configuration of the body, or of a part of a body.

Formaldehyd (*form-al'-de-hīd*) [*formica*, an ant, *aldehyd*]. Formic aldehyd. See *Aldehyd, Formic.*

Formalin (*for'-mal-in*) [*formica*, an ant], HCOH. A proprietary germicide composed of a 40 per cent. solution of formaldehyd. Unof.

Formanilid (*form-an'-il-id*) [*formica*, an ant; *anilin*], C_7H_7NO. A substance obtained on digesting anilin with formic acid, or by rapidly heating anilin with oxalic acid. It consists of colorless prisms, readily soluble in water, alcohol, and ether, melting at 46° C.

Formatio (*for-ma'-she-o*) [L.]. A formation. **F. reticularis,** the intercrossing of the fibers of the anterior columns in the medulla.

Formative (*form'-at-iv*) [*formare*, to form]. Plastic; molding. **F. Cell,** a large spheric, refractive cell beneath the hypoblast.

Formic Acid (*for'-mik*). See *Acid.*

Formicant (*for'-mik-ant*) [*formicare*, to crawl like an ant]. Creeping, or moving with a small and feeble action; applied to the pulse when it is unequal and scarcely perceptible.

Formication (*for-mik-a'-shun*) [*formica*, an ant]. A sensation like that produced by ants or other insects crawling upon the skin. **F., Cocain.** See *Cocain-bug.*

Formol (*for'-mol*) [*formica*, an ant], CH_2O. A name given to formic aldehyd or formaldehyd. It is a powerful antiseptic, ranking as one of the best, but its microbicidal power in a given time is very feeble.

Formula (*form'-u-lah*) [dim. of *forma*, a form: *pl.*, *Formulæ*]. A prescribed method. In pharmacy, a list of the names and respective quantities of substances entering into a composition. In chemistry, a method of representing the gravimetric structure of a compound by symbols. **F., Constitutional,** or **Rational,** one that indicates only the union of individual atoms, such as are especially characteristic of the compound. **F., Empiric.** See *F., Unitary.* **F., Graphic.** Same as *F., Constitutional.* **F., Rational.** Same as *F., Constitutional.* **F., Structural,** one that indicates the complete grouping of all of the atoms, representing the whole chemic deportment of a given compound. **F., Unitary,** or **Empiric,** one that belongs to an entire series of bodies that are isomeric, yet wholly different, and that affords no hint as to the character of the compound.

Formulary (*for'-mu-la-re*) [*formula*; dim. of *forma*, form]. **F., National,** a collection of widely-used and well-known preparations, omitted from the U. S. Pharmacopeia, but collected and published by the American Pharmaceutic Association.

Formyl (*for'-mil*) [*formica*, the ant; ὕλη, matter], CHO. The radicle of formic acid.

Forne's Method. See *Anesthetic.*

Forneaux Jordan's Operations. See *Operations.*

Fornicate (*for'-nik-āt*) [*fornix*, an arch]. In biology, bearing fornices; overarched. To commit fornication.

Fornication (*for-nik-a'-shun*) [*fornicari*, to fornicate]. The illicit sexual intercourse of an unmarried person of either sex with another, whether married or not.

Fornicolumn (*for'-ne-kol-um*) [*fornix*, an arch; *columna*, a column]. The anterior pillar of the fornix, one in each hemicerebrum. It is a bundle of fibers ascending from the albicans and thalamus, passing just caudad of the precommissure, forming the cephalic boundary of the porta, and ending in the temporal lobe.

Fornicommissure (*for-ne-kom'-is-shūr*) [*fornix*, an arch; *commissura*, a commissure]. A lamina of greater or less thickness uniting the two hemifornices of the brain. It is not a true commissure, nor even fibrous in structure.

Fornicrista (*for-ne-kris'-tah*). See *Crista*.

Fornix (*for'-niks*) [*fornix*, an arch]. 1. An arched portion of the brain composed of the two hippocamps and their respective fimbrias, united across the meson by a thin lamina, the forni commissure. 2. In biology, a vaulted or arched arrangement or appendage, as, for example, the scales in the throat of some corollas, or the hollow beneath the umbo of a bivalve shell. **F. descendens.** See *Bundle of Vicq d'Azyr*.

Förster's Method. See *Cataract, Artificial Maturation of*. **F.'s, Operation.** See *Operations, Table of*.

Fortification Spectrum (*for-tif-ik-a'-shun spek'-trum*). Teichopsia; the appearance of a peculiar subjective visual sensation in migraine. The luminous shape of its outer edge assumes a zigzag form, with angles like those of a fortification.

Fosforus (*fos'-for-us*). A commendable orthography for *phosphorus*. It has been recommended for adoption by recent spelling-reformers.

Fossa (*fos'-ah*) [*fossa*, a ditch: *pl.*, *Fossæ*]. A depression, furrow, or sinus. **F., Canine,** the depression on the external surface of the superior maxillary bone, giving rise to the origin of the *levator anguli oris* and *compressor nasi* muscles. **F., Condyloid,** a fossa behind each condyle of the occipital bone. **F. coronaris,** the boundary between the disc and corona, in *Medusæ*. **F., Cranial,** any fossa of the skull. **F., Digastric,** a deep groove on the inner aspect of the mastoid process for the attachment of the digastric muscle. **F., Digital,** a deep depression at the base of the inner surface of the great trochanter of the femur. **F., Glenoid,** the fossa in the temporal bone that receives the condyle of the lower jaw. **F., Hyaloid,** a depression in the anterior surface of the vitreous body for the crystalline lens. **F., Hyoid,** a small cavity external to the ary-epiglottic fold on either side of the larynx. It is also called the *Sinus pyriformis*. **F., Iliac,** the smooth internal surface of the ilium. **F., Incisive,** a depression in the superior maxillary bone just above the incisor teeth. **F., Infraclavicular.** See *F., Mohrenheim's*. **F. innominata.** Same as *F. scaphoidea*. **F., Jugular,** a deep excavation in the petrous portion of the temporal bone, forming part of the posterior lacerated foramen. **F. lachrymalis,** the depression in the frontal bone for the reception of the lachrymal gland. **F., Lenticular.** Same as *F., Hyaloid*. **F., Mohrenheim's,** the infraclavicular fossa; a triangular depression beneath the clavicle. **F., Myrtiform.** Same as *F., Incisive*. **F., Nasal,** the nostrils. See *Nasal Fossæ*. **F. navicularis,** *Morgagni's fossa*, a fossa within the penis, formed by a dilatation in the spongy portion of the urethral passage. **F., Occipital,** a fossa behind the condyle of the occipital bone. **F., Olfactory,** the fossa in the fetus that develops into the nasal fossa. **F. ovalis,** an oval depression in the right auricle of the heart. **F., Palatine,** the anterior palatine canal passing through the palatine process of the superior maxillary bone. It branches into four compartments, the foramina of Stensen, and the foramina of Scarpa. **F. patellaris,** a depression on the anterior aspect of the vitreous humor in which rests the posterior surface of the lens. **F., Pituitary,** a depression below the olivary process of the sphenoid bone lodging the pituitary body. **F., Prepontile,** the anterior foramen cæcum. See *Foramina, Table of*. **F., Pterygoid,** the notch separating the external and internal plates of the pterygoid process of the sphenoid. **F. of Rosenmüller,** a depression on the posterior wall of the naso-pharynx immediately behind the Eustachian orifice. **F. scaphoidea,** the curved depression between the helix and antihelix of the external ear. **F. sigmoidea,** a deep groove on the internal surface of the mastoid portion of the temporal bone into which the mastoid foramen opens. **F., Spheno-maxillary,** a triangular space at the angle of the spheno-maxillary and pterygo-maxillary fissures. **F., Sublingual,** a depression on the internal surface of the inferior maxillary bone, for containing the sublingual gland. **F., Submaxillary,** the oblong depression on the internal surface of the inferior maxillary bone, which contains the submaxillary gland. **F., Subscapular,** a broad cavity on the internal surface of the scapula. **F., Temporal,** the fossa on either side of the head filled by the temporal muscle. It is formed by parts of the frontal, sphenoid, parietal, temporal, and malar bones. **F., Trochanteric.** Same as *F., Digital*. **F., Zygomatic,** a cavity below and on the inner side of the zygoma.

Fosset, or **Fossette** (*fos-et'*) [Fr.]. A dimple or small depression.

Fossilin (*fos'-il-in*) [*fossilis*, dug up]. A trade-name for a product resembling vaselin.

Fossula (*fos'-su-lah*) [dim. of *fossa*, a ditch: *pl.*, *Fossulæ*]. 1. In biology, a small fossa. 2. Any one of the numerous slight depressions on the surface of the cerebrum. **F. olfactoriæ,** the olfactory depressions of acraspede medusæ.

Fothergill's Disease, or **Faceache.** See *Diseases, Table of*. **F.'s Sore-throat,** a synonym of the anginoid variety of scarlet fever (*Scarlatina anginosa*).

Foubert's Test. See *Death*.

Foudroyancy (*foo-droi'-an-se*) [Fr.]. The property of being foudroyant.

Foudroyant (*foo-droi'-ant*) [Fr.]. Sudden and overwhelming; fulminant; fulgurant.

Foul (*fowl*) [ME., *foul*, foul]. Filthy; offensive; disgusting. **F.-in-the-foot.** See *F.-rot*. **F.-rot,** an inflammatory disease of the hoofs of cattle; it is attended with suppuration.

Foulage (*foo-lahzh'*) [Fr., "fulling, or pressing"]. In massage, a form of manipulation of the tissues. See *Fulling*.

Foulbrood (*fowl'-brood*). A contagious zymotic disease of the honey-bee and its larva, due to the presence of the *Bacillus alvei*. See *Bacteria, Synonymatic, Table of*.

Foullioy's Operation. See *Operations, Table of*.

Founder (*fown'-der*) [*fundere*, to pour]. Laminitis (*q. v.*) of the horse's fore-feet, with the accompanying disorders of related parts. **F., Chest,** founder in a horse, marked or accompanied by atrophy of the chest-muscles.

Foundling (*found'-ling*) [Ger., *finden*, found]. An abandoned infant.

Four (*for*) [ME., *feowur*, four]. Twice two. **F.-drug Ointment.** See *Basilicon Ointment*. **F. Masters, Suture of the.** See *Suture*. **F.-tailed Bandage.** See *Bandage*.

Fourchet, or Fourchette (*foor-shet'*) [Fr., a fork]. 1. A fold of mucous membrane at the posterior junction of the labia majora. 2. A forked instrument used in division of the frenum linguæ.

Fournier's Method. See *Treatment, Methods of.*

Fovea (*fo-ve'-ah*) [*fovea*, a small pit]. Applied to many depressions in the body or its organs, but more particularly to the *fovea centralis retinæ*, a little pit in the *macula lutea* opposite the visual axis, the spot of distinctest vision, where the retinal cones are massed together and the rods and some other parts are absent. It is opposite the center of the cornea. **F. hemielliptica,** recessus ellipticus; sinus semiovalis; a small fossa on the inner wall of the labyrinth, between the fovea hemispherica and the orifices of the semicircular canals. **F. hemispherica,** recessus sphericus; a depression in the forepart of the inner wall of the labyrinth.

Foveate (*fo'-ve-āt*) [*fovea*, a small pit]. In biology, deeply pitted.

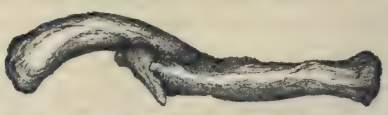
Foveola (*fo-ve'-o-lah*) [dim. of *fovea*, a small pit]. 1. A small pit or depression. 2. The depression at the summit of each papilla of the kidney. **F. coccygea,** a slight depression—a congenital defect—a little above the anus and at the apex of the coccyx. It is due to imperfect development. **F. inguinalis,** a somewhat funnel-shaped depression in the external inguinal fossa. It is open in fetal life, and is the abdominal end of the inguinal canal, through which the testis descended. **F. radialis.** See *Anatomist's Snuffbox.*

Fovilla (*fo-vil'-ah*) [*fovere*, to warm, to cherish: *pl.*, *Fovillæ*]. In biology, the protoplasmic contents of a pollen-grain.

Fowler's Method. A method of estimating the amount of urea in the urine. It consists in mixing one volume of the urine with seven volumes of liquor sodæ chloratæ (U. S. P.) and comparing the specific gravity before and after effervescence. See *Urea.* **F.'s Solution.** See *Arsenic.*

Fox's Apparatus. An apparatus for treating fracture of the clavicle. It consists of a pad in the axilla with a suspensory apparatus from the opposite shoulder.

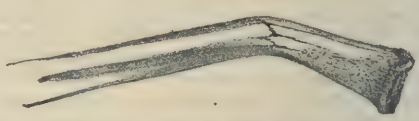
Fox-glove (*foks'-gluv*). See *Digitalis.*



Foxination (*foks-in-a'-shun*). See *Hypnotism.*

Fractional (*frak'-shun-al*) [*fractio*, a breaking]. Pertaining to fractions. **F. Cultivation,** the isolation of one variety of microŏrganism from a mixture of several, in order to study or cultivate it. This is done by attenuation of the medium so that a drop will probably contain but one organism. Distilled water was first used as the attenuating medium, but gelatinized media are now used. Brefeld and Nägeli suggested the procedure, and Lister isolated the first microbe, the *Bacillus lacticus* of Cohn. **F. Distillation.** See *Distillation.*

Fractionation (*frak-shun-a'-shun*) [*fractio*, a breaking]. Chemic separation by successive operations.



Fractura (*frak-tūr'-ah*) [L.]. A fracture. **F. dentis,** fracture of a tooth.

Fracture (*frak'-tūr*) [*fractura; frangere*, to break]. The breaking of a bone, either by external force, or by the action of the muscles of the body. Applied also to the breaking of a cartilage. **F., Barton's,** an oblique fracture of the lower end of the radius, beginning on the articulating surface. **F.-bed,** a doubly-inclined plane used in the treatment of fractures of the hip. **F.-box,** a long box with no ends or cover, used in the immobilization of fractured bones. **F., Capillary,** consisting of only a fine crack or fissure. **F., Comminuted,** with shattering of the bone. **F., Colles',** one of the lower end of the radius with displacement backward. **F., Complete,** entirely through the bone. **F.,**

Comminuted Fracture of Clavicle. (*Moullin.*)

Complicated, with injury of adjacent parts. **F., Compound,** with a communicating wound of the skin. **F., Depressed,** with depression of the fractured part below the normal level, as in fracture of the skull. **F., Double,** one bone is fractured in two places. **F., Dupuytren's,** fracture of the fibula, with retraction and displacement outward, and with laceration of the ligaments of the foot. **F., Epiphyseal,** with separation of the epiphysis of a bone. **F., Greenstick,** one

Greenstick Fracture of the Radius. (*Moullin.*)

side of the bone is broken, the other bent. **F., Impacted,** with forcible compression of the fragments into each other. **F., Moore's,** fracture of the lower end of the radius, with laceration of the internal lateral ligament and detachment of the triangular interarticular cartilage, which allows of the dislocation of the head of the ulna and the imprisonment of the styloid process under the annular ligaments. **F., Pott's,** same as *F., Dupuytren's*, but without laceration of the inferior tibio-fibular ligaments. **F., Shepherd's,** a fracture of the astragalus, the outer projecting edge being detached. **F., Simple,** without rupture of the overlying skin or mucous membrane. **F., Smith's,** fracture of the lower end of the radius, from a quarter of an inch to an inch from the articular surface. **F., Spontaneous,** with but a slight force to cause it, as when there is disease of the bone.

Frænulum (*fren'-u-lum*). See *Frenulum.*

Frænum (*fre'-num*). See *Frenum.*

Fragilitas (*fraj-il'-it-as*) [L.]. Brittleness. In physiology, a want of flexile strength. **F. crinium,** an atrophic condition of the hair in which the individual hairs split into numerous fibrillæ, the cleavage in many cases being recognizable as far as to the roots, the fibrils often curling in several turns away from the axis of the shaft. **F. ossium,** abnormal brittleness of the bones.

Fragmentation (*frag-men-ta'-shun*) [*fragmentum*, a piece]. The subdivision into fragments; the separation of certain forms of bacilli, or other microŏrganisms, into joints which become new individuals; the division or segmentation of a cell. **F. of Calculi, Spontaneous,** the exfoliation and breaking up of a calculus by the action of the uric acid or other morbid products in the bladder.

Frambesia (*fram-be'-ze-ah*) [*frambœsia*, raspberry]. Yaws; Pian; Amboyna Button; Parangi; Coco; Endemic Verrugas. A tropical contagious disease of the skin, of long duration, characterized by dirty or bright-red raspberry-like tubercles, appearing usually on the face, toes, and genital organs. It is most frequent in young colored people.

Frambesial (*fram-be'-ze-al*) [*frambœsia*, a raspberry]. Resembling, or pertaining to frambesia.

Frambesioid (*fram-be'-ze-oid*) [*frambœsia*, a raspberry; εἶδος, likeness]. Resembling frambesia, or one of its tubercles.

Franchimont's Test. See *Tests, Table of.*

Francis' Test. See *Tests, Table of.*

Franciscea (*fran-sis'-e-ah*). See *Manaca.*

Franck's Pill. A purgative pill containing aloes 4, rhubarb 2, syrup of absinthe, *q. s.*

Franco's Operations. See *Operations, Table of.*

Frangible (*fran'-jib-l*) [*frangere*, to break]. Liable to fracture; breakable.

Frangula (*frang'-gu-lah*) [origin uncertain]. The bark (one year old) of *Rhamnus frangula*, or alder buckthorn. The fresh bark is a violent irritant; the old bark is a non-irritant purgative much used in the constipation of pregnancy. **Ext. Rhamni Frang.** (B. P.). Dose gr. xv–℥j. **F., Ext., Fld.** Dose ℥ss-ij. **Ext. Rham. Frang. Liq.** (B. P.). Dose ℥j–iv.

Frangulin (*frang'-gu-lin*) [origin uncertain], $C_{20}H_{20}O_{10}$. Rhamnoxanthin; a lemon-yellow, crystalline, odorless, and tasteless glucosid found in *Buckthorn.*

Frank [ME., *frank*, open]. Of a benign or favorable tendency; as a *frank* inflammation; sometimes also applied to remedies, in a similar sense.

Frank's Operation. See *Operations, Table of.*

Fränkel's Apparatus. A pneumatic apparatus. **F.'s Pneumobacillus.** See *Bacteria, Synonymatic Table.*

Frankenhäuser, Ganglion of. See *Ganglia, Table of.* **F.'s Micrococcus.** The micrococcus of pernicious anemia. See *Bacteria, Synonymatic Table of.*

Frankenia (*frang-ke'-ne-ah*) [after Johann *Franke*]. A genus of heath-like herbs and undershrubs. **F. grandiflora**, of California, called *Yerba rheuma*, is astringent, and is a popular remedy for nasal, urethral and vaginal catarrhs. **F. portulacifolia**, of St. Helena, has been used as a substitute for tea. Other species of the genus are aromatic and stimulant. Unof.

Frankfort Black. See *Pigments, Conspectus of.* **F. Plane.** See *Plane.*

Frankincense (*frangk'-in-sens*) [*francum incensum*, pure incense]. A name given to a variety of resinous aromatic substances, especially the exudation of *Abies excelsa;* the term was originally, and properly, the same as *olibanum.* It is the concrete turpentine scraped off the trunks of *Pinus australis* and *P. tæda.* It is used externally as a slight stimulant and is contained in *Emplastrum picis* (B. P.).

Frankland's Artificial Human Milk. A nutritious preparation made from cow's milk as follows:—Allow ⅓ of a pint of new milk to stand 12 hours; remove the cream, and mix it with ⅔ of a pint of perfectly fresh cow's milk. Take the milk from which the cream was removed, and put into it a piece of rennet about an inch square (fluid rennet may be employed). Keep the vessel containing it in a warm place, until the milk is fully curdled, an operation requiring from 5 to 15 minutes according to the activity of the rennet. Break up the curd repeatedly, and carefully separate the whole of the whey, which should then be rapidly heated to boiling in a small tin-pan placed over a spirit-lamp or gas-lamp. During the heating a further quantity of casein, technically called "fleetings," separates, and must be removed by straining through clean muslin. Now dissolve 110 grains of powdered sugar of milk in the hot whey, and mix it with ⅔ of a pint of new milk to which the cream from the other fluid has already been added. The artificial milk should be used within 12 hours of its preparation. **F.'s Method**, a method of estimating the quantity of organic matter present in water. The organic carbon is oxidized and obtained as CO_2, and the organic nitrogen is liberated in the free gaseous state and measured.

Franklin (*frangk'-lin*) [from Benjamin *Franklin*]. A unit of static or frictional electricity. **F. Spectacles.** See *Bifocal.*

Franklinic (*frangk-lin'-ik*) [from B. *Franklin*]. Frictional. **F. Electricity**, static or frictional electricity.

Franklinism (*frangk'-lin-izm*). Same as *Franklinization.*

Franklinization (*frangk-lin-iz-a'-shun*) [after B. *Franklin*]. The therapeutic use of frictional or static electricity.

Frasera (*fra'-zer-ah*). See *American Columbo.*

Fraserin (*fra'-zer-in*) [after John *Fraser*, an English botanist]. A precipitate from a tincture of the root of *Frasera carolinensis;* it is atonic, stimulant, and mildly astringent. Dose 1 to 3 grains. Unof.

Fraunhofer's Lines. See *Absorption*, and *Lines Table.*

Fraxin (*fraks'-in*) [*fraxinus*, an ash-tree], $C_{21}H_{22}O_{13}$. A glucosid from the bark of certain species of ash (*Fraxinus excelsior*, etc.). It forms fine, white, four-sided prisms, of a bitter taste. It has been proposed as a remedy for gout, rheumatism, etc.

Fraxinus (*fraks-in'-us*) [L., "ash-tree."]. A genus of trees, order *Oleaceæ*, to which the various species of the ash belong. **F. americana**, is useful in dysmenorrhea. A wine (*Vinum fraxini americanæ*, N. F.) is prepared from its inner bark. Dose, one fluidrachm. **F. excelsior**, of Europe, affords a medicinal bark, its leaves, and wood formerly being official. Chinese wax is collected from the branches of **F. chinensis**; and manna from **F. ornus** and **F. rotundifolia.**

Freak (*frēk*) [ME., *freke*, bold]. A popular name for a deformed person.

Freckles (*frek'-ls*). See *Lentigo* and *Ephelides.*

Freestone-hewers' Lung. Synonym of *Pneumonokoniosis.*

Freezing (*frēz'-ing*) [ME., *freesen*, to freeze]. The congelation of liquids, especially of water. **F.-fluids**, liquid preparations, with boric acid, syrupy or gummy in consistence, in which tissue-specimens are immersed prior to freezing and section-cutting. **F.-machine**, an apparatus for producing intense cold by the evaporation of condensed gases. **F.-microtome**, a microtome attached to a contrivance for freezing artificially the tissue to be sectionized. It is used with very soft tissues. **F.-mixture**, a mixture of salts which absorb heat in undergoing solution. **F.-point**, the temperature at which a liquid freezes.

Frèire, Micrococcus of. See *Bacteria, Table of.*

Fremitus (*frem'-it-us*) [L., a murmur]. A tremor caused by the sympathetic vibration of some part or organ of the body in consonance with some other vibrating body. Also, a murmuring. **F., Friction**, the vibrations produced by the rubbing together of two dry surfaces of the pleura, and felt by the hand. It is met with frequently in dry pleurisy. **F., Rhonchal**, vibrations produced by the passage of air through a large bronchial tube containing mucus. It is most often felt in bronchitis. **F., Tactile**, the vibratory sensation conveyed to the hand applied to the chest of a speaking person. **F., Tussive**, the thrill felt when the hand is placed upon the chest while the patient coughs. **F., Vocal.** See *Vocal.*

Fremontia (*fre-mon'-she-ah*) [after John C. *Fremont*, an American explorer]. A genus of malvaceous shrubs. **F. californica**, Californian slippery elm, is not related botanically to the true elms, but its bark is used in the same way as that of the slippery elm.

French [*Francus*, a Frank]. Pertaining to France. **F. Blue.** See *Artificial Ultramarine* under *Pigments, Conspectus of.* **F. Crust**, or **F. Distemper.** Synonym of *Syphilis.* **F. Green.** Same as *Schweinfurt Green.* **F. Measles.** Synonym of *Rötheln, q. v.* **F. Method**, the manual method of instruction of deaf-mutes. **F. Mulberry.** See *Callicarpa.* **F. Pox.** Synonym of

French Lick Springs Indiana, see "Pluto p. [illegible] and "Mineral Water" p. 769.

Syphilis. **F. Purple.** Same as *Archil.* See *Pigments, Conspectus of.* **F. Red.** See *Pigments, Conspectus of.* **F. Spirit,** Brandy. **F. White.** Same as *White Lead.*

Frenetic (*fren-et'-ik*) [Fr., *frénétique*]. Relating to mental disorder.

Freno-secretory (*fre'-no-se-kre'-tor-e*) [*frenum*, bridle; *secretio*, a separation]. Exercising a restraining or inhibitory power over the secretions.

Frenulum (*fren'-u-lum*) [*dim., of frenum*, a bridle: *pl., Frenula*]. A small or minute frenum. The name given to the cephalic portion of the valvula of the mesencephal. In biology, a strong elastic bristle on the upper edge and near the base of the secondary wing of butterflies and moths, which folds the secondaries when at rest; it serves to lock the wings together.

Frenum (*fre'-num*) [L., a curb]. A ligament, fold of integument, or other part, that checks or limits the movements of any organ. **F. dentis,** the socket of a tooth. **F. labiorum,** the fourchet or lower commissure of the *labia pudendi.* **F. linguæ,** the bridle of the tongue. **F., Macdowel's,** the accessory fibers strengthening anteriorly the intermuscular septum of the deep fascia of the arm attached to the great pectoral tendon. **F. of Penis.** the fold on the lower surface of the glans penis connecting it with the prepuce.

Frenzy (*fren'-ze*) [φρένησις; φρήν, brain; mind]. Extreme and violent mania. **F., Transitory,** a condition of impaired consciousness characterized by either an intense maniacal frenzy or a confused hallucinatory delirium, the duration of which does not exceed the period of a day or two.

Frère Côme, Arsenical Paste of. Arsenious acid and animal charcoal, each one part; mercuric sulphid, four parts; to be used only over a small area at a time. **F. C.'s Operation.** See *Operations Table.*

Fresco Colors. See *Pigments, Colors, and Dyestuffs.*

Fret [ME., *freten*, to eat up]. An abrasion; a chafing; herpes; tetter.

Fretting (*fret'-ing*) [ME., *freten*, to eat up]. A chafing. Synonym of *Tormina.*

Fretum (*fre'-tum*) [L., a strait]. A constriction. **F. of Haller,** in the fetal heart, the constriction between the auricles and the ventricles.

Freund's Operations. See *Operations, Table of.* **F.'s Test.** See *Tests, Table of.*

Frey's White Mass. A substance for injecting tissues. Precipitate from 125 to 185 c. c. of a cold, saturated, aqueous solution of barium chlorid by adding H_2SO_4, drop by drop. Allow the precipitate to settle for 24 hours, and decant the clear fluid. The remaining mucilaginous mass is mixed with an equal volume of strong gelatin solution.

Friable (*fri'-ab-l*) [*friare*, to rub]. Easily broken or crumbled.

Friar's Balsam (*fri'-arz bal'-sam*). A name given to the *Balsamum traumaticum*, N. F., and also to the very similar *Tinctura benzoini composita*, U. S. P. See *Benzoin*, and *Wade's Balsam.*

Fricke's Operation. See *Operations, Table of.*

Friction (*frik'-shun*) [*frictio; fricare*, to rub]. 1. The act of rubbing. The process, in medicine, called shampooing. Also the inunction of a medicinal substance by rubbing. 2. In massage, firm circular manipulations, always followed by centripetal strokings. Friction may be practised with the thumb, with the tips of the fingers, or with one hand. **F.-fremitus.** See *Fremitus.* **F.-sound,** the sound observed in auscultation, as a result of the rubbing together of adjacent parts, as of the pleural folds, the pericardium, or the peritoneum.

Friedländer, Bacillus of. See *Bacteria, Synonymatic Table of.* **F.'s Hematoxylon Solution.** See *Stains, Table of.* **F.'s Method,** a method of staining *Pneumonia-cocci.* See *Stains, Table of.* **F., Microbe of.** See *Bacteria, Synonymatic Table of.*

Friedreich's Ataxia or **Disease.** Hereditary Ataxia, or Hereditary Ataxic Paraplegia, or Postero-lateral Sclerosis, depending on combined posterior and lateral sclerosis of the cord, and differing from tabes and ataxic paraplegia in the early age of its appearance, its hereditary nature, and some other features. Also applied to *Paramyoclonus multiplex.* See *Diseases, Table of.* **F.'s Sign.** See *Signs and Symptoms, Table of.*

Fright (*frīt*) [ME., *friht*, fright]. Sudden and extreme fear. **F.-neuroses,** Page's term for certain neuromimetic disorders following injury. This class of cases is generally considered under the name of "*traumatic hysteria.*" Fright-neuroses are frequently encountered in males as the result of railway injuries.

Frigorific (*frig-or-if'-ik*) [*frigus*, cold; *facere*, to make]. 1. Producing extreme cold. 2. That which produces extreme cold. **F. Mixture,** *Arnott's Mixture;* a mixture used as a local anesthetic. It consists of two parts of ice, and one of salt. These are pulverized separately in a canvas or linen bag, and then thoroughly mixed and surrounded by a piece of gauze. As soon as the mixture begins to melt it should be placed over the part to be anesthetized.

Fringe (*frinj*) [ME., *fringe*, a fringe]. See *Fimbria.* **F.-tree,** the bark of the root of *Chionanthus virginica*, a mild diuretic, aperient, and reputed alterative. Dose of the fld. ext. ʒ ss–j. Unof. See *Chionanthus.*

Frog [ME., *frogge*, a frog]. 1. An amphibian of the family *Ranidæ.* 2. In farriery, an elastic, horny substance that grows in the middle of the sole of a horse's foot, dividing it into two branches, and running toward the heel in the form of a fork. 3. A popular name for *Ranula, q. v.* It is also called *Frog-tongue.* **F., Cohnheim's.** See *Cohnheim.* **F.-face,** a facial deformity due to the growth of polypi or other tumors in the nasal cavities. A temporary condition of this kind may be due to orbital cellulitis or facial erysipelas. **F.-gait,** a peculiar hopping progression due to contractions of the flexors and adductors of the thighs, and to paralysis of the adductors. It is one of the results of infantile diplegia. **F.-headed,** the appellation given to anencephalic monsters, from their peculiar contour, which is due to the imperfect development of the orbits and the consequent apparent prominence of the eyes. **F.-spawn Matter.** See *Boiled-sago Matter.* **F.-tongue.** See *Frog.*

Froissement (*frwas-mon(g)*) [Fr., bruising]. In massage, a form of "rough *attachement*," of the skin and superficial tissues. See *Attachement.*

Frôlement (*frōl-mon(g)*) [Fr.]. A brushing; in massage, a succession of slow, backward-and-forward movements, as from a center to a periphery, and the reverse. It is done with the palmar surface of the fingers, or with the roulet.

Fromage de Brie (*fro-mahzh du(r)-bre*). See *Cheese.*

Frohmann's Lines. See *Line.*

Frond (*frond*) [*frons*, a leafy branch]. In biology, a leaf-like expansion of certain invertebrates, especially such as resemble plants. A thallus, or organ in which the functions of leaf and stem are not fully differentiated.

Frondescence (*fron-des'-ens*) [*frondescere*, to put forth leaves]. In biology, the state of bursting into leaf. Cf. *Foliation*, and *Phyllody.*

Frondose (*fron'-dōs*) [*frondosus*, leafy]. In biology,

having thin, expanded parts. Thalloid, or like a thallus.

Frons (*fronz*) [L.: *gen.*, *Frontis*]. The forehead.

Front (*frunt*) [*frons*, the forehead]. The forehead. **F. Combination.** See *Combination*. **F.-tap Contraction of Gowers.** See *Contraction*, and *Reflexes, Table of*.

Frontad (*frun'-tad*) [*frons*, the forehead; *ad*, to]. Towards the frontal aspect.

Frontadiform (*frun-tad'-if-orm*) [*frons*, front; *forma*, form]. In biology, having the body extended in the direction of the forehead.

Frontal (*frunt'-al*) [*frontalis*, of the forehead]. 1. Pertaining to the anterior part or aspect of an organ or body. 2. More often, belonging to the *frons* or forehead. **F. Bone**, the anterior bone of the skull and superior bone of the face. **F. Crest.** See *Crest*. **F. Eminence.** See *Eminence*. **F. Lobe.** See *Lobe*. **F. Section.** See *Section*. **F. Sinuses**, the cavities, one over each orbit, of the frontal bone. **F. Triangle.** See *Triangles, Table of*.

Frontalis Muscle (*fron-ta'-lis*) [*frontalis*, of the forehead]. The frontal portion of the occipito-frontal muscle. See *Muscles, Table of*.

Fronten (*frun'-ten*) [*frons*, the forehead]. Belonging to the frontal bone in itself.

Frontlet (*frunt'-let*) [*frons*, the forehead]. In biology, applied to the forehead of a bird when distinguished by some peculiarity.

Fronto- (*frun'-to-*) [*frons*, the forehead]. A prefix denoting anterior position; or, more often, expressing a relation with the *frons*, or forehead. **F.-alveolar**, relating to the frontal and alveolar regions. **F.-ethmoid**, relating to the frontal and ethmoid bones. **F.-occipital**, relating to both forehead and occiput. **F.-triangle.** See *Triangle*. **F.-orbital**, relating to forehead and orbit.

Frontodymia (*frun-to-dim'-e-ah*). Same as *Cephalopagus* and *Cephalodymia*.

Frost [old Danish, *froste*, frost]. In farriery, to sharpen the front and hind parts of a horse's shoes. **F.-bite**, injury to the skin or a part from extreme cold, resulting in inflammation and gangrene; pagoplexia. **F.-itch**, a name for *Prurigo hiemalis*. **F.-wort.** See *Helianthemum*.

Frosted Feet (*frost'-ted fēt*). See *Chilblain*.

Froth [ME., *frothe*, froth]. Foam, as from the mouth. **F., Bronchial**, that coming from the bronchial tubes, as in asthma.

Frottage (*frot-ahzh'*) [Fr.]. A form of sexual perversion in which the orgasm is induced by simply rubbing against or toying with the clothing of women. An individual so afflicted is called a *frotteur*.

Frotteur (*fro-tair'*) [Fr.]. See *Frottage*.

Frown [ME., *frownen*, to scowl]. To scowl. A wrinkling of the brow.

Frozen Attitude (*fro'-zen at'-it-ūd*). See *Attitude*.

Fructiculose (*fruk-tik'-u-lōs*) [*fructiculus*, dim. of *fructus*, fruit]. In biology, bearing much fruit.

Fructification (*fruk-tif-ik-a'-shun*) [*fructificare*, to bear fruit]. In biology, fecundation, fertilization, impregnation; the act of forming, or the production of fruit, of whatever sort.

Fructose (*fruk'-tōs*) [*fructus*, fruit], $C_6H_{12}O_6$. Fruit-sugar, formerly called *levulose*; it is found in almost all sweet fruits. It is formed, together with grape-sugar, in the so-called *inversion*, or decomposition of cane-sugar, by boiling with acids or by the action of ferments. The mixture of the two is called *invert-sugar*. Fruit-sugar forms a thick syrup, which at 100° C. dries to a gummy, deliquescent mass. It may be crystallized in fine, silky needles, fusing at 95° C. It is more slowly fermented by yeast than grape-sugar. It reduces an alkaline copper-solution in the same proportion as the latter. See also *Carbohydrates, Table of*.

Fruehjahrkatarrh [Ger.]. See *Ophthalmia, Spring*.

Frugivorous (*fru-jiv'-or-us*) [*frux*, fruit; *vorare*, to devour]. Fruit-eating.

Frühlingskatarrh (*frē'-lings-kat-ar*) [Ger.]. See *Vernal Conjunctivitis* and *Ophthalmia, Spring*.

Fruit (*froot*) [*fructus*, fruit]. The developed ovary of a plant, and especially the succulent, fleshy parts gathered about the same. Also applied to the offspring of animals. **F.-sugar.** See *Sugar* and *Fructose*. **F.-dots.** See *Sorus*.

Frumentaceous (*fru-men-ta'-she-us*) [*frumentum*, grain]. Belonging to or resembling grain.

Frumentum (*fru-men'-tum*) [L.]. Wheat or other grain. *Spiritus frumenti*, whisky. See *Spiritus*.

Frutescent (*fru-tes'-ent*) [*frutex*, a shrub]. In biology, somewhat shrubby.

Frutex (*fru'-teks*) [L. a shrub, a bush: *pl. Frutices*]. In biology, a shrub; a woody, perennial plant, generally having several stems and not exceeding twenty feet in height.

Fruticose, or **Fruticous** (*fru'-tik-ōs*, or *-us*) [*frutex*, a shrub]. Shrubby.

Fruticulose (*fru-tik'-u-lōs*) [*fruticulus*, dim. of *frutex*, a shrub]. In biology, resembling a small shrub.

Fryer's Apparatus. A transfusion apparatus made of a single piece of rubber with two bulbs. **F.'s Operation.** See *Operations, Table of*.

Fuchsin (*fook'-sin*) [after Leonhard *Fuchs*], $C_{20}H_{19}N_3$.HCl. Roseïn, Magenta, Eosin, Anilin-red. The hydrochlorid of rosanilin, a lustrous, green, crystalline salt imparting an intense red to solutions. In large doses it produces violent emesis and purging. Injected into a vein it causes staggering and trembling. It is said to be efficient in reducing albuminuria. Dose gr. ½–iv. See *Pigments, Conspectus of*. **F.-bodies**, the name given by Russel to certain bodies found in carcinomata to which he attributes the causation of the growths; he refers them to the sprouting fungi. Other observers find similar bodies which they hold to be *coccidia*, while others consider them as crystals of safranin or other pigments used in the preparation.

Fuchsinophile (*fook-sin'-o-fil*) [*fuchsin*; φιλεειν, to love]. Readily stained by fuchsin.

Fuciphagous (*fu-sif'-ag-us*). Same as *Fucivorous*.

Fucivorous (*fu-siv'-or-us*) [*fucus*, a seaweed; *vorare*, to devour]. In biology, applied to such animals as the dugong, certain marine turtles, etc., that feed on sea-weeds.

Fucus (*fu'-kus*) [φῦκος, seaweed]. A genus of marine algæ, the rock-weeds. **F. vesiculosus**, bladder-wrack, sea-wrack; a marine alga abundant on the seashore; it is used as an alterative and tonic. It is employed in goiter and glandular enlargements, but mainly as an empiric remedy for the absorption of fatty tissue in obesity. An extract for such purpose is sold under the name of anti-fat. Dose of the solid extract, gr. x; of the fluid extract, ʒj–ij. Unof.

Fuel (*fu'-el*) [ME., *fuel*, a wood-yard]. Combustible matter. **F.-gas**, natural gas mixed with air, used largely for manufacturing purposes as a substitute for solid fuel. Artificial gas, of the water-gas type, not enriched with hydrocarbons for rendering it illuminant, is also sold as fuel-gas.

Fugacious (*fu-ga'-shus*) [*fugere*, to flee]. In biology, falling off, or fading early; fleeting; fugitive.

Fugitive Color (*fu'-jit-iv kul'-or*). See *Pigments, Colors, and Dye-stuffs*.

Fulgurant (*ful'-ju-rant*) [*fulgurare*, to flash; *fulgur*, lightning]. Severe and terrific; as fulgurant pains.

Fulguration (*ful-ju-ra'-shun*) [*fulguratio*, a stroke of lightning]. 1. Lightning-stroke. 2. A sensation of swiftly darting pains.

Fuliginous (*fu-lij'-in-us*) [*fuliginosus*, full of soot]. Smoke-like; very dark; soot-colored; applied to lips that are covered with dry, black crusts, as a "fuliginous coating."

Fuligo (*fu-li'-go*) [L.]. Soot; sordes. **F. ligni**, the soot of a wood-fire; ointments and tinctures of it are popularly esteemed. It is a good disinfectant. **F. kali**, a preparation of soot boiled in caustic potash, and used in skin-diseases. Cf. *Anthrakokali*.

Full [ME., *ful*, full]. 1. Replete; filled. 2. Intoxicated. 3. Entire. **F. Bath.** See *Bath*.

Fullers' Earth (*ful'-erz urth*). A siliceous non-fictile clay, used in the fulling of cloth, on account of its soapy quality; it was formerly used as an absorbent, like bole.

Fuller's Lotion. A lotion for rheumatic joints, composed of carbonate of soda, 6 drams; laudanum, 1 ounce; glycerin, 2 ounces, and water, 9 ounces. Saturate hot cloths with this and apply. **F.'s Pill**, a purgative pill, containing aloes, senna, asafetida, galbanum, myrrh, sulphate of iron, saffron, mace, oil of amber, honey, and alcohol.

Fulling (*ful'-ing*) [ME., *fullynge*, fulling]. In massage, a valuable method of kneading, named from the motion used by fullers in rubbing linen between their hands. It consists in holding the limb between the palms of both hands, with the fingers fully extended, and making a rapid to-and-fro movement with each, the result being that the limb is rolled back and forth between the hands.

Fulmar Oil (*ful'-mar*) [ME., *fulmar*]. Oil cast up from the stomach of the fulmar (*Procellaria glacialis*), a sea-bird of the N. Atlantic. It has the general qualities of cod-liver oil.

Fulminant, or **Fulminating** (*ful'-min-ant*, or *ful'-min-a-ting*) [*fulminare*, to lighten]. Sudden, severe, and rapid in course; as fulminant glaucoma. Same as *Foudroyant*, *q. v.*

Fulminate (*ful'-min-āt*) [*fulmen*, lightning]. A compound of fulminic acid with a base, usually silver, gold, or mercury, characterized by highly explosive qualities.

Fulminating (*ful'-min-a-ting*). See *Fulminant*.

Fulvous (*ful'-vus*) [*fulvus*, deep-yellow, tawny, flame-colored]. Having a tawny-yellow color.

Fumaria (*fu-ma'-re-ah*). See *Fumitory*.

Fumarin (*fu'-mar-in*) [*fumus*, smoke]. An alkaloid from *Fumaria officinalis;* recommended as strongly antipyretic. Unof.

Fumigation (*fu-mig-a'-shun*) [*fumigare*, to smoke]. Disinfection by exposure to the fumes of a vaporized disinfectant.

Fumitory (*fu'-mit-or-e*) [*fumus*, smoke; *terra*, earth]. The plants *Fumaria officinalis*, and *F. bulbosa*, herbs native to Europe: formerly esteemed as polychrest remedies, but now neglected; they are actively deobstruent and antifebrile. Unof.

Fumous (*fu'-mus*) [*fumus*, smoke]. In biology, smoke-colored; fuliginous.

Fumus (*fu'-mus*) [L.]. Smoke. **F. terre**, old name for *Fumitory*.

Function (*fungk'-shun*) [*fungi*, to perform]. The normal or special action of a tissue, organ, or part of the body.

Functional (*fungk'-shun-al*) [*fungi*, to perform]. Pertaining to the special action of an organ, whether physiologic or pathologic. **F. Disease**, one without appreciable organic alterations. **F. Spasm**, a term applied to any of the so-called Fatigue-diseases.

Functionalization (*funk-shun-al-iz-a'-shun*) [*functio*, a function]. Restoration of a lost or diseased function.

Fundal (*fun'-dal*) [*fundus*, the bottom]. Relating to a fundus.

Fundament (*fun'-dam-ent*) [*fundamentum: fundus*, bottom]. 1. The foundation or base of a thing. 2. In embryology, the rudiment. 3. The anus.

Fundamental (*fun-dam-ent'-al*) [*fundamentum: fundus*, bottom]. Pertaining to the foundation. **F. Tissue**, in biology, unspecialized parenchyma; those tissues of a plant through which the fibro-vascular bundles are distributed.

Fundus (*fun'-dus*) [*fundus*, the bottom]. The base of an organ. **F. Glands**, microscopic tubular glands of the cardiac portion of the gastric mucous membrane. **F. oculi**, the posterior and interior portion of the eye seen by the ophthalmoscope, comprising chiefly the retina, papilla, retinal vessels, etc. **F. uteri**, the part of the womb remotest from the cervix, and situated cephalad from the outlets of the oviducts. **F. vesicæ**, the basis, floor, or *bas fond* of the urinary bladder.

Fungate (*fung'-gāt*) [*fungus*, a toadstool]. To grow up with a fungous form or appearance. Also to grow rapidly like a fungus (applied to certain pathologic growths).

Fungi (*fun'-ji*). See *Fungus*.

Fungicide (*fun'-jis-īd*) [*fungus*, a toadstool; *cædere*, to kill]. 1. Destructive to fungi; bactericide. 2. An agent that destroys fungi or bacteria.

Fungiform (*fun'-jif-orm*) [*fungus*, a mushroom; *forma*, form]. Having the form of a mushroom. **F. Papillæ**, elevations upon the middle and back part of the tongue.

Fungin (*fun'-jin*) [*fungus*, a toadstool]. A peculiar principle found in most of the fungi. It is a whitish, soft, insipid, fleshy substance, insoluble in water, alcohol, ether, or weak H_2SO_4, soluble in heated hydrochloric acid.

Fungoid (*fung'-goid*) [*fungus*, a toadstool; εἶδος, likeness]. Resembling a fungus; fungous.

Fungosity (*fung-gos'-it-e*) [*fungus*, a toadstool]. A fungous growth; the quality of being fungous.

Fungous (*fung'-gus*) [*fungus*, a toadstool]. Having the appearance or qualities of a fungus; excrescent, soft and swiftly-growing. **F. Endometritis.** See *Endometritis*.

Fungus (*fung'-gus*) [*fungus*, a toadstool: *pl.*, *Fungi*]. 1. An order of plants without stems, leaves or roots, consisting of juxtaposed cells, without chlorophyl. They reproduce by spores. The chief classes are the *Hymenomycetes*, *Basidiomycetes*, *Ascomycetes*, *Schizomycetes*, and *Oömycetes*. 2. A spongy, morbid excrescence, as proud-flesh. **F. of Brain**, hernia cerebri **F. of Dura Mater**, a tumor of the skull, of malignant nature, originating in the layers of osteal cells. **F. Foot.** See *Foot*. **F. hæmatodes**, a bleeding tumor, generally a soft cancer.

Funic (*fu'-nik*) [*funis*, a rope]. Pertaining to the funiculus or umbilical cord.

Funicular (*fu-nik'-u-lar*) [*funis*, a rope]. Relating to the funiculus. **F. Souffle**, a hissing sound synchronous with that of the fetal heart, heard in auscultating the pregnant abdomen. It is heard in only from 14 to 15 per cent. of cases, and is referable to the umbilical cord.

Funiculitis (*fu-nik-u-li'-tis*) [*funiculus*, the spermatic cord; ιτις, inflammation]. Inflammation of the spermatic cord.

Funiculus (*fu-nik'-u-lus*) [L., a cord; dim. of *funis*, a rope]. 1. In biology, applied to various cord-like structures, as the spermatic cord, the umbilical

cord of mammals or its analogue in lower animals, the ultimate nerve-bundles, the attachment of the base of the stomach of a polyp with the bottom of its cell, the slender part of the clubbed antenna of an insect, the stalk of an ovule or seed, etc. 2. A bundle of nerve-fibers in a sheath of perineurium. 3. A name, variously qualified, for the different columns of the spinal cord and oblongata; as the *F. cuneatus*, *F. gracilis*, *F. of Rolando*, *F. teres*. **F. cuneatus.** See *Column of Burdach*. **F. gracilis.** See *Column of Goll*.

Funiform (*fu'-nif-orm*) [*funis*, rope; *forma*, shape]. In biology, resembling a rope or cord.

Funis (*fu'-nis*) [L.]. A cord; applied to the umbilical cord.

Funnel (*fun'-el*) [Old Fr., *fonel*]. 1. A wide-mouthed, conic vessel ending in a tube, designed to aid in the speedy and safe transfer of liquids from one vessel to another. It is also used as a support for paper-filters. 2. An infundibulum. **F. Mitral,** a condition of the mitral valve in mitral stenosis in which the left auricle and the valve-structures are transformed into a hollow cone. This condition is also called *Button-hole Mitral*. **F., Muscular,** the funnel-shaped space bounded by the four straight muscles of the eye; its apex is at the optic foramen, the eyeball forms its base, and along its axis runs the optic nerve. **F.-shaped Pelvis,** a congenital deformity of the pelvis, in which it retains its fetal or funnel shape. **F., Vascular,** the light-hued depression at the center of the disc of the retina; if exaggerated, it forms a so-called physiologic cup.

Funny Bone (*fun'-e bōn*). The internal condyle of the humerus. Being crossed superficially by the ulnar nerve, blows upon it give an unpleasant sensation to the hand; whence the name.

Fur [ME., *furre*, fur]. A coating of morbid matters, including an increased amount of epithelium, seen upon the tongue in various conditions of disease.

Furan (*fur'-an*) [*furfur*, bran], C_4H_4O. Furfuran; tetrol; a product of the destructive distillation of pine-wood; it is also produced synthetically by the distillation of pyromucic acid. It is a liquid, insoluble in water, with a peculiar odor, and boiling at 32° C. It yields bluish-violet dyestuffs with isatin and sulphuric acid, and violet-red with phenanthraquinone.

Fürbringer's Method. A method of cleansing the hands and nails of operators. The hands and forearms having been thoroughly cleansed by scrubbing with soap and warm water and the nails carefully cleansed, the hands and forearms are dipped for at least a minute in absolute alcohol, then immediately into warm bichlorid of mercury solution (1 : 1000) and well scrubbed with a nail-brush, the nails receiving particular attention.

Furca (*fur'-kah*) [L., a fork]. A fork. **F. orbitalis,** the orbital fork; one of the earliest signs of the orbit seen in the embryo; it is a mere trace of bifurcated bony tissue.

Furcate (*fur'-kāt*) [*furca*, a fork]. In biology, forked; divided into two equal branches.

Furcula (*fur'-ku-lah*) [L., dim. of *furca*, a fork]. In biology, applied to various forked structures, as the united clavicles (wish-bone or merry-thought) of a bird, or the bifid processes of certain insects.

Furfur (*fur'-fur*) [L.]. Dandruff or perrigo; scurf; the bran of flour. **F., Microsporon.** See *Tinea versicolor*.

Furfuraceous (*fur-fur-a'-she-us*) [*furfur*, bran]. Resembling bran. Applied also to dandruff-covered skin.

Furfuran (*fur'-fu-ran*). See *Furan*.

Furfurin (*fur'-fu-rin*) [*furfur*, bran], $C_{15}H_{12}N_2O_3$. A basic crystalline principle derivable from furfurol; it has been proposed as an antipyretic and tonic remedy.

Furfurol (*fur'-fu-rol*) [*furfur*, bran; *oleum*, oil], $C_5H_4O_2$. The aldehyd of furfuryl alcohol is produced in the distillation of bran with dilute H_2SO_4, or of sugar, etc. It is also derived from arabinose or xylose and occurs in the decomposition-products of albuminoid bodies, as meat, cheese, urine, etc. With phenylhydrazin it forms a nearly insoluble compound, *furfurol hydrazon*. It is a colorless volatile oil, with an aromatic odor. Its specific gravity at 130° C. is 1.163. It boils at 162° C. It combines with dimethylanilin to form a green dye-stuff, corresponding to malachite green. It exists in certain new whiskies; but as the spirit becomes older the furfurol gradually disappears.

Furibund (*fu'-re-bund*) [*furibundus*, raging]. Raging; maniacal (applied to certain insane patients).

Furor (*fu'-ror*) [L.]. Madness; fury; a maniacal attack. **F. genitalis.** Same as *Erotomania*. **F. epilepticus,** epileptic insanity. **F. transitorius.** See *Mania, Transitory*. **F. uterinus.** See *Nymphomania*.

Furred (*furd*) [ME., *furre*, fur]. Having an abnormal coating of granular or epithelial scales and other matter; as a furred tongue.

Furrow (*fur'-o*) [ME., *furwe*, a groove]. A groove or trench. **F., Auriculo-ventricular,** the great transverse groove separating the auricles of the heart from the ventricles. **F., Digital,** one of the transverse lines or furrows on the palmar surface of the fingers. **F., Genital,** a groove appearing on the genital tubercle of the fetus at the end of the second month. **F., Interventricular,** two longitudinal grooves separating the two ventricles of the heart. **F., Jadelot's.** See *Jadelot's Lines*, or *Furrows*.

Furrowing (*fur'-o-ing*) [ME., *furwe*, a groove]. In biology, the process of segmentation of the yolk of an egg in some animals, as *Amphibia*.

Furuncle (*fu'-rung-kl*). See *Furunculus*.

Furunculosis (*fu-rung-ku-lo'-sis*) [*furunculus*, a boil]. The morbid condition that is associated with the production of furuncles.

Furunculous (*fu-rung'-ku-lus*) [*furunculus*, a boil]. Characterized by a continuous production of furuncles.

Furunculus (*fu-rung'-ku-lus*) [L.]. A boil. A local inflammatory affection, commonly involving a skin-gland or hair-follicle, ending in necrosis and central suppuration of adjacent parts. It begins with painful induration, followed by swelling, finally suppurating and sloughing at the "core." **F. orientalis,** Oriental Boil, Aleppo Boil, Delhi Boil, Biscara Button, Gafsa Button, Kandahar Sore, Pendjeh Sore, Natal Sore. A local disease, marked by the successive formation of papule, tubercle, scab, and sharply circumscribed ulcer on the face, especially the cheeks and angle of the mouth. It is common along the shores of the Mediterranean Sea.

Fuscescent (*fus-es'-ent*) [*fuscus*, dusky]. In biology, of a dark-brownish tinge.

Fuscin (*fus'-in*) [*fuscus*, dark]. Retinal melanin. A pigment found as minute granules imbedded in the cell-substance and processes of the retinal epithelium.

Fuscoferruginous (*fus-ko-fer-oo'-jin-us*) [*fuscus*, dark; *ferruginous*, rusty]. Brownish; rust-colored.

Fuscotestaceous (*fus-ko-tes-ta'-she-us*) [*fuscus*, dark, dusky; *testaceus*, brick-colored]. Dull reddish-brown.

Fuscous (*fus'-kus*) [*fuscus*, dusky]. Grayish-brown.

Fusel Oil (*fu'-zel*). See *Alcohol*.

Fusible (*fu'-zib-l*) [*fusus*, melted]. That which may be fused or melted. **F. Calculus.** See *Calculus*.

Fusiform (*fu'-sif-orm*) [*fusus*, a spindle; *forma*, shape]. Spindle-shaped; larger in the middle and diminishing in diameter toward either end; applied to cells, fibers, etc.

Fusion (*fu'-zhun*) [*fusio; fundere*, to pour out]. The process of liquefying a solid by the agency of heat.

Fuso-cellular (*fu'-so-sel'-u-lar*) [*fusus*, a spindle; *cella*, a cell]. Spindle-celled; as a fuso-cellular sarcoma.

Fustic (*fus'-tik*) [Fr., *fustoc*]. A yellow dye-stuff, the wood of *Cholorophora tinctoria*, an urticaceous tree of tropical America. The wood of *Rhus cotinus*, or Venetian sumach, is called *young fustic*.

Fustigation (*fus-tig-a'-shun*) [*fustigare*, to beat]. Flagellation. **F., Electric,** an application of electricity in which the surface of the body is rapidly tapped with the electrodes of an induced current.

Fustin (*fus'-tin*) [*fustus*, a knotted stick], $C_{15}H_{10}O_6$. A yellow crystalline coloring-matter obtained from *Rhus cotinus*. See *Pigments, Conspectus of.*

Fuzzball (*fuz'-bawl*). See *Bovista.*

G.

G. Abbreviation of *gram.*

Gabbett's Method. A method of detecting tubercle-bacilli in cover-glass preparations. See *Stains, Table of.*

Gabian (*ga'-be-an*) [Fr.]. A variety of naphtha or petroleum from Gabian, a town of France, in Hérault; oleum gabianum.

Gaboon Chocolate (*gab-oon' chok'-o-let*). See *Iba.*

Gad-fly (*gad'-fli*) [*gad*, a goad; ME., *flye*, a fly]. A dipterous insect belonging to the genus *Tabanus*. Also applied to flies of the genus *Œstris.*

Gadinin (*gad'-in-in*) [from *Gadus callarias*, haddock], $C_7H_{17}NO_2$. A ptomaïne obtained from decomposing haddock, and also from cultures of the bacteria of human feces. It acts as a decided poison when given in large doses.

Gaduin (*gad'-u-in*) [*gadus*, the codfish], $C_{35}H_{46}O_9$. A fatty principle occurring in cod-liver oil; it is a dark-brown, brittle substance.

Gadus (*ga'-dus*) [γάδος, the whiting]. A genus of fish. **G. morrhua,** the cod; a fish from the livers of which cod-liver oil is obtained. See *Morrhua.*

Gæophagia (*je-o-fa'-je-ah*). See *Geophagy.*

Gaertner, Ducts of. See *Duct.*

Gaffky's Method. A method of staining the bacillus of typhoid fever. See *Stains, Table of.*

Gafsa Button (*gaf'-sah but'-n*). See *Furunculus orientalis.*

Gag [*gaggen*, to suffocate]. An instrument, generally made of flexible rubber, placed between the teeth to prevent closure of the jaws during the administration of nitrous oxid gas, or in operations on the mouth.

Gage's Solution. See *Stains, Table of.*

Gaiac (*ga'-yak*). Same as *Guaiacum.*

Gaillard's Suture. See *Suture.*

Gait (*gāt*) [AS.]. The manner of progression by walking. The peculiarities of the gait may assume great diagnostic importance in cases of central nervous disorder. **G., Cerebellar,** a gait in which the feet are widely spread apart for support, and associated with a staggering movement. It is due to disease, usually tumor, of the middle lobe of the cerebellum. **G., Equine,** a gait in which the foot hangs down and cannot be moved, progression being accomplished by flexing the thigh on the abdomen. It is seen in peroneal paralysis. **G., Frog,** the characteristic hopping-gait of infantile paralysis.

Gal. Abbreviation of *gallon.*

Galactacrasia (*gal-ak-tak-ra'-ze-ah*) [γάλα, milk; ἀ, priv.; κρᾶσις, mixture]. Defect or abnormality in the composition of the milk.

Galactæmia (*gal-ak-te'-me-ah*). See *Galacthemia.*

Galactagogue (*gal-ak'-tag-og*) [γάλα, milk; ἀγωγός, leading]. 1. Inducing the secretion of milk. 2. An agent that increases the secretion of milk in the breast.

Galactangioleucitis (*gal-ak-tan-je-o-lu-si'-tis*) [γάλα, milk; ἀγγεῖον, vessel; λευκός, white]. Lymphangitis associated with lactation.

Galactapostema (*gal-ak-tap-os-te'-mah*) [γάλα, milk; ἀπόστημα, abscess: *pl.*, *Galactapostemata*]. Milk-abscess; mammary abscess associated with lactation.

Galactedema (*gal-ak-te-de'-mah*) [γάλα, milk; οἴδημα, a swelling]. Swelling of the mamma due to accumulation of milk within it.

Galacthemia (*gal-ak-the'-me-ah*) [γάλα, milk; αἷμα, blood]. 1. A milky state or appearance of the blood. 2. Bloody milk, or the giving of bloody milk.

Galactia (*gal-ak'-te-ah*) [γαλα, milk]. A genus of diseases, according to Good's Nosology, embracing defective or abnormal secretion of milk. **G. virorum,** the secretion of milk by the male.

Galactic (*gal-ak'-tik*) [γαλακτικός, milky]. Relating to or promoting the flow of milk.

Galactidrosis (*gal-ak-tid-ro'-sis*) [γάλα, milk; ἱδρώς, sweat]. The sweating of a milk-like fluid.

Galactin (*gal-ak'-tin*) [γάλα, milk]. 1. Same as *Lactose.* 2. An amorphous alkaloid or base, reported to be obtainable from milk. 3. A wax obtained from the sap of the S. American cow-tree, *Galactodendron utile;* it is used locally in candle-making. 4. $C_5H_{10}O_5$, a carbohydrate from the seeds of leguminous plants.

Galactirrhea (*gal-ak-ter-e'-ah*). See *Galactorrhea.*

Galactoblast (*gal-ak'-to-blast*) [γάλα, milk; βλαστός, a germ]. A peculiar fat-containing globule found in the acini of the mammary gland.

Galactocele (*gal-ak'-to-sēl*) [γάλα, milk; κήλη, tumor]. 1. A cystic tumor of the female breast due to a collection of milk and resulting from closure of a milk-duct. 2. Hydrocele with milky contents.

Galactodendron (*gal-ak-to-den'-dron*) [γάλα, milk; δένδρον, a tree]. The cow-tree. See *Brosimum.*

Galactoglycosuria (*gal-ak-to-gli-ko-su'-re-ah*) [γάλα, milk; γλυκύς, sweet; οὖρον, urine]. Glycosuria dependent upon lactation.

Galactoid (*gal-ak'-toid*) [γάλα, milk; εἶδος, form]. Resembling milk.

Galactoma (*gal-ak-to'-mah*) [γάλα, milk; ὄμα, a tumor: *pl.*, *Galactomata*]. Same as *Galactocele.*

Galactometer (*gal-ak-tom'-et-er*). See *Lactometer.*

Galactoncus (*gal-ak-tong'-kus*) [γάλα, milk; ὄγκος, a swelling]. Same as *Galactocele.*

Galactonic Acid (*gal-ak-ton'-ik*). See *Lactonic Acid.*

Galactophagous (*gal-ak-toff'-ag-us*) [γάλα, milk; φαγεῖν, to eat]. Milk-eating.

Galactophlebitis (*gal-ak-to-fle-bi'-tis*) [γάλα, milk; φλέψ, vein; ιτις, inflammation]. 1. Milk-leg; phleg-

masia alba dolens; phlebitis associated with lactation. 2. Phlebitis in a suckling child.

Galactophlysis (*gal-ak-toff'-lis-is*) [γάλα, milk; φλύσις, eruption]. A vesicular eruption containing a milk-like fluid, and associated with a suppression of lactation.

Galactophora (*gal-ak-toff'-or-ah*) [γάλα, milk; φέρειν, to bear]. Remedies that increase the secretion of milk.

Galactophoritis (*gal-ak-toff-or-i'-tis*) [γάλα, milk; φέρειν, to bear; ιτις, inflammation]. Inflammation of a milk-duct.

Galactophorous (*gal-ak-toff'-or-us*) [γάλα, milk; φέρειν, to bear]. Milk-bearing. **G. Ducts**, the excretory ducts of the mammæ.

Galactophorus (*gal-ak-toff'-or-us*) [γάλα, milk; φέρειν, to bear]. An artificial nipple placed over the natural organ in order to facilitate suckling and also to protect the natural nipple when abraded.

Galactophthisis (*gal-ak-toff'-this-is*) [γάλα, milk; φθίσις, consumption]. Emaciation and debility due to excessive secretion of milk.

Galactophyga (*gal-ak-toff'-ig-ah*) [γάλα, milk; φεύγειν, to shun]. Remedies employed to arrest the secretion of milk.

Galactophygous (*gal-ak-toff'-ig-us*) [γάλα, milk; φυγή, flight]. Having the power to reduce or arrest the secretion of milk.

Galactoplania (*gal-ak-to-pla'-ne-ah*) [γάλα, milk; πλάνη, a wandering]. The metastasis of milk; any secretion or discharge of a milky fluid consequent upon a suppression of lactation.

Galactoplerosis (*gal-ak-to-ple-ro'-sis*) [γάλα, milk; πλήρωσις, a filling]. Distention of the mamma from hypersecretion of milk, or from closure of the milk-ducts.

Galactopoietic (*gal-ak-to-poi-et'-ik*) [γάλα, milk; ποιέειν, to make]. Inducing the secretion of milk; concerned in the secretion of milk.

Galactoposia (*gal-ak-to-po'-se-ah*) [γάλα, milk; πόσις, drinking]. "Milk-cure." The treatment of diseases by the use of a milk-diet.

Galactopyretic (*gal-ak-to-pi-ret'-ik*) [γάλα, milk; πυρετός, fever]. Relating to milk-fever.

Galactopyretus (*gal-ak-to-pi'-ret-us*) [γάλα, milk; πυρετός, fever]. Milk-fever; the febricula that may attend the establishment of lactation; it is a form of septic infection.

Galactorrhea (*gal-ak-tor-e'-ah*) [γάλα, milk; ῥοία, a flow]. An excessive secretion and flow of milk in a nursing woman.

Galactoschesis (*gal-ak-tos'-kes-is*) [γάλα, milk; σχέσις, retention]. The retention or suppression of the milk.

Galactoscope (*gal-ak'-to-skōp*). See *Lactoscope*.

Galactose (*gal-ak'-tōs*) [γάλα, milk], $C_6H_{12}O_6$. Lactose; the aldose of dulcitol. It is formed on boiling milk-sugar with dilute acids, and is obtained from such gums as yield mucic acid when oxidized. It crystallizes in nodules of grouped needles or leaflets, that melt at 166° C. Its solution is dextro-rotatory. It readily reduces alkaline copper-solutions and is fermentable with yeast. See *Carbohydrates, Table of*.

Galactosis (*gal-ak-to'-sis*) [γαλάκτωσις; γάλα, milk]. The secretion of milk.

Galactostasis (*gal-ak-tos'-tas-is*) [γάλα, milk; στάσις, stoppage]. A morbid collection or stoppage of the milk.

Galactosyrinx (*gal-ak-to-sir'-ingks*) [γάλα, milk; σῦριγξ, a pipe]. Lacteal fistula.

Galactotherapy (*gal-ak-to-ther'-ap-e*) [γάλα, milk; θεραπεία, treatment]. 1. The treatment of disease in suckling infants by the administration of the remedies to the mother or wet-nurse. 2. Milk-cure; galactoposia.

Galactotrophy (*gal-ak-tot'-ro-fe*) [γάλα, milk; τροφή, nourishment]. Nourishing with milk only.

Galactozemia (*gal-ak-to-ze'-me-ah*) [γάλα, milk; ζημία, loss]. 1. Loss, diminution, or suppression of the milk by failure of secretion. 2. Loss of milk by wastage; oozing of milk from the nipple.

Galactozyme (*gal-ak'-to-zīm*) [γάλα, milk; ξύμη, leaven]. 1. A drink made by the fermentation of milk, as kefir, or kumiss; also milk fermented with common yeast.

Galacturia (*gal-ak-tu'-re-ah*) [γάλα, milk; οὖρον, urine]. Milkiness of the urine; chyluria.

Gala-heptose (*ga-lah-hep'-tōs*). See *Carbohydrates, Table of*.

Galanga, or **Galangal** (*gal-ang'-gah*, or *gal'-an-gal*) [Chin.]. The rhizome of *Alpinia officinarum*, and of *Kæmpferia galganga* (great galangal), much resembling ginger. It was formerly brought from China and India, but is now little used. Unof.

Galax (*ga'-laks*) [γαλα, milk]. A genus of diapensiaceous plants. **G. aphylla**, of N. America (carpenter's leaf, "galax," beetle-weed), has an astringent root, and the leaves are said to be vulnerary. Unof.

Galazyme (*gal'-az-īm*) [γάλα, milk; ζύμη, leaven]. A fermented drink, made on the Continent, from milk by adding to it sugar and a special ferment.

Galbanum (*gal'-ban-um*) [Heb., *khelbenah*, white milk]. 1. A gum-resin of *Ferula galbaniflua*, and *F. rubricaulis*, native to Asia. It is expectorant, stimulant, and antispasmodic, and is useful in chronic bronchitis and catarrh. Dose gr. x–xx. **G., Pil., Comp.**, each pill contains galbanum gr. iss, myrrh gr. iss. asafetida gr. ss, and syrup. Dose ij–iij. **G., Emplastrum**, galbanum 16, turpentine 2, Burgundy pitch 6, lead-plaster 76 parts. 2. Locally, in the U. S., Burgundy pitch is popularly called *galbanum* and is sold under that name.

Galbiati Knife (*gal-be-at'-e*) [*Galbiati*, an Italian obstetrician]. A special knife used in the operation of symphysiotomy.

Galbulus (*gal'-bu-lus*) [L., the nut of the cypress-tree: *pl.*, *Galbuli*]. In biology, a closed, fleshy, berry-like cone, as the fruit of the juniper.

Gale (*gāl*) [ME., *gawl*, gale]. 1. A shrub, *Myrica gale*, sweet gale of cool regions; it has an aromatic odor, and is used locally for external parasites. See *Sweet Gale*. 2. The fern-gale, or sweet fern. See *Sweet Fern*. **G. bedouine.** See *Lichen simplex*.

Galea (*ga'-le-ah*) [*galea*, γαλέα, helmet: *pl.*, *Galeæ*]. 1. A form of head-bandage. 2. Headache extending all over the head. 3. The aponeurotic portion of the occipito-frontal muscle. 4. In biology, applied to various helmet-shaped parts or organs. **G. capitis**, a fascial investment covering the crown of the head.

Galeamaurosis (*ga-le-am-aw-ro'-sis*) [γαλῆ, cat, weasel; ἀμαυρόειν, to darken]. See *Amaurotic Cat's Eye*.

Galeanthropy (*ga-le-an'-thro-pe*) [γαλῆ, cat, weasel; ἄνθρωπος, man]. A form of zoanthropy in which the patient believes himself to be transformed into or inhabited by a cat.

Galeati, Glands of. See *Crypts of Lieberkühn*.

Galen (*ga'-len*). An ancient physician, A. D. 130–200. **G.'s Anastomosis**, that between the superior and inferior laryngeal nerves. **G.'s Bandage.** See *Bandage*. **G.'s Cerate**, a cerate composed of white wax, 1; oil of almonds, 4; rose-water, 3. **G., Veins of.** See *Vein*.

Galena (*ga-le'-nah*) [γαλήνη, lead ore]. 1. A remedy for poison. 2. Native lead sulphid.

Galenic, Galenical (*ga-len'-ik, -al*) [*Galen*, an ancient physician]. Relating to or consistent with the teachings of Galen. Medicines were said to be *galenic*

(*a*) when they were of vegetable origin, and not chemic or spagyric; (*b*) when they were designed for the use of human patients, and were not veterinary; (*c*) the term was often nearly equivalent to *officinal*, or *official*, in the modern sense of the latter word.

Galenism (*ga'-len-izm*) [*Galen*, an ancient physician]. The system or theory of medicine taught by Galen and his followers.

Galeopsis (*ga-le-op'-sis*) [γαλέη, a weasel; ὄψις, appearance]. A genus of labiate plants; hemp-nettle. **G. ladanum**, of Europe, is a popular remedy for coughs. The oil of the seeds of **G. tetrahit**, of Europe and N. America, is said to be a vermifuge. Unof.

Galeropia, or **Galeropsia** (*ga-ler-o'-pe-ah*, or *ga-ler-op'-se-ah*) [γαλερός, cheerful; ὄψις, vision]. A preternaturally clear and light appearance of objects due to some perversion of the visual apparatus.

Galianconism (*ga-le-an'-ko-nizm*) [γαλιάγκων, a short-armed person; γαλέη, weasel; ἀγκών, elbow]. Atrophy of the arm, with shortening.

Galipe's Test. See *Tests, Table of.*

Galipea (*gal-ip-e'-ah*) [L.]. A genus of tropical American rutaceous shrubs and trees. **G. cusparia** and **G. officinalis** afford *angustura bark, q. v.*, also called *cusparia bark.*

Galipein (*gal-ip-e'-in*) [*Galipea*], $C_{20}H_{21}NO_3$. An alkaloid from cusparia bark.

Galipot (*gal'-e-pot*) [Fr.]. Crude Burgundy pitch. Cf. *Gallipot.*

Galium (*ga'-le-um*) [γάλιον, milk-wort]. A genus of rubiaceous plants of many species, several of which are used in popular medicine. Among them are **G. californicum, G. circæzans, G. pilosum,** and **G. trifedum,** in N. America, and **G. mollugo, G. cruciatum,** and **G. verum** in Europe. See, also, *Ladies' Bedstraw.* **G. aparine,** goose-grass, cleavers, or clivers, a succulent plant, the juice of which is a popular remedy in strumous affections, and is said to be actively diuretic. Dose of the juice ʒ v; of the fluid extract ʒ j-ij. Unof.

Gall (*gawl*) [ME., *galle;* χόλη, bile]. The bile. The juice normally secreted by the liver. See *Galla.* **G.-bladder,** the pear-shaped sac in the right lobe of the liver, constituting the reservoir for the bile. See *Cholecyst.* **G.-cyst,** the gall-bladder. **G-duct.** See *Duct.* **G.-fever,** a synonym of intermittent fever. **G.-stones,** the calcareous concretions occasionally formed in the gall-bladder and its ducts. They are usually of small size, but may be as large as a pigeon's egg. They are composed of the bile-pigments and acids, cholesterin, various salts, especially of lime and magnesia. Cholesterin is the chief constituent. They give rise to acute attacks of intense pain, the so-called *biliary colic.*

Galla (*gal'-ah*) [L.]. Nut-gall. An excrescence on the leaves of dyer's oak, *Quercus lusitanica*, caused by the deposited ova of an insect. It contains tannic acid from 10–75 per cent., gallic acid 5 per cent. Dose gr. v-xv. **G., Tinct.,** 20 per cent. Dose ʒ ss–iij. **G., Unguentum,** 10 per cent. See *Acid, Tannic.* **G., Unguentum, cum opii** (B.P.), an astringent and sedative ointment.

Gallacetophenone (*gal-as-et-o-fe'-nōn*) [*galla*, gall; *acidum*, acid; F., *phényle*]. A yellow powder with the formula $CH_3CO.C_6H_2(OH)_3$, prepared from pyrogallic acid. It is used as a 10 per cent. ointment in dermatology.

Galleïn (*gal'-e-in*), $C_{18}H_{14}O_7$. Pyrogallol-phthaleïn; one of the coal-tar colors, obtained on heating pyrogallic acid with phthalic anhydrid to 200° C. It dissolves with a dark-red color in alcohol, and with a beautiful blue color in alkalies. It is an important dye-stuff, producing tolerably fast shades of purple and violet on cotton, wool, and silk. See *Pigments.*

Gallic (*gal'-ik*) [*galla*, an oak-gall]. Pertaining to the oak-gall or nut-gall. **G. Acid.** See *Acid, Gallic.*

Gallipoli Oil (*gal-e-po'-le*). See *Turkey-red Oil.*

Gallipot (*gal'-e-pot*) [OD., *gleypot*, a gallipot]. An apothecary's pot for holding ointments or confections.

Gallisin (*gal'-is-in*) [*galla*, an oak-gall], $C_{12}H_{24}O_{10}$. An unfermentable carbohydrate found in starch-sugar. It is prepared by fermenting a 20 per cent. solution of starch-sugar with yeast at 18° or 20° C. for five or six days. In the pure state it is a white, amorphous, extremely hygroscopic powder; its taste is at first sweet, but afterward becomes insipid; it is easily decomposed by heat; is readily soluble in water, nearly insoluble in absolute alcohol. It is dextro-rotatory and reduces copper-solutions.

Gallium (*gal'-e-um*) [*Gallia*, Gaul]. A rare metal (symbol Ga., sp. gr. 5.935), extremely fusible, and related in chemic properties to aluminum, like which it is capable of forming a series of alums. Some of its compounds are poisonous. See *Elements, Table of.*

Gallivorous (*gal-iv'-or-us*) [*galla*, a gall-nut; *vorare*, to eat, devour]. In biology, applied to the larvæ of gall-producing insects that feed on the inside of the nut-gall.

Gallization (*gal-iz-a'-shun*). A method of improving wine, by which the must of a bad year is brought up to the standard found to belong to a good must (24 per cent. of sugar, 0.6 per cent. of acid, and 75.4 per cent. of water) by correcting the ratio of acid to sugar. This is done by adding sugar and water in sufficient quantity.

Gallocyanin (*gal-o-si'-an-in*) [*galla*, gall (-nut); κύανος, blue], $C_{15}H_{12}N_2O_5$. A compound produced by the action of nitroso-dimethyl-anilin upon gallic acid, catechuic acid, etc. It forms shining green needles, and serves as a beautiful violet-colored lake in calico print. See *Pigments, Conspectus of.*

Galloflavin (*gal-o-flav'-in*). See *Pigments.*

Gallois' Test. See *Tests, Table of.*

Gallon (*gal'-on*) [ME., *galon*, a gallon]. A standard unit of volumetric measurement, having in the United States a capacity of 231 cu. in., and equivalent to a weight of 58,328.8 grains of distilled water at maximum density. In Great Britain its capacity is 277.27 cu. in. **G., Miniature,** in water-testing, a name given to 70 c.c.

Gallop Rhythm (*gal'-up rithm*). A peculiar form of cardiac arrhythmia, in which the sounds resemble the footfall of a horse in cantering. It is expressed by the words "rat-ta-tat." It is most frequently heard in interstitial nephritis and arterio-sclerosis. It is said to be met with also in healthy persons.

Galloping Consumption. The popular term for that very rapidly fatal form of pulmonary tuberculosis, in which there is rapid destruction of the lung-tissue on both sides. It is also called *Florid Phthisis.* **G. Paresis,** rapidly progressive general paralysis.

Galton's Whistle. An instrument used for testing the perception of high tones by the ear.

Galvanic (*gal-van'-ik*) [*Galvani*, an Italian physician and scientist]. Pertaining to galvanic or chemic electricity. **G. Battery.** See *Battery.* **G. Belt,** a belt composed of alternate plates of copper and zinc, separated by pieces of felt moistened with a dilute acid. It is designed to be worn around the waist for the continuous application of galvanism. **G. Cautery.** See *Cautery.* **G. Discs,** discs of two dissimilar metals arranged alternately, between which a communication is established when moistened and placed on the skin.

G. Poultice, minute pieces of zinc and copper wrapped in cotton-wool, each pair separated by flannel, all inclosed in a bag, one side of which is made of rubber-cloth and the other of cotton. The cotton side is placed next the skin, perspiration exciting galvanic action.

Galvanism (*gal'-van-izm*) [*Galvani*, an Italian physician and scientist]. Primary dynamic or current electricity.

Galvanization (*gal-van-iz-a'-shun*) [*Galvani*, an Italian physician]. The transmission of a current of low electro-motive force through any part of the body for the purpose of diagnosticating or curing disease. **G., Central,** a variety of general galvanization in which the kathode is placed in the epigastrium and the anode is moved over the body. **G., General,** galvanization of the entire body.

Galvano- (*gal-van'-o-*) [*Galvani*, an Italian physician]. A prefix denoting connection with chemic or current electricity. **G.-caustic Amputation,** an amputation in which the soft parts are divided with the galvanic-cautery loop, the bone being sawn through. **G.-cauterization,** the application of the galvanic cautery. **G.-cautery.** See *Cautery*. **G.-contractility,** muscular contraction produced by the galvanic current. **G.-emesis,** the production of vomiting by galvanism. **G.-faradization,** the simultaneous excitation of a nerve or muscle by both a voltaic and a faradic current. **G.-hypnotism,** a hypnotic state induced by an electric current. **G.-magnetism,** same as *Electromagnetism*. **G.-puncture,** the introduction of fine needles, that complete an electric circuit, into the skin or other tissue. Also, a form of galvano-cautery employing a current of the necessary electro-motive force to heat the needles to whiteness. **G.-therapeutics.** See *Electro-therapeutics*.

Galvanometer (*gal-van-om'-et-er*) [*Galvani*, an Italian physician; μέτρον, a measure]. An instrument used for the qualitative determination of the presence of an electric current.

Galvanoscope (*gal-van'-o-skōp*) [*Galvani*, an Italian physician; σκοπεῖν, to view]. An instrument for detecting the direction and presence of a galvanic current.

Galvanoscopy (*gal-van-os'-ko-pe*) [*Galvani*, an Italian physician; σκοπεῖν, to examine]. The use of the galvanoscope.

Galvanotonus (*gal-van-ot'-on-us*) [*Galvani*, an Italian physician; τόνος, tension]. 1. Same as *Electrotonus*. 2. The "closing tetanus." The continued tetanus of a muscle between the make and break contraction.

Galvanotropism (*gal-van-ot'-ro-pizm*) [after *Galvani*; τρέπειν, to turn round]. In biology, the turning movements of growing organs under the influence of a current of electricity.

Gambir, Gambier (*gam-bēr'*) [*Malayan*]. A kind of catechu produced from the leaves and shoots of *Uncaria gambir*, a rubiaceous plant of the Malayan region. It has the general properties of official catechu. See also *Pigments, Conspectus of.* Unof.

Gamboge (*gam-bōzh'*). See *Cambogia* and *Pigments*.

Game Leg (*gām'-leg*). A popular term for a lame leg.

Gamenomania (*gam-en-o-ma'-ne-ah*). See *Gamomania*.

Gametangium (*gam-et-an'-je-um*) [γαμέτη, wife; ἀγγεῖον, a vessel]. In biology, a cell or organ producing or containing sexual elements, or gametes.

Gamete (*gam'-ēt*) [γαμεῖν, to marry]. In biology, any sexual reproductive body.

Gametophyte (*gam'-et-o-fit*) [γαμέτη, a wife; γαμέτης, a husband; φυτόν, a plant]. In biology, the sexual form of such plants as exhibit alternate generation.

Gamgee Tissue (*gam'-ge*). Absorbent cotton-wool.

Gamic (*gam'-ik*) [γάμος, marriage]. In biology, sexual.

Gammacism (*gam'-as-izm*) [*gammacismus*; γάμμα, the letter G]. Difficulty in pronouncing any guttural consonant; guttural stammering.

Gamogastrous (*gam-o-gas'-trus*) [γάμος, marriage; γαστήρ, the womb]. In biology, applied to a compound pistil in which the ovaries only are united.

Gamogenesis (*gam-o-jen'-es-is*) [γάμος, marriage; γένεσις, origin]. Sexual reproduction.

Gamogenetic (*gam-o-jen-et'-ik*) [γάμος, marriage; γένεσις, origin]. Relating to gamogenesis.

Gamomania (*gam-o-ma'-ne-ah*) [γάμος, marriage; μανία, mania]. Insane desire of marriage.

Gamomorphism (*gam-o-mor'-fizm*) [γάμος, marriage; μορφή, form]. Puberty; sexual maturity.

Gamopetalous (*gam-o-pet'-al-us*) [γάμος, marriage; πεταλον, a leaf]. In biology, sympetalous; having the petals more or less united.

Gamophyllous (*gam-o-fil'-us*) [γάμος, marriage; φύλλον, a leaf]. In biology, symphyllous; having the floral envelops united into a single perianth-whorl.

Gangliac, Ganglial, Gangliar (*gang'-gle-ak, gang'-le-al, gang'-le-ar*). Same as *Ganglionic*.

Gangliasthenia (*gang'-gle-as-the'-ne-ah*) [γάγγλιον, ganglion; ἀσθένεια, weakness]. Ganglionic asthenia; neurasthenia due to defect of ganglionic function.

Gangliform (*gang'-glif-orm*) [γάγγλιον, ganglion; *forma*, form]. Formed like, or having the nature of, a ganglion.

Gangliitis (*gang-gle-i'-tis*) [γάγγλιον, a ganglion; ιτις, inflammation]. Inflammation of a ganglion.

Gangliocytin (*gang-gle-o-si'-tin*) [γάγγλιον, nucleus; κύτος, cell]. Same as *Cytophosphatid*.

Ganglioma (*gang-gle-o'-mah*) [γάγγλιον, ganglion; ὄμα, a tumor: *pl.*, *Gangliomata*]. A tumor or enlargement of a lymphatic ganglion.

Ganglion (*gang'-gle-on*) [γάγγλιον, a knot: *pl.*, *Ganglia*]. 1. A separate and semi-independent nervous center communicating with other ganglia or nerves, with the central nervous system, and peripheral organs. 2. An enlarged bursa in connection with a tendon. 3. A lymphatic gland. **G.-capsule,** the envelop of a ganglion containing the ganglion-cells or nerve-cells. **G.-cell,** any one of the nerve-cells characteristic of

MULTIPOLAR GANGLION-CELL.
a. Axis-cylinder process. *b*. Pigment.

the ganglia, whether found in a ganglion or not. **G.-corpuscle,** a ganglion-cell. **G.-globule,** a ganglion-

cell. An alphabetic table of the principal ganglia is appended, showing their location, roots, and distribution. **Ganglia, Basal,** the ganglia at the base of the brain, comprising the corpora striata (caudate and lenticular nuclei), thalami, and corpora quadrigemina.

TABLE OF GANGLIA.

NAME.	LOCATION.	ROOTS.	DISTRIBUTION.
Abdominal, maximum.	See *Semilunar.*		
Acoustic.	In grasshoppers, the termination of the acoustic nerve.	Ganglionic chain.	Organ of hearing.
Andersch's.	See *Petrous.*		
Anterior (of thalamus).	The anterior tubercle of the thalamus.		
Arnold's.	See *Otic.*		
Auerbach's.	Several minute ganglia situated in Auerbach's plexus, *q. v.*	Sympathetic.	Sympathetic.
Auricular.	See *Otic.*		
Auricular, posterior.	See *Temporal.*		
Auriculo-ventricular.	See *Bidder's.*		
Azygous.	See *Impar.*		
Basal.	At base of cerebrum; they include: corpora striata, thalami, corpora geniculata, corpora quadrigemina, locus niger, nuclei tegmenti.		
Basal optic.	See *Optic, basal.*		
Bezold's (Von).	In the auricular septum of the frog's heart.	Sympathetic.	Heart.
Bidder's (2).	In the auricular septum of the frog's heart.	Termination of the cardiac branches of the vagus.	Heart.
Bochdalek's.	Above the root of one of the upper incisor teeth, at the point of communication between the posterior nasal branch of Meckel's ganglion and the anterior dental nerve.	Dental nerves.	Dental nerves.
Branchial.	In *Mollusca*, near the branchia.	Ganglionic chain.	Branchia.
Buccal.	In *Mollusca*, at the point of union of the esophagus with the buccal mass.	Cerebral ganglia.	Nerves to the mouth and alimentary canal.
Cardiac, lesser.	See *Cardiac, superior.*		
Cardiac, superior (Wrisberg).	Beneath the arch of the aorta	Superficial cardiac plexus.	Cardiac plexus.
Carotid.	In the lower part of the cavernous sinus, beneath the carotid artery.	Filaments from the carotid plexus.	Carotid plexus.
Carotid, inferior.	Lower portion of the carotid canal.	Carotid plexus.	Filaments to the carotid artery.
Carotid, internal.	See *Carotid, superior.*		
Carotid, superior.	Upper portion of the carotid canal.	Carotid plexus.	Filaments to the carotid artery.
Casserian.	See *Gasserian.*		
Celiac, lateral.	Near the spleen.	Splenic plexus.	Filaments to the spleen.
Celiac, left.	The left semilunar ganglion (*q. v.*).		
Celiac, middle.	In front of the aorta above the celiac axis.	Hepatic plexus.	Filaments to the liver.
Celiac, right.	The right semilunar ganglion (*q. v.*).		
Cephalic.	Sympathetic ganglia of the head. They include the ciliary, spheno-palatine, otic, and submaxillary.		
Cerebral.	In *Mollusca*, above the esophagus.	Ganglionic chain.	To the head.

TABLE OF GANGLIA.—*Continued.*

NAME.	LOCATION.	ROOTS.	DISTRIBUTION.
Cerebral, anterior.	A name for the corpus striatum.		
Cervical, first.	See *Cervical, superior.*		
Cervical, great.	See *Cervical, superior.*		
Cervical, inferior.	Between the neck of the first rib, and the transverse process of the last cervical vertebra.	Three lower cervical, first dorsal.	Cardiac nerves and plexus, etc.
Cervical, lower.	See *Cervical, inferior.*		
Cervical, middle or thyroid.	Opposite the fifth cervical vertebra; near the inferior thyroid artery.	Fifth and sixth cervical nerves, spinal nerves and ganglia.	Thyroid gland, cardiac nerve, cavernous plexus.
Cervical, oval.	See *Cervical, superior.*		
Cervical (of vagus nerve).	See *Inferior (of vagus).*		
Cervical, second.	See *Cervical, middle.*		
Cervical, stellate.	See *Cervical, middle.*		
Cervical, superior.	Opposite the second and third cervical vertebræ.	Four upper cervical, petrosal, vagus, glosso-pharyngeal, and hypoglossal nerves.	Superior, inferior, external, internal branches; carotid and cavernous plexuses.
Cervical, third.	See *Cervical, inferior.*		
Cervical, upper.	See *Cervical, superior.*		
Cervical (of uterus).	Near the cervix uteri.	Filaments from the hypogastric plexus, sacral ganglia, and sacral nerves.	Uterine nerves.
Of the chorda tympani.	In *Invertebrata*, above the Glaserian fissure.	Chorda tympani nerve.	Chorda tympani.
Ciliary.	See *Ophthalmic.*		
Of the circumflex nerve.	On the branch of the circumflex nerve.	Circumflex nerve.	Filaments to teres minor, deltoid, and fascia.
Of Cloquet.	Incisor foramen.	Naso-palatine nerves.	Naso-palatine nerves.
Coccygeal.	See *Impar.*		
Cochlear.	See *Spiral.*		
Corti's.	See *Spiral.*		
Cranio-cervical.	See *Cervical, superior.*		
Diaphragmatic.	See *Phrenic.*		
Ehrenritter's.	See *Jugular.*		
Extraventricular.	A name for the lenticular nucleus.		
Facial.	See *Geniculate.*		
Of Frankenhäuser.	See *Cervical, uterine.*		
Frontal.	In *Invertebrata*, the ganglion from which arises the pharyngeal nerve.	Ganglionic chain.	Pharyngeal nerve.
Fusiform.	See *Cervical, superior.*		
Gasser's (A. P.).	See *Gasserian.*		
Gasserian, or semilunar.	Fossa on the anterior part of the petrosa, near the apex.	Fifth cranial nerve, carotid plexus.	Ophthalmic, superior and inferior maxillary nerves.
Geniculate.	Aqueduct of Fallopius.	Large and small superficial petrosal.	Facial.
Great.	See *Cardiac, superior.*		
Of the habenula.	A ganglion situated in the trigonum habenulæ near the thalamus.		
Hepatic.	Around the hepatic artery.	Hepatic branches of the semilunar ganglion.	Liver.

TABLE OF GANGLIA.—*Continued.*

Name.	Location.	Roots.	Distribution.
Hirschfeld's.	A name for the hippocampal gyrus.		
Hypogastric.	See *Cervical* (*of uterus*).		
Impar, or Coccygeal.	Anterior surface of the tip of the coccyx, uniting the two sympathetic nerves.	Sympathetic.	Sympathetic.
Inferior (of vagus).	Near jugular foramen.	Hypoglossal and cervical nerves and various plexuses.	Vagus.
Infra-esophageal.	In *Mollusca*, beneath the esophagus.	Ganglionic chain.	Foot.
Inframaxillary, anterior.	Near the incisor teeth.	Inferior maxillary nerve.	Filaments to the teeth.
Inframaxillary, posterior.	Near the last molar tooth.	Inferior maxillary nerve.	Filaments to the teeth.
Intercarotid.	Bifurcation of the common carotid.	Carotid plexus.	Sympathetic.
Interoptic.	The gray matter of the interoptic lobes.		
Interosseous.	Back of the wrist	Interosseous nerve.	Nerves to the carpus.
Intervertebral.	Near the intervertebral foramen.	Spinal cord.	Dorsal root of spinal nerve.
Jugular (Ehrenritter's).	Upper part of the jugular foramen.	Glossopharyngeal.	Continuation of the glossopharyngeal.
Jugular (of vagus).	Jugular foramen.	Vagus.	Vagus.
Lateral (several in number).	Surrounding the subclavian artery.	Branches of the inferior cervical ganglion.	Subclavian artery.
Lenticular.	See *Ophthalmic.*		
Lingual.	See *Submaxillary.*		
Ludwig's.	Right auricle of the heart.	Cardiac plexus.	Cardiac plexus.
Lumbar (4 or 5).	On each side and behind the abdominal aorta.	Sympathetic.	Sympathetic.
Maxillo-tympanic.	See *Otic.*		
Meckel's.	See *Spheno-palatine.*		
Meckelian.	See *Spheno-palatine.*		
Meissner's.	Intestinal sub-mucosa.	Sympathetic.	Sympathetic.
Mesenteric, inferior.	The inferior mesenteric artery.	Inferior mesenteric plexus.	Mesentery and intestine.
Mesenteric, lateral.	Left side of the body.	Superior mesenteric plexus.	Mesentery and bowel.
Mesenteric, superior.	Near the origin of the superior mesenteric artery.	Superior mesenteric plexus.	Sympathetic.
Of Meynert.	See *Optic, basal.*		
Müller's.	See *Jugular* and *Prostatic.*		
Nasal.	See *Meckel's.*		
Nephro-aortic.	See *Renal.*		
Nephro-lumbar.	Junction of the branches of the lumbar and spermatic nerves.	Lumbar and spermatic nerves.	Kidney and lumbar region.
Ophthalmic.	Posterior part of the orbit.	Nasal branch of the ophthalmic, third, cavernous plexus, and Meckel's ganglion.	Short ciliary.
Optic.	See *Ophthalmic.*		
Optic, basal (of Meynert).	Beneath the third ventricle, near the optic tract.	Gray matter of the cerebrum.	Optic tract.
Optic, inferior.	See *Optic, basal.*		
Orbital.	See *Ophthalmic.*		
Otic (Arnold's).	Below the foramen ovale.	Inferior maxillary, auriculo-temporal, glosso-pharyngeal, facial, sympathetic, and internal pterygoid.	Tensor tympani, tensor palati, chorda tympani.

TABLE OF GANGLIA.—*Continued.*

NAME.	LOCATION.	ROOTS.	DISTRIBUTION.
Pedal.	See *Infra-esophageal.*		
Petrosal.	See *Petrous.*		
Petrous (Andersch's).	Petrous portion of the temporal bone, lower border.	Glosso-pharyngeal.	Tympanic, sympathetic, and vagus.
Pharyngeal.	Near ascending pharyngeal artery.	Carotid plexus.	Carotid plexus.
Pharyngeal, soft.	On the lingual artery, near the pharyngeal ganglion.	Carotid plexus.	Lingual plexus.
Phrenic.	Under the diaphragm at the junction of the right phrenic nerve and phrenic plexus.	Sympathetic.	To the diaphragm, inferior vena cava, supra-renal capsule, hepatic plexus.
Phrenic, major.	Point of union of the phrenic nerves with the spinal and sympathetic systems.	Phrenic, spinal, and sympathetic.	Filaments to the diaphragm.
Phrenic, secondary.	Near the diaphragm.	Anterior, superior, transverse plexus.	Filaments to the diaphragm.
Phrenico-hepatic.	Lower surface of the diaphragm.	The phrenic plexus.	Filaments to the diaphragm and liver.
Plexiform.	See *Gasserian.*		
Pneumogastric.	See *Vagus.*		
Of the portio dura.	See *Geniculate.*		
Post-esophageal.	In insects, around the gullet.	Cephalic ganglia.	Nerves to the mouth.
Postoptic.	See *Optic, basal.*		
Pre-esophageal.	See *Cephalic.*		
Prostatic (of Müller).	On the prostate.	Prostatic plexus.	Filaments to seminal vesicles and cavernous tissue of penis.
Pterygo-palatine.	See *Meckel's.*		
Remak's.	Tissue of the heart, near the superior vena cava.	Sympathetic.	Sympathetic.
Renal.	Around the renal artery.	Renal plexus.	Renal artery.
Renal, anterior communicating.	In front of the renal artery.	Renal plexus.	Kidney.
Renal, left aortic.	Point of origin of the renal artery.	Renal plexus.	Kidney.
Renal, posterior communicating.	Behind the renal artery.	Renal plexus.	Kidney.
Reticulate.	Medulla oblongata.	The gray matter scattered through the medulla.	
Rhinic.	See *Meckel's.*		
Of Ribes.	Anterior communicating artery of the brain. (It is the upper termination of the sympathetic.)	Branches from the two superior ganglia.	Sympathetic.
Sacral (4 or 5).	Ventral surface of the sacrum.	Sympathetic.	Sympathetic.
Sacral, accessory (4).	Along the middle sacral artery.	Sympathetic.	Middle sacral artery.
Scarpa's.	Near the internal auditory meatus, at the point of junction of the facial nerve and the vestibular branch of the auditory nerve.	Facial and auditory nerves.	Internal ear.
Schacher's.	See *Ophthalmic.*		
Schmiedel's.	In the carotid plexus.	Fifth nerve, third branch.	Sympathetic.
Semilunar (2, right and left).	Near the supra-renal bodies, in front of the crura of the diaphragm.	Solar plexus and great splanchnic nerves.	Solar plexus.
Semilunar.	See *Gasserian.*		
Solar.	See *Semilunar.*		

TABLE OF GANGLIA.—*Continued.*

NAME.	LOCATION.	ROOTS.	DISTRIBUTION.
Spermatic, inferior.	On the spermatic artery, near the internal abdominal ring	Sympathetic.	Cord and testicle.
Spermatic, superior.	Around the spermatic artery.	Sympathetic.	Sympathetic.
Spermatico-renal.	In a plexus formed by the inferior branches of the renal plexus.	Renal plexus.	Spermatic artery and kidney.
Sphenoid.	See *Meckel's.*		
Spheno-palatine (Meckel's).	Spheno-maxillary fossa, near the spheno-palatine foramen.	Superior maxillary, facial, sympathetic.	Anterior, posterior, and external palatine, naso-palatine, superior nasal, Vidian, pharyngeal.
Spinal.	See *Intervertebral.*		
Spiral.	Spiral canal of the modiolus.	Cochlear nerve.	Filaments to the osseous lamina and to the organ of Corti.
Splanchnic.	See *Semilunar.*		
Stellate.	The first thoracic (*q. v.*).		
Stomato-gastric.	In *Mollusca*, the upper surface of the stomach.	Sympathetic.	Sympathetic.
Sub-esophageal.	See *Infra-esophageal.*		
Sub-intestinal.	See *Meissner's.*		
Sublingual.	See *Submaxillary.*		
Submandibular.	See *Submaxillary.*		
Submaxillary.	Above the submaxillary gland.	Gustatory, chorda tympani, submaxillary, sympathetic.	Mouth, submaxillary gland, and Wharton's duct.
Superior.	See *Jugular.*		
Superior (of Vagus).	Jugular foramen.	Superior cervical and petrous ganglia, and spinal accessory.	Vagus.
Supra-esophageal.	In *Mollusca*, above the esophagus.	Ganglionic chain.	Esophagus.
Supra-maxillary.	Above the canine tooth.	Anterior superior dental nerve.	Anterior superior dental nerve.
Supra-renal.	Junction of the great splanchnic nerves	Solar plexus.	Supra-renal plexus.
Temporal.	External carotid artery, near the parotid gland.	Superior cervical ganglion and carotid plexus.	Temporal region.
Thoracic (12).	Between the transverse processes of the vertebræ and the heads of the ribs.	Sympathetic.	Splanchnic nerves and branches to spinal nerves and plexuses
Thyroid, inferior.	See *Cervical, middle.*		
Thyroid, superior.	See *Cervical, superior.*		
Transverse.	See *Semilunar.*		
Tympanic.	Canal between the lower surface of the petrosa and the tympanum.	Tympanic branch of the glossopharyngeal.	Tympanum.
Vagus: (1) of the root, see *Jugular*; (2) of the trunk (*Vagus*).	Below the jugular foramen.	Vagus.	Vagus.
Valentin's.	Above the root of the second bicuspid, at the junction of the middle and posterior dental nerves.	Posterior and middle dental nerves.	Filaments to the teeth.
Ventricular.	See *Bidder's.*		
Vertebral.	See *Cervical, inferior.*		
Vesico-vaginal.	Ventral wall of the vagina.	Vesico-vaginal plexus.	Sympathetic.
Vestibular.	Aqueduct of Fallopius.	Geniculate ganglion.	Vestibular nerve.
Walter's.	See *Impar.*		
Of Wrisberg.	See *Cardiac.*		

Ganglionic (*gang-gle-on'-ik*) [*γάγγλιον*, a ganglion]. Pertaining to or of the nature of a ganglion. **G. Centers**, masses of gray matter of the brain lying between the floor of the lateral ventricles and the decussation of the anterior pyramids of the cord. They include the optic thalami, corpora striata, and others.

Ganglionitis (*gang-gle-on-i'-tis*). See *Gangliitis*.

Gangliopathy (*gang-gle-op'-ath-e*) [*γάγγλιον*, a ganglion; *πάθος*, disease]. Any disorder dependent upon a diseased condition of a ganglion; any diseased state of a ganglion.

Gangræna (*gang-gre'-nah*) [L.]. Gangrene. **G. contagiosa.** See *Gangrene, Hospital.* **G. nosocomialis.** See *Gangrene, Hospital.* **G. oris.** See *Stomatitis.*

Gangrænosis (*gang-gre-no'-sis*). See *Gangrenosis.*

Gangrene (*gang'-grēn*) [*γάγγραινα*, a sore, from *γραίνειν*, to gnaw]. Mortification or death of a part of the body from failure in nutrition. The putrefactive fermentation of a dead limb or tissue. **G., Circular,** a form of mortification occurring usually on some part of the lower extremity, and not exceeding in size a silver half-dollar. It involves the skin and subcutaneous tissues and is accompanied by signs of exhaustion. **G., Constitutional,** that dependent upon systemic disease, such as diabetes, or circulatory disease. **G., Diabetic.** See *Sphaceloderma.* **G., Dry,** shriveling and desiccation from insufficiency of blood. **G., Embolic,** that caused by an embolus that cuts off the supply of blood. **G., Hospital,** a contagious form arising under crowded conditions without antiseptic precautions. **G., Moist,** a form with abundance of serous exudation and rapid decomposition. **G., Nosocomial,** hospital gangrene. **G., Primary,** that without preceding inflammation of the part. **G., Pulpy.** See *G., Hospital.* **G., Secondary,** a form with preceding inflammation. **G., Senile,** that attacking the extremities of the aged. **G., Symmetric,** that attacking corresponding parts of opposite sides. It is called, also, *Raynaud's G.* See, also, *Sphaceloderma.* **G., White,** a moist gangrene of chronic form, in which there is a serous exudate with lymphatic obstruction, followed by complete anemia. It is unaccompanied by the characteristic color-change of other varieties of gangrene.

Gangrenopsis (*gang-gren-op'-sis*) [*γάγγραινα*, gangrene; *ὄψις*, the face]. Synonym of *Cancrum oris.*

Gangrenosis (*gang-gren-o'-sis*) [*γάγγραινα*, gangrene; *νόσος*, disease]. The condition of being or of becoming mortified or gangrenous.

Gangrenous (*gang'-gren-us*) [*γάγγραινα*, gangrene]. Pertaining to or being of the nature of gangrene. **G. Emphysema.** See *Edema, Malignant.*

Ganja (*gan'-jah*) [Hind.]. Synonym of *Cannabis indica.*

Gannal's Solution. A preservative fluid containing one part of aluminum acetate in 20 parts of water.

Ganoin (*gan'-o-in*) [*γάνος*, brightness]. In biology, the dense enamel-like form of bone of the plates of a ganoid fish.

Gant's Line. See *Lines, Table of.*

Gantelet (*gant'-let*). See *Gauntlet.*

Gape (*gap*, or *gāp*) [ME., *gapen*, to yawn]. To yawn; the act of yawning.

Gapes (*gāps*) [ME., *gapen*, to gape]. A disease of young fowls, caused by the presence of a nematode worm, *Syngamus trachealis*, in the trachea. See *Parasites, (Animal) Table of.*

Gaping (*gap'-ing*). See *Pandiculation* and *Yawning.*

Gaps, Cranial (*gaps*) [ME., *gapen*, to gape]. Certain occasional congenital fissures of the skull.

Garancin (*gar-an'-sin*) [origin unknown]. The product obtained by the action of concentrated H_2SO_4 on pulverized madder, at a temperature of 100° C. (212° F.). It is a valuable dye. See *Pigments Conspectus of.*

Garbage (*gar'-bāj*) [ME., *garbage*, the entrails of fowls]. The refuse materials of kitchen-cookery, etc. **G. and Waste.** See *Sewage, Disposal of.* **G.-cart, Flannagan Automatic,** a variety of cart much used for the collection of garbage. **G.-furnace,** a furnace in use in cities and towns to consume the waste material of the place.

Garbling (*gar'-bling*) [OF., *garbeler*, to sift]. The assorting of a drug and its separation into grades of different quality.

Garcinia (*gar-sin'-e-ah*) [after Laurent *Garcin*, a French botanist]. A genus of guttiferous trees of Old-world tropical regions. **G. hanburii, G. morella, G. pictoria,** and **G. travancorica** afford gamboge. **G. mangostana** yields the palatable fruit called mangosteen.

Garden Rocket. See *Eruca sativa.*

Garel, Sign of. See *Signs and Symptoms, Table of.*

Gargarism (*gar'-gar-izm*) [*γαργαρίζειν*, to gargle: *pl.*, *Gargarismata*]. A gargle.

Garget (*gar'-get*) [ME., *gargat*, the throat]. 1. A swelling of the throat in swine or cattle. 2. A hard, knotty condition of the udder in cows, that sometimes follows calving, due to the sudden distention of the bag with milk; it is attended with inflammation. At times it is tuberculous in nature. It is also called "*Weed*" and *Mammitis.* **G.-root,** a name improperly given to the root of *Phytolacca decandra* (see *Phytolacca*); so called because it is regarded as a cure for garget in cows.

Gargle (*gar'-gl*) [Fr., *gargouille*, the throat]. To rinse or wash the interior of the throat and upper part of the pharynx. Also, a wash for the throat.

Gargling (*gar'-gling*) [Fr., *gargouille*, the throat]. Rinsing the throat. **G., von Troltsch's Method of,** the patient takes a mouthful of fluid, throws back the head, and then, instead of making the customary "gurgle," allows the liquid to pass as far down as possible. The act of deglutition is then performed, without, however, letting the fluid be swallowed.

Garland (*gar'-land*). See *Karyokinesis.*

Garlic (*gar'-lik*). See *Allium.*

Garnet-brown. See *Pigments, Conspectus of.*

Garretson's Bandage. See *Bandage.*

Garrod's Theory. The theory that gout is due to an increase in the uric acid in the blood, either from increased production or diminished elimination. The alkalinity of the blood is also lessened; hence the urates are deposited in the tissues. **G.'s Test.** See *Tests, Table of.*

Garrot (*gar'-ot*) [Fr., *garotter*, to bind]. An instrument for compression of an artery by twisting a circular bandage about the part.

Garroting (*gar'-ot-ing*) [Sp., *garrote*, strangulation by means of an iron collar]. In forensic medicine, a term used in England to signify the forcible compression of a victim's neck by robbers or criminals.

Garrulity (*gar-oo'-lit-e*) [*garrire*, to prattle]. Talkativeness. **G. of the Vulva.** See *Vulva.*

Garrya (*gar'-e-ah*) [after *Garry*, a botanist]. California fever-bush; skunk-bush, or quinin-bush. The leaves of *G. fremontii*, a bitter antiperiodic, popular on the Pacific coast as a remedy for malarial diseases. Dose of the fld. ext. ♏x–xxx. Unof.

Garryin (*gar'-e-in*) [*Garry*, a botanist]. An alkaloid said to exist in the leaves of *Garrya fremontii.*

Gärtner, Canals or Ducts of. See *Canal.*

Gas (*gas*). Any substance that is normally aëriform. Substances normally in a liquid or solid state are usually called *vapors* when changed to the aëriform

condition. **G.-black.** See *Pigments, Conspectus of.* **G., Nitrous Oxid.** See *Nitrous Oxid.*

Gaskell's Clamp. See *Clamp.*

Gasolene (*gas'-o-lēn*) [*gas*]. Canadol. A product obtained from petroleum, boiling at 70° to 90° C; specific gravity, .660 to .690, or 80° to 75° B. It is used in the extraction of oils from oil-seeds and in carburetting coal-gas.

Gasp [ME., *gaspen*, to yawn]. To catch for breath. To breathe spasmodically with open mouth.

Gasser's Arteries. See *Arteries, Table of.* **G.'s Ganglion.** See *Ganglia, Table of.* **G., Nerve of.** See *Nerves, Table of.*

Gasserian Arteries. See *Arteries, Table of.* **G. Ganglion.** See *Ganglia, Table of.*

Gaster (*gas'-ter*) [γαστήρ, stomach]. The stomach; the abdomen. **G. basalis**, the apical canal, pedunclе-tube, or *tubus capularis* of hydroid polyps. **G. buccalis**, the esophagus of Medusæ. **G. centralis**, the central cavity of Medusæ. **G. coronaris**, the perogaster of Medusæ. **G. principales.** See *Axogaster.*

Gasterangiemphraxis (*gas-ter-an-je-em-fraks'-is*) [γαστήρ, stomach; ἀγγεῖον, vessel; ἔμφραξις, obstruction]. 1. Congestion of the stomachic blood-vessels. 2. Pyloric obstruction.

Gasterasthenia (*gas-ter-as-the'-ne-ah*) [γαστήρ, stomach; ἀσθένεια, weakness]. Weakness or debility of the stomach.

Gasterataxia (*gas-ter-at-aks'-e-ah*) [γαστήρ, stomach; ἀταξία, disorder]. Disordered state of the functions of the stomach; that state of the stomach-walls in which some parts are hardened or thickened, while others are softened or inflamed.

Gasterechema (*gas-ter-ek-e'-mah*) [γαστήρ, stomach; ἦχημα, sound]. A sound heard in the auscultation of the stomach.

Gasterectasis (*gas-ter-ek'-tas-is*) [γαστήρ, stomach; ἔκτασις, dilatation]. Dilatation of the stomach; it is usually due to pyloric obstruction, but may also result from muscular weakness, and from over-distention from excessive eating and drinking.

Gastero- (*gas'-ter-o-*) [γαστήρ, belly]. See *Gastro-.*

Gasterotheca (*gas-ter-o-the'-kah*) [γαστήρ, stomach; θήκη, case: *pl.*, *Gasterothecæ*]. In biology, the part of the pupa or chrysalis-case that covers the abdomen.

Gasterozoöid, Gastrozoöid (*gas-ter-o-zo'-oid, gas-trozo'-oid*) [γαστήρ, stomach; ζῷον, animal; εἶδος, form]. In biology, one of the nutritive zoöids of a polypcolony.

Gastræa (*gas-tre'-ah*) [γαστήρ, stomach; *pl.*, *Gastrææ*]. In biology, Hæckel's term for a hypothetic, primeval, two-layered, saccular organism; the supposed ancestral type of the gastrula stage of the present Metazoan.

Gastræmia (*gas-tre'-me-ah*). See *Gastremia.*

Gastral (*gas'-tral*) [γαστήρ, the stomach]. Pertaining to the gaster or stomach; gastric.

Gastralgia, Gastralgy (*gas-tral'-je-ah, -je*) [γαστήρ, stomach; ἄλγος, pain]. Pain in the stomach. A mild form is sometimes called *gastrodynia.*

Gastread (*gas'-tre-ad*) [γαστήρ, stomach]. In biology, an animal the morphologic development of which stops at the gastrula stage.

Gastrectasia (*gas-trek-ta'-ze-ah*). See *Gastrectasis.*

Gastrectasis (*gas-trek'-tas-is*) [γαστήρ, stomach; ἔκτασις, a stretching out]. Dilatation of the stomach.

Gastrectomy (*gas-trek'-to-me*) [γαστήρ, stomach; ἐκτομη, a cutting out]. Resection of any diseased part of the stomach.

Gastrelcobrosis (*gas-trel-ko-bro'-sis*) [γαστήρ, stomach; ἕλκος, ulcer; βρῶσις, an eating]. Ulceration of the stomach.

Gastrelcosis (*gas-trel-ko'-sis*) [γαστήρ, stomach; ἕλκωσις, ulceration]. Ulceration of the stomach.

Gastremia (*gas-tre'-me-ah*) [γαστήρ, stomach; αἷμα, blood]. Congestion of the coats of the stomach.

Gastrenteralgia (*gas-tren-ter-al'-je-ah*) [γαστήρ, stomach; ἔντερον, intestine; ἄλγος, pain]. Neuralgia of the stomach and bowels.

Gastrenteromalacia (*gas-tren-ter-o-mal-a'-se-ah*) [γαστήρ, stomach; ἔντερον, intestine; μαλακία, softening]. Softening of the stomach and intestines (asserted by some to be merely a post-mortem condition).

Gastreum (*gas'-tre-um*) [γαστήρ, stomach]. In biology, the under or ventral surface of a bird.

Gastric (*gas'-trik*) [γαστήρ, stomach]. Pertaining to the stomach. **G. Artery.** See *Arteries, Table of.* **G. Crisis**, a severe, paroxysmal attack of pain in the stomach, accompanied by obstinate vomiting, faintness, and occasionally by slowness and irregularity of the pulse. These crises are met with in locomotor ataxia, *q. v.* **G. Digestion**, that part of the digestion of food performed by the gastric juice; the conversion of albuminous bodies into peptones. **G. Fever.** See *Fever.* **G. Fistula**, a perforation or communication other than the normal one between the stomach and peritoneal cavity, or with the outer part of the body. **G. Follicles.** See *Glands, Peptic.* **G. Insufficiency**, a term applied to the early stages of dilatation of the stomach. **G. Juice**, the normal secretion of the tubular, peptic glands of the stomach. It is a clear, colorless liquid, having an acid reaction, and containing from .5 to 2 per cent. of solid matter in solution. A small amount of hydrochloric acid, .2 to .4 per cent., and a ferment called *pepsin*, are the essential elements. **G. Plexus**, a subdivision of the solar plexus distributed to the stomach. It joins branches of the left pneumogastric nerve. See *Plexus.* **G. Veins**, two veins of the stomach; the lesser one is called the pyloric, the greater the coronary. See *Vein.*

Gastricism (*gas'-tris-izm*) [γαστήρ, stomach]. 1. The theory that ascribes most diseases to some gastric derangement. 2. A gastric disorder.

Gastrimargia, or Gastrimargism (*gas-trim-ar'-je-ah, or -jizm*) [γαστήρ, belly; μάργος, greedy]. Insane or furious gluttony.

Gastritic (*gas-trit'-ik*) [γαστήρ, stomach]. Pertaining to or affected with gastritis.

Gastritis (*gas-tri'-tis*) [γαστήρ, stomach; ιτις, inflammation]. Inflammation of the coats of the stomach. It may be acute or chronic. **G. polyposa**, that form associated with a rough, wrinkled, mammillated condition of the gastric mucous membrane.

Gastro- (*gas'-tro-*) [γαστήρ, stomach]. A prefix denoting some relation with or complication of the stomach.

Gastro-adenitis (*gas'-tro-ad-en-i'-tis*) [γαστήρ, stomach; ἀδήν, gland; ιτις, inflammation]. Inflammation of the glands of the stomach.

Gastro-arthritis (*gas-tro-ar-thri'-tis*) [γαστήρ, stomach; ἄρθρον, a joint; ιτις, inflammation]. Gout in the stomach and joints at the same time.

Gastrobrosis (*gas-tro-bro'-sis*) [γαστήρ, stomach; βρῶσις, a gnawing]. Perforating ulcer of the stomach.

Gastrocele (*gas'-tro-sēl*) [γαστήρ, stomach; κήλη, hernia]. A hernia of the stomach.

Gastrocelus (*gas-tro-se'-lus*) [γαστήρ, stomach; κοῖλος, hollow]. In biology, applied to one of the depressions at the base of the second abdominal tergite in certain insects.

Gastrocephalitis (*gas-tro-sef-al-i'-tis*) [γαστήρ, stomach; κεφαλή, head; ιτις, inflammation]. Concurrent inflammation of the stomach and of the brain.

Gastrocholia (*gas-tro-ko'-le-ah*) [γαστήρ, stomach; χόλη, bile]. Concurrent gastric and bilious disorder.

Gastrocnemius (*gas-trok-ne'-me-us*) [γαστήρ, stomach; κνήμη, leg]. See *Muscles, Table of.*

Gastrocolic (*gas-tro-kol'-ik*) [γαστήρ, stomach; κόλον, the large intestine]. Pertaining to both the stomach and the colon.

Gastrocolitis (*gas-tro-ko-li'-tis*) [γαστήρ, stomach; κόλον, colon; ιτις, inflammation]. Concurrent inflammation of the stomach and large intestine.

Gastrocolotomy (*gas-tro-ko-lot'-o-me*) [γαστήρ, stomach; κόλον, colon; τέμνειν, to cut]. The establishment of an artificial communication between the stomach and the colon.

Gastrocolpotomy (*gas-tro-kol-pot'-o-me*) [γαστήρ, stomach; κόλπος, vagina; τέμνειν, to cut]. The operation of Cesarean section in which the opening is made through the *linea alba* into the upper part of the vagina.

Gastrocystis (*gas-tro-sis'-tis*) [γαστήρ, belly; κύστις, bladder]. In biology, the single-layered blastodermic vesicle of mammals.

Gastroderma (*gas-tro-der'-mah*) [γαστήρ, stomach; δέρμα, skin]. In biology, the *lamina gastralis*, or intestinal epithelium.

Gastrodialysis (*gas-tro-di-al'-is-is*) [γαστήρ, stomach; λύσις, a loosening]. A solution of continuity in the gastric wall.

Gastrodiaphane (*gas-tro-di'-af-ān*) [γαστήρ, stomach; διά, through; φαίνειν, to show]. See *Gastrodiaphany.*

Gastrodiaphanoscopy (*gas'-tro-di-af-an-os'-ko-pe*) [γαστήρ, stomach; διά, through; φαίνειν, to show; σκοπεῖν, to inspect]. The examination of the stomach by means of the diaphanoscope.

Gastrodiaphany (*gas-tro-di-af'-an-e*) [γαστήρ, stomach; διά, through; φαίνειν, to show]. A method of exploration of the stomach by means of the *gastrodiaphane*. This consists of a soft stomach-tube, at the gastric extremity of which is placed an Edison's hard-glass lamp, from which conducting wires, containing a current-interrupter, run to a portable storage-battery. The stomach should be free from food and moderately distended with water. The gastric extremity of the gastrodiaphane, after being lubricated with oil or glycerin, is introduced into that viscus, and the circuit is closed. If no pronounced thickening of the anterior stomach wall exists, trans-illumination in a dark room, with the patient erect, permits the outlines of the stomach to be seen as a zone of reddish hue on the abdominal wall.

Gastrodidymus (*gas-tro-did'-im-us*) [γαστήρ, stomach; δίδυμος, double]. A double monstrosity with one abdominal cavity.

Gastroduodenal (*gas-tro-du-o-de'-nal*) [γαστήρ, stomach; *duodeni*, twelve each]. Pertaining to the stomach and the duodenum.

Gastroduodenitis (*gas-tro-du-od-en-i'-tis*) [γαστήρ, stomach; *duodeni*, twelve each; ιτις, inflammation]. Inflammation of the stomach and duodenum.

Gastroduodenostomy (*gas'-tro-du-od-en-os'-to-me*) [γαστήρ, stomach; *duodeni*, twelve each; στόμα, mouth]. A surgical operation upon the stomach and the duodenum, in which a new passage from the one to the other is established.

Gastrodynia (*gas-tro-din'-e-ah*) [γαστήρ, stomach; ὀδύνη, pain]. A mild pain in the stomach. See also *Gastralgia.*

Gastroectasis (*gas-tro-ek'-tas-is*). Same as *Gastrectasis.*

Gastro-electrization (*gas-tro-e-lek-triz-a'-shun*) [γαστήρ, stomach; ἤλεκτρον, amber]. The therapeutic application of electricity to the stomach.

Gastroelytrotomy (*gas-tro-el-it-rot'-o-me*) [γαστήρ, stomach; ἔλυτρον, a sheath; τομή, a cutting]. A method of performing Cesarean section. An incision is made into the vagina (after the abdominal section), instead of into the uterus, and if the child cannot be extracted in this way, an incision is made into the os uteri.

Gastroenteralgia (*gas-tro-en-ter-al'-je-ah*) [γαστήρ, stomach; ἔντερον, bowel; ἄλγος, pain]. Concurrent pain in the stomach and bowels.

Gastroenteric (*gas-tro-en-ter'-ik*) [γαστήρ, stomach; ἔντερον, bowel]. Pertaining to both stomach and bowels.

Gastroenteritis (*gas-tro-en-ter-i'-tis*) [γαστήρ, stomach; ἔντερον, bowel; ιτις, inflammation]. Concurrent inflammation of stomach and bowels.

Gastroenterostomy (*gas-tro-en-ter-os'-to-me*) [γαστήρ, stomach; ἔντερον, bowel; στόμα, mouth]. Formation of a fistulous communication between the stomach and the small intestine in obstruction of the pylorus.

Gastroenterotomy (*gas-tro-en-ter-ot'-o-me*) [γαστήρ, stomach; ἔντερον, bowel; τέμνειν, to cut]. Intestinal incision through the abdominal wall.

Gastroepiploic (*gas-tro-ep-ip-lo'-ik*) [γαστήρ, stomach; ἐπίπλοον, caul]. Pertaining to stomach and omentum.

Gastro-esophageal (*gas-tro-e-so-fa'-je-al*) [γαστήρ, stomach; οἰσοφάγος, the esophagus]. Pertaining to both the stomach and the esophagus.

Gastrofaradization (*gas'-tro-far-ad-iz-a'-shun*) [γαστήρ, stomach; *Faraday*]. The application of faradism to the stomach.

Gastrogalvanization (*gas'-tro-gal-van-iz-a'-shun*) [γαστήρ, stomach; *Galvani*]. The application of galvanism to the stomach.

Gastrohepatic (*gas-tro-he-pat'-ik*) [γαστήρ, stomach; ἧπαρ, the liver]. Relating to both stomach and liver.

Gastrohysterectomy (*gas'-tro-his-ter-ek'-to-me*) [γαστήρ, the stomach; ὑστέρα, the womb; ἐκτομή, a cutting out]. The Porro-Cesarean operation. See *Operations, Table of.*

Gastrohysterotomy (*gas-tro-his-ter-ot'-o-me*) [γαστήρ, stomach; ὑστέρα, womb; τέμνειν, to cut]. The Cesarean section, *q. v.*

Gastrolith (*gas'-tro-lith*) [γαστήρ, stomach; λίθος, a stone]. A calcareous formation in the stomach; gastric calculus; bezoar.

Gastrolithiasis (*gas-tro-lith-i'-as-is*) [γαστήρ, stomach; λιθίασις, the formation of calculi]. A morbid condition associated with the formation of gastroliths.

Gastrology (*gas-trol'-o-je*) [γαστήρ, stomach; λόγος, science]. A treatise on the stomach and its functions.

Gastromalacia (*gas-tro-mal-a'-se-ah*) [γαστήρ, stomach; μαλακία, softening]. An abnormal softening of the structural tissue of the stomach; it is generally believed to be due to post-mortem acidity.

Gastromelus (*gas-trom'-el-us*) [γαστήρ, stomach; μέλος, limb]. A monster with accessory limbs attached to the abdomen.

Gastromenia (*gas-tro-me'-ne-ah*) [γαστήρ, stomach; μήν, month]. Vicarious menstruation by the stomach.

Gastrometritis (*gas-tro-me-tri'-tis*) [γαστήρ, stomach; μήτρα, womb; ιτις, inflammation]. Gastritis concurrent with metritis.

Gastromycetes (*gas-tro-mi-se'-tēz*) [γαστήρ, stomach; μύκης, mushroom]. A group of fungi, the spores of which are enclosed in a cavity or pouch.

Gastropancreatic (*gas-tro-pan-kre-at'-ik*) [γαστήρ, stomach; πάγκρεας, pancreas]. Both gastric and pancreatic.

Gastropathy (*gas-trop'-ath-e*) [γαστήρ, stomach; πάθος, disease]. Any disease or disorder of the stomach.

Gastro-pericarditis (*gas-tro-per-ik-ar-di'-tis*) [γαστήρ, stomach; περί, around; καρδία, heart; ιτις, inflammation]. Gastritis concurrent with pericarditis.

Gastroperiodynia (*gas-tro-per-e-o-din'-e-ah*) [γαστήρ, stomach; περίοδος, period; ὀδύνη, pain]. Periodic gastralgia.

Gastrophrenic (*gas-tro-fren'-ik*) [γαστήρ, stomach; φρήν, diaphragm]. Relating to both stomach and diaphragm.

Gastroplegia (*gas-tro-ple'-je-ah*) [γαστήρ, stomach; πληγή, stroke]. Paralysis of the stomach.

Gastropore (*gas'-tro-por*) [γαστήρ, stomach; πόρος, pore]. In biology, the mouth-opening of a gasterozoöid.

Gastroptosis (*gas-trop-to'-sis*) [γαστήρ, stomach: πτῶσις, fall]. A prolapse or downward displacement of the stomach.

Gastro-pylorectomy (*gas-tro-pi-lor-ek'-to-me*) [γαστήρ, stomach; πυλωρός, a gate-keeper; ἐκτομή, excision]. Surgical excision of the pyloric portion of the stomach.

Gastropyra (*gas-trop'-ir-ah*) [γαστήρ, stomach; πῦρ, fire]. Inflammation or phlegmasia of the stomach.

Gastrorrhagia (*gas-tror-a'-je-ah*) [γαστήρ, stomach; ῥηγνύναι, to break forth]. See *Hematemesis.*

Gastrorrhaphy (*gas-tror'-a-fe*) [γαστήρ, stomach; ῥαφή, suture]. Suture of wounds of the abdominal wall or stomach.

Gastrorrhea (*gas-tror-e'-ah*) [γαστήρ, stomach; ῥοία, a flow]. Excessive secretion, or regurgitant flow, of gastric mucus or liquid.

Gastrorrhexis (*gas-tror-eks'-is*) [γαστήρ, stomach; ῥῆξις, a breaking]. Rupture of the stomach.

Gastroscope (*gas'-tro-skōp*) [γαστήρ, stomach; σκοπεῖν, to see]. An instrument for viewing the interior of the stomach. It consists essentially of a tube with an incandescent electric light and reflecting prisms.

Gastroscopy (*gas-tros'-ko-pe*) [γαστήρ, stomach; σκοπεῖν, to see]. The inspection of the interior of the stomach by means of the gastroscope.

Gastrosis (*gas-tro'-sis*) [γαστήρ, stomach; νόσος, disease: *pl.*, *Gastroses*]. A general term for any disease of the abdomen or of the stomach only.

Gastrosphongioma (*gas-tro-sfon-je-o'-mah*) [γαστήρ, stomach; σφογγιά, sponge; ὄμα, tumor: *pl.*, *Gastrosphongiomata*]. A fungosity of the stomach.

Gastrosplenic (*gas-tro-splen'-ik*) [γαστήρ, stomach; σπλήν, spleen]. Relating both to the stomach and the spleen.

Gastrosplenitis (*gas-tro-splen-i'-tis*) [γαστήρ, stomach; σπλήν, spleen; ιτις, inflammation]. Inflammation of both stomach and spleen.

Gastrostege (*gas'-tro-stej*) [γαστήρ, stomach, στέγη, a roof]. In biology, one of the short, wide, transverse scutes or scales that cover the ventral surface of a snake.

Gastrostenosis (*gas-tro-ste-no'-sis*) [γαστήρ, stomach; στενός, narrow]. A stricture or morbid contraction of the stomach.

Gastrostomy (*gas-tros'-to-me*) [γαστήρ, stomach; στόμα, mouth]. The establishing of a fistulous opening into the stomach.

Gastrosuccorrhea (*gas-tro-suk-or-e'-ah*) [γαστήρ, stomach; *succus*, juice; ῥοία, a flow]. Reichmann's disease; hypersecretion of the gastric juice.

Gastrothoracic (*gas-tro-tho-ra'-sik*) [γαστήρ, belly; θώραξ, thorax]. Pertaining both to the abdomen and the thorax.

Gastrotome (*gas'-tro-tōm*) [γαστήρ, stomach; τομή, a cutting]. A cutting instrument used in gastrotomy.

Gastrotomy (*gas-trot'-o-me*) [γαστήρ, stomach; τέμνειν, to cut]. Incision of the abdomen or the stomach.

Gastrotrichous (*gas-trot'-rik-us*) [γαστήρ, stomach; θρίξ, hair]. In biology, having the ventral surface of the body ciliated.

Gastro-typhoid (*gas'-tro-ti'-foid*) [γαστήρ, stomach; τῦφος, smoke]. Typhoid fever with pronounced gastric symptoms.

Gastrovascular (*gas-tro-vas'-ku-lar*) [γαστήρ, stomach; *vasculum*, a little vessel]. Common to the functions of digestion and circulation, as the body-cavity of some animals.

Gastroxia (*gas-troks'-e-ah*) [γαστήρ, stomach; ὀξύς, acid]. Abnormal acidity of the contents of the stomach.

Gastroxynsis (*gas-troks-in'-sis*) [γαστήρ, stomach; ὀξύνειν, to irritate]. Rossbach's term for hyperchlorhydria; a periodic form of nervous dyspepsia with hyperacidity of the gastric juice. It is, in fact, a neurosis of secretion that may be quite independent of the time of digestion. It is a rare condition, and is associated either with profound neurasthenia or with locomotor ataxia. It is marked by a gnawing, unpleasant sensation in the stomach, severe headache, and the vomiting of a clear, watery, intensely acid secretion.

Gastrula (*gas'-tru-lah*) [γαστήρ, belly: *pl.*, *Gastrulæ*]. In biology, a stage in the development of Metazoans, in which the germ consists of a two-layered sac, produced by the invagination of the one-layered, hollow germ-sphere, the blastula.

Gastrulation (*gas-tru-la'-shun*) [γαστήρ, belly]. In biology, the process of formation of the gastrula by the invagination of the blastula.

Gastruria (*gas-tru'-re-ah*) [γαστήρ, stomach; οὖρον, urine]. A supposed passage of urine into the stomach.

Gate-vein (*gāt'-vān*). An old name for the portal vein.

Gathering (*gath'-er-ing*) [ME., *gadering*, a gathering]. A popular name for an abscess, pustular inflammation, or suppurating sore.

Gattine (*gat-ēn'*) [F.]. A disease of the silk-worm.

Gaubius' Table. See *Dose.*

Gaule's Experiment. See *Cytozoön.*

Gaultheria (*gawl-the'-re-ah*) [after Dr. *Gaultier*, a Canadian physician]. Wintergreen, Teaberry. The leaves of wintergreen, *G. procumbens*, an evergreen plant, with properties due to a volatile oil, methyl salicylate, which is also found in black birch and several other plants. It is stimulant, astringent, and antipyretic, and is used in rheumatism and gout, or when salicylic acid is indicated. **G., Ol.**, oil of wintergreen, much used as a flavor. Dose, ♏iij–x. **G., Spt.**, oil of wintergreen 5, alcohol 95. Dose, ʒss–ij. **G. fragrans**, of India, affords an identical oil.

Gaultherilene (*gawl-ther'-il-ēn*) [after Dr. *Gaultier*, a Canadian physician], $C_{10}H_{16}$. A peculiar hydrocarbon found in the oil of gaultheria. It is a colorless, yellow or reddish liquid, of a peculiar strong and aromatic odor, a sweetish, warm, and aromatic taste, a slightly acid reaction, and a specific gravity of about 1.180. It is readily soluble in alcohol.

Gaulthier's Reagent. See *Tests, Table of.*

Gauntlet (*gahnt'-let*, or *gawnt'-let*) [OF., *gantelet*, dim. of *gant*, a glove]. A surgical bandage that covers the hand and fingers like a glove. See *Bandage.*

Gauze (*gawz*). A thin, open-meshed cloth used for surgical dressings. When impregnated with antiseptic solutions or substances it is called *antiseptic gauze*, or, according to the substance used, it is spoken of as *iodoform-gauze*, *sublimate-gauze*, *etc.* See *Carbasus.*

Gavage (*gav-ahzh'*) [Fr.]. 1. The regular feeding of an infant with freshly-drawn mother's milk, through a small, soft catheter passed into the stomach at each feeding. 2. The administration of liquid nourishment through the stomach-tube.

Gavard's Muscle. See *Muscles, Table of.*

Gay-Lussac's Laws. See *Law.*

Gazeol (*gaz'-e-ol*) [Fr., *gazéol*]. A mixture of naph-

thalin, 1 part; benzene, 10 parts; acetone, 10 parts; coal-tar, 100 parts; aqua ammoniæ (20 per cent.), 1000 parts; it is recommended as affording a vapor for inhalation in whooping-cough.

Geber's Glomerules. The convolutions of the terminal branches of the nerves supplying the epithelial lining of the mouth.

Geddes' Fluid Extract. See *Abies*.

Geissler Tube. A glass tube designed to show the effects of electric discharges through gases at low pressure.

Geissler's Apparatus. An apparatus for estimating the quantity of carbonic acid in a carbonate.

Geissospermin, or **Geissin** (*gi-so-sper'-min*, or *gi'-sin*) [γεῖσσον, cornice; σπέρμα, seed], $C_{19}H_{24}N_2O_2 + H_2O$. An alkaloid from the bark of *Geissospermum lævе;* it is a depressant of the respiration and of the cardiac action.

Geissospermum (*gi-so-sper'-mum*) [γεῖσσον, cornice; σπέρμα, seed]. A genus of apocynaceous trees. **G. lævе** and **G. vellosii,** of Brazil, afford *Pao-pereira* ("pear-tree") bark, an active febrifuge and astringent. Unof.

Geitonogamy (*gi-ton-og'-am-e*) [γείτων, a neighbor; γάμος, marriage]. In biology, fertilization of one flower by pollen from another flower of the same plant.

Gelasma (*jel-az'-mah*) [γήλασμα, laughter], or **Gelasmus** (*jel-az'-mus*) [γελαστός, laughable]. Insane or hysteric laughter.

Gelatin (*jel'-at-in*) [*gelare*, to congeal]. An albuminoid substance of jelly-like consistence, obtained by boiling skin, connective tissue, and bones of animals in water. The glue of commerce is an impure variety. See *Glue*. **G. Bath.** See *Bath*. **G., Blasting.** See *Blasting Gelatin*. **G. Capsules,** capsules of gelatin designed for containing medicines of nauseating taste. **G. Culture-medium,** a jelly made by a solution of the best commercial food-gelatin in the proportion of 6, 8, or 10 parts to 100 of water, with 1 or 2 parts of dried peptones or glucose (the latter not to be used if the culture is to be made on slides) for increased nutritive value. Bicarbonate of soda is used to neutralize the acid reaction. This, in bacteriology, is simply known as *Gelatin*. **G.-dynamite.** See *Blasting Gelatin*. **G., Liquid,** a substance for fastening paper to glass, wood, or paper; its formula is:—

Gelatin or clear glue,	75 to 100 grams (℥ij)
Commercial acetic acid (No. 8),	100 c.c. (3-4 f℥j)
Water,	100 c.c. (3-4 f℥j)
95 per cent. Alcohol,	100 c.c. (3-4 f℥j)
Glycerin,	15 to 30 c.c. (½ to 1 f℥j)

Crush the glue and put it into a bottle with the acid; set in a warm place and shake occasionally. After three or more days add the other ingredients. **G., Medicated,** a soft basis consisting of gelatin 3, zinc oxid 3, glycerin 5, water 9 parts, to which antiseptic or other medicaments may be added. It is preferable to greasy ointments. All unof. **G. Sugar.** See *Glycin*.

Gelatinigerous (*jel-at-in-ij'-er-us*) [*gelatina*, gelatin; *gerere*, to bear]. In biology, applied to such organisms as secrete a gelatinous investment.

Gelatinoid (*jel'-at-in-oid*) [*gelare*, to freeze; εἶδος, likeness]. 1. Resembling gelatin. 2. Any member of a class of nitrogenous substances, including chondrin, collagen, elastin, gelatin, etc.

Gelatinous (*jel-at'-in-us*) [*gelare*, to freeze]. Resembling or having the nature of gelatin. **G. Tissue.** See *Animal Tissue*.

Gelatio (*jel-a'-she-o*) [L.]. Synonym of *Frostbite*.

Gelation (*jel-a'-shun*) [*gelatio*, a freezing]. 1. Freezing; also frost-bite, or chilblain. 2. Catalepsy.

Geld [ME., *gelden*, to castrate]. To castrate.

Gelding (*gel'-ding*) [ME., *gelding*, a eunuch]. 1. Castration. 2. A castrated person or animal.

Gelidium (*jel-id'-e-um*) [*gelum*, cold]. A genus of seaweed. **G. corneum,** affords gelosin, and others, as **G. spiniform,** supply some portion of the agar-agar of commerce.

Gelle's Experiment. A diminution of the bone-conduction of sound resulting from compression of the air in the external auditory canal.

Gellert's Green. Same as *Rinmann's Green*.

Gelose (*jel-ōz'*) [*gelare*, to freeze]. 1. The gelatinizing principle of agar-agar. 2. A culture-medium used in bacteriologic investigation. Gelatin liquefies at 23° or 24° C., and is thus inferior to gelose for those cultures that require a higher degree of heat for their proper development. Agar-agar contains a considerable proportion of chemic gelose. Of the agar-agar a jelly is made, 2 to 3 parts (to 100) of dried peptone added; 10 to 15 parts of this substance to 50 parts of water, with 1 to 5 of glycerin, form a nutritive jelly which is called *gelose*, from its essential ingredient. It is also called *Parabin*.

Gelosin (*jel'-o-sin*) [*gelare*, to freeze]. A mucilage resembling gelose, and extracted from some kinds of agar-agar and from various species of algæ. It is soluble in water and alcohol, and is an excellent excipient for powders, tinctures, and salts, and is serviceable in bacterial cultures. Unof.

Gelsemin (*jel'-sem-in*) [*gelseminum*, jasmine]. 1. $C_{11}H_{19}NO_2$, a poisonous alkaloid from Gelsemium, *q. v.* 2. A precipitate or resinoid from a tincture of the root-bark of *Gelsemium sempervirens;* it is a febrifuge, antispasmodic, emmenagogue, and narcotic; dose ½ to 1 grain. Unof.

Gelseminin (*jel-sem'-in-in*) [*gelseminum*, jasmine]. An alkaloid of *Gelsemium*. It is an amorphous yellowish-white, bitter, very poisonous powder, soluble in ether and chloroform, less so in alcohol and water. Dose gr. $\frac{1}{60}$–$\frac{1}{20}$.

Gelsemium (*jel-se'-me-um*) [*gelseminum*, jasmine], $C_{11}H_{19}NO_2$. Yellow Jasmine. The root of *G. sempervirens*, abundant in the southern U. S., with properties mainly due to an alkaloid, *gelsemin*, a powerful motor depressant, antispasmodic, and diaphoretic. In toxic doses it produces diplopia, extreme muscular weakness, and anesthesia, death occurring from asphyxia. It is useful in exaltation of nerve-action and in cerebro-spinal meningitis, and is especially valuable in remittent and malarial fevers. Dose gr. ij–xx. **G., Ext., Alcoholic** (B. P.). Dose gr. ¼–½. **G., Ext., Fld.,** alcoholic. Dose ♏ij–xx. **G., Tinct.,** 15 per cent. in strength. Dose ♏x–℥j. **Gelseminin,** the alkaloid. Dose gr. $\frac{1}{60}$–$\frac{1}{20}$. **G., Hydrochloras,** freely soluble in water. Dose gr. $\frac{1}{60}$–$\frac{1}{20}$. **G., Hydrochlorat., Liq.,** one grain in one dram. Dose ♏j–iij, hypodermatically.

Gely's Suture. See *Suture*.

Gemellus (*jem-el'-us*) [dim. of *geminus*, twin]. Double. In pairs. **G. Muscle,** the gastrocnemius muscle, on account of its double origin. See *Muscles, Table of*.

Gemina (*jem'-in-ah*) [L., twins]. A name for the corpora quadrigemina, or optic lobes. They constitute the larger part of the mesocœlian roof.

Geminate (*jem'-in-at*) [*geminus*, a twin]. In pairs. In biology, parts that are disposed in pairs.

Geminiflorous (*jem-in-if-lo'-rus*) [*geminus*, twin; *flos*, flower]. In biology, applied to plants that produce flowers in pairs.

Geminous (*jem'-in-us*) [*geminus*, a twin]. Same as *Geminate*. **G. or Connate Teeth,** twin-formation of two teeth from the occurrence of a double dental germ in a single sac, from which are developed two

teeth of the same class, when normally there should be but one.

Gemma (*jem'-ah*) [L., a swelling bud, a germ: *pl.*, *Gemmæ*]. In biology, one of the various asexual reproductive bud-like processes of cryptogams.

Gemmation (*jem-a'-shun*) [*gemmare*, to put forth buds]. In biology, asexual reproduction by budding, as distinguished from fission and free-cell formation. Gemmation occurs in certain cryptogams and in the *Cœlenterata*, *Polyzoa*, and *Tunicata* among animals, in which the bud arises as an evagination of the ectoderm only. Cf. *Idioplasm*, *Blastemic*, and *Budding*.

Gemmipara, Gemmiparæ (*jem-ip'-ar-ah*, *-e*) [*gemma*, a bud; *parere*, to produce]. In biology, organisms that reproduce by budding.

Gemmule (*jem'-ūl*) [*gemmula*, a little bud; dim. of *gemma*, a bud]. In biology, (*a*) one of the small buds produced by a gemmiparous organism. (*b*) In Darwin's theory of pangenesis, one of the invisible granules or atoms, being given off continually by all the cells of the body, conveyed into the blood and circulated through the body to finally settle down in other cells, especially the germ-cells. Each gemmule is supposed to reproduce the cell from which it is derived, and the gemmules of the different cells become active in the same order as that in which the corresponding cells followed each other in the ontogeny of the parent. Galton accepted the "gemmule hypothesis," but denied the circulation of the gemmules. Brooks attributes to the male germ-cell a particularly strong power of attraction for the gemmules, so that it collects a special mass of them and stores them up. Cf. *Anlage*, *Biophor*, *Determinant*, *Id*, *Idioplasm*, *Heredity*.

Gena (*je'-nah*) [L., the cheek: *pl.*, *Genæ*]. In biology, applied to a rather poorly defined region on the side of the head of various animals; the cheek.

Genal (*je'-nal*) [γένυς, the cheek]. Relating to the gena, or cheek.

Genepi (*jen'-ep-e*). See *Genipi*.

Genera (*jen'-er-ah*) [L.]. Plural of *Genus*, *q.v.*

General (*jen'-er-al*) [*generalis*, of a kind]. Common to a class; universal. **G. Anatomy**, histology, especially comparative histology. **G. Anemia**, oligemia; also, deficiency of hemoglobin in the blood. **G. Paralysis**, or **Paresis**. See *Paralysis*, *General, of the Insane*.

Generale (*ja-ne-ral'-e*) [Fr.]. Synonym of *Influenza*.

Generate (*jen'-er-āt*) [*generare*, to beget]. To beget; to produce of the same kind.

Generatio æquivoca (*jen-er-a'-she-o e-kwiv'-o-kah*) [L.]. See *Generation, Equivocal*.

Generation (*jen-er-a'-shun*) [*generatio*, a begetting]. The begetting or production of offspring. **G., Alternate**, in biology, the alternation of asexual with sexual generation, the offspring of one process differing from that of the other, *e.g.*, the asexual fern and the sexual prothallium, the asexual hydroid-polyp and the sexual medusa. **G., Alternations of**. See *Alternations of Generation*. **G., Equivocal**, spontaneous generation; birth from parentage of another form; abiogenesis. **G., Fissiparous**. See *Fission*. **G., Organs of**, those that are functional in reproduction; the genitalia. **G., Spontaneous**, abiogenesis; the generation of living from non-living matter.

Generator (*jen'-er-a-tor*) [*generare*, to generate]. One who, or that which, begets or causes. **G.-gas**, a gas formed from coal, varying in composition according to the kind of coal employed and the manner of working; it is used to gasify coke and for the production of heat and power.

Generic (*jen-er'-ik*) [*genus*, a kind]. Pertaining to the same genus.

Genesial (*jen-e'-ze-al*) [γένεσις, origin]. Pertaining to generation. **G. Cycle**, the periods of ovarian, uterine, and mammary activity into which the reproductive life of the female is divided; the first extending from puberty to conception, the second from conception to gestation, and the third from gestation through lactation.

Genesiology (*jen-e-ze-ol'-o-je*) [γένεσις, reproduction; λόγος, science]. The science of reproduction.

Genesis (*jen'-es-is*) [γένεσις, production]. The act of begetting; development; origin; formation; generation.

Genetic (*jen-et'-ik*) [γένεσις, generation]. Pertaining to generation, or to anything inherited. **G. Affinity**, relationship by direct descent.

Genetous (*jen'-et-us*) [γένεσις, generation]. Congenital; existing from some point or period in fetal life; as genetous idiocy.

Genévrette (*zhen-a-vret'*) [Fr.]. A drink made by the fermentation of wild fruits with juniper-berries and wine; it is popular in parts of Switzerland.

Genga's Bandage. See *Bandage*.

Genial (*je'-ne-al*) [*gena*, chin]. Pertaining to the chin. **G. Tubercles**, four prominent tubercles on the internal surface of the lower jaw.

Genian (*je'-ne-an*) [*gena*; γένειον, chin]. Pertaining to the chin.

Geniculate, Geniculated (*jen-ik'-u-lāt*, *-ed*) [*geniculare*, to bend the knee]. In biology, kneed, or abruptly bent. **G. Bodies**, the corpora geniculata; two oblong, flattened bodies on the outer side of the corpora quadrigemina and under the back part of the optic thalamus. See *Geniculum*. **G. Ganglion**. Same as *Intumescentia gangliformis*.

Geniculum (*jen-ik'-u-lum*) [*genu*, knee]. One of the two eminences on the latero-caudal aspect of the diencephal; the *post-geniculum* is mesad and more distinct, and the *pre-geniculum*, laterad and less distinct.

Genio- (*je'-ne-o-*) [γένειον, the chin]. A prefix denoting connection with the chin. **G.-hyoglossus Muscle**. See *Muscles, Table of*. **G.-hyoid Muscle**. See *Muscles, Table of*.

Genioplasty (*je'-ne-o-plas-te*) [γένειον, chin; πλάσσειν, to form]. Plastic surgery, or a plastic operation, upon the chin.

Genipap (*jen'-e-pap*) [native Guiana, *Genipapo*]. The agreeable edible fruit of *Genipa americana*, a rubiaceous tree of tropical America. Cataplasms are made of the unripe fruit.

Genipi (*jen'-ip-e*) [Fr., *génèpi*]. A green bitter-sweet cordial, or liquor, made from Alpine herbs of the genera *Artemisia*, *Achillea*, etc.

Genista (*jen-is'-tah*) [L.]. A genus of leguminous plants. **G. canariensis**, affords some part of the so-called oil of rhodium. **G. purgans**, of W. Europe, is purgative and emetic. **G. tinctoria**, dyer's broom, is diuretic and purgative. Unof.

Genital (*jen'-it-al*) [*genitalis*, pertaining to generation]. Pertaining to the organs of generation or to reproduction. **G. Cord**, the union of the two ducts of Wolff and of Müller to form a common cord in the embryo. **G. Eminence**, or **Tubercle**, an elevation appearing about the sixth week of embryonic life, in front of the cloaca, and from which the penis or clitoris is developed. **G. Fissure**, a furrow extending from the genital eminence of the embryo to the cloaca. **G. Folds**, two plications at the side of the orifice of the cloaca. **G. Furrow**. Same as *G. Fissure*. **G. Sense**, the degree of vigorousness of the development of ovisacs.

Genitalia (*jen-it-a'-le-ah*) [*genitalis*, pertaining to gen-

eration]. The organs of generation. In the *male* these consist of two testicles or seminal glands, with their excretory ducts; a musculo-glandular organ, the prostate, which provides a material for the dilution of the semen; an organ of copulation, the penis; and a canal, the urethra, piercing the prostate and penis, and

EXTERNAL GENITALIA OF FEMALE.

1. Labia majora of right side. 2. Fourchet. 3. Labia minora. 4. Clitoris. 5. Urethral orifice. 6. Vestibule. 7. Orifice of the vagina. 8. Hymen. 9. Orifice of the vulvo-vaginal gland. 10. Anterior commissure of the labia majora. 11. Orifice of the anus.

serving for the transit of the generative and urinary secretions. The *female* genitals include an *external* part, the vulva, and the vagina, or passage-way leading to the *internal* organs; the latter include the ovaries, or organs of ovulation, with their ducts or Fallopian tubes, and the uterus, a musculo-mucous sac in which the ovum undergoes development and by which the fetus is ultimately expelled.

Genitalist (*jen'-it-al-ist*) [*genitalis*, pertaining to generation]. One who is a specialist in the treatment of diseases and affections of the genital organs.

Genito- (*jen'-it-o-*) [*genitus*, begotten, from *gignere*, to be born]. A prefix denoting connection or relation to the genital organs. **G.-anal,** pertaining to the genitals and the anus. **G.-crural.** See *Nerves, Table of.* **G.-enteric,** relating to the genitals and to the intestine. **G.-spinal Center.** See *Center.* **G.-urinary,** relating to the genitals and the urinary organs.

Gennari, Line of. See *Lines, Table of.*

Genoblast (*jen'-o-blast*) [γένος, sex; βλαστός, germ]. 1. The nucleus of the impregnated ovum, regarded as bisexual. 2. An ovum or spermatozoid.

Genocatachresia (*jen-o-kat-ak-re'-ze-ah*) [γένος, sex; κατάχρησις, misapplication]. Perversion of the sexual instinct.

Genometabole (*jen-o-me-tab'-o-le*) [γένος, sex; μεταβολή, change]. The modification of sexual character that may follow the menopause.

Gentele's Green. See *Pigments, Conspectus of.*

Gentian, or **Gentiana** (*jen'-she-an,* or *jen-she-a'-nah*) [*gentiana*, gentian]. The root of *G. lutea*, a European, and of *G. catesbæi*, an American species, a simple, non-astringent bitter. It is highly esteemed as a stomachic tonic in convalescence from acute diseases and malarial fever. **G.-blue.** Same as *Spirit-blue.* **G., Ext.** Dose gr. j–v; dose of the British extract gr. ij–x. **G., Ext., Fld.** Dose ʒss–j. **G., Infusum, Comp.,** unof., gentian 10, bitter-orange peel 2½, coriander 2½, alcohol 40, water to make 320. Dose ʒj–ʒj. **G., Mist., Alkalin.,** unof., dil. hydrocyanic acid ♏iij, sodium bicarb. gr. xv, infus. gentian. comp. to make ʒj. Dose ℥j. **G. et Sennæ, Mist.,** unof., infus. of senna ʒiij, comp. tinct. cardamom ʒj, comp. infus. of gentian ʒvj. Dose ʒx. **G., Tinct., Comp.,** contains gentian 10, bitter-orange peel 4, cardamom 1, dil. alcohol to make 100. Dose ʒss–ij.

Gentiogenin (*jen-she-oj'-en-in*). See *Gentiopicrin.*

Gentiopicrin (*jen-she-o-pik'-rin*) [*gentiana*, gentian; πικρός, bitter], $C_{20}H_{30}O_{12}$. The principal constituent of *Gentian.* It is a peculiar, intensely bitter, crystalline glucosid, forming clear, radiate, or clustered needles, soluble in water and dilute alcohol, insoluble in ether. Diluted acids separate it into sugar and *gentiogenin*, a yellow, bitter, neutral powder.

Gentisin (*jen'-tis-in*) [*gentiana*, gentian], $C_{14}H_{10}O_5$. A coloring-matter contained in gentian-root; it crystallizes in yellow needles.

Genu (*je'-nu*) [*genu*, the knee: *pl.*, *Genua*]. 1. The knee. 2. Any bent or knee-shaped structure; as the *genu* of the corpus callosum, or of the optic tract. **G. corporis callosi,** the cephalic reflected part of the *corpus callosum.* **G.-cubital,** relating to the knee and the elbow; as the *Genucubital Posture,* in surgery. See *Postures, Table of.* **G. extrorsum,** out-knee; outward bowing of the knee; bow-leg. **G. facialis,** the curved portion of the bundle of rootlets emerging from the subnuclei of the *Nidus facialis*, and causing, together with the underlying nidus of the abducens, the *Eminentia facialis* on the floor of the fourth ventricle. **G.-pectoral,** relating to the knee and the chest. *G.-p. Posture,* the (so-called) Knee-chest Posture. See *Postures, Table of.* **G. recurvatum,** the backward curvature of the knee-joint. **G. valgum,** inward curving of the knee; knock-knee; in-knee. **G. varum.** Same as *G. extrorsum.*

Genual (*jen'-u-al*) [*genu*, the knee]. Pertaining to a knee or to a genu.

Genuclast (*jen'-u-klast*) [*genu*, knee; κλάειν, to break]. An apparatus for the forcible correction of knee-joint deformities or adhesions.

Genuflex (*jen-u-fleks'*) [*genu*, knee; *flexus*, bent]. Bent at, or like, the knee. Also, bent at any joint.

Genuflexion, Genuflection (*jen-u-flek'-shun*) [*genu*, knee; *flexus*, bent]. The bending or flexion of the knee.

Genuflexuous (*jen-u-fleks'-u-us*) [*genu*, knee; *flexus*, a bending]. In biology, zig-zag, with knee-like bendings.

Genus (*je'-nus*) [*genus*, a family: *pl.*, *Genera*]. A species or a number of species marked by one or more common characteristics that distinguish them from other groups of species.

Genyantralgia (*jen-e-an-tral'-je-ah*) [γένυς, jaw, ἄντρον, cave; ἄλγος, pain]. Pain or neuralgia in the antrum of Highmore.

Genyantritis (*jen-e-an-tri'-tis*) [γένυς, jaw; ἄντρον, cave; ιτις, inflammation]. Inflammation of the genyantrum.

Genyantrum, or **Genyantron** (*jen-e-an'-trum,* or *-tron*) [γένυς, jaw; ἄντρον, cave]. The maxillary antrum, or antrum of Highmore.

Genyplasty (*jen'-e-plas-te*) [γένυς, cheek, chin, jaw; πλάσσειν, to form]. An operation for reforming or restoring the cheek or jaw, imperfect either from injury or from congenital malformation.

Geoblast (*je'-o-blast*) [γῆ, earth; βλαστός, germ]. In biology, a plumule that in germination rises above the ground, leaving the cotyledons buried, *e. g.*, that of the pea.

Geoffroya (*je-off-roi'-yah*) [after *Geoffroy*, a French physician]. A genus of leguminous trees. **G. spinulose** and **G. vermifuga** are S. American trees with anthelmintic seeds. Unof.

Geogenous (*je-oj'-en-us*) [γῆ, earth; γενής, produced]. In biology, applied to such plants as grow on the ground, rather than on other plants; specifically applied to fungi.

Geographic Tongue. An eruption on the dorsum of the tongue, which becomes covered with sinuous, map-like lines. It is very chronic and obstinate in its nature, and most frequently attacks young children. It is probably the expression of a tropho-neurosis.

Geography (*je-og'-ra-fe*) [γῆ, earth; γράφειν, to write]. In medicine, a description of the earth's surface with reference to climatology and the distribution of disease, with relation to origin and locality.

Geolin (*je'-o-lin*) [γῆ, earth; *oleum*, oil]. A trade-name for a petrolatum resembling vaselin.

Geology (*je-ol'-o-je*) [γῆ, earth; λόγος, science]. The science treating of the structural development of the earth.

Geomalism (*je-om'-al-izm*) [γῆ, earth; ὁμαλός, even]. In biology, the tendency of organisms to adjust themselves to the attraction of gravitation by symmetric growth in horizontal planes.

Geomaly (*je-om'-al-e*). Same as *Geomalism*.

Geometry (*je-om'-et-re*) [γῆ, earth; μέτρον, a measure]. That branch of mathematic science that treats of the relations of magnitudes.

Geophagia (*je-o-fa'-je-ah*). See *Geophagism*.

Geophagism (*je-off'-aj-izm*) [γῆ, earth; φαγεῖν, to eat]. The practice of earth-eating or clay-eating; chthonophagia.

Geophagist (*je-off'-aj-ist*) [γῆ, earth; φαγεῖν, to eat]. A dirt-eater.

Geophagous (*je-off'-ag-us*) [γῆ, earth; φαγεῖν, to eat]. Addicted to dirt-eating.

Geophagy (*je-off'-aj-e*). See *Geophagism*.

Geophilous (*je-off'-il-us*) [γῆ, earth; φίλος, loving]. In biology, ground-loving, *e. g.*, certain snails.

Georgia Bark (*jor'-je-ah*) [after King *George*, of England]. The bark of *Pinckneya pubens*, a tree of N. America; it is said to be febrifuge. Unof.

Geotropic (*je-o-trop'-ik*) [γῆ, earth; τρέπειν, to turn]. Affected by or turning toward the earth; exhibiting a tendency to grow toward the earth. The roots of plants are *geotropic*.

Geotropism (*je-ot'-ro-pizm*) [γῆ, the earth; τρέπειν, to turn]. In biology, the tendency of roots and other parts to grow downward toward the earth.

Geotropy (*je-ot'-ro-pe*). Same as *Geotropism*.

Gephyrocercal (*jef-ir-o-ser'-kal*) [γέφυρα, a bridge; κέρκος, tail]. In biology, applied to fishes in which the aborted tail-fin is replaced by the union of the dorsal and anal fins.

Geraniin (*je-ra'-ne-in*) [γεράνιον, geranium]. A precipitate from the tincture of Cranesbill, *Geranium maculatum*. It stimulates and contracts the caliber of the capillary vessels of the mucous membranes, etc. Dose 1 to 3 grains. Unof.

Geranium (*je-ra'-ne-um*) [γεράνιον, geranium: *gen.*, *Geranii*]. Cranesbill-root. The root of *G. maculatum*, with properties due to tannic and gallic acids. It is useful in diarrhea, infantile colic, etc. **G., Ext., Fld.** Dose ɱv–ʒj.

Geratic (*jer-at'-ik*) [γῆρας, old age]. Relating to old age.

Geratology (*jer-at-ol'-o-je*) [γῆρας, old age; λέγειν, to speak]. That department of biology that treats of the decadence and gradual extinction of a group of organisms.

Gerber's Food. A variety of infantile milk-food having the following composition: Water, 6.78; fat, 2.21; grape-sugar and milk-sugar, 6.06; cane-sugar, 30.50; starch, 38.48; soluble carbohydrates, 44.76; albuminoids, 9.56; ash, 1.21.

Gerdy, Fibers of. See *Fibers*. **G., Ligament of.** See *Ligament*.

Gerhardt's Sign. See *Signs and Symptoms, Table of*. **G.'s Test.** See *Tests, Table of*. **G., Type Theory of,** the molecules were considered as residues that remain unaltered in certain reactions.

Gerlach's Ammonia-carmin. See *Stains, Table of*. **G.'s Carmin Mass,** a warm-flowing mass for injecting tissues. Dissolve 5 gm. of carmin in a mixture of 4 c.c. of water and 0.5 c.c. of ammonia. Allow the solution to stand several days, and mix with 8 parts of a solution of gelatin, 1 to 2. Filter and inject at a temperature of 40° C. **G.'s Network,** or **Plexus,** an exceedingly delicate fibrous network of the finest nerve-fibrils in the gray matter of the cord. **G.'s Theory,** pertains to the connection of the nerve-fibers and ganglionic cells of the cord. **G.'s Tubal Tonsil,** a granular condition sometimes noticed at the orifices of the Eustachian tubes in chronic inflammations in this region, and due to swelling of the muciparous glands of the tube. **G.'s Valve,** the fold of mucous membrane that surrounds the mouth of the vermiform appendix.

Gerlier's Disease. An affection (of farm-hands) characterized by sudden paroxysms of ptosis, vertigo, muscular paresis, and cervico-occipital pain. See *Diseases, Eponymic Table of*.

Germ (*jerm*) [L., *germen*, sprig, offshoot, embryo]. In biology, (*a*) a portion of matter potentially vital and having within itself the tendency to assume a definite living form (Harvey); a spore, a seed, an embryo. (*b*) A microbe or bacterium. **G.-area,** the germinal area, the germinal disc, *area germinativa*, the spot on an ovum where the development of the embryo begins. **G., Asexual,** or **Unisexual.** See *Parthenogenesis, Germ-plasm, Evolution,* and *Reproduction*. **G.-band,** in embryology, one of the bands that unite to form the primitive streak. **G.-cell.** 1. The germinal vesicle in a non-fertilized ovum. 2. The ovum that has been impregnated, but which is still a single cell; a cytula, or a blastomere; a simple sphere. See also *Heredity*. **G., Dentinal,** a tooth-papilla, or tooth-pulp. **G. of Disease,** the special virus or spore through which a disease becomes communicable. **G.-disc.** See *G.-area*. **G. Epithelium,** cylindric cells on the surface of the median plate of the mesoblast. **G.-flesh.** See *Sarcophyte*. **G.-gland,** a germ-producing gland; an ovary or a testicle. **G.-history,** ontogeny, *q. v.* **G.-layer,** in biology, any one of the membranes of a developing germ, as the *blastophylla, epiblast, mesoblast, hypoblast, endoderm, ectoderm, mesoderm, somatopleure, splanchnopleure*. **G.-plasm,** in biology, a term introduced by Weissmann to indicate the reproductive or hereditary substance of living organisms. It is held to contain all the primary constituents of the entire organism; it is never produced neogenetically, but is ever passed on from the germ-cell in which an organism originates in direct continuity to the germ-cells of succeeding generations. It causes the production of the new individual by directing the process of division in ontogeny, in the course of which it becomes changed in a regular manner. It is composed primarily of biophores (*q. v.*) or bearers of vitality, the smallest units that exhibit vital force. (Cf. *pangens*

of De Vries, *physiologic units* of Herbert Spencer, *plastidules* of Elsberg, and *plasomes* of Wiesner.) These biophores unite into groups called *determinants* (*q. v.*), each of which is a primary constituent of a cell. Groups of determinants in turn combine to form *ids* (Cf. *ancestral germ-plasms*), which correspond to the small granules hitherto called *micro-somata* (*q.v.*). The ids again form groups called *idants* (*q. v.*), which correspond with the *chromatosomes* (*q.v.*) or rod-like granular masses of chromatin in the nucleus. **G.-plasma**, the protoplasm of the ovum or germ, supposed to determine the character of the resultant offspring; the physical basis of heredity and of the conservation of the species. Its alleged unchangeableness is called "the immortality of the germ-plasma." See *Protoplasm*. **G.-plasms, Ancestral**, Weismann's term for bodies of a highly complex constitution, each containing all the primary constituents that are necessary to the formation of an organism ("*Ahnenplasmen*"), afterward supplanted by the word *id*, *q. v.*). **G.-pore**, in cryptogamic botany, a simple pit in the coat of a spore or an opening that serves as a place of exit for the tubular outgrowths from the spore at the time of germination (De Bary). **G.-sac**, the vesicle constituting the blastoderm of mammals. **G., Specific**, same as *Germ*. **G.-theory**, the doctrine of the origin of every organism from a germ or germ-plasm; *blastogenesis*, as distinguished from *neogenesis*, or spontaneous generation. Also the doctrine that certain diseases are dependent upon the presence of certain microörganisms. **G.-tube**, in cryptogamic botany the filamentous growth of a spore upon germination. **G.-vesicle.** See *Germinal Vesicle*.

German (*jer'-man*) [*Germanus*, German]. Pertaining or belonging to Germany. **G. Breast-tea**, a decoction of althea, *q. v.* **G. Black.** Same as *Frankfort Black*. **G. Chamomile.** See *Matricaria*. **G. Disease.** Synonym of *Influenza*. **G. Ichthyol.** See *Thiol*. **G. Measles.** See *Rubeola*. **G. Method**, the oral method of instruction for deaf-mutes. **G. Tinder.** See *Amadou*.

Germander (*jer-man'-der*, or *jer'-man-der*) [ME., *germaunder*, germander]. A popular name for plants of the labiate genus *Teucrium*. *T. chamædrys*, of Europe, is a popular polychrest remedy. *T. marum* is diaphoretic, tonic, and emmenagogue. Unof.

Germarium (*jer-ma'-re-um*) [*germen*, germ]. In biology, applied to the ovary of certain invertebrates.

Germicidal (*jer'-mis-i-dal*) [*germen*, a germ; *cædere*, to kill]. Destructive of germs.

Germicide (*jer'-mis-id*) [*germen*, germ; *cædere*, to kill]. A microbicide; an agent that destroys germs.

Germiculture (*jer'-me-kul-chūr*) [*germen*, germ; *cultura*, culture]. The artificial culture of bacteria.

Germifuge (*jer'-mif-ūj*) [*germen*, a germ; *fugare*, to banish]. 1. Having the power of expelling germs. 2. An agent that expels germs.

Germinal (*jer'-min-al*) [*germen*, a germ]. Pertaining to a germ or the genesis of a tissue or organ. **G. Area**, the *Area germinativa*, or *embryonal shield*, a white round spot upon one side of the vitelline membrane in which the blastoderm becomes double. **G. Disc.** See *Disc*. **G. Matter.** See *Protoplasm*. **G. Membrane**, the blastoderm. **G. Spot**, the nucleolus of the ovule. **G. Vesicle**; (*a*) the blastosphere or blastodermic vesicle; (*b*) a lacuna in the substance of the germ; (*c*) the imperfectly formed germ-cell in the embryo-sac previous to fertilization. Cf. *Gastrocystis*.

Germination (*jer-min-a'-shun*) [*germinatio*, sprouting, budding]. In biology, the development of an embryo from the ovum. Sprouting of a seed or spore.

Germule (*jer'-mūl*) [*germen*, a germ]. An incipient germ.

Gerocomia, or Gerocomy (*jer-o-ko'-me-ah*, or *jer-ok'-o-me*) [γέρων, old man; κομεῖν, to care for]. The hygienic and medical care of old people.

Gerocomium (*jer-o-ko'-me-um*) [γέρων, old man; κομεῖν, to care for]. A home or institution for aged people.

Geromarasmus (*jer-o-mar-az'-mus*) [γέρων, old man; μαρασμός, a wasting]. Emaciation and weakness characteristic of extreme old age.

Geromeninguria (*jer-o-men-in-gu'-re-ah*) [γέρων, old man; μῆνιγξ, membrane; οὖρον, urine]. That senile condition in which the urine contains membranous shreds.

Geromorphism (*jer-o-mor'-fizm*) [γῆρας, old age; μορφή, form]. Decrepitude of the cutaneous system; appearance of age in a young person.

Geroni speciosa (*jer-o'-ne spe-she-o'-sah*) [L.]. An Andean plant, having a local reputation as a remedy for syphilis and rheumatism. Unof.

Gerontoxon (*jer-on-toks'-on*). See *Arcus senilis*.

Geropigia (*jer-o-pij'-e-ah*) [*Port.*]. A strongly sweetened and colored mixture of brandy and grape-juice, used in adulterating and fortifying wines.

Gerst's Method. See *Treatment, Methods of*.

Gestation (*jes-ta'-shun*) [*gestatio; gestare*, to bear]. Same as *Pregnancy*. **G., Abdominal**, the form of extra-uterine gestation in which the product of conception is developed in the abdominal cavity. **G., Double.** 1. Twin pregnancy. 2. The coëxistence of uterine and extra-uterine pregnancy. **G., Ectopic.** Same as *G., Extra-uterine*. **G., Extra-uterine**, pregnancy in which the product of conception is not contained in the uterine cavity. **G., Dorsal**, the hatching of eggs on the back, as occurs in certain batrachians, *e. g.*, the Surinam toad. **G., Mammary or Pouch**, the completion of growth in a pouch, as in marsupials. **G., Oral**, applied to the hatching of eggs in the mouth, as occurs in some fishes.

Geum (*je'-um*). See *Avens*.

Gheel System (*gēl sis'-tem*) [from *Gheel*, a town in Belgium]. The colony-plan of housing, boarding, and treating the insane, which prevails at Gheel, in Belgium.

Giacomi's Method. A method of staining the bacillus of syphilis. See *Stains, Table of*.

Giacomini's Method of Preserving the Brain. Immerse the brain in a saturated solution of chlorid of zinc; turn several times daily and inject 600 grms. of the liquid through the carotids. Remove the membranes in 48 hours. Allow the brain to remain in the solution until it begins to sink, then immerse in alcohol for 10 days. Immerse in glycerin until it sinks; remove, allow to dry, and varnish.

Giampetro-Löwenberg Method. A method of introducing the Eustachian catheter. The catheter is passed into the pharynx, and the beak is then turned toward the opposite tube and the catheter withdrawn until it catches on the posterior edge of the septum narium, when it is rotated in the opposite direction through an arc of at least 180° into the tube which it is desired to catheterize.

Giant (*ji'-ant*) [γίγας, large or ponderous]. An adult of a species excessively developed in stature and proportions. **G.-cell.** See *Cell*. **G. Pelvis.** See *Pelvis, Female, Deformities of*. **G.-powder.** See *Dualin*. **G.-swelling.** See *Angio-neurotic Edema* and *Urticaria tuberosa*. **G. Urticaria.** See *Urticaria ædematosa*.

Giantism (*ji'-an-tizm*) [γίγας, large]. Excessive overgrowth; the quality of being gigantic. Gigantism.

Gianuzzi, Cells or Crescents of. Granular protoplasmic cells found in mucous glands between the mucous cells and the basement-membrane; they play an important part in the functional activity of the gland. They are also called *demilune* cells. See *Cell.*

Gibbes' Method. A method of staining tubercle-bacilli. See *Stains, Table of.*

Gibbon's Hydrocele. See *Diseases, Table of.*

Gibbositas (*gib-os'-it-as*) [L.]. Gibbosity; the condition of being a hunchback.

Gibbosity (*gib-os'-it-e*) [*gibber*, a hunch, a hump]. In biology, a hump or irregular protuberance.

Gibbous (*gib'-us*) [*gibber*, hunched]. Swollen, convex, protuberant, especially upon one side.

Gibert's Pityriasis. See *Diseases, Table of.* **G.'s Syrup.** See *Hydrargyrum.*

Giblets (*jib'-lets*) [OF., *gibelet, giblets*]. The entrails of fowl.

Gibraltar Fever. Synonym of *Yellow Fever* and of *Mediterranean Fever.*

Gibson's Bandage. See *Bandage.*

Gid (*gid*) [ME., *gidie*, dizzy]. Staggers in sheep, a disease caused by a cystic worm in the brain, formerly called *Cœnurus cerebralis, q. v.* See under *Parasites* (*Animal*), *Table of.*

Giddiness (*gid'-e-nes*) [ME., *gidie*, dizzy]. A sensation of whirling or unsteadiness of the body, usually accompanied by more or less nausea. See *Gid.*

Giesbrecht's Method. A method of mounting serial sections. Make a solution of brown shellac in alcohol; filter and paint on warmed slides; allow to dry. Over this paint a thin layer of creasote and put the sections in place. Then heat the slide on a water-bath for fifteen minutes at the melting-point of paraffin. Allow to cool; dissolve the paraffin in turpentine; mount in balsam. The tissue must have been stained *en masse* before embedding.

Gigantism (*ji-gan'-tizm*) [γίγας, giant]. Abnormally exaggerated size; excessive overgrowth; great hypertrophy or auxesis. Giantism.

Gigantoblast (*ji-gan'-to-blast*) [γίγας, giant; βλαστός, a germ]. A large germ said to exist in the blood in cases of pernicious anemia. It somewhat resembles the larger megalocyte.

Giganto-cellular (*ji-gan'-to'-sel'-u-lar*) [γίγας, giant; *cella*, cell]. Characterized by giant-cells; as *Gigantocellular Endothelioma.*

Gigartina (*jig-ar-ti'-nah*) [L.]. A genus of seaweeds, several species of which are used in the same way as *Carragheen*, for human food. Some of the agar-agar of commerce is believed to be the product of plants of this genus.

Gigerium (*ji-je'-re-um*) [*gigeria*, the entrails of poultry]. In biology, the gizzard of birds, or the thickened muscular portion of the stomach in certain mammals. See *Gizzard.*

Gigger (*jig'-er*). See *Pulex.*

Gila monster. See *Heloderma.*

Gill (*gil*) [ME., *gile, gylle*, a gill]. One of the respiratory organs of such animals as breathe the air that is mixed with water. The gills first appear in the *Polychæta.* Cf. *Branchiæ.* **G.-hearts,** contractile expansions, with but a single cavity, at the base of the blood-vessels conducting the blood to the branchiæ in the higher crustacea.

Gillenia (*jil-e'-ne-ah*) [after Dr. Arnold *Gill*, a German botanist]. A genus of rosaceous herbs. **G. stipulacea** (Bowman's root, Indian physic) and **G. trifoliata,** both of N. America, are good, safe, and effective substitutes for ipecac. Unof.

Gillenin (*jil'-en-in*) [after Dr. *Gill*, a German botanist]. The active principle of *American Ipecac.* It is a bitter, slightly odorous, permanent powder with emetic properties.

Gimbernat's Ligament. See *Ligament.*

Gin (*jin*) [ME., *gynypre*, juniper]. Common grain-spirit distilled and aromatized with juniper-berries. The finest gin, known as "Holland," is made in the distilleries of Schiedam, whence also the name "Schiedam Schnapps." See *Spiritus juniperi.* **G.-drinker's Liver.** See *Cirrhosis*, and *Hobnail Liver.* **G.-liver.** See *Cirrhosis.*

Gingelly Oil (*jin-jel'-e oil*). See *Sesami, Oleum.*

Ginger (*jin'-jer*). See *Zingiber.*

Gingiva (*jin-jiv'-ah*) [L. "the gum:" *pl.*, *Gingivæ*]. The vascular tissue surrounding the necks of the teeth and covering the alveoli.

Gingival (*jin'-jiv-al*) [*gingiva*, the gum]. Pertaining to the gums. **G. Line,** a blue or purplish line along the gums where they meet the teeth, indicative of chronic lead-poisoning; also, the reddish line on the gums sometimes seen in tuberculosis, etc. **G. Margin,** the line or edge of the gums where they meet the teeth; the free edge of the gums.

Gingivalgia (*jin-jiv-al'-je-ah*) [*gingiva*, gum; ἄλγος, pain]. Neuralgia of the gums.

Gingivitis (*jin-jiv-i'-tis*) [*gingiva*, the gums; ιτις, inflammation]. Ulitis; inflammation of the gums. **G., Expulsive,** osteo-periostitis of a tooth, which is gradually expelled from its socket.

Gingko (*ging'-ko*) [Jap.]. A genus of taxaceous trees. **G. biloba,** a native of Eastern Asia, is now common in the U. S. Its edible seeds are astringent and are said to restrain or to slow the secretion of urine. Unof.

Ginglymoid (*ging'-glim-oid*) [γίγγλυμος, a hinge; εἰδος, likeness]. Resembling a hinge-joint.

Ginglymus (*ging'-glim-us*). See *Diarthrosis.*

Ginseng (*jin'-seng*) [Chinese, *jintsan*, ginseng]. The fleshy root of several species of *Panax* or *Aralia. A. ginseng*, of Eastern Asia, and *A. quinquefolia*, of the U. S., are the best-known species. Ginseng is an aromatic bitter with tonic properties. Unof.

Giraffe, Girafy (*jir-af', -af'-e*). See *Endemic Colic* and *Dengue.*

Giraldensian Organ or **Organ of Giraldès.** The paradidymis. It is composed of a number of flat, white bodies, each of which consists of a collection of tubes blind at each end. It is situated at the posterior portion of the epididymis, between the head and the vas deferens.

Girdle (*gir'-dl*) [ME., *girdel*, a waistband]. Any band designed to go around the body. **G., Emphysematous.** See *Emphysema.* **G., Neptune's,** an abdominal bandage used in applying the wet-pack. **G.-pain,** a sensation as if a girdle were drawn tightly around the body. When not hysteric, it is characteristic of disease of the myelon, or of the nerve-roots. **G., Pelvic,** the bones (or cartilages) forming the support for the lower limbs of vertebrates. In mammals they consist of the ilia, ischia, and os pubes. **G.-sensation.** Same as *G.-pain.* **G., Shoulder,** the system of bones designed for the support of the upper limbs or arms. In man, the scapulæ and clavicles compose this structure.

Girgensohn's Method. A method of removing proteids from a liquid. Mix the solution with half its volume of a solution of common salt; add tannin in slight excess, and the proteids will be entirely precipitated.

Girmir (*gir'-mir*) [Arab]. Tartar of the teeth.

Giroflé (*jir-o-fla'*). See *Pigments, Conspectus of.*

Gizzard (*giz'-ard*) [OF., *gesier*; L., *gigerium*]. The strong muscular stomach of birds; also, the corre-

sponding organ at the pylorus of certain mammals. **G.-skin**, the lining membrane of a gizzard. Pigeons' gizzard-skins, dried and triturated, are a popular remedy for dyspepsia. See *Ingluvin*.

Glabella (*gla-bel'-ah*) [dim. of *glaber*, smooth]. The triangular space between the eyebrows. See *Craniometric Points*.

Glabellad (*gla-bel'-ad*) [dim. of *glaber*, smooth; *ad*, to]. Toward the glabellar aspect of the head.

Glabellar (*gla-bel'-ar*) [dim. of *glaber*, smooth; *ad*, to]. Pertaining to the glabella.

Glabellen (*gla-bel'-en*) [dim. of *glaber*, smooth]. Belonging to the glabella in itself.

Glabello-inial (*gla-bel'-o-in'-e-al*) [dim. of *glaber*, smooth; *ἰνίον*, the nape of the neck]. Included between the glabellum to the inion.

Glabello-obeliac (*gla-bel'-o-o-be'-le-ak*) [dim. of *glaber*, smooth; *ὀβελός*, a spit]. Included between the glabella to the obelion.

Glabello-occipital (*gla-bel'-o-ok-sip'-it-al*) [dim. of *glaber*, smooth; *occiput*, the occiput]. Included between the glabellum to the occiput.

Glabellum (*gla-bel'-um*) [*glaber*, smooth]. Same as *Glabella*.

Glabrate (*gla'-brāt*) [*glabrare*, to make smooth]. In biology, becoming or tending to smoothness or baldness.

Glabrous (*gla'-brus*) [*glaber*, smooth]. Smooth. In biology, destitute of hairs or down.

Glacial (*gla'-she-al*) [*glacies*, ice]. Icy; resembling ice in appearance, as glacial acetic or phosphoric acid. **G. Phosphoric-acid Test.** See *Tests, Table of*.

Glacialin (*gla-she-a'-lin*) [*glacies*, ice]. An antiseptic substance used for the preservation of foods. It consists of borax, boric acid, sugar, and glycerin.

Glaciation (*gla-she-a'-shun*) [*glacies*, ice]. A condition like that of ice; erosive effect like that of moving ice.

Gladiate (*glad'-e-āt*) [*gladius*, a sword]. In biology, ensiform, or sword-shaped.

Gladiolin (*glad-i'-o-lin*) [*gladius*, a sword. An alkaloid from brain-tissue.

Gladiolus (*glad-e-o'-lus*) [dim. of *gladius*, a sword]. 1. The middle or second piece of the sternum. 2. A genus of iridaceous flowering-plants. **G. segetum**, of Europe, is said to be aphrodisiac and emmenagogue. Unof.

Glair (*glār*) [ME., *glayre*, the white of egg]. The white of egg; any thin, viscous substance, as a mucous discharge.

Glairidin (*glār'-id-in*). Same as *Glairin*.

Glairin (*glār'-in*) [ME., *glayre*, the white of egg]. A peculiar organic, gelatinous substance found on the surface of some thermal waters. It is also called *baregin*, *plombierin*, *zoögene*, *glairidin*, *sulphurain*, and *zoidin*. See *Baregin*.

Glairy (*glār'-e*) [*glayre*, the white of egg]. Slimy; also, albuminous.

Glaisher's Factors. A table of figures for calculating the dew-point.

Glama (*gla'-mah*) [L.]. Lippitudo. An accumulation of gummy or hard material at the inner canthus of the eye; the material so accumulated.

Gland [*glans*, an acorn]. A name given to numerous bodies or organs of the body, both secretive and excretive in function, withdrawing from the blood material for other purposes, or that is injurious or of no use to the economy. In structure they may be simple, saccular, or tubular. Also, the bulbous end of the penis and clitoris. **G., Abdominal Salivary**, a term for the pancreas. **G., Absorbent.** See *G., Lymphatic*. **G., Accessory Lachrymal.** See *G. of Krause*. **G., Accessory Lactiferous.** See *G. of Montgomery*. **G., Accessory (of Pancreas).** See *G., Brunner's*. **G., Accessory (of Parotid).** See *Socia parotidis*. **G., Accessory (of Rosenmüller).** See *G., Rosenmüller's*. **G., Accessory Supra-renal**, a small gland sometimes connected with and resembling the supra-renal capsules. **G., Accessory Thyroid**, a small mass of gland-tissue connected with the thyroid gland. **G., Acinose**, one composed of acini. **G., Acinous.** See *G., Racemose*. **G., Aggregate.** See *G., Cowper's*. **G., Aggregated (of Bruch)**, a number of follicles in the conjunctiva, at the palpebro-sclerotic reflection. **G., Agminated.** See *G., Peyer's*. **G., Albumin**, in *Cestoda*, the gland that secretes the albuminous coating of the ovum. **G., Anal**, a lymphatic and odoriferous gland situated near the anus. **G., Angular.** See *G., Submaxillary*. **G., Anomalous.** See *G., Ductless*. **G., Anteprostatic.** See *G., Cowper's*. **G., Aporic.** See *G., Ductless*. **G.-area**, the depressed area, from the alveolar epithelium of which the mammary gland is developed. **G., Arterial**, one of a number of small gland-like bodies connected with the arterial system. **G., Arytenoid**, a small muciparous gland in front of the arytenoid cartilage. **G., Atrabiliary**, an old name for the Supra-renal Capsule. **G., Auricular, Anterior**, a lymph-gland anterior to the external auditory meatus. **G., Auricular, Posterior.** See *G., Subauricular*. **G., Axillary**, one of the lymph-glands situated in the axilla. **G. of Bartholin.** 1. A small gland on either side of the vagina, opening through a duct, on the inner side of the nympha. 2. See *G., Sublingual*. **G., Bauhin's.** See *G., Nuhn's*. **G. of Benham.** See *G., Lophophoral*. **G., Blandin's.** See *G., Nuhn's*. **G., Blind.** See *G., Ductless*. **G., Blood.** See *G., Hematopoietic*. **G., Blood-vascular.** See *G., Hematopoietic*. **G. of Boerhaave.** See *G., Miliary*. **G., Bowman's**, one of the tubular glands of the olfactory region. **G., Brachial**, one of the lymph-glands of the arm and the fore-arm. **G., Branchio-tympanic.** See *G., Tympanic*. **G., Bronchial.** 1. One of the lymph-glands of the bronchi and root of the trachea. 2. See *G., Thyroid*. **G. of Bruch.** See *G., Aggregated*. **G., Brunner's**, one of the granular racemose bodies found in the wall of the duodenum. **G., Buccal**, one of the glands between the buccinator muscle (of the cheek) and the adjacent mucous membrane. **G., Buccal, Inferior.** See *G., Molar*. **G., Bulbo-cavernous.** See *G., Cowper's*. **G., Bulbo-urethral.** See *G., Cowper's*. **G., Byssus.** See *G., Byssys*. **G., Byssys**, in *Lamellibranchiata*, a gland near the foot, secreting the substance that forms the byssus. **G., Calciferous**, in the earth-worm one of several pairs of lateral glandular bodies in the esophagus whose function it is to secrete a calcareous substance. **G., Camphor**, one of the camphor-secreting glands of the camphor-tree. **G., Cardiac**, one of the acinous glands in the mucosa at the distal extremity of the esophagus. **G., Cardiac Gastric.** See *G., Oxyntic*. **G., Cardiac Lymphatic.** See *G., Mediastinal, Superior*. **G., Carotic.** See *G., Intercarotid*. **G., Carotid.** See *G., Intercarotid*. **G., Cecal**, one of the lymph-glands around the cecum. **G., Celiac**, one of the lymph-glands on the abdominal aorta, above the superior mesenteric artery. **G., Cement.** 1. One of certain glands in insects whose function it is to secrete the sebum that surrounds the ova prior to their discharge. 2. In *Cirripedia*, one of the glands in the antennæ secreting a sticky substance. **G., Ceruminiparous.** See *G., Ceruminous*. **G., Ceruminous**, one of the convolute glands secreting the cerumen of

the ear. **G., Cervical,** one of the lymph-glands of the neck; these are also called cervical ganglia. **G., Cervical, Deep,** one of the lymph-glands contained in two groups, superior and inferior, that are deeply-seated in the neck. They empty into the right lymphatic duct, through the jugular lymphatic. **G., Cervical, Inferior, Deep,** the lower group of deep cervical glands in the supra-clavicular fossa. **G., Cervical, Middle,** one of the lymph-glands in the neck, corresponding to the lower portion of the larynx. **G., Cervical, Posterior,** any one of the deep lymph-glands situated along the anterior border of the trapezius muscle on either side of the neck. Enlargement of these glands is one of the earliest evidences of the secondary stage of syphilis. **G., Cervical, Superficial,** one of the superficial lymph-glands in the upper anterior portion of the neck. **G., Cervical, Superior, Deep,** the upper of the deep cervical lymph-glands, near the bifurcation of the common carotid artery. **G., Cervical, Upper, Deep.** See *G., Cervical, Superior, Deep.* **G., Choroid,** in certain *Teleostei*, a vascular plexus around the optic nerve. **G., Choroideal.** See *G., Choroid.* **G., Circumanal.** See *G., Anal.* **G., Closed.** See *G., Ductless.* **G., Coccygeal** (or *Luschka's*). 1. A small arterial gland on the top of the coccyx, ventrally. 2. See *G., Uropygial.* **G., Colic.** See *Crypts of Lieberkühn.* **G., Colleterial.** See *Colleterium.* **G., Compound,** one in which the secreting surface is contained in numbers of small pouches. A gland whose duct is branched. **G., Concatenate.** See *G., Cervical, Deep.* **G., Conglobate.** See *G., Lymphatic.* **G., Conglomerate.** See *G., Racemose.* **G., Congregate.** See *G., Peyer's.* **G., Coniferous,** an old name for the discoid tracings in the wood-cells of gymnosperms. **G., Convoluted,** a tubular gland with a highly convoluted blind termination. **G., Cowper's** (or *Méry's*), in the male, one of two small acinous glands, situated between the two layers of the triangular ligament, anteriorly to the prostate gland. **G., Cowperian.** See *G., Cowper's.* **G., Cubital,** one of the lymph-glands of the elbow. **G., Cubital, Deep,** any one of the deep lymph-glands around the elbow-joint. **G., Cubital, Superficial,** any one of the lymph-glands situated over the inner condyle of the humerus in the subcutaneous connective tissue. **G., Cutaneous,** any one of the various glands of the skin. They include the hair, sudoriparous and sebaceous glands. **G., Cyathiform,** in biology, small, fleshy, cup-like glands, secreting a viscid fluid. **G., Decidual,** any one of the glands of the decidua. **G., Dental** (of *Serres*), one of the small, white epithelial bodies on the mucous membrane of the jaw, over the point of emergence of the teeth. **G., Diapnogenous.** See *G., Sudoriparous.* **G., Digestive,** in biology, one of certain glands situated on the leaves or other portions of some insectivorous plants; they secrete a fluid capable of digesting albuminoid substances. **G., Dorsal.** See *G., Scapular.* **G., Ductless,** a gland without a duct. **G., Duodenal.** 1. See *G., Brunner's.* 2. One of the lymph-glands of the duodenal mesentery. **G., Duverney's.** See *G. of Bartholin.* **G., Ebner's,** one of the acinous glands of the tongue situated in the region of the circumvallate papillæ. **G., Enteric.** See *Crypts of Lieberkühn.* **G., Epiglottic,** one of the muciparous glands about the posterior surface of the epiglottis. **G., Esophageal,** one of the acinous lymph-glands under the mucous membrane of the esophagus. **G., Excretory,** one of the glands that secrete the excrementitious matters of the body. **G., External,** in botany, one of the glands on the outer surface of a plant-organ. **G., Facial,** one of the lymph-glands of the face. **G., Facial, Deep,** one of the lymph-glands beneath the buccinator muscle. **G., Facial, Superficial.** See *G., Auricular, Anterior.* **G., Femoral.** See *G., Inguinal.* **G.-fever,** an infectious constitutional disorder characterized by rapid and painful enlargement of the cervical lymphatic glands, with considerable elevation of temperature. **G., Floral.** See *G., Nectariferous.* **G., Follicular,** one consisting of or beginning in follicles. **G., Follicular** (*of the tongue*), one of the lymph-glands in the mucous membrane at the base of the tongue. **G., Fundus.** See *G., Oxyntic.* **G. of Galeati.** See *Crypts of Lieberkühn.* **G., Gastric,** any one of the glands of the stomach, tubular or peptic. Those lining the fundus of the stomach are the true pepsin-secreting glands. **G., Gastro-epiploic, Inferior,** one of the lymph-glands surrounding the greater curvature of the stomach. **G., Gastro-epiploic, Superior,** one of the lymph-glands in the gastrophrenic ligament. **G., Genal.** See *G., Buccal.* **G., Genital.** See *G., Sexual.* **G., Globate.** See *G., Lymphatic.* **G., Globular** (*of Mirbel*), in biology, one of the spheric glands forming a pulverulent surface upon the calyx, corolla and anthers of many labiate plants. **G., Glomerate.** See *G., Racemose.* **G., Green,** in *Crustacea*, a gland on the side of the anterior portion of the body. Its duct opens on a cervical eminence, just below the antenna. **G., Guérin's.** See *G., Skene's.* **G. of Guettard.** See *G., Miliary.* **G., Guttural.** See *G., Pharyngeal.* **G., Hair,** the sebaceous gland of a hair-follicle. **G., Harder's.** See *G., Harderian.* **G., Harderian,** a small gland in the nictitating membrane of many of the lower animals. **G. of Havers** (also called synovial fringe), one of the fatty bodies lying behind the highly vascular fringe-processes that project from a synovial membrane into the cavity of a joint; these were formerly believed to be the glands that secreted the synovia. **G., Haversian.** See *G. of Havers.* **G., Hematopoietic,** any one of the glands that are supposed to take part in the formation of the blood, as the spleen, thymus, supra-renal capsules, etc. **G. of Henle.** See *G., Aggregated* (*of Bruch*). **G., Hepatic,** one of the lymph-glands in the ligaments around the liver. **G., Hermaphrodite,** in hermaphroditic animals, a gland answering both as ovary and testicle. **G., Hibernating,** in hibernating animals, one of the masses of fatty tissue, supposed to aid in sustaining life during hibernation. **G., Honey-comb.** See *G., Peyer's.* **G., Hydrophorous.** See *G., Sudoriparous.* **G., Hypogastric.** See *G., Iliac, Internal.* **G., Iliac, Anterior,** one of the lymph-glands anterior to the iliac arteries, and situated between the fifth lumbar vertebra and the femoral ring. They receive the lymphatic and efferent vessels of the inguinal glands. **G., Iliac, External.** See *G., Iliac, Anterior.* **G., Iliac, Internal,** one of the lymph-glands in the course of the hypogastric artery and vein. **G., Iliac, Superior,** one of the lymph-glands near the crest of the ilium. **G., Infraclavicular,** one of the small lymph-glands situated below the clavicle, between the deltoid and pectoral muscles. **G., Inguinal, Deep,** one of the lymph-glands in the crural ring, around the femoral artery and vein. **G., Inguinal, Superficial,** one of the lymph-glands in the superficial fascia just above Poupart's ligment. **G., Infundibular,** the infundibulum of the brain. **G., Intercarotid,** a minute body of glandular structure, of unknown function, situated at the bifurcation of the common carotid artery. **G., Intercellular,** one of the multicellular vegetable glands, supplying the walls between the cells. **G., Intercostal,** one of the lymph-glands

in the posterior portion of the intercostal spaces. **G., Internal,** in botany, a gland below the surface of a plant-organ. **G., Interocular,** in comparative anatomy, the ectocranial portion of the epiphysis cerebri. It is regarded as the rudiment of the third eye. **G., Interungulate,** in sheep, a muciparous gland between the hoofs. **G., Intestinal, Solitary,** one of a number of peculiar white isolated lymph-glands distributed through the intestinal mucous membrane. **G., Jugular, Inferior.** See *G., Cervical, Deep.* **G., Jugular, Superficial.** See *G., Cervical, Superficial.* **G., Jugular, Superior.** See *G., Cervical, Superior, Deep.* **G. of Kölliker.** See *G., Bowman's.* **G. of Krause,** one of a number of acinous glands in the orbital portion of the conjunctiva. **G., Labial,** one of several racemose glands near the edges of the lips. **G., Lachrymal,** a compound racemose gland in the upper and outer portions of the orbit, whose function it is to secrete the tears. **G., Lachrymal, Inferior,** the lower portion of the lachrymal gland. **G., Lachrymal, Superior,** the upper portion of the lachrymal gland. **G., Lactiferous.** See *G., Mammary.* **G., Laryngeal, Anterior, Posterior,** one of the acinous lymph-glands in the laryngeal mucous membrane. **G., Lateral,** in *Cestodes*, one of the glands situated on either side of the uterus. **G., Lenticular.** 1. In botany, one of the oily or fatty glands found in plants. 2. One of the conglobate glands in the mucous membrane of the stomach. **G. of Lieberkühn.** See *Lieberkühn, Crypts of.* **G., Lingual, Anterior.** See *G., Nuhn's.* **G., Lingual, Lateral,** one of the acinous glands at the edge of the tongue. **G., Lingual, Lymphatic,** one of two or three glands on the outer surface of the hyoglossus muscle. **G., Lingual, Posterior,** one of the acinous lymph-glands on the dorsum linguæ near the foramen cecum. **G. of Littré (or of Morgagni),** one of the small racemose muciparous glands in the mucous membrane of the cavernous portion of the urethra. **G., Lobulated.** See *G., Racemose.* **G., Lophophoral** (of *Benham*), in biology, a border of glandular tissue, surrounding the lophophore. **G., Lumbar,** one of a number of lymph-glands, situated in the lumbar region, behind the peritoneum. **G., Luschka's.** See *G., Coccygeal.* **G., Lymph.** See *G., Lymphatic.* **G., Lymphatic,** a small oval mass of lymphoid tissue in the course of a lymphatic vessel. There are supposed to be between 500 and 600 in man. The chyle and lymph pass through them to the blood. **G., Lymphatic, Solitary.** 1. A simple isolated lymph-gland. 2. See *G., Intestinal, Solitary.* **G., Mammary,** one of the glands, in mammals, that secrete milk. **G., Mastoid.** See *G., Subauricular.* **G., Maxillary, Internal.** See *G., Facial, Deep.* **G., Mediastinal,** one of the lymph-glands in the mediastinum. **G., Mediastinal, Anterior,** one of several small lymph-glands in the lower portion of the anterior mediastinum. **G., Mediastinal, Posterior,** one of the lymph-glands in the posterior mediastinum surrounding the esophagus and thoracic aorta. **G., Mediastinal, Superior,** one of the lymph-glands in the upper portion of the mediastinum. **G., Meibomian,** one of the minute sebaceous follicles between the cartilage and conjunctiva of the eyelids. **G. of Meibomius.** See *G., Meibomian.* **G., Méry's.** See *G., Cowper's.* **G., Mesenteric,** one of the lymph-glands of the mesentery. **G., Meseraic.** See *G., Mesenteric.* **G., Mesocolic,** one of the lymph-glands in the mesentery of the colon. **G., Miliary.** 1. (of *Boerhaave*) any one of the sudoriparous glands. 2. (of *Mirbel*) in biology, one of the minute granules on the green parts of plants. 3. (of *Guettard*) a stoma. **G. of Mirbel.** See *G., Miliary,* and *G., Globular.* **G., Molar,** one of the large buccal glands situated near the molar teeth, between the masseter and buccinator muscles of the cheek. **G., Moll's,** one of the modified sweat-glands on the free margin of the eyelids opening into the hair-follicles of the eyelashes. **G., Montgomery's,** one of the microscopic sebaceous glands of the areola of the breast. **G. of Morgagni.** See *G. of Littrè.* **G., Moriform.** See *G., Racemose.* **G., Morrenian,** in biology, one of certain glands of worms, as the earth-worm, whose function is that of assimilation. **G., Mucilaginous,** a name given to one of the fringed processes of synovial membranes. See *G., Haversian.* **G., Muciparous.** See *G., Mucous.* **G., Mucous,** one of the glands in mucous membranes, secreting mucus. **G., Mucous, Salivary,** a salivary gland mainly secreting mucus. **G., Mushroom-shaped,** a peculiar accessory male genital organ in certain insects, probably the analogue of the seminal vesicle. **G., Musk,** the glandular structure in certain animals secreting musk. **G. of Naboth** (also called *follicle of Naboth*), a pathologic vesicle in the mucous membrane of the uterine cervical canal. **G., Nabothian.** See *G. of Naboth.* **G., Nasal.** 1. See *G., Supra-orbital.* 2. (*of Rathke*). See *Jacobson's Organ.* **G., Nasal, External,** in birds, a gland in the frontal or nasal bone emptying into the nasal cavities. **G., Nectar.** See *G., Nectariferous.* **G., Nectariferous,** in biology, a gland secreting honey or nectar. **G., Nerve,** the supra-renal capsule. **G., Nervous** (*of the pelvis*). See *G., Coccygeal.* **G., Nidamental,** in biology, a gland secreting a peculiar viscid material that invests the ova. **G., Nuck's.** See *G., Nuhn's.* **G., Nuhn's,** one of the acinous glands near the apex of the tongue. They are also called *Nuck's, Bauhin's,* and *Blondin's glands.* **G., Occipital,** one of the lymph-glands situated over the occipital insertion of the trapezius. **G., Odoriferous,** one of the glands secreting odoriferous substances, as behind the cervix of the penis, secreting the smegma. **G., Oil.** See *G., Sebaceous.* **G., Oviducal,** in *Elasmobranchia*, a gland connected with the oviduct. **G., Oxyntic,** one of the glands of the cardiac region of the stomach, supposed to secrete the acid of the gastric juice. **G. of Pacchioni.** See *Pacchionian Bodies.* **G., Pacchionian.** See *Pacchionian Bodies.* **G., Palatal.** See *G., Palatine.* **G., Palatine,** a small acinous gland that with others forms a continuous layer beneath the mucous membrane of the hard and soft palate. **G., Palpebral.** See *G., Meibomian.* **G., Pancreatico-splenic,** one of the lymph-glands following the course of the splenic artery and vein. **G., Papillary,** in biology, a papilla-like gland on the under surface of a leaf of labiate plants. **G., Parotic.** See *G., Parotid.* **G., Parotid,** a large salivary gland situated in front of the ear. **G., Parotid, Lymphatic.** See *G., Auricular, Anterior.* **G. of Pecklin.** See *G., Peyer's.* **G., Pectoral,** one of the lymph-glands on the lower portion of the pectoralis major muscle. **G., Pepsin.** See *G., Oxyntic.* **G., Peptic.** See *G., Oxyntic.* **G., Perspiratory.** See *G., Sudoriparous.* **G., Petiolar,** in botany, a gum-secreting gland occurring on the petiole. **G., Peyer's,** one of a number of lymph-follicles of the bowel occurring mainly in the ileum. They are especially involved in typhoid fever. **G., Peyerian.** See *G., Peyer's.* **G., Pharyngeal,** one of the racemose glands in the pharyngeal mucous membrane. **G., Phrenic,** one of the lymph-glands in the lower portion of the anterior mediastinum. **G., Pilous.** See *G., Hair.* **G., Pineal.** See *Pineal Gland.* **G., Pituitary,** a term for the hypophysis of

the brain. See *Pituitary Body*. **G., Plexiform.** See *G., Peyer's*. **G., Poison,** a gland in venomous insects and snakes that secretes the poisonous substance. **G., Popliteal,** one of the lymph-glands surrounding the popliteal vessels. **G., Precrural,** in comparative anatomy, one of the lymph-glands following the course of the nervus circumflex ilii. **G., Prehyoid,** an accessory thyroid gland above the hyoid bone. **G., Prelaryngeal,** a lymph-gland on the crico-thyroid membrane, between the crico-thyroid muscles. **G., Prepectoral,** in comparative anatomy one of the lymph-glands surrounding the lower portion of the jugular vein. **G., Preputial.** See *G., Tyson's*. **G., Prescapular,** in comparative anatomy, one of the lymph-glands situated beneath the elevator humeri muscle. **G., Prostate.** See *Prostate Gland*. **G., Prostatic.** See *Prostate Gland*. **G., Pulmonary,** one of the lymph-glands in the pulmonary substance. **G., Purple,** in *Gasteropoda*, one of the glands secreting the so-called Tyrian purple. **G., Pyloric,** one of the glands of the stomach mainly situated near the pylorus and secreting the gastric juice. **G., Racemose,** a compound follicular gland resembling a bunch of grapes. It is composed of a number of acini with a single excretory duct. **G. of Rathke.** See *G., Nasal*. **G., Renal,** the suprarenal capsule. **G., Reticulate,** a lymph-gland containing reticular tissue. **G., Retroperitoneal,** one of the lymph-glands behind the peritoneum. **G., Rivini's.** See *G., Sublingual*. **G., Rosenmüller's.** 1. The inferior lachrymal gland (*accessory of Rosenmüller*). It is the fore part of the lachrymal gland, which is separated from the rest of the gland by a fibrous septum. It is also called the palpebral portion of the lachrymal gland. 2. The lymph-gland situated in the crural ring. **G., Saccular,** a gland formed by a sacculation of a mucous or serous membrane. **G., Sacral,** one of the lymph-glands on the anterior face of the sacrum. **G., Salival.** See *G., Salivary*. **G., Salivary,** a gland whose function it is to secrete saliva. **G., Salivary, External.** See *G., Parotid*. **G., Scapular,** one of the lymph-glands near the axillary border of the scapula. **G., Scent.** See *G., Odoriferous*. **G., Sebaceous.** 1. One of the minute saccular glands in the corium of the skin, secreting sebum. 2. See *G., Cement*. **G., Sebiferous.** See *G., Sebaceous*. **G., Sebiparous.** See *G., Sebaceous*. **G., Secreting.** See *G., Secretory*. **G., Secretory,** any gland of the body yielding a secretion. It is an arrangement of cells by which certain elements are separated from the blood that circulates in the capillary vessels which are in contact with the cells. **G., Seminal,** the testicle. **G., Septal,** in biology, one of the secreting glands in the septa between the loculi of the ovaries of liliaceous plants. **G., Serous.** See *G., Albuminous*. **G., Serous, Salivary,** one of those salivary glands the secretion of which contains a characteristic albuminous substance, with little or no mucin. **G. of Serres.** See *G., Dental*. **G., Sexual,** the ovary or testis. **G., Simple,** a gland composed of but one secreting sac, with a single and unbranched tube. **G., Skene's,** one of the two mucous glands just within the meatus urinarius of the female; they are frequently the seat of latent gonorrhea. **G., Solitary,** one of the glands scattered through the mucous membrane of the small intestine. **G., Spinning,** one of the tubular glands near the anal or oral orifice of certain spiders and other insects; it secretes a viscid material that hardens on exposure to the air. **G., Stalked,** in botany, a gland situated upon a stalk. **G., Staphyline.** See *G., Palatine*. **G., Sternal,** one of the lymph-glands on the upper costal cartilages, near the sternum. **G., Subauricular,** one of the lymph-glands situated below and behind the ear. **G., Sub-caudal,** a gland located near the base of the tail, the secretion from which yields the peculiar penetrating odor of the fox and other animals. **G., Subconjunctival.** See *G., Meibomian*. **G., Sublingual,** the smallest of the salivary glands. There is one on either side beneath the tongue. **G., Submaxillary,** a large salivary gland situated in the submaxillary triangle. **G., Submaxillary Lymphatic,** one of the lymph-glands in the submaxillary triangle. **G., Suboccipital.** See *G., Occipital*. **G., Substernal.** See *G., Sternal*. **G., Suburethral.** Same as *G. of Cowper*. **G., Sudoriferous.** See *G., Sudoriparous*. **G., Sudoriparous,** one of the peculiarly convoluted glands in the subcutaneous connective tissue that secrete the sweat. **G., Supraclavicular.** See *G., Cervical, Inferior, Deep*. **G., Supra-hyoid,** one of the small lymph-glands between the anterior bellies of the digastric muscles. **G., Supra-orbital,** in biology, a gland in the orbit of birds communicating with the nasal passages. **G., Suprarenal,** the suprarenal capsules. **G., Sweat.** See *G., Sudoriparous*. **G., Tarsal.** See *G., Meibomian*. **G., Tarso-conjunctival.** See *G., Meibomian*. **G., Tartar,** one of the hypothetic glands thought to secrete the tartar of the teeth. **G., Temporary,** the name occasionally given to the Graafian follicle. **G., Thoracic, Deep,** one of the lymph-glands situated on the outer surface of the serratus magnus muscle. **G., Thoracic, Superficial.** See *G., Pectoral*. **G., Thymus,** a temporary organ lying mainly in the neck, attaining its full growth at two years and practically disappearing at puberty. **G., Thyroid,** a ductless lobulated gland situated in the lower middle ventral portion of the neck, in front of the trachea and below the thyroid cartilage. **G., Tibial, Anterior,** a lymph-gland on the anterior surface of the interosseous ligament of the leg. **G., Tracheal,** one of the minute ovoid acinous glands in the tracheal mucous membrane, especially on its posterior surface. **G., Trachoma** (*of Henle*). See *G., Aggregated* (*of Bruch*). **G., Tubular,** a gland composed mainly of a tube-like structure. **G., Tubular, Compound,** one composed of a number of small tubules with a single duct. **G., Tympanic,** a swelling upon the tympanic nerve, situated near or within the tympanic canal, and believed to be of the same nature as the coccygeal gland. **G., Tyson's,** one of the sebaceous glands on the corona of the glans penis and on the prepuce. See *G., Odoriferous*. **G., Urethral.** See *G. of Littré* and *G., Skene's*. **G., Uropygial,** the oil-secreting gland situated over the coccyx of birds. **G., Uterine,** one of numerous tubular follicles in the uterine mucous membrane, secreting the so-called uterine milk. **G., Utricular.** 1. In biology, one of the spaces in the epidermis filled with a colorless fluid. 2. See *G., Uterine*. **G., Vaginal,** one of the acinous glands in the vaginal mucous membrane. **G., Venenific.** See *G., Poison*. **G., Veneniparous.** See *G., Poison*. **G., Vesalius's,** one of the pulmonary and bronchial mucous glands. **G., Vesicular.** See *G., Utricular* (*1st def.*). **G., Vulvo-vaginal.** See *G. of Bartholin*. **G., Wax,** in insects, one of the glands of the surface secreting a wax-like material. **G., Weber's,** one of the tubular mucous glands of the tongue situated chiefly near the root. **G., Yolk,** the vitellarium, *q. v.* **G., Zeiss's,** one of the sebaceous glands of the eyelashes. **G., Zygomatic.** See *G., Auricular, Anterior*.

Glanderous (*glan'-der-us*), or **Glandery** (*glan'-der-e*) [*glandula*, a gland]. Affected with glanders.

Glanders (*glan'-derz*). A contagious disease of horses,

sometimes communicated to man. For staining the microörganism of glanders see *Schutz's Method*, *Kühne's Method*, or *Læffler's Method*, under *Stains, Table of*. See *Equinia*.

Glandilemma (*glan-dil-em'-ah*) [*glans*, gland; λέμμα, husk]. The capsular covering of a gland.

Glandula (*gland'-u-lah*) [L.: *pl.*, *Glandulæ*]. A little gland.

Glandular (*gland'-u-lar*) [*glandula*, a gland]. Relating to, or of the nature of, a gland. **G. Hypertrophy**, a term used to indicate an enlargement of a lymph-gland, without any appreciable cause. **G. Pestilence**, synonym of the *Plague*, *q. v.* **G. Plague**, synonym of the *Plague*, *q. v.*

Glandule (*gland'-ūl*) [*glandula*, a gland]. A small gland.

Glandulin (*gland'-u-lin*) [*glandula*, a gland]. Extract of gland-tissue.

Glans (*glanz*) [*glans*, a corn]. 1. The head of the penis or of the clitoris. 2. A gland; an enlarged gland. 3. A suppository or pessary. 4. In botany, a nut. The name applied to fruits like the filbert, acorn, chestnut, etc. **G. clitoridis**, the small round tubercle of the clitoris analogous to the glans penis of the male. **G. penis**, the conical-shaped body forming the head of the penis.

Glareose (*glār'-e-ōs*) [*glarea*, gravel]. In botany, growing in gravel.

Glaser's Fissure. See *Fissure*.

Glaserian Artery. See *Arteries, Table of*. **G. Fissure.** See *Fissure*.

Glaserius, Fissure of. See *Fissure*.

Glasgow Committee. See *Anesthetic*.

Glass (*glas*) [ME., *glas*, glass]. A brittle, hard, and transparent substance consisting usually of the fused, amorphous silicates of potassium and calcium, or sodium and calcium, with an excess of silica. When glass of a high refractive index is required, lead silicate is also added. **G.-blowers' Cramp.** See *Cramp*. **G.-blowers' Disease**, a term formerly used to designate any infectious disease of the lips, especially syphilitic eruptions. Also, applied to pulmonary emphysema. **G.-blowers' Patch**, a condition of the dorsum of the tongue very similar to smokers' patch, and due to an analogous cause. **G., Crown**, a very hard glass, made from sodium sulphate or lime, without lead. It has a low refractive index, but considerable chromatic dispersion. It is used for making lenses for optic instruments. **G., Flint**, that composed of lead and potassium silicates. It has a very high refractive index. **G. Slides.** See *Slides*. **G., Soluble**, potassium or sodium silicate.

Glasses (*glas'-es*) [ME., *glas*, glass]. A synonym of spectacles or eye-glasses. **G., Bifocal**, those that have a different refracting power in the upper part from that in the lower. **G., Hyperbolic**, those ground in the form of an hyperbola. **G., Periscopic**, those in which the curvature of one surface exceeds that of the other. See *Meniscus*. **G., Prismatic**, those formed of prisms; used in insufficiency and paralysis of the ocular muscles. **G., Protective**, for shielding the eyes against light; they are made of London smoke or blue glass. **G., Spheric**, those ground in the form of a sphere. **G. Stenopaic**, those consisting of a blackened disc of metal in which is placed a small round hole or a narrow slit; they are used for examining astigmatic eyes.

Glassy Degeneration. See *Degeneration*. **G. Swelling**, a synonym of amyloid infiltration.

Glauber's Salt. See *Sodium*.

Glaucedo (*glaw-se'-do*) [L.]. Glaucoma.

Glaucescence (*glaw-ses'-ens*) [*glaucescens*]. A bluish-gray or sea-green luster or bloom; the quality of being somewhat glaucous.

Glaucescent (*glaw-ses'-ent*) [γλαυκός, silvery]. In biology, slightly glaucous, or bluish-gray.

Glaucin (*glaw'-sin*) [γλαυκός, sea-green]. Cow-pox; so-called from the color of the pocks.

Glaucium (*glaw'-se-um*) [γλαύκιον, horn-poppy]. A genus of papaveraceous herbs; horn-poppy. **G. luteum** and **G. corniculatum** are acrid herbs, with diuretic and alterative properties. Unof.

Glaucoma (*glaw-ko'-mah*) [γλαυκός, sea-green]. A disease of the eye the essential and characteristic symptom of which is an abnormally heightened intraocular tension, resulting in hardness of the globe, excavation of the papilla or optic disc, a restriction of the field of vision, corneal anesthesia, colored halo about lights, and lessening of visual power that may, if unchecked, proceed to blindness. The etiology is obscure. **G. absolutum**, or **consummatum**, the completed glaucomatous process, with blindness. **G. acutum**, the first or the renewed attack, with the characteristic and inflammatory symptoms, generally intermitting after a few days. **G., Auricular**, a disease of the middle ear characterized by a great increase in the intra-labyrinthine pressure. **G. evolutum**, the second stage of glaucoma. **G. fulminans**, an acute attack coming on with great suddenness and violence. **G. hæmorrhagicum**, or **apoplecticum**, that associated with retinal hemorrhage. **G. malignum**, a grave form, attended with violent pain and rapidly leading to blindness. **G., Secondary**, that consequent upon other ocular diseases. **G. simplex**, that form without inflammatory symptoms.

Glaucomatous (*glaw-kōm'-at-us*) [γλαυκός, sea-green]. Affected with or pertaining to glaucoma.

Glaucosis (*glaw-ko'-sis*) [γλαυκός, sea-green]. The blindness resulting from glaucoma.

Glaucosuria (*glaw-ko-su'-re-ah*) [γλαυκός, sea-green; οὖρον, urine]. The presence of indican in the urine, which is thereby discolored.

Glaucous (*glaw'-kus*) [γλαυκός, sea-green]. Of a blue-gray or dull sea-green tint; having a blue, or pale-green luster covered with a silvery bloom, as the leaves of the cabbage.

Glaukuria (*glaw-ku'-re-ah*). See *Glaucosuria*.

Glaux (*glawks*) [γλαύξ, γλάξ, the milk-vetch]. A genus of primulaceous herbs. **G. maritima**, salt-wort, is said to be an effective galactagogue. Unof.

Glea (*gle'-ah*) [γλοία, glue]. A mucilaginous substance secreted by many inferior organisms, and which frequently serves as a matrix in which they lie embedded.

Glean (*glēn*) [origin obscure]. The afterbirth of a domestic animal.

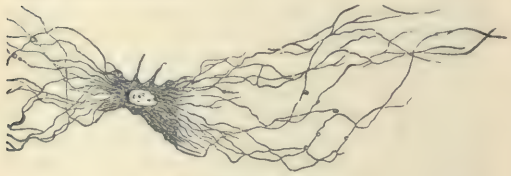
Gleet (*glēt*) [ME., *glet*, gleet]. The chronic stage of urethritis, with muco-purulent discharge.

Gleety (*gle'-tē*) [ME., *glet*, gleet]. Thin and ichorous; resembling the discharge of gleet.

Glénard's Disease. See *Diseases, Table of*.

Glene (*gle'-ne*) [γλήνη, pit]. 1. The glenoid cavity. 2. The interior of the eye. *Obsolescent*.

Gleno-humeral (*gle'-no-hu'-mer-al*) [γλήνη, pit; *humerus*, the humerus]. Pertaining to the glenoid cavity and to the humerus.



Glenoid (*gle'-noid*) [γλήνη, a cavity; εἶδος, form]. Having a shallow cavity; pertaining to a shallow cavity. **G. Cavity**, the articular depression in the head of the scapula. **G. Fossa.** See *Fossa*.

Glenoin (*gle-no'-in*). Same as *Trinitrin*.

Glenovertebral (*gle'-no-ver'-te-bral*) [γλήνη, a cavity; *vertebra*, a vertebra]. Pertaining to the glenoid and vertebral borders of the scapula.

Gleogene (*gle'-o-jēn*) [γλοιός, a sticky substance; glue; γενής, producing]. In biology, secreting a glairy, mucilaginous substance.

Glia (*gli'-ah*) [*γλία*, glue]. The neuroglia; bindweb. It contains peculiar cells called glia-cells. **G.-cells.** See *Deiters' Cells*.

GLIA-CELL. × 800.

Gliadin (*gli'-ad-in*) [*γλία*, glue]. A proteid obtainable from wheat-gluten; it is tenacious and gelatinous when moist, brittle and glassy when dry. Also a synonym of *Hematin*. See *Gluten*.

Gliding Movement (*gli'-ding moov'-ment*). The most simple kind of movement that can take place in a joint, one surface gliding or moving over another, without any angular or rotary movement.

Glioma (*gli-o'-mah*) [*γλία*, glue; *ὄμα*, a tumor: *pl.*, *Gliomata*]. A variety of round-celled sarcoma, consisting of a tumor of neuroglia-cells, occurring in the central mass of the brain or of the spinal cord. **G. of the Retina** ("encephaloid of the retina"), a glioma springing from the connective tissue of the retina, usually occurring in the young, and involving the choroid, optic nerve, and extending finally into the brain. **G., Pseudo-, of the Retina,** metastatic purulent choroiditis, simulating the appearance of retinal glioma.

Gliomatosis (*gli-o-mat-o'-sis*) [*γλία*, glue; *ὄμα*, a tumor: *pl.*, *Gliomatoses*]. The aggregation of exuberant masses of glioma-like tissue in the spinal cord—a condition thought to precede the development of syringomyelia.

Gliomatous (*gli-o'-mat-us*) [*γλία*, glue; *ὄμα*, a tumor]. Of the nature of, or affected with, glioma.

Gliomyxoma (*gli-o-miks-o'-mah*) [*γλία*, glue; *μύξα*, mucus; *ὄμα*, a tumor: *pl.*, *Gliomyxomata*]. A tumor having the characters of both glioma and myxoma.

Gliosarcoma (*gli-o-sar-ko'-mah*) [*γλία*, glue; *σάρξ*, flesh; *ὄμα*, a tumor: *pl.*, *Gliosarcomata*]. A tumor with both the neuroglia-cells of glioma and the fusiform cells of sarcoma.

Gliosis (*gli-o'-sis*) [*γλία*, glue; *νόσος*, disease]. A brain-disease marked by foci of sclerosed gray substance, with the formation of lacunar spaces within the foci. It differs from ordinary diffused sclerosis in its histology and symptomatology.

Glischruria (*glis-kru'-re-ah*) [*γλίσχρος*, viscid; *οὖρον*, urine]. Mucous degeneration of the urine, supposed to be due to the presence of a microörganism, the *Bacterium glischrogenum*.

Glisson's Capsule. See *Capsule*.

Glissonian Cirrhosis. Synonym of *Perihepatitis*. See also *Diseases, Table of*.

Glister (*glis'-ter*). A clyster or enema.

Globe of the Eye. The eyeball.

Globiferous (*glo-bif'-er-us*) [*globus*, a ball; *ferre*, to bear]. In biology, applied to antennæ or similar structures bearing a large globose joint.

Globin (*glo'-bin*) [*globus*, a globe]. A proteid derivable from hemoglobin. There is also a class of similar proteids grouped together as globins.

Globinometer (*glo-bin-om'-et-er*) [*globus*, a globe; *μέτρον*, a measure]. An instrument devised with special reference to the calculation of the percentage-amount of oxyhemoglobin in a given amount of blood.

Globo-cellular (*glo'-bo-sel'-u-lar*) [*globus*, a globe; *cella*, a cell]. Round-celled, as globo-cellular sarcoma.

Globoid (*glo'-boid*) [*globus*, a round body; *εἶδος*, form]. In biology, a globular or amorphous particle of the double phosphate of calcium and magnesium, often found associated with crystalloids in protein-granules.

Globose (*glo-bōs'*) [*globosus*, round as a ball]. Spheric in form, or nearly so.

Globular (*glob'-u-lar*) [dim. of *globus*, a globe]. Having the shape of a globe or sphere.

Globularia (*glob-u-la'-re-ah*) [*globulus*, a little ball]. A genus of selaginaceous herbs and shrubs. **G. alypum**, of the old world, affords leaves that are a good substitute for senna. **G. puticosa** and **G. vulgaris** have similar properties.

Globule (*glob'-ūl*) [dim. of *globus*, a ball]. A small globe; a blood-corpuscle or lymph-corpuscle. In biology, any minute spheric structure. In pharmacy, a small pill or pellet. See also *Oil-globule*. **G. of Donné.** See *Blood-plates* and *Hemutoblast*. **G. in Pulp,** a globular mass of dentine within the substance of the dental pulp.

Globulicidal (*glob-u-lis-i'-dal*) [*globulus*, a little ball; *cædere*, to kill]. Destructive to the blood-corpuscles.

Globulicide (*glob-u'-lis-id*) [*globulus*, a globule; *cædere*, to kill]. 1. Destructive of blood-cells. 2. An agent that destroys blood-cells.

Globulimeter (*glob-u-lim'-et-er*) [*globulus*, a little ball; *μέτρον*, a measure]. An instrument for estimating the corpuscular richness of blood.

Globulin (*glob'-u-lin*) [*globulus*, a little ball]. 1. A general name for various proteids comprising globulin, vitellin, paraglobulin, or serum-globulin, fibrinogen, myosin, and globin, which differ from the albumins in not being soluble in water; one species, existing in the crystalline lens, is specially designated as *globulin*. They are insoluble in distilled water, but soluble in dilute neutral saline solutions. These solutions are coagulated by heat, and precipitated by a large amount of water. They yield acid-albumin when acted upon by dilute acids, and alkali-albumin when acted upon by dilute alkalies. **Vegetable Globulins** have been studied, and named *vegetable myosin*, *vitellin*, and *paraglobulin*; they are found in the seeds of plants. 2. A blood-platelet.

Globulinuria (*glob-u-lin-u'-re-ah*) [*globulus*, a little ball; *οὖρον*, urine]. The presence of globulin in the urine.

Globulism (*glob'-u-lizm*) [*globulus*, a little ball]. The administration of medicine in globules; homeopathy.

Globulose (*glob'-u-lōs*) [*globulus*, a little ball]. Any product of the gastric digestion of a globulin.

Globulus (*glob'-u-lus*) [L.]. The *Nucleus globuliformis* of the cerebellum. It is a mass of gray matter between the fastigatum and the embolus.

Globus (*glo'-bus*) [L.]. A ball or globe. **G. epididymis.** See *Epididymis*. **G. hystericus,** the "lump" or choking sensation occurring in hysteria, caused probably by spasmodic contraction of the esophageal and pharyngeal muscles. **G. major,** the larger end or head of the epididymis. **G. minor,** the lower end of the epididymis. **G. pallidus,** the inner and lighter part of the lenticular nucleus.

Glochidiate (*glo-kid'-e-āt*) [*γλωχίς*, a projecting point]. In biology, barbed. Tipped with barbs, or with a doubly-hooked point.

Glochidium (*glo-kid'-e-um*) [*γλωχίς*, a projecting point: *pl.*, *Glochidia*]. In biology, a stage in the development of lamellibranchiate molluscs [*Unio*, *Anodon*], the ova of which develop up to a certain stage in the gill-pouches of the parent, and remain there as *glochidia* until some fish or wading-bird comes into their vicinity, when the glochidia issue forth, and, swimming as Pectens by the flapping of their valves,

attach themselves, like external parasites, to the animal whose presence has stimulated their efforts; here they become encysted and transformed into young Unios or Anadons.

Glochis (*glo'-kis*) [*γλωχίς*, a projecting point: *pl.*, *Glochines*]. In biology, a barbed spine or point.

Glome (*glōm*) [*glomus*, a ball]. Same as *Glomerule*.

Glomerate (*glom'-er-āt*) [*glomerare*, to wind around]. A descriptive term applied to any gland consisting of vessels bunched together like a ball of thread; conglomerate.

Glomerule (*glom'-er-ūl*) [dim. of *glomus*, a ball of yarn]. In biology, a capitate cyme; a cluster of spores.

Glomerulitis (*glom-er-u-li'-tis*) [*glomerulus*, a small ball; *ιτις*, inflammation]. Inflammation of the glomeruli of the kidney.

Glomerulo-nephritis (*glom-er'-u-lo-nef-ri'-tis*) [*glomerulus*, a little ball; *νεφρός*, the kidney; *ιτις*, inflammation]. Inflammation of the Malpighian bodies of the kidney.

Glomerulus, or Glomerule (*glom-er'-u-lus*, or *glom'-er-ūl*) [dim. of *glomus*, a ball]. A knot or small rounded mass. A coil of arterial blood-vessels projecting into the capsular widening of the lumen of each uriniferous tubule and with it composing the Malpighian body peculiar to the vertebrate kidney. **G. Malpighii.** See *Malpighian Bodies*. **G., Olfactory,** a group of nerve-cells, a number of which are embedded in the olfactory nerve-fibers.

Glonoin (*glo-no'-in*). See *Nitroglycerin*.

Gloriosa (*glo-re-o'-sah*) [*gloriosus*, glorious]. A genus of splendid liliaceous plants with poisonous juices. **G. superba,** of India, is alterative and tonic, and its starch is said to cure hemorrhoids. Unof.

Glossa (*glos'-ah*) [*γλῶσσα*, the tongue]. The tongue; also the faculty of articulate speech.

Glossagra (*glos-a'-grah*) [*γλῶσσα*, tongue; *ἄγρα*, seizure]. Gouty pain in the tongue.

Glossal (*glos'-al*) [*γλῶσσα*, tongue]. Pertaining to the tongue.

Glossalgia (*glos-al'-je-ah*) [*γλῶσσα*, tongue; *ἄλγος*, pain]. Any pain in the tongue, especially neuralgia of the tongue.

Glossanthrax (*glos-an'-thraks*). Synonym of *Anthrax*.

Glossarium (*glos-a'-re-um*) [*γλῶσσα*, a tongue: *pl.*, *Glossaria*]. In biology, the slender, elongated labrum of a dipterous insect, as the mosquito.

Glossate (*glos'-āt*) [*γλῶσσα*, tongue]. In biology, having a tongue or glossa; applied to suctorial as distinguished from mandibulate insects.

Glossauxesis (*glos-awks-e'-sis*) [*γλῶσσα*, tongue; *αὔξησις*, increase]. Enlargement of the tongue.

Glossectomy (*glos-ek'-to-me*) [*γλῶσσα*, tongue; *ἐκτομή*, excision]. Amputation or excision of the tongue.

Glossitic (*glos-it'-ik*) [*γλῶσσα*, tongue; *ιτις*, inflammation]. Pertaining to or affected with glossitis.

Glossitis (*glos-i'-tis*) [*γλῶσσα*, tongue; *ιτις*, inflammation]. Inflammation of the tongue. **G., Dissecting,** a form of chronic superficial glossitis characterized by deep furrows upon the tongue that appear to penetrate into the mucous membrane. **G., Idiopathic.** Same as *G., Parenchymatous*. **G., Interstitial.** Same as *G., Parenchymatous*. **G., Parasitic,** an inflammation of the tongue said to be due to parasitic vegetations. It is also called *Glossophytia*. **G., Parenchymatous,** an inflammation of the tongue involving its substance as well as the mucous membrane.

Glosso- (*glos'-o-*) [*γλῶσσα*, tongue]. A prefix denoting connection with the tongue.

Glossocele (*glos'-o-sēl*) [*γλῶσσα*, tongue; *κήλη*, tumor]. Swelling or edema of the tongue, with consequent extrusion of the organ.

Glossodesmus (*glos-o-dez'-mus*) [*γλῶσσα*, tongue; *δεσμός*, bond]. The frenum linguæ.

Glossodynia (*glos-o-din'-e-ah*) [*γλῶσσα*, tongue; *ὀδύνη*, pain]. Pain in the tongue, sometimes accompanied by exfoliation of its epithelium.

Glosso-epiglottic (*glos'-o-ep-e-glot'-ik*) [*γλῶσσα*, tongue; *ἐπιγλωττίς*, epiglottis]. Pertaining to both tongue and epiglottis.

Glosso-epiglottidean Ligament. See *Ligament*.

Glossograph (*glos'-o-graf*) [*γλῶσσα*, tongue; *γράφειν*, to write]. An instrument for registering the movements of the tongue in speech.

Glossography (*glos-og'-ra-fe*) [*γλῶσσα*, tongue; *γράφειν*, to write]. A descriptive treatise upon the tongue.

Glossohyal (*glos-o-hi'-al*) [*γλῶσσα*, tongue; *ὑοειδής*, the hyoid bone]. Pertaining to the tongue and the hyoid bone.

Glossoid (*glos'-oid*) [*γλῶσσα*, tongue; *εἶδος*, appearance]. Resembling a tongue.

Glossolalia (*glos-o-la'-le-ah*) [*γλῶσσα*, tongue; *λαλιά*, speech]. The alleged speaking in foreign or unknown tongues by somnambulists.

Glossology (*glos-ol'-o-je*) [*γλῶσσα*, tongue; *λόγος*, a treatise]. A treatise concerning the tongue.

Glossolysis (*glos-ol'-is-is*) [*γλῶσσα*, tongue; *λύσις*, a loosening]. Paralysis of the tongue.

Glossomegistus (*glos-o-me-jis'-tus*). Synonym of *Glossitis, Parenchymatous*.

Glossoncus (*glos-ong'-kus*) [*γλῶσσα*, tongue; *ὄγκος*, tumor]. A swelling of the tongue.

Glossopathy (*glos-op'-ath-e*) [*γλῶσσα*, tongue; *πάθος*, disease]. Any disease of the tongue.

Glosso-pharyngeal (*glos'-o-far-in'-je-al*) [*γλῶσσα*, tongue; *φάρυγξ*, pharynx]. Pertaining to the tongue and the pharynx. See *Nerves, Table of*.

Glosso-pharyngeus (*glos'-o-far-in'-je-us*) [*γλῶσσα*, tongue; *φάρυγξ*, pharynx]. A portion of the superior constrictor muscle of the pharynx. See *Muscles, Table of*.

Glossophyte (*glos'-o-fīt*) [*γλῶσσα*, tongue; *φυτόν*, plant]. A parasitic vegetation growing on the tongue.

Glossophytia (*glos-o-fīt'-e-ah*) [*γλῶσσα*, tongue; *φυτόν*, a plant]. Black tongue. A dark discoloration of the tongue, due to accumulations of spores, dead epithelium, and accidental impurities.

Glossoplasty (*glos'-o-plas-te*) [*γλῶσσα*, tongue; *πλάσσειν*, to form]. Plastic surgery of the tongue.

Glossoplegia (*glos-o-ple'-je-ah*) [*γλῶσσα*, tongue; *πληγή*, stroke]. Paralysis of the tongue.

Glossoptosis (*glos-op-to'-sis*) [*γλῶσσα*, tongue; *πτῶσις*, a fall]. Synonym of *Macroglossia*.

Glossorrhagia (*glos-or-a'-je-ah*) [*γλώσσα*, tongue; *ῥηγνύναι*, to burst forth]. Hemorrhage from the tongue.

Glossorrhaphy (*glos-or'-af-e*) [*γλῶσσα*, tongue; *ῥαφή*, suture]. Surgical suturing of the tongue.

Glossoscopy (*glos-os'-ko-pe*) [*γλῶσσα*, tongue; *σκοπεῖν*, to inspect]. Diagnostic inspection of the tongue.

Glossosemeiotics (*glos-o-sem-e-ot'-iks*) [*γλῶσσα*, tongue; *σημειόειν*, to mark]. The study or science of the diagnostic and prognostic signs exhibited by the tongue.

Glossospasm, or Glossospasmus (*glos'-o-spasm*, or *glos-o-spaz'-mus*) [*γλῶσσα*, tongue; *σπασμός*, spasm]. Spasm of the tongue.

Glossosteresis (*glos-o-ster-e'-sis*) [*γλῶσσα*, tongue; *στέρησις*, privation]. Surgical excision of the tongue; absence of the tongue.

Glossotheca (*glos-o-the'-kah*) [*γλῶσσα*, tongue; *θήκη*,

a case: *pl.*, *Glossothecæ*]. In biology, that part of a pupa-case inclosing the sucking-organ of an insect.

Glossotilt (*glos'-o-tilt*) [γλῶσσα, tongue; τίλλειν, τιλτός, to pull]. An instrument by which the tongue is drawn forward during the process of artificial respiration.

Glossotomy (*glos-ot'-o-me*) [γλῶσσα, tongue; τέμνειν, to cut]. The dissection of the tongue. Also, the excision of the tongue.

Glossy Skin. A peculiar neurosis of the skin, characterized by a smooth, shining, red appearance, accompanied by intense burning pain. See *Atrophoderma neuriticum*.

Glossypertrophia, or Glossypertrophy (*glos-e-per-tro'-fe-ah*, or *-per'-tro-fe*) [γλῶσσα, tongue; ὑπέρ, over; τροφή, nutrition]. Hypertrophy of the tongue.

Glottagra (*glot-a'-grah*) [γλῶττα, tongue; ἄγρα, seizure]. Glossagra.

Glottal (*glot'-al*) [γλωττίς, glottis]. Pertaining to the glottis.

Glottalgia (*glot-al'-je-ah*) [γλῶττα, tongue; ἄλγος, pain]. Glossalgia.

Glottic (*glot'-ik*) [γλῶττα, tongue]. 1. Pertaining to the tongue. 2. Pertaining to the glottis.

Glottid (*glot'-id*) [γλωττίς, glottis]. An act of the vocal bands whereby the form of the glottis is changed; also, any sound produced by such a change.

Glottidean (*glot-id'-e-an*) [γλωττίς, glottis]. Pertaining to the glottis.

Glottis (*glot'-is*) [γλωττίς; γλῶττα, tongue]. The *rima glottidis*. The opening between the arytenoid cartilages, or the interval between the vocal bands; also, the structures collectively that surround that opening. Over it is the epiglottis, a thin lamella of cartilage covering the larynx during deglutition.

Glottiscope (*glot'-is-kōp*) [γλωττίς, glottis; σκοπεῖν, to inspect]. A form of laryngoscope.

Glottitis (*glot-i'-tis*). See *Glossitis*.

Glottology (*glot-ol'-o-je*). See *Glossology*.

Glove (*gluv*) [ME., *glove*, a glove]. A protection for the hand, with separate partitions for each finger; it is used therapeutically in certain skin-diseases of the hand; also as a guard against septic poisoning. **G. Alphabet.** See *Dalgarno Alphabet*.

Glovers' Stitch (*gluv'-erz stitch*). The continuous suture in surgery. See *Suture*.

Glucinum (*glu-si'-num*). See *Beryllium*.

Glucogen (*glu'-ko-jen*). See *Glycogen*.

Glucohemia (*glu-ko-he'-me-ah*). See *Glycohemia*.

Gluco-heptose (*glu'-ko-hep'-tōs*). See *Carbohydrates, Table of*.

Glucometer (*glu-kom'-et-er*). See *Glycymeter*.

Gluconic Acid (*glu-kon'-ik*). See *Acid*.

Glucose (*glu'-kōs*) [γλυκύς, sweet], $C_6H_{12}O_6$, Grape-sugar, Starch-sugar. A substance obtained from starch by the action of the natural ferment, diastase, and by the catalytic action of mineral acids. It is less soluble, and therefore less sweet, than cane-sugar, but equally nutritious. It is much used as an adulterant of cane-sugar. Its varieties are numerous, dextrose and levulose being the best known. Dextrose differs from levulose in its behavior to the polarized ray of light, which is turned by the former to the right, and by the latter to the left. Glucose crystallizes in nodular masses, melting at 86° F. See *Carbohydrates, Table of*. **G. Vinegar.** See *Vinegar*.

Glucosid (*glu'-ko-sid*) [γλυκύς, sweet]. Any member of a series of compounds that may be resolved by the presence of an acid into glucose and another principle.

Glucosin (*glu'-ko-sin*) [γλυκύς, sweet]. Any one of a series of ptomaïne-bases obtained by the action of ammonia on glucose. One of these, $C_{14}H_{10}N_2$(C = 6), corresponds in formula and general properties with a remarkable unnamed base formed during the alcoholic fermentation of sugar or molasses,—*Morin's base*, $C_7H_{10}N_2$: a colorless, strongly refracting, very mobile oil, with a nauseous, pyridin-like odor. It causes stupor, paralysis, impairment of sensibility, dilatation of the pupils, slowing of the pulse and depression of the temperature, coma, and death. Similar alkaloidal bases have also been found in petroleum, paraffin-oil, chloroform, benzole, ether, amyl alcohol, and in most solvents in common use.

Glucosis (*glu-ko'-sis*). Same as *Glycosuria*.

Glucosuria (*glu-ko-su'-re-ah*). See *Glycosuria*.

Glue (*glu*) [*gluere*, to draw together]. A decomposition-product of many nitrogenous animal tissues. These lose their organized structure, on heating with water, swell up, and gradually go into solution. The solutions, even when very dilute, gelatinize on cooling, forming a jelly that dries to a horny translucent mass. This mass is glue, or gelatin, as the finer grades are termed. It dissolves in hot water and forms a liquid possessing notable cementing-power. Two proximate principles seem to be present as characteristic in all preparations of glue: *glutin*, obtained chiefly from the hide and larger bones, and *chondrin*, from the young bones while yet in the soft state, and the cartilages of the ribs and joints. Of these the former much exceeds the latter in adhesive power. *Hide-glue* is the variety that shows most strongly the adhesive property. Its color may vary considerably without any impairment of its adhesive power. It is usually of a gray to amber or brown-yellow color, and translucent or partially opaque. It should be clear, dry, and hard, and possess a glassy fracture. It should swell up but not dissolve in cold water, but should dissolve in water at 62.5° C. (144.5° F.). *Cologne Glue* is manufactured from scrap-hide which, after liming, is carefully bleached in a chlorid-of-lime bath and then thoroughly washed. *Russian Glue* contains some inorganic admixture. It is of a dirty-white color, and contains from four to eight per cent. of white lead, chalk, zinc-white, or barytes. *Size-glue* and *Parchment-glue* are both skin-glues prepared with special care. *Bone-glue* or *Bone-gelatin* is a clear product free from offensive odor. It is much used for culinary purposes and for medicinal applications, and for fining or clarifying wines, etc. It is largely used in the manufacture of gelatin capsules, of court-plaster, and of gelatin emulsions with bromid and chlorid of silver for coating photographic dry plates. *Patent Glue* is a very pure variety of bone-glue of deep dark-brown color. It is very glossy and swells up very much in water. *Isinglass*, or *Fish-gelatin*, is the finest and best of animal glues. It is pure white, nearly transparent, dry and horny in texture, and free from smell. It dissolves in water at from 35° to 50° C. (95° to 122° F.) without any residue, and in cooling produces an almost colorless jelly. *Liquid Glue*. By the action of nitric or acetic acid upon a solution of glue its power to gelatinize may be completely dissipated, while its adhesive power is not at all interfered with.

Gluge's Corpuscles. Compound granular corpuscles; compound granule-cells. Larger or smaller cells densely crowded with droplets of fat, occurring in tissues that are the seat of fatty degeneration. By transmitted light the globules of fat show as black dots, and the whole corpuscle looks like a mulberry. They are the only pathognomonic evidences of softening of nerve-tissue.

Glumaceous (*glu-ma'-she-us*) [*gluma*, a husk]. In biology, possessing chaff-like bracts or glumes.

Glume (*glūm*) [*gluma*, a hull or husk]. In biology, one of the floral envelops in the grasses.

Glumellule (*glu-mel'-ūl*). Same as *Lodicule*.

Glusidum (*glu'-sid-um*) [γλυκύς, sweet], $C_6H_4<^{CO}_{SO_2}>NH$. Saccharin. Benzoyl-sulphonic-imid, a coal-tar derivative. It is an intensely sweet, white powder, 200 times as sweet as cane-sugar. It is antiseptic, and is used to disguise the taste of nauseous medicine. It may be used as a sweetening-agent in diabetes and in the treatment of corpulency.

Glutaric Acid (*glu-tar'-ik*). See *Acid*.

Gluteal (*glu'-te-al*) [γλουτός, the buttock]. Pertaining to the buttocks. **G. Artery.** See *Arteries, Table of*. **G. Muscles.** See *Muscles, Table of*. **G. Nerve.** See *Nerves, Table of*. **G. Reflex.** See *Reflexes, Table of*.

Gluten (*glu'-ten*) [*gluten*, glue]. A substance resembling albumin, with which it is probably identical. It occurs abundantly in the seed of cereals, in the form of cubic cells surrounding the starchy fecula of the seed. It consists mainly of gluten-fibrin, gluten-casein, gliadin, and mucedin. **G.-bread**, a variety of non-starch-containing bread for use by diabetics. It is made as follows: Take one quart of sweet milk, or milk and water, one heaping teaspoonful of good butter, one-fifth of a cake of compressed yeast beaten up with a little water, and two eggs well beaten. Stir in the gluten-flour until a soft dough is formed, knead as in making ordinary bread, put in pans to raise, and when light, bake in a hot oven. **G.-soap**, a bland and soothing variety of soap, containing a considerable proportion of gluten.

Gluteo-femoral (*glu'-te-o-fem'-or-al*) [γλουτός, the buttock; *femur*, the femur]. Relating to the buttock and the thigh.

Gluteus (*glu-te'-us*) [γλουτός, the buttock]. One of the large muscles of the buttock. See *Muscles, Table of*.

Glutin (*glu'-tin*). See *Glue*.

Glutition (*glu-tish'-un*) [*glutire*, to swallow]. Deglutition.

Glutitis (*glu-ti'-tis*) [γλουτός, buttock; ιτις, inflammation]. Inflammation or suppuration of a buttock.

Glyceleum (*gli-se'-le-um*) [γλυκύς, sweet; ἔλαιον, oil]. A mixture of glycerin 2 parts, olive oil 6 parts, almond-meal 1 part; it is used as a base for ointments.

Glycemia (*gli-se'-me-ah*) [γλυκύς, sweet; αἷμα, blood]. The presence of glucose in the blood.

Glycerid (*glis'-er-id*) [γλυκερός, sweet]. A compound ether of the triatomic alcohol, glycerol or glycerin. Some of the glycerids exist ready-formed, as natural fats, in the bodies of plants and animals, and many more may be produced artificially by the action of an acid upon glycerol.

Glycerin, Glycerinum (*glis'-er-in, glis-er-i'-num*) [γλυκερός, sweet], $C_3H_5(HO)_3$. Propenyl hydrate. A viscous, syrupy, colorless substance derived from certain fats—mainly palm-oil—by decomposing them with superheated steam. Pure glycerin is an emollient; the impure article an irritant to the skin. Dose ʒj–ij. It is an efficient internal remedy in acne and flatulence, and may be used in rectal enemata or in suppositories with soap or gelatin ($\frac{1}{10}$), in chronic constipation. See *Glycerol*. **Glycerinum acidi carbolici** (B. P.), glycerin 4, carbolic acid 1. **G. acid. gallici** (B. P.), gallic acid 1, glycerin 4. **G. acid. tannici** (B. P.), tannic acid 1, glycerin 4. **G. aluminis** (B. P.), alum 1, glycerin 5. **G. boracis** (B. P.), borax 1, glycerin 4, distilled water 2. **G. plumbi subacetat.** (B. P.), acetate of lead 5, oxid of lead 3½, glycerin 20, distilled water 12. **G. tragacanthæ** (B. P.), tragacanth 3, glycerin 12, distilled water 2. **Glycerini, Suppos.** (B. P.), each contains 70 per cent. by weight of glycerin. **Glycerin-Cupric Test** (for sugar); to an inch of potassium hydrate in a test-tube add a few drops of copper sulphate and a few drops of glycerin. Boil and add the suspected urine by small amounts up to less than one inch in the tube. Sugar will throw out the cuprous oxid, red or yellow. **G.-Jelly**, a valuable preparation for the treatment of eczema. It is made as follows: Gelatin, 4 drams; oxid of zinc, 2½ drams; glycerin, ½ ounce; water, 6 drams. Heat the water, dissolve the gelatin in it, then add the glycerin and zinc, and stir till cold. Before using, the jelly is melted by gentle heat in a water-bath, and applied with a soft brush. See *Mounting-media*.

Glycerinum (*glis-er-i'-num*) [γλυκερός sweet; *gen.*, glycerini: *pl.*, *Glycerina*]. 1. Glycerin, *q. v.* 2. A solution of some medicinal agent in glycerin, *q. v.*

Glycerite, or Glyceritum (*glis'-er-it* or *glis-er-i'-tum*) [γλυκερός, sweet]. A mixture of medicinal substances with glycerin. There are six official glycerites, besides several others in the National Formulary. **G. acidi carbolici**, carbolic acid 2, glycerin 8. **G. acidi tannici**, tannic acid 2, glycerin 8. **G. amyli**. See *Amylum*. **G. vitelli**. See *Vitellus*.

Glycerize (*glis'-er-īz*) [γλυκερός, sweet]. To treat or mix with glycerin.

Glycerol (*glis'-er-ōl*) [γλυκερός, sweet], $C_3H_8O_3$. Glycerin; a substance produced in small quantities in the alcoholic fermentation of sugar. It is prepared exclusively from the fats and oils. It is a thick, colorless syrup, of specific gravity 1.265 at 15° C. It has a pure, sweet taste, hence its name.

Glycerose (*glis'-er-ōs*) [γλυκερός, sweet], $C_3H_6O_3$. Triose; a substance derived from glycerol. It is the lowest glucose, and is a mixture of glycerol aldehyd and dioxy-acetone. See *Carbohydrates, Table of*.

Glyceryl (*glis'-er-il*) [γλυκερός, sweet]. A designation applied to the trivalent group $CH_2.CH.CH_2$. It is the hypothetic triatomic radicle of glycerol and the glycerids, and is also called *propenyl*. **G. Borate.** See *Boroglycerin*.

Glycid (*gli'-sid*) [γλυκύς, sweet], $C_3H_6O_2$. An anhydrid of glycerin, not yet isolated. **G. Compounds**, certain compounds formed from glycerol-derivatives by the loss of H_2O or HCl. These are again readily converted into glycerol-derivatives.

Glycin (*gli'-sin*) [γλυκύς, sweet], $C_2H_5NO_2$. Also called *Glycocol* and *Glycocin*, *Amido-acetic Acid*, or *Gelatin-sugar*. It does not occur in the free state in the animal body, but enters into the composition of several important substances, as hippuric and glycocholic acids. It is acid in reaction, and has a sweet taste. It crystallizes in large, colorless, hard rhombohedra, or four-sided prisms, easily soluble in water. See *Glycocol*.

Glycina (*glis-i'-nah*). Soya-bean. See *Soja*.

Glycocholic Acid (*gli-ko-kol'-ik*) [γλυκύς, sweet; χολή, bile]. An acid found in the bile. See *Acid*.

Glycocid (*gli'-ko-sid*). See *Glucosid*.

Glycocin (*gli'-ko-sin*). See *Glycin*.

Glycocol (*gli'-ko-kol*) [γλυκύς, sweet; κόλλα, glue]. The same as *Glycin*, *q. v.* The *Glycocols*, *Alanins*, or *Amido-fatty Acids* are crystalline bodies, usually of a sweet taste, and readily soluble in water.

Glycocyamin (*gli-ko-si'-am-in*) [γλυκύς, sweet; κυανος, blue; *amin*], $C_3H_7N_3O_2$. Guanido-acetic Acid; a substance obtained by the direct union of glycocol with cyanamid. It is soluble in 120 parts of cold water and rather readily in hot water; insoluble in alcohol and in ether. It forms crystalline compounds with acids and bases.

Glycodrupose (*gli-ko-dru'-pōs*) [γλυκύς, sweet; δρύπα, an over-ripe olive]. The substance forming the stony concretions of pears.

Glycogen (*gli'-ko-jen*) [γλυκύς, sweet; γεννᾶν, to produce], $C_6H_{10}O_5$. A white, amorphous powder, tasteless and odorless, forming an opalescent solution with water, and insoluble in alcohol. It is commonly known as animal-starch. It occurs in the blood and the liver, by which it is elaborated, and is changed by diastasic ferments into glucose. See *Carbohydrates, Table of.*

Glycogenesis (*gli-ko-jen'-es-is*) [γλυκύς, sweet; γένεσις, production]. The formation of sugar in the animal economy, whether normal or pathologic.

Glycogenic (*gli-ko-jen'-ik*) [γλυκύς, sweet; γένεσις, production]. Pertaining to glycogen or to glycogenesis.

Glycogeny (*gli-koj'-en-e*) [γλυκύς, sweet; γένεσις, production]. The normal production of glycogen.

Glycohemia (*gli-ko-he'-me-ah*) [γλυκύς, sweet; αἷμα, blood]. The presence of sugar in the blood, especially its presence in excessive quantity; glycemia.

Glycol (*gli'-kol*) [γλυκύς, sweet; *alcohol*]. A divalent alcohol; a compound intermediate in its properties and chemic relations between monohydric alcohol and trihydric glycerol. The glycols are neutral, thick liquids. The solubility of a compound in water increases according to the accumulation of OH groups in it, and it will be correspondingly less soluble in alcohol and especially in ether. There will also be an appreciable rise in the boiling-temperature, while at the same time the body acquires a sweet taste, inasmuch as there occurs a gradual transition from the hydrocarbons to the sugars. In accord with this, the glycols have a sweetish taste, are readily soluble in water, slightly soluble in ether, and boil at a much higher point (100° C.) than the corresponding monohydric alcohols. They contain two hydroxyl groups united to different carbon atoms.

Glycolamid (*gli-kol'-am-id*) [γλυκύς, sweet; *amid*], $C_2H_5NO_2$. A substance crystallizing in needles that melt at 120° C.; it possesses a sweet taste, and dissolves easily in water, but with difficulty in alcohol.

Glycollic Acid (*gli-kol'-ik*). See *Acid.*

Glycoluric Acid (*gli-kol-u'-rik*). See *Acid.*

Glycolysis (*gli-kol'-is-is*) [γλυκύς, sweet; λύσις, dissolution]. The process of decomposition into glycols.

Glyconin, Glyconon (*gli'-ko-nin, -on*) [γλυκύς, sweet]. The *Glyceritum vitelli* of the U. S. Ph. It is a mixture of yolk of egg 45, and glycerin 55.

Glyco-polyuria (*gli-ko-pol-e-u'-re-ah*) [γλυκύς, sweet; πολύς, much; οὖρον, urine]. Bouchardat's term for diabetes, attended with a moderate quantity of sugar in the urine and with an increase of lithic acid in the blood.

Glycosamin (*gli-kos'-am-in*). See *Chitin.*

Glycoses (*gli-ko'-sēz*). Same as *Glucoses, q. v.*

Glycosometer (*gli-ko-som'-et-er*) [γλυκύς, sweet; μέτρον, a measure]. An instrument for use in the estimation of the percentage of sugar in diabetic urine.

Glycosuria (*gli-ko-su'-re-ah*) [γλυκύς, sweet; οὖρον, urine]. The presence of grape-sugar in the urine. See *Diabetes.* **G., Tests for.** See *Boettger's, Fehling's, Glycerin-cupric, Indigo-carmin, Pavy's, Picrosaccharimeter, Phenyl-hydrazin, Roberts' Differential Density, Saccharometer, Trommer's,* and others in *Tests, Table of.* **G., Hepatic,** a temporary glycosuria due to excessive formation of glycogen in the liver. **G., Irritative,** that produced by irritation of the diabetic center on the floor of the fourth ventricle. **G., Paralytic,** that produced by dividing the anterior columns of the spinal cord at the level of the fourth cervical vertebra.

Glycuronic Acid (*gli-ku-ron'-ik*). See *Acid.*

Glycyrrhea (*gli-sir-e'-ah*) [γλυκύς, sweet; ῥεῖν, to flow]. Any discharge of glucose from the body. **Glycyrrhœa urinosa.** Synonym of *Diabetes mellitus.*

Glycyrrhetin (*gli-sir-e'-tin*) [γλυκύς, sweet; ῥίζα, root], $C_{18}H_{26}O_4$. An amorphous bitter substance in liquorice-root.

Glycyrrhiza (*gli-sir-i'-zah*) [γλυκύς, sweet; ῥίζα, root: *gen., Glycyrrhizæ*]. Liquorice-root. The root of *G. glabra*, a demulcent and mild laxative, of sweet taste. In combination with other medicaments it is an excellent expectorant, and is much used as an excipient in pills, troches, etc. **G., Ext.,** the liquorice of commerce, occurring in black rolls. **G., Ext., Liquid** (B.P.). Dose ʒj–ij. **G., Ext., Purum,** made with aqua ammoniæ and water by percolation and evaporation. **G., Ext., Fld.,** prepared with water and alcohol. **G., Mist., Comp.,** Brown mixture, pure extract, sugar, acacia, āā 3 parts, tinct. opii camph. 12, vin. antimonii 6, spt. nitrous ether 3, water 70. Dose ʒj – ʒss. **G. et Opii, Trochisci,** have each ext. of glycyrrhiza, gr. ij, ext. of opium gr. $\frac{1}{20}$, acacia, sugar, oil of anise q. s. Dose j–ij. **G., Pulv., Comp.,** compound licorice-powder, senna 18, glycyrrhiza 23, oil of fennel 4, washed sulphur 8, sugar 50.

Glycyrrhizin (*gli-sir-i'-zin*). See *Glycyrrhizinum.*

Glycyrrhizinum (*glis-ir-iz-i'-num*) [γλυκύς, sweet; ῥίζα, root: *gen., Glycirrhizini*]. A sweet principle derived from liquorice-root. **G. ammoniatum** (U. S. P.), ammoniated glycyrrhizin, a sweet preparation used as a substitute for liquorice. Dose gr. v–xv.

Glyoxal (*gli-oks'-al*) [γλυκύς, sweet; ὀξαλίς, sorrel], $C_2H_2O_2$. A substance formed by oxidizing acetaldehyd with HNO_3. It is an amorphous non-volatile mass that deliquesces in the air, and is soluble in alcohol and in ether.

Glyoxalin (*gli-oks'-al-in*) [γλυκύς, sweet; ὀξαλίς, sorrel], $C_3H_4N_2$. A substance produced by the action of ammonia upon glyoxal. It is easily soluble in water, alcohol and ether, and crystallizes in brilliant prisms, melting at 89° C. and boiling at 255° C.

Glyoxim (*gli-oks'-im*) [γλυκύς, sweet], $C_2H_4N_2O_2$. A compound produced by the action of hydroxylamin upon trichlorlactic acid. It is soluble in water, alcohol, and ether; crystallizes in rhombic plates; melts at 178° C.; sublimes without difficulty; has a faintly acid reaction, and forms salts with bases.

Glyoxylic Acid (*gli-oks-il'-ik*). See *Acid.*

Gmelin's Test. Same as *Gmelin-Heintz Reaction.*

Gmelin-Heintz Reaction. A test for bile-pigments in the urine. See *Tests, Table of.*

Gmelina (*mel'-in-ah*) [after *Gmelin*, a Russian scientist]. A genus of verbenaceous shrubs and trees. In India, **G. arborea, G. asiatica, G. parvifolia, G. villosa,** and other species, are employed in catarrhal disorders and in fevers and rheumatism. Unof.

Gnaphalium (*naf-a'-le-um*). See *Life-everlasting.*

Gnat (*nat*) [ME., *gnat*, a gnat]. A dipterous insect, the *Culex pipiens*, differing but slightly from the common mosquito, with which it is popularly confounded. The "bite" consists in a piercing of the skin and the withdrawal of a minute quantity of blood. The gnat has no sting or poison-glands.

Gnathalgia (*nāth-al'-je-ah*) [γνάθος, jaw; ἄλγος, pain]. Pain or neuralgia of the jaw.

Gnathankylosis (*nāth-ang-kil-o'-sis*) [γνάθος, jaw; ἀγκύλωσις, ankylosis]. Ankylosis of the jaw.

Gnathic (*nath'-ik*) [γνάθος, the cheek-bone]. Pertaining to the cheek or jaw. **G. Index.** See *Alveolar* and *Index.*

Gnathidium (*nāth-id'-e-um*) [γνάθος, jaw: *pl., Gnathidia*]. In biology, one of the rami of the lower mandible of a bird.

Gnathion (*nāth'-e-on*). See *Craniometric Points.*

Gnathite (*nāth'-īt*) [γνάθος, the jaw]. In biology, one of the jaw-feet of an arthropod; a gnathopodite.

Gnathitis (*nath-i'-tis*) [γνάθος, jaw; ιτις, inflammation]. Inflammation of the jaw or cheek.

Gnathogramma (*nāth-o-gram'-ah*) [γνάθος, jaw, cheek; γράμμα, line]. Jadelot's genal line. See *Jadelot's Lines* or *Furrows.*

Gnathoneuralgia (*nāth-o-nu-ral'-je-ah*) [γνάθος, jaw; νεῦρον, a nerve; ἄλγος, pain]. See *Gnathalgia.*

Gnathoparalysis (*nāth-o-par-al'-is-is*) [γνάθος, jaw; παράλυσις, paralysis]. Paralysis of the jaw.

Gnathoplasty (*nāth'-o-plas-te*) [γνάθος, cheek; πλάσσειν, to shape]. Plastic surgery of the cheek.

Gnathoplegia (*nāth-o-ple'-je-ah*) [γνάθος, cheek; πληγή, stroke]. Paralysis of the cheek.

Gnathopodite (*nāth-op'-o-dīt*) [γνάθος, jaw; πούς, foot]. Same as *Gnathite.*

Gnathorrhagia (*nāth-or-a'-je-ah*) [γνάθος, the cheek; ῥηγνύναι, to burst forth]. Hemorrhage from the mucous membrane of the cheek.

Gnathoschisis (*nāth-os'-kis-is*) [γνάθος, jaw; σχίζειν, to split]. Cleft-jaw.

Gnathospasmus (*nāth-o-spaz'-mus*) [γνάθος, jaw; σπασμός, spasm]. Locked jaw; trismus.

Gnathostegite (*nath-os'-tej-it*) [γνάθος, jaw; στέγος, roof]. In biology, the cover to the mouth-parts of a crustacean formed by the expansion of parts of the third thoracic limbs.

Gnomonic (*no-mon'-ik*) [γνώμων, a carpenter's square]. In biology, bent at right angles.

Gnoscopin (*nos'-ko-pin*), $C_{34}H_{36}N_2O_{11}$. A crystalline alkaloid of opium, melting at 233° C.

Goa Ball, or Goa Stone [*Goa*, in Portugal]. A mass of drugs made up into a large bolus, from which enough for a dose is scraped as needed; it is said to have originated at Goa. **G. Powder.** See *Araroba.*

Goadby's Solution. A solution of salt and corrosive sublimate in water, for preserving meat against putrefaction.

Goanese Ipecacuanha (*go-an-ēz' ip-e-kak-u-an'-ah*). See *Naregamia.*

Goat's-voice (*gōts'-vois*). See *Egophony.*

Goblet Cells. Chalice-like cells lying between the epithelial cells of the intestinal villi.

Goddard's Astringent Gargle. An astringent gargle composed of alum 2 drams, pomegranate bark ½ ounce, red rose petals 1 dram, honey 1 ounce, boiling water 6 ounces.

Godfrey's Cordial. A non-official preparation of opium containing from half a grain to a grain and a half of opium to the ounce.

Goggle-eyed (*gog'-l-īd*) [ME., *goggleyed*]. A vulgar synonym of *Exophthalmos* and of *Strabismus.*

Goggles (*gog'-lz*) [ME., *gogelen*, to look asquint]. Spectacles with colored lenses and wire or cloth sides, to protect the eyes from excessive light, dust, etc.

Gogo (*go'-go*) [African]. The rhizome of *Phrynium beaumetzii*, a marantaceous plant indigenous to the western coast of Africa. It is a powerful vermifuge and purgative. It is used in the form of a decoction, ℥ijss to the Oj. Unof.

Gogul (*go'-gul*) [Beng. or Hind.]. A name for various balsamic resins, the product of Asiatic trees of the genus *Balsamodendron;* it is sometimes classed as *Elemi*, and also as *Bdellium.*

Goiter (*goi'-ter*) [*guttur*, throat]. Enlargement, particularly if hypertrophic, of the thyroid gland. It is called, also, *Bronchocele* and *Tracheocele.* It generally accompanies cretinism. **G., Anemic.** Synonym of *G., Exophthalmic.* **G., Exophthalmic,** Basedow's Disease, Graves' Disease. A disease characterized by cardiac palpitation, goiter, exophthalmos, tremor, palpitation usually being the initial symptom; the pulse ranges from 90 to 120. Occasionally the exophthalmos is so extreme as to produce spontaneous dislocation of one or both eyes. There are present *Graefe's lid-sign*, namely, inability of the upper lid to follow perfectly the downward movement of the eye; and, usually, *Stellwag's sign*, viz., apparent widening of the palpebral aperture, due to retraction of the upper lid. The disease is usually encountered in women; its course is chronic, and the ultimate outcome recovery. Death, however, occasionally results. The etiology is obscure, but the disease occurs frequently in those of the neurotic habit. The theories proposed for the explanation of exophthalmic goiter may be placed in three divisions: 1. The *cardio-vascular theories*, which locate the seat of the disease in the heart itself, the vessels, and the blood. 2. The *mechanical theories*, which connect the symptoms with compression of vessels or nerves in the neck by a primarily hypertrophied thyroid. 3. The *nervous theories*, which attribute the disease to disturbance in the vagus nerve, in the sympathetic nerve itself, or in the central nervous system proper. **G., Pulsating.** Synonym of *G., Exophthalmic.* **G.-stick,** the coarse stem of certain kinds of sea-weed (*Sargassum bacciferum*, etc.), used in various places as a cure for goiter.

Goitrous (*goi'-trus*) [*guttur*, throat]. Pertaining to or affected with goiter.

Gokeroo (*gook'-er-oo*). See *Gokhru.*

Gokhru (*gok'-ru*) [E. Indian]. Gokeroo. The fruit of *Pedalium murex*, found in the East Indies, much used by the natives for enuresis and spermatorrhea. It is used in infusion of ℥j to Oj of boiling water. Dose *ad lib.* Unof.

Gold [ME., *gold*, gold]. See *Aurum.* **G., Bichlorid of,** so-called, has been vaunted in the treatment of drunkenness and the opium-habit. The compounds of chlorin and gold are the monochlorid and the trichlorid. **G.-beaters' Cramp.** See *Cramp.* **G.-beaters' Skin,** a thin membrane prepared from the cecum of the ox for gold-beaters' use. It has a limited use in surgery. **G., Annealing of,** the softening of gold by means of heat, to reduce the hardness caused by the mechanical forces to which it has been subjected in its manufacture. See *Annealing.* **G.-brown.** Same as *Phenylene-brown.* **G. Cinnabar.** Same as *Minium.* **G. Crowns,** portions of the natural crowns of teeth capped with gold, thereby restoring the contour. **G.-foil, Dentists'** (aurum foliatum), gold-leaf. Gold-foil, as used by dentists for filling teeth, is gold hammered into a thin leaf, but finer in quality and of much greater thickness than the article ordinarily known as gold-leaf. **G.-ochre.** Same as *Ochre.* **G.-orange,** an anilin dye employed by Unna for staining lepra-bacilli and tubercle-bacilli. See *Stains, Table of,* and *Pigments, Conspectus of.* **G.-plate,** for dental uses, may be made by the following formulas:—

18-KARAT GOLD-PLATE.

Gold,	18 dwt.
Silver,	2 "
Copper,	4 "

20-KARAT GOLD-PLATE.

Gold coin,	20 dwt.
Silver,	2 "
Copper,	2 "

G. of Pleasure. See *Camelina.* **G.-purple.** Same as *Cassius' Purple.* **G.-solder,** gold alloyed with one or more metals. The following table exhibits the rela-

tive proportions of the metals most frequently employed:—

2 dwts.,	22-karat gold.
16 grs.,	fine silver.
12 grs.,	roset copper.
6 dwts.,	pure gold.
2 dwts.,	roset copper.
1 dwt.,	fine silver.

G.-thread. See *Coptis.*

Golden (*gōld'-en*) [ME., *gold*, gold]. Of the nature or color of gold. **G. Hair-dye.** See *Bleach.* **G.-rod,** the leaves of *Solidago odora*, an aromatic stimulant and carminative. A volatile oil distilled from the plant is used in flatulence. Dose of the fld. ext. ʒj–ij; of the oil ♏ij–x. Unof. **G.-seal.** See *Hydrastis.* **G.-yellow.** Same as *Martius' Yellow.*

Golgi's End-plate. A reticulated ending of nerve-fibers in tendons, sometimes embedded in granular-looking matter. **G.'s Method,** a method of staining nerve-cells. See *Stains, Table of.*

Goll, Columns of. See *Column.*

Goltz's Balancing-experiment. Animals lose their power of equilibrium with removal of the mid-brain or corpora quadrigemina. **G.'s Croaking-experiment,** a pithed male frog croaks when the skin of its back or flanks is stroked. **G.'s Embrace-experiment,** during the breeding-season the body of the male frog between the skull and fourth vertebra embraces every rigid object with which it is brought into contact. **G.'s Static-theory,** every position of the head causes the endolymph of the semicircular canals to exert the greatest pressure upon some part of the canals, thus in varying degree exciting the nerve-terminations of the ampullæ.

Gomphia (*gom'-fe-ah*) [γόμφος, a nail]. A genus of ochnaceous trees and shrubs, partly natives of tropical America and partly of India. The leaves and bark of various species are tonic, astringent, and aromatic. Unof.

Gomphiasis (*gom-fi'-as-is*) [γομφίασις, toothache]. Looseness of the teeth.

Gomphodont (*gom'-fo-dōnt*) [γόμφος, a bolt; ὀδούς, tooth]. In biology, having the teeth set in sockets.

Gomphosis (*gom-fo'-sis*) [γόμφος, nail]. See *Synarthrosis.*

Gonacratia (*gon-ak-ra'-she-ah*) [γονή, semen; ἀκράτεια, incontinence]. Spermatorrhea.

Gonad (*gon'-ad*) [γονή, semen]. A spermary or ovary; a sexual gland.

Gonades (*gon'-ad-ēz*) [γονή, generation]. In biology, the reproductive organs; genitalia; sexualia.

Gonaduct (*gon'-ad-ukt*) [*gonad*, seed; *ductus*, a duct]. In biology, the excretory duct of a reproductive gland; an oviduct or a sperm-duct.

Gonagra (*gon-a'-grah*) [γόνυ, knee; ἄγρα, seizure]. Gout of the knee or knee-joint.

Gonalgia (*gon-al'-je-ah*) [γόνυ, knee; ἄλγος, pain]. Pain in the knee-joint.

Gonangium (*go-nan'-je-um*) [γόνος, generation; ἀγγεῖον, a vessel: *pl.*, *Gonangia*]. In biology, the reproductive capsule of certain hydroids (*thecophora*), bearing within it a modified hydranth that produces, by budding, many sexual individuals.

Gonapophysis (*gon-ap-off'-is-is*) [γόνος, generation; ἀπόφυσις, an outgrowth: *pl.*, *Gonapophyses*]. In biology, one of the paired appendages forming the external sexual organs of insects, as the ovipositor, or the clasping-organs.

Gonarthritis (*gon-ar-thri'-tis*) [γόνυ, knee; ἄρθρον, a joint; ιτις, inflammation]. Inflammation of the knee-joint.

Gonarthrocace (*gon-ar-throk'-as-e*) [γόνυ, knee; ἄρθρον, joint; κάκη, evil]. A cancerous or ulcerated affection of the knee-joint, popularly known as white swelling.

Gonarthrotomy (*gon-ar-throt'-o-me*) [γόνυ, knee; ἄρθρον, joint; τέμνειν, to cut]. Incision into the knee-joint.

Gonecium (*gon-e'-se-um*) [γόνος, generation, seed; οἰκία, house]. A modified zoecium set apart in the *Polyzoa* for reproductive functions.

Gonecyst (*gon'-e-sist*) [γονή, semen; κύστις, cyst]. A seminal vesicle.

Gonecystic (*gon-e-sis'-tik*) [γονή, semen; κύστις, cyst]. Pertaining to a gonecyst.

Gonecystitis (*gon-e-sis-ti'-tis*) [γονή, semen; κύστις, cyst; ιτις, inflammation]. Inflammation of a gonecyst.

Gonecystolith (*gon-e-sis'-to-lith*) [γονή, semen; κύστις, cyst; λίθος, stone]. A sympexion, *q. v.*

Gonecystoncus (*gon-e-sis-tong'-kus*) [γονή, semen; κύστις, cyst; ὄγκος, tumor]. Any tumor of a seminal vesicle.

Gonepoiesis (*gon-e-poi-e'-sis*) [γονή, semen; ποιεῖν, to make]. The secretion or elaboration of semen.

Gonepoietic (*gon-e-poi-et'-ik*) [γονή, semen; ποιεῖν, to make]. Pertaining to the secretion of semen.

Gongrona (*gon-gro'-nah*) [γογγρώνη, a ganglion]. Synonym of *Goiter.*

Gonic (*gon'-ik*) [γονικός, pertaining to semen]. Pertaining to semen or to generation.

Gonid (*go-nid'*). Same as *Gonidium.*

Gonidangium (*gon-id-an'-je-um*) [γονή, generation; ἀγγεῖον, a vessel: *pl.*, *Gonidangia*]. In biology, a sac or sporangium containing asexually-produced spores.

Gonidimium (*gon-id-im'-e-um*) [γονή, generation: *pl.*, *Gonidimia*]. Applied to gonidial cells; certain lichens intermediate between gonidia proper and gonimia.

Gonidiophore (*go-nid'-e-o-for*) [γονή, seed; φέρειν, to bear]. In biology, the fruiting-organ of certain fungi producing spores asexually.

Gonidium (*go-nid'-e-um*) [γονή, seed: *pl.*, *Gonidia*]. In biology, (*a*) one of the grass-green algal elements of the lichen thallus. (*b*) Also called *Gonid*, and applied to various asexually-produced reproductive bodies. Cf. *Pseudocyst.*

Gonimium (*go-nim'-e-um*) [γόνιμος, able to produce: *pl.*, *Gonimia*]. In biology, glaucous-green or bluish-green gonidia.

Gonioautecious (*go-ne-o-aw-te'-she-us*) [γωνία, an angle; αὐτός, the same; οἶκος, house]. In biology, applied to plants producing both male and female inflorescences, as mosses with the bud-like male organs growing on a female branch.

Gonion (*go'-ne-on*) [γωνία, an angle]. See *Craniometric Points.*

Goniotheca (*go-ne-o-the'-kah*) [γωνία, an angle; θήκη, a case: *pl.*, *Goniothecæ*]. See *Macrosporangium.*

Goniotropous (*go-ne-ot'-ro-pus*) [γωνία, an angle; τρέπειν, to turn]. In biology, applied to certain quadrangular stems, in which two of the angles are anterior and posterior, and the others lateral. Cf. *Pleurotropous.*

Gonio-zygomatic (*go-ne-o-zi-go-mat'-ik*) [γονία, an angle; ζυγόν, a yolk]. Relating to the gonion and the zygoma.

Gonitis (*go-ni'-tis*) [γόνυ, knee; ιτις, inflammation]. Inflammation of the knee-joint.

Gonoblast (*gon'-o-blast*) [γόνος, generation; βλαστός, germ]. A sperm-cell or germ-cell; any cell concerned directly in reproduction; a spermatozoön; an ovum.

Gonoblastidium (*gon-o-blas-tid'-e-um*) [γόνος, genera-

tion, seed; *βλαστός*, germ: *pl.*, *Gonoblastidia*]. A term applied by Huxley to the organs set apart for the production of generative buds in the *Physophoridæ* and other *Hydrozoa*. Cf. *Blastostyle*.

Gonobolia (*gon-o-bo'-le-ah*) [*γονή*, semen; *βάλλειν*, to throw]. 1. The ejaculation of semen. 2. Spermatorrhea.

Gonocace (*gon-ok'-as-e*) [*γόνυ*, knee; *κάκη*, evil]. Same as *Gonarthrocace*.

Gonocalyx (*gon-o-ka'-liks*) [*γόνος*, generation, seed; *κάλυξ*, a cup: *pl.*, *Gonocalices*, *Gonocalyxes*]. In biology, a term applied by Huxley to the investment of the reproductive organs of many of the *Hydrozoa*, having more or less the structure of a nectocalyx, but from whose walls those of the actual genital sac, the *manubrium* of Allman, tend to become independent.

Gonocele (*gon'-o-sēl*) [*γόνυ*, knee; *κήλη*, tumor]. A swelling of the knee.

Gonocele (*gon'-o-sēl*) [*γονή*, semen; *κήλη*, tumor]. 1. A tumor of a testis, or of a spermatic cord, due to retention of semen. 2. Synonym of *Gonorrheal Rheumatism*.

Gonocheme (*gon'-o-kēm*) [*γόνος*, generation, seed; *ὀχεῖν*, to carry, hold]. In biology, hydroid medusæ bearing genitalia.

Gonochorismus (*gon-o-kor-iz'-mus*) [*γόνος*, generation, sex; *χωρισμός*, separation]. In biology, the specialization of sex; the differentiation of male or female genitalia in a developing embryo; the separation of the sexes in phylogeny.

Gonococcus (*gon-o-kok'-us*) [*γονή*, semen; *κόκκος*, kernel]. A microbe thought to be the specific cause of gonorrhea. See *Gonorrhea*, and *Bacteria*, *Synonymatic Table of*.

Gonocyst (*gon'-o-sist*) [*γόνος*, generation, seed; *κύστις*, a pouch]. In biology, the inflation of the surface of the zoarium in which the embryos are developed in certain of the *Polyzoa*. See *Gonecyst*.

Gonoid (*go'-noid*) [*γόνος*, semen; *εἶδος*, appearance]. Resembling semen.

Gonolobus (*gon-o-lo'-bus*) [*γόνος*, semen; *λοβός*, pod]. A genus of asclepiadaceous plants, all American. **G. macrophyllus**, of the U.S., has a cathartic and poisonous root. Unof. Some varieties of condurango are furnished by plants of this genus.

Gonophore (*gon'-o-for*) [*γόνος*, seed; *φόρος*, bear]. In biology: 1, a stipe below stamens. 2. The ultimate generative zoöid of the *Hydroid-medusæ*, that which immediately produces the generative elements. It may be either medusiform or sacciform.

Gonoplasm (*gon'-o-plazm*) [*γόνος*, seed; *πλάσμα*, anything formed]. In biology, that portion of the protoplasm of the male fertilizing element in certain cryptogams that penetrates and fertilizes the oösphere.

Gonopod (*gon'-o-pod*) [*γόνος*, generation; *πούς*, foot]. In biology, one of the specialized abdominal feet of certain male crustaceans, functionating as auxiliary reproductive organs.

Gonopoiesis (*gon-o-poi-e'-sis*). See *Gonepoiesis*.

Gonopoietic (*gon-o-poi-et'-ik*) [*γόνος*, generation, seed; *ποιητικός*, productive]. In biology, productive of reproductive elements, as ova or spermatozoa.

Gonorrhea (*gon-or-e'-ah*) [*γόνος*, semen; *ῥοία*, a flow]. Etymologically, an involuntary discharge of semen, but generally applied to a specific infectious inflammation of the mucous membrane of the urethra and adjacent cavities. The gonococcus of Neisser is believed to be the specific microbe of gonorrhea. It is a diplococcus, found in clumps of from 10 to 20, surrounded by a mucous envelop. **G. balani**, affects the glans penis. **G., Bastard.** See *G.*, *Mucous*. **G., Dry**, a form unassociated with discharge. **G., Mucous**, the so-called abortive or slight superficial catarrh. The inflammation never runs high, and subsides in from seven to fourteen days. **G. preputialis.** See *Balanitis*. **G. sicca.** See *G.*, *Dry*.

Gonorrheal (*gon-or-e'-al*) [*γόνος*, semen; *ῥοία*, a flow]. Relating to gonorrhea. **G. Ophthalmia.** See *Ophthalmia*. **G. Rheumatism**, inflammation of one or more joints as a sequel of gonorrhea. **G. Wart.** See *Venereal Wart*.

Gonoscheocele (*gon-os'-ke-o-sēl*) [*γονή*, semen; *ὄσχεον*, scrotum; *κήλη*, tumor]. A distention of the testicle with semen.

Gonosome (*gon'-o-sōm*) [*γόνος*, generation, seed; *σῶμα*, the body]. In biology, the entire assembly of generative zoöids in a hydroid colony.

Gonospherium (*gon-o-sfe'-re-um*) [*γόνος*, generation, seed; *σφαῖρα*, sphere: *pl.*, *Gonospheria*]. In biology, a form of oögonium in which the protoplasm is condensed at the center of the cell and separated by a space from the cell-wall.

Gonostroma (*gon-o-stro'-mah*) [*γόνος*, offspring; *στρῶμα*, stroma]. The proligerous disc.

Gonotheca (*gon-o-the'-kah*) [*γόνος*, generation, seed; *θήκη*, case: *pl.*, *Gonothecæ*]. In biology, the chitinous hull of the reproductive capsules of certain hydrozoans.

Gonozemia (*gon-o-ze'-me-ah*) [*γόνος*, semen; *ζημία*, flow]. Excessive secretion or discharge of semen.

Gonozoöid (*gon-o-zo'-oid*) [*γόνος*, generation; *ζῷον*, animal; *εἶδος*, form]. In biology, one of the sexual zoöids of an ascidian.

Gonyagra (*gon-e-a'-grah*). See *Gonagra*.

Gonyalgia (*gon-e-al'-je-ah*). See *Gonalgia*.

Gonybatia (*gon-e-ba'-she-ah*) [*γόνυ*, knee; *βαίνειν*, to go]. Walking upon the knees; a symptom encountered in some paralytic and paretic cases.

Gonycampsis (*gon-e-kamp'-sis*) [*γόνυ*, knee; *κάμψις*, curve]. Deformity of the knee by curvation.

Gonyocele (*gon'-e-o-sēl*) [*γόνυ*, knee; *κήλη*, tumor]. Same as *Gonyoncus*.

Gonyoncus (*gon-e-ong'-kus*) [*γόνυ*, knee; *ὄγκος*, tumor]. A tumor or swelling of the knee.

Gonys (*go'-nis*) [*γένυς*, the chin]. In biology, the line of symphysis of the mandibles of a bird.

Gonytyle (*gon-e-ti'-le*) [*γόνυ*, knee; *τύλη*, pad]. A prominent thickening of the skin upon the knee.

Goodyera (*good-ye'-rah*) [after John *Goodyer*, an English botanist]. A genus of orchidaceous plants. **G. repens** of Asia, Europe, and America, is a popular medicine. **G. pubescens** of N. America (rattlesnake plantain, cancer-plant) is applied to sores, cancers, etc. Unof.

Goose (*goos*) [ME., *goos*, a goose]. A bird of the family of *Anserines*. **G.-flesh.** See *G.-skin*. **G.-foot.** See *Pes anserinus*. **G.-grass.** See *Galium aparine*. **G.-skin**, Cutis ansera, Goose-flesh, a popular name for a well-known condition of the skin marked by prominence about the hair-follicles. See *Arrector pili Muscle*.

Gore (*gōr*) [ME., *gore*, gore]. Thick or clotted blood.

Gorged Stomach (*gorjd stum'-ak*). See *Stomach Staggers*.

Gorgeret (*gor-jer-et'*) [Fr., *gorge*, throat]. A surgeon's gorget, especially a small gorget.

Gorget (*gor'-jet*) [*gurges*, a chasm]. A channeled instrument similar to a grooved director. It may be blunt, sharp, hooked, etc. In biology, a throat-patch, as the brilliant throat of the humming-bird.

Gorgon's Head. See *Caput medusæ*.

Gosselin's Fracture. A V-shaped fracture of the distal extremity of the tibia, involving the ankle-joint.

Gossypiin (*gos-ip'-e-in*) [*gossypium*, the cotton-tree].

A precipitate from a tincture of the root-bark of *Gossypium herbaceum*, recommended as an emmenagogue and diuretic. Dose, 1 to 5 grains. Unof.

Gossypine (*gos'-ip-in*) [*gossypium*, cotton]. In biology, cottony, flocculent.

Gossypium (*gos-ip'-e-um*) [L., cotton-tree: gen., *Gossypii*]. Cotton. The hairs of the seed of *G. herbaceum*. Freed from impurities and deprived of fatty matter, it becomes the *absorbent cotton* of surgery. It is soluble in an ammoniacal solution of copper sulphate. The root is thought to have emmenagogue properties. **G. purificatum**, purified cotton. **G. rad., Cortex**, cotton-root bark. Dose gr. xxx–℥j. **G. rad., Ext., Fld.**, prepared with glycerin and alcohol. Dose ♏xxx–℥j. **G. seminis, Ol.**, the expressed oil constitutes most of the so-called olive-oil of commerce. **G., Tinct.**, 1 in 4. Dose ℥j. See, also, *Pyroxylin*.

Gothard Worm (*goth'-ard wurm*). See *Anchylostomum*.

Gothic Palate. An enormously high palatal arch.

Göttinger's Line. See *Lines, Table of*.

Gottstein's Basal Process. The filiform basal extremity of Corti's organ. It is connected with the fine nerve-filaments of the cochlear nerve. **G.'s Curet**, a curved curet for the removal of post-nasal growths. **G.'s Fibers.** See *Fiber*.

Gouge (*gooj* or *gowj*) [Fr.]. An instrument for cutting or removing bone or other hard structures.

Goujeers (*goo'-jērs*) [OF., *gouge*, a soldier's mistress]. An old name for syphilis.

Goulard's Cerate. See *Plumbum*. **G.'s Extract.** See *Plumbum*.

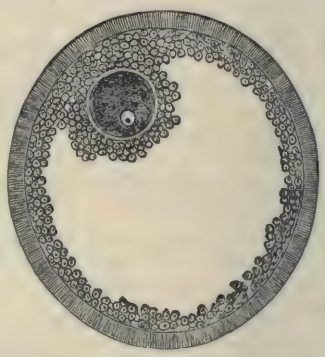
Gould, Methods of. See *Treatment, Methods of*.

Gourand's, or Goyrand's, Disease. See *Diseases, Table of*. **G.'s Hernia.** See *Hernia*.

Gourdy (*gor'-de or goor'-de*) [ME., *gourd*, a gourd]. In farriery, having swollen legs (said of horses).

Gout (*gowt*) [ME., *goute*, the gout; *gutta*, a drop]. A constitutional disease characterized by an excess of uric acid or alkaline urates, especially sodium urate, in the fluids of the body. Sodium urate is first deposited about the articular surfaces of the small joints, but in time the arteries, cardiac valves, and connective tissue of the kidneys may be involved. The metatarso-phalangeal joint of the great toe is, curiously, the favorite point of attack, and the helix of the ear is another favorite seat. Tophi form about the affected part. To diminished solubility of the urates, due to increased acidity of the blood; to increased formation of uric acid, and failure in function of the kidneys; to persistent plethora of the digestive organs,—is variously ascribed the cause of gout. The symptoms of the acute form are malaise, intense pain in the affected part, with swelling and redness, pyrexia, chills, scanty and acid urine, irritability and sleeplessness. The paroxysm usually occurs in the night. Other attacks almost invariably follow at irregular intervals. **G., Diaphragmatic**, angina pectoris. **G., Latent** or **Masked**, a condition ascribed to a gouty diathesis, but not presenting the typical symptoms of gout. **G., Retrocedent**, that form that is manifested by severe internal manifestations, without the customary arthritic symptoms. See *DaCosta's Disease*. **G., Rheumatic.** See *Arthritis, Rheumatic*.

Gouty (*gow'-te*) [ME., *goute*, the gout]. Of the nature of gout; affected with gout. **G. Kidney.** See *Bright's Disease*.



Goux, System. See *Sewage, Disposal of*.

Gowers' Column. See *Column*. **G.s' Front-tap Contraction.** See *Contraction*, and *Reflexes, Table of*. **G.'s Method**, the method of counting the corpuscles of the blood by the hemocytometer. **G.'s Pupil.** See *Signs and Symptoms, Table of*.

Gowland's Cosmetic, Lotion, or **Wash.** A famous lotion used in the treatment of acne, and said to have contained oxymuriate of mercury in an emulsion of bitter almonds.

Gr. Abbreviation of *grain*.

Graafian Follicles, or **Vesicles.** Peculiar vesicular bodies existing in the cortex of the ovary as well as in

GRAAFIAN FOLLICLE AND OVULE, WITH PROLIGEROUS DISC.

the ovarian stroma. Within them the ova mature. See *Vesicle*.

Gracilis (*gras'-il-is*) [L., slender]. See *Muscles, Table of*. **G. Experiment**, an experiment performed upon the gracilis muscle of the frog, showing that pure muscular excitation does not travel backward from the muscle to the nerve.

Gradient (*gra'-de-ent*) [*gradi*, to step, to go]. In biology, walking, rather than creeping or jumping.

Graduate (*grad'-u-āt*) [*gradus*, a step]. To take a degree from a college or university. Also, a person on whom a degree has been conferred. Also, in pharmacy, a glass vessel upon which the divisions of liquid measure have been marked.

Graduated (*grad'-u-a-ted*) [*gradus*, a step]. Arranged in degrees or steps. **G. Compress**, a compress made of pieces decreasing progressively in size, the apex or smallest piece being applied to the focus of pressure. **G. Cones.** See *Cones*. **G. Full Bath.** See *Bath*.

GRAEFE'S KNIFE.

Graefe's Collyrium. The celebrated *collyrium adstringens luteum*. It was made as follows: Camphor, 10 grains; alcohol, 1 ounce; chlorid of ammonium, 15 grains; sulphate of zinc, 30 grains; croci pulv. hispanici, 2 grains; distilled water, 5 ounces. One drop of this, after filtration, is used morning and evening. **G.'s Knife**, a knife for the performance of the operation for cataract. **G.'s Operations.** See *Operations, Table of*. **G.'s Signs** or **Symptoms.** See, *Signs and Symptoms, Table of*.

Gräfenberg System. See *Hydrotherapy*.

Graft [ME., *graffe*, graft]. A small portion of skin, bone, periosteum, nerve, etc., inserted into or upon a raw surface or tissue deficient in the special structure desired. **G., Sponge**, the insertion of antisepticized sponge to act as a framework for the granulations.

Graham Bread. Brown bread; wheaten bread made from unbolted flour.

Grahamism (*gra'-am-izm*) [after Sylvester *Graham*, an American reformer]. Vegetarianism; a theory of dietetic and medical reform started in 1839.

Grahamite (*gra'-am-it*) [after Sylvester *Graham*]. A vegetarian; a follower of the teachings of Sylvester Graham, 1794–1851.

Grahe's Test. See *Tests, Table of.*

Grain (*grān*) [*granum*, corn]. A general name applied to starch-producing seeds, or to those of the cereals. Also, any small seed. In pharmacy, a small pill. Also, the $\frac{1}{5760}$ part of the Troy pound.

Graining-colors. See *Pigments, Colors, and Dyestuffs.*

Grains of Paradise [*Grana paradisi*, "grains of paradise"]. The unripe fruit of *Amomum melegueta*, and of *A. granum paradisi*, brought from W. Africa. It is an aromatic stimulant and diuretic, useful in some cases of neuralgia. Unof.

Grallatorial (*gral-at-o'-re-al*) [*grallator*, one who walks on stilts]. In biology, applied to wading-birds.

Gram, Gramme (*gram*) [γράμμα, a Greek weight]. The weight of a cubic centimeter of distilled water at its maximum density. The gravimetric unit of the metric system of weights and measures. See *Metric System.* **G.** [Anglo-Indian.] A commercial name for the chick-pea, *Cicer arietinum*, and for other varieties of pulse.

Gram's Fluid. See *Gram's Solution.* **G.'s Method,** 1. See *Gram's Solution.* 2. See *Treatment, Methods of.* **G.'s Solution,** a test for amyloid liver, and a mordant in staining for tubercle-bacilli, consisting of iodin 1 part, potassium iodid 2, water 300. The preparation is taken from the color-bath, washed and plunged into this solution until it takes a blackish tinge, then washed in alcohol until decolorization is complete. This process is called *Gram's Method.* See *Stains, Table of.*

Gramineous (*gram-in'-e-us*) [*gramen*, grass]. In biology, grass-like.

Graminifolious (*gram-in-if-o'-le-us*) [*gramen*, grass; *folium*, a leaf]. In biology, having grass-like leaves.

Graminivorous (*gram-in-iv'-or-us*) [*gramen*, grass; *vorare*, to devour]. Feeding upon grass.

Grammatic Acataphasia (*gram-at'-ik ak-at-af-a'-ze-ah*). The faulty use of words, due not to ignorance, but to some central brain-lesion. See *Acataphasia.*

Grammopetalous (*gram-o-pet'-al-us*) [γραμμή, a stroke or line; πέταλον, a leaf]. In biology, having petals like leaves of grass, linear.

Grana paradisi (*gran'-ah par-ad-i'-si*) [L.]. See *Grains of Paradise.*

Granatum (*gran-a'-tum*) [*granum*, a grain: *gen.*, *Granati*]. Pomegranate. The cortex of the root of *Punica granatum* contains a liquid alkaloid, *pelletierin*, $C_8H_{13}NO$, one of the most efficient anthelmintics against tapeworm, rarely failing to bring away the whole worm. **G., Fld. Ext.** Dose ʒss-jss. **G., Decoctum,** fresh bark ʒxvij, water ℥xvij, boiled to ℥xij and strained. Dose ʒiv–vj. **Pelletierin tannas,** tannate of the alkaloid, $C_8H_{13}NO.C_{14}H_{10}O_9$. Dose gr. v–xx followed by a quick purgative. **P. sulphas,** very hygroscopic. Dose v-x. All unof.

Grancher's Sign. See *Signs and Symptoms, Table of.*

Grand Mal (*grand mal*) [Fr.]. A term for fully-developed epilepsy; major epilepsy.

Grandeau's Test. See *Tests, Table of.*

Grandeur, Delirium of, or Delusions of. Insane exaltation of mind, with false opinions as to one's own greatness and dignity.

Grandidentatus (*gran-de-den-ta'-tus*) [*grandis*, large; *dens*, a tooth]. Having large teeth.

Grandin (*gran'-din*) [*grando*, a hailstone]. A peculiar substance found in the urine of pregnant women. It is supposed to produce kyesteïn by its decomposition.

Grandry's Corpuscles. A variety of sensitive nerve-terminations consisting of delicately punctate and sharply defined cells that are flattened and lens-like in form, and have a nucleus, the latter being the so-called *Tactile Cells of Merkel.* They occur in the beak and tongue of the duck and goose, in the epidermis of man and mammals, etc. They are the same as the *Corpuscles of Krause.*

Graniticoline (*gran-it-ik'-o-lin*) [It., *granito*, granite; *colere*, to inhabit]. In biology, applied to such lichens as grow upon granite.

Granny Knot (*gran'-e not*). A tie of a cord in which in the second loop the end of one cord is over and the other under its fellow, so that the two loops do not lie in the same line. This knot can easily be converted into a slip-knot. See *Knot.*

Granular (*gran'-u-lar*) [*granum*, a grain]. Made up of, containing, or bearing granules. **G. Casts.** See *Casts.* **G. Corpuscles.** See *Granule-cell.* **G. Degeneration.** See *Cloudy Swelling.* **G. Degeneration of the Cervix.** See *Erosion.* **G. Kidney,** a kidney affected with diffuse or insterstitial nephritis. **G. Lids.** See *Trachoma.* **G. Liver,** a cirrhosed liver. See *Cirrhosis.* **G. Pharyngitis,** follicular pharyngitis.

Granulated (*gran'-u-la-ted*) [*granula*, a little grain]. Characterized by the presence of granulations or granules.

Granulation (*gran-u-la'-shun*) [*granula*, dim. of *granum*, a grain]. 1. The operation of reducing coarsely crystalline substances to particles of uniform size by solution and rapid evaporation, with constant stirring. Some substances, like ferrous sulphate, are best granulated by filtering a strong solution into alcohol. 2. The formation of new or cicatricial tissue in the repair of wounds or sores, the surface of which has a granular appearance; also, any one of the elevated points of such a surface or formation. **G., Miliary,** a miliary tubercle. **G.-tissue,** new or cicatricial tissue made up of granulations, or by the process of granulation.

Granulative (*gran'-u-la-tiv*) [*granula*, a little grain]. Pertaining to or marked by the process of granulation.

Granule (*gran'-ūl*) [*granula*, a little grain]. In anatomy, any small rounded grain, such as is found in the Malpighian bodies of the spleen. Also a spore or an isolated cell. In pharmacy, a small pill. **G., Elementary,** irregular protoplasmic bodies in the blood, smaller than ordinary blood-corpuscles. **G., Seminal,** any one of the solid particles of the semen, consisting of round, granular corpuscles. **G.-cell,** any one of a variety of round cells found in pathologically softened brain-tissue, and densely filled with fat-globules. **G.-mass,** a giant-cell.

Granulia (*gran-u'-le-ah*) [*granula*, a little grain]. Empis' name for an acute inflammatory condition distinct from tuberculosis, but, like it, characterized by the development of granulations within organs and on serous surfaces.

Granulistics (*gran-u-lis'-tiks*) [*granula*, a little grain]. That branch of physics employed in the estimation of the volume or capacity of a body by means of seed, shot, sand, granules, etc.

Granulitis (*gran-u-li'-tis*) [*granula*, a little grain; τις, inflammation]. Acute miliary tuberculosis.

Granuloma (*gran-u-lo'-mah*) [*granulum*, a small grain; ὄμα, a tumor: *pl.*, *Granulomata*]. A term used by Virchow to include such a neoplasm as does not advance beyond the stage of granulation-tissue. **G. fungoides;** Mycosis fungoides; Fibroma fungoides; a rare, chronic inflammatory disorder, probably of specific origin, that affects the superficial and deep layers of the skin, and occasionally the mucous membranes. It is marked by the appearance of urticarial, erythematous, or eczematous patches, of irregular shape and size, with well-defined margins, usually upon the scalp and skin of the trunk. Itching is intense, and frequently the

patches become hypertrophic, and firm, hard nodules, varying in size from that of a pea to an apple, either sessile or pedunculated, develop on them. These eventually break down, to form deep, unsightly ulcers that contain sensitive, fungating granulation-tissue, and discharge thin pus and serum. Death results from a progressive cachexia. See *Mycosis*.

Granulomatous (*gran-u-lo′-mat-us*) [*granula*, a little grain; *ὄμα*, a tumor]. Pertaining to, of the nature of, or affected with granuloma. **G. Inflammation.** See *Inflammation*.

Granulose (*gran′-u-lōs*) [*granula*, a grain]. The material that forms the inner portion of starch-granules; it is enclosed by coats of cellulose.

Granum (*gra′-num*). See *Grain*.

Granville's Lotion. A compound liniment of ammonia.

Grape-cure (*grāp′-kūr*). A cure for pulmonary tuberculosis, consisting in the ingestion of quantities of grapes. Some patients should not take more than an average of two pounds daily, beginning with about a pound, and other patients should not exceed four pounds. The laxative influence of the grapes is also beneficial. Irritation of the gums produced by the treatment should be relieved by rinsing the mouth with cold water to which a little bicarbonate of sodium is added. **G.-disease,** a vulgar synomyn for tuberculous disease of cattle. **G.-sugar.** See *Glucose* and *Dextrose*.

Grapes (*grāps*). Same as *Grape-disease*.

Graphite (*graf′-īt*) [*γράφειν*, to write]. Plumbago, or black lead, an impure allotropic form of carbon. It has been applied externally in skin-diseases; its dilutions are also used by homeopathists. Unof.

Graphology (*graf-ol′-o-je*) [*γραφή*, writing; *λόγος*, science]. The study of the handwriting or of written sentences, for the purpose of diagnosticating nerve-disease or brain-lesion.

Graphomania (*graf-o-ma′-ne-ah*) [*γραφή*, writing; *μανία*, madness]. An insane desire to write.

Graphomaniac (*graf-o-ma′-ne-ak*) [*γράφειν*, to write; *μανία*, madness]. One affected with graphomania.

Graphospasm (*graf′-o-spazm*) [*γραφή*, writing; *σπασμός*, spasm]. Writers' cramp.

Grass (*gras*) [ME., *gras*, grass]. Herbage. **G.-oil.** See *Anthoxanthum*. **G.-staggers,** indigestion of cattle. **G.-tree Resin.** See *Xanthorrhea*.

Grating (*gra′-ting*) [*grata*, a grating]. A frame or screen composed of bars. Also a sound produced by the friction of very rough surfaces against each other. In optics, a glass ruled with exceedingly fine parallel lines to produce chromatic dispersion in the rays of light reflected from it.

Gratiola (*gra-ti′-o-lah*) [*gratia*, grace]. A genus of scrophulariaceous herbs. **G. aurea, G. carolinensis, G. virginiana,** and other N. American species are actively medicinal, but are little used. **G. officinalis,** of Europe, is cathartic, emetic, and diuretic, and is a decided poison. Unof.

Gratiolet's Angle. See *Angle*. **G.'s Bundle,** optic radiations running into the occipital cortex.

Gratiolin (*gra-ti′-o-lin*) [*gratia*, grace], $C_{20}H_{34}O_7$. A crystalline, bitter glucosid from *Gratiola officinalis*. It was formerly used as a hydragogue.

Gratiolirrhetin (*gra-te-o-lir-et′-in*) [*gratia*, grace; *ῥητίνη*, resin], $C_{17}H_{28}O_{31}$. A resinoid substance; a decomposition-product of gratiolin.

Grattage (*grah-ta(h)zh′*) [Fr.]. A method of removing morbid growths, as polypi or trachomatous granulations, by rubbing with a harsh sponge or brush.

Grave (*grāv*) [ME., *grave*, a grave]. An excavation in the earth for burying the dead. **G.-wax.** See *Adipocere*.

Gravedo (*grav-e′-do*) [L.]. 1. Muscular rheumatism of the head. 2. Coryza.

Gravel (*grav′-el*) [ME., *gravel*, gravel]. In surgery, a common name for the larger calculi or urinary concretions. Also, difficult or painful micturition. **G.-plant.** See *Trailing Arbutus*. **G.-root,** Queen of the Meadow, the root of *Eupatorium purpureum*, or of *Collinsonia canadensis*. See *Eupatorium* and *Collinsonia*.

Graveolent (*grav′-e-o-lent*) [*gravis*, heavy; *olere*, to smell]. Having a strong, unpleasant odor; fetid.

Graves' Disease. See *Goiter*, *Exophthalmic*, and *Diseases, Table of*.

Gravid (*grav′-id*) [*gravare*, to load]. With child, pregnant. **G. Uterus,** the womb during pregnancy or gestation.

Gravida (*grav′-id-ah*) [*gravidus*, pregnant]. A pregnant woman.

Gravidin (*grav′-id-in*) [*gravidus*, pregnant]. A peculiar substance occurring in white transparent globules on the surface of the urine voided by pregnant women. **G.-test,** a worthless sign of pregnancy. After the first month of pregnancy the urine of the gravid woman, if allowed to stand from thirty hours to eight days, will have formed upon it a pellicle with a cheesy odor and an appearance like the "fatty scum of cooled broth." Examined microscopically and chemically the pellicle shows fungi, triple phosphates, fat-globules, and sometimes a peculiar form of albumin. It may be found in urine from men, young girls, and very old women, hence is of no value as a test of pregnancy. The test is also called the *Kyesteïn Test*.

Gravidism, or Gravidity (*grav′-id-izm*, or *grav-id′-it-e*) [*gravidus*, pregnant]. Pregnancy, or the totality of symptoms presented by a pregnant woman.

Gravimeter (*grav-im′-et-er*) [*gravis*, heavy; *μέτρον*, measure]. An instrument used in determining specific gravities; especially a hydrometer, aërometer, or urinometer.

Gravity (*grav′-it-e*) [*gravis*, heavy]. The property of possessing weight. Also, a condition of serious import. **G., Specific,** the measured weight of a substance compared with that of an equal volume of another taken as a standard. For gaseous fluids, hydrogen is taken as the standard; for liquids and solids, distilled water at its maximum density.

Grawitz's Theory. A theory as to the immunity conferred by inoculation. The cells of the body and the bacteria take their nutrition from the same places, and it is a true fight for existence between them. If the cells come out victorious, they become habituated to the struggle with the bacteria, and are more able to resist a second attack, and this quality is transmitted to the succeeding generations of body-cells by heredity. This theory is purely hypothetic.

Gray (*gra*) [ME., *gray*, gray]. 1. Of a color between white and black. 2. Having gray hairs. **G. Hepatization.** See *Hepatization* and *Pneumonia*. **G. Induration.** See *Induration*. **G. Infiltration.** See *Infiltration*. **G. Lanolin Ointment.** See *G. Oil*. **G. Matter,** the cinerea. See *Brain*. **G. Oil,** *Oleum cinereum*, a semifluid, fatty, mercurial liquid introduced into medicine by Lang, of Vienna, in 1886. It is used in the treatment of syphilis by injections. It is prepared as follows: A given quantity of lanolin—1 or 2 drams—is rubbed up with sufficient chloroform to emulsify it. This mixture is to be thoroughly triturated, during which operation the chloroform will evaporate. While the mixture is still in a fluid state, metallic mercury to the amount of double the quantity of the lanolin is to be added, the trituration being meanwhile continued. As a result, a pomade of mer-

cury is left, which represents two parts of mercury and one part of lanolin. This is called strong gray lanolin ointment. From this salve-basis a 50 per cent. oleum cinereum, or *gray oil*, may be obtained by mixing three parts with one part of olive-oil. A mild gray lanolin ointment may be made in the same manner as the strong, by taking equal parts of lanolin and mercury and thoroughly mixing them. From this salve-basis a 30 per cent. gray oil may be made by mixing six parts with four parts of fresh almond-oil or olive-oil. **G. Powder**, hydrargyrum cum creta. See *Hydrargyrum.*

Grease (*grēs*) [ME., *grese*, grease]. Soft or oily animal fat. In farriery, a swelling and inflammation in a horse's leg, with excretion of oily matter and the formation of cracks in the skin. **G.-trap**, a contrivance employed to prevent clogging of waste-pipes, as well as to save the grease, which has considerable commercial value.

Great (*grāt*) [ME., *gret*, great]. Large. **G. Laurel**, the leaves of *Rhododendron maximum*, an expectorant, useful in obstinate coughs. Dose of the fld. ext. ♏v–xv. Unof. **G. Mortality.** Synonym of the *Plague*. **G. Pox.** Synonym of *Syphilis*, to distinguish it from smallpox.

Green (*grēn*) [ME., *grene*, green]. 1. Verdant; of the color of grass. 2. Unripe; not mature. **G. Blindness.** Achloropsia, *q. v.* **G. Dragon**, the corm of *Arum dracontium*, an expectorant and diaphoretic. Dose of the fld. ext. ♏j–x. Unof. **G. Bice.** See *Bremen Green.* **G.-blue.** Same as *Soluble-blue.* **G. Cinnabar.** See *Pigments, Conspectus of.* **G. Gland**, one of the excretory organs (kidney) of a decapod crustacean formerly supposed (in Astacus) to be an auditory organ. The secretions contain uric acid and traces of the base *guanin.* **G.-heart.** See *Bebeeru.* **G.-man.** See *Aceras.* **G. Osier**, the bark of *Cornus circinata*, an astringent, tonic, and febrifuge. Dose of the fld. ext. ♏xx–ʒj. Unof. **G., Paris**, cupric arsenite. **G., Scheele's**, cupric arsenite. **G., Schweinfurth's**, a compound of cupric arsenite and cupric arsenate. **G.-sickness.** See *Chlorosis.* **G. Smalt.** Same as *Rinmann's Green.* **G.-stick Fracture.** See *Fracture.* **G. Verditer.** See *Bremen Green.*

Green's Test-types. A slight modification of *Snellen's Test-types, q. v.*

Greenhow's Cholera-mixture. A mixture containing guaiacum, cloves, cinnamon, each 1 ounce; brandy, 2 pints.

Greffotome (*gref'-o-tōm*) [Fr., *greffe*, graft; τομός, cutting]. A knife used in cutting slips for surgical grafting.

Gregarina (*greg-ar-ē'-nah*) [*grex*, a herd]. A genus of parasitic protozoa, of extremely simple nature. It is not certain that any true *Gregarinæ* infest the human subject, most of the supposed protozoan parasites of the human species being now referred to other classes or groups. See *Parasites* (*Animal*), *Table of.*

Gregarinosis (*greg-ar-in-ō'-sis*) [*grex*, a herd; νόσος, disease]. A morbid condition due to infestation by *Gregarinæ.*

Gregarious (*gre-gā'-re-us*) [*grex*, a flock, a herd]. In biology, clustered, but not matted together, as the fruit-spots of a parasitic fungus; *e. g.*, the cluster-cups.

Gregory's Powder. Compound powder of rhubarb.

G.'s Salt, crude hydrochlorate of morphin containing codein.

Grenacher's Alcoholic Carmin. See *Stains, Table of.*

G.'s Alum-carmin. See *Stains, Table of.*

G.'s Purpurin Solution. See *Stains, Table of.*

G.'s Solution. See *Stains, Table of.*

Grenade (*gren-ād'*). Synonym of *Influenza.*

Grenet Cell. See *Cell.*

Gressorial (*gres-ō'-re-al*) [*gressus*, p.p. of *gradi*, to walk]. In biology, adapted for walking; gradient.

Griesinger's Disease. Cachexia aquosa.

Griffe (*grif*) [Sp., *grifos*, frizzled hair]. 1. In biology, the offspring of a mulatto and a negress, or of a mulattress and a negro. See *Mulatto.* 2. See *Main en griffe.*

Griffin Hand (*grif'-in hand*). Same as *Claw-hand.*

Griffith's Mixture. See *Ferrum.* **G.'s Pills.** See *Ferrum.* **G.'s Snow-white.** Same as *Zincolith.*

Grin [ME., *grinnen*, to show the teeth]. To smile, at the same time showing the teeth.

Grindelia (*grin-dē'-le-ah*) [after H. *Grindel*, a German botanist]. The leaves and flowering top of *G. robusta*, Wild Sunflower, or Gum-plant, found in California, an anstipasmodic and motor-depressant, in large doses producing mydriasis. It is valuable in asthma, bronchitis, and whooping-cough. Dose of the fld. ext. ♏x–ʒj; of the alcoholic extract, gr. iij. **G. squarrosa**, common ague-weed, an herb popular in the western U. S. as a remedy for ague and malarial diseases. It has proved serviceable in chronic rheumatism. Dose of the fld. ext. ♏xv–xxx. Unof. **G. hirsutula** and **G. integrifolia** of the Pacific States have similar qualities. These plants are all highly resinous; their tinctures or infusions are said to cure the dermatitis of rhus-poisoning.

Grindelin (*grin'-del-in*). An alkaloid reported to exist in *Grindelia robusta.*

Grinder (*grin'-der*) [ME., *gryndere*, a miller]. 1. See *Quiszer.* 2. A molar tooth.

Grinders' Asthma. A chronic affection of the lungs resulting from the inspiration of metallic or siliceous dust, accumulating in the lungs, and producing symptoms similar to those of tuberculosis. It is called also *G.'s Rot* and *G.'s Disease.* **G.'s Disease.** See *G.'s Asthma.* **G.'s Phthisis.** See *G.'s Asthma.* **G.'s Rot.** See *G.'s Asthma.*

Grinning (*grin'-ing*) [ME., *grinnen*, to snarl]. Drawing back the lips, so as to show the teeth. **G.-muscle.** See *Muscles, Table of.*

Grip or Grippe (*grip*). See *Influenza.*

Gripe (*grīp*) [ME., *gripen*, to seize]. 1. To suffer griping pains. 2. A spasmodic pain in the bowels; cramp-colic.

Gripes (*grīps*) [ME., *gripen*, to seize]. Colic; tormina.

Grippal (*grip'-al*) [Fr., *gripper*, to seize]. Pertaining to influenza.

Grippo-toxin (*grip-o-toks'-in*) [*la grippe*, an epidemic form of influenza; *toxicum*, poison]. A term introduced by Althaus to designate the toxin of influenza.

Griseous (*gris'-e-us*) [*griseus*, gray]. Gray or bluish-gray.

Grisolle Sign (*gre-zol' sīn*). A sign said to be a certain means of diagnosis of smallpox. If, upon stretching an affected portion of the skin, the papule becomes impalpable to the touch, the eruption is caused by measles; if, on the contrary, the papule is still felt when the skin is drawn out, the eruption is the result of smallpox.

Gristle (*gris'-l*) [ME., *gristel*, cartilage]. The popular name for cartilage.

Gristly (*gris'-le*) [ME., *gristel*, cartilage]. Cartilaginous; like gristle.

Groan (*grōn*) [ME., *gronen*, to groan]. To utter a low, moaning sound, as when in pain. The sound so uttered.

Grocers' Itch (*grō'-serz ich*). Eczema of the hands, due to irritation from flour, sugar, etc. It is said to be due, in some cases, to the presence of sugar-mites upon the hands.

Groin [origin obscure]. The depression between the belly and the thigh.

Groove (*groov*) [D., *groef*, a channel]. A furrow or channel. **G., Auriculo-ventricular.** See *Furrow.* **G., Bicipital,** the deep groove on the anterior surface of the humerus separating the greater and lesser tuberosities. **G., Cavernous,** a broad groove on the superior surface of the sphenoid bone lodging the internal carotid artery and the cavernous sinus. **G., Dental.** See *Dental Groove.* **G., Infraorbital,** the furrow at the posterior portion of the superior maxillary bone on its orbital surface, which finally develops into a canal of the same name. **G., Lachrymal,** a groove in front of the opening of the antrum, on the inner surface of the superior maxillary bone. **G., Medullary,** a long shallow furrow that appears along the dorsal line of the neural tube of the embryo. **G., Mylo-hyoid,** the groove on the inner surface of the inferior maxillary bone running from the submaxillary fossa to the inferior dental foramen. **G., Nasal,** the groove in the nasal bone for the nasal nerve. **G., Occipital,** the groove in the mastoid portion of the temporal bone, that lodges the occipital artery. **G., Optic,** the groove on the superior surface of the sphenoid bone terminating on either side in the optic foramen. **G., Sacral,** the channel on the back of the sacrum between the spinous and transverse processes. **G., Subclavian,** the longitudinal groove on the under surface of the clavicle for the attachment of the subclavius muscle. **G., Spiral.** See *Sulcus spiralis.* **G., Vertebral,** the groove running along the spine on each side of the spinous process.

Groping-test (*grōp'-ing-test*). In ophthalmology, a test for false orientation in paralysis of the ocular muscles. The affected eye does not locate objects in their true place, and if asked to point quickly at an object the patient's finger will be carried to one side of it.

Gros Mal (*gro-ma(h)l'*) [Fr.]. The well-marked form of epilepsy; major epilepsy.

Gross (*grōs*) [F., *gros*, great]. Coarse; great. **G. Anatomy,** anatomy considered without reference to histology or the details of minute structure. **G. Appearances,** macroscopic appearances.

Grote's Test. See *Tests, Table of.*

Grough, Grouph (*gruf*). See *Gruff.*

Ground (*grownd*) [ME., *ground*, ground]. The bottom; soil; earth. **G. Ivy,** a popular name for *Gaultheria procumbens.* **G. Laurel.** See *Trailing Arbutus.* **G.-nut.** See *Apios.* **G.-nut Oil,** peanut oil. A fixed oil expressed from the embryo of the seed of the peanut, *Arachis hypogæa.* It resembles olive-oil in general properties, and for which it is often substituted. **G.-water.** See *Subsoil-water.*

Groundseltree. See *Baccharis.*

Grouse (*grows*) [OF., *griesche*, gray]. A bird of the genus *Tetrao.* **G.-berry,** a popular name for *Gaultheria procumbens.* **G.-disease,** a disease that attacks and destroys great numbers of red grouse (*Lagopus scoticus*) of Europe; it is believed to be due to the overstocking of its haunts and the propagation of the species by depauperized parents. It is said by some writers to be due to the presence of a parasite, *Strongylus pergracilis,* in the bronchial passages. See *Parasites* (*Animal*), *Table of.*

Grove Cell. See *Cell.*

Grow (*gro*) [ME., *growen*, to grow]. To increase by a natural process of development.

Growing (*gro'-ing*) [ME., *growen*, to grow]. Increasing in size. **G.-fever,** pyrexia associated with rapid growth. **G.-pains,** a term applied to neuralgic or rheumatic pains in the limbs occurring during youth, apparently of varied origin and character. **G.-point,** in botany, the tissue immediately about the apical cell; the tip of the stem or other point where cell-division is active; the *Punctum vegetationis.*

Growth (*grōth*) [ME., *growen*, to grow]. 1. The augmentation of the body that takes place between infancy and adult age. Also, the increase of any part of the body by addition to the number of its cellular elements, without the production of structural abnormality or differentiation into unlike tissues. 2. Any tumor or adventitious structure.

Grub [ME., *grubben*, to dig]. 1. A dwarf. 2. See *Comedo.* **G.-in-the-head.** See *Œstrus ovis,* under *Parasites* (*Animal*), *Table of.* **G.-worms.** See *Comedo.*

Gruber's Experiment. An experiment for detecting anomalies of tension in the ear-membrane. A membrane already excessively tense will give no alteration during Valsalva's experiment (*q. v.*), but if the membrane has been previously unduly relaxed, Valsalva's experiment will, according to Gruber, restore its tension, and the vibrating fork will be heard better by air-conduction, and worse by bone-conduction than before or after. **G.'s Gelatin Bougies,** medicated almond-shaped pieces of gelatin for insertion into the auditory meatus. **G.'s Method.** 1. A method of washing out the tympana. Syringe the fluid into one nostril with the other closed, the fluid entering the tympana by way of the Eustachian tubes. 2. A method of inflating the middle ear. The patient is required to phonate at the moment the inflation-bag is compressed. A short word, ending in a guttural consonant, is advised, as "hic" or "hook."

Gruel (*gru'-el*) [dim. of *grutum*, meal]. A decoction of corn-meal or oat-meal boiled in water to a thick paste.

Gruff (*gruf*) [D., *grof*, coarse]. Any crude drug; also the coarse part of a drug that will not pass through a sieve; the term is used also adjectively, as *gruff* sulphur or saltpeter.

Grume (*groom*) [*grumus*, a little heap]. A clot, as of blood; a thick and viscid fluid.

Grumose (*gru'-mōs*) [*grumus*, a little heap]. Same as *Grumous.*

Grumous (*gru'-mus*) [*grumus*, a little heap]. Knotted, clotty, or in granular masses. Formed of coarse, clustered grains.

Grutum (*gru'-tum*) [*grutum*, grit]. A small, hard tubercle of the skin, usually seen on the face, and due to retention of sebaceous matter. It is also called *Miliary Tubercle* and *Pearly Tubercle.* See *Milium.*

Gruyère Cheese (*gru-yār'*). See *Cheese.*

Gryposis (*gri-po'-sis*) [γρύπωσις, curvature]. Curvature. See *Arthrogryposis* and *Onychogryposis.*

Gscheidlen's Method. A method of preparing hemoglobin crystals. Take defibrinated blood that has been exposed for 24 hours to the air, and keep it in a closed tube of narrow caliber for several days at 37° C. When the blood is spread on glass the crystals form rapidly.

Gtt. Abbreviation of *gutta*, or *guttæ*, drop, or drops.

Guachamaca (*gwaw-shaw-maw'-kah*) [S. America]. The bark of an apocynaceous tree. **G. toxifera,** or **Malouetia nitida,** of *S. America,* furnishes a virulent arrow-poison, somewhat resembling curare; it has been employed in tetanus and hydrophobia. Unof.

Guachata, or **Guachacata** (*gwaw-chaw'-tah*, or *gwaw-chaw-kat'-ah*) [Mex.]. The flowers of a Mexican plant, containing several bitter tonic principles. Unof.

Guacin (*gwaw'-sin*) [*guaco*]. A bitter resin from guaco; it is diaphoretic, stimulant, and emetic. Unof.

Guaco (*gwaw'-ko*) [S. Amer.]. The leaves of *Mikania guaco*, much used in S. America for snake-bites. It is thought to be of value in chronic rheumatism. Dose of the fld. ext. ʒss–j. Unof. Various species of *Mikania* and *Aristolochia* are locally known by this name.

Guaiac (*gwi'-ak*) [S. Amer]. See *Guaiacum*. **G.-mixture, Fenner's.** The *Tinctura antacrida* [N. F.], a tincture of the resin of guaiacum and Canada turpentine, in which each fluidram contains ⅓ of a grain of the corrosive chlorid of mercury. **G.-test.** See *Tests, Table of.*

Guaiacol (*gwi'-ak-ol*) [S. Amer.], $C_7H_8O_2$. A substance that occurs in wood-tar, and is also produced on heating pyrocatechin with potassium hydroxid and potassium methyl-sulphate to 180° C. It is a colorless liquid that boils at 200° C., and has a specific gravity of 1.117. It is readily soluble in alcohol, ether, and acetic acid, and is recommended instead of creasote in pulmonary tuberculosis. Dose ♏ j–ij, or gr. $\frac{1}{12}$–$\frac{1}{6}$. Sciolla (1893) found that topical applications of guaiacol reduced bodily temperature, and J. Solis-Cohen and Da Costa (1894) have applied the method successfully in cases of high temperature in typhoid fever and other febrile diseases. The dose is about 30 drops slowly rubbed on the skin of the abdomen or thigh. Unof.

Guaiacum (*gwi'-ak-um*) [Guaicauans, a tribe of S. A. Indians]. Lignum vitæ. The heart of the tree, and also the oleoresin, of *G. officinale* and *G. sanctum*, a prompt diaphoretic, expectorant, and alterative, efficient in tonsillitis, neuralgic dysmenorrhea, amenorrhea, and rheumatism, and formerly much used as an antisyphilitic. Dose gr. x–xxx. **G., Mist.** (B. P.) Dose ʒ j–iss. **G., Resina**, the resin of the wood of *G. officinale*. **G., Tinct.**, strength 20 per cent. Dose ♏v–ʒ j in mucilage. **G., Tinct., Ammoniat.**, contains guaiac 20, and aromatic spirit of ammonia 80 parts. Dose ♏v–ʒss.

Guanin (*gwaw'-nin*) [Sp., *guano*, dung], $C_5H_5N_5O$. A leukomaïne discovered by Unger in 1844, as a constituent of guano. Since then it has been found in small quantities in the pancreas, liver, and muscle-extract, and has been shown to be one of the decomposition products of nuclein in both animal and vegetable organisms. In the case of the lower animals it is evidently the end-product of katabolic change. It is a white, amorphous powder, insoluble in water, alcohol, ether, and ammonia. Guanin and kreatin appear to mutually replace each other—both being substituted guanidins. Guanin is an intermediate product in the formation of urea. It is non-poisonous and a muscle-stimulant. See *Capranica's Tests.*

Guano (*gwaw'-no*) [Peruv., *huanu*, dung]. The excrement of sea-fowl found on certain islands in the rainless regions of the Pacific Ocean. It consists essentially of alkaline urates and phosphates. It is used externally in certain skin-diseases. Unof.

Guarana (*gwaw-rah'-nah*) [the name of a tribe of S. A. Indians]. A dried paste prepared from the seeds of *Paullinia cupana*, found in Brazil. It contains an alkaloid, guaranin, $C_8H_{10}N_4O_2.H_2O$, identical with caffein. It is employed chiefly in nervous sick-headaches. The commercial preparations are not always trustworthy. Dose of the fld. ext., ♏v–xxx; of guaranin gr. j–iij; of the solid ext. gr. iij–x; of the tincture (1 in 4) ʒss–j.

Guard (*gard*) [*garder*, to keep]. An appliance on a knife to prevent too deep incision. **G.-cell**, in biology, one of the two semilunar epidermal cells, inclosing the opening of a stoma in plants.

Guardian-cells (*gar'-de-an-selz*). Same as *Guard-cell.*

Guarinari's Agar-gelatin. A culture-medium composed of agar-agar 3–4 gms., sodium chlorid 5 gms., peptone 25–30 grms., gelatin 40–60 gms., water 50 c.c., meat-infusion 950 c.c.

Guaycuru (*gwi-ku-ru'*) [Sp.]. The S. American name of various plants, as *Statica brasiliensis* and *S. antarctica*. The root is a very powerful astringent. Unof.

Gubernaculum testis (*gu-ber-nak'-u-lum tes'-tis*) [L.]. The conical-shaped cord attached above the lower end of the epididymis and governing the descent of the testes in fetal growth.

Gubler's Tumor. A prominence over the carpus of the dorsum of the hand in chronic wrist-drop from lead-poisoning. See *Signs and Symptoms, Table of.*

Gudden's Atrophy Method. A method of demonstrating the connection of a nerve-trunk with a center. If a portion of a nerve-trunk is destroyed in a young, growing animal, the peripheral fibers will undergo Wallerian degeneration, while the proximal cells and fibers connected with the destroyed portion will atrophy and disappear. **G.'s Commissure**, a mass of fibers forming the upper (dorsal) part of the optic tracts. They cannot be demonstrated in man except in cases of complete degeneration of the optic fibers proper. **G.'s Ganglion**, the cephalo-dorsal ganglion of the mamillary body of the brain. **G.'s Law.** See *Law.*

Guérin's Glands. See *Gland.* **G.'s Method.** See *Treatment, Methods of.*

Guernsey Blue. See *Pigments, Conspectus of.*

Guettard, Glands of. See *Gland.*

Guidi, Canal of. See *Canal.*

Guignet's Green. Same as *Chrome-green.*

Guillotine (*gil'-o-tēn*) [after Dr. J. I. *Guillotin*]. A surgical instrument for excision of the tonsils or growths in the larynx, etc.

Guimet Blue. Same as *French Blue.*

Guinea (*gin'-e*) [African]. The name of a district on the west coast of Africa. **G. Fever**, a form of intermittent fever. **G.-green.** See *Pigments, Conspectus of.* **G. Pepper.** See *Grains of Paradise.* **G.-pig**, an animal of the genus *Cavia*, used in bacteriologic investigation. **G.-worm**, the *Filaria medinensis*, a nematode worm of tropical countries, that in the human tissues in which it burrows may, unless removed, develop to a length of several feet, producing inflammatory ulceration. See *Thread-worm.* **G.-worm Disease.** See *Dracontiasis.*

Gula (*gu'-lah*) [L.: *pl.*, *Gulæ*]. The gullet; the neck and throat, or the pharynx and esophagus. In biology: 1. An exoskeletal piece on the under side of the head of certain insects, behind the mentum and between the genæ. 2. The upper portion of the front of the neck of a bird.

Gulancha (*goo-lan'-kah*) [E. Ind.]. The plant, *Tinospora cordifolia*, of India. Its stems and roots are diuretic, tonic, and antiperiodic. Unof.

Gular (*gu'-lar*) [*gula*, the gullet]. Pertaining to the throat, pharynx, or gula.

Gulinula (*gu-lin'-u-lah*) [*gula*, throat]. In biology, applied by Hyatt to that stage in the development of an actinozoan in which the actinostome or gullet is formed; it follows the hydroplanula stage.

Gullet (*gul'-et*). See *Esophagus.*

Gum [ME., *gumme*, gum]. A name loosely applied to the concreted juices of plants. Chemically, a substance yielding *mucic acid* when treated with nitric acid. See, also, *Gums*, and the names of the various gums. **G. Arabic.** See *Acacia.* **G. Benjamin.** See *Benzoin.* **G.-boil**, abscess of the gum. **G. Dammar.** See *Dammar.* **G.-plant.** See *Grindelia.* **G.-resins.** See *Resins.* **G. Tragacanth.** See *Tragacanth.* **G.-wood Tents.** See *Tupelo.*

Gumma (*gum'-ah*) [Fr., *gomme*: *pl.*, *Gummata*]. A soft, elastic tumor resulting from a peculiar kind of caseation of tertiary syphilitic inflammatory deposits.

Gummatous (*gum'-at-us*) [Fr., *gomme*, gum]. Of the nature of or affected with gummata.

Gummosis (*gum-o'-sis*) [*gummi*, gum]. In biology, the transformation of plant-tissue into gum.

Gums (*gumz*) [ME., *gumme*, gum]. 1. Amorphous, transparent substances widely disseminated in plants. They form sticky masses with water, and are precipitated by alcohol. They are odorless and tasteless. 2. See *Gingiva*.

Gun-cotton. See *Pyroxylin*.

Gunjah (*gun'-jah*). See *Cannabis*.

Gunstock Deformity. A deformity caused by fracture of either condyle of the humerus, in which the long axis of the fully extended forearm deviates outwardly from that of the arm.

Günzburg's Test. See *Tests, Table of*.

Gurgling Sound. The peculiar sound caused by a gas passing through a liquid. It is heard in breathing, when the bronchi or pulmonary cavities contain fluid, and is observed upon palpation of the abdomen in enteric fever and other conditions in which the bowel is distended with gas and contained liquid.

Gurjun Balsam (*ger'-jun*) [E. Ind.]. *Balsamum dipterocarpus*, wood-oil. An oleo-resin obtained from several species of *Dipterocarpus*, trees native to Southern Asia. It is similar to copaiba but more decided in therapeutic effects, and is less unpleasant. It is an admirable expectorant, useful in true leprosy. Dose ♏x–ʒij, in emulsion. Unof.

Gussenbauer's Suture. See *Suture*.

Gustation (*gus-ta'-shun*) [*gustare*, to taste]. The sense of taste; the act of tasting. **G., Chromatic,** the symptom of luminous sensations aroused by the sense of taste of certain substances.

Gustative (*gus'-tat-iv*). See *Gustatory*.

Gustatory (*gus'-tat-o-re*) [*gustare*, to taste]. Pertaining to the special sense of taste and its organs. **G. Bud,** a taste-bud. **G. Cell,** a spindle-cell from the interior of a taste-bud. **G. Nerve.** See *Nerve*.

Gut [ME., *gut*, intestine]. A common name for intestine. **G. Suture.** See *Catgut*. **G.-tie,** volvulus as occurring in the horse.

Gutta (*gut'-ah*) [L.: *pl.*, *Guttæ*]. A drop. Also, freely used as a minim or sixtieth part of a fluid dram. **G. nigra, or Black-drop,** a dilute acetic acid containing saffron, and flavored with sugar and nutmeg. Unof. **G. rosacea.** See *Acne*. **G. rosea.** Synonym of *Acne rosacea*. **G. serena,** a synonym of *Amaurosis*. **G.-percha,** a substance obtained from the milky juice of different trees of the genus *Dichopsis* (*Isonandra*). It forms a fibrous mass, varying in color from nearly white to reddish or brownish, looking like leather-clippings cemented together; it has a specific gravity of .979. Hard and somewhat elastic at the ordinary temperature, at 25° C. (77° F.) it becomes soft, and at 50° C. (122° F.) it can be kneaded or rolled into plates. It is largely used in insulating wires and cables; the best solvents are oil of turpentine, chloroform, and carbon disulphid. **G.-p., Liq.,** a solution in 91 parts of commercial chloroform with 9 parts of lead carbonate. It is employed as a protective application to slight wounds and eruptions. See, also, *Traumaticin*.

Guttate (*gut'-āt*) [*gutta*, a drop]. In biology, spotted as if by drops of something colored.

Guttatim (*gut-a'-tim*) [*gutta*, a drop]. A pharmaceutic term signifying *drop by drop*.

Gutter-water Passages. The liquid stools of a brownish color discharged in typhoid fever.

Guttula (*gut'-u-lah*) [L., dim. of *gutta*, a drop: *pl.*, *Guttulæ*]. In biology, a small spot of color.

Guttulate (*gut'-u-lāt*) [*guttula*, a small drop]. In biology, resembling small drops of oil or resin.

Guttur (*gut'-er*) [*guttur*, the throat]. The throat with reference to the trachea. **G. tumidum.** Synonym of *Goiter*.

Guttural (*gut'-u-ral*) [*gutturalis*, pertaining to the throat]. Pertaining to the throat. **G. Pouch,** in the horse one of the large air-sacs, diverticula from the Eustachian tubes and lying behind the upper part of the pharynx.

Gutturomycosis (*gut-u-ro-mi-ko'-sis*) [*guttur*, throat; μύκης, fungus]. An ulcerative affection of the guttural pouches of horses and mules, produced by the parasitic fungus, *Gutturomyces equi*.

Gutturo-palatine (*gut'-u-ro-pal'-at-in*) [*guttur*, the throat; *palatum*, the palate]. Relating to the pharynx and the palate.

Gutturo-tetany (*gut'-u-ro-tet'-an-e*) [*guttur*, throat; *tetanus*, tetanus]. A form of stuttering in which the pronunciation of such sounds as *g*, *k*, *q*, is difficult.

Guyon's Sign. See *Signs and Symptoms, Table of*.

Gymnanthous (*jim-nan'-thus*) [γυμνός, naked; ἄνθος, flower]. In biology, applied to flowers wanting in floral envelops.

Gymnasium (*jim-na'-ze-um*) [γυμνός, naked]. A place designed and fitted with appliances for the systematic exercise of the muscles and other organs of the body. Also, in Germany, a high-school.

Gymnastic (*jim-nas'-tik*) [γυμνός, naked]. Pertaining to bodily exercise, or to the science of preserving health by bodily exercise.

Gymnastics (*jim-nas'-tiks*) [γυμνός, naked]. The science of preserving (and of restoring) health by bodily exercise. **G., Medical,** any physical exercise designed to restore or promote health. **G., Ocular,** regular muscular exercise of the eye to overcome muscular insufficiency. **G., Swedish,** a system of exercises to restore strength to paretic muscles, and found useful in a great variety of abnormal chronic conditions.

Gymnaxony (*jim-naks'-on-e*) [γυμνός, naked; ἄξων, axis]. In biology, a monstrous flower in which the placenta, with its ovules, protrudes from the ovary.

Gymnoblastic (*jim-no-blas'-tik*) [γυμνός, naked; βλαστός, germ]. In biology; applied to those hydroid polyps in which the zoöids are not inclosed in horny receptacles.

Gymnobranchiate (*jim-no-brang'-ke-āt*) [γυμνός, naked; βραγχία, gills]. In biology applied to those molluscs that have naked gills; nudibranchiate.

Gymnocarpous (*jim-no-kar'-pus*) [γυμνός, naked; καρπός, fruit]. In biology, having the fruit naked; applied to lichens and fungi in which the apothecia and hymenia are naked or exposed.

Gymnocaulus (*jim-no-kaw'-lus*) [γυμνός, naked; καυλός, stalk]. In biology, the immature contractile cord or stalk of a polypid.

Gymnoceratous (*jim-no-ser'-at-us*) [γυμνός, naked; κέρας, horn]. In biology, applied to certain insects with prominent antennæ.

Gymnocidium (*jim-no-sid'-e-um*) [γυμνός, naked: *pl.*, *Gymnocidia*]. In biology, the swelling at the base of the spore-case in certain mosses.

Gymnocladus (*jim-nok'-lad-us*). See *Chicot*.

Gymnocyta (*jim-no-si'-tah*) [γυμνός, naked; κύτος, a hollow]. In biology, a naked-celled, unicellular organism.

Gymnocytode (*jim-no-si'-tōd*) [γυμνός, naked; κύτος, a hollow]. In biology, a naked, non-nucleated, unicellular organism, as a gregarine while in the monerad stage.

Gymnodont (*jim'-no-dont*) [γυμνός, naked; ὀδούς, tooth]. In biology, having naked teeth; applied to certain fishes, as the parrot-fish, the globe-fish, etc.

Gymnogen (*jim′-no-jen*) [γυμνός, naked; γενής, producing]. Same as *Gymnosperm.*

Gymnogenous (*jim-noj′-en-us*) [γυμνός, naked; γενής, producing]. In biology, applied to birds that are naked when hatched.

Gymnogynous (*jim-noj′-in-us*) [γυμνός, naked; γυνή, female]. In biology, applied to such plants as have the ovary uncovered.

Gymnomyxine (*jim-no-miks′-in*) [γυμνός, naked; μύξα, slime]. In biology, applied to the lower protozoa.

Gymnorhinal (*jim-nor-ī′-nal*) [γυμνός, naked; ῥίς, nose]. In biology, applied to birds having the nostrils naked or unfeathered.

Gymnosomatous (*jim-no-sō′-mat-us*) [γυμνός, naked; σῶμα, body]. In biology, applied to certain molluscs that produce no shell; specifically, naked pteropods.

Gymnosperm (*jim′-no-sperm*) [γυμνός, naked; σπέρμα, seed]. In biology, a plant characterized by having naked seeds (not inclosed in a pericarp), as in the coniferæ.

Gymnospore (*jim′-no-spōr*) [γυμνός, naked; σπόρος, a seed]. In biology, a naked spore.

Gymnostomous (*jim-nos′-to-mus*) [γυμνός, naked; στόμα, mouth]. In biology, applied to such mosses as have the mouth of the sporangium destitute of a peristome.

Gynæ- (*jin′-e*). See *Gyne-.*

Gynæcology (*jin-e-kol′-o-je*). See *Gynecology.*

Gynæcomastia (*jin-e-ko-mas′-te-ah*). See *Gynecomastia.*

Gynander (*jin-an′-der*) [γυνή, woman; ἀνήρ, man]. A man of effeminate or woman-like qualities.

Gynandria (*jin-an′-dre-ah*) [γυνή, woman; ἀνήρ, man]. The same as *Hermaphroditism.*

Gynandrism, or **Gynandromorphism** (*jin-an′-drizm* or *jin-an′-dro-mor′-fizm*) [γυνή, woman; ἀνήρ, man; μορφή, form]. Hermaphroditism.

Gynandromorphism (*jin-an-dro-morf′-izm*) [γυνή, female; ἀνήρ, male; μορφή, form]. In biology, applied to such insect-monstrosities as combine both male and female characters.

Gynandrophore (*jin-an′-dro-fōr*) [γυνή, female; ἀνήρ, male; φέρειν, to bear]. In biology, a stalk raising the stamens and pistils above the insertion of the corolla.

Gynandrosporous (*jin-an-dros′-por-us*) [γυνή, female; ἀνήρ, male; σπόρος, a seed]. In biology, applied to certain algæ that bear both male and female reproductive organs (oögonia and androspores) on the same plant.

Gynandrous (*jin-an′-drus*) [γύναανδρος, of doubtful sex]. In biology, having the stamens and pistils more or less intimately united.

Gynantherous (*jin-an′-ther-us*) [γυνή, female; ἀνθηρός, flowering]. In biology, applied to flowers in which the stamens have been converted into pistils.

Gynatresia (*jin-at-re′-ze-ah*) [γυνή, woman; ἀτρησία, atresia]. Vaginal atresia.

Gynecatoptron (*jin-ek-at-op′-tron*) [γυνή, woman; κάτοπτρον, mirror]. A vaginal speculum.

Gynecian (*jin-e′-se-an*) [γυνή, a woman]. Pertaining to women.

Gynecic (*jin-e′-sik*) [γυνή, woman]. Relating to women.

Gynecium (*jin-e′-se-um*) [γυνή, female; οἶκος, house]. In biology, the name applied to the pistils of a flower taken as a whole.

Gynecologic (*jin-e-ko-loj′-ik*) [γυνή, a woman; λόγος, science]. Relating to gynecology.

Gynecologist (*jin-e-kol′-o-jist*) [γυνή, a woman; λόγος, science]. One who practises in gynecology.

Gynecology (*jin-e-kol′-o-je*) [γυνή, a woman; λόγος, science]. The science and therapeutics of the diseases of women.

Gynecomania (*jin-e-ko-ma′-ne-ah*) [γυνή, woman; μανία, madness]. Satyriasis.

Gynecomastia (*jin-e-ko-mas′-te-ah*) [γυνή, woman; μαστός, breast]. 1. The excessive development of the breast of a man, either with or without atrophy of the testicles. 2. The secretion of milk by the male.

Gynecomasty (*jin′-e-ko-mas-te*). See *Gynecomastia.*

Gynecomazia (*jin-e-ko-ma′-ze-ah*) [γυνή, woman; μαζός, breast]. Same as *Gynecomastia.*

Gynecopathy (*jin-e-kop′-ath-e*) [γυνή, woman; πάθος, disease]. Any disease of, or peculiar to, women; the study of diseases of women.

Gynecophore (*jin′-e-ko-for*) [γυνή, female; φέρειν, to bear]. In biology, the canal or receptacle in certain male worms, in which the female is retained, as in *Bilharzia.*

Gynephobia (*jin-e-fo′-be-ah*) [γυνή, woman; φόβος, fear]. Morbid aversion to the society of women.

Gyniatrics (*jin-e-at′-triks*) [γυνή, woman; ἰατρεία, therapy]. Gynecology, or gynecologic therapeutics.

Gynobase (*jin′-o-bās*) [γυνή, a female; βάσις, base]. In biology, an elevated portion of the receptacle of a flower, bearing the ovary.

Gynocardia (*jin-o-kar′-de-ah*). See *Chaulmoogra.*

Gynodiecious (*jin-o-dī-e′-se-us*) [γυνή, female; δίς, two; οἶκος, house]. In biology, having pistillate flowers on one set of plants and perfect flowers on another set.

Gynomonecious (*jin-o-mo-ne′-se-us*) [γυνή, female; μόνος, single; οἶκος, house]. In biology, having both pistillate and perfect flowers upon the same plant.

Gynophore (*jin′-o-for*) [γυνή, female; φερεῖν, to bear]. In biology: (*a*) The stalk of a pistil raising it above the receptacle; (*b*) The branch of a hydroid gonoblastidium that bears only generative buds containing ova.

Gynoplastic (*jin-o-plas′-tik*) [γυνή, woman; πλαστικός, suitable for moulding]. Pertaining to the closing of unnatural openings, or to the dilatation of contracted, narrow openings in the female organs of generation.

Gynostegium (*jin-o-ste′-je-um*) [γυνή, female; στέγη, a roof]. In biology, the sheath or covering of the gynecium, or female portion of a flower taken as a whole.

Gypsum (*jip′-sum*) [γύψος, lime]. Native calcium sulphate. See *Calcium.*

Gyral (*ji′-ral*) [*gyrare*, to turn or whirl]. Pertaining to a gyrus or to gyri.

Gyration (*ji-ra′-shun*) [*gyrare*, to turn or whirl]. A turning in a circle; also, giddiness.

Gyre (*jīr*) [gyrus, a circle]. A convolution, and a more commendable word than the polysyllable.

Gyrophora (*ji-roff′-or-ah*) [γῦρος, ring; φορεῖν, to bear]. A genus of lichens, some species of which afford the *tripe de roche*, a rock-tripe of Northern Canada. Though tough, acrid, and unpalatable, these lichens are sometimes eaten when other food is not to be had.

Gyropsoriasis (*ji-ro-sor-ī′-as-is*) [γυρός, round; ψωρίασις, a skin-disease]. Psoriasis occurring in circular patches.

Gyrosa (*ji-ro′-sah*) [γῦρος, a circle]. A variety of gastric vertigo in which, when the patient is standing, everything turns around him, and he must close his eyes to avoid falling.

Gyrospasm (*ji′-ro-spazm*) [γῦρος, circle; σπασμός, spasm]. A peculiar rotary spasm of the head, and sometimes a nodding spasm.

Gyrus (*ji′-rus*) [*gyrus*, γῦρος, a circle: *pl.*, *Gyri*]. A convolution of the brain. See *Convolution.*

H

H. Abbreviation of *Hypermetropia*. In chemistry, the symbol of hydrogen. In pharmacy, the symbol of *Haustus*, a draught.

Haarlem Blue. Same as *Mineral Blue*.

Habena (*hab-ē'-nah*) [L., "a rein"]. 1. A peduncle of the conarium. A slight ridge at the dorsal margin of the mesal surface of the thalamus, with a dorsal convexity, extending from the porta to the supracommissure, which unites it with its opposite. 2. A bandage or strip of plaster for a wound.

Habenal, or **Habenar** (*hab-ē'-nal*, or *hab-ē'-nar*) [*habena*, a rein]. Relating to the habena.

Habenula (*hab-en'-u-lah*) [*habena*, a rein]. A ribbon-like structure. The superficial gray nucleus of the optic thalamus in front, and superior to the posterior commissure. **H. conarii.** Same as *Habena*. **H. pectinata, perforativa,** and **tecta** (or **arcuata**), names of different zones, or portions of the basilar membrane of the internal ear; called also *Zona pectinata*, etc.

Habenular (*hab-en'-u-lar*) [*habena*, a rein]. Pertaining to an habenula.

Habit (*hab'-it*) [*habere*, to have]. 1. That condition or quality that one naturally possesses, or that may be acquired. 2. The tendency to repeat an action or condition. 3. In biology, the general aspect of a plant or animal and its mode of growth. **H.-chorea.** See *H.-spasm*. **H., Full,** of a plethoric constitution. **H.-spasm;** *Habit-chorea; Convulsive Tic; Gilles de la Tourette's Disease*. A choreic disease characterized by simply localized spasmodic movements, or such movements combined with explosive utterances and psychic symptoms (*convulsive tic*). *Habit-spasm* is confined chiefly to young girls, and is marked mainly by spasmodic action of the facial muscles or of the head. *Convulsive Tic* or *Gilles de la Tourette's Disease* is a psychosis allied to hysteria, and occurring usually in children of a neurotic tendency. It is marked by involuntary muscular movements, usually affecting the facial or brachial muscles, and by explosive utterances that may resemble a bark or an inarticulate cry. A word heard may be mimicked at once and repeated over and over again, usually with the involuntary movements. To this the term *Echolalia* has been applied. *Coprolalia*, or the use of bad language, is another symptom, and occasionally actions are mimicked (*echokinesis*). These may also be associated with curious mental disturbances, the patient becoming the subject of a form of obsession or a fixed idea.

Habitat (*hab'-it-at*) [*habitare*, to dwell]. The natural locality, or geographic range of an animal or plant.

Habitation (*hab-it-a'-shun*) [*habitatio*, a dwelling]. A dwelling-place. The home, dwelling-place, or natural locality of an animal or a plant.

Habitus (*hab'-it-us*) [*habere*, to have]. A habit; general appearance or expression.

Habromania (*hab-ro-ma'-ne-ah*) [ἁβρός, graceful; μανία, madness]. Insanity with pleasant or agreeable delusions.

Hachement (*hahsh-mon'g'*) [Fr., hacking, or chopping]. In massage, a succession of strokes, usually with the ulnar edge of the hand, sometimes with the border of the percutor.

Hackberry (*hak'-ber-e*). See *Celtis*.

Hacking (*hak'-ing*). See *Tapotement* and *Hachement*.

Haddock (*had'-ok*) [ME., *haddok*, haddock]. A fish, *Gadus æglefinus*, closely allied to the cod. It is said that the oil of the liver of the haddock is sometimes mixed with cod-liver-oil; but such admixture is probably rare, as it greatly impairs the market value of the oil. Unof.

Hæckel's Law. See *Law*.

Hæma- (*hem'-ah-*) [αἷμα, blood]. A prefix signifying some relationship with the blood. For words (unless unanglicized) thus beginning, see *Hema-*.

Hæmal (*hem'-al*). See *Hemal*.

Hæmanthin (*hem-an'-thin*). See *Hemanthin*.

Hæmatoxylin (*hem-at-oks'-il-in*). See *Hematoxylon*.

Hæmin (*hem'-in*). See *Hemin*.

Hæmo- (*hem'-o-*). For words thus beginning see *Hemo-*.

Hæmorrhage (*hem'-or-āj*). See *Hemorrhage*.

Hæser and Neubauer's Formula. A formula for estimating from the specific gravity the total amount of solids in the urine; it is sufficiently accurate for clinical purposes. The estimation is made by multiplying the last two figures of the specific gravity by the factor 2.33, the product of which represents the number of grams of solids in 1000 c.c. of the urine; this must be multiplied by the number of c.c. of the urine under examination and divided by 1000 in order to obtain the correct amount of solids.

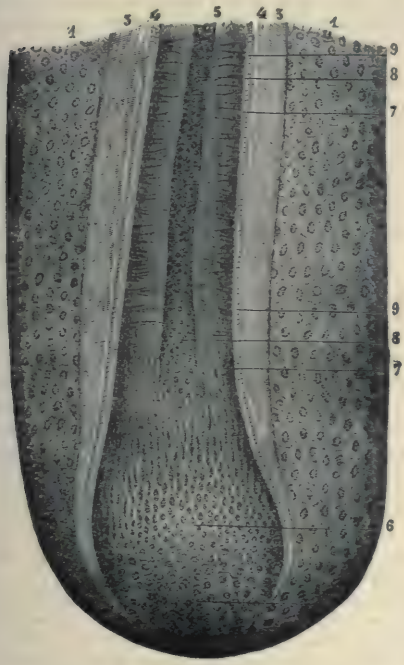
Hagenia (*haj-ē'-ne-ah*). See *Kusso*.

Hager's Reagent. A reagent for the detection of sugar in the urine. It consists of the ferrocyanid of iron and caustic potassa.

Hahnemannism (*hahn'-e-man-izm*). See *Homeopathy*.

Haidinger's Brushes. A visual phenomenon seen upon directing the eye toward a source of polarized light, due to the doubly-refractive character of the elements of the macula.

Hair (*hār*) [ME., *here*, hair]. The hirsute appendage of the skin. Each hair consists of a bulb and a shaft. The former is situated in the true skin, but is enveloped in a sheath of epidermis. **H.-blanching.** See *Canities*. **H.-bulb,** a whitish, soft, bulbous enlargement at the proximal extremity of the root of the hair. **H.-cap Moss,** Robin's Rye; the leaves and stems of *Polytrichum juniperum*, a powerful diuretic. Dose of the decoction *ad lib.*; of the fld. ext. ʒj–ij. Unof. **H.-despoiler,** an individual who is afflicted with a form of sexual perversion, in which the feelings are aroused during the act of mutilating or cutting-off the hair of the victim. **H.-follicle.** See *Follicle*. **H.-gland,** a minute sebaceous gland of the hair-root. **H.-knob,** Henle's term for a hollow, bulbous hair-root. **H.-papilla,** the nipple-like process of the corium from which the hair grows. **H.-pigment,** the coloring-matter of the hair. **H.-pith,** the medulla of a hair. **H.-root,** that portion of a hair contained in the follicle. **H.-shaft,** the part of a hair above the root. (See illustration, page 539.)



Hairy (*hār'-e*) [ME., *here*, hair]. Covered with hair; consisting of hair. **H. Heart.** See *Trichocardia* and *Cor villosum*. **H. Tongue.** See *Nigrities*.

Halberd-shaped (*hal'-berd-shāpt*). Same as *Hastate*.

Hale (*hāl*) [ME., *heil*, in good health]. Sound; healthy; robust.

Half (*ha(h)f*) [ME., *half*, half]. One of two equal parts. **H.-bath.** See *Bath*. **H.-breed,** a popular term applied to offspring whose parents belong to different races. **H.-lying,** in massage, reclining at an angle of about 45°. **H. Neck-rest,** in massage, having one hand supporting the neck posteriorly. **H.-wit,** a

weak-minded person; an idiot. **H.-witted**, idiotic; weak in intellect.

ROOT OF A HAIR AND ITS EPIDERMIC SHEATH.

1, 1. External layer of epidermic sheath. 2, 2. Its inferior extremity. 3, 3. Internal layer. 4, 4. External layer of cuticle of hair. 5. Root of hair 6. Bulb of root. 7, 7. Its peripheral or fibrous portion. 8. Its central or medullary portion. 9, 9. Internal layer of cuticle of hair.

Halicore (*hal-ik'-or-e*) [ἁλς, sea; κόρη, maiden, mermaid]. See *Dugong*.

Halimeter (*hal-im'-et-er*) [ἁλυκός, saltness; μέτρον, a measure]. An instrument for estimating the proportions of water in milk by means of its power to dissolve common salt.

Halisteresis (*hal-is-ter-e'-sis*) [ἁλς, salt; στέρησις, privation]. The loss by fully-formed bones of ⅓ to ½ their lime-salts, resulting in osteomalacia.

Halituous (*hal-it'-u-us*) [*halitus*, breath]. Moist, as if from having been breathed upon; applied to the skin.

Halitus (*hal'-it-us*) [L., a vapor]. A vapor. Also, expired breath. **H. oris fœtidus**, tainted or foul breath. **H. sanguinis**, the characteristic smell of the blood, peculiar to each kind of animal.

Hall's (Marshall) Disease. See *Diseases, Table of.*

H.'s Method. See *Artificial Respiration*.

Haller, Ansa of. See *Ansa*. **H., Circle of.** See *Circle* and *Circulus*. **H., Cones of**, the *Coni vasculosa*. **H., Fretum of.** See *Fretum*. **H., Line of.** See *Lines, Table of.* **H., Network of**, the *Rete vasculosum* of the testis. **H., Passage of**, in the embryo the narrow passage joining the auricle and ventricle of the heart.

Hallex (*hal'-eks*) [L.]. See *Hallux*.

Hallucal (*hal'-u-kal*) [*hallux*, the great toe]. Pertaining to the hallux, or great toe.

Hallucinatio (*hal-lew-sin-a'-she-o*) [L.]. Hallucination. **H. hypochondriaca.** Synonym of *Hypochondriasis*.

Hallucination (*hal-lew-sin-a'-shun*) [*hallucinari*, to wander in mind]. The highest degree of subjective sensation, dependent alone upon morbid stimulation of the sensory cortical centers. There is the perception of non-existent objects or impressions, creations of the imagination. Hallucinations are variously classed as hypochondriac, hypnagogic, motor, negative, pseudo-sensorial, unilateral, visual, auditory, gustatory, olfactory, tactile, hemiopic, epileptoid, etc.

Hallux, or **Hallus** (*hal'-uks* or *hal'-us*) [L.]. The great toe. The great toe when overriding the second toe. **H. dolorosus.** See *H. flexus*. **H. flexus**; *Hallux rigidus; Hallux dolorosus;* a condition allied to and perhaps identical with hammer-toe, in which there is flexion of the first phalanx of the great toe. The second phalanx is usually extended upon the first, and there is more or less rigidity of the metatarsophalangeal joint. **H. rigidus.** See *H. flexus*. **H. valgus**, displacement of the great toe toward the other toes. **H. varus**, displacement of the great toe away from the other toes.

Halo (*ha'-lo*) [ἅλως, a threshing-floor]. 1. The brownish circle about the female nipple, called also the areola. 2. The luminous or colored circles seen by the patient about light in glaucoma.

Halogen (*hal'-o-jen*) [ἅλς, salt; γεννᾶν, to produce]. In chemistry, an element that forms a compound of a saline nature by its direct union with a metal. The halogens are chlorin, iodin, bromin, and fluorin, to which cyanogen may be added as a compound halogen.

Halogenic (*hal-o-jen'-ik*) [ἅλς, salt; γεννᾶν, to produce]. Salt-producing; producing haloids.

Haloid (*hal'-oid*) [ἅλς, salt; εἶδος, likeness]. Any one of those compounds that consist of a metal directly united to chlorin, bromin, iodin, fluorin, or cyanogen.

Halophilous (*hal-off'-il-us*) [ἅλς, salt; φίλος, loving]. In biology, applied to plants growing in salt marshes and along sea-coasts.

Halstern's Disease. See *Diseases, Table of.*

Halt (*hawlt*) [ME., *halt*, lame]. 1. Lame. 2. To limp. 3. A disease in sheep.

Halter (*hawl'-ter*) [ἁλτήρ, a leaping weight: *pl. Halteres*]. In biology, one of the rudimentary hinder wings of a fly; it is also called *poiser* or *balancer*.

Halteripterous (*hal-ter-ip'-ter-us*) [ἁλτήρ, a leaping weight; πτερόν, wing]. Having halteres; applied to dipterous insects.

Halved (*hahvd*) [ME., *half*, half]. In biology, applied to bilaterally symmetric organs in which one side is wanting, as in certain leaves.

Ham [ME., *hamme*, the ham]. That part of the leg between the knee-joint and the hip-joint. **H.-string**, one of the tendons of the posterior muscles of the thigh. Also, to cripple by cutting the tendons of the muscles of the thigh. **H., Inner**, the tendons of the semimembranosus, sartorius, and semitendinosus muscles. **H., Outer**, the tendons of the biceps flexor cruris.

Hamamelin (*ham-am-e'-lin*) [ἁμαμηλίς, a kind of medlar or service-tree]. A precipitate from a tincture of the bark of witch-hazel, *Hamamelis virginica;* it is astringent, tonic, and sedative. Dose gr. j–iij. Unof.

Hamamelis (*ham-am-e'-lis*) [ἅμα, together with; μῆλον, apple-tree: *gen.*, *Hamamelidis*]. Witch-hazel; the leaves of *H. virginica*, with properties not fully known. It is thought to be tonic, styptic, and sedative, and appears to affect the circulation in a manner similar to aconite. It is highly recommended as a hemostatic. A preparation of this drug is sold under the name of Pond's Extract. **H., Fld. Ext.** Dose ♏j–ʒj. **H., Tinct.** (B. P.) (alc.), 1 in 10. Dose ♏ij–v.

Hamann's Acid Carmin. See *Stains, Table of.*

Hamarthritis (*ham-ar-thri'-tis*) [*ἅμα*, together; *ἄρθρον*, a joint; *ιτις*, inflammation]. Gout involving all of the joints.

Hamate or **Hamose** (*ha'-māt*, *ha'-mōs*) [*hamus*, a hook]. In biology, hooked, uncinate.

Hamburg Blue. Same as *Berlin Blue.* **H. White.** See *Pigments, Conspectus of.* **H. Yellow.** Same as *Chrome-yellow.*

Hamilton's Bandage. See *Bandage.*

Hammarsten's Theory of Coagulation. A theory that claims that fibrin is formed from one body only, namely, fibrinogen.

Hammer (*ham'-er*) [ME., *hamer*, a hammer]. In anatomy, the malleus. **H.-bone**, the malleus. **H.-cramp.** See *Cramp, Blacksmiths'.* **H., Thermal.** Same as *Cautery Button.* **H.-toe.** See *Hallux.*

Hammerman's Cramp. A spasmodic, and sometimes painless, affection of the muscles of the upper extremity. It is seen in those that use a hammer, and is due to over-use.

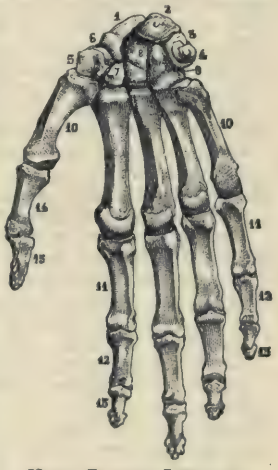
Hammock (*ham'-ok*) [Span., *hamaca*, a hanging mat]. A couch or bed made of netting or canvas, suspended at the ends. It is much used aboard vessels and in tropical regions; it has been used latterly in the transportation of the sick and wounded. Slings for fractured legs, etc., are sometimes called hammocks.

Hammond's Disease. See *Athetosis*, and *Diseases, Table of.*

Hamular (*ham'-u-lar*) [*hamus*, a hook]. Pertaining to or shaped like a hook.

Hamulate, Hamulose (*ham'-u-lāt*, *-lōs*) [*hamus*, a hook]. Hooked or hook-shaped.

Hamulus (*ham'-u-lus*) [dim. of *hamus*, a hook: *pl.* and *gen.*, *Hamuli*]. In anatomy, a hook-shaped process, as of a bone; any unciform process. **H. of the Cochlea**, the hook-like process of the osseous lamina at the cupola.



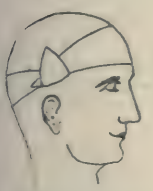
Hamus (*ha'-mus*) [L., a hook: *pl.*, *Hami*]. In biology, a hooked process found on the wings of certain insects, which, together with the *tendo*, helps to keep the wings together during flight.

Hamy's Plane. See *Plane.*

Hanchinol (*han'-chin-ol*). See *Heimia.*

Hancock's Operations. See *Operations, Table of.*

Hand [ME., *hand*, hand]. The organ of prehension in bimana and quadrumana, composed of the carpus, the metacarpus and the phalanges. **H., Ape.** See *Main en griffe.* **H., Claw.** See *Main en griffe.* **H., Dropped.** See *Dropped.* **H.-gout.** See *Chiragra.* **H.-litter.** See *Stretcher.* **H., Monkey.** See *Main en griffe.*



HAND, PALMAR SURFACE.

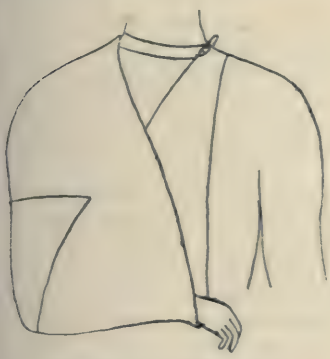
1. Scaphoid. 2. Semilunar. 3. Cuneiform. 4. Pisiform. 5. Trapezium. 6. Groove for tendon of flexor carpi radialis. 7. Trapezoid. 8. Os magnum. 9. Unciform. 10, 10. Metacarpal bones. 11, 11. First phalanges of fingers. 12, 12. Second phalanges. 13, 13. Third phalanges. 14. First phalanx of thumb. 15. Second phalanx.

Handkerchief (*hang'-ker-chif*) [ME., *hand*, hand; *kerchef*, a kerchief]. A square piece of cloth for wiping the face or nose. **H., Barton's**; a handkerchief is folded in the form of a cravat, and the body is so placed on the point of the heel that the portion on the outer side of the foot is one-third longer than the other portion. The short part is held parallel with the sole of the foot while the long part is carried across the instep, turned round the inner part, carried back under the sole of the foot and looped round its own side. The two ends are then tied together for the purpose of exerting traction.

Handkerchief-Dressing. A form of temporary dressing for wounds and fractures made of handkerchiefs. There are two varieties, viz., *cravats*, in which the handkerchiefs are folded into rolls like cravats; and *triangles*, the handkerchiefs being folded diagonally in the form of triangles. The most important **cravats** are the following: **C., Abdomino-inguinal**; two handkerchiefs are folded into cravats and their ends tied together. The body of one is placed beneath the thigh, close up to the nates; the ends are brought to the front, crossed over the groin, then carried round the opposite sides of the body, and tied together on one side rather than behind, so that the knot shall not press injuriously upon the back. **C., Axillo-acromial.** See *C., Parieto-axillaris.* **C., Axillo-cervical**; the body of the cravat is placed in the axilla, the ends crossed over the shoulder, and tied on the opposite sides of the neck. **C., Cervical**; a handkerchief is formed into a cravat, the body placed on the front, back, or sides of the neck, according to the part to be dressed, the ends are carried around, crossed on the opposite side and returned, and fastened with pins. **C., Compound Bis-axillary**; for this two handkerchiefs in cravat form are required. One is tied as an axillo-acromial cravat through one axilla, while the body of the other is placed in the opposite axilla, and its ends, being brought across the chest, one in front and the other behind, are passed through the loop of the first and tied in front of the breast. **C., Compound Bis-axillo-scapulary**; form two handkerchiefs into cravats. Tie one as a loose ring, or form the axillo-acromial cravat of one side, and, placing the body of the other in front of the opposite shoulder, bring the ends back, one over the shoulder and the other through the axilla; then form these into a single knot, and complete the dressing by passing the ends through the ring or loop of the other cravat, and tying them into a knot. **C., Fronto-occipito-labialis**; the handkerchief is formed into a cravat and the middle portion is placed upon the forehead; the ends are carried back, crossed upon the posterior part of the neck, brought forward under the ears and crossed over the upper lip. This is used to approximate lip-wounds. **C., Ilio-inguinal**, a double cravat, also called the *sacro bi-crural cravat of Mayor.* The body of a long cravat is placed over the body of the sacrum, the two extremities are brought around the body down in front of each groin and around the thighs, to be fastened on the opposite side of the body. **C., Ilio-inguinal**, or the *cruro-pelvic cravat of Mayor.* The body of a large cravat is placed over the inguinal region, the upper extremity is carried around the body, the lower extremity around the thigh, and the two ends knotted in front. **C., Metatarso-malleolar**; place the body of the cravat obliquely across the dorsum of the foot; carry one end under the foot and up in front of the ankle, and the other around the leg above the malleoli, fastening them together in front of the joint. **C., Parieto-axillaris**; one handkerchief is formed into a cravat, and its body is placed in the axilla, the ends tied over the shoulder, forming the *axillo-acromial cravat.* A second handkerchief is made into a triangle, and its body placed over the side of the head, and its ends tied into the first over the shoulder. It is

used to approximate wounds on the side of the neck and to prevent contraction after burns. **C., Simple Bis-axillary**; place the body of the cravat in the axilla, cross the ends over the shoulder, and after carrying one across the back and the other across the breast, tie them together at the anterior border of the axilla of the opposite side. **C., Simple Bis-axillo-scapulary**; this is a posterior figure-of-eight, and is best formed with a strip of muslin three inches wide and ten yards long. Place the center of the strip in front of the shoulder and the axilla; bring one end back over the top of the shoulder and the other through the axilla, cross them between the scapulæ, carrying the axillary end over the shoulder of the opposite side and back through the axilla, and the humeral end forward through the axilla, the two overlapping each other; then fasten their ends front and back. This is an extemporaneous dressing for fracture of the clavicle. **C., Tarso-patellar**; this requires three handkerchiefs, all in cravat-form. One is to be placed about the knee as a figure-of-eight; a second round the foot in front of the ankle; the third is passed through the loop of the latter, the ends being carried on either side through the figure-of-eight of the knee, and pinned or tied as they are turned downward. **C., Tibial**; place the body of a handkerchief, folded into a cravat, obliquely across the posterior surface of the leg, and carry the extremities around the limb, the one below the knee, and the other above the malleoli. **Mayor's Bandage for Fractured Clavicle**; the arm is flexed at a right-angle and confined to the side of the chest by a triangular handkerchief, the base being placed above the forearm and the two extremities fastened on the back, the apex hanging down in front. The two folds forming the apex are carried up between the arm and the body and the under one is passed to the sound shoulder, while the upper one is carried to the affected shoulder. A broad piece of bandage is fastened to one apex and carried beneath the handkerchief at the back and is then brought up and fastened to the other apex on the opposite shoulder.

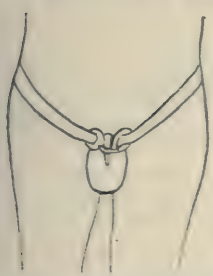
Bi-temporal Triangle.



Fronto-occipital Triangle.

Auriculo-occipital Triangle.

Triangular or Hunter's Cap of the Head.



Brachio-cervical Triangle.

Oblique Triangle of the Arm and Chest.

Mayor's Bandage for Fractured Clavicle.

Scroto-lumbar Triangle.
(Suspensory Bandage of the Scrotum).

Ilio-inguinal Cravat (double).
The Sacro Bi-crural Cravat of Mayor.

Ilio-inguinal Cravat.
(The Cruro-pelvic Cravat of Mayor.)

The most important **triangles** are the following: **T., Auriculo-occipital**, a variety of handkerchief-dressing for the head, used in keeping an application to the ear in proper place. The base of the handkerchief is placed in front of the ear to be covered, and the apex directed backward. The lower end is next carried under the jaw and up over the face in front of the

ear on the sound side, where it is made to meet the upper end, the two being tied together. **T., Bi-temporal**, a form of handkerchief head-dressing, the base being placed over the temporal region upon one side and the apex over the other. The ends are carried round to the opposite temple, crossed, brought back, and secured with pins, and the summit or apex is turned up and pinned above the temporal ridge. **T., Fronto-occipital**, a variety of handkerchief-dressing in which the base is placed over the forehead, while the summit is allowed to hang down over the occiput. The ends are next carried backward along the sides of the head, above the ears, and either tied behind the occipital protuberance, or crossed, brought forward, and pinned at each side. The apex is then turned forward and pinned to the body of the handkerchief. **T., Malleolo-phalangeal**; form the handkerchief into a triangle; place the base under the foot opposite to the instep; fold the summit back over the toes and the dorsum of the foot, and carry the ends round the malleoli, making them fast in front. Tie the ends in front, or cross them over the dorsum and tie under the sole of the foot. **T., Mammary**; fold a handkerchief into a triangle; place its base under the breast and its apex over the corresponding shoulder; then carry one end under the axilla and the other over the opposite side of the neck, tying the two behind the scapula of the affected side, and pin to these the summit. **T., Oblique, of the Arm and Chest**; the base of the triangle is placed under the wrist, the apex being allowed to project beyond the elbow. The extremity that is next to the chest is carried over the opposite shoulder, the other extremity being passed through the axilla of the injured side and tied with the first extremity over the sound shoulder. The apex is folded backward around the elbow and fastened. **T., Occipito-frontal**; the same as the *fronto-occipital*, only that the handkerchief is reversed, the base being placed over the occiput. **T., Occipito-sternal**; one handkerchief is formed into a triangle and another into a cravat. The latter is tied around the chest, forming the sterno-dorsal cravat. The body of the former is placed over the occiput and its apex over the forehead. The ends are brought down on each side of the face and fastened to the cravat about the chest. The apex is turned backward over the vertex, and pinned. **T., Palmar**; the base of the handkerchief is placed across the back or the front of the wrist, according as it is designed to dress the palm or dorsum of the hand; the summit is folded back upon the wrist, and secured there by carrying the ends around the same. **T., Scroto-lumbar.** See *T., Suspensory*. **T., Simple Brachio-cervical**; the arm being flexed at a right-angle the base of the triangle is placed under the wrist, and the two extremities are tied around the neck, the knot being thrown to one side. The apex is brought round the elbow and pinned in front. **T., Suspensory**; *Scroto-lumbar Triangle;* fold one handkerchief into a cravat and tie it around the loins; form another into a triangle, the base of which should be placed under the scrotum, and the extremities brought up, passed beneath the circular cravat and tied in front. The apex is next carried up, passed beneath the abdominal cravat and turned down in front, where it may be fastened with a pin. **T., Vertico-mental**, a form of handkerchief head-dressing in which the body of the handkerchief is placed over the vertex, the ends brought down over the ears and crossed under the chin, carried upward and pinned to the descending portion of the handkerchief. The apex is brought round one side of the head, and secured with a pin. **The Triangular or Hunter's Cap of the Head**; a piece of material is secured, with the side sufficiently long to pass over the head and fasten under the chin. First fold it transversely across until one side is within an inch of the opposite side; the short side is then placed beneath; the two corners of the folded edge are turned inward, forming a triangle. The two extremities of the triangle are taken in either hand, and while kept tense are twisted and rolled up to the extent of two inches. Lifting the bandage and approximating the hands cause the two sides to separate. It is placed on the head with the thin edge over the forehead and the rolled edge around the back of the neck. The ends are brought under the chin, and tied.

Handwriting (*hand'-ri-ting*). See *Graphology*.

Hanging (*hang'-ing*)[ME., *hangynge*, hanging]. Death by suspension of the body from the neck, by a rope provided with a slip-noose. The immediate cause of death may be asphyxia, cerebral hemorrhage (from strangulation), or dislocation or fracture of the cervical vertebræ.

Hangnail (*hang'-nāl*) [AS., *angnægl*, a sore by the nail]. A partly detached piece of epidermis at the root of the nail, the friction against which has caused inflammation of the abraded surface.

Haouwa [E. Ind.]. Synonym, in Bagdad, of *Asiatic Cholera*.

Hapantismus (*hap-an-tiz'-mus*) [ἅπας, entire]. Complete adhesion between parts or surfaces.

Haphalgesia (*haf-al-je'-ze-ah*) [ἁφή, touch; ἄλγος, pain]. Painful touch by bodies ordinarily not painful.

Haphemetric (*haf-e-met'-rik*) [ἁφή, touch; μέτρον, measure]. Relating to esthesiometry. See *Esthesiometer*.

Haphephobia (*haf-e-fo'-be-ah*) [ἁφή, contact; φόβος, fear]. The morbid dread of touching persons or things; mysophobia.

Haphonosus (*haf-on'-o-sus*) [ἁφή, touch; νόσος, disease]. Any disorder of the sense of touch.

Haplodermitis (*hap-lo-der-mi'-tis*) [ἁπλόος, simple; δέρμα, skin; ιτις, inflammation]. A simple or uncomplicated skin-inflammation.

Haplodont (*hap'-lo-dont*) [ἁπλόος, single; ὀδούς, (ὀδόντ), tooth]. In biology, applied to animals whose molar teeth have simple or single crowns.

Haplolichen (*hap-lo-li'-ken*) [ἁπλόος, single; λειχήν, lichen]. Same as *Lichen simplex*, *q. v.*

Haplomelasma (*hap-lo-mel-az'-mah*) [ἁπλόος, simple; μέλασμα, a livid spot]. Simple melasma.

Haplomorphous (*hap-lo-mor'-fus*) [ἁπλόος, simple; μορφή, form]. In biology, applied to the simpler forms of certain groups.

Haploöphone (*hap-lo'-o-fōn*) [ἁπλόος, single; φωνή, voice]. In biology, applied to the form of the syrinx in certain birds (*e. g.*, *Xenicidæ*) which have but one intrinsic syringomyon.

Haplopathy (*hap-lop'-ath-e*) [ἁπλόος, simple; πάθος, illness]. Any uncomplicated disease.

Haplopetalous (*hap-lo-pet'-al-us*) [ἁπλόος, single; πέταλον, leaf]. In biology, having but a single circle of petals.

Haplophyma (*hap-lo-fi'-mah*) [ἁπλόος, simple; φῦμα, a tumor]. A simple tumor.

Haploscope (*hap'-lo-skōp*) [ἁπλόος, single; σκοπεῖν, to see]. An instrument for measuring the visual axes.

Haplostemonous (*hap-lo-ste'-mon-us*) [ἁπλόος, single; στήμων, a thread]. In biology, having but a single circle of stamens.

Haplotomia, Haplotomy, (*hap-lo-to'-me-ah*, *hap-lot'-o-me*) [ἁπλόος, simple; τομή, a cut]. A simple incision.

Haptodysphoria (*hap-to-dis-fo'-re-ah*) [ἁπτός, tactile, touched; δύς, difficult; φορός, bearing]. The disagree-

able sensation aroused by touching certain objects, as velvet, a peach, or a russet apple.

Haramaitism (*har-am-a'-it-izm*) [Anglo-Indian; from *Haram maiti*, the name of an Hindu offender in this way]. Child-marriage in India; also, the collective physical evils that result from that system.

Hard [ME., *hard*, hard]. Solid; firm to the touch. **H.-hack**, the leaves and twigs of *Spiræa tomentosa;* it is astringent and tonic, and a popular New England remedy in diarrhea and *cholera infantum*. Dose gr. v–xv, in decoction; of the fld. ext. ʒ ss–j. Unof. The shrub *Potentilla fruticosa* is locally called hard-hack; its properties are the same as those of the species named. **H. Palate.** See *Palate*. **H. Pitch.** See *Pitch*. **H. Resins.** See *Resins*. **H.-tack**, a form of biscuit used in the navy and army.

Hardenbergia (*har-den-ber'-je-ah*) [after Countess *Hardenberg*]. A genus of Australian leguminous plants. The root of **H. monophylla**, called lilac, and sarsaparilla, is said to be a good substitute for true sarsaparilla. Unof.

Hardening (*hard'-en-ing*) [ME., *hard*, hard]. A stage in the preparation of tissues for microscopic examination. See *Alcohol*, *Ammonium Chromate*, *Ammonium Bichromate*, *Potassium Bichromate*, *Müller's Fluid*, *Erlicki's Fluid*, *Chromic Acid*, *Klein's Fluid*, *Rabl's Fluid*, *Corrosive Sublimate*, *Picric Acid*, in *Stains, Table of*. Alcohol for pieces under 1 inch square, and the bichromate solutions for larger masses, are best for general use; others in special cases; but in all, full twenty times the bulk of the object should be used. See *Stains, Table of*.

Harder's Glands. See *Gland*.

Hare's Method. A method of determining the position on the skull corresponding to the fissure of Rolando. The pre-Rolandic region occupies 55.7 per cent. of the distance from the glabella to the inion.

Hare-eye (*hār'-i*). See *Lagophthalmos*.

Harelip (*hār'-lip*). Congenital fissure of the lip due to arrested facial development. The scheme of the formation of cleft is shown in the annexed illustrations. **H., Complicated**, with cleft or malformation of the superior maxillary bone also. **H., Double**, two clefts of the lip, or one of each lip. **Twisted or Harelip Suture**, a figure-of-8 suture about a pin thrust through the lips of freshened edges of the cleft. For operations for single harelip see *Clemot's*, *Collis's*, *Dieffenbach's*, *Giraldès'*, *Graefe's*, *Hagedorn's*, *Malgaigne's*, *Mirault's*, *Nelaton's*, *Paré's*, *Rose's*, *Stokes' Operations;* and for operations for double harelip see *Bardeleben's*, *Blandin's*, *Butcher's*, *Desault's*, *Franco's*, *Gensoul's*, *Langenbeck's*, *Rose's*, *Sédillot's*, *Smith's Operations*, in *Operations, Table of*.

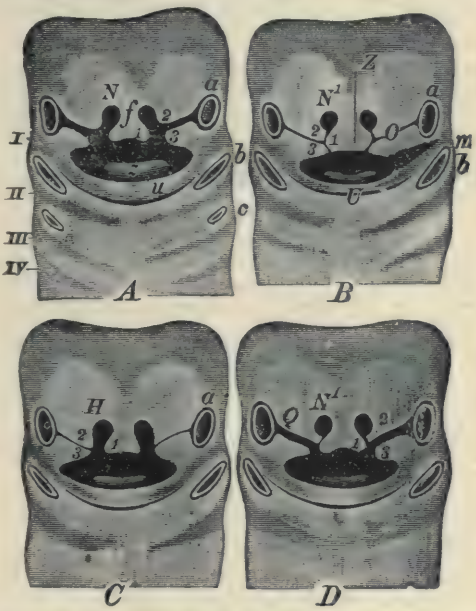
Harlequin (*har'-le-kwin*) [OF., *harlequin*, a harlequin]. Variegated; party-colored. **H. Fetus**, a fetus with congenital ichthyosis, general seborrhea, or diffuse keratoma. Such subjects are always born prematurely, and have no external ears, eyelids, or lips.

Harmalin (*har'-mal-in*) [ἅρμαλα], $C_{13}H_{14}N_2O$. A yellowish crystalline substance used as a dye. See *Pigments, Conspectus of*.

Harmonia (*har-mo'-ne-ah*) [ἁρμονία, harmony]. A suture (also a mode of suture) between two bones that are apposed closely and immovably upon each other.

Harmonics (*har-mon'-iks*). See *Over-tones*.

Harpoon (*har-poon'*) [Fr., *harpon*, a grappling-iron]. An instrument for the removal of bits of living tissue for microscopic examination.



Harrison's Groove. A transverse curve passing outward from the level of the ensiform cartilage toward the axilla. It may be deepened at each inspiration in certain diseases, *e.g.*, rickets.

Hartig's White Mass. A substance for injecting tissues. Dissolve 125 gms. of lead acetate in enough water to make the whole weigh 500 gms. Dissolve 95 gms. of sodium carbonate in enough water to make the whole weigh 500 gms. One volume of each of these solutions is mixed with two volumes of strong gelatin solution.

Hartmann's Elixir. An elixir containing camphor 50 parts, and saffron 1 part, in alcohol 350 parts.

H.'s Tubes, small tubes devised to be passed through a perforated drum-membrane for the purpose of irrigating and draining the middle-ear cavity.

Hartshorn (*harts'-horn*). 1. Cornu cervi. 2. A name popularly given to *ammonium hydrate*. See *Ammonium*.

SCHEME OF FORMATION OF THE FACE AND ARREST OF ITS DEVELOPMENT.

A. First appearance of the face. I, II, III, IV. The four visceral arches. *f*. Frontal process 1. Inner nasal process. 2. Outer nasal process. 3. Superior maxillary process. *u* Inferior maxillary process. *b, c*. First and second visceral clefts. *a*. Eye. *z*. Tongue. *B*. Normal union of the embryonic parts. *Z*. Intermaxillary bone. *N'*. Nasal orifice. *O* Nasal tear-duct. *U*. Lower jaw (*m*, abnormal dilatation of the mouth, constituting makrostomia). *C* Arrest of the development, constituting oro-nasal cleft. *D*. Arrest of development showing an "oblique facial cleft" (*Q*).

Harvest-bug. See *Leptus autumnalis*.

Hashish (*hash'-ish*). See *Cannabis*.

Hasner's Valve. A fold of the mucous membrane of the nasal duct at the lower orifice. It is not of constant occurrence. See *Valve*.

Hassall, Concentric Corpuscles of. Peculiar bodies found in the medulla of the thymus gland. They consist of a central granular part, around which are disposed layers of flattened nucleated endothelial cells arranged concentrically.

Hastate (*has'-tāt*) [*hasta*, a spear]. In biology, shaped like the head of a spear; halberd-shaped.

Hastifolious (*has-tif-o'-le-us*) [*hasta*, a spear; *folium*, a leaf]. In biology, having hastate leaves.

Hatters' Disease. A form of constitutional mercurial poisoning occurring in the makers of hats; also a

skin-disease, arising from the use of mercury and arsenic; also an acute irritation of the respiratory tract caused by the fumes of nitrogen tetroxid; all of these chemicals being used in hat-making. **H.'s Consumption,** a form of pneumonitis occurring in hatters from inhalation of the fur and dust arising during the process of "finishing and pouncing."

Haunch (*hawnch* or *hahnch*) [Fr., *hanche*, haunch]. The part of the body including the hips and the buttocks.

Haustellum (*haws-tel'-um*) [*haustrum*, a machine for drawing water: *pl.*, *Haustella*]. In biology, the sucking-apparatus of an arthropod.

Haustorium (*haws-to'-re-um*) [*haustus*, *haurire*, to draw: *pl.*, *Haustoria*]. In biology, the penetrating organs of certain parasitic plants, by means of which they obtain nourishment from their host.

Haustus (*haws'-tus*) [*haurire*, to draw]. In pharmacy, a draft. A portion of medicine in the form of a draft.

Haut Mal (*ho-mahl'*). See *Epilepsy*.

Havanna-brown. Same as *Phenyl-brown*.

Havers, Canals of. See *Canal*. **H., Glands of.** See *Gland*. **H., Spaces of,** large and irregular spaces found in growing bone mainly, though also to a limited extent in adult bones.

Haversian Canal (*hav-er'-zhe-un*). See *Bone* and *Canal*. **H. System,** a system in bone, consisting of a central opening, or Haversian canal, surrounded by a number of concentric rings.

Haw [ME., *haw*, an excrescence in the eye]. 1. The third eyelid, nictitating membrane, or winker of a horse. 2. A diseased or disordered condition of the third eyelid of the horse.

Hawking (*haw'-king*) [ME., *hauk*, to hawk]. Clearing the throat by a peculiar expiratory current of air.

Hawley's Food. A variety of Liebig's foods for infants. Its composition is: Water, 6.60; fat, 0.61; grape-sugar, 40.57; cane-sugar, 3.44; starch, 10.97; soluble carbohydrates, 76.54; albuminoids, 5.38; ash, 1.50.

Hay (*ha*) [ME., *hay*, hay]. Grass, cut and dried. **H.-asthma.** See *Fever, Hay*. **H.-cold.** Same as *Hay-fever*. **H.-fever.** See *Fever*.

Hay's Method. See *Treatment, Methods of*. **H.'s Reaction.** See *Strassburg's Test*, in *Tests, Table of*. **H.'s Test.** See *Tests, Table of*.

Haya Poison (*ha'-yah*) [said to have been named after Mr. John *Hay*]. A powerful toxic agent from tropical Africa, said by some to be derived from some species of *erythrophleum;* but this has been disputed. A solution of its impure alkaloid (1 to 2 per cent.) is a powerful local anesthetic, more persistent in its effects than cocain.

Haycraft's Method. A method for the estimation of uric acid in solutions. When uric acid is precipitated by an ammoniacal solution of nitrate of silver in the presence of the ammonio-magnesic mixture (see *Salkowski-Ludwig Method*), the precipitate is stated to contain one atom of silver to each molecule of uric acid. The uric acid is then determined by dissolving the precipitate in HNO_3, in which solution the silver is finally estimated volumetrically with a standard solution of potassium sulphocyanate. See *Uric Acid*.

Hayden's Viburnum Compound. See *Viburnum*.

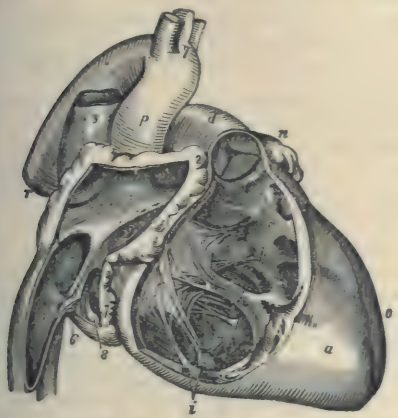
Hayem's Corpuscles. See *Blood-plates*. **H.'s Fluid,** a fluid used in hematology. It consists of distilled water, with the addition of sulphate of sodium, two and one-half per cent.; pure chlorid of sodium, one-half per cent.; and bichlorid of mercury, one-fourth per cent.

Hayward's Treatment. After the operation of arthrectomy for tuberculous disease, Hayward packed the cavity with lint saturated with dilute sulphuric acid, one-third the official strength, to hasten the separation of diseased tissues, to stimulate granulations, and to secure ankylosis.

Head (*hed*) [ME., *hed*, the head]. The anterior or upper part of the body. That part of the body containing the brain or central nerve-system. Also, the upper end of a long bone, as the femur. **H.-ache,** any pain in the head, general or local, arising from any cause whatever. According to Hughlings-Jackson, frontal headaches, such as "sick" and "bilious" headaches, are due to disorders of the digestive system; headache at the vertex, to cerebral troubles; and occipital headache, to anemia. Eye-strain is a frequent source of headache, especially in the frontal region. **H.-breeze, Electro-therapeutic,** a device for general static cephalic electrization by a head-plate, with numerous insulated pencils for subdividing and accumulating strong currents, and giving more gradual effects. See *Static Breeze*. **H.-birth,** the birth of the fetal head first. **H.-drop,** a peculiar nervous disease seen in Japan during the spring and early summer, supposed to be miasmatic in origin. It is attended with inability to hold the head erect, paralytic symptoms in the limbs, and optic disorders. One attack predisposes to others. **H.-fold,** an inflection or tucking-in of the layers in front of and beneath the head of the embryo. **H.-gut.** See *Fore-gut*. **H.-kidney.** Same as *Pronephros*. **H.-light Oil.** See *Burning Oil*. **H.-locking,** a term in obstetrics denoting the entanglement of the heads of twins at the time of birth. **H.-measurements.** See *Craniometry*.

Heal (*hēl*) [ME., *helen*, to heal]. To make whole or sound; to cure. **H.-all.** See *Collinsonia*.

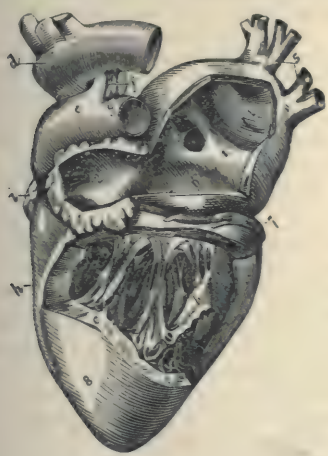
Healing (*hē'-ling*) [ME., *helen*, to heal]. Union and cicatrization of a wound; applied generally to the cure of disease. **H. by First Intention,** without the granulating process. **H. by Second Intention,** by the intermediation of granulations. **H. by Third Intention,** the direct union of two already granulating surfaces.



Health (*helth*) [ME., *helth*, health]. That condition of the body and its organs necessary to the proper performance of their normal functions. A hale or whole condition of body. **H.-lift,** an apparatus for exercising those muscles by which weights are lifted directly upward.

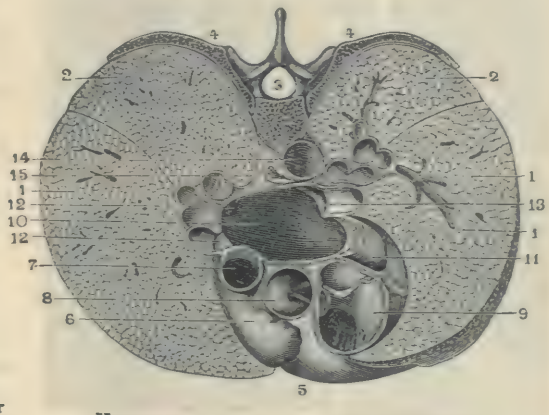
Hear (*hēr*) [ME., *heren*, to hear]. To perceive by the ear.

Hearing (*hēr'-ing*) [ME., *heren*, to hear]. The special sense by which the sonorous vibrations of the air are communicated to the mind. The cerebral center is excited by the vibration of the fluid contents of the labyrinth, or terminal organs of the auditory nerve. Sound presents three elements, pitch, intensity, and timbre. The first depends upon the number of the aërial vibrations; the second upon their amplitude; the third upon their form.



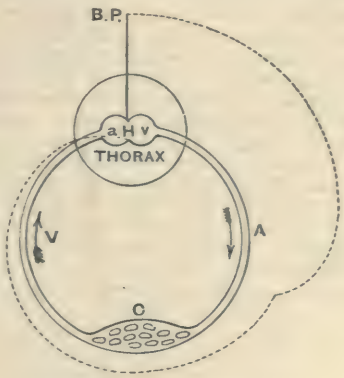
Heart (*hart*) [ME., *hart*, heart]. The organ giving the initiative and chief impulse to the circulation of the blood. It is enveloped by a membranous tissue called the *pericardium*. It consists essentially of four cavities, a right auricle and ventricle, and a left auricle and ventricle. The movements of the heart may be recorded by means of the cardiograph, and these tracings, or *cardiograms*, may be of value in the study of diseased conditions. **H., Dilatation of,** the abnormal increase in size of any or all of the cavities of the heart. **H.-burn,** a burning feeling at the epigastrium and lower part of the chest, caused by the acetic or putrefactive fermentation of the gastric contents. **H.-clot,** coagulation of the blood in the cardiac cavities;

cardiac thrombosis. **H.-disease,** any functional or organic pathologic condition of the heart. **H., Fatty,** a name given to two distinct pathologic conditions of the heart-tissue. In the first there is a true fatty degeneration of the muscular fibers of the heart; and in the second there is an increase in the quantity of subpericardial fat—a fatty infiltration. The former and most serious condition is due to a deficiency in the supply of oxygenated blood to the heart, arising either from local or general causes. It gives rise to asthma, angina pectoris, and a tendency to syncope and sudden death. The second condition is usually associated with general obesity, and may present the same symptoms as the first. **H.-hurry, Paroxysmal.** See *Tachycardia*. **H., Hypertrophy of,** an abnormal increase in the muscular tissue of the heart. See,



Anatomy of the Heart, Right Side.

1. Cavity of right auricle. 2. Appendix auriculæ. 3. Superior vena cava. 4. Inferior vena cava. 5. Fossa ovalis; the prominent ridge surrounding it is the annulus ovalis. 6. Eustachian valve. 7. Opening of the coronary vein. 8. Coronary valve. 9. Entrance of the auriculo-ventricular opening. Between the figures 1 and 9, several foramina thebesii are seen. *a*. Right ventricle. *b*, *c*. Cavity of right ventricle. *e*, *f*. Tricuspid valve. *g*. Long columna carnea. *h*. The "long moderator band." *i*. The two columnæ carneæ of the right curtain. *k*. Attachment of chordæ tendineæ of the left limb of the anterior curtain. *l*, *l*. Chordæ tendineæ of the "fixed curtain" of the valve. *m*. Valve of the pulmonary artery. *n*. Apex of left appendix auriculæ. *o*. Left ventricle. *p*. Ascending aorta. *q*. Its transverse portion. *r*. Descending aorta.

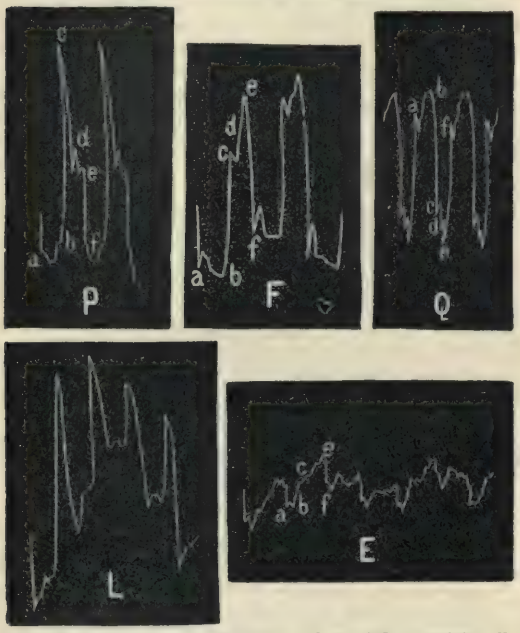


Anatomy of the Heart, Left Side.

Cavity of left auricle. 2. Cavity of the appendix auriculæ. 3. Opening of the two right pulmonary veins. 4. The sinus into which the left pulmonary veins open. 5. Left pulmonary veins. 6. Auriculo-ventricular opening. 7. Coronary vein. 8. Left ventricle. 9, 9. Cavity of the left ventricle. *a*. Mitral valve. *b*, *b*, *b*. Columnæ carneæ. *c*, *c*. Fixed columnæ carneæ. *d*. Arch of the aorta. *e*. Pulmonary artery. *f*. Obliterated ductus arteriosus. *g*. Left pulmonary artery. *h*. Right ventricle. *i*. Point of the appendix of right auricle.

Horizontal Section of Lungs and Heart.

1, 1. Upper lobes of lungs. 2, 2. Lower lobes. 3. Dorsal vertebra. 4, 4. Two ribs. 5. Heart. 6. Right auricular appendix. 7. Superior vena cava. 8. Aorta. 9. Pulmonary artery. 10. Left auricle. 11. Left auricular appendix. 12. Mouths of right pulmonary veins. 13. Mouths of left pulmonary veins. 14. Thoracic aorta. 15. Esophagus. (*See also pp. 113 and 370.*)



Scheme of the Blood-pressure.

H. Heart. *a*. Auricle. *v*. Ventricle. A. Arterial; C, capillary; V, venous areas. The circle indicates the parts within the thorax. B, P. Pressure in the aorta.

also, *Hypertrophy*. **H.-murmurs.** See *Murmur*. **H.-scald.** Same as *H.-burn*. **H.-shock,** Latham's term for sudden cardiac breakdown during exertion, not due to rupture of a valve. **H., Sounds of,** the sounds observed in auscultation of the heart, occurring synchronously with systolic contraction and the closure of the valves, etc. **H., Valves of.** See *Valve*. **H.-starvation,** Fothergill's term for a form of cardiac asthenia occurring in adult age, and characterized by feeble circulation, cold extremities, tendency to vertigo, and pseudo-apoplectic attacks, but with absence of arcus senilis. It is due to general ill-nutrition,

worry, over-work, and loss of sleep. Cardiograms of some pathologic conditions of the heart are appended.

P, Q. Hypertrophy and dilatation of the left ventricle. E. Stenosis of the aortic orifice. F. Mitral insufficiency. L. Exophthalmic goiter.
(*a*, *b* Contraction of the auricles. *b*, *c*. Ventricular systole. *d*, Closure of aortic valve. *e*. Closure of pulmonary valves. *e*, *f*. Diastole of the ventricle.)

Heat (*hēt*) [ME., *heete*, heat]. A mode or rate of vibration of ethereal, atomic, or molecular, or wave-motion. Within certain limits of intensity it is essential to the development of all organized beings; above a certain degree, it is destructive to all organization and life. As regards the body, heat indicates a temperature above 98.6° F. (37° C.). In physiology, the period of sexual excitement in the females of many animals. **H., Animal**, the heat generated within the bodies of living animals by the liberation of the latent heat contained in the food. **H.-apoplexy.** See *Insolation*. **H.-asphyxia.** Same as *Insolation*. **H.-centers**, certain points situated about the mesal and lateral aspects of the corpus striatum, supposed to have the function of regulating or inhibiting the production of body-heat. **H.-eruption.** Synonym of *Eczema*. **H.-fever.** See *Insolation*. **H., Latent**, physiologically, the potential energy existing in a complex proteid molecule, and which is liberated by the simplification of the latter, or the katabolic processes of the organism. **H., Prickly.** See *Urticaria*. **H., Specific.** See *Specific*. **H.-spot**, a freckle. Also a synonym of *Eczema solare*. **H.-stroke**, a nervous affection characterized by sudden syncope, enfeebled circulation and respiration, caused by exposure to intense heat. It is called also *Sunstroke*. **H.-unit**, the unit quantity of heat. It is the amount of heat necessary to raise one pound of water through one degree of temperature.

Heaves (*hēvz*) [ME., *heven*, to raise]. A disease of horses, characterized by difficult and laborious respiration. It is also called "*broken wind*."

Heavy Oil. See *Creasote Oil*.

Hebephrenia (*he-be-frē'-ne-ah*) [*ἥβη*, puberty; *φρήν*, mind]. A special form of mental derangement occurring in young persons at or soon after the age of puberty.

Hebephreniac (*he-be-frē'-ne-ak*) [*ἥβη*, puberty; *φρήν*, the mind]. One who is affected with hebephrenia.

Hebephrenic (*he-be-fren'-ik*) [*ἥβη*, puberty; *φρήν*, the mind]. 1. Affected with hebephrenia. 2. One who is affected with hebephrenia.

Heberden's Asthma. See *Asthma*, and *Diseases, Table of*. **H.'s Rheumatism.** See *Diseases, Table of*. **H.'s Nodes.** See *Nodes*, and *Signs and Symptoms, Table of*. **H.'s Nodosities.** See *Signs and Symptoms, Table of*.

Hebetic (*he-bet'-ik*) [*ἡβητικός*, relating to puberty]. Relating to puberty or to adolescence.

Hebetude (*heb'-e-tūd*) [*hebetudo; hebes*, blunt]. Dulness of the senses and intellect. A term applied to the state of partial stupor in affections of the brain.

Hebetudinous (*heb-e-tu'-din-us*) [*hebetudo; hebes*, blunt]. Affected with hebetude.

Hebra's Arsenical Paste. A paste also known as *Cosme's Paste*. It is used in treating lupus vulgaris. It consists of arsenious acid, 10 grains; artificial cinnabar, ½ dram; ointment of rose-water, ½ ounce. It is spread on linen and applied accurately by means of a pad and bandage. **H.'s Erythema.** See *Diseases, Table of*. **H.'s Pityriasis.** See *Diseases, Table of*. **H.'s Prurigo.** See *Diseases, Table of*.

Heckle-cell (*hek'-l-sel*) [ME., *hekele*, a heckle; *cella*, a cell]. An epidermal cell having minute, hard, horny projections from its cell-wall.

Hectic (*hek'-tik*) [*ἑκτικός*, habitual or consumptive]. Habitual. A word now commonly used in connection with certain constant symptoms of pulmonary tuberculosis, as **H. Fever**, the febrile symptoms concurrent with pulmonary tuberculosis. **H. Flush**, the flushed cheek accompanying pulmonary tuberculosis. **H. Spot.** Same as *H. Flush*.

Hectocotylization (*hek-to-kot-il-iz-a'-shun*) [*ἑκατόν*, a hundred; *κοτύλη*, a small cup]. In biology, applied to the peculiar sexual modification of the arm of the male cephalopod, or its use as a fertilizing-organ.

Hectocotylus (*hek-to-kot'-il-us*) [*ἑκατόν*, a hundred; *κοτύλη*, a cup]. In biology, a specialized arm in certain male cephalopods, which contains the sperm-cells, and is detached and deposited within the mantle-cavity of the female.

Hectogram (*hek'-to-gram*) [*ἑκατόν*, one hundred; *γράμμα*, a weight]. One hundred grams, or 1543.2349 grains.

Hectoliter (*hek'-to-le-ter*) [*ἑκατόν*, hundred; *λίτρα*, a pound]. One hundred liters, equal to 22.009 imperial gallons, or 26.4 U. S. gallons.

Hectometer (*hek'-to-me-ter*) [*ἑκατόν*, hundred; *μέτρον*, a measure]. One hundred meters, or 328 feet, 1 inch.

Hedeoma (*he-de-o'-mah*) [*ἡδύς*, sweet; *ὀσμή*, smell]. American Pennyroyal. The leaves and tops of *H. pulegioides*, distinguished by their aroma. Its properties are due to a volatile oil. It is stimulant and carminative, and has some value as an emmenagogue. It is useful in the flatulent colic of children. Its odor is extremely repulsive to fleas and mosquitoes. **H., Ol.** the volatile oil. Dose ♏ij–x. **H., Spt.**, unof., 10 per cent. of the oil in alcohol.

Hedera (*hed'-er-ah*) [L.]. A genus of woody vines. **H. helix**, the true or European Ivy. Its wood is used in making issue-peas. A decoction of the leaves has been used as an alterative and antibechic. The berries are purgative and emetic. The gum is emetic and stimulant, and is useful in toothache. Unof.

Hederic Acid (*hed-er'-ik*) [*hedera*, European Ivy]. An acid derivable from the leaves of *Hedera helix*, of which it shares the medicinal qualities. Unof.

Hederin (*hed'-er-in*) [*hedera*, European Ivy]. An intensely bitter alkaloid from the seeds of *Hedera helix*. It is said to be actively febrifuge. (The *gum* of ivy has also been called *hederin*.)

Hedge-hog Crystals. Crystals of urate of soda found as a urinary deposit. The crystals are globular, with spiny projections, and may cause severe vesical irritation.

Hedge-hyssop (*hej-his'-up*). See *Gratiola*.

Hedonia (*he-do'-ne-ah*) [ἡδονή, pleasure]. Abnormal cheerfulness; amenomania.

Hedonism (*hed'-o-nizm*) [ἡδονή, pleasure]. The pursuit of pleasure; in psychic medicine, the unreasoning pursuit of some hobby or whim.

Hedrocele (*hed'-ro-sēl*) [ἕδρα, anus; κήλη, tumor]. A hernia in which the part protrudes through the notch of the ischium. Also, prolapsus of the anus.

Hedrosyrinx (*hed-ro-si'-rinks*) [ἕδρα, anus; fundament; σῦριγξ, pipe]. Fistula in ano.

Hedwigia (*hed-wij'-e-ah*) [after Johann *Hedwig*]. A genus of amarydaceous trees. **H. balsamifera**, of the W. Indies, affords a resin, not unlike copaiba in its uses. The bark is antiperiodic, and contains a convulsivant alkaloid, which would appear to be a powerful heart-depressant and antithermic.

Hedyosmon (*hed-e-os'-mon*) [ἡδύς, sweet; ὀσμή, odor]. A genus of tropical chloranthaceous trees and shrubs. **H. arborescens**, a tree of Jamaica, affords a remedy for dyspepsia. **H. nutans**, a shrub of the W. Indies, has leaves that are good for headaches.

Heel (*hēl*) [ME., *heel*, heel]. The hinder part of the foot. **H.-bone.** See *Calcaneum*.

Hegar's Sign. See *Signs and Symptoms, Table of*.

Hegar-Kohrn Method. See *Treatment, Methods of*.

Heidenhain, Demilune Cells of. See *Demilune* and *Crescent of Gianuzzi*. **H.'s Method.** See *Stains, Table of*. **H., Parietal Cells of.** See *Delomorphous*. **H., Rods of.** See *Rods*. **H.'s Solution.** See *Stains, Table of*.

Heimia (*hīm'-e-ah*) [after Ludwig *Heim*, a German botanist]. A genus of lythaceous shrubs of N. and S. America. **H. salicifolia** (hanchinol), found in Texas and far to the South, is resinous, antisyphilitic, hemostatic, and febrifuge. Unof.

Heintz's Method. A method of estimating uric acid in the urine. Take 100 c.c. of urine. Add to this 5 c.c. of HCl. Lay the mixture aside for 24 hours. Collect the crystals on a weighed filter-paper, wash with dilute HCl; dry at 100° C., and weigh. The increase in weight will give the percentage of uric acid.

Heisch's Test. See *Tests, Table of*.

Heister's or Heisterian Valve. A fold of mucous membrane in the cystic duct arranged in a spiral.

Heitzmann's Theory. The theory that the axis-cylinder of a nerve-fiber is ordinary connective tissue modified for the transmission of special impulses.

Hekistotherm (*hek-is'-to-therm*) [ἥκιστος, least, worst; θέρμη, heat]. In biology, a plant that can subsist with a minimum of heat, *e.g.*, a member of the Arctic or Antarctic flora.

Helcoid (*hel'-koid*) [ἕλκος, ulcer; εἶδος, likeness]. Resembling an ulcer.

Helcology (*hel-kol'-o-je*) [ἕλκος, ulcer; λόγος, science]. The pathology and treatment of ulcers.

Helcoma (*hel-ko'-mah*) [ἕλκωμα, an ulcer: *pl.*, *Helcomata*]. An ulcer.

Helcomenia (*hel-ko-me'-ne-ah*) [ἕλκος, ulcer; μήν, month]. Vicarious menstrual discharge from an ulcer.

Helcoplasty (*hel'-ko-plas-te*) [ἕλκος, ulcer; πλάσσειν, to shape]. The treatment of ulcers by skin-grafting.

Helcopoiesis (*hel-ko-poi-e'-sis*) [ἕλκος, ulcer; ποίησις, making]. The surgical formation of an issue, for counter-irritation.

Helcosis (*hel-ko'-sis*) [ἕλκωσις, ulceration]. The formation and development of an ulcer.

Helcotic (*hel-kot'-ik*) [ἑλκωτικός, pertaining to an ulcer]. Ulcerative; of the nature of or accompanied by ulceration.

Helenin (*hel'-en-in*), C_6H_8O. Alant Camphor; Inulol; the active principle of inula. It is a faintly odorous and nearly tasteless, volatile substance, insoluble in water, but soluble in ether, oils, and hot alcohol. It is antiseptic and germicidal, and is recommended for use in diphtheria and tuberculosis. Unof.

Helenium (*hel-e'-ne-um*) [ἑλένιον, elecampane]. 1. Same as *Inula*, *q. v.* 2. A genus of composite North American herbs. **H. autumnale**, sneezewort. **H. nudiflorum**, and **H. bolanderi** are strongly errhine, and are substituted for arnica. **H. puberulum** is tonic, alterative, and errhine. **H. tenuifolium**, of the Gulf States, is said to be a destructive cattle-poison. Unof.

Helianthella (*he-le-an-thel'-ah*) [ἥλιος, the sun; ἄνθος, flower]. A genus of North American composite herbs. The root of *H. tenuifolia* is aromatic, expectorant, antispasmodic, and, in large doses, emetic. It is of reputed service in pulmonary complaints. Dose of the fld. ext. ♏v–xxx. Unof.

Helianthemum (*he-le-an'-them-um*) [ἥλιος, sun; ἄνθος, flower]. Frostwort; Rock Rose. The herb *H. canadensé*, astringent, aromatic, tonic, and alterative. It is useful in diarrhea, scrofula, and secondary syphilis. Dose of the fld. ext. ♏v–xx. Unof.

Helianthin (*he-le-an'-thin*) [ἥλιος, the sun; ἄνθος, a flower], $C_6H_4SO_3Na.N:N.C_6H_4N(CH_3)_2$. Methyl-orange; an orange-yellow powder used as a dye and as a test in analyses. See *Pigments, Conspectus of*.

Helianthus (*he-le-an'-thus*) [ἥλιος, sun; ἄνθος, flower]. A genus of composite-flowered plants. The sunflower. **H. annuus**, a commonly cultivated species, affords highly useful, oil-bearing seeds, the seeds of some varieties being also edible. **H. tuberosus**, the Jerusalem Artichoke, has large tuberous roots, sometimes eaten when cooked or pickled. Several of the species are medicinal.

Helichrysum (*he-le-kri'-sum*) [ἥλιος, sun; χρυσός, gold]. A genus of old-world composite plants. The European species (as **H. arenarium**, **H. stœchas**) are aromatic stimulants, used in domestic practice. Several South African species (**H. auriculatum, imbricatum, nudiflorum**, etc.) are used as pectoral teas.

Helicin (*hel'-is-in*), $C_{13}H_{16}O_7$. A glucosid, produced by oxidizing salicin with HNO_3. It dissolves with difficulty in water, crystallizes in small needles, and melts at 175° C.

Helicine (*hel'-is-in*) [ἕλιξ, a spiral]. 1. Tortile, or spiral in structure. 2. Pertaining to the helix. **H. Arteries**, arteries proceeding from the profunda penis branches of the pudic, and from the dorsal arteries of the penis. See *Arteries, Table of*.

Helicogyrate (*hel-ik-o-ji'-rāt*) [ἕλιξ, a spiral; γῦρος, a ring]. In biology, having a spiral annulus, as the spore-cases in *trichomanes*.

Helicoid (*hel'-ik-oid*) [ἕλιξ, a spiral; εἶδος, form]. Spiral; coiled like a snail-shell or helix.

Helicopepsin (*hel-ik-o-pep'-sin*) [ἕλιξ, a spirally coiled snail; πέψις, digestion]. A peptic ferment found by Krukenberg in snails.

Helicorubin (*hel-ik-o-ru'-bin*) [ἕλιξ, a spiral, the snail; ῥουβίνι, ruby]. A pigment of certain invertebrates; the same as *Hemochromogen* and *Enterohematin*, *q. v.*

Helicotrema (*hel-ik-o-tre′-mah*) [ἕλιξ, helix, coil; τρῆμα, hole]. The opening connecting the *scalæ tympani* and *vestibuli* of the spiral canal of the cochlea.

Heliencephalitis (*he-le-en-sef-al-i′-tis*) [ἥλιος, sun; ἐγκέφαλος, brain; ιτις, inflammation]. Encephalitis caused by exposure to the sun's rays.

Heliodorus's Bandage. See *Bandage.*

Heliomyelitis (*he-le-o-mi-el-i′-tis*) [ἥλιος, sun; μυελός, marrow; ιτις, inflammation]. Myelitis caused by exposure to the sun's rays.

Helionosus (*he-le-on′-o-sus*) [ἥλιος, sun; νόσος, disease]. Sunstroke.

Heliophag (*he′-le-o-fag*) [ἥλιος, sun; φαγεῖν, to devour]. A name given to the animal pigment-cell, as being a supposed absorber of the radiant energy of the sun's light and heat.

Heliophobia (*he-le-o-fo′-be-ah*) [ἥλιος, sun; φόβος, fear]. Morbid fear of exposure to the sun's rays.

Heliosis (*he-le-o′-sis*) [ἥλιος, sun]. A sun-bath; also, sunstroke.

Heliotherapy (*he-le-o-ther′-ap-e*) [ἥλιος, sun; θεραπεία, treatment]. The treatment of disease by exposure of the body to sunlight. Sun-bathing.

Heliotrope (*he′-le-o-trōp*) [ἥλιος, sun; τρέπειν, to turn]. Any plant of the boraginaceous genus *Heliotropium.* **H. europæum** is aperient, and is said to cure warts and ulcers. Unof.

Heliotropin (*he-le-ot′-ro-pin*) [ἥλιος, the sun; τρέπειν, to turn]. 1. See *Piperonal.* 2. A poisonous alkaloid from *Heliotropium europæum*, a European species of heliotrope. Its action is little known. Unof.

Heliotropism (*he-le-ot′-ro-pizm*) [ἥλιος, the sun; τρέπειν, to turn]. In biology, that property of a plant or plant-organ by virtue of which it bends toward or away from the sunlight.

Heliotropy (*he-le-ot′-ro-pe*) [ἥλιος, the sun; τροπή, a turning]. Same as *Heliotropism.*

Helix (*he′-liks*) [ἕλιξ, a coil]. The margin of the external ear.

Hellebore, Black. See *Helleborus.* **H., White.** See *Veratrum album.*

Helleboreïn (*hel-eb-or-e′-in*). See *Helleborus.*

Helleborin (*hel′-e-bo-rin*) [ἑλλέβορος, hellebore], $C_{36}H_{42}O_6 + 4H_2O$. A crystalline glucosid of *Helleborus viridis*, insoluble in water. It is a cardiac and nervous poison of great intensity. See *Helleborus.*

Helleborism (*hel′-eb-or-izm*) [ἑλλεβορίζειν, to dose with hellebore]. The treatment of disease with hellebore; the morbid condition induced by the free exhibition of hellebore.

Helleborus (*hel-eb′-or-us*) [ἑλλέβορος, hellebore: *gen.*, *Hellebori*]. The root of *H. niger*, black hellebore, with properties due to two glucosids, *helleborin*, $C_{36}H_{42}O_6$, and *helleboreïn*, $C_{26}H_{44}O_{15}$. It is a drastic hydragogue cathartic, and emmenagogue, and was formerly a popular remedy for insanity, dropsy, and amenorrhea. *Helleboreïn* is sometimes used in cardiac affections as a substitute for digitalis, its action being obtained by smaller doses and with less irritation. **H. nigri., Ext.** Unof. Dose gr. j–x, cautiously. **H. nigri., Ext., Fld.** Unof. Dose ɱij–xv. **Helleboreïn.** Unof. Very soluble in water. Dose gr. $\frac{1}{16}$–$\frac{1}{8}$.

Heller's Tests. See *Tests, Table of.*

Hellmund's Ointment. A narcotic ointment composed of acetate of lead, 10 parts; extract of conium, 30 parts; balsam of Peru, 30 parts; Sydenham's laudanum, 5 parts; and cerate, 240 parts.

Helmerich's Ointment. An ointment used in the treatment of scabies. It consists of sublimated sulphur, 1 dram; potassium carbonate, ½ dram; and lard, 6½ drams. The ointment should remain in contact with the diseased surface for four or five hours.

Helmholtz's Apparatus. A galvanometer consisting of two equal and vertical coils, with a magnetic needle midway between them. **H.'s Ligament.** See *Ligament.* **H.'s Line.** See *Lines, Table of.*

Helminth (*hel′-minth*) [ἕλμις, worm]. A worm; an intestinal or entozoic worm.

Helminthagogue (*hel-minth′-ag-og*). See *Anthelmintic.*

Helminthiasis (*hel-min-thi′-as-is*) [ἑλμινθιᾶν, to suffer from worms]. A condition marked by the presence of parasites in the body, especially intestinal worms. Also, a disorder or lesion caused by worms.

Helminthicide (*hel-minth′-is-id*) [ἕλμις, a worm; *cædere*, to kill]. See *Vermicide.*

Helminthics (*hel-min′-thiks*). See *Anthelmintics.*

Helminthochorton (*hel-min-tho-kor′-ton*) [ἕλμις, a worm; χόρτος, grass]. See *Corsican Moss.*

Helminthoid (*hel-min′-thoid*) [ἕλμις, a worm; εἶδος, likeness]. Shaped like a worm.

Helminthology (*hel-min-thol′-o-je*) [ἕλμις, a worm; λόγος, science]. A treatise on worms, especially those parasitic within the body.

Helminthoma (*hel-min-tho′-mah*) [ἕλμις, a worm; ὄμα, a tumor: *pl.*, *Helminthomata*]. A tumor caused by the presence of a parasitic worm. See *Bulam Boil* and *Guinea-worm.*

Helminthoncus (*hel-minth-ong′-kus*) [ἕλμις, a worm; ὄγκος, a tumor]. An old term for a parasitic skin-disease.

Helminthophobia (*hel-min-tho-fo′-be-ah*) [ἕλμις (ἑλμινθ-), a worm; φόβος, fear]. A nervous state produced by the presence or thought of parasitic worms.

Helminthous (*hel-min′-thus*) [ἕλμις, a worm]. Wormy.

Helocerous (*he-los′-er-us*) [ἧλος, a nail; κέρας, horn]. In biology, having capitate antennæ.

Heloderma (*he-lo-der′-mah*) [ἧλος, wart; δέρμα, skin]. A genus of lizards. **H. horridum**, of Mexico, and **H. suspectum**, of Arizona (called *Gila Monster*), are said to be the only known species of venomous lizards.

Helodermatous (*he-lo-der′-mat-us*) [ἧλος, a nail, wart; δέρμα, skin]. In biology, having a warty or tuberculous skin.

Helodes (*he-lo′-dēz*) [ἕλος, a swamp]. Swampy, or marshy. Also, a fever attended with profuse sweating. Also, marsh-fever.

Helonias (*hel-o′-ne-as*) [ἕλος, a marsh]. A genus of monocotyledonous plants. **H. dioica.** See *Chamælirion.*

Helonin (*hel-o′-nin*) [ἕλος, a marsh]. A crude precipitate from the tincture of *Chamælirion carolinianum.* It is prescribed for uterine affections, and is tonic and diuretic. Caution should be observed in its use. Dose, gr. ij–iv. Unof.

Helopyra (*hel-op′-e-rah*) [ἕλος, marsh; πῦρ, fever]. Malarial fever.

Helosis (*hel-o′-sis*) [ἧλος, nail, bract]. 1. A genus of tropical American plants. **H. brasiliensis, cayennensis,** and **jamaicensis,** are styptic and vulnerary remedies. Unof. 2. An old name for inversion of the eyelids; strabismus; eye-spasm; plica polonica; the term is now seldom employed.

Helvetia Green. See *Pigments, Conspectus of.*

Helvolous (*hel′-vo-lus*) [dim. of *helvus*, yellow]. Tawny, or reddish-yellow.

Helweg, Triangular Tract of. A tract that appears either in juxtaposition with, or as the most ventral part of, the ventro-lateral tract of the spinal cord.

Hemabarometer (*hem-ab-ar-om′-et-er*) [αἷμα, blood;

βαρύς, heavy; μέτρον, measure]. A contrivance for the approximate determination of the specific gravity of the blood.

Hemacelinosis (*hem-as-el-en-o'-sis*) [αἷμα, blood; κηλίς, spot; νόσος, disease]. A synonym of the disease, *Purpura*.

Hemachroin (*hem-ak-ro'-in*) [αἷμα, blood; χρόα, color]. Same as *Hematosin*.

Hemachrome (*hem'-ak-rōm*) [αἷμα, blood; χρῶμα, color]. The coloring-matter of the blood; hematin.

Hemachrosis (*hem-ak-ro'-sis*) [αἷμα, blood; χρῶσις, coloring]. 1. Redness of the blood. 2. Any disease in which the blood is abnormally colored.

Hemacyanin (*hem-as-i'-an-in*) [αἷμα, blood; κίανος, blue]. A blue coloring-matter found in the blood and the bile.

Hemacytometer (*hem-as-i-tom'-et-er*). See *Hemocytometer*.

Hemad (*hem'-ad*) [αἷμα, blood]. 1. Toward the hemal aspect; opposed to *neurad*. 2. A blood-cell or blood-corpuscle.

Hemadonosos (*hem-ad-on'-o-sos*) [αἱμάς, blood-stream; νόσος, disease]. A disease of the blood or of the blood-vessels.

Hemadostenosis (*hem-ad-o-ste-no'-sis*) [αἱμάς, blood-stream; στενός, narrow]. Stricture or narrowing of a blood-vessel.

Hemadosteosis (*hem-ad-os-te-o'-sis*) [αἱμάς, blood-stream; ὀστέον, bone]. Ossification or calcification of blood-vessels.

Hemadrometer (*hem-ad-rom'-et-er*). See *Hemadromometer*.

Hemadrometry (*hem-ad-rom'-et-re*). See *Hemadromometry*.

Hemadromograph (*hem-ad-rom'-o-graf*) [αἷμα, blood; δρόμος, course; γράφειν, to write]. An instrument for registering changes in the velocity of the blood-stream.

Hemadromometer (*hem-ad-ro-mom'-et-er*) [αἷμα, blood; δρόμος, course; μέτρον, measure]. A device for measuring the velocity of the blood-current.

Hemadromometry (*hem-ad-ro-mom'-et-re*) [αἷμα, blood; δρόμος, course; μέτρον, measure]. Measurement of the speed of the blood-current.

Hemadynamics (*hem-ad-i-nam'-iks*) [αἷμα, blood; δύναμις, power]. Dynamics of the blood-current.

Hemadynamometer (*hem-ad-i-nam-om'-et-er*) [αἷμα, blood; δύναμις, strength; μέτρον, a measure]. A contrivance for measuring the tension or pressure of blood within the arteries. Careful experiments show that, in man, the pressure of blood in the carotid artery is equal to about that of six inches of mercury.

Hemafecal (*hem-af-e'- kal*) [αἷμα, blood; *fæx*, dregs]. Characterized by bloody stools. **H. Jaundice.** See *Jaundice*.

Hemagogue (*hem'-ag-og*) [αἷμα, blood; ἀγωγός, leading]. 1. Promoting the menstrual or hemorrhoidal discharge of blood. 2. An agent that promotes the catamenial or hemorrhoidal flow of blood.

Hemahysteria (*hem-a-his-te'-re-ah*) [αἷμα, blood; ὑστέρα, uterus]. Synonym of *Menorrhagia*.

Hemal (*hem'-al*) [αἷμα, blood]. 1. Pertaining to the blood or the vascular system. 2. See *Ventral*.

Hemaleucin (*hem-al-oo'-sin*) [αἷμα, blood; λευκός, white]. Fibrin; the white portion of a washed blood-clot.

Hemaleukosis (*hem-al-oo-ko'-sis*) [αἷμα, blood; λευκός, white]. The formation of the buffy coat of a clot.

Hemalopia (*hem-al-o'-pe-ah*) [αἷμα, blood; ὤψ, the eye]. Effusion of blood in the eye; erythropsia.

Hemameba (*hem-am-e'-bah*) [αἷμα, blood; ἀμοιβή, a change]. A white blood-cell so called from its resemblance to an ameba.

Hemangioma (*hem-an-je-o'-mah*) [αἷμα, blood; ἀγγεῖον, vessel; ὄμα, a tumor: *pl.*, *Hemangiomata*]. An angioma made up of blood-vessels, as distinguished from lymphangioma.

Hemanthin (*hem-an'-thin*) [αἷμα, blood; ἄνθος, a flower]. An alkaloid from *Hemanthus coccineus*. it is poisonous, with the general properties of atropin.

Hemanthus (*hem-an'-thus*) [αἷμα, blood; ἄνθος, flower]. A genus of amaryllidaceous plants; blood-flower. **H. coccineus,** of S. Africa, affords an arrow-poison, with the general properties of atropin. The plant is a diuretic and cardiant. It affords hemanthin. Unof.

Hemaphein (*hem-af-e'-in*) [αἷμα, blood; φαιός, dusky]. A brown coloring-matter from blood, regarded as a decomposition-product of hematin; it is probably the same as urohematin.

Hemaphobia (*hem-af-o'-be-ah*). See *Hematophobia*.

Hemapoiesis (*hem-ap-oi-e'-sis*). See *Hematopoiesis*.

Hemapoietic (*hem-ap-oi-et'-ik*). See *Hematopoietic*.

Hemapophysis (*hem-ap-off'-is-is*) [αἷμα, blood; ἀποφύειν, to put forth]. That part of an ideal or perfect vertebra which forms the antero-lateral part of the hemal arch. In man, all the hemapophyses are either cartilaginous or detached.

Hemaporia (*hem-ap-o'-re-ah*) [αἷμα, blood; ἀπορία, distress]. Any disorder of the blood, *e. g.* anemia.

Hemarthron, Hemarthros (*hem-ar'-thron, hem-ar'-thros*) [αἷμα, blood; ἄρθρον, joint]. Effusion of blood into the synovial sac of a joint.

Hemarthrosis (*hem-ar-thro'-sis*) [αἷμα, blood; ἄρθωσις, a joint]. Effusion of blood into a joint.

Hemastatic (*hem-as-tat'-ik*). See *Hemostatic*.

Hemastatics (*hem-as-tat'-iks*) [αἷμα, blood; στατικός, standing]. That branch of physiology treating of the laws of the equilibrium of the blood.

Hemasthenosis (*hem-as-then-o'-sis*) [αἷμα, blood; ἀσθένεια, weakness]. A weakening or deterioration of the blood.

Hematachometer (*hem-at-ak-om'-et-er*). See *Hemotachometer*.

Hematangionosus (*hem-at-an-je-on'-o-sus*) [αἷμα, blood; ἀγγεῖον, vessel; νόσος, disease]. Any disease of the blood-vessels.

Hematangiosis (*hem-at-an-je-o'-sis*) [αἷμα, blood; ἀγγεῖον, vessel]. Any disease of the blood-vessels.

Hemataporia (*hem-at-ap-o'-re-ah*). See *Hemaporia*.

Hematapostasis (*hem-at-ap-os'-tas-is*) [αἷμα, blood; ἀπόστασις, a standing away from]. Unequal distribution or pressure of blood, with congestion or effusion in some part of the body.

Hematapostema (*hem-at-ap-os-te'-mah*) [αἷμα, blood; ἀπόστημα, abscess: *pl.*, *Hemapostemata*]. An abscess containing extravasated blood.

Hemataria (*hem-at-a'-re-ah*) [αἷμα, blood]. The so-called blood-animals.

Hematedema (*hem-at-e-de'-mah*) [αἷμα, blood; οἴδημα, a swelling]. Swelling due to the effusion of blood.

Hematein (*hem-at-e'-in*) [αἷμα, blood], $C_{16}H_{12}O_6$. A crystalline principle derivable from, and reconvertible into, hematoxylin.

Hemateleum (*hem-at-el-e'-um*) [αἷμα, blood; ἔλαιον, oil]. A yellow or brownish oily fluid obtained by the dry distillation of blood.

Hematemesis (*hem-at-em'-es-is*) [αἷμα, blood; ἐμέειν, to vomit]. The vomiting of blood from any cause. It may be due to *general* or *constitutional* pathologic conditions, or to *local* conditions.

Hematencephalon (*hem-at-en-sef'-al-on*) [αἷμα, blood; ἐγκέφαλος, brain]. A hemorrhage or bleeding within the brain; cerebral apoplexy.

Hemathermous (*hem-ath-er'-mus*) [αἷμα, blood; θερμός, hot]. Having warm blood.

Hemathidrosis (*hem-ath-id-ro′-sis*). Same as *Hematidrosis.*

Hemathorax (*hem-ah-tho′-raks*). See *Hemothorax.*

Hematic (*hem-at′-ik*) [αἷμα, blood]. Bloody; pertaining to, full of, or having the color of, blood. Also, a blood-tonic.

Hematidrosis (*hem-at-id-ro′-sis*) [αἷμα, blood; ἱδρωσις, sweat]. Bloody sweat. Ephidrosis cruenta. A sanguineous perspiration caused by the extravasation of blood into the coils and ducts of the sweat-glands, whence it is carried to the surface, mixed with sweat. See also *Chromidrosis.*

Hematimeter (*hem-at-im′-et-er*) [αἷμα, blood; μέτρον, measure]. A device for counting the corpuscles in a given volume of blood.

Hematimetry (*hem-at-im′-et-re*) [αἷμα, blood; μέτρον, measure]. The estimation of the number or proportion of the blood-corpuscles, as by the hemocytometer or hematimeter.

Hematin (*hem′-at-in*) [αἷμα, blood], $C_{34}H_{35}N_4FeO_5$. A substance produced by decomposing oxyhemoglobin either by acids or alkalies. It occurs as a scaly but non-crystalline mass of bluish-black color and metallic luster, strongly resembling iodin. It is a very stable substance, and is insoluble in water, alcohol, ether, chloroform, or benzol, but dissolves freely in dilute acids and in alkaline solutions. For test, see *Tests, Table of.* Also a synonym for *Hematoxylon, q. v.*

Hematinic (*hem-at-in′-ik*) [αἷμα, blood]. 1. Relating to hematin, or serving to increase the proportion of hematin in the blood. 2. An agent, such as iron, which tends to increase the proportion of hematin or coloring-matter in the blood.

Hematinometer (*hem-at-in-om′-et-er*). Same as *Hemoglobinometer.*

Hematinuria (*hem-at-in-u′-re-ah*) [αἷμα, blood; οὖρον, urine]. Same as *Hemoglobinuria.* See also *Hematuria.*

Hemato- (*hem′-at-o-*) [αἷμα; αἵματος, blood]. A prefix signifying blood.

Hematobious (*hem-at-o′-be-us*) [αἷμα, blood; βίος, life]. Living in the blood.

Hematobium (*hem-at-o′-be-um*) [αἷμα, blood; βίος, life]. 1. A blood-corpuscle. 2. A blood-parasite.

Hematoblast (*hem′-at-o-blast*) [αἷμα, blood; βλαστός, germ]. Blood-plate; a rudimentary or immature red blood-corpuscle.

Hematocausis (*hem-at-o-kaw′-sis*) [αἷμα, blood; καίειν, to burn]. The normal oxidation of certain elements of the blood.

Hematocele (*hem′-at-o-sēl′*) [αἷμα, blood; κήλη, a tumor]. A tumor formed by the extravasation and collection of blood in a part. **H., Pelvic,** an effusion of blood into the pelvis, usually due to rupture of a Fallopian tube, the seat of an extra-uterine pregnancy. It may also be due to the rupture of an ovary, or of a vein in the broad ligament; it may follow an abortion, the blood escaping through the Fallopian tube; or it may be due to retention of the menstrual fluid with escape of the blood. Physical examination, whatever may be the cause, reveals a boggy swelling in Douglas's cul-de-sac.

Hematocelia (*hem-at-o-se′-le-ah*) [αἷμα, blood; κοιλία, a cavity]. An effusion of blood into the peritoneal cavity.

Hematocephalus (*hem-at-o-sef′-al-us*) [αἷμα, blood; κεφαλή, head]. An effusion of blood into, or a sanguineous tumor of, the brain. Also a monstrosity characterized by an effusion of blood into the cerebral hemispheres. Also a vascular tumor that is sometimes observed in the pia mater of anencephalic monstrosities.

Hematochezia (*hem-at-o-ke′-ze-ah*) [αἷμα, blood; χέζειν, to defecate]. The passage of hemorrhagic stools.

Hematochrosis (*hem-at-o-kro′-sis*) [αἷμα, blood; χρῶσις, coloring: *pl.*, *Hematochroses*]. 1. Any disease characterized by discoloration of the skin. 2. A discoloration of the skin.

Hematochyluria (*hem-at-o-ki-lu′-re-ah*) [αἷμα, blood; χυλός, chyle; οὖρον, urine]. The presence of blood and chylous material in the urine, due to *Filaria sanguinis hominis.* It is usually an intermittent condition.

Hematocolpos (*hem-at-o-kol′-pos*) [αἷμα, blood; κόλπος, vagina]. Hemorrhage into the vagina. Also a collection of menstrual discharge within the vagina, due to atresia or imperforate hymen.

Hematocrit (*hem′-at-o-krit*) [αἷμα, blood; κριτής, judge; κρίνειν, to separate, to judge]. An instrument for making volumetric estimation of the blood by separating by centrifugal action the corpuscles from the serum. A volume of blood and one of Müller's liquid (to prevent coagulation) are placed together in each of two small, thick-walled glass tubes, graduated in fifty parts. The tubes rest on brass holders which are fixed on the axes of a revolving apparatus. After some eight thousand revolutions in from five to seven minutes, the process is complete. The corpuscles and the salt-plasma are separated by a narrow band of leukocytes. The instrument is useful in comparing the blood of different individuals. With a little practice the total error is not more than one per cent.

Hematocryal (*hem-at-ok′-re-al*) [αἷμα, blood; κρύος, cold]. In biology, of or pertaining to the cold-blooded invertebrates.

Hematocrystallin (*hem-at-o-kris′-tal-in*). Same as *Hemoglobin.*

Hematocyanosis (*hem-at-o-si-an-o′-sis*). Synonym of *Cyanosis.*

Hematocyst (*hem′-at-o-sist*) [αἷμα, blood; κύστις, bladder]. A cyst containing blood. Also an effusion of blood into the bladder.

Hematocyte (*hem′-at-o-sīt*) [αἷμα, blood; κύτις, cell]. A blood-corpuscle.

Hematocythuria (*hem-at-o-si-thu′-re-ah*) [αἷμα, blood; κύτος, cell; οὖρον, urine]. The presence of blood-cells in the urine.

Hematocytometer (*hem-at-o-si-tom′-et-er*). See *Hemocytometer.*

Hematodes (*hem-at-o′-dēz*) [αἱματώδης, bloody]. Bloody; gorged with or appearing like blood.

Hematodiarrhea (*hem-at-o-di-ar-e′-ah*). Synonym of *Dysentery.*

Hematodynamics (*hem-at-o-di-nam′-iks*). See *Hemadynamics.*

Hematodynamometer (*hem-at-o-di-nam-om′-et-er*). See *Hemadynamometer.*

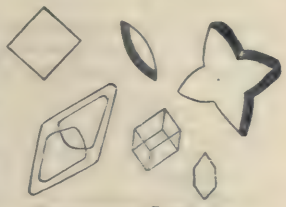
Hematodyscrasia (*hem-at-o-dis-kra′-se-ah*) [αἷμα, blood; δυσκρασία, bad temperament]. A diseased or dyscrasic state of the blood.

Hematogenesis (*hem-at-o-jen′-es-is*) [αἷμα, blood; γένεσις, production]. The development of blood or of blood-corpuscles; the making of blood.

Hematogenic (*hem-at-o-jen′-ik*) [αἷμα, blood; γεννᾶν, to produce]. Pertaining to the formation of blood.

Hematogenous (*hem-at-oj′-en-us*) [αἷμα, blood; γενής, producing]. Derived from, or having origin in, the blood.

Hematoglobin (*hem-at-o-glo′-bin*). See *Hemoglobin.*



Hematoglobulin (*hem-at-o-glob′-u-lin*). Same as *Hemoglobin.*

Hematography (*hem-at-og′-ra-fe*) [αἷμα, blood; γράφειν, to write]. A description of the blood; hematology.

Hematohidrosis (*hem-at-o-hid-ro′-sis*). See *Hematidrosis*.

Hematoid (*hem′-at-oid*) [αἷμα, blood; εἶδος, form]. Resembling blood.

Hematoidin (*hem-at-oi′-din*) [αἷμα, blood; εἶδος, resemblance], $C_{16}H_{18}N_2O_3$. A derivative of hemoglobin, identical with bilirubin, the pigment of the bile. It occurs as reddish or orange rhombohedral crystals, in old blood-clots, as of cerebral hemorrhages, in corpora lutea, and in the urine of hematuria.

HEMATOIDIN CRYSTALS.

Hematoin (*hem-at-o′-in*). Same as *Hematoporphyrin*.

Hematokrit (*hem′-at-o-krit*). See *Hematocrit*.

Hematolin (*hem-at′-o-lin*) [αἷμα, blood], $C_{68}H_{78}N_8O_7$. An iron-free derivative of hematin.

Hematology (*hem-at-ol′-o-je*) [αἷμα, blood; λόγος, science]. The science of the blood, its nature, functions, and disorders.

Hematolysis (*hem-at-ol′-is-is*) [αἷμα, blood; λύσις, a solution]. A solution, or an imperfect coagulation, of the blood; diminished coagulability of the blood; a diseased condition marked by destruction of the corpuscular constituents of the blood; impoverishment of the blood.

Hematolytic (*hem-at-o-lit′-ik*) [αἷμα, blood; λύσις, a solution]. Marked by or tending to impoverishment of the blood.

Hematoma (*hem-at-o′-mah*) [αἷμα, blood; ὄμα, tumor: *pl.*, *Hematomata*]. A tumor, fungus, or swelling containing blood. **H. auris,** *Insane Ear;* an effusion of blood or serum between the cartilage of the ear and its covering, occurring in various forms of insanity. It may be either *acute* or *chronic*, if the former reaching the size of a pigeon's egg in a day or two. It is an elastic tumor, generally painless, with some local heat. It may suppurate and burst, or may shrivel up, in either case leaving considerable deformity. In the majority of cases the left ear is involved, and the condition occurs most frequently among men. **H. of the Dura mater,** an effusion beneath the dura mater, forming membranous sheets. **H., Pelvic,** an effusion of blood into the cellular tissue of the pelvis; it is frequently due to traumatism, or occurs as a complication of pregnancy and the puerperal state, from rupture of dilated veins; it is often the result of rupture of an extra-uterine pregnancy.

Hematomantia (*hem-at-o-man′-she-ah*) [αἷμα, blood; μαντεία, divination]. The arriving at a diagnosis from examination of the blood.

Hematomatous (*hem-at-o′-mat-us*) [αἷμα, blood; ὄμα, a tumor]. Relating to or of the nature of a hematoma.

Hematomediastinum (*hem′-at-o-me-de-as-ti′-num*) [αἷμα, blood; *mediastinum*, the mediastinum]. An effusion of blood or bloody serum into the mediastinal cavities.

Hematometer (*hem-at-om′-et-er*). See *Hemoglobinometer*.

Hematometra (*hem-at-o-me′-trah*) [αἷμα, blood; μήτρα, womb]. Hemorrhage in the womb. Also, an accumulation of menstrual discharge within the uterine cavity, as a result of obstruction.

Hematometry (*hem-at-om′-et-re*) [αἷμα, blood; μέτρον, measure]. The measurement, or estimation of the measure, of the blood.

Hematomonas (*hem-at-o-mo′-nas*) [αἷμα, blood; μονάς, a unit]. A genus of microscopic organisms infesting the blood. See *Ague* and *Plasmodium*.

Hematomphalocele (*hem-at-om-fal′-o-sēl*) [αἷμα, blood; ὀμφαλός, navel; κήλη, tumor]. A tumor or a hernia at the navel, distended with blood.

Hematomyces (*hem-at-om′-is-ēz*) [αἷμα, blood; μύκης, a fungus]. A hematoid variety of encephaloid carcinoma; medullary sarcoma. It is called, also, *Fungus hematodes*.

Hematomyelia (*hem-at-o-mi-e′-le-ah*) [αἷμα, blood; μυελός, marrow]. Hemorrhage into the spinal cord; an accumulation of blood in the central canal of the spinal cord. The symptoms vary with the seat, but paralyses, vaso-motor and trophic changes, loss of sensation, etc., are common.

Hematomyelitis (*hem-at-o-mi-el-i′-tis*) [αἷμα, blood; μυελός, marrow; ιτις, inflammation]. An acute myelitis attended with an effusion of blood into the spinal cord.

Hematoncus (*hem-at-ong′-kus*) [αἷμα, blood; ὄγκος, tumor]. Blood-tumor; hemangioma; hematoma.

Hematopathy (*hem-at-op′-ath-e*) [αἷμα, blood; πάθος, disease]. Any disease of the blood.

Hematopedesis (*hem-at-o-ped-e′-sis*) [αἷμα, blood; πήδησις, a leaping]. Cutaneous hemorrhage; hematidrosis.

Hematopericardium (*hem-at-o-per-ik-ar′-de-um*) [αἷμα, blood; περικάρδιον, pericardium]. An effusion of blood into the pericardium, due to rupture or perforation of the walls of the heart.

Hematophagous (*hem-at-off′-ag-us*) [αἷμα, blood; φαγεῖν, to eat]. Blood-eating; pertaining to insects, such as the gnat, mosquito, etc., that suck the blood.

Hematophilia (*hem-at-o-fil′-e-ah*). See *Hemophilia*.

Hematophobia (*hem-at-o-fo′-be-ah*) [αἷμα, blood; φόβος, fear]. Morbid dread of the sight of blood.

Hematophore (*hem′-at-o-for*) [αἷμα, blood; φέρειν, to bear]. An instrument used in the transfusion of blood.

Hematophthalmia (*hem-at-off-thal′-me-ah*). See *Hemophthalmia*.

Hematophyte (*hem′-at-o-fīt*) [αἷμα, blood; φυτόν, a plant]. A vegetable organism, such as a bacillus, living in the blood.

Hematopinax (*hem-at-op′-in-aks*) [αἷμα, blood; πίναξ, tablet: *pl.*, *Hematopinaces*]. A blood-plaque.

Hematopisis (*hem-at-op′-is-is*) [αἷμα, blood; πίνειν, to drink]. 1. The drinking of blood. 2. A morbid collection of blood in any cavity of the body.

Hematopisy (*hem-at-op′-is-e*). See *Hematopisis*.

Hematoplanesis (*hem-at-o-plan-e′-sis*) [αἷμα, blood; πλάνησις, wandering]. See *Hematoplania*.

Hematoplania (*hem-at-o-pla′-ne-ah*) [αἷμα, blood; πλάνη, a wandering]. Vicarious or aberrant course or flow of the blood.

Hematoplasma (*hem-at-o-plaz′-mah*) [αἷμα, blood; πλάσμα, plasma]. The plasma of the blood.

Hematoplast (*hem′-at-o-plast*). Same as *Hematoblast*.

Hematoplastic (*hem-at-o-plas′-tik*) [αἷμα, blood; πλαστικός, plastic]. Blood-forming.

Hematoplethora (*hem-at-o-pleth′-or-ah*). Synonym of *Plethora*.

Hematopoiesis (*hem-at-o-poi-e′-sis*) [αἷμα, blood; ποιέειν, to make]. The making of blood. See *Hematosis*.

Hematopoietic (*hem-at-o-poi-et′-ik*) [αἷμα, blood; ποιέειν, to make]. Relating to or forwarding the processes of blood-making.

Hematoporphyrin (*hem-at-o-por′-fe-rin*) [αἷμα, blood; πόρφυρος, purple], $C_{68}H_{74}N_8O_{12}$. Iron-free hematin, a metabolitic decomposition-product of hemoglobin.

It is produced by dissolving hematin in concentrated H_2SO_4. It occurs occasionally in urine and in eggshells of certain birds. See *Polyperythrin*.

Hematoporphyrinuria (*hem'-at-o-por'-fe-rin-u'-re-ah*) [αἷμα, blood; πόρφυρος, purple; οὖρον, urine]. The presence of hematoporphyrin in the urine.

Hematoporphyroidin (*hem-at-o-por-fir-oid'-in*) [αἷμα, blood; πόρφυρος, purple]. A substance similar in origin and character to hematoporphyrin, but less soluble. Like hematoporphyrin, it is sometimes found in the urine.

Hematoposia (*hem-at-o-po'-ze-ah*) [αἷμα, blood; πόσις, a drinking]. Blood-drinking as a therapeutic measure; hematopisis.

Hematopsia (*hem-at-op'-se-ah*) [αἷμα, blood; ὄψ, eye]. An extravasation of blood in the subconjunctival tissues of the eye.

Hematoptysis (*hem-at-op'-tis-is*). Same as *Hemoptysis*.

Hematorrhachis (*hem-at-or'-ak-is*) [αἷμα, blood; ῥάχις, spine]. Hemorrhage within the vertebral canal.

Hematorrhea (*hem-at-or-e'-ah*) [αἷμα, blood; ῥοία, a flow]. A copious passive flow or discharge of blood; a hemorrhage.

Hematorrhosis (*hem-at-or-o'-sis*) [αἷμα, blood; ὀρρός, serum]. Separation of the serum of the blood.

Hematosac (*hem'-at-o-sak*) [αἷμα, blood; *saccus*, a bag]. A blood-cyst.

Hematosalpinx (*hem-at-o-sal'-pinks*) [αἷμα, blood; σάλπιγξ, a trumpet]. A hemorrhagic distention or obstruction of a Fallopian tube.

Hematoscheocele (*hem-at-os'-ke-o-sēl'*) [αἷμα, blood; ὀσχεον, scrotum; κήλη, tumor]. A hemorrhagic tumor or distention of the scrotum.

Hematoscope (*hem'-at-o-skōp*) [αἷμα, blood; σκοπεῖν, to inspect]. A modified form of, or an attachment to, the spectroscope, for use in examination of blood.

Hematoscopy (*hem-at-os'-ko-pe*) [αἷμα, blood; σκοπεῖν, to inspect]. Spectroscopic examination of the blood and blood-discs.

Hematose (*hem'-at-ōs*) [αἷμα, blood]. Full of blood.

Hematosepsis (*hem-at-o-sep'-sis*). See *Septicemia*.

Hematosin (*hem-at-o'-sin*). See *Hematin*.

Hematosis (*hem-at-o'-sis*) [αἱμάτωσις; αἷμα, blood]. 1. The process of the formation of blood and the development of blood-corpuscles. 2. The arterialization of the blood.

Hematospectroscope (*hem-at-o-spek'-tro-skōp*) [αἷμα, blood; *spectrum*, an image; σκοπεῖν, to view]. A spectroscope adapted for use in the study of the blood.

Hematospermia (*hem-at-o-sper'-me-ah*) [αἷμα, blood; σπέρμα, seed]. The discharge of bloody semen.

Hematospongus (*hem-at-o-spun'-gus*) [αἷμα, blood; σπόγγος, sponge]. Medullary sarcoma.

Hematothorax (*hem-at-o-tho'-raks*). See *Hemothorax*.

Hematoxic (*hem-at-oks'-ik*) [αἷμα, blood; τοξικόν, a poison]. Pertaining to a poisoned or impure condition of the blood.

Hematoxin (*hem-at-oks'-in*) [αἷμα, blood; τοξικόν, poison]. Any blood-poison or poisonous principle developed in the blood.

Hematoxylin (*hem-at-oks'-il-in*) [αἷμα, blood; ξύλον, wood], $C_{16}H_{14}O_6$. The coloring-matter of logwood; it is very soluble in water and alcohol, and crystallizes in yellowish prisms with $2H_2O$. It dissolves in alkalies with a violet-blue color. It is a valuable stain in microscopy. See *Pigments, Conspectus of*. **H., Delafield's.** See *Stains, Table of*. For other hematoxylin stains, including Böhmer's, Kleinenberg's, Mayer's, Friedlander's and Cook's, see *Stains, Table of*.

Hematoxylon (*hem-at-oks'-il-on*) [αἷμα, blood; ξύλον, wood]. Logwood. The heart-wood of *H. campechianum*; it occurs as dark brown raspings or a coarse powder, and contains tannic acid and a coloring-principle, *hematoxylin*, $C_{16}H_{14}O_6$, that becomes grayish-red by the action of light. It is a mild astringent. **H., Ext.** Dose gr. v–xx. **H., Decoctum**, strength 1 to 17. Dose ʒj–ij. Unof.

Hematozoic (*hem-at-o-zo'-ik*) [αἷμα, blood; ζῷον, an animal]. Pertaining to a hematozoön.

Hematozoön (*hem-at-o-zo'-on*) [αἷμα, blood; ζῷον, animal: *pl.*, *Hematozoa*]. Any living organism or animal in the blood.

Hematozymotic (*hem-at-o-zi-mot'-ik*) [αἷμα, blood; ζύμη, leaven]. Relating to a blood-ferment, or to fermentation in the blood of a living organism.

Hematuresis (*hem-at-u-re'-sis*) [αἷμα, blood; οὖρον, urine]. The passage of bloody urine.

Hematuria (*hem-at-u'-re-ah*) [αἷμα, blood; οὖρον, urine]. Hematuresis. Blood in the urine. It may be due to injury, local disease, general disorder, or the presence of entozoa. When only the coloring-matter of the blood is found in the urine, it is termed *hemoglobinuria* or *hematinuria*. The color of the urine in hematuria varies from bright-red to a dingy, smoky color, or to merely a tinging of the urine. The urine may be examined for blood-corpuscles by means of the microscope; the presence of blood may be demonstrated by the spectroscope. *Almen's*, or the *guaiacum test*, or *Heller's test* may be made. See *Tests, Table of*. **H., Intermittent**, that form due to malarial poisoning. **H., Paroxysmal.** Same as *H., Intermittent*.

Hemautogram (*hem-aw'-to-gram*) [αἷμα, blood; αὐτός, self; γράμμα, a tracing]. The tracing made in hemautography.

Hemautograph (*hem-aw'-to-graf*). Same as *Hemautogram*.

Hemautography (*hem-aw-tog'-ra-fe*) [αἷμα, blood; αὐτός, self; γράφειν, to write]. The tracing of the pulse-curve by the jet of blood from a divided artery caught upon paper drawn in front of it.

Hemeralopia (*hem-er-al-o'-pe-ah*) [ἡμέρα, day; ὤψ, eye]. Day-vision or night-blindness; a symptom of pigmentary degeneration of the retina, failure of general nutrition, etc. Vision is good by day or in a strong light, but fails at night. See also *Nyctalopia*.

Hemeraphonia (*hem-er-af-o'-ne-ah*) [ἡμέρα, day; ἀ, priv.; φονή, voice]. Loss of voice during the day, with return of the power of phonation at night.

Hemerythrin (*hem-er'-ith-rin*) [αἷμα, blood; ἐρυθρός, red]. The pigment found by Krukenberg in the blood of *Sipunculus nudus*.

Hemerythrogen (*hem-er-ith'-ro-gen*) [αἷμα, blood; ἐρυθρός, red; γενής, producing]. The chromogen of *hemerythrin*.

Hemi- (*hem'-e-*) [ἡμι, half]. A prefix, meaning one-half. In anatomy and physiology it is applied to one of the two lateral halves of the body.

Hemiablepsia (*hem-e-ab-lep'-se-ah*) [ἡμι, half; ἀβλεψία, blindness]. See *Hemianopsia*.

Hemiacephalus (*hem-e-ah-sef'-al-us*) [ἡμι, half; ἀ, priv.; κεφαλή, head]. A variety of omphalositic monsters of the species *Paracephalus*. It is the lowest grade of development in paracephalus, closely approaching true acephalus.

Hemiachromatopsia (*hem-e-ah-kro-mat-op'-se-ah*) [ἡμι, half; ἀ, priv.; χρῶμα, color; ὄψις, vision]. Subnormal or absent color-vision in corresponding halves of the field of vision.

Hemialbumin (*hem-e-al'-bu-min*). See *Anti-albumin*.

Hemialbuminose (*hem-e-al-bu'-min-ōs*). The same as *Hemialbumose*.

Hemialbumose (*hem-e-al′-bu-mōs*) [*ἡμι*, half; *albumen*, the white of egg]. The most characteristic and most frequently obtained by-product of proteid zymolysis. It is the forerunner of hemipeptone. It is frequently found in the urine, and occurs normally in the marrow of bones and in cerebro-spinal fluid. See *Peptones*.

Hemialbumosuria (*hem-e-al-bu-mōs-u′-re-ah*). Same as *Propeptonuria*.

Hemialgia (*hem-e-al′-je-ah*) [*ἡμι*, half; *ἀλγος*, pain]. Unilateral neuralgia.

Hemianalgesia (*hem-e-an-al-je′-se-ah*) [*ἡμι*, half; *ἀν* priv.; *ἀλγος*, pain]. Insensibility to pain throughout one lateral half of the body and limbs.

Hemianasarca (*hem-e-an-as-ar′-kah*) [*ἡμι*, half; *ἀνά*, through; *σάρξ*, flesh]. Edema of one-half of the body.

Hemianesthesia (*hem-e-an-es-the-ze′-ah*) [*ἡμι*, half; *ἀναισθησία*, want of feeling]. Partial or complete loss of the sense of feeling in a lateral half of the body.

Hemianopia (*hem-e-an-o′-pe-ah*). See *Hemianopsia*.

Hemianopsia (*hem-e-an-op′-se-ah*) [*ἡμι*, half; *ἀν*, priv.; *ὄψις*, sight]. Blindness in one-half of the visual field. It may be bilateral (binocular) or monolateral (monocular or uniocular), according as it affects one or both eyes. **H., Binasal,** due to anesthesia of the temporal halves of the retina, the nasal fields thereby failing to be visible. **H., Bitemporal,** the reverse of the last. **H., Crossed** or **Heteronymous,** a general term for either binasal or bitemporal hemianopsia. **H., Homonymous,** right, or left, the most common form, affecting the inner half of one field and the outer of the other. **H., Inferior** and **Superior,** the upper or lower halves of the retina are insensitive.

Hemianoptic (*hem-e-an-op′-tik*) [*ἡμι*, half; *ἀν*, priv.; *ὄψις*, sight]. Affected with hemianopsia.

Hemiataxia (*hem-e-at-aks′-e-ah*) [*ἡμι*, half; *ἀ*, priv.; *τάξις*, order]. Inability to produce orderly or systematic movements on one side of the body.

Hemiathetosis (*hem-e-ath-et-o′-sis*) [*ἡμι*, half; *ἄθετος*, without fixed position]. A term for athetosis or involuntary rhythmic movements of one side of the body only.

Hemiatrophy (*hem-e-at′-ro-fe*) [*ἡμι*, half; *ἀτροφία*, lack of nourishment]. Imperfect or impaired nutrition confined to one side of the body.

Hemiazygous (*hem-e-az′-ig-us*) [*ἡμι*, half; *ἀ*, priv.; *ζυγός*, a yolk]. Partially paired; imperfectly azygous. **H. Veins.** See *Vein*.

Hemibranchiate (*hem-e-brang′-ke-āt*) [*ἡμι*, half; *βράγχια*, gills]. In biology, having an incomplete branchial apparatus.

Hemic (*hem′-ik*) [*αἷμα*, blood]. Pertaining to the blood; hemal.

Hemicardia (*hem-e-kar′-de-ah*) [*ἡμι*, half; *καρδία*, heart]. Half of a four-chambered heart.

Hemicarp (*hem′-e-karp*) [*ἡμι*, half; *καρπός*, fruit]. In biology, one of the separable carpels of a dicarpellary fruit.

Hemicatalepsy (*hem-e-kat′-al-ep-se*) [*ἡμι*, half; *κατάληψια*, catalepsy]. Catalepsy affecting only one lateral half of the subject.

Hemicentrum (*hem-e-sen′-trum*) [*ἡμι*, half; *κέντρον*, center]. Either one of the two lateral elements of the centrum of a vertebra.

Hemicephalia (*hem-e-sef-a′-le-ah*). Synonym of *Hemicrania*.

Hemicephalus (*hem-e-sef′-al-us*) [*ἡμι*, half; *κεφαλή*, head]. A monster fetus in which the cerebral hemispheres and skull are absent or undeveloped. It is a synonym of *Anencephalus*.

Hemicerebrum (*hem-e-ser′-e-brum*) [*ἡμι*, half; *cerebrum*, cerebrum]. A cerebral hemisphere.

Hemichordate (*hem-e-kor′-dāt*) [*hemi*, half; *chorda*, a string]. In biology, of or pertaining to such animal forms as are intermediate between the *Chordata* and the *Achordata*, *e.g.*, *Balanoglossus*.

Hemichorea (*hem-e-ko-re′-ah*) [*ἡμι*, half; *χορεία*, chorea, dance]. Unilateral chorea; a form of chorea in which the convulsive movements are confined to one side of the body only.

Hemicollin (*hem-e-kol′-in*) [*ἡμι*, half; *κόλλα*, glue], $C_{47}H_{70}N_{14}O_{19}$. A peptone-like substance derived from collagen. It is soluble in 70–80 per cent. alcohol, and is not precipitable by platinum tetrachlorid.

Hemicrania (*hem-e-kra′-ne-ah*) [*ἡμι*, half; *κρανίον*, head]. Neuralgia or headache of one-half of the head. See *Migraine*.

Hemicranic (*hem-e-kra′-nik*) [*ἡμι*, half; *κρανιόν*, skull]. Pertaining to half the skull. **H. Equivalents,** a name given to isolated symptoms—flitting scotomata, vomiting, vaso-motor disturbances, etc.—in cases of aborted migraine.

Hemicyclic (*hem-e-si′-klik*) [*ἡμι*, half; *κύκλος*, a circle]. In biology, having certain of the floral organs arranged in whorls, and others in a spiral.

Hemidesmus (*hem-e-dez′-mus*) [*ἡμι*, half; *δεσμός*, a band]. Indian sarsaparilla. The dried root of *H. indicus*, imported from India. It is a tonic, alterative, diaphoretic, and diuretic. **H., Syr.** (B.P.). Dose ʒj.

Hemidiaphoresis (*hem-e-di-af-or-e′-sis*) [*ἡμι*, half; *διαφόρησις*, sweating]: Sweating of one lateral half of the body only.

Hemidrosis (*hem-id-ro′-sis*). See *Hematidrosis*.

Hemidysesthesia (*hem-e-dis-es-the′-ze-ah*) [*ἡμι*, half; *δυς*, difficult; *αἰσθησις*, sensation]. Enfeebled or dulled sensation in a lateral half of the body, or in half of one of the organs of sense.

Hemidystrophia (*hem-e-dis-tro′-fe-ah*) [*ἡμι*, half; *δυσ*, ill; *τροφή*, nourishment]. In biology, the state of being imperfectly nourished.

Hemi-elastin (*hem-e-e-las′-tin*). See *Proto-elastose*.

Hemielytrum, Hemielytron (*hem-e-el′-it-rum, -tron*) [*ἡμι*, half; *ἔλυτρον*, a sheath: *pl.*, *Hemielytra*]. One of the fore-wings of hemipterous and heteropterous insects, or one of the dorsal scales of certain marine annelids, as in *Hermioni*.

Hemiencephalon (*hem-e-en-sef′-al-on*) [*ἡμι*, half; *ἐγκέφαλος*, brain]. Either lateral half of the brain.

Hemiencephalus (*hem-e-en-sef′-al-us*) [*ἡμι*, half; *ἐγκέφαλος*, brain]. A monstrosity without organs of sense, but possessing otherwise a nearly normal brain.

Hemiepilepsy (*hem-e-ep′-il-ep-se*) [*ἡμι*, half; *ἐπιληψία*, epilepsy]. A form of epilepsy in which the convulsions are confined to one lateral half of the body.

Hemifornix (*hem-e-for′-niks*) [*ἡμι*, half; *fornix*, an arch, vault]. A name used to designate the irregular, elongated portion of either paracelian floor, composed of hippocamp, fimbria, and fornicolumn.

Hemigamous (*hem-ig′-am-us*) [*ἡμι*, half; *γάμος*, marriage]. In biology, applied to grasses in which one floret is neuter and the other male or female.

Hemiglossitis (*hem-e-glos-i′-tis*) [*ἡμι*, half; *γλῶσσα*, tongue; *ιτις*, inflammation]. Inflammation of one-half of the tongue only. A definite nodule or lump may be present in the substance of the tongue.

Hemignathous (*hem-ig′-na-thus*) [*ἡμι*, half; *γνάθος*, jaw]. In biology, applied to such birds as have one mandible shorter than the other.

Hemihidrosis (*hem-e-hid-ro′-sis*) [*ἡμι*, half; *ἱδρώς*, sweat]. The same as *Hemidiaphoresis*.

Hemihyperesthesia (*hem-e-hi-per-es-the′-ze-ah*) [*ἡμι*, half; *ὑπέρ*, over; *αἰσθησις*, sensation]. Hyperesthesia confined to one lateral half of the body.

Hemihypertrophy (*hem-e-hi-per′-tro-fe*) [*ἡμι*, half; *ὑπέρ*, over; *τροφή*, nourishment]. Hypertrophy of half of the body.

Hemihypesthesia (*hem-e-hi-pes-the′-ze-ah*) [*ἡμι*, half; *ὑπό*, under; *αἴσθησις*, perception]. Impairment of sensibility in one lateral half of the body.

Hemilethargy (*hem-e-leth′-ar-je*) [*ἡμι*, half; *ληθαργία*, lethargy]. A state of partial lethargy.

Hemimelus (*hem-im′-el-us*) [*ἡμι*, half; *μέλος*, limb]. An ectromelic monstrosity having deficient or atrophied forearms, legs, feet, and hands, and normal arms and thighs.

Hemimetaboly (*hem-e-met-ab′-o-le*) [*ἡμι*, half; *μεταβολή*, transformation]. In biology, incomplete or imperfect metamorphosis; hemimetamorphosis.

Hemimetamorphosis (*hem-e-met-am-or′-fo-sis*) [*ἡμι*, half; *μεταμόρφωσις*, transformation]. In biology, incomplete metamorphosis; hemimetaboly.

Hemimyasthenia (*hem-e-mi-as-the′-ne-ah*) [*ἡμι*, half; *μῦς*, muscle; *ἀσθενία*, weakness]. Myasthenia of one lateral half of the body.

Hemimyoclonus (*hem-e-mi-ok′-lo-nus*) [*ἡμι*, half; *μῦς*, muscle; *κλόνος*, commotion]. Clonic spasm of the muscles of one lateral half of the body.

Hemin (*hem′-in*) [*αἷμα*, blood], $C_{34}H_{35}N_4FeO_5.HCl$. Teichmann's crystals, or hydrochlorid of hematin. A doubly-refractive pleochromatic crystalline substance derived from blood. It is obtained by heating under a cover-slip, a drop of fresh blood on a glass-slide with a little glacial acetic acid. In the case of blood that has been dried, or in old blood-clot or stain, the resi-

HEMIN CRYSTALS.

1. Human. 2. Seal. 3. Calf. 4. Pig. 5. Lamb. 6. Pike. 7. Rabbit.

due should be powdered as finely as possible with a trace of NaCl. Some of this powder is then placed on a slide and glacial acetic acid added, and heat carefully applied. The crystals are dark-brown or black, elongated rhombic plates and prisms belonging to the triclinic system; they are insoluble in water, alcohol, ether, chloroform, or dilute acids.

Hemineurasthenia (*hem-e-nu-ras-the′-ne-ah*) [*ἡμι*, half; *νεῦρον*, a nerve; *ἀσθενία*, weakness]. Neurasthenia peculiar to one lateral half of the body.

Hemiopia (*hem-e-ōp′-e-ah*) [*ἡμι*, half; *ὤψ*, eye]. The older term for hemianopsia. Hemiopia refers to the seeing-half of the retina, hemianopsia to that part of the field not seen.

Hemiopsia, Hemiopy (*hem-e-op′-se-ah*, *hem′ e-ōp-e*). See *Hemiopia*.

Hemipagus (*hem-ip′-ag-us*) [*ἡμι*, half; *πηγνύναι*, to unite]. A monomphalic monstrosity united by the thoraces, and with a common mouth.

Hemiparaplegia (*hem-e-par-ap-le′-je-ah*) [*ἡμι*, half; *παραπληγία*, paralysis of the limbs]. Paralysis of a lower limb on one side only.

Hemiparesis (*hem-e-par′-es-is*) [*ἡμι*, half; *πάρεσις*, impairment of strength]. Paresis, or weakening of the strength on one side of the body only.

Hemiparesthesia (*hem-e-par-es-the′-ze-ah*) [*ἡμι*, half; *παρά*, beside; *αἴσθησις*, sensation]. Numbness or paresthesia of one lateral half of the body.

Hemiparetic (*hem-e-par-et′-ik*) [*ἡμι*, half; *πάρεσις*, impairment of strength]. Affected with hemiparesis.

Hemi-peptone (*hem-e-pep′-tōn*). See *Peptones*.

Hemiphalacrosis (*hem-e-fal-ak-ro′-sis*) [*ἡμι*, half; *φαλάκρωσις*, baldness]. Baldness affecting one lateral half of the head.

Hemiphonia (*hem-e-fo′-ne-ah*) [*ἡμι*, half; *φωνή*, voice]. Speech having the characteristics of half-voice, half-whisper; used by patients in great weakness and exhaustion.

Hemipinic Acid (*hem-e-pin′-ik*). See *Acid*.

Hemiplegia (*hem-e-ple′-je-ah*) [*ἡμι*, half; *πληγή*, stroke]. Paralysis of one side of the body, due usually to a lesion of some part of the corpus striatum and internal capsule, of the crus cerebri, or of the cortex or subcortex of the opposite side of the brain. **H., Alternate,** paralysis of the facial muscles upon one side, with paralysis of the trunk and extremities upon the opposite side of the body. **H., Bilateral Spastic.** See *Paraplegia, Infantile Spasmodic*. **H., Cerebral,** the ordinary form first described. **H., Crossed.** Same as *H., Alternate*. **H., Facial,** motor paralysis of one side of the face. **H., Hephestic,** from the use of the hammer by smiths, a form of occupation neurosis. **H., Spastic,** a form occurring in infants, in which the affected extremities are subject to convulsive twitchings. **H., Spinal,** paralysis of one side or of the whole body, with loss of sensation of the opposite side. It is due to disease of the spinal cord.

Hemiplexia (*hem-e-pleks′-e-ah*). Same as *Hemiplegia*.

Hemiprosoplegia (*hem-e-pro-so-ple′-je-ah*) [*ἡμι*, half; *πρόσωπον*, face; *πληγή*, stroke]. Paralysis of one side of the face.

Hemiprotein (*hem-e-pro′-te-in*). See *Antialbumate*.

Hemipterous (*hem-ip′-ter-us*) [*ἡμι*, half; *πτερόν*, wing]. In biology, applied to certain insects that have the fore-wings partly membranous and partly coriaceous or chitinous.

Hemirheumatism (*hem-e-ru′-mat-izm*) [*ἡμι*, half; *ῥευματισμός*, liability to rheum]. Rheumatism confined to one lateral half of the body.

Hemisection (*hem-e-sek′-shun*) [*ἡμι*, half; *sectio*, a cutting]. Bisection; chiefly applied to division into two lateral halves. See *Medisection*.

Hemiseptum (*hem-e-sep′-tum*) [*ἡμι*, half; *septum*, a partition]. The lateral half of a septum, as of the heart; the lateral half of the septum lucidum.

Hemispasm (*hem′-e-spazm*) [*ἡμι*, half; *σπασμός*, a spasm]. A spasm or convulsive movement affecting only one side of the body.

Hemisphere (*hem′-is-fēr*) [*ἡμι*, half; *σφαῖρα*, a ball]. Half a sphere. **H., Cerebellar,** either lateral half of the cerebellum. **H., Cerebral,** either lateral half of the cerebrum.

Hemisystole (*hem-e-sis′-to-le*) [*ἡμι*, half; *συστολή*, a contraction]. A peculiar kind of irregular action of the heart-muscle, in which, with every two beats of the heart, only one beat of the pulse is felt.

Hemiterata (*hem-it-er′-at-ah*) [*ἡμι*, half; *τέρας*, monster]. A class of malformations, including all human bodies presenting any abnormality of development, not grave enough to be called monstrous, nor of the specific character to be classed as heterotaxic or hermaphroditic.

Hemiteratic (*hem-it-er-at′-ik*) [*ἡμι*, half; *τέρας*, a monster]. Pertaining to *Hemiterata*.

Hemitis (*hem-i'-tis*) [*αἷμα*, blood; *ιτις*, inflammation]. A condition of the blood associated with inflammation.

Hemitriteus (*hem-it-rit-e'-us*) [*ἡμι*, half; *τρείς*, three]. The semi-tertian form of ague.

Hemitropous (*hem-it'-ro-pus*) [*ἡμι*, half; *τροπή*, a turning over]. In biology, amphitropous; half anatropous; applied to the plant-embryo when much curved.

Hemizonia (*hem-iz-o'-ne-ah*) [*ἡμι*, half; *ξώνη*, girdle]. A genus of composite-flowered herbs and shrubs, of which some 19 species are Californian; they are called tar-weeds and resin-weeds. They are generally strongly fragrant, resinous plants, locally esteemed for their balsamic qualities. Unof.

Hemlock (*hem'-lok*). See *Conium*. **H.-bark**, a bark used in the manufacture of leather. It is taken from *Abies canadensis* of Canada and the United States, and contains nearly fourteen per cent. of tannin. It is said to produce a leather harder than oak-bark, but which is less pliable and more pervious to water. **H.-extract**, a strongly astringent, solid extract of hemlock-bark, *q. v.* It is principally employed in the arts. **H. Spruce.** See *Abies*.

Hemo-(*hem'-o-*)[*αἷμα*, blood]. A prefix denoting blood.

Hemocelum (*hem-o-se'-lum*) [*αἷμα*, blood; *κοιλία*, a cavity]. A blood-cyst.

Hemochromogen (*hem-o-kro'-mo-jen*) [*αἷμα*, blood; *χρῶμα*, color; *γενής*, producing]. An excretory pigment of certain invertebrates. In some beetles it has a respiratory function. It is the same as *Enterohematin* and *Helicorubin*.

Hemochromometer (*hem-o-kro-mom'-et-er*) [*αἷμα*, blood; *χρῶμα*, color; *μέτρον*, measure]. Colorimeter; an instrument for estimating the amount of oxyhemoglobin in the blood, by comparing a solution of the blood with a standard solution of picrocarminate of ammonia.

Hemochyle (*hem'-o-kil*)[*αἷμα*, blood; *χυλός*, juice]. The blood-lymph of vertebrates.

Hemocrystallin (*hem-o-kris'-tal-in*). See *Hemoglobin*.

Hemocyanin (*hem-o-si'-an-in*) [*αἷμα*, blood; *κύανος*, blue], $C_{767}H_{1363}N_{223}CuS_4O_{258}$ (Griffiths). A blue proteid pigment, having a very constant percentage composition. It is analogous to hemoglobin, but contains copper instead of iron, and forms the chief constituent in the blood of many invertebrates, in which it acts as the carrier of oxygen.

Hemocyne (*hem'-o-sin*) [*αἷμα*, blood; *κύων*, *κυνός*, dog]. The serum of dogs' blood.

Hemocyte(*hem'-o-sit*)[*αἷμα*, blood; *κύτος*, a cell]. One of the protistan organisms found in the blood of man and animals, *e.g.*, the parasite of malarial fever, as studied by Lavaran, Celli, Machiafava, Golgi, Councilman, Osler, and Pfeiffer. See *Parasites* (*Animal*) *Table of*.

Hemocytolysis (*hem-o-si-tol'-is-is*) [*αἷμα*, blood; *κύτος*, cell; *λύειν*, to unloose]. The dissolution of blood-corpuscles by means of heat.

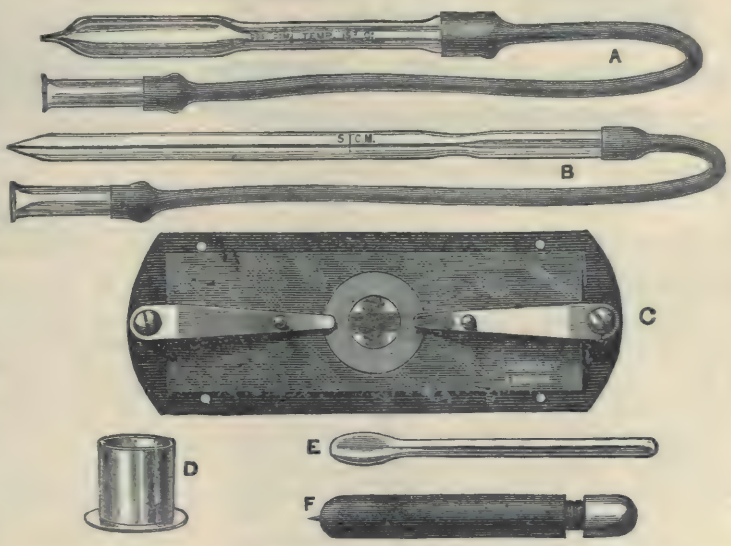
Hemocytometer (*hem-o-si-tom'-et-er*) [*αἷμα*, blood; *κύτος*, a cell; *μέτρον*, a measure]. A device for estimating the number of corpuscles in the blood. The instrument of Gowers, illustrated below, and that of Thoma are those most frequently employed.

Hemocytotrypsis (*hem-o-si-to-trip'-sis*) [*αἷμα*, blood; *κύτος*, cell; *τρίβειν*, to rub]. The breaking up of blood-corpuscles under strong pressure.

Hemodiapedesis (*hem-o-di-ap-ed-e'-sis*) [*αἷμα*, blood; *διαπήδησις*, an oozing through]. The transudation of blood through the skin.

Hemodromograph (*hem-o-dro'-mo-graf*). Same as *Hemotachometer*.

Hemodromometer (*hem-o-dro-mom'-et-er*). See *Hemadromometer*.



Hemodynamometer (*hem-o-di-nam-om'-et-er*). See *Hemadynamometer*.

Hemogallol (*hem-o-gal'-ol*) [*αἷμα*, blood; *galla*, gall-nut]. A proprietary substance occurring as a brownish-red powder, and formed by oxidizing the hemoglobin of the blood by pyrogallol. It is used in anemia in doses of gr. iss–viiss. Unof.

Hemogastric (*hem-o-gas'-trik*) [*αἷμα*, blood; *γαστήρ*, stomach]. Pertaining to blood in the stomach.

Hemogenesis (*hem-o-jen'-es-is*) [*αἷμα*, blood; *γένεσις*, generation]. The formation of blood.

Hemogenic (*hem-o-jen'-ik*) [*αἷμα*, blood; *γένεσις*, generation]. Pertaining to the formation of blood; blood-producing.

GOWERS' HEMOCYTOMETER.

A. Pipet for measuring the diluted solution. B. Capillary tube for measuring the blood. C. Cell with divisions on the floor, mounted on a slide. D. Vessel in which the dilution is made. E. Glass stirrer. F. Guarded spear-pointed needle.

Hemoglobin (*hem-o-glo'-bin*) [*αἷμα*, blood; *globus*, a round body]. Hematoglobin, Hemocrystallin. A doubly-refractive, pleochromatic colloid or crystalline matter, existing in the corpuscles of the blood, and to which their red color is due. In man the amount is 13.77 per cent., in woman 12.59 per cent., reduced by pregnancy to from 9 to 12 per cent. It is an oxygen-carrier or respiratory pigment. The crystals of hemoglobin have a dark-red appearance with a strong purple or bluish tint; they are very soluble in water.

Hemoglobinemia (*hem-o-glo-bin-e'-me-ah*) [*αἷμα*, blood; *globus*, a round body; *αἷμα*, blood]. A condition in which the hemoglobin is dissolved out of the red corpuscles, probably as the result of the destruction of the latter, and is held in solution in the serum. The blood is "lake"-colored. It occurs in some in-

fectious diseases, and after injecting certain substances into the blood.

Hemoglobiniferous (*hem-o-glo-bin-if'-er-us*) [αἷμα, blood; *globus*, a round body; *ferre*, to bear]. Yielding or carrying hemoglobin.

Hemoglobinocholia (*hem-o-glo-bin-o-ko'-le-ah*) [αἷμα, blood; *globus*, a round body; χολή, bile]. The presence of hemoglobin in the bile.

Hemoglobinometer (*hem-o-glo-bin-om'-et-er*) [αἷμα, blood; *globus*, a round body; μέτρον, a measure]. An instrument for the quantitative estimation of hemoglobin by comparing the color of a solution of blood of unknown with a color of a known valuation.

GOWERS' HEMOGLOBINOMETER.

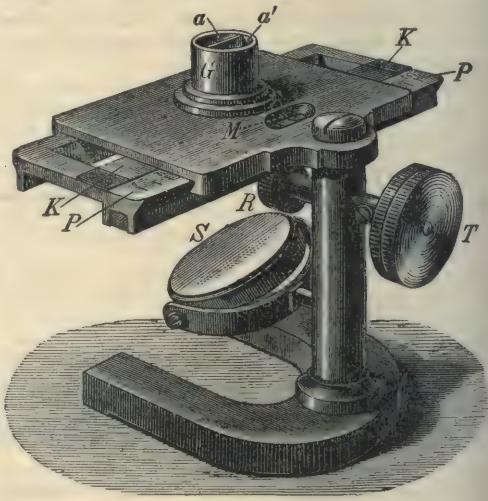
A. Pipet-bottle for distilled water. B. Capillary pipet. C. Graduated tube. D. Closed tube containing standard dilution. F. Lancet for pricking the finger.

Hemoglobinuria (*hem-o-glo-bin-u'-re-ah*) [αἷμα, blood; *globus*, a round body; οὖρον, urine]. The presence of hemoglobin, the red coloring-matter of the blood, in the urine, due either to its solution out of the red corpuscles, or to disintegration of the red corpuscles. It occurs after transfusion of blood, during certain stages of septicemia, and after severe burns. It is unattended with the presence of the corpuscular elements of the blood in the urine, thus differing from hematuria. **Hemoglobin Test:** to a suspected sample add a drop of acetic acid and boil; a red coagulum indicates hemoglobin. See, also, *Almen's Test*, *Hemin*, and *Heller*. **H., Epidemic**, a condition of the newborn marked by jaundice, cyanosis, and nervous symptoms. **H. Intermittent.** See *H., Paroxysmal.* **H., Paroxysmal**, a form characterized by recurring periodic attacks. It is related to cold, and is also closely associated with Raynaud's Disease. **H., Toxic**, that form occurring in consequence of poisoning by various substances, *e. g.*, potassium chlorate.

Hemoglobulin (*hem-o-glob'-u-lin*) [αἷμα, blood; *globus*, a ball]. Same as *Hemoglobin*.

Hemoid (*hem'-oid*) [αἷμα, blood; εἶδος, likeness]. Having the appearance of, or resembling, blood.

Hemology (*hem-ol'-o-je*) [αἷμα, blood; λόγος, science]. The science treating of the blood.



Hemolutein (*hem-o-lu'-te-in*) [αἷμα, blood; *luteus*, yellow]. A yellow coloring-matter obtained from corpora lutea.

Hemolymph (*hem'-o-limf*) [αἷμα, blood; *lympha*, clear water]. The blood of the higher invertebrata, containing more albuminoids and less water than the hydrolymph of lower forms. **H. Glands**, a variety of glands which, according to W. F. Robertson, are a kind of cross between the hemogenic glands (*e. g.* the spleen) and the lymphatic glands. The small prevertebral glands are examples.

Hemolysis (*hem-ol'-is-is*) [αἷμα, blood; λύσις, solution]. Destruction or breaking-up of the red blood-corpuscles.

Hemolytic (*hem-o-lit'-ik*) [αἷμα, blood; λύσις, solution]. Pertaining to hemolysis.

Hemometer (*hem-om'-et-er*) [αἷμα, blood; μέτρον, measure]. See *Hemoglobinometer*. Also, an apparatus for ascertaining the amount of hemoglobin in normal or diseased blood.

FLEISCHL'S HEMOMETER.

K. Red-colored wedge of glass moved by R. G. Mixing vessel with two compartments *a* and *a'*. M. Table with opening to read off the percentage of hemoglobin on the scale P. T. To move K through R. S. Reflector of Plaster-of-Paris.

Hemometra (*hem-o-me'-trah*). See *Hematometra*.

Hemoöphoritis (*hem-o-off-or-i'-tis*) [αἷμα, blood; ᾠόν, egg; φέρειν, to bear]. Oöphoritis with hemorrhage.

Hemopericardium (*hem-o-per-ik-ar'-de-um*) [αἷμα, blood; περί, around; καρδία, the heart]. An effusion of blood into the pericardial cavity. It is due usually to the bursting of an aneurysm of the aorta, but may also follow rupture of the heart, or the bursting of an aneurysm of one of the coronary arteries.

Hemophagic (*hem-o-faj'-ik*) [αἷμα, blood; φαγεῖν, to eat]. Feeding upon blood; applied to certain animal parasites.

Hemophagocyte (*hem-o-fag'-o-sīt*) [αἷμα, blood; φαγειν, to eat; κύτος, a cell]. Any phagocyte of the blood; a white blood-corpuscle.

Hemophilia (*hem-o-fil'-e-ah*) [αἷμα, blood; φιλεῖν, to love]. The hemorrhagic diathesis; an abnormal tendency to hemorrhage, or ease of bleeding. It usually first appears at about the period of the second dentition, and is most frequent among males. Heredity plays a prominent part in this affection.

Hemophthalmia (*hem-off-thal'-me-ah*) [αἷμα, blood; ὀφθαλμός, eye]. A hemorrhage into the interior of the eye. It may arise from contusion, from iridectomy, or by rupture of a vessel.

Hemophthalmos (*hem-off-thal'-mos*) [αἷμα, blood; ὀφθαλμός, the eye]. Blood in the vitreous chamber characterized by a reddish reflex from the pupil.

Hemophthisis (*hem-off'-this-is*) [αἷμα, blood; φθίσις, wasting]. Anemia dependent upon undue degeneration of the red blood-corpuscles

Hemoplasmodium (*hem-o-plaz-mo'-de-um*): [αἷμα, blood; πλάσμα, a moulded figure; εἶδος, form]. The plasmodium of malaria. See *Parasites* (*Animal*), *Table of.*

Hemoplastic (*hem-o-plas'-tik*) [αἷμα, blood; πλάσσειν, to form]. Same as *Hematoplastic.*

Hemopneumothorax (*hem-o-nu-mo-tho'-raks*) [αἷμα, blood; πνεῦμα, wind; θώραξ, the chest]. An effusion of air and blood within the pleura.

Hemopoiesis (*hem-o-poi-e'-sis*). See *Hematopoiesis.*

Hemoptysis (*hem-op'-tis-is*) [αἷμα, blood; πτύειν, to spit]. The spitting of blood. The term is confined usually to the expectoration of blood from the lungs. It may be slight or profuse, and death may result from suffocation. The blood is frothy and bright-red. **H., Parasitic.** See *Distoma ringeri.*

Hemorhodin (*hem-or-o'-din*) [αἷμα, blood; ῥόδον, a rose]. A rose-colored albuminoid found in the blood of *Aplysia depilans;* it was discovered by L. Cuénot.

Hemorrhage (*hem'-or-āj*) [αἷμα, blood; ῥηγνύναι, to burst forth]. The flowing of blood from wounded or ruptured vessels. **H., Accidental,** during pregnancy from premature detachment of the placenta when normally situated. **H., Capillary,** oozing of blood from a wound without a flow from large vessels. **H., Collateral,** bleeding occurring in the course of acute inflammations. **H., Complementary,** succeeding upon another hemorrhage that has been cut short. **H., Concealed,** a variety of accidental hemorrhage in which the bleeding takes place between the ovum and the uterine walls, without escape from the genital tract. **H., Consecutive,** ensuing some time after injury. **H., Critical,** occurring at the turning-point of a disease. **H., Petechial.** See *Purpura.* **H., Postpartum,** *primary,* within 24 hours after labor; *secondary,* after 24 hours. **H., Primary,** that immediately following any traumatism. **H., Secondary,** that occurring some time after the traumatism, and usually due to the sloughing of the tissues. **H., Unavoidable,** from detachment of a placenta previa. **H., Vicarious,** suppression of the menses with abnormal discharge of blood from some other part of the body than the vagina.

Hemorrhagic (*hem-or-a'-jik*) [αἷμα, blood; ῥηγνύναι, to burst forth]. Relating to or accompanied by hemorrhage **H. Diathesis.** See *Hemophilia.* **H. Endometritis.** See *Endometritis.* **H. Infarct.** See *Infarct.* **H. Pneumonia,** a form of pneumonia occurring in elderly people and in certain weakened states of the constitution, characterized by the presence of a large amount of blood in the expectoration.

Hemorrhaphilia (*hem-or-af-il'-e-ah*) [αἱμορραγία, hemorrhage; φίλος, loving]. Synonym of *Hemophilia.*

Hemorrhea (*hem-or-e'-ah*) [αἷμα, blood; ῥοία, a flow]. A hemorrhage; a flow of blood. **H. ventriculi.** See *Hematemesis.*

Hemorrhelcosis (*hem-or-el-ko'-sis*) [αἱμορροΐς, a hemorrhoid; ἕλκωσις, ulceration]. The formation of an ulcer upon a hemorrhoid.

Hemorrhinia (*hem-or-in'-e-ah*) [αἷμα, blood; ῥίς, nose]. Epistaxis; nose-bleed.

Hemorrhoid (*hem'-or-oid*) [αἱμόρροος, flowing with blood]. Pile. An enlarged and varicose condition of the vessels in the tissues around the anus, sometimes associated with eversion of the rectal mucous membrane. There is always more or less pain and tenderness, with discomfort in sitting. Hemorrhoids are caused by sedentary habits, constipation, obstruction to the portal circulation, or violent purging. **H., External,** situated without the sphincter ani. **H., Internal,** within the anal orifice.

Hemorrhoidal (*hem-or-oi'-dal*) [αἱμόρροος, flowing with blood]. Pertaining to or affected with hemorrhoids.

Hemoscope (*hem'-o-skōp*). Same as *Hematoscope.*

Hemosialemesis (*hem-o-si-al-em'-es-is*) [αἷμα, blood; σιαλόν, saliva; ἐμέειν, to vomit]. A form of vomiting sometimes observed in hysterical women with dysmenorrhea, the vomited matter consisting largely of saliva and a small quantity of blood, in addition to the ordinary contents of the stomach.

Hemosiderin (*hem-o-sid'-er-in*) [αἷμα, blood; σίδηρος, iron]. Neumann's name for a pigment often found in extravasations and thrombi with hematoidin, but differing from the latter in containing iron.

Hemospasia (*hem-o-spa'-ze-ah*) [αἷμα, blood; σπάειν, to draw]. The drawing of blood to a part; derivative action; the process of dry-cupping, especially when thoroughly carried out.

Hemospastic (*hem-o-spas'-tik*) [αἷμα, blood; σπάειν, to draw]. Effecting or pertaining to hemospasia.

Hemostasia, or Hemostasis (*hem-o-sta'-se-ah*, or *hem-os'-tas-is*) [αἷμα, blood; στάσις, a standing]. 1. Stagnation of the blood-current. 2. Arrest of a flow of blood.

Hemostatic (*hem-o-stat'-ik*) [αἷμα, blood; στατικός, stationary]. Having the power to arrest hemorrhage. Also, an agent or remedy that arrests or restrains bleeding.

Hemostatics (*hem-o-stat'-iks*). See *Hemastatics.*

Hemotachometer (*hem-o-tak-om'-et-er*) [αἷμα, blood; τάχος, swiftness; μέτρον, a measure]. An instrument for measuring the rate of flow of arterial blood.

Hemotexis (*hem-o-teks'-is*) [αἷμα, blood; τῆξις, a melting]. The dissolution of putrid blood.

Hemothorax (*hem-o-tho'-raks*) [αἷμα, blood; θώραξ, the chest]. An accumulation of blood in a pleural cavity. It may occur under many varied conditions.

Hemotrophy (*hem-ot'-ro-fe*) [αἷμα, blood; τροφή, nourishment]. Synonym of *Plethora, q. v.*

Hemp [ME., *hemp*, hemp]. The hemp-fiber is the product of the *Cannabis sativa*, which is grown for textile purposes chiefly in Russia and Italy, while the seed is grown in India. It is a bast-fiber similar to that of the flax-plant, but coarser and stronger, and of deeper color, and less luster. It is used chiefly for the manufacture of ropes and cordage, and the fabric woven from it, known as canvas, is used in sail-making. Hemp is a mixture of cellulose and bastose. **H., Manila,** is a tropical fiber obtained on the Philippine Islands from the leaves of the wild plantain. It furnishes a very superior rope-making fiber, because of its combined lightness and strength, and the finer grades are used for woven goods. The color is yellowish or white, and the white variety has a fine silky luster. **H., Suron,** is grown in India, and furnishes a fiber of light-yellowish color. It resembles jute, although less lustrous. It is well adapted for cordage and netting. **H., Sisal** (or *henequen*), is derived from the fleshy leaves of a species of agave grown in Yucatan and the West Indies. It is used largely in the United States as a substitute for jute in the manufacture of bagging and for cordage, being stronger and lighter than jute. See also *Cannabis.* **H.-nettle.** See *Galeopsis.* **H.-seed Calculus,** a small rounded urinary concretion composed of oxalate of lime. It may vary in size from a pin's head to that of a hempseed, and is smooth and dark-colored. **H.-seed Oil,** oleum cannabis, is obtained from the seeds of the *Cannabis sativa* or common hemp. It has a mild odor, but mawkish taste, and greenish-yellow color, turning brown with age. Its specific gravity at 15° C. is .9276. It is freely soluble in boiling alcohol, has weaker drying properties than linseed oil, but is used in paint and varnish manufacture and in making soft soaps.

Hemuresis (*hem-u-re′-sis*). Synonym of *Hematuria.*

Hen [ME., *hen*, a hen]. The female of the domestic fowl. **H.-bane.** See *Hyoscyamus.* **H.-blindness,** a popular name for night-blindness. **H.-cluck Stertor,** a form of stertorous respiration heard in some cases of retropharyngeal abscess.

Henequen (*hen′-e-ken*). See *Hemp, Sisal.*

Henle's Ansa. See *Ansa.* **H.'s Canals.** See *Canal.* **H.'s Fenestrated Membrane,** the layer of longitudinal elastic fibers of the inner coat of the arteries. **H.'s Fibers,** the elastic fibers forming the fenestrated membrane of Henle. **H.'s Glands.** See *Gland.* **H.'s Layer,** a layer of flat, horny, polygonal, non-nucleated cells situated between the cuticula and the external root-sheath of a hair-bulb. **H.'s Loop,** a loop in the uriniferous tubules. See *Tubuli uriniferi.* **H.'s Muscle.** See *Muscles, Table of.* **H.'s Sheath,** a connective-tissue sheath, surrounding terminal nerve-fibers. **H.'s Tubular Tumor.** See *Siphonoma.*

Henna (*hen′-ah*) [Arab., *Khanna*, henna]. A cosmetic much used in the Orient; it is prepared from the leaves of *Lawsonia alba*, and is sometimes used externally and internally in leprosy and in skin-diseases. Unof.

Henocardia (*hen-o-kar′-de-ah*) [εἷς, ἓν, one; καρδία, heart]. The condition of having but one auricle and one ventricle in the heart; it is normal in some of the lower animals.

Henoch's Purpura. See *Diseases, Table of.*

Henogenesis (*hen-o-jen′-es-is*) [εἷς (ἑν-), one; γένεσις, origin]. In biology, the developmental history of an individual organism; ontogenesis.

Henosis (*hen-o′-sis*) [ἕνωσις, uniting]. 1. Healing or uniting. 2. Symblepharon.

Henotic (*hen-ot′-ik*) [ἑνωτικός; εἷς, one]. Tending to heal or to promote union.

Henry's Law. See *Law.*

Hensen's Disc. See *Engelmann's Middle Disc.* **H.'s Experiment,** an experiment proving that the so-called auditory hairs of the crustacean *Mysis* vibrate to a particular note. **H.'s Prop-cells.** See *H.'s Supporting Cells.* **H.'s Stripe,** a glistening band in the middle of the under surface of the membrana tectoria of the ear. **H.'s Supporting Cells,** tall columnar epithelial cells on the outer side of the outermost of Deiters' cells of the ear.

Hepar (*he′-par*) [ἧπαρ, the liver; *gen. Hepatis*]. The liver; jecur. **H. adiposum,** a synonym of fatty liver. **H. amyloideum,** amyloid degeneration of the liver. **H. sulphuris,** the liver of sulphur; potassium sulphid; formerly much employed in medicine; now used mainly by homeopathists.

Hepatalgia (*hep-at-al′-je-ah*) [ἧπαρ, liver; ἄλγος, pain]. Pain in the liver, but more especially the paroxysmal pain occasionally affecting the right hypochondrium.

Hepatalgic (*hep-at-al′-jik*) [ἧπαρ, the liver; ἄλγος, pain]. Relating to or affected with hepatalgia.

Hepatapostema (*hep-at-ap-os-te′-mah*) [ἧπαρ, liver; ἀπόστημα, abscess: *pl.*, *Hepatapostemata*]. An abscess of the liver.

Hepatauxesis (*hep-at-awks-e′-sis*) [ἧπαρ, liver; αὔξησις, enlargement]. Enlargement of the liver.

Hepatectomy (*hep-at-ek′-to-me*) [ἧπαρ, liver; ἐκτομή, a cutting out]. Excision of the liver, wholly or in part.

Hepatemphractic (*hep-at-em-frak′-tik*) [ἧπαρ, liver; ἐμφραξις, obstruction]. Relating to hepatemphraxis.

Hepatemphraxis (*hep-at-em-fraks′-is*) [ἧπαρ, liver; ἐμφραξις, obstruction]. Hepatic obstruction.

Hepathelcosis (*hep-ath-el-ko′-sis*) [ἧπαρ, liver; ἕλκωσις, ulceration]. Ulceration of the liver.

Hepatic (*hep-at′-ik*) [ἡπατικός; ἧπαρ, liver]. Pertaining or belonging to the liver. **H. Aloes.** See *Aloes.* **H. Duct.** See *Duct.* **H. Lobes,** the natural anatomic divisions of the liver, usually designated as right, left, quadrate, spigelian, and caudate lobes. **H. Plexus.** See *Plexus.* **H. Zones,** certain areas in an hepatic lobule. The central area, capillaries and cells form the *Hepatic-vein Zone*, specially liable to congestive changes; the area next the periphery of the lobule is the *Portal-vein Zone;* and the area between the two the *Hepatic-artery Zone.* **H. Starch,** a synonym of *Glycogen.*

Hepatica (*hep-at′-ik-ah*) [ἡπατικός; ἧπαρ, liver]. The liverwort; a genus of ranunculaceous plants. **H. triloba** and **H. acutiloba** were formerly esteemed in hepatic, renal, and pulmonic complaints. Unof.

Hepaticell (*hep-at′-is-el*) [ἡπατικός; ἧπαρ, liver; *cella*, cell]. An hepatic or liver cell; a cell of the liver tissue.

Hepatico-ductitis (*hep-at′-ik-o-duk-ti′-tis*) [ἡπατικός, pertaining to the liver; *ductus*, duct; ιτις, inflammation]. Inflammation of the hepatic ducts.

Hepatico-pancreatic (*hep-at′-ik-o-pan-kre-at′-ik*) [ἡπατικός, pertaining to the liver; πάγκρεας, sweetbread]. Relating to the liver and the pancreas.

Hepaticous (*hep-at′-ik-us*) [ἡπατικός, of the liver]. In biology, resembling liver.

Hepaticula (*hep-at-ik′-u-lah*) [ἧπαρ, liver]. 1. A small liver. 2. A slight degree of hepatitis.

Hepatin (*hep′-at-in*) [ἧπαρ, liver]. Same as *Glycogen.*

Hepatirrhagia (*hep-at-ir-a′-je-ah*) [ἧπαρ, liver; ῥηγνύναι, to burst forth]. Hemorrhage from the liver.

Hepatirrhea (*hep-at-ir-e′-ah*). See *Hepatorrhea.*

Hepatism (*hep′-at-izm*) [ἧπαρ, liver]. Derangement of various functions of the body, due or ascribed to some functional or other disorder of the liver.

Hepatitic (*hep-at-it′-ik*) [ἧπαρ, liver; ιτις, inflammation]. Affected with, or relating to, hepatitis.

Hepatitis (*hep-at-i′-tis*) [ἧπαρ, liver; ιτις, inflammation.] Inflammation of the liver. **H. chronica interstitialis,** cirrhosis of the liver. **H., Parenchymatous, Acute,** acute yellow atrophy of the liver. **H. suppurativa,** abscess of the liver.

Hepatitopyitis (*hep-at-it-o-pi-i′-tis*) [ἧπαρ, liver; πύον, pus; ιτις, inflammation]. Hepatitis characterized by the formation of abscesses.

Hepatization (*hep-at-iz-a′-shun*) [ἧπαρ, liver]. An abnormal change in lung-tissue, in which it becomes solid and friable, somewhat resembling the tissue of the liver. **H., Gray,** the condition of a lung in the third stage of pneumonia. **H., Red,** that in the second stage of pneumonia. **H., White,** the condition of the lungs in stillborn syphilitic children. **H., Yellow,** the condition of the lung in the third stage of pneumonia when tinted by the presence of numerous pus-cells. See *Pneumonia.*

Hepatocace (*hep-at-ok′-as-e*) [ἧπαρ, liver; κακός, ill]. Gangrene of the liver.

Hepatocarcinia (*hep-at-o-kar-sin′-e-ah*) [ἧπαρ, liver; καρκίνος, cancer]. Malignant disease of the liver.

Hepatocele (*hep′-at-o-sēl′*) [ἧπαρ, liver; κήλη, a tumor]. A form of hernia in which the liver protrudes through an opening in the abdominal wall.

Hepatochromate (*hep-at-o-kro′-māt*) [ἧπαρ (ἡπατ-), the liver; χρῶμα, a color]. Krukenberg's name for *Enterochlorophyl.*

Hepatocirrhosis (*hep-at-o-sir-o′-sis*) [ἧπαρ, liver; κιῤῥός, yellow]. Cirrhosis of the liver.

Hepatocolic (*hep-at-o-kol′-ik*) [ἧπαρ, liver; κῶλον, colon]. Relating to the liver and the colon.

Hepatocystic (*hep-at-o-sis′-tik*) [ἧπαρ, liver; κύστις, bladder]. Pertaining to the liver and the gall-bladder.

Hepatodidymus (*hep-at-o-did'-im-us*) [ἧπαρ, the liver; δίδυμος, double] A monster with a double body from the liver up.

Hepatoduodenal (*hep-at-o-du-od'-en-al*) [ἧπαρ, liver; *duodeni*, twelve each]. Relating to the liver and the duodenum.

Hepatodynia (*hep-at-o-din'-e-ah*) [ἧπαρ, liver; ὀδύνη, pain]. Pain in the liver.

Hepatogastric (*hep-at-o-gas'-trik*) [ἧπαρ, liver; γαστήρ, stomach]. Pertaining to the liver and the stomach.

Hepatogastritis (*hep-at-o-gas-tri'-tis*) [ἧπαρ, liver; γαστήρ, stomach; ιτις, inflammation]. Inflammation of both liver and stomach.

Hepatogenic (*hep-at-o-jen'-ik*) [ἧπαρ, liver; γεννᾶν, to beget]. Produced by or in the liver. **H. Icterus**, also called absorption-icterus or jaundice, is caused by the absorption of bile already formed in the liver.

Hepatography (*hep-at-og'-ra-fe*) [ἧπαρ, liver; γράφειν, to write]. A description of the liver.

Hepatoid (*hep'-at-oid*) [ἧπαρ, liver; εἶδος, likeness]. Resembling a liver or liver-substance.

Hepatolith (*hep'-at-o-lith*) [ἧπαρ, liver; λίθος, stone]. Biliary calculus; gall-stone.

Hepatolithiasis (*hep-at-o-lith-i'-as-is*) [ἧπαρ, liver; λιθίασις, presence of calculus]. A disease characterized by gall-stones or concretions in the liver.

Hepatolithic (*hep-at-o-lith'-ik*) [ἧπαρ, liver; λίθος, a stone]. Affected with biliary calculi.

Hepatology (*hep-at-ol'-o-je*) [ἧπαρ, liver; λόγος, science]. The science of the nature, structure, functions, and diseases of the liver.

Hepatomalacia (*hep-at-o-mal-a'-se-ah*) [ἧπαρ, liver; μαλακία, softness]. Softening of the liver.

Hepatomegalia (*hep-at-o-meg-a'-le-ah*) [ἧπαρ, liver; μέγας, large]. Auxesis of the liver.

Hepatomyeloma (*hep-at-o-mi-el-o'-mah*) [ἧπαρ, liver; μυελός, marrow; ὄμα, a tumor: *pl. Hepatomyelomata*]. Medullary carcinoma of the liver.

Hepatoncus (*hep-at-ong'-kus*) [ἧπαρ, liver; ὄγκος, a tumor]. A tumor or swelling of the liver.

Hepatonecrosis (*hep-at-o-ne-kro'-sis*) [ἧπαρ, liver; νέκρωσις, death]. Gangrene of the liver.

Hepatopancreas (*hep-at-o-pan'-kre-as*) [ἧπαρ, the liver; πάγκρεας, the pancreas: *pl. Hepatopancreates*]. In biology, a glandular organ of many invertebrates which exercises a digestive action upon starch and albumin, and at the same time secretes matters similar to those found in the bile of vertebrates.

Hepatopathy (*hep-at-op'-ath-e*) [ἧπαρ, liver; πάθος, disease]. Any hepatic disease or disorder.

Hepatoperitonitis (*hep-at-o-per-it-on-i'-tis*) [ἧπαρ, liver; περιτόναιον, peritoneum; ιτις, inflammation]. Inflammation of the peritoneal or serous coat of the liver.

Hepatopexia, or Hepatopexy (*hep-at-o-peks'-e-ah, hep'-at-o-peks-e*) [ἧπαρ, liver; πῆξις, fixation]. The suturing of a floating liver in its proper position.

Hepatophage (*hep'-at-o-faj*) [ἧπαρ, liver; φαγεῖν, to eat]. A giant-cell of a type peculiar to the liver; it is said to absorb and to destroy liver-cells.

Hepatophyma (*hep-at-o-fi'-mah*) [ἧπαρ, liver; οἴμα, growth]. Any tumor of the liver.

Hepato-portal (*hep-at-o-port'-al*) [ἧπαρ, liver; *porta*, a gate]. Relating to the portal circulation in the liver; portal as distinguished from *reniportal*.

Hepatoptosis (*hep-at-op-to'-sis*) [ἧπαρ, liver; πτῶσις, a falling]. Synonym of *Floating Liver*, *q. v.*

Hepatorrhagia (*hep-at-or-a'-je-ah*). Same as *Hepatirrhagia*.

Hepatorrhaphy (*hep-at-or'-a-fe*) [ἧπαρ, liver; ῥαφή, suture]. Suture of the liver.

Hepatorrhea (*hep at-or-e'-ah*) [ἧπαρ, liver; ῥοία, flow]. Morbid or excessive secretion of bile by the liver.

Hepatorrhexis (*hep-at-or-eks'-is*) [ἧπαρ, liver; ῥῆξις, a rupture]. Rupture of the liver.

Hepatoscirrhus (*hep-at-o-skir'-us*) [ἧπαρ, liver; σκίρρος, an induration]. Scirrhous carcinoma of the liver.

Hepatoscopy (*hep-at-os'-ko-pe*) [ἧπαρ, liver; σκοπεῖν, to examine]. Visual examination of the liver.

Hepato-splenitis (*hep-at-o-splen-i'-tis*) [ἧπαρ, liver; σπλήν, spleen; ιτις, inflammation]. Inflammation of both liver and spleen.

Hepatotomy (*hep-at-ot'-o-me*) [ἧπαρ, liver; τέμνειν, to cut]. Incision of the liver.

Hephestic (*hef-es'-tik*) [*Hephæstus*, Vulcan]. Prevailing or occurring among hammermen. **H. Cramp.** See *Hammermen's Cramp*. **H. Hemiplegia.** See *Hemiplegia*.

Heptacosane (*hep'-tak-o-sān*) [ἑπτά, seven], $C_{27}H_{56}$. A hydrocarbon contained in beeswax.

Heptad (*hep'-tad*) [ἑπτά, seven]. In chemistry, an atom whose equivalence is seven atoms of hydrogen, or that can be combined with, substituted for, or replaced by, seven atoms of hydrogen.

Heptagynian (*hep-taj-in'-e-an*). See *Heptagynous*.

Heptagynious (*hep-taj-in'-e-us*). See *Heptagynous*.

Heptagynous (*hep-taj'-in-us*) [ἑπτά, seven; γυνή, female]. In biology, having seven pistils or styles.

Heptamerous (*hep-tam'-er-us*) [ἑπτά, seven; μέρος, a part]. In biology, consisting of seven parts; having the organs in sevens.

Heptandrous (*hep-tan'-drus*) [ἑπτά, seven; ἀνήρ, man]. In biology, having seven stamens.

Heptane (*hep'-tān*) [ἑπτά, seven], C_7H_{16}. A paraffin existing as a mobile, colorless liquid. It is contained in petroleum, and is also obtained from the resin of *Pinus sabiniana* by dry distillation. It is also called *abietene*, *theolin*, *erasene*, and *aurantin*. See *Hydrocarbons, Table of*.

Heptapetalous (*hep-tak-pet'-al-us*) [ἑπτά, seven; πέταλον, a leaf]. In biology, having seven petals.

Heptaphyllous (*hep-tah-fil'-us*) [ἑπτά, seven; φύλλον, a leaf]. In biology, having seven leaves.

Heptatomic (*hep-tat-om'-ik*) [ἑπτά, seven; ἄτομος, an atom]. Same as *Heptavalent*, *q. v.*

Heptavalent (*hep-tav-a'-lent*) [ἑπτά, seven; *valens*, having power]. In chemistry, equal to seven atoms of hydrogen in combining or saturating-power; applied to an atom that can be substituted for, or replaced by, seven atoms of hydrogen.

Heptolactone (*hep-to-lak'-tōn*) [ἑπτά, seven; *lac*, milk], $C_7H_{12}O_2$. A substance formed from teracrylic acid by reducing with hydrobromic acid. It melts at 11° C., and boils at 220° C.

Heptoses (*hep-tōs'-ez*) [ἑπτά, seven]. A division of the glucoses, of the composition $C_7H_{14}O_7$. They are prepared by reducing the corresponding heptonic acids, $C_7H_{14}O_8$ (their lactones), with sodium amalgam. They have similar properties to the hexoses, and are not fermented by yeast. See *Carbohydrates, Table of*.

Heracleum (*her-ak-le'-um*) [Ἡράκλειος, Hercules]. A genus of umbelliferous plants, the cow-parsnips. Several species, especially **H. lanatum**, in North America, and **H. tauricum**, in Europe, are diuretic and expectorant, and the roots and seeds are recommended for use in epilepsy. Unof.

Herapath's Method. A method for determining the presence of minute quantities of quinin. For a test-fluid use—

	Metric.	*Apoth.*
Glacial acetic acid,	12 c.c.	(3.21 f3).
Ninety-five per cent. alcohol,	4 c.c.	(1.08 f3).
Dilute sulphuric acid,		7 drops.

A drop of this is put on the slide, and a very minute amount of the quinin-containing substance added.

When dissolved, add an extremely minute drop of an alcoholic solution of iodin. The first effect is the production of the yellow, cinnamon-colored compound of iodin and quinin, which forms as a small circular spot; the alcohol separates in little drops, which, by a sort of repulsive movement, drive the fluid away; after a time the acid liquid again flows over the spot, and the polarizing crystals of sulphate of iodoquinin are slowly produced in beautiful rosets. This test succeeds best without the application of heat.

Herapathite (*her'-ap-ath-it*) [from *Herapath*, an English chemist]. An iodid of quinin-sulphate, occurring in rhomboid laminæ. It has been used as a remedy in scrofula and in febrile cases; in microscopy, it is employed in polarizing light.

Herb (*erb* or *herb*) [*herba*, an herb]. An annual, biennial or perennial plant, the stem of which contains but little wood and dies down to the ground at the end of the season. **H.-doctor.** See *Herbalist.* **H.-juice Cure.** See *Cure.*

Herbaceous (*her-ba'-se-us*) [*herba*, grass]. In biology: 1. Applied to stems or other organs that have a tender, juicy consistence and perish at the close of the growing-season. 2. Feeding upon herbs.

Herbal (*her'-bal*) [*herba*, grass]. An old name for a book on herbs; chiefly designating a book on the medicinal virtues of herbs.

Herbalist (*her'-bal-ist*) [*herba*, grass]. An herb-doctor or simpler; a so-called botanic physician.

Herbarium (*her-ba'-re-um*) [*herba*, grass]. A collection of dried plants arranged for study; a *hortus siccus.*

Herbicarnivorous (*her-be-kar-niv'-or-us*) [*herba*, herbage; *caro*, flesh; *vorare*, to eat]. Omnivorous; living upon both animal and vegetable food.

Herbivora (*her-biv'-or-ah*) [*herba*, grass; *vorare*, to devour]. A name given to a division of mammalia. Animals that feed on vegetation.

Herbivorous (*her-biv'-or-us*) [*herba*, grass; *vorare*, to devour]. A descriptive term applied to animals that subsist on vegetation.

Herbst's Corpuscles. A variety of sensory end-organs found in the mucous membrane of the tongue of the duck; they resemble small Vater's corpuscles, but their lamellæ are thinner and closer to each other, while the axis-cylinder within the central core is bordered on each side by a row of nuclei.

Hercogamy (*her-kog'-am-e*) [ἕρκος, a fence; γάμος, marriage]. In biology, the prevention of impregnation or fertilization by some structural obstacle; applied to flowers.

Herculeus morbus (*her-ku-le'-us mor'-bus*) [L.]. Synonym of *Epilepsy.*

Hereditary (*he-red'-it-a-re*) [*heres*, an heir]. Acquired by inheritance. **H. Disease,** one transmitted from parent to offspring. **H. Parts.** See *Determinate.* **H. Syphilis.** See *Syphilis.*

Heredity (*he-red'-it-e*) [*hereditas*, heredity]. The principle or fact of the transmission of physical or mental qualities or tendencies from ancestor to offspring. **Darwin's Theory of Heredity,** or the **Hypothesis of Pangenesis,** supposes that each of the different cells of the body gives off *gemmules* (*Plastidules* of *Elsberg*), or germinal particles, that are capable of reproducing their kind, and which are included in and constitute the generative cells, and thus reproduce all of the peculiarities of the original organism. **Weissmann's Theory of the Continuity or "Immortality" of Germ-plasma,** is developed from *Nussbaum's* proposition that germ-substance is directly abstracted from the developing ovum and preserved, without essential alteration, to become, by giving rise to sexual elements, the germ-substance of another generation, by the corollary that the whole nature of the animal or plant depends upon its germinal substance, and that the resemblance of the offspring to the parent is due to every gonoblast containing some germinal matter. According to Nussbaum and Weissmann the cells of the embryo are separated into two kinds: (1) The *germ-cells,* which become the sexual elements; (2) The *somatic cells* or *body-cells,* used as building-material (*Somatoplasm*) of the individual. Kölliker and others have demonstrated that no sharp distinction exists between germ-cells and somatic cells, so that speculations based on such assumed difference necessarily fall to the ground. **Nægele's Theory of Idioplasm and Nutritive Plasma,** is a definite theory of germinal continuity; he assumes the formative force to reside in a specific material substratum, *i. e.*, *idioplasm*—essentially identical with Weissmann's germ-plasma. Minot assumes idioplasm to be the *nuclear substance,* chromatin, the essential factor in the function of heredity, and the nucleus, therefore, the organ of hereditary transmission. **De Vries' Theory of Intracellular Pangenesis,** suggests that the nuclear substance of the germ-plasm is composed of minute particles, *Pangenes,* not cells, but the bearers of the properties of the cells. There are also in the nucleus *Nuclear Rods,* called also *Idants,* and *Chromatin Rods,* which are built up of a series of ancestral plasms, called *Ids,* each representing "an individuality." The doubling and multiplication of these idants prior to fertilization is in the interest of variety, or variation of form and character of the subsequent individual. This theory claims the same independence for all constituent parts of the cell-body as Weissmann claimed for those of the nucleus. The entire cell is called the *Protoplast,* and its various living, independent parts are called *Pangenes.* The cell is thus likened to a compound organism or colony.

Hering's Experiment. A delicate test of stereoscopic vision in which the perception of degrees of depth is tested by means of falling bodies, seen through a long tube. **H.'s Theory.** See *Color-sensation.*

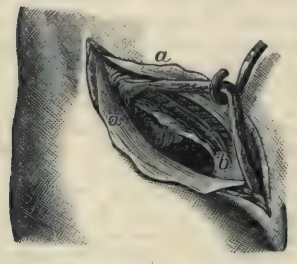
Hermann's Difference-theory. See *Difference.* **H.'s Theory,** a theory as to the causation of muscular contraction; he claims that the formation of carbonic anhydrid on contraction is not simply due to oxidation, but rather to the decomposition of inogen, with the formation of certain simpler products, of which carbonic anhydrid is one, and sarcolactic acid and myosin the others.

Hermaphrodism, or **Hermaphroditism** (*her-maf'-ro-dizm, her-maf'-ro-dit-izm*) ['Ερμῆς, Mercury; 'Αφροδίτη, Venus]. The co-existence in a single individual of completely developed ovaries and testicles, or of at least one of each gland. **H., Bilateral,** an ovary and a testicle on each side. **H., Complex,** a rare instance of hermaphrodism in which there are present both the internal and external organs of either sex. **H., Double.** Same as *H., Complex.* **H., Lateral,** an instance in which male organs (especially a testicle) are more or less developed on one side, and female organs (especially an ovary) on the opposite side. **H., Protandrous,** applied to the phenomenon as exhibited by most hermaphrodite platode worms, of developing the male sexual products before the female. **H., Spurious,** doubtful, but not double, sex. **H., Transverse,** an instance in which the external organs indicate the one sex, and the internal the opposite. **H., Unilateral,** on one side an ovary and a testicle, on the other an ovary or a testicle. **H., Vertical.** Same as *H., Complex.*

Hermaphrodite (*her-maf'-ro-dit*) ['Ερμῆς, Mercury;

Ἀφροδίτη, Venus]. An individual affected with hermaphrodism, *q. v.*; usually the condition is due to some congenital malformation of the genital organs, such as epispadias, hypospadias, cleft of the scrotum, etc., that makes the determination of sex somewhat doubtful. For varieties, see *Hermaphrodism*.

Hermaphroditic (*her-maf-ro-dit'-ik*) [Ἑρμῆς, Mercury; Ἀφροδίτη, Venus]. Pertaining to hermaphroditism, *q. v.* See also *Teratism*.



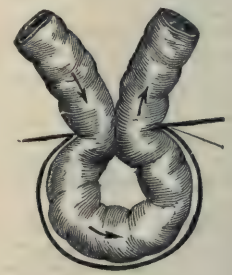
Hermaphroditism (*her-maf'-ro-dit-izm*). Same as *Hermaphrodism*.

Hermetic, Hermetical (*her-met'-ik, her-met'-ik-al*) [Ἑρμῆς, the god Mercury, the reputed founder of alchemy]. Pertaining to chemistry. Also, having resistance to chemic action. Also, protected from exposure to air. **H. Medicine**, alchemistic or spagyric practice. **H. Sealing**, the closure of an outlet by cementation or fusion, so that it is impervious to air. Also, the closing or covering of a wound by impervious dressings.

Hermodactyl (*her-mo-dak'-til*) [Ἑρμῆς, Mercury; δάκτυλος, finger]. The root or bulb of *Colchicum variegatum*, or *C. autumnale*; also of *Iris tuberosa*. It was formerly prized in medicine, but is now little used, except in India. Unof.

Hernia (*her'-ne-ah*) [*hernia*, from ἔρνος, sprout]. A tumor formed by the protrusion of the contents of a cavity (usually the abdominal) through its wall. Hernias may be called after their locality, *Epigastric*, *Femoral*, *Inguinal*, *Perineal*, *Scrotal*, *Umbilical*, etc.; according to their condition, *Encysted*, *Reducible*, *Strangulated*, *Purulent*, etc.; according to their contents, *Cerebral*, *Intestinal*, *Omental*, *Vesical*, etc.; or, lastly, according to their origin, *Acquired*, *Congenital*, *Infantile*, etc. **H., Abdominal**, a protrusion of a portion of the abdominal viscera through some portion of the parietes. **H., Béclard's**, a hernia through the saphenous opening. **H., Birkett's**, a hernia of the synovial membrane of a joint, following laceration of the capsular ligament. **H. of the Bladder**, the protrusion of a part of the bladder through one of the openings of the abdominal cavity, viz.: the femoral ring, or external adominal ring; or it may form part of a ventral hernia after celiotomy or injury, or it may take place through an opening in the floor of the pelvis; the term was also formerly applied to cystocele, *q. v.* **H. of Brain**. See *Fungus cerebri*. **H., Bruggiser's**. Same as *H., Properitoneal*. **H., Bursal**. Same as *H., Birkett's*. **H. carnosa**. Synonym of *Elephantiasis arabum*. **H., Cecal**, a hernia containing the cecum (with or without other parts of the bowel). **H. cerebri**. See *Fungus cerebri*. **H., Chronic**, an old hernia. **H. of Cloquet**. See *H., Pectineal-crural* and *Diseases, Table of*. **H., Complete**, a hernia in which the sac and its contents have passed the hernial orifice. **H., Congenital**, a form of indirect inguinal hernia in which the vaginal process of the peritoneum having remained patulous, the bowel descends at once into the scrotum, in direct contact with the testicle. See also *H. of the Cord*. **H., Cooper's**, a variety of femoral hernia with a diverticulum through the superficial fascia. See, also, *Diseases, Table of*. **H. of the Cord**, a congenital condition resulting from arrest of development of the lateral plates, with persistence of the omphalic duct. If the latter does not wither away, the fetal intestines are drawn out into the cord, giving rise to congenital umbilical hernia. **H., Crural**. See *H., Femoral*. **H., Cruro-properitoneal**, a variety in which an additional sac exists between the peritoneum and abdominal wall, in the cellular tissue of the pelvis, and at the side of the bladder. **H., Cystic**. Same as *Cystocele, q. v.* **H., Diaphragmatic**, a protrusion of a portion of some of the abdominal viscera into the thorax, through a congenital defect in the diaphragm, or through a dilatation or laceration of one of the natural openings. **H., Direct Inguinal**. See *H., Inguinal, Direct*. **H., Dorsal**. Synonym of *H., Lumbar*. **H., Encysted** (of *Cooper*); this form occurs when the ventral orifice closes, but the tunica vaginalis remains patulous, allowing the hernia to descend within the latter, pushing before it the thin septum. **H., Epigastric**, a hernia in the linea alba, between the ensiform cartilage and the umbilicus. **H., External**, one appearing upon the external surface of the body. **H., Femoral**, a protrusion of the abdominal contents through the femoral canal, the tumor appearing on the upper inner aspect of the thigh, below Poupart's ligament. **H. of the Foramen ovale**. See *H., Obturator*. **H. into the Foramen of Winslow**, a lodgment of a portion of intestine in the foramen of Winslow. **H., Funicular**, a hernia into the umbilical cord. See *H., Infantile*. **H., Gastric**. See *Gastrocele*. **H., Goyrand's** or **Gourand's**. See *H., Inguino-interstitial*. **H., Guttural**. Synonym of *Goiter*. **H. of Hesselbach**, a femoral hernia with a diverticulum through the cribriform fascia, the hernia presenting a lobulated appearance. See, also, *Diseases, Table of*. **H. of Holthouse**. See *H., Inguino-crural*. **H., Humoral**. Synonym of *Epididymitis*, or *Swelled Testicle*. **H., Incarcerated**, an old irreducible hernia which has become occluded by the accumulation of gas, feces, or undigested food, thus causing obstruction of the bowels. **H., Incomplete**, one that has not entirely passed through the hernial orifice. **H., Infantile**, that form of direct inguinal hernia that occurs when the funicular portion of the vaginal process of peritoneum has remained patulous. **H., Infantile** (of *Hey*). See *H., Encysted*. **H., Hey's**. See *H., Encysted*. **H., Infrapubic**. Same as *H., Obturator*. **H., Inguinal**, a hernia occupying wholly, or in part, the inguinal canal. **H., Inguinal, Direct**, a protrusion of the abdominal viscera through the parietes at the site of the external abdominal ring, without having traversed the inguinal canal. **H., Inguinal, External**. See *H., Inguinal, Indirect*. **H., Inguinal, Indirect**, one in which the protrusion occurs at the internal ring, and passes along the inguinal canal. **H., Inguinal, Internal**. See *H., Inguinal, Direct*. **H., Inguinal, Oblique**. See *H., Inguinal, Indirect*. **H., Inguino-crural**, or **H. of Holthouse**, a variety of suddenly-developed oblique inguinal hernia, in which, owing to the non-descent of the testicle, or to other causes, the hernia protrudes outward along the fold of the groin. **H., Inguino-interstitial**, an incomplete inguinal hernia. **H., Inguino-labial**, a variety of oblique inguinal hernia in the female, corresponding to the inguino-scrotal hernia of the male. **H., Inguino-properitoneal**, or **H. of Krönlein**, a hernia, with a prolongation of the hernial sac in various directions, within the abdominal walls. **H., Inguino-scrotal**, the common form of oblique inguinal hernia in men past middle life. **H., Intermuscular**. Same as *H., Inguino-properitoneal*. **H., Interparietal**. Same as *H., Inguino-properitoneal*. **H., Inveterate**. See *H., Chronic*. **H. of Iris**, a prolapse of a portion of the iris after iridectomy, trauma, etc. **H., Irreducible**; a hernia is called irreducible when the protruded viscera cannot be returned to the abdomen by manipulation, with complete disappearance of the symptoms. **H., Ischio-rectal**. Same as *H., Perineal*. **H., Ischiatic**, a protrusion of the bowel through the great sacrosciatic foramen. **H.-knife**, a probe-pointed knife for incising the constriction of a hernial sac. **H. of**

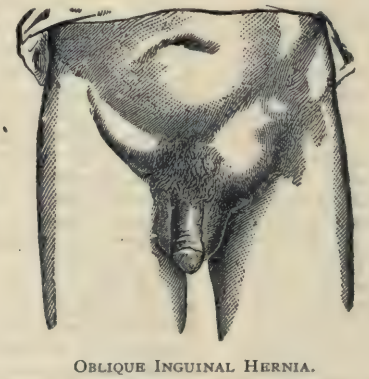
Krönlein. See *H., Inguino-properitoneal.* **H., Labial,** a protrusion of the bowel between the vagina and the ramus of the ischium into a labium majus. **H. of Laugier,** a femoral hernia through Gimbernat's ligament. See, also, *Diseases, Table of.* **H. of Littre,** a hernia of the bowel in which only a portion of the lumen is constricted in the hernial orifice. There is not, therefore, complete obstruction. **H. of the Liver.** See *Hepatocele.* **H., Lumbar,** a protrusion of the intestine through Petit's triangle—a space bounded by the external oblique and latissimus dorsi muscles and the crest of the ilium. **H. of the Lung.** See *Pneumocele.* **H., Malgaigne's.** Same as *H., Congenital.* **H., Mesenteric** (of *Cooper*); the passage of a portion of gut through an opening in the mesentery. **H. of Muscles;** occasionally, owing to imperfect healing of the deep fascia after wounds, a limited protrusion of the muscle occurs at the point at which the fascia is deficient. **H., Obstructed.** See *H., Incarcerated.* **H., Obturator,** a protrusion of bowel through the obturator foramen. **H., Omental,** a hernia containing omentum. This condition is also called *Epiplocele, q. v.* **H. of Ovary,** a hernia including ovary, wholly or in part. **H., Parainguinal.** Same as *H., Properitoneal.* **H. of Partridge,** a femoral hernia, external to the femoral vessels. See, also, *Diseases, Table of.* **H., Pectineal-crural,** or **H. of Cloquet,** a variety in which, after passing the femoral ring, the hernia turns within and behind the femoral vessels, resting on the pectineus muscle. **H., Perineal,** a protrusion of the abdominal contents between the fibers of the levator ani muscle, in front of or to one side of the anus. **H., Petit's.** Same as *H., Lumbar.* **H., Pharyngeal.** See *Pharyngocele.* **H., Phrenic.** Same as *H., Diaphragmatic.* **H., Pleural.** See *Pleurocele.* **H., Properitoneal,** a hernia occupying a position between the planes of the abdominal wall, in front of the parietal peritoneum. **H., Pudendal.** Same as *H., Labial.* **H., Reducible,** one that may be returned or reduced by manipulation. **H., Retroperitoneal;** in this form of hernia the small intestine lodges in the fossa duodeno-jejunalis. **H., Sciatic.** Same as *H., Ischiatic.* **H., Scrotal,** that form of inguinal hernia in which the protrusion has entered the scrotum. **H. of the Spleen.** See *Splenocele.* **H. of the Stomach.** Same as *Gastrocele.* **H., Strangulated;** a hernia is said to be strangulated when it is so tightly constricted at its neck as to interfere with its return, with the circulation of blood, and the passage of feces. **H., Synovial.** See *H., Bivkett's.* **H. of Testis,** a protrusion of the seminiferous



The pillars open, the cord held up.

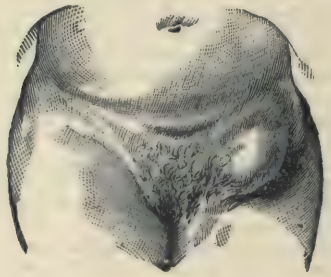
The pillars sutured, the cord held up.

The deep fascia closed over the cord.



An Unstrangulated Hernia.

Radical Operation for Inguinal Hernia. (*After Bassini.*)



A Strangulated Hernia.

Oblique Inguinal Hernia.
Bubonocele on right side, but passing through external ring on left.

Direct Inguinal Hernia.

Femoral Hernia.

tubules through a fistulous opening following abscess of the testicle. **H. of the Tongue.** See *Glossocele.* **H. of the Trachea.** See *Tracheocele.* **H., Thyroid.** See *H., Obturator.* **H., Umbilical,** a protrusion of the abdominal contents through the umbilicus. **H. of the Uterus.** See *Hysterocele.* **H., Vaginal,** a protrusion of the abdominal viscera between the uterus and rectum, forming a tumor on the vaginal wall. **H., Velpeau's,** a femoral hernia in front of the femoral vessels. **H., Ventral,** the name applied to protrusions of the abdominal contents through the abdominal walls in situations not usually subject to herniæ; *e. g.*, not at the abdominal rings or the umbilicus. **H., Vesical.** See *H. of the Bladder.*

Hernial (*her'-ne-al*) [*hernia*, a rupture]. Pertaining to hernia. **H. Sac,** the diverticulum of the peritoneum that accompanies a hernia.

Hernio-celiotomy (*her'-ne-o-se-le-ot'-o-me*) [*hernia*, a rupture; κοιλία, belly]. Abdominal section for the relief of hernia.

Hernio-enterotomy (*her'-ne-o-en-ter-ot'-o-me*) [*hernia*, a rupture; ἔντερον, bowel; τομή, a cutting]. Herniotomy combined with enterotomy.

Hernio-laparotomy (*her'-ne-o-lap-ar-ot'-o-me*) [*hernia*, a rupture; λαπάρα, the flank; τομή, a cutting]. Same as *Hernio-celiotomy.*

Herniology (*her-ne-ol'-o-je*) [*hernia*, hernia; λόγος, science]. That department of surgery which treats of the causes, diagnosis, and treatment of hernia.

Herniopuncture (*her-ne-o-punk'-chūr*) [*hernia*, hernia; *punctura*, a pricking]. The puncture of a hernia.

Herniotome (*her'-ne-o-tōm*) [*hernia*, hernia; τομός, cutting]. A hernia-knife.

Herniotomy (*her-ne-ot'-o-me*) [*hernia*, hernia; τέμνειν, to cut]. Operation for the relief of hernia by section of the constriction.

Heroic (*he-ro'-ik*) [ἥρως, a hero]. Bold or daring; rash or unusually severe; as *heroic* treatment or measures.

Herophilus, Torcular of. See *Torcular.*

Herpes (*her'-pēz*) [ἕρπης; ἕρπειν, to creep]. An acute inflammatory affection, characterized by the development of groups of vesicles on a patch of inflamed skin or mucous membrane. **H. catarrhalis,** herpetic fever; a form of herpes accompanying the onset or crisis of acute febrile disorders, and frequently following a rigor, of which it may be the sole sequel. It is most common in spring and autumn. Its forms are *H. facialis* and *H. progenitalis.* **H. circinatus.** See *Tinea circinata.* **H. circinatus bullosus.** See *Hydroa herpetiforme.* **H. desquamans.** See *Tinea imbricata.* **H. esthiomenos.** See *Lupus.* **H. facialis,** *Herpes labialis; Herpes febrilis; Hydroa febrile;* an acute, non-contagious, inflammatory disorder of the skin that appears in the form of one or more groups of vesicles. It is commonly called *fever-blisters.* Its usual seats are the lips, angles of the mouth, and the face, generally below the forehead. Owing to its relation to digestive derangements the ulcers are often termed "*dyspeptic ulcers.*" **H. febrilis.** See *H. facialis.* **H. gestationis.** See *Hydroa herpetiforme.* **H. iris,** a form of erythema in which a vesicle is seated on an erythematous base. It is usually seen on the backs of the hands and feet. **H. labialis.** See *H. facialis.* **H. miliaris.** Synonym of *Eczema.* **H. phlyctenodes,** Willan's name for *Herpes zoster* occurring elsewhere than on the trunk. **H. preputialis.** See *H. progenitalis.* **H. progenitalis,** *Herpes preputialis;* a form of *H. simplex*, in which vesicles occur upon the glans and prepuce, from the size of a pin's head to that of a small pea. They number from two or three to a dozen. The condition is most common in males. **H. pyæmicus.** See *Impetigo herpetiformis.* **H. simplex.** A synonym of *H. catarrhalis.* **H. tonsurans.** See *Tinea tonsurans.* **H. tonsurans maculosus.** See *Pityriasis rosea.* **H. zoster,** *Zoster; Zona; Shingles; Ignis sacer;* an acute inflammatory disease of the skin, which consists of grouped vesicles on a reddened base, the lesions being distributed in relation to the course of the cutaneous nerves, and, as a rule, unilateral. They are usually seen in the course of the intercostal nerves, but may follow the course of any nerve. The outbreak of the eruption is usually preceded by severe neuralgic pain. The condition occurs most frequently in young people and in the autumn and spring of the year. **H. z. ophthalmicus,** following the course of the ophthalmic nerve.

Herpetic (*her-pet'-ik*) [ἕρπης, herpes]. Pertaining to herpes. **H. Bridge.** See *Bridge.* **H. Fever.** See *Herpes catarrhalis.* **H. Sore-throat.** See *Tonsilitis, Herpetic.*

Herpetiform (*her-pet'-if-orm*) [ἕρπες, herpes; *forma*, form]. Having a likeness to herpes.

Herpetism (*her'-pet-izm*) [ἕρπης, herpes]. The herpetic diathesis; a constitutional predisposition to herpes.

Herpetography (*her-pet-og'-ra-fe*). Same as *Herpetology.*

Herpetoid (*her'-pet-oid*) [ἑρπετόν, a reptile; εἶδος, likeness]. In biology, resembling a reptile.

Herpetology (*her-pet-ol'-o-je*) [ἕρπης, herpes; λόγος, treatise]. The science of skin-diseases, especially those of an herpetic nature.

Herpetology (*her-pet-ol'-o-je*) [ἑρπετόν, a reptile; λέγειν, to speak]. The classified knowledge of reptiles.

Hertwig's Theory. A theory of immunity founded upon the chemotactic action of certain chemic substances. The fact of cardinal importance in this theory is that negative chemotropism may, under certain conditions, become positive.

Hesperetinic Acid (*hes-per-et-in'-ik*). See *Acid.*

Hesperidin (*hes-per'-id in*) [Ἕσπερος, Hesperus]. $C_{22}H_{26}O_{12}$. A glucosid present in the unripe fruit of oranges, lemons, etc. It separates from alcohol in fine needles, and melts at 251° C.

Hesperidium (*hes-per-id'-e-um*) [Ἕσπερος, Hesperus (in allusion to the golden apples of the Hesperides): *pl.*, *Hesperidia*]. In biology, an orange-like fruit, having a succulent flesh covered with a leathery rind; a variety of berry.

Hesse's Apparatus. An apparatus for air-analysis.

Hesselbach's Hernia. See *Hernia*, and *Diseases, Table of.* **H.'s Triangle.** See *Triangles, Table of.*

Hessian Crucible (*hesh'-yan kru'-sib-l*). A crucible made of fine clay and sand, and used for melting gold, silver, and their alloys in the manufacture of gold and silver plates and solders. **H. Purple.** See *Pigments, Conspectus of.* **H. Violet,** and **H. Yellow.** See *Pigments, Conspectus of.*

Hesthogenous (*hes-thoj'-en-us*) [ἑσθής, dress, clothing; γόνος, offspring]. In biology, applied to birds that are hatched with a covering of down; *ptilopedic*, opposed to *gymnogenous, psilopedic.*

Heteracanth (*het'-er-ak-anth*) [ἕτερος, other; ἀκανθα, spine]. In biology, applied to fishes in which the dorsal and anal fin-spines are asymmetric.

Heteracephalous (*het-er-a-sef'-al-us*) [ἕτερος, other; κεφαλή, head]. See *Heterocephalous.*

Heteracmy (*het-er-ak'-me*) [ἕτερος, other, different; ἀκμή, prime, maturity]. In biology, applied to plants in which cross-fertilization is secured by the heterochronous maturing of the stamens and pistils.

Heteradelph (*het'-er-ad-elf*). See *Heteradelphus.*

Heteradelphia (*het-er-ad-el'-fe-ah*) [ἕτερος, other; ἀδελφός, brother]. Heteradelphous teratism.

Heteradelphous (*het-er-ad-el'-fus*) [ἕτερος, other; ἀδελφός, brother]. Relating to an heteradelphus, or to an autosite and its parasite.

Heteradelphus (*het-er-ad-el'-fus*) [ἕτερος, other; ἀδελφός, brother]. A joined twin-monster, consisting of an autosite with an attached parasite, the head of the latter being absent.

Heteradenia (*het-er-ad-e'-ne-ah*) [ἕτερος, other; ἀδήν, gland]. 1. Normal glandular structure occurring in a part normally not provided with glands. 2. Glandular structure departing from the normal type.

Heteradenic (*het-er-ad-e'-nik*) [ἕτερος, other; ἀδήν, gland]. Pertaining to or consisting of tissue that is unlike normal glandular tissue, though essentially glandular.

Heteradenoma (*het-er-ad-en-o'-mah*) [ἕτερος, other; ἀδήν, gland; ὄμα, tumor: *pl.*, *Heteradenomata*]. A tumor formed of heteradenic tissue.

Heteralius (*het-er-a'-le-us*) [ἕτερος, other; ἄλως, a disc]. A double monster in which the parasite is very incomplete—usually merely a head—and inserted at a distance from the umbilicus of its host, and with no direct connection with the umbilical cord of the latter.

Heterauxesis (*het-er-awks-e'-sis*) [ἕτερος, other, different; αὔξησις, increase]. In biology, any unsymmetric growth, normal or abnormal.

Heterecious (*het-er-e'-se-us*) [ἕτερος, other, different; οἶκος, a house]. In biology, parasitic upon different hosts at different stages of growth.

Hetero- (*het'-er-o-*) [ἕτερος, other]. A Greek prefix denoting diversity or unlikeness.

Hetero-albumose (*het'-er-o-al'-bu-mōs*). See *Albumoses*.

Hetero-autoplasty (*het'-er-o-aw'-to-plas-te*) [ἕτερος, other; αὐτός, self; πλάσσειν, to form]. Grafting of skin from one person upon the body of another.

Heterobiophorid (*het-er-o-bi-off'-or-id*) [ἕτερος, other, different; *biophore*, a bearer of vitality, from βίος, life; φέρειν, to bear]. In biology, Weismann's name for a primitive organism, the constituent biophores of which have been differentiated, in connection with a division of labor, and combined in various ways to form the body of the organism. See *Homeobiophorid*.

Heteroblastic (*het-er-o-blas'-tik*) [ἕτερος, other, different; βλαστός, germ, bud]. In biology, arising from a different or abnormal source.

Heterocarpous (*het-er-o-kar'-pus*) [ἕτερος, other, different; καρπός, fruit]. In biology, having more than one sort of fruit.

Heterocele (*het'-er-o-sēl*) [ἕτερος, other; κήλη, hernia]. A hernia existing in some prolapsed organ, as in a rectocele.

Heterocephalous (*het-er-o-sef'-al-us*) [ἕτερος, other, different; κεφαλή, head]. In biology, applied to plants bearing flower-heads of more than one kind, as pistillate and staminate.

Heterocephalus (*het-er-o-sef'-al-us*) [ἕτερος, other; κεφαλή, the head]. A fetal monstrosity with two heads of unequal size.

Heterocercal (*het-er-o-ser'-kal*) [ἕτερος, other; κέρκος, tail]. In biology, having an asymmetric or unequally divided tail-fin.

Heterocerous (*het-er-os'-er-us*) [ἕτερος, other, different; κέρας, horn]. In biology, applied to a group of insects, the members of which vary as to the form of their antennæ.

Heterochromia (*het-er-o-kro'-me-ah*) [ἕτερος, other; χρῶμα, color]. A difference in color (as between the irides of the two eyes).

Heterochromous (*het-er-o-kro'-mus*) [ἕτερος, other; χρῶμα, color]. In biology, having different colors.

Heterochronia (*het-er-o-kro'-ne-ah*) [ἕτερος, other; χρόνος, time]. The production of a structure or the occurrence of a phenomenon at an abnormal period of time.

Heterochronic, Heterochronous (*het-er-o-kron'-ik, het-er-ok'-ron-us*) [ἕτερος, other; χρόνος, time]. Irregular in occurrence. Occurring at different times, or at other than the proper time.

Heterochrony (*het-er-ok'-ro-ne*) [ἕτερος, other; χρόνος, time]. In biology, out of order as to time, as organs, organisms, or hereditary traits that occur out of the true ontogenetic sequence. Cf. *Homeochronous*.

Heterocline (*het'-er-o-klin*) [ἕτερος, other, different; κλίνη, bed]. Same as *Heterocephalus*.

Heterocrania (*het-er-o-kra'-ne-ah*) [ἕτερος, other; κρανίον, skull]. Headache involving but one side of the head.

Heterocyst (*het'-er-o-sist*) [ἕτερος, other, different; κύστις, a bag, pouch]. In biology, applied to individual cells in the moniliform rows of roundish, chlorophyl-bearing cells of the *Nostocaceæ*, which, apparently without any definite law, vary in size and color from those among which they are intercalated; a limiting-cell.

Heterodactyl (*het-er-o-dak'-til*) [ἕτερος, other; δάκτυλος, a finger or toe]. An animal in which the digits are in some way peculiar or irregular.

Heterodermotrophy (*het-er-o-der-mot'-ro-fe*) [ἕτερος, other; δέρμα, skin; τροφή, nutrition]. Disordered or perverted nutrition of the skin.

Heterodont (*het'-er-o-dont*) [ἕτερος, different; ὀδούς (ὀδοντ-), tooth]. In biology, having more than one sort of teeth, as incisors, canines, molars; the opposite of *Homodont*.

Heterodromous (*het-er-od'-ro-mus*) [ἕτερος, other; δραμεῖν, to run]. In biology, growing or turning in opposite directions, as a tendril that coils first one way and then the other.

Heterodromy (*het-er-od'-ro-me*) [ἕτερος, other; δρόμος, a running]. In biology, a change in the direction of the spiral in the leaves of the branches and stem. Same as *Antidromy*.

Heterodymus (*het-er-od'-im-us*) [ἕτερος, other; δίδυμος, twin]. A double monster, the accessory part being but an imperfect head, with a neck and thorax by which it is implanted in the anterior abdominal wall of its host.

Heterogamous (*het-er-og'-am-us*) [ἕτερος, other; γάμος, marriage]. In biology, bearing male and female flowers in the same inflorescence or plant.

Heterogamy (*het-er-og'-am-e*) [ἕτερος, other; γάμος, marriage]. In biology, a term applied to different forms of sexual development arising from difference in nutrition or environment. It is typified in the *Phylloxera vastatrix*, the development of which is far more complex when the insects are bred under ground, on the roots of the grape-vine, compared with that when the insects breed upon the leaves of the vine. In the latter case the successive generations consist of apterous, oviparous females only; in the former the cycle consists of male insects, apterous females for perpetuating, and winged females for spreading the species.

Heterogeneity (*het-er-o-jen-e'-it-e*) [ἕτερος, other; γένος, kind]. The condition or quality of being heterogeneous.

Heterogeneous (*het-er-o-je'-ne-us*) [ἕτερος, other; γένος, kind]. Differing in kind or nature; composed of different substances; not homogeneous.

Heterogenesis (*het-er-o-jen'-es-is*) [ἕτερος, different; γένεσις, generation]. 1. Organic deviation in the situation or character of organs, etc. 2. In biology, a mode of biogenesis, by which the living parent gives rise to offspring that pass through totally different

series of states from those exhibited by the parents, and do not return into the cycle of the parents (Huxley). Milne-Edwards has substituted the word *Xenogenesis*, *q. v.*

Heterogenetic (*het-er-o-jen-et'-ik*) [ἕτερος, other; γένεσις, generation]. Pertaining to heterogenesis.

Heterogenist (*het-er-oj'-en-ist*). See *Abiogenesis*.

Heterogeny (*het-er-oj'-en-e*). Same as *Heterogenesis*.

Heterogonous (*het-er-og'-o-nus*) [ἕτερος, other; γόνος, generation]. In biology, having several kinds of flowers as regards the length of the stamens and styles; hetero-styled. Cf. *Dimorphous*, *Trimorphous*.

Heterogony (*het-er-og'-o-ne*) [ἕτερος, other; γόνος, generation]. A form of reproduction that consists in the occurrence, in the cycle of development, of individuals differing in structure from the parent forms and existing under special conditions of nutrition.

Heterogynous (*het-er-oj'-in-us*) [ἕτερος, other, different; γύνη, female]. In biology, applied to certain groups of insects among which there are two kinds of females, one sexually perfect, the other not.

Heteroinfection (*het-er-o-in-fek'-shun*) [ἕτερος, other; *inficere*, to taint]. 1. Infection transmitted by a person who is himself not infected. 2. Infection of any organism by a poison not produced within itself; opposed to auto-infection.

Heteroinoculation (*het-er-o-in-ok-u-la'-shun*) [ἕτερος, other; *inoculatio*, an ingrafting]. Inoculation of one person by another.

Heterokinesis (*het-er-o-kin-e'-sis*) [ἕτερος, different; κινεῖν, to move]. In biology, Weismann's term for that kind of nuclear division in which the two daughter-nuclei contain different kinds of idioplasm, *i.e.*, nuclear division depending upon a heterogeneous grouping of the primary constituents and resulting in parts containing dissimilar hereditary tendencies. Cf. *Homeokinesis*.

Heterolalia (*het-er-o-la'-le-ah*) [ἕτερος, other; λαλιά, talk]. The utterance of words other than those intended by the speaker; heterophemy.

Heterologous (*het-er-ol'-o-gus*) [ἕτερος, other; λόγος, relation]. Differing in structure or form from the normal. **H. Series**, a series derived from each other by chemic metamorphoses. **H. Tissues**, morbid tissues that have no structural relation with the normal tissues of the part. **H. Tumors**, tumors constituted of a different tissue from that of the part in or on which they are situated.

Heterology (*het-er-ol'-o-je*) [ἕτερος, other; λόγος, relation]. Abnormality in nature, form, or structure; development of an abnormal structure.

Heterolopia, Heterolopy (*het-er-o-lo'-pe-ah*, *het-er-ol'-o-pe*) [ἕτερος, other; λοπός, scale]. The presence of abnormal scales, crusts, or scabs.

Heteromastigate (*het-er-o-mas'-tig-āt*) [ἕτερος, other, different; μάστις, a whip]. In biology, having more than one kind of flagellum.

Heteromerous (*het-er-om'-er-us*) [ἕτερος, other; μέρος, a part]. In biology, having homologous parts diversely composed.

Heteromorphism (*het-er-o-mor'-fizm*) [ἕτερος, other; μορφή, form]. A condition marked by difference in form, as compared with the normal form. In chemistry, the property of crystallizing in different forms. In biology: 1. A state of deviation from a type or norm. 2. Exhibiting different forms at different stages in the life-history.

Heteromorphosis (*het-er-o-mor-fo'-sis*) [ἕτερος, other; μόρφωσις, formation]. Malformation or deformity; any disease characterized by deformity.

Heteromorphous (*het-er-o-mor'-fus*) [ἕτερος, other; μορφή, form]. Differing from the normal in form.

Heteronephrotrophy (*het-er-o-nef-rot'-ro-fe*) [ἕτερος, other; νεφρός, kidney; τροφή, nutrition]. Malnutrition or degeneration of any part of the kidney.

Heteronomous (*het-er-on'-o-mus*) [ἕτερος, other; νόμος, law]. In biology, diversification in any series or set of morphologically related structures through specialization.

Heteronomy (*het-er-on'-o-me*) [ἕτερος, other; νόμος, law]. 1. Subordination to a law of adaptive modification. 2. The presence of segmentation. Cf. *Autonomy* and *Homonomy*.

Heteronym (*het'-er-o-nim*) [ἕτερος, other; ὄνυμα, name]. An unrelated synonym; a name in one language that corresponds to the same name in another language, but has no near derivative relationship thereto.

Heteronymous (*het-er-on'-im-us*) [ἕτερος, other; ὄνυμα, name]. Not homonymous; applied to crossed double visual images, such as are seen when there is a relative divergence of the eyes.

Heteronymy (*het-er-on'-im-e*) [ἕτερος, other; ὄνυμα, name]. A system of polyglot nomenclature in which exact synonyms are used in each language to represent corresponding but unrelated words in other languages; compare *paronymy*.

Hetero-osteoplasty (*het'-er-o-os'-te-o-plas-te*) [ἕτερος, other; ὀστέον, bone; πλάσσειν, to form]. The surgical grafting of bone, especially with a graft taken from a bone of one of the lower animals.

Heteropagus (*het-er-op'-ag-us*) [ἕτερος, other; πηγνύναι, to unite]. A monstrosity with normal head, upper and lower extremities, but with a parasite attached to the anterior abdominal wall. The parasite has a head and extremities.

Heteropathic (*het-er-o-path'-ik*) [ἕτερος, other; πάθος, disease]. Pertaining to or making use of heteropathy.

Heteropathy (*het-er-op'-ath-e*) [ἕτερος, other; πάθος, affection]. The treatment of a disease by inducing a different morbid condition to neutralize it. Abnormal reaction to stimulus or irritation.

Heteropelmous (*het-er-o-pel'-mus*) [ἕτερος, different; πέλμα, the sole of the foot]. In biology, applied to birds in which each of the flexor tendons of the sole of the foot splits into two.

Heterophagous (*het-er-off'-ag-us*) [ἕτερος, other, different; φαγεῖν, to eat]. In biology, applied to young animals that require to be fed by the parents; altricial.

Heterophemism (*het-er-off'-em-izm*). See *Heterophemy*.

Heterophemy (*het-er-off'-em-e*) [ἕτερος, other; φήμη, utterance]. The utterance of one thing when another is intended; heterolalia.

Heterophonia (*het-er-o-fo'-ne-ah*) [ἕτερος, other; φωνή, voice]. Abnormal quality or perversion of the voice.

Heterophoralgia (*het-er-o-for-al'-je-ah*) [ἕτερος, other; φορός, tending; ἄλγος, pain]. Eye-strain or ocular pain caused by heterophoria.

Heterophoria (*het-er-o-fo'-re-ah*) [ἕτερος, different; φορός, tending]. A tending of the visual lines in some other way than that of parallelism. It may be **Esophoria**, a tending of the lines inward; or **Exophoria**, outward; or **Hyperphoria**, a tending of the right or left visual line in a direction above its fellow; **Hyperesophoria**, a tending of the visual lines upward and inward; **Hyperexophoria**, upward and outward.

Heterophoric (*het-er-o-fo'-rik*) [ἕτερος, other; φορός, tending]. Due to heterophoria.

Heterophthongia (*het-er-off-thong'-e-ah*) [ἕτερος, other; φθόγγος, sound]. Synonym of *Ventriloquism*.

Heterophyadic (*het-er-o-fi-ad'-ik*) [ἕτερος, other, different; φύεσθαι, to grow]. In biology, characterized by producing two kinds of stems, *e. g.*, one fertile, the succeeding one sterile.

Heterophyllous (*het-er-off'-il-us*) [ἕτερος, other, different; φύλλον, leaf]. In biology, producing more than one kind of leaves on the same stem, as in *Juniperus sabina*, var. *procumbens*, or having the leaves different in the several species of a genus.

Heteroplasia (*het-er-o-pla'-ze-ah*) [ἕτερος; other; πλάσις, shaping]. 1. Development of abnormal tissue; the presence in a part where it does not normally belong, of tissue that may, or may not, be normal. 2. The gradual removal of the material of an engrafted part, and its replacement by material normal to the part in which it is engrafted.

Heteroplasm (*het'-er-o-plazm*) [ἕτερος, other; πλάσμα, something formed]. Heteroplastic material.

Heteroplastic (*het-er-o-plas'-tik*) [ἕτερος, other; πλάσσειν, to form]. 1. Relating to heteroplasia. 2. Differing in structure.

Heteroplastid (*het-er-o-plas'-tid*) [ἕτερος, other; πλάσσειν, to form]. A surgical graft.

Heteroplasty (*het'-er-o-plas-te*) [ἕτερος, other; πλάσσειν, to form]. 1 and 2. Same as *Heteroplasia*, *q. v.* 3. Surgical grafting, especially of parts taken from another species.

Heteroprosopus (*het-er-o-pro-so'-pus*) [ἕτερος, other; πρόσωπον, face]. A fetus with two faces; janus or janiceps.

Heteropsychology (*het-er-o-si-kol'-o-je*) [ἕτερος, other; ψυχή, soul; λόγος, treatise]. The study or science of psychology, as based upon facts other than those of one's own subjective experiences.

Heteropterous (*het-er-op'-ter-us*) [ἕτερος, other, different; πτερόν, wing]. In biology, having the wings composed of several distinct parts, as in the bugs.

Heterorexia (*het-er-o-reks'-e-ah*) [ἕτερος, other; ὄρεξις, desire]. Perversion of the appetite.

Heteroscopy (*het-er-os'-ko-pe*) [ἕτερος, other; σκοπεῖν, to examine]. Same as *Deuteroscopy*.

Heterosomatous (*het-er-o-sōm'-at-us*) [ἕτερός, other, different; σῶμα, body]. In biology, having the body bilaterally asymmetric, or otherwise varying from a type.

Heterosporous (*het-er-os'-po-rus*) [ἕτερος, other, different; σπόρος, seed]. In biology, bearing spores of more than one kind, as *macrospores* and *microspores*.

Heterostrophy (*het-er-os'-tro-fe*) [ἕτερος, other, different; στροφή, a turning]. In biology, a reversal in the direction of the twist, as in certain spiral shells.

Heterostyled (*het'-er-o-stīld*) [ἕτερος, different; στῦλος, a pillar, style]. See *Heterogonous*.

Heterotaxia (*het-er-o-taks'-e-ah*). See *Heterotaxis*.

Heterotaxis (*het-er-o-taks'-is*) [ἕτερος, other; τάξις, order]. The anomalous disposition or transposition of internal organs; a form of malformation occasionally seen in the human species—*situs inversus viscerum*. The transposition is most commonly seen in the abdomen. There is no interference with nutrition or function by the abnormal arrangement of the parts. The opposite of *Homotaxis*.

Heterotopia (*het-er-o-to'-pe-ah*) [ἕτερος, other; τόπος, place]. 1. Any misplacement of normal tissue, especially a congenital malformation of the brain, in which masses of gray matter are found transplanted into the white. This condition is invariably associated with idiocy. 2. The same as *Heterochronia*. 3. In biology, a mode of acceleration or change during growth, characterized by the transfer of cells from one part of the organism to the other.

Heterotopic (*het-er-o-top'-ik*). See *Heterotopous*.

Heterotopous (*het-er-ot'-o-pus*) [ἕτερος, other; τόπος, place]. Characterized by heterotopia; misplaced.

Heterotopy (*het-er-ot'-o-pe*). Same as *Heterotopia*.

Heterotrophia, or Heterotrophy (*het-er-o-tro'-fe-ah*, or *het-er-ot'-ro-fe*) [ἕτερος, other; τροφή, sustenance]. Any perversion or disorder of nutrition, local or general. In biology, obtaining nourishment by some abnormal or unusual arrangement.

Heterotropia (*het-er-o-trōp'-e-ah*). See *Strabismus*.

Heterotropic (*het-er-o-trop'-ik*) [ἕτερος, other, different; τρόπος, a turning]. In biology, applied to plants the different organs of which behave differently under the same form of irritation. Cf. *Anisotropic*.

Heterotropous (*het-er-ot'-ro-pus*) [ἕτερος, different; τρόπος, turning]. In biology, applied to any organ or part which is turned in an unusual direction, as an embryo transverse to the axis of the seed; *amphitropous*.

Heterotypic (*het-er-o-tip'-ik*), **Heterotypical** (*het-er-o-tip'-ik-al*) [ἕτερος, other; τύπος, pattern]. Applied to a monstrosity consisting of a well-developed fetus from which grows an immature secondary fetus.

Heterotypus (*het-er-o-ti'-pus*) [ἕτερος, different; τύπος, a type]. A double monster having the parasitic fetus hanging from the ventral wall of the principal subject.

Heteroxanthin (*het-er-o-zan'-thin*) [ἕτερος, other; ξανθός, yellow], $C_6H_6N_4O_2$. A leukomaïne isolated from urine in 1884. In composition it is methyl-xanthin, and it is intermediate between xanthin and paraxanthin or dimethyl-xanthin; it exists in the urine of man in the same proportion as para-xanthin. It occurs in larger amount in the urine of leukemic patients. It is crystalline, soluble in hot water, insoluble in alcohol and ether. It is thought by Solomon to have its origin in the kidney. Its physiologic action is not yet fully known. Xanthin, heteroxanthin, and paraxanthin form normally an homologous series of xanthin-bodies in the urine.

Heubner's Disease. Syphilitic disease of the cerebral arteries. See *Diseases, Table of*.

Heuchera (*hu'-ker-ah*). See *Alum-root*.

Heurteloup (*her'-tel-ūp*) [after Baron *Heurteloup*, the inventor]. An artificial leech or cupping-apparatus.

Hewitt's Mixture. A mixture used in treating chlorosis. It consists of compound spirit of ether, compound tincture of lavender, and aromatic spirit of ammonia, each 2 drams; water sufficient to make 2 ounces. Of this one dram is given every two or three hours.

Hewson's Dressing. An application for wounds, tumors, etc., consisting of dry earth containing about 50 per cent. of clay. **H.'s Experiments,** experiments made to prove that the blood-vessels exert a restraining influence on coagulation.

Hexabasic (*heks-ah-ba'-sik*) [ἕξ, six; βάσις, a base]. Replaceable by six basic atoms.

Hexactinal (*heks-ak'-tin-al*) [ἕξ, six; ἀκτίς, ray]. In biology, bearing six rays.

Hexad (*heks'-ad*) [ἑξάς, six]. In chemistry, an element the atoms of which have six times the saturating power or equivalence of the hydrogen atom.

Hexadactylism (*heks-ad-ak'-til-izm*) [ἑξάς, six; δάκτυλος, a finger]. Having six fingers or toes.

Hexagynian (*heks-aj-in'-e-an*) [ἕξ, six; γυνή, female]. In biology, having six pistils or styles.

Hexahydric Alcohols (*heks-ah-hi'-drik*). See *Alcohol*.

Hexamerous (*heks-am'-er-us*) [ἕξ, six; μέρος, part]. In biology, having six parts, or the parts in sixes.

Hexandrous (*heks-an'-drus*) [ἕξ, six; ἀνήρ, male]. In biology, having six stamens. It is also called *Hexandrious*, *Hexandrian*.

Hexane (*heks'-ān*) [ἑξάς, six], C_6H_{14}. The sixth member of the paraffin series of hydrocarbons. It is a liquid, boiling at about 71° C., found in various natural oils.

Hexapetalous (*heks-ap-et'-al-us*) [ἓξ, six; πέταλον, a leaf]. In biology, having six petals.

Hexaphyllous (*heks-af-il'-us*) [ἓξ, six; φύλλον, leaf]. In biology, having six leaves or leaflets.

Hexapod (*heks'-ap-od*) [ἓξ, six; πούς, foot]. In biology, having six feet, as the true insects.

Hexapodan (*heks-ap'-o-dan*). Same as *Hexapod*.

Hexapterous (*heks-ap'-ter-us*) [ἓξ, six; πτερόν, a wing]. In biology, having six wings or wing-like appendages.

Hexastemonous (*heks-as-tem'-o-nus*) [ἓξ, six; στήμων, warp, taken as stamen]. Same as *Hexandrous*.

Hexastichous (*heks-as'-tik-us*) [ἑξάστιχος, of six rows]. In biology, having the parts or organs arranged in six rows.

Hexatomic (*heks-at-om'-ik*) [ἓξάς, six; ἄτομος, an atom]. In chemistry, consisting of six atoms; also applied to atoms that are hexavalent, and to alcohols or other compounds having six replaceable hydrogen atoms.

Hexavalent (*heks-av'-al-ent*) [ἓξάς, six; *valens*, having power]. In chemistry, having the same saturating or combining-power as six hydrogen atoms, or a valence of six.

Hexicology (*heks-ik-ol'-o-je*). See *Hexiology*.

Hexiology (*heks-e-ol'-o-je*) [ἕξις, habit; λόγος, science]. The science of the relations of the organism to its environment.

Hexoses (*heks-o'-sēz*) [ἓξάς, six]. The aldehyd or ketone derivatives of the hexahydric alcohols. They occur frequently in plants, especially in ripe fruits. They are formed by the hydrolytic decomposition of all disaccharids and polysaccharids when they are boiled with dilute acids, or acted upon by ferments. They possess feeble reducing-power. They precipitate cuprous oxid from warm alkaline cupric solutions, one molecule of hexose precipitating about five atoms of copper. This is the basis of the method for the volumetric estimation of glucose by means of Fehling's solution. When exposed to *Schizomycetes* the hexoses readily undergo fermentation. See *Carbohydrates, Table of*.

Hexylamin (*heks-il'-am-in*). See *Caproylamin*.

Hey's Hernia. See *Hernia, Encysted.* **H.'s Ligament.** See *Ligament*.

Hiation (*hi-a'-shun*) [*hiare*, to gape]. The act of gaping or yawning. Cf. *Pandiculation*.

Hiatus (*hi-a'-tus*) [*hiare*, to gape]. A space or opening. Also, the vulva. **H. aorticus.** See *Aortic Opening*. **H. of Fallopius,** the shallow groove on the petrous portion of the temporal bone. **H. sacralis,** a slit-like opening on the posterior surface of the sacrum. It is continuous above with the spinal canal. **H. semilunaris,** a crescentic furrow upon the outer wall of the middle meatus of the nose.

Hibernaculum (*hi-ber-nak'-u-lum*) [L., a winter residence: *pl.*, *Hibernacula*]. In biology, an organ fitted to protect delicate parts during the winter; a winter bud.

Hibernation (*hi-ber-na'-shun*) [*hibernus*, winter]. The dormant condition or winter-sleep of certain animals, notably bears, hedgehogs, etc., in which animation is almost suspended. Respiration and circulation are greatly reduced, and nutrition is performed mainly at the expense of the fatty tissues of the animal.

Hiccup, or **Hiccough** (*hik'-up*) [*hic*, a mimic word; ME., *cough*, a cough]. A spasmodic contraction of the diaphragm causing inspiration, followed by a sudden closure of the glottis.

Hickory (*hik'-or-e*) [an American Indian name]. The bark of shellbark hickory, *Hicoria*, or *Carya alba*: it is tonic and anti-intermittent, and useful in malarial fevers. Dose of the fld. ext. ʒ ss–j. Unof.

Hicks (Braxton), Method of. In obstetrics a method of performing version. It is the bipolar or combined internal and external method. **H., Sign of.** See *Signs and Symptoms, Table of*.

Hidden Seizure. A popular name for various forms of slight or sudden epileptiform attacks.

Hide (*hid*) [ME., *hide*, skin]. The skin of an animal. The skins of the ox, cow, buffalo, horse, etc., that are utilized in the manufacture of leather, are especially so termed. If obtained from younger animals of the same kind, they are called *kips*. **H.-bound Disease.** See *Scleroderma*. **H.-bound Skin.** See *Scleroderma*. **H.-glue.** See *Glue*.

Hidro- (*hi'-dro-*) [ἱδρώς, sweat]. A prefix signifying sweat.

Hidroa (*hid-ro'-ah*) [ἱδρωα, sweat-spots; sudamina]. Sudamina; any dermal lesion associated with or caused by profuse sweating.

Hidrocystoma (*hid-ro-sis-to'-mah*) [ἱδρωα, sudamina; κύστις, a cyst; ὄμα, a tumor: *pl.*, *Hidrocystomata*]. A variety of sudamina appearing on the face, especially in women in middle and advanced life.

Hidromancy (*hid'-ro-man-se*) [ἱδρώς, sweat; μαντεία, divination]. The forming of a prognosis from examination of the perspiration.

Hidronosus (*hid-ron'-o-sus*) [ἱδρώς, sweat; νόσος, disease]. Any disease of the sweat-glands.

Hidropedesis (*hid-ro-ped-e'-sis*) [ἱδρώς, sweat; πήδησις, a leaping]. Excessive sweating.

Hidroplania (*hid-ro-pla'-ne-ah*) [ἱδρώς, sweat; πλάνη, a wandering]. Sweating in an unusual portion of the body.

Hidropoiësis (*hid-ro-poi-e'-sis*) [ἱδρώς, sweat; ποιέειν, to make]. The process of the formation and excretion of sweat.

Hidropoietic (*hid-ro-poi-et'-ik*) [ἱδρώς, sweat; ποιέειν, to make]. Relating to hidropoiesis; sudoriparous.

Hidrorrhea (*hid-ror-e'-ah*) [ἱδρώς, sweat; ῥοία, a flow]. Excessive flow of sweat.

Hidrosadenitis (*hid-rōs-ad-en-i'-tis*) [ἱδρώς, sweat; ἀδήν, gland; ιτις, inflammation]. Inflammation of the sweat-glands.

Hidroschesis (*hid-ros'-kes-is*) [ἱδρώς, sweat; σχέσις, retention]. Retention or suppression of the sweat.

Hidrosis (*hid-ro'-sis*) [ἱδρώς, sweat]. 1. The formation and excretion of sweat. 2. Abnormally profuse sweating. 3. Any skin-disease marked by disorder of the sweat-glands.

Hidrotic (*hid-rot'-ik*) [ἱδρωτικός, producing sweat]. 1. Diaphoretic or sudorific. 2. A medicine that causes sweating.

Hidrotopathic (*hid-ro-to-path'-ik*) [ἱδρώς, sweat; πάθος, disease]. Relating to a morbid state of the perspiratory function.

Hidrotopoiësis (*hid-ro-to-poi-e'-sis*) [ἱδρώς, sweat; ποιέειν]. Same as *Hidropoiesis*.

Hidrotopoietic (*hid-ro-to-poi-et'-ik*). See *Hidropoietic*.

Hidrozymases (*hi-dro-zi-ma'-sēz*) [ἱδρώς, sweat: ζύμη, ferment]. Sweat-ferments, including amylase, emulsin, and pepsin.

Hiera picra (*hi'-er-ah pi'-krah*) [L., sacred bitters]. Pulvis aloes et canellæ. See *Aloes*.

Hieracium (*hi-er-a'-se-um*) [ἱεράκιον, hawk-weed]. A genus of composite-flowered herbs. In the old world, **H. murorum** and **H. pilosella,** and in the U. S., **H. scabrum** and **H. venosum** are popularly esteemed as useful remedies. They have astringent and pectoral qualities. Unof.

Hieralgia (*hi-er-al'-je-ah*) [ἱερόν, sacred, sacrum; ἄλγος, pain]. Pain in the sacrum.

High (*hi*) [ME., *high*, high]. 1. Elevated far above a base. 2. Intensified in physical quality, as temper-

ature. **H. Pelvic Posture.** See *Postures, Table of.* **H.-ride Sitting,** in *massage,* sitting astride a high stool or narrow bench in order to fix the pelvis.

Highgate Resin (*hi'-gāt rez'-in*). See *Copalin.*

Highmore, Antrum of. A cavity in the superior maxillary bone. **H.'s Antrum of the Testicle.** See *Antrum.*

Highmorianum, Corpus (*hi-mor-e-an'-um kor'-pus*) [L.]. See *Corpus.*

Hilar (*hi'-lar*) [*hilum,* a little thing]. In biology, pertaining to the hilum.

Hill Diarrhea. Hill colic. A peculiar type of diarrhea prevailing in certain hill-districts of India, marked by pernicious fever, extreme pain, and often speedy death.

Hill's Stopping. A preparation consisting principally of bleached gutta-percha, carbonate of lime, and quartz, used for filling teeth.

Hilton's Law. See *Law.* **H.'s Line.** See *Lines, Table of.* **H.'s Muscle.** See *Muscles, Table of.* **H.'s Sac,** a laryngeal pouch.

Hilum (*hi'-lum*) [*hilum,* a little thing: *pl.,* *Hila*]. In biology: (*a*) the point of attachment of an ovule or a seed to its funiculus, or if sessile, to the placenta; (*b*) a small pit, scar, recess, or opening in an animal structure, especially the notch on the internal or concave border of the kidney.

Hinckes-Bird Method. See *Ventilation.*

Hind (*hīnd*) [ME., *hindere, hinder*]. Pertaining to the rear or posterior extremity. **H.-brain,** a division of the brain, developing from a funnel-shaped tube in the embryo to an anterior lobe that becomes the cerebellum, and a posterior lobe that becomes the medulla oblongata. **H.-gut,** that part of the embryonic intestine from which the extreme aboral part of the large intestine is developed. See *Epigaster.* **H.-head,** the occiput. **H.-limb,** one of the posterior limbs of a quadruped.

Hinge-joint (*hinj'-joint*). See *Diarthrosis.*

Hinoid (*hin'-oid*) [ἰς-(ἰν.), strength; εἶδος, form]. In biology, applied to leaves the veins of which are parallel and undivided and set at right angles to the midrib.

Hip [ME., *hipe,* hip]. 1. The upper part of the thigh at its junction with the buttocks. 2. The hip-joint. 3. The coxa or first joint of an insect's leg. 4. To sprain the hip. 5. The fruit of the rose. *Confection of hips,* confectio rosæ caninæ. **H.-bath.** See *Bath.* **H.-bone,** the ischium. **H.-girdle,** the pelvic arch. **H.-joint,** the articulation of the femur with the haunch-bone or innominate bone. **H.-joint Disease,** an arthritis of the hip-joint; an affection of early life, and according as it begins in the head of the femur, the acetabulum, or in the synovial membrane and proper structures of the joint, divided respectively into *Femoral, Acetabular,* and *Arthritic.* Its etiology is obscure, its symptoms pain (coxalgia), swelling, and deformity. Coxalgia is incorrectly used as a synonym.

Hipling (*hip'-ling*) [ME., *hipe,* hip]. In obstetrics, a hip-presentation of the fetus.

Hippanthropy (*hip-an'-thro-pe*) [ἱππος, horse; ἀνθρωπος, man]. A form of zoanthropy in which the patient believes that he is a horse.

Hippiater (*hip-e-a'-ter*) [ἱππος, a horse; ἰατρός, a physician]. A horse-doctor; a farrier.

Hippiatric (*hip-e-at'-ric*) [ἱππος, a horse; ἰατρός, a physician]. Pertaining to veterinary surgery.

Hippiatry (*hip-i'-at-re*) [ἱππος, horse; ἰατρεία, medical art]. Veterinary medicine, in so far as it relates to the horse; farriery.

Hippocamp (*hip'-o-kamp*) [ἱππος, horse; κάμπος, a sea-monster]. The hippocampus major.

Hippocampal (*hip-o-kam'-pal*) [ἱππος, horse; κάμπος, a sea-monster.] Relating to the hippocampus.

Hippocampus (*hip-o-kam'-pus*) [ἱππος, horse; κάμπος, a sea-monster]. A name applied to two elevations, *H. major* and *H. minor,* the former situated in the inferior, and the latter in the posterior horn of the ventricles of the brain. When the name *Hippocampus* is used alone, the *H. major* is meant.

Hippocoryza (*hip-o-ko-ri'-zah*). Synonym of *Equinia.*

Hippocras (*hip'-o-kras*) [ἱππος, horse; κράτος, strength]. An old-fashioned cordial or liquor, made of red wine, sweetened and flavored.

Hippocrates' Bandage. See *Bandage.*

Hippocratic (*hip-o-krat'-ik*) [*Hippocrates,* a Greek physician of the fourth century]. Pertaining to Hippocrates. **H. Expression,** an anxious expression of the countenance, described as characteristic of peritonitis. **H. Face.** See *Facies.* **H. Finger.** See *H. Nail.* **H. Nail,** a peculiar curvation of the nails seen in pulmonary tuberculosis and other lung-diseases. They are curved, longitudinally striated, overlapping the finger like the beak of a parrot. The condition is also called *Hippocratic Finger.* **H. Sound.** See *Succussion-sound.*

Hippocratism (*hip-ok'-rat-izm*) [*Hippocrates,* a Greek physician]. Hippocrates' doctrine of imitating nature in the treatment of disease.

Hippocrepian (*hip-o-kre'-pe-an*) [ἱππος, a horse; κρηπίς, a boot]. In biology, horse-shoe-shaped; hippocrepiform, as a certain deformity of the kidney.

Hippocrepiform (*hip-o-krep'-if-orm*). See *Hippocrepian.*

Hippolith (*hip'-o-lith*) [ἱππος, horse; λίθος, stone]. A calculus or bezoar found in the stomach of the horse.

Hippology (*hip-ol'-o-je*) [ἱππος, horse; λόγος, knowledge]. The anatomy, pathology, etc., of the horse.

Hippomane (*hip-om'-an-e*) [ἱππομανές; ἱππος, horse; μανία, madness; the ancients believed that horses were madly fond of a plant called by this name]. A genus of euphorbiaceous trees. **H. mancinella** and **H. spinosa,** the manchineal trees of tropical America, are extremely acrid and poisonous, even to the touch. They are used locally in medicine, especially in skin-diseases. Unof.

Hippomelanin (*hip-o-mel'-an-in*) [ἱππος, horse; μέλας, black]. A pigment found in melanotic tumors in horses.

Hippopathology (*hip-o-path-ol'-o-je*) [ἱππος, horse; πάθος, disease; λόγος, science]. The science of the diseases of the horse.

Hippophagy (*hip-off'-a-je*) [ἱππος, horse; φαγεῖν, to eat]. The eating of horse-flesh.

Hipposteology (*hip-os-te-ol'-o-je*) [ἱππος, horse; ὀστέον, bone; λόγος, science]. The science of osteology as applied to the horse.

Hippotomy (*hip-ot'-o-me*) [ἱππος, horse; τομή, a cutting]. The anatomy or dissection of the horse.

Hippurate (*hip'-u-rāt*) [ἱππος, horse; οὖρον, urine]. Any salt of hippuric acid, *q. v.*

Hippuria (*hip-u'-re-ah*) [ἱππος, horse; οὖρον, urine]. Excess of hippuric acid in the urine, *e. g.,* after medication with benzoic acid.

Hippuric Acid (*hip-u'-rik*). See *Acid.*

Hippuris (*hip-u'-ris*) [ἱππουρις, horse-tail]. 1. A genus of halorageaceous aquatic herbs, common in all cool regions. **H. vulgaris** is astringent. Unof. 2. The cauda equina, *q. v.*

Hippus (*hip'-us*) [ἱππος, horse, from analogy to the movement of this animal]. Spasmodic pupillary movement, independent of the action of light.

Hircin (*her'-sin*). See *Acid, Hircic.*

Hircinous (*her-sin'-nus*) [*hircinus*, of a goat]. In biology, having a goat-like odor.

Hircismus (*her-siz'-mus*) [*hircus*, a goat]. The goat-like odor sometimes emitted by the human axilla.

Hircus (*her'-kus*) [L., "goat"]. The tragus.

Hirschfeld's Ganglion. See *Ganglia, Table of.*

Hirsute (*her-sut'*) [*hirsutus*, rough, shaggy]. In biology, thickly covered with rough, shaggy hair.

Hirsuties (*her-su'-te-ēz*) [*hirsutus*, shaggy]. Hypertrichosis; hypertrichiasis; polytrichia; trichauxis; that condition in which the hairs of the body are increased in number or size, or grow in unusual situations, or in normal situations in unusual length or number. **H. gestationis**, a growth of hair about the chin and lips in women in the course of pregnancy.

Hirsutocinereous (*her-su-to-sin-e'-re-us*) [*hirsutus*, hairy; *cinereous*, ashy]. In biology, having a hairy coat of an ashy-gray color.

Hirtellous (*her-tel'-us*) [*hirtus*, hairy]. Minutely hirsute; stiffly pubescent.

Hirudiniculture (*hi-ru'-din-e-kul-chūr*) [*hirudo*, leech; *cultura*, culture]. The artificial breeding and rearing of leeches.

Hirudo (*hi-ru'-do*) [L.: *pl.*, *Hirudines*]. The leech, *q. v.*

His, Bursa of. A dilatation of the end of the archenteron described by His in a human embryo. **H.'s Granule-cell**, a granular cell resembling a leukocyte, found in the ovarian stroma. **H.'s Tissue**, a synonym of *Adenoid Tissue.*

Hispid (*his'-pid*) [*hispidus*, bristly]. In biology, bristly. Beset with rigid, spreading hairs or minute spines.

Hispidulous (*his-pid'-u-lus*) [*hispidus*, hairy]. In botany, minutely hispid; having short, stiff hairs.

Histioid (*his'-te-oid*). See *Histoid.*

Histochemic (*his-to-kem'-ik*) [ἱστός, tissue; χημεία, chemistry]. Relating to histochemistry.

Histochemistry (*his-to-kem'-is-tre*) [ἱστός, tissue; χημεία, chemistry]. The chemistry of the histologic elements of the body.

Histodialysis (*his-to-di-al'-is-is*) [ἱστός, web; διάλυσις, a resolution]. The dissolution of organic tissue.

Histogenesis (*his-to-jen'-es-is*) [ἱστός, web; γένεσις, generation]. In biology, the process of formation of cells and cell-products.

Histogenetic (*his-to-jen-et'-ik*) [ἱστός, web; γεννᾶν, to produce]. Relating to histogenesis.

Histogeny (*his-toj'-en-e*). See *Histogenesis.*

Histography (*his-tog'-ra-fe*) [ἱστός, tissue; γράφειν, to write]. A description or written account of the tissues.

Histohematin (*his-to-hem'-at-in*) [ἱστός, web; αἷμα, blood]. 1. A pigmentary extractive of the suprarenal bodies; it is found also in various other tissues in the lower animals. 2. One of a class of respiratory pigments; the intrinsic coloring-matters of the organs and tissues of invertebrates. The *histohematins* are of wide-spread occurrence in the tissues of both vertebrates and invertebrates. The best known is that found in muscles, viz., myohematin, *q. v.*

Histoid (*his'-toid*) [ἱστός, web; εἶδος, likeness]. Pertaining to tissue derived from the mesoblast, as a histoid tumor. See *Neoplasm.*

Histokinesis (*his-to-kin-e'-sis*) [ἱστός, tissue; κίνησις, movement]. Movement that takes place in the minute structural elements of the body.

Histologic, Histological (*his-to-loj'-ik, his-to-loj'-ik-al*) [ἱστός, tissue; λόγος, science]. Relating to histology.

Histologist (*his-tol'-o-jist*) [ἱστός, tissue; λόγος, science]. One who is expert in histology.

Histology (*his-tol'-o-je*) [ἱστός, tissue; λόγος, science]. The study of the intimate structure of tissues.

Histolysis (*his-tol'-is-is*) [ἱστός, tissue; λύσις, dissolution]. Disintegration and dissolution of organic tissue.

Histolytic (*his-tol-it'-ik*) [ἱστός, tissue; λύσις, dissolution]. Pertaining to histolysis.

Histomorphology (*his-to-morf-ol'-o-je*) [ἱστός, tissue; μορφή, form; λόγος, science]. The morphology of the histologic elements of the body.

Histon (*his'-ton*) [ἱστός, tissue]. A proteid prepared from the nuclei of ceils. It belongs to the group of proteids known as albumoses or propeptones.

Histonomy (*his-ton'-o-me*) [ἱστός, tissue; νόμος, a law]. The laws of the development and arrangement of organic tissue.

Histopathology (*his-to-path-ol'-o-je*) [ἱστός, tissue; πάθος, disease; λόγος, science]. The study of minute pathologic changes or states.

Histophysiology (*his-to-fiz-e-ol'-o-je*) [ἱστός, web, tissue; φύσις, nature; λόγος, science]. The science of the functions of the various tissues.

History (*his'-tor-e*) [ἱστορία, a learning by inquiry]. A narrative; story. **H., Biologic**, the life-story of any animal. **H., Medical**, the account obtained from a patient as to his health, past and present, and the symptoms of his disease.

Histotome (*his'-to-tōm*) [ἱστός, tissue; τομός, cutting]. A microtome or other apparatus for cutting tissue for the study of its minute structure.

Histotomy (*his-tot'-o-me*) [ἱστός tissue; τέμνειν, to cut]. The dissection of any organic tissue.

Histotripsy (*his-to-trip'-se*) [ἱστός, web; τρίψις, a crushing]. The crushing of tissues by an ecraseur.

Histotromy (*his-tot'-ro-me*) [ἱστός, tissue; τρόμος, tremor]. Fibrillary contraction.

Histotrophic (*his-to-trōf'-ik*) [ἱστός, tissue; τροφή, nourishment]. Concerning the nutrition of the tissues.

Histozyme (*his'-to-zīm*) [ἱστός, tissue; ζύμη, leaven]. A ferment found by Schmiedeberg in the kidneys of pigs, and concerned in splitting up hippuric acid.

Histrionic (*his-tre-on'-ik*) [*histrio*, an actor]. Dramatic. **H. Mania**, insanity with affectation and lofty manner. **H. Muscles**, the expressional muscles of the face. **H. Spasm**, spasm of the histrionic muscles.

Histrionism (*his'-tre-on-izm*) [*histrio*, a player]. Dramatic action in insanity or in hysteria.

Hitooch (*hit-oosh'*). See *Hitouch.*

Hitouch (*hit-oosh'*) [Heb.]. Hitooch; the first step in the Jewish rite of circumcision. It consists in cutting off the prepuce.

Hives (*hīvz*) [origin uncertain]. A name loosely applied to almost any papular eruption of the skin. In Great Britain, the term is applied to *croup*, *laryngitis*, and to *chicken-pox*; in the United States it is limited to a transitory form of *urticaria*, *q. v.*

Hive-syrup. See *Scilla* and *Antimonium.*

Hoang-nan, or Hwang-nao (*hwang-now'*) [Chinese]. A Chinese preparation obtained from the bark of *Strychnos gaultheriana.* Its properties are due to a small percentage of strychnin. It is recommended as an alterative in syphilis, leprosy, and similar diseases, and is an alleged preventive of hydrophobia if given in large doses (gr. xv) during the period of incubation. Dose of the powdered drug gr. iij–v; of the aceto-alcoholic extract gr. ⅛–½; of the tinct. ♏j–v.

Hoar (*hor*) [ME., *hore*, hoar]. Gray; old.

Hoarhound (*hor'-hownd*). See *Marrubium.*

Hoariness (*hor'-e-nes*). See *Canities.*

Hoarse (*hors*) [ME., *hoors*, harsh]. Harsh; grating; discordant; applied to the voice.

Hoarseness (*hors'-nes*) [ME., *hoorsnesse*, hoarseness]. Harshness of the voice depending on some abnormal condition of the larynx or throat.

Hob-nail Liver, or Hob-nailed Liver. A liver covered with small bosselations like the heads of hob-nails; it is the result of cirrhosis, or of an old and persistent hyperemia. It is called also *Gin-drinkers' Liver.*

Hobokenius, Valves of. Crescentic or ring-like ridges on the inner surface of the umbilical vessels, producing constrictions upon their outer surface.

Hock (*hok*) [Ger., *Hochheimer*]. White Hochheimer wine; any German white wine.

Hock, Hough (*hok*) [ME., *houz*, heel]. The joint on the hind-leg of a quadruped between the knee and the fetlock, corresponding to the ankle-joint in man. In man, the back part of the knee-joint; the ham.

Hodgen's Apparatus. A modification of Smith's anterior splint.

Hodgkin's Disease. See *Lymphadenoma* and *Diseases, Table of.*

Hodgson's Dilatation, or Disease. Dilatation of the aorta. It commences with inflammatory and sub-inflammatory changes in the tissues, going on to extreme degeneration, with dilatation of the first part of the aorta. There is sometimes involvement of the aortic valves, with hypertrophy and dilatation of the heart. See *Diseases, Table of.*

Hoe (*ho*) [ME., *howe*, a hoe]. A scraping-instrument used in operations for cleft-palate, or in dentistry.

Hoffmann's Anodyne. See *Ether.* **H.'s Violet.** Same as *Dahlia.* **H.'s Method.** See *Treatment, Methods of.*

Hofmeier's Method. A method of expression of the fetal head. It is carried out by pressure on the head alone, by directly pressing from without upon the occiput and the face from both sides.

Hofmeister's Method. A method of removing proteids from a liquid. To the liquid, rendered faintly acid and heated to boiling, add a solution of ferric acetate, made by saturating acetic acid with recently precipitated ferric hydrate. After boiling for a few minutes and filtering, a solution is obtained which contains neither proteids nor iron. This method does not precipitate peptones.

Hog [ME., *hog*, a gelded hog]. 1. A gelded pig; a barrow-pig. 2. A glutton. **H.-cholera,** a specific, highly contagious fever of swine, attended with inflammation of the lungs, stomach, intestines, and other organs, usually diarrhea, frequently cough, and extravasations of blood in the skin and mucous membranes. It is called also *Pneumoenteritis.* See *Bacillus ex pneumo-enteritide suis*, under *Bacteria, Table of.* **H.-gum,** a name for various West Indian resins. See *Gum.* **H.'s Potato.** See *Camass.* **H.-weed.** See *Ambrosia.*

Hohl's Method. A method of preserving the perineum in labor. It consists in applying resistance to the presenting part, the thumb being applied anteriorly to the occiput and the index and middle fingers posteriorly upon that portion of the head lying nearest the commissure.

Holagogue (*hol'-ag-og*) [ὅλος, whole; ἀγωγος, leading]. A medicine or remedy that expels or drives out the whole of a morbid substance. A radical remedy.

Holarrhena (*hol-ar-e'-nah*). See *Wrightia.*

Holcodont (*hol'-ko-dont*) [ὁλκός, a furrow; ὀδούς (ὀδόντ), tooth]. In biology, applied to teeth planted in a continuous groove.

Holden's Line. See *Lines, Table of.*

Holder (*hōld'-er*) [ME., *holdere*, a holder]. A device for holding instruments, sponges, etc., in surgical operations.

Holder's Plane. See *Plane.*

Hold-fast (*hōld'-fast*). A "lumpy-jaw" tumor. See *Actinomycosis.*

Hollands (*hol'-ands*). See *Gin.*

Hollek (*hol'-ek*). Same as *Hollyhock.*

Hollow-foot (*hol'-o-foot*). See *Cavus.*

Holly (*hol'-e*). See *Ilex.*

Hollyhock (*hol'-e-hok*) [AS., *holihoc*, hollyhock]. A name given to the *Althea rosea* and other species of *Althea.* See *Althea.*

Holmgren's Test. The worsted test for color-blindness. One of the worsteds is placed before the person to be tested, and he is asked to match it as nearly as possible.

Holo- (*hol'-o-*) [ὅλος, entire]. A prefix signifying entirety.

Holoblast (*hol'-o-blast*) [ὅλος, whole; βλαστός, germ]. In biology, an ovum that undergoes complete segmentation while germinating.

Holoblastic (*hol-o-blas'-tik*) [ὅλος, whole; βλαστός, germ]. In biology, applied to eggs in which the entire yolk is included in the process of segmentation; one in which there is no separate food-yolk.

Hologastrula (*hol-o-gas'-tru-lah*) [ὅλος, whole; γαστήρ, stomach: *pl.*, *Hologastrulæ*]. In biology, the gastrula resulting from the development of a holoblastic ovum.

Holometabolian (*hol-o-met-ab-o'-le-an*). Same as *Holometabolic.*

Holometabolic (*hol-o-met-ab-ol'-ik*) [ὅλος, whole; μεταβόλος, changeable]. In biology, applied to animals that undergo complete metamorphosis or transformation, as insects.

Holonarcosis (*hol-o-nar-ko'-sis*) [ὅλος, complete; νάρκωσις, stupor]. Complete narcosis.

Holopathy (*hol-op'-ath-e*) [ὅλος, entire; πάθος, disease]. 1. A general or constitutional disease of which a local disorder is but a manifestation. 2. The theory that local diseases are manifestations of a general disorder.

Holophanerous (*hol-o-fan'-er-us*) [ὅλος, whole; φανερός, visible]. In biology, discernible throughout, as the transformation of insects.

Holophytic (*hol-o-fit'-ik*) [ὅλος, whole; φυτόν, plant]. In biology, applied to certain protozoa and other animals that, in their mode of nutrition, closely resemble plants.

Holoplexia (*hol-o-pleks'-e-ah*) [ὅλος, whole; πλῆξις, a stroke]. Complete or general paralysis.

Holopneustic (*hol-op-nu'-stik*) [ὅλος, whole; πνευστικός, πνεῖν, to breathe]. In biology, applied to such insect larvæ as possess many pairs of open stigmata, as distinguished from those having no open stigmata, *apneustic* larvæ.

Holorhinal (*hol-o-ri'-nal*) [ὅλος, whole; ῥίς, the nose]. In biology, applied to the *Gallinæ* and other birds having the anterior margin of the nasal bone concave, with two cornua directed forward, the processes being continuous behind with the body of the bone and with one another.

Holoschisis (*hol-os'-kis-is*) [ὅλος, whole; σχίσις, cleavage]. Amitotic or indirect cell-division; amitosis.

Holosericeous (*hol-o-ser-is'-e-us*) [ὅλος, whole; σηρικός, of silk]. In biology, covered with very minute silky hairs.

Holosteous (*hol-os'-te-us*) [ὅλος, whole; ὀστέον, a bone]. In biology, having a completely bony skeleton.

Holostomatous (*hol-o-sto'-mat-us*) [ὅλος, whole; στόμα, mouth]. In biology, having the mouth entire, neither notched nor with parts missing.

Holostomous (*hol-os'-to-mus*). Same as *Holostomatous.*

Holotetanus (*hol-o-tet'-an-us*) [ὅλος, whole; τέτανος, tetanus]. General tetanus; called also *Holotonia.*

Holothecal (*hol-o-the′-kal*) [ὅλος, whole; θήκη, case]. In biology, booted; applied to birds in which the tarsal envelop is entire.

Holotomy (*hol-ot′-o-me*) [ὅλος, whole; τέμνειν, to cut]. Complete surgical excision of a part or organ.

Holotonia, or Holotony (*hol-o-to′-ne-ah, hol-ot′-o-ne*) [ὅλος, entire; τείνειν, to stretch]. Same as *Holotetanus*.

Holotonic (*hol-o-ton′-ik*) [ὅλος, entire; τείνειν, to stretch]. Relating to, or characterized by, holotetany.

Holozoic (*hol-o-zo′-ik*) [ὅλος, whole; ζῷον, an animal]. In biology, entirely resembling animals in mode of nutrition.

Holthouse, Hernia of. See *Hernia*.

Holting (*hōlt′-ing*) [after *Holt*, the inventor of the method]. The divulsion of an urethral stricture by Holt's dilator.

Holtz Machine. A particular form of electro-static induction-machine.

Homalocephalus (*hom-al-o-sef′-al-us*) [ὁμαλός, flat; κεφαλή, the head]. Lissauer's term for "flat-headed."

Homalocoryphus (*hom-al-o-kor′-if-us*) [ὁμαλός, flat; κορυφή, the head]. Lissauer's term for a skull in which the angle formed by two lines drawn from the bregma and the occipital point to the highest point above is between 132° and 142°.

Homalogonatous (*hom-al-o-gon′-at-us*) [ὁμαλός, even, level; γόνυ, knee]. In biology, applied to such birds as possess an accessory femoro-caudal muscle and a tufted oil-gland and cocca; the opposite of *Anomalogonatous*, in which this combination is never found.

Homalographic (*hom-al-o-graf′-ik*) [ὁμαλός, same; γράφειν, to write]. Pertaining to homalography. **H. Method**, a method of showing the structure of the body by means of plane sections of a frozen body.

Homalography (*hom-al-og′-ra-fe*) [ὁμαλός, level; γράφειν, to record]. Anatomy by sections; the representation of structure by means of sketches of various sections.

Homalometopus (*hom-al-o-met-o′-pus*) [ὁμαλός, flat; μέτωπον, the space between the eyes]. Lissauer's term for a skull having a frontal angle between 130.5° and 141°.

Homalopisthocranius (*hom-al-o-pis-tho-kra′-ne-us*) [ὁμαλός, flat; ὄπισθεν, behind; κρανίον, the skull]. Lissauer's term for a skull in which the angle formed by lines joining the external occipital protuberance and the occipital point with the highest point of the skull is between 140° and 154°.

Homalosternal (*hom-al-o-ster′-nal*) [ὁμαλός, even, level; στέρνον, sternum]. In biology, having a raft-like or keelless sternum; ratite, as certain birds.

Homaluranus (*hom-al-u-ra′-nus*) [ὁμαλός, flat; οὐρά, a tail]. Lissauer's term for a skull in which the angle formed by lines joining the occipital point and the bregma with the highest point of the skull is betwen 147.5° and 163.5°.

Homatropin (*hōm-at′-ro-pin*). See *Atropin*.

Homeo- (*ho′-me-o-*) [ὁμοιος, like]. A prefix signifying like or similar.

Homeobiophorid (*ho-me-o-bi-off′-or-id*) [ὁμοιος, like; βίος, life; φέρειν, to bear]. In biology, Weismann's name for the lowest and most primitive undifferentiated organism conceivable, having the form of a single biophore, or of a number of similar biophores, in which multiplication and transmission would occur together, no special apparatus being required for the latter process, as a reproduction by binary fission must result in two corresponding halves, each containing similar biophores, and each of which, simply by the multiplication of its units, is able to give rise to a compact organism like the parent. Cf. *Heterobiophorid*.

Homeochronous (*ho-me-ok′-ro-nus*) [ὁμοιος, like, similar; χρόνος, time]. In biology, true ontogenetic sequence; appearance in proper order in time; applied to animals, organs, or hereditary traits. **H. Heredity**, pertaining to the appearance of an organ, trait, tendency or function, whether psychologic, physiologic, or pathologic, at a similar time of life in a series of descendants.

Homeodont (*ho′-me-o-dont*) [ὁμοιος, like; ὀδόυς, tooth]. In biology, applied to teeth that are simple cones.

Homeokinesis (*ho-me-o-kin-e′-sis*) [ὁμοιος, like; κινειν, to move]. In biology, Weismann's term for that kind of nuclear division in which the two daughter-nuclei contain similar idioplasm; *i. e.* nuclear division depending upon a perfectly uniform distribution of the primary constituent and resulting in parts containing similar hereditary tendencies. Cf. *Heterokinesis*.

Homeomerous (*ho-me-om′-er-us*) [ὁμοιος, like; μέρος, part]. In biology, having given organs or parts distributed uniformly throughout.

Homeomorphous (*ho-me-o-mor′-fus*) [ὁμοιος, like; μορφή, form]. Like or similar in form and structure.

Homeopathic (*ho-me-o-path′-ik*) [ὁμοιος, like; πάθος, feeling]. Relating to homeopathy.

Homeopathist (*ho-me-op′-ath-ist*) [ὁμοιος, like; πάθος, feeling]. A practitioner of homeopathy.

Homeopathy (*ho-me-op′-ath-e*) [ὁμοιος, like; πάθος, ailment or disease]. A system of treatment of disease by the use of agents that, administered in health, "would produce symptoms similar to those morbid conditions for the relief of which the agent or medicine is given." The hypothesis expressed by the adage, "*similia similibus curantur*." See *Regular* and *Allopathy*.

Homeoplasia (*ho-me-o-pla′-ze-ah*) [ὁμοιος, like; πλάσσειν, to shape]. The growth of tissue resembling the normal tissue, or matrix, in its form and properties; also the tissue so formed.

Homeoplastic (*ho-me-o-plas′-tik*) [ὁμοιος, like; πλάσσειν, to form]. Pertaining to a neoplasm resembling its matrix-tissue in texture. One differing widely in this respect is **heteroplastic.** If separated in position, it is said to be **heterotopic**; in date, **heterochronic.**

Homeoplasty (*ho′-me-o-plas-te*). See *Homeoplasia*.

Homeosis, or Homoiosis (*ho-me-o′-sis*, or *ho-moi-o′-sis*) [ὁμοίωσις; ὅμοιος, like]. The assimilation of nutrient material.

Homeo-therapeutics (*ho-me-o-ther-ap-u′-tiks*) [ὁμοιος, like; θεραπεύειν, to serve]. The homeopathic doctrine of therapeutics.

Homeothermal, or Homoiothermal (*ho-me-o-ther′-mal, ho-moi-o-ther′-mal*) [ὁμοιος, like; θέρμη, heat]. Pertaining to animals that are "warm-blooded," or that maintain a uniform temperature despite variations in the surrounding temperature.

Homeozoic (*ho-me-o-zo′-ik*) [ὁμοιος, the same, similar; ζωή, life]. In biology, applied to geographic areas, zones, or belts, having similar forms of life.

Homesickness (*hōm′-sik-nes*). Nostalgia. An urgent desire to return to one's home. It may be accompanied by a morbid sluggishness of the functions of the various organs of the body, and may develop into profound melancholy.

Homicidal (*hom-is-i′-dal*) [*homo*, a man; *cædere*, to kill]. Pertaining to homicide. **H. Mania**, insanity characterized by murderous impulses.

Homicide (*hom′-is-īd*) [*homo*, a man; *cædere*, to kill]. The killing of a human being without malice or intent, as distinguished from murder or manslaughter.

Also, the taking of human life in general by another. Also, one who takes the life of another.

Homiculture (*ho'-mik-ul-chur*) [*homo*, man; *cultura*, culture]. The proposed improvement of the human species by attention to the laws of breeding; stirpiculture.

Hominisection (*ho-min-is-ek'-shun*) [*homo*, *hominis*, man; *sectio*, a cutting]. Dissection of the human body; anthropotomy.

Homo (*ho'-mo*) [L.]. Man. The sole genus of the order *Bimana*.

Homoblastic (*ho-mo-blas'-tik*) [ὁμός, the same; βλαστός, a bud, germ]. In biology, derived from like germs or cells.

Homocarpous (*ho-mo-kar'-pus*) [ὁμός, the same; καρπός, fruit]. In biology, bearing fruits all of one kind.

Homocentric (*ho-mo-sen'-trik*) [ὁμός, same; κέντρον, center]. Concentric. Having the same center. **H. Rays**, a pencil of light-rays either cone-shaped or rod-shaped.

Homocerc (*ho'-mo-serk*) [ὁμός, the same; κέρκος, the tail]. Same as *Homocercal*.

Homocercal (*ho-mo-ser'-kal*) [ὁμός, the same; κέρκος, the tail]. In biology, applied to fishes in which the caudal fin-rays are so disposed as to give the tail an appearance of symmetry with respect to the axis of the body.

Homocerebrin (*ho-mo-ser'-e-brin*) [ὁμός, like; *cerebrum*, cerebrum]. A substance derivable from brain-tissue, closely resembling cerebrin, but more soluble in alcohol.

Homochromous (*ho-mo-kro'-mus*) [ὁμός, the same; χρῶμα, color]. In biology, all of one color, as the florets in a flower-head, or an entire organism.

Homocinchonidin (*ho-mo-sin-kon'-id-in*) [ὁμός, the same; *cinchona*], $C_{19}H_{22}N_2O_2$. An alkaloid derived from *South American Red-bark*, one of the *Cinchonas*.

Homodermic (*ho-mo-der'-mik*) [ὁμός, the same; δέρμα, the skin]. In biology, of similar blastodermic origin; applied to tissues or organs.

Homodesmotic (*ho-mo-des-mot'-ik*) [ὁμός, like; δεσμός, bond]. Connecting centers of equal importance (as a nerve-fiber).

Homodont (*ho'-mo-dont*) [ὁμός, the same; ὀδόνς, tooth]. In biology, having the teeth alike throughout.

Homodromous (*ho-mod'-ro-mus*) [ὁμός, the same; δρόμος, a course]. In biology, applied to plants in which the spiral arrangement of the leaves on the stem and branches is alike throughout.

Homodynamy (*ho-mo-di'-nam-e*) [ὁμός, the same; δύναμις, power]. In biology, serial homology; applied to homologous parts (somites or metameres) arranged along the long axis of the body.

Homœo- (*ho'-me-o-*). For words thus beginning, see *Homeo-*.

Homogamous (*ho-mog'-am-us*) [ὁμός, the same; γάμος, marriage]. In biology, having all the florets of the inflorescence alike in sex.

Homogamy (*ho-mog'-am-e*) [ὁμός, same; γάμος, marriage]. 1. Romanes' term for that method of evolution by physiologic selection of those varieties, the individuals of which are fertile among themselves, but less fertile or sterile with other varieties and with the parent-stock. It is called also *Segregate Fecundity* by Gulick. See *Evolution*. 2. In biology, applied to hermaphrodite flowers that mature their stigmas and anthers at the same time.

Homogen (*ho'-mo-jen*) [ὁμός, the same; γένος, race]. In biology: 1. Derived from the same or similar parents; having a common ancestor. 2. One of two organs or organisms having a common ancestor or ancestral part. **H., Ancestral**, *i. e.*, homogenetic homologues that do not arise similarly, though probably descended from common ancestral parts, *e. g.*, the legs of flies of diverse development. **H., Developmental**, *i. e.*, homogenetic homologues that arise similarly, whether descending from the same ancestral part or not, *e. g.*, some of the cranial bones of a Teleostean and of a mammal.

Homogeneity (*ho-mo-jen-e'-it-e*) [ὁμός, like; γένος, a kind]. The condition of being homogeneous.

Homogeneous (*ho-mo-je'-ne-us*) [ὁμός, like; γένος, kind]. Having the same nature or qualities. Similar or identical in structure. **H. Immersion.** See *Immersion*. **H. Triplets.** See *Homogeneous Twins*. **H. Twins**, in embryology, when the cleavage-force is exerted to its fullest effect, the entire embryonal trace is completely divided; each resulting part may be capable of independent development, whereby two fetuses are produced remarkable for their great similarity; such offspring are known as *homogeneous twins*. They are always of the same sex and possess almost perfect identity of physical characteristics. So also may a secondary fission of one of the halves take place, as an extremely rare occurrence, *homogeneous triplets* resulting from such twofold division of the original area. Such fetuses usually lie within a single chorion, enclosed by a separate or a common amniotic sac, the increased pressure arising from the unusual contents of the limited uterine cavity favoring absorption and disappearance of the amniotic partitions.

Homogenesis (*ho-mo-jen'-es-is*) [ὁμός, like; γεννᾶν, to beget]. Univocal generation; reproduction in which a living parent gives rise to offspring that pass through the same cycle of changes as itself.

Homogenization (*ho-mo-jen-iz-a'-shun*) [ὁμός, the same; γεννᾶν, to produce]. The act or process of rendering or of becoming homogeneous; reduction to a common standard; the process of rendering the objects of microscopic study transparent and fixed.

Homogenous (*ho-moj'-en-us*) [ὁμός, the same; γένος, race]. In biology, applied to structures that are genetically related, in so far as they have a single representation in a common ancestor.

Homogentisic Acid (*hom-o-jen-tiz'-ik*). See *Acid*.

Homogeny (*ho-moj'-en-e*) [ὁμογενής, of the same race or family]. In biology, an agreement among organisms depending on the inheritance of a common part or having a common ancestor. See *Homogenesis*.

Homogonous (*ho-mog'-on-us*) [ὁμός, similar; γόνος, offspring]. In biology, having the stamens and pistils alike in all the flowers of the species; homostyled. Cf. *Heterogonous*.

Homoio- (*ho'-moi-o-*). For words thus beginning, see *Homeo-*.

Homoiosis (*ho-moi-o'-sis*). See *Homeosis*.

Homologize (*ho-mol'-o-jīz*) [ὁμός, the same; λέγειν, to speak]. In biology: 1. To recognize as homologous; 2. To exhibit homology; to correspond in structure.

Homologous (*ho-mol'-o-gus*) [ὁμός, the same; λέγειν, to speak]. In biology, corresponding in structure, either directly or as referred to a fundamental type. In chemistry, being of the same chemic type or series; differing by a multiple or an arithmetic ratio in certain constituents, while the physical qualities are analogous, with small differences, as if corresponding to a series of parallels. **H. Tissues**, those identical in type of structure. **H. Tumor**, a name given by Virchow to a tumor consisting of tissue identical with that of the organ whence it springs.

Homologue (*hom'-o-log*) [ὁμός, same; λόγος, proportion]. An homologous organ common to any number of species, classes, or orders of animals; that which has the same relative structure, position, or development as another. The same organ in different organisms under every variety of form and function. We may have: 1. **Homogenetic Homologues,** *i. e.*, parts which, on the evolutionary theory, have a genetic relation, *e. g.*, the humerus of a horse and that of an ox. 2. **Homoplastic Homologues,** *i. e.*, parts closely similar as to relative position, but with no genetic affinity, or only a remote one, *e. g.*, the ventricle of a bat and that of a bird. 3. **Homogenetic Serial Homologues,** *i. e.*, different parts of one individual, the correspondence between which is to be accounted for by the influence of external conditions (the "superinduced segmentation" of Mr. Herbert Spencer), *e. g.*, the fore-limbs and hind-limbs of one side of any animal. 4. **Vertical Homologues,** *i. e.*, different corresponding parts of one individual, of which one part is dorsal, the other ventral, *e. g.*, dorsal and anal fins of certain fishes. 5. **Lateral Homologues,** *i. e.*, different corresponding parts of one individual, of which one part is right and the other left, *e. g.*, the right and left arms of a man. 6. **Antero-posterior Homologues,** *i. e.*, different corresponding parts of one individual, of which one part is anterior, the other posterior, *e. g.*, the mouth and the cloaca. 7. **Radial Homologues,** *i. e.*, different corresponding parts of one individual which radiate from a central axis, *e. g.*, any two arms on the same starfish. 8. **Homotrophic Homologues,** *i. e.*, parts of an individual, the correspondences between which are regarded as due to internal modifying influences, *e. g.*, the eyes and the ears. 9. **Actinologous Homologues,** *i. e.*, successive subdivisions, parts, or regions of a part or segmented organ, *e. g.*, two successive joints of an antenna of a lobster, or the vertebral and sternal parts of the same costal element. 10. **Special Homologues,** *i. e.*, parts of two organisms belonging to the same special skeletal category, *e. g.*, the basi-occipital of man and the cod. 11. **General Homologues,** *i. e.*, parts of two organisms belonging to the same general skeletal category, *e. g.*, the vertebral center of man and that of the cod, or the lateral appendages of the lobster and those of the scorpion. (Mivart.)

Homology (*ho-mol'-o-je*) [ὁμός, same; λόγος, proportion]. The quality of being homologous; also, the morphologic identity of parts or organs in different animals. In biology, a term introduced by R. Owen to indicate a close resemblance between parts, depending upon relations of relative position. (Mivart.)

Homomalous (*ho-mom'-al-us*) [ὁμαλος, even, level, equal]. In biology, applied to parts or organs that are all turned to one side.

Homomorphism (*ho-mo-mor'-fizm*) [ὁμός, the same; μορφή, form]. In biology, superficial resemblance, without true homology; mimicry or adaptive resemblance.

Homomorphous (*ho-mo-mor'-fus*) [ὁμός, the same; μορφή, form]. In biology, exhibiting superficial resemblance, but not truly homologous.

Homonomous (*ho-mon'-o-mus*) [ὁμός, same; νόμος, law]. Governed by or under the same law.

Homonym (*hom'-o-nim*) [ὁμόσ, same; ὄνυμα, name]. That which is homonymous.

Homonymous (*ho-mon'-im-us*) [ὁμός, same; ὄνυμα, a name]. 1. A term applied to names that have the same sound or pronounciation, but different meanings. 2. Coming under the same general designation (thus the two external recti muscles are homonymous); occurring on or within the same lateral half of the body; not heteronomous. **H. Diplopia,** occurs when the image seen by the right eye seems to be on the right side and that seen by the left eye seems to be on the left side. **H. Hemianopia,** occurs when all points in the visual field of each eye lying to the right (**Right H. H.**) or to the left (**Left H. H.**) of the fixation-point are not seen.

Homophthalic Acid (*hom-off-thal'-ik*). See *Acid.*

Homophthalimid (*hom-off-thal'-im-id*) [ὁμός, same; ὀφθαλμος, eye; *imid*], $C_9H_5NO_2$. A substance produced when the ammonium salt of homophthalic acid is heated. It crystallizes in minute needles, melting at 233° C.

Homophyadic (*ho-mo-fi-ad'-ik*) [ὁμός, the same; φύεσθαι, to grow]. In biology, having but one kind of stem, as distinguished from *heterophyadic.*

Homophyly (*ho-moff'-il-e*) [ὁμός, the same; φυλή, race]. In biology, correspondence in genetic relationships.

Homoplasis (*ho-mo-pla'-sis*) [ὁμός, the same; πλάσις, formed]. In biology, Lankester's term for structural agreement or modification resulting from the action of identical or nearly similar forces or environments on two or more parts of an organism, or on two organisms, which parts are exactly or nearly alike, or perhaps homogenetic. The same as the "superinduced segmentation" of Spencer.

Homoplasmic (*ho-mo-plaz'-mik*). Same as *Homoplastic.*

Homoplasmy (*ho'-mo-plaz-me*) [ὁμός, the same; πλάσμα, a thing moulded]. In biology, homoplastic or homomorphic, *i. e.*, showing mimetic resemblances.

Homoplast (*ho'-mo-plast*) [ὁμός, the same; πλαστός, formed, moulded]. In biology; 1. One of any aggregate or fusion of plastids. 2. An organ or part showing mere superficial or mimetic resemblance to another.

Homoplastic (*ho-mo-plas'-tik*) [ὁμός, the same; πλαστός, formed]. In biology, showing close agreement, dependent upon the common action of evoking causes or moulding environment upon homogeneous parts, or on parts that, for other reasons, offer a likeness of material to begin with. (Lankester.)

Homoplasy (*ho'-mo-plaz-e*) [ὁμός, the same; πλάσις, a forming, moulding]. In biology, agreement in the form, structure, and perhaps function, of organs or parts in the same or separate organisms, dependent upon evoking causes other than genetic affinity.

Homopterous (*ho-mop'-ter-us*) [ὁμός, the same; πτερόν, wing, feather]. In biology, applied to insects having wings of the same texture throughout.

Homorgan (*hōm'-or-gan*) [ὁμός, the same; ὀργανον, organ]. In biology, an organ resembling another; a homoplast.

Homosexual (*ho-mo-seks'-u-al*) [ὁμός, same; *sexus,* sex]. Pertaining to the same sex.

Homosexuality (*ho-mo-seks-u-al'-it-e*) [ὁμός, same; *sexualis,* of a sex]. That form of sexual perversion, acquired or congenital, in which the individual conceives a violent sexual passion for one of the same sex, and gratifies it either by sodomy, by titillation, or platonically.

Homosporous (*ho-mos'-por-us*) [ὁμός, similar; σπόρος, seed]. In biology, producing but one kind of spores; isosporous.

Homostyled (*ho'-mo-stīld*) [ὁμός, the same; στῦλος, pillar]. See *Homogonous.*

Homothermic (*ho-mo-ther'-mik*) [ὁμός, same; θέρμη, heat]. Having uniformity of temperature or bodily heat.

Homothermous (*ho-mo-ther'-mus*) [ὁμός, the same; θέρμη, heat]. In biology, applied to animals showing the same degree of bodily heat.

Homotonic (*ho-mo-ton'-ik*) [ὁμός, same; τόνος, tone, tension]. Having a uniform or even course; applied to diseases.

Homotopia (*ho-mo-to'-pe-ah*). See *Homotopy*.

Homotopy (*ho-mot'-o-pe*) [ὁμός, the same; τόπος, place]. In biology, the usual or normal mode of acceleration or change of parts during growth, characterized by the exact or modified repetition or multiplication of cells or segments already present; also called repetition. Autonym of *Heterotopy*.

Homotropal (*ho-mot'-ro-pal*). Same as *Homotropous*.

Homotrophe (*ho'-mo-trōf*) [ὁμός, the same; τροφή, nourishment]. In biology, one of two or more homologous parts or organs the structural correspondences of which are due to corresponding internal, modifying conditions, rather than to external environment. **1. Serial Homotrophes,** *i. e.*, homotrophic homologues, the correspondence between which is antero-posterior, *e. g.*, an extra thumb and an extra great toe on the same side of the body. **2. Vertical Homotrophes,** *i. e.*, homotrophic homologues that correspond vertically. **3. Lateral Homotrophes,** *i. e.*, homotrophic homologues of the two sides of one individual, *e. g.*, the right and left eyes. **4. Antero-posterior Homotrophes,** *i. e.*, homotrophic homologues that correspond antero-posteriorly. (St. Geo. Mivart.)

Homotrophic (*ho-mo-trof'-ik*) [ὁμός, the same; τροφή, nourishment]. In biology, exhibiting homotrophy. **Homotrophic Homologues,** *i. e.*, parts of an individual, the correspondences between which are regarded as due to internal modifying influences, *e. g.*, the eyes and the ears.

Homotrophy (*ho-mot'-ro-fe*) [ὁμός, the same; τροφή, nourishment]. In biology, correlations of growth; homoplasy due to internal conditions rather than external environment.

Homotropous (*ho-mot'-ro-pus*) [ὁμός, the same; τρόπος, turn]. In botany, said of the embryo when curved the same as the seed containing it.

Homotype (*ho'-mo-tip*) [ὁμός, same; τύπος, a pattern]. A part corresponding and similar to another part, as the humerus to the femur, a serial homologue, or an antitype.

Homotypic (*ho-mo-tip'-ik*) [ὁμός, the same; τύπος, type]. In biology, showing serial correspondence or bilateral symmetry.

Homotypical (*ho-mo-tip'-ik-al*). Same as *Homotypic*.

Homotypy (*ho'-mo-ti-pe*) [ὁμοτυπία, sameness of form]. In biology, serial or bilateral homology.

Homunculus (*ho-mun'-ku-lus*) [L., dim. of *homo*, man]. The fetus; a dwarf.

Honduras Bark (*hon-du'-ras bark*). See *Cascara amarga*.

Honey (*hun'-e*) [ME., *hony*, honey]. See *Mel*. **H.-berry.** See *Celtis*. **H.-comb,** the waxy structure formed by bees as a repository for the honey that they produce. **H.-comb Glands.** See *Gland*. **H.-comb Ringworm.** See *Favus*. **H.-cyst.** See *Meliceris*. **H.-dew,** a glutinous liquid exuded by aphides, and frequently to be noticed covering the leaves of the bass-wood, sycamore, oak, maple, plum, apple, box, currant, etc. Its taste is mawkish, its odor unpleasant, and its color often as dark as molasses, especially that found in the oak and sycamore. **H.-stone.** See *Mellitic Acid*.

Honorarium (*on-or-a'-re-um*) [L.]. A professional fee; especially one that is in theory a gift, no formal professional charge having been made.

Hoof (*hoof*) [ME., *hoof*, a hoof]. The casing of hard, horny substance that sheathes the ends of the digits or incases the foot in many animals. **H.-bound,** in farriery, having a dryness and contraction of the hoof, resulting in pain and lameness. This condition is also called *Contracted Heels*.

Hook [ME., *hok*, a hook]. A curved instrument. See *Hamus*. **H., Blunt,** an instrument described by its name, for exercising traction upon the fetus in an arrested breech-presentation. **H., Tyrrel's,** a blunt, slender hook for operations upon the eye.

Hooke's Law. See *Law*.

Hooper's Pill. A pill containing aloes, crystallized sulphate of iron, extract of hellebore, myrrh, soap, canella, and ginger.

Hooping-cough (*hoop'-ing-kawf*). See *Pertussis*.

Hoose (*hooz*) [ME., *hose*, hoarse]. Sheep-cough. A disease of sheep, lambs, etc., due to the presence of *Strongylus filaria*, a nematode worm, in the lungs and air-passages (see under *Parasites, Animal*), and characterized by a husky cough, anorexia, dry muzzle, constipation, and dyspnea.

Hoove, Hooven (*hoov, hoov'-en*) [dial., *hooven*]. Distention of the stomach of a ruminant animal with gas, caused by the fermentation of food. It is generally due to eating too much green food.

Hop. See *Humulus*.

Hope's Camphor-mixture. A mixture containing nitric acid, camphor-water, and tincture of opium. It is used in the treatment of serous or choleraic diarrheas.

Hopea (*ho-pe'-ah*) [after John *Hope*, a Scotch botanist]. A genus of dipterocarpaceous trees of S. Asia. Several species afford resins known in commerce as *Dammar*. Unof.

Hopein (*hō-pe'-in*). See *Humulus*.

Hoppe-Seyler's Method. A method of preparing hemoglobin crystals. Mix defibrinated blood with ten volumes of a 20 per cent. salt-solution, and allow it to stand for two days. Remove the clear upper fluid with a pipet, wash the thick deposit of blood-corpuscles with water, and shake it for a long time with an equal volume of ether, which dissolves the blood-corpuscles. Remove the ether, filter the lake-colored blood, add to it one-fourth of its volume of cold alcohol (0° C.) and allow the mixture to stand in the cold for several days. The crystals can be collected on a filter and pressed between folds of bibulous paper.

Hordeiform (*hor-de'-if-orm*) [*hordeum*, barley; *forma*, form]. Shaped like a grain of barley.

Hordein (*hor'-de-in*) [*hordeum*, barley]. A mixture of a proteid with starch-cellulose; it exists in barley-starch, but is not soluble.

Hordeolum (*hor-de'-o-lum*) [*hordeum*, a grain of barley]. A stye; a furuncular inflammation of the connective tissue of the lids, near a hair-follicle. **H., External,** *H. zeissianum;* one produced by suppuration of one of Zeiss's glands. **H., Internal,** *H. meibomianum;* one produced by suppuration of one of the Meibomian glands. **H. meibomianum.** See *H., Internal*. **H. zeissianum.** See *H., External*.

Hordeum (*hor'-de-um*) [L.]. Barley, *q. v.* **H. decorticatum,** barley deprived of its husk; commonly called *pearl barley*. **H. germinatum,** malt. Also, one of several granular elevations described by Spitzka on the floor of the fourth ventricle.

Horehound (*hōr'-hownd*). See *Marrubium*.

Horizon (*hor-i'-zon*) [ὁρίζων, horizon]. 1. The line separating the visible from the invisible part of the earth from a single point of view. 2. In craniometry, a line that extends around the skull, touching the lower border of the orbital cavities and passing through the auricular points.

Horizontal (*hor-iz-on'-tal*) [ὁρίζων, the horizon]. Parallel to the horizon. **H. Posture.** See *Postures, Table of*.

Horlick's Food. A variety of Liebig's foods for infants. Its composition is: Water, 3.39; fat, 0.08; grape-sugar, 34.99; cane-sugar, 12.45; no starch; soluble carbohydrates, 87.20; albuminoids, 6.71; ash, 1.28.

Hormion (*hor'-me-on*) [ὁρμή, the first]. See *Craniometric Points.*

Hormogone, Hormogon (*hor'-mo-gōn*). Same as *Hormogonium.*

Hormogonium (*hor-mo-go'-ne-um*) [ὅρμος, a cord, chain; γόνος, offspring: *pl.*, *Hormogonia*]. In biology, a short, moniliform reproductive body, found in the Nostocs.

Horn [ME., *horn*, horn]. The hard projection, used as a defensive weapon, growing on the heads of certain animals. Horns may be permanent, as in the ox; or deciduous, as in the deer. Also, the hardened epithelial substance of which the horn is composed. **H., Cutaneous.** See *Cornu cutaneum.* **H.-blende,** a common mineral, occurring massive or in prismatic crystals, of various colors, from white, through green shades, to black. It is a silicate of lime, magnesia, or iron. It is sometimes used in the manufacture of porcelain teeth for shading the body or enamel. **H.-distemper,** a disease of cattle affecting the core of the horn. **H.-pock.** See *Warty Smallpox.* **H.-pox,** a variety of varicella in which the lesions resemble papules. See also *Warty Smallpox.*

Horner's Mixture. See *Red Mixture.* **H.'s Muscle.** See *Muscles, Table of.*

Horny (*horn'-e*) [ME., *horn*, horn]. Composed of, or resembling, horn. **H. Band of Tarinus,** a band of white fibers running between the optic thalamus and the corpus striatum. See *Band.* **H. Epithelium.** See *Trachoma.*

Horologic (*hor-o-loj'-ik*) [ὡρολόγος, lit., telling the hour]. In biology, applied to such flowers as open or shut at certain hours.

Horological (*hor-o-loj'-ik-al*). Same as *Horologic.*

Horopter (*hor-op'-ter*) [ὅρος, boundary; ὀπτήρ, an observer]. The sum of all the points seen singly by the two retinæ while the fixation-point remains stationary. "A circle passing through the center of rotation of each eye and through the apex of the point of fixation of the visual lines." (*Mueller.*) "A line representing the curve along which both eyes can join in sight." (*Noyes.*)

Horopteric (*hor-op-ter'-ik*) [ὅρος, boundary; ὀπτήρ, observer]. Pertaining to an horopter.

Horrida cutis (*hor'-id-ah ku'-tis*) [L.]. Goose-skin. Cutis anserina.

Horripilation (*hor-ip-il-a'-shun*) [*horrere*, to stand on end; *pilus*, the hair]. A sensation as if the hairs of the skin were stiff and erect.

Horripilator (*hor-ip-il-a'-tor*). Same as *Arrector pili.*

Horrors (*hor'-orz*) [*horror*, a shaking, terror]. A popular name for *Delirium tremens, q. v.*

Horse (*hors*) [ME., *hors*, a horse]. A member of the genus *Equus;* a domestic beast of burden. **H.-chestnut.** See *Æsculus hippocastanum.* **H.-chestnut bark,** the bark of the horse-chestnut (*Æsculus hippocastanum*), said to be used in leather-manufactures for the production of an extract under the simple name of *chestnut extract.* **H.-distemper,** influenza. **H.-doctor,** a farrier; a veterinary surgeon. **H.-drench,** a dose of physic for a horse. **H.-foot.** See *Talipes equinus.* **H.-leech,** a large leech, the Hæmopis of Southern Europe and Northern Africa; also a horse-doctor. **H.-power.** See *Unit.* **H.-pox.** 1. A pustular disease of horses, which, communicated to cows, produces cow-pox. It is also called *pustular grease.* 2. See *Coitus Disease.* **H.-radish,** the fresh root of *Cochlearia armoracia*, with properties due to a volatile oil. It is stimulant, diuretic, and externally a rubefacient, and is much used as a condiment. Dose of the fld. ext. ʒj–ij. **Armoraciæ, Spt., Comp.** (B.P.). Dose ʒj–ij. **H.-shoe Fistula,** a name applied to a fistulous track surrounding the rectum in a semicircle, either in front or behind. **H.-shoe Hymen.** See *Hymen.* **H.-shoe Kidney,** the union of the lower ends of the two kidneys, so that they appear to form a single organ of a form somewhat like that of a horse-shoe. **H.-sickness.** See *Anthrax.* **H.-tail.** See *Equisetum.* **H.-weed.** See *Collinsonia canadensis.*

Horsikin (*hor'-sik-in*) [ME., *hors*, a horse]. A model used in teaching the anatomy and surgery of the horse.

Horsley's Method. A method of determining the position of the fissure of Rolando. It is carried out by means of an instrument made to encircle the head, and having an arm fixed at an angle of 67°, which indicates the position of the fissure. **H.'s Test.** See *Tests, Table of.*

Horst's Eye-water. *Collyrium adstringens luteum.* An eye-solution prepared as follows: Take of ammonium chlorid, 50 centigrams, and zinc sulphate, 125 centigrams, dissolve in 200 grams of distilled water, and add a solution of 40 centigrams of camphor in 20 grams of dilute alcohol, and 10 centigrams of saffron. Digest for 24 hours with frequent agitation, and filter.

Hospital (*hos'-pit-al*) [*hospitale*, a large house]. A building for the care and treatment of sick or infirm people. **H. Fever,** a feverish condition formerly common in hospitals, due to ill-ventilation and unsanitary conditions. Also, the fever symptomatic of gangrene. Also, a synonym of *Typhus Fever.* See *Fever.* **H. Gangrene,** a contagious, phagedenic gangrene occasionally attacking wounds or open sores. It is confined mainly to military hospitals, and is of microbic origin.

Hospitalism (*hos'-pit-al-izm*) [*hospitale*, a large house]. The morbific influence arising from the gathering of diseased persons in a hospital, a condition that seems to have a tendency to produce septic diseases.

Hospitalization (*hos-pit-al-iz-a'-shun*) [*hospitale*, a large house]. Confinement in a hospital for treatment.

Hospitalomania (*hos-pit-al-o-ma'-ne-ah*) [*hospitale*, a large house; μανία, madness]. A mania for founding or visiting hospitals.

Host (*hōst*) [*hostis*, a stranger, a landlord]. The organic body upon which parasites live.

Hot [ME., *hot*, hot]. Having or yielding the sensation of heat; stimulating; biting. **H.-air Bath.** See *Bath.* **H. Bath.** See *Bath.* **H.-blanket Pack,** a rubber sheet and one or two woolen blankets are placed upon the bed. A heavy woolen blanket is wrung out of water at 110° F., spread upon the dry blanket, the patient placed upon it and wrapped with it like a mummy. The dry blankets and rubber sheet are wrapped over this, and the patient is allowed to remain in this pack from half an hour to two hours. It is useful in suppression of urine. **Hot-box, Japanese,** a device for applying dry heat to a part. **H. Drops,** the *Tinctura capsici et myrrhæ*, N. F.; they are useful in many painful conditions of the stomach and bowels, when there is no inflammation or organic disease; it is called also "*number six.*" **H. Eye,** Hutchinson's term for a persistent hyperemia of the conjunctiva seen in gout. **H.-spots.** See *Temperature-sense.* **H. Wet-pack,** instead of wringing the linen sheet out of cold water, as in the *Wet-pack,* it

is dipped into water at 110° F., well wrung out and spread upon the blanket, as in the cold-pack. The patient is wrapped in this and allowed to remain for an hour. Then he is removed to the side of the bed upon which he is to lie, lightly rubbed over with a rough wash-rag dipped into water at 65° F., squeezed out by the hand, quickly dried and left alone. This method is useful only in obstinate insomnia. **H.-wind Stroke,** a form of heat-fever, not unlike sunstroke, but caused by hot winds, and far more fatal than sunstroke; it is common in India.

Hottentot Apron (*hot'-n-tot*). See *Velamen vulvæ.* **H. Deformity.** See *Steatopygia.*

Hottentotism (*hot'-n-tot-izm*). An extreme form of stammering, sometimes congenital, and often due to or associated with deformity of the vocal organs.

Hough (*huf*) [AS., *hoh*, the hough]. The lower part of the thigh.

Hound's Tongue (*hownd's tung*). The leaves and root of *Cynoglossum officinale*, an anodyne, demulcent, and astringent. Dose of the fld. ext. ʒ ss–j. Unof.

Hour-glass Contraction. See *Uterus.*

House (*hows*) [ME., *hous*, a house]. In biology, a cuticular secretion, representing the cellulose coat of higher ascidians, in which the lowest *Tunicata*, as represented by *Appendicularia*, shelter themselves. **H.-maid's Knee.** See *Abscess, Bursal.* **H.-physician,** the resident physician in a hospital. **H.-refuse,** the ashes, dust, food-scraps, both animal and vegetable, waste-paper, and other waste material from a household, and which does not enter the drains. **H.-surgeon,** the resident surgeon in a hospital.

Houston's Folds, or **Valves.** Three folds of mucous membrane within the rectum. They are directed obliquely. **H.'s Muscle.** See *Muscles, Table of.*

Hove, Hoven (*hōv, ho'-ven*). See *Hoove* and *Blown.*

Hovius, Canals of. See *Canal.* **H., Plexus of.** See *Plexuses, Table of.*

Howard's Method. See *Artificial Respiration.*

Howship's Lacunæ, or **Pits.** Certain deep or shallow depressions, sometimes simple, and at times quite complex, occurring in bones undergoing absorption, at the edges of the bone bordering on vascular surfaces, and seen on making a microscopic examination. These lacunæ are usually filled or lined by larger and smaller granular, frequently multinuclear cells—the so-called *osteoclasts.*

Hoyer's Alcoholic Carmin. See *Stains, Table of.* **H.'s Carmin.** See *Stains, Table of.* **H.'s Solution.** See *Stains, Table of.*

Huanokin (*whah'-no-kin*) [from *Huanuco*, a place-name]. An alkaloid from *Cinchona nitida*, said to be strongly febrifugal. Unof.

Hubbell's Wheat Food. A variety of farinaceous food for infants, with the following composition: Water, 7.78; fat, 0.41; grape-sugar, 7.56; cane-sugar, 4.87; starch, 67.60; soluble carbohydrates, 14.29; albuminoids, 10.13; ash, 1.0; gum, cellulose, etc., undetermined.

Huchard's Diet. See *Treatment, Methods of.*

Huckle-bone (*huk'-l-bōn*) [ME., *huccle-bone*, the astragalus]. The Astragalus, *q. v.*

Hudson's Apparatus. An apparatus to support the fingers and hands in the treatment of wrist-drop.

Hueter's Bandage. See *Bandage.* **H.'s Method,** a method of inducing premature labor. It consists in applying a bladder filled with water or decoction of ergot to the neck of the womb.

Hüfner's Method. A method of obtaining glycocholic acid. A little HCl is added to fresh bile, the mixture shaken, and the mucinoid material so precipitated is filtered off. Ethyl ether and HCl are added to the filtrate; the proportions of the filtrate, acid, and ether are respectively 100, 5, and 30. The mixture is shaken and allowed to remain some hours, when crystals form, which are then collected on a filter, washed with water holding HCl and ether in solution, and dried in the air. By recrystallization the crystals are obtained perfectly colorless.

Hufeland's Cerate. A preparation used in treating sore nipples. It consists of zinc oxid and lycopodium each 2 parts, simple cerate 30 parts.

Hughes Bennett's Diuretic. A diuretic mixture employed in chronic nephritis, composed of pulverized potassium acetate, 2 drams; sweet spirit of niter, half an ounce; water sufficient to make two ounces; one dram of this is given three times daily.

Huguier's Canal. See *Canal.* **H.'s Disease.** See *Diseases, Table of.* **H.'s Glands,** two small glands opening into the vagina.

Huingan (*whin'-gan*) [S. Amer.]. The seed of a plant (*Duvarra dependens*) native to the Andes. The infusion is used in urinary affections. Unof.

Human (*hu'-man*) [*humanus*, human]. Pertaining to or characteristic of man. **H. Dolphin,** a monster with complete union of the lower limbs. **H. Milk,** mother's milk. It derives its origin from an overgrowth of epithelial cells lining the lactiferous ducts, with infiltration with fat, and subsequent rupture. Its specific gravity is 1024–35, its reaction alkaline. Each minute fat-globule is surrounded by a pellicle of serum-albumin. The chemical composition of human milk is as follows:—

	Meigs.	*Vogel.*	*Gautrelet.*
Water,	87.163	89.5	88.1
Fat,	4.283	3.5	4.0
Casein,	1.046	2.0	2.2
Sugar,	7.407	4.8	5.2
Ash,	0.101	0.17	0.5

Humation (*hu-ma'-shun*) [*humare*, to inter]. Interment; inhumation.

Humboldt Blue. Same as *Spirit-blue.*

Hume's Test. See *Tests, Table of.*

Humectant (*hu-mek'-tant*) [*humectare*, to make moist]. 1. Moistening; like a poultice; diluent. 2. A diluent; a substance used to moisten.

Humeral (*hu'-mer-al*) [*humerus*, the shoulder]. Pertaining to the humerus.

Humeren (*hu'-mer-en*) [*humerus*, the shoulder]. Belonging to the humerus in itself.

Humero- (*hu'-mer-o-*) [*humerus*, the shoulder]. A prefix signifying relationship with the shoulder. **H.-cubital,** relating to the humerus and the ulna. **H.-c. Amputation,** amputation at the elbow-joint. **H.-radial,** relating to the humerus and the radius. **H.-scapular,** relating to the humerus and the scapula. **H.-s. Amputation,** amputation at the shoulder-joint. **H.-ulnar,** relating to the humerus and the ulna. **H.-u. Amputation,** amputation at the elbow-joint.

Humerus (*hu'-mer-us*) [L.]. The bone of the upper arm. Also, the shoulder.

Humid (*hu'-mid*) [*humidus*, moist]. Moist; damp. **H. Tetter.** See *Eczema.*

Humidity (*hu-mid'-it-e*) [*humor*, moisture]. The state or quality of being moist. **H., Absolute,** the actual amount of water present in the air at any moment, regardless of saturation. **H., Relative,** the relative amount of water present in air which is not saturated, as compared to what the air should contain at the existing temperature were its condition that of saturation.

Humifuse (*hu'-mif-ūs*) [*humus*, the ground; *fundere*, to pour]. In biology, spread over the surface of the ground.

Humming-top Murmur or **Sound.** See *Bruit de diable.*

Humor (*hu'-mor* or *u'-mor*) [L.]. Any fluid or semi-fluid part of the body. **H., Aqueous**, the transparent fluid that fills the anterior chamber of the eye. **H., Crystalline.** See *Lens, Crystalline.* **H., Vitreous**, the transparent gelatin-like substance filling the posterior chamber of the eye.

Humoral (*hu'-mor-al*) [*humor*, moisture]. Pertaining to the natural fluids of the body. **H. Pathology**, an obsolete theory that all diseases result from a disordered or abnormal condition of the fluids or humors of the body.

Humoralism (*hu'-mor-al-izm*), or **Humorism** (*hu'-mor-izm*). Same as *Humoral Pathology.*

Humoralist (*hu'-mor-al-ist*) [*humor*, moisture]. The name given to one who was an advocate of the supreme importance of the blood in the processes of health and disease.

Humoro-vitalism (*hu'-mo-ro-vi'-tal-izm*) [*humor*, moisture; *vita*, life]. The obsolete belief that the fluids of the body are the seat of life.

Humpback (*hump'-bak*). See *Kyphosis.*

Humulin (*hu'-mu-lin*) [*humulus*, hop]. 1. The same as *Lupulin.* 2. A concentrated preparation from the tincture and decoction of hops. Unof.

Humulus (*hu'-mu-lus*) [L.: *gen.*, *Humuli*]. Hop. The strobiles of *H. lupulus.* It contains various principles, hopein and lupulin being the most important. It is a bitter stomachic tonic and feeble hypnotic, increasing the cardiac action. A poultice of hops is a favorite remedy for painful conditions and in inflammations. **H., Infusum**, unof., ℥ss–Oj. Dose ℥j–iv. **H., Tinct.**, 20 per cent. in strength. Dose ℥j–ij. **Lupulinum**, the glandular powder. Dose gr. v–xv. **L., Ext.** (B. P.) Dose gr. v–x. **L., Fld. Ext.**, alcoholic. Dose ♏x–℥j. **L., Oleoresina**, ethereal. Dose gr. ij–v. **L., Tinct.**, unof., strength 12½ per cent. Dose ℥ss–ij.

Humus (*hu'-mus*) [L., the earth, ground, soil]. Vegetable mold. It contains ulmin and ulmic acid, humin and humic acid. **H. Pigments**, certain pigmentary bodies of a more or less dark-brown color, produced when carbohydrates are treated with acids or alkalies. When urine is treated with acids in the presence of oxygen, it becomes darker from the formation of some of these humus-pigmented substances by the action of the acids on the carbohydrates.

Hunchback (*hunch'-bak*). See *Kyphosis.*

Hungarian (*hung-ga'-re-an*) [*Hungaria*, Hungary]. Pertaining to Hungary. **H. Balsam**, or **H. Turpentine**, a thin turpentine from the branches of *Pinus pumilio.* **H. Disease.** Synonym of *Typhus Fever.*

Hungary Blue. Same as *Cobalt-blue.*

Hunger (*hung'-ger*) [ME., *hunger*, hunger]. A condition marked by a sensation of emptiness of the stomach, with intense desire for food. **H.-cure.** See *Nestiatria.* **H.-pest.** Synonym of *Relapsing Fever, q. v.* **H.-typhus.** Synonym of *Relapsing Fever, q. v.*

Hunter, Canal of. See *Canal.* **H.'s Line.** See *Lines, Table of.* **H.'s Method**, a method of treating aneurysm by ligating the artery on the proximal side of the sac.

Hunterian Chancre. See *Chancre.*

Huntingdon's Chorea. Hereditary Chorea. An affection characterized by irregular movements, disturbance of speech, and gradual dementia. It is frequently hereditary, is associated with psychic troubles, and occurs between the thirtieth and fortieth years. The disease has no connection with Sydenham's Chorea. See *Chorea, Hereditary*, and *Diseases, Table of.*

Huntsman's Cup. See *Trumpet Plant.*

Hunyadi Janos (*hun-yah'-de*) [from the name of the Hungarian national hero, otherwise called *John Corvinus*]. An aperient mineral water from Buda-Pesth, in Hungary. It is an effective laxative or cathartic. It should be taken in the quantity of from a half to one wineglassful, fasting.

Hura (*hu'-rah*) [S. Amer.]. A genus of poisonous euphorbiaceous trees of tropical America. **H. brasiliensis, H. crepitans**, and **H. strepens**, are the best-known species. They have the general acrid, pustulant, and cathartic properties of nearly all euphorbiaceous plants. Unof.

Huschke, Auditory Teeth of. Nipple-like projections along the free border of the labium vestibulare of the ear. **H., Canal of.** See *Canal.* **H., Foramen of.** See *Foramen.* **H., Valve of**, the fold of mucous membrane at the point where the common canal formed by the junction of the canaliculi enters the lachrymal sac.

Husky (*hus'-ke*) [E. dial., *hask*, rough, dry]. Harsh, rough, as the voice.

Hutchinson's Lotion. A lotion used in the treatment of eczema. It has the following composition: Liquor plumbi subacetatis, ½ ounce; liquor carbonis detergentis, 2½ ounces. Of this one teaspoonful is mixed with a pint of water, and used as a lotion. **H.'s Patch.** See *Signs and Symptoms, Table of.* **H.'s Teeth**, a notched or furrowed condition of the free edges of the permanent teeth, especially the central incisors of the upper jaw, due to inherited syphilis. See *Signs and Symptoms, Table of.* **H.'s Treatment.** See *Treatment, Methods of.* **H.'s Trio of Symptoms.** See *Signs and Symptoms, Table of.*

Hutchoning (*hut'-on-ing*) [after *Hutton*, the inventor]. A method of manipulating a luxated joint, introduced by one Hutton, a bone-setter.

Huxham's Tincture. See *Cinchona.*

Huxley's Angle. See *Angle.* **H.'s Layer, Membrane, or Sheath**, a layer of nucleated, elongated, polygonal cells lying within Henle's layer of the inner root-sheath of hairs. **H. Law.** See *Law.*

Huygenian Ocular (*hi-je'-ne-an*). See *Ocular.*

Huygens, Theory of. The undulatory theory of light.

Hyalin (*hi'-al-in*) [ὑαλος, glass]. A translucent substance, called also *canalized fibrin*, that sometimes occurs in miliary tubercle. Also, the membrane or sac forming the walls of hydatid cysts. Also, a substance found in echinoderms and other invertebrates. Its centesimal formula is, C = 45.3 to 44.1; H = 6.5 to 6.7; N = 5.2 to 4.5; O = 43 to 44.7.

Hyaline (*hi'-al-in*) [ὑαλος, glass]. Resembling glass in transparency. **H. Cartilage.** See *Cartilage.* **H. Cast, or Cylinder**, a clear, nearly transparent urinary tube-cast. **H. Degeneration**, a degeneration of fibrous tissue, which becomes transparent, jelly-like, and homogeneous in structure.

Hyalinosis (*hi-al-in-o'-sis*) [ὑαλος, glass]. Hyaline or waxy degeneration.

Hyalinuria (*hi-al-in-u'-re-ah*) [ὑαλος, glass; οὖρον, urine]. The presence of hyalin in the urine.

Hyalitis (*hi-al-i'-tis*) [ὑαλος, glass; ιτις, inflammation]. Inflammation of the hyaloid membrane. It is also used as a synonym of inflammation of the vitreous humor.

Hyalogen (*hi-al'-o-jen*) [ὑαλος, glass; γεννᾶν, to produce]. One of the albuminoids found in cartilage; it is readily changed into hyalin, whence the name.

Hyaloid (*hi'-al-oid*) [ὑαλος, glass; εἰδος, form]. Transparent; like glass. **H. Artery**, in the embryo, a branch of the arteria centralis retinæ, traversing the vitreous humor to the posterior capsule of the lens. Its hyaloid sheath forms the *Canal of Cloquet.* Persistence of this artery after birth has been observed. **H. Membrane**, a delicate, transparent membrane

surrounding the vitreous humor, except in front, where it becomes fibrous and strong and forms a leaflet of the zonula of Zinn.

Hyaloiditis (*hi-al-oid-i′-tis*). See *Hyalitis.*

Hyalonyxis (*hi-al-o-niks′-is*) [ὑαλος, glass; νύξις, a pricking]. Puncture of the vitreous body of the eye.

Hyalophagia (*hi-al-o-fa′-je-ah*) [ὑαλος, glass; φαγεῖν, to eat]. The practice of eating glass, sometimes seen among insane persons.

Hyaloplasm (*hi′-al-o-plazm*) [ὑαλος, glass; πλάσμα, plasm]. The clear, fluid, homogeneous portion of the protoplasm surrounding the spongioplasm of a living cell. The term is also used as a general synonym of protoplasm.

Hybrid (*hi′-brid*) [ὕβρις, insult]. The offspring of two individuals of distinct but closely related species. Among animals, the mule is the best known hybrid. **H. Measles.** Synonym of *Rötheln, g. v.*

Hybridism, or **Hybridity** (*hi′-brid-izm, hi-brid′-it-e*) [ὕβρις, insult]. Cross-breeding; mixture of races; the combination of various diseases.

Hybridization (*hi-brid-iz-a′-shun*) [*hybrid*, a mongrel; ὕβρις, insult]. Cross-breeding.

Hydantoic Acid (*hi-dan-to′-ik*). See *Acid, Glycoluric.*

Hydantoïn (*hi-dan-to′-in*), $C_3H_4N_2O_2$. Glycolyl urea. A substance that crystallizes from hot water and from alcohol in needles that melt at 206° C., and have a neutral reaction and sweet taste.

Hydarthrosis (*hi-dar-thro′-sis*). See *Hydrarthrosis.*

Hydatenterocele (*hi-dat-en-ter′-o-sēl*) [ὑδωρ, water; ἔντερον, bowel; κήλη, a tumor]. Hydrocele with intestinal hernia.

Hydatid (*hi′-dat-id*) [ὑδατίς, vesicle]. A cyst with aqueous contents formed by the larva of a tenia, *Echinococcus polymorphus*, the larva of a small tapeworm, *Tænia echinococcus*, which, in its adult (strobila) condition is only known to infest the dog and the wolf, while the larvæ (hydatids) are of frequent occurrence in man and other mammals. Three principal forms of hydatids are recognized, viz., exogenous, endogenous, and multilocular. The first is sparingly found in man, but is extremely common in the lower animals, whilst the second is most frequently developed in the human subject, the third kind being found only in man. (Cobbold.) See *Parasites* (*Animal*), *Table of.* The term hydatid is frequently, also, loosely applied to vesicular tumors and cysts of many kinds. Hydatids are most frequent in the liver, but are found in almost any tissue, even in bone. **H. Disease,** a disease characterized by the presence in various portions of the body of cysts containing the embryo of the *Tænia echinococcus.* The symptoms vary according to the location of the tumor. **H. Fremitus,** a modified sense of fluctuation occasionally obtained on palpating an hydatid cyst. Placing the palm of one hand upon the tumor, and striking the dorsum with the fingers of the other hand, a tremor or thrill is perceived. This is doubtless due to the physical conditions of a cyst containing fluid, and provided with a tense elastic wall. **H. Mole.** See *Chorion, Cystic Degeneration of,* and *Mole.* **H. of Morgagni,** one of certain short processes of the tunica vaginalis testis; also a similar structure connected with the fimbriated extremity of the Fallopian tube. These hydatids are the remnants of the Müllerian duct. **H. Tapeworm.** See *Tænia echinococcus.*

Hydatidiform (*hi-dat-id′-if-orm*) [ὑδατίς, hydatid; *forma*, form]. Having the form of an hydatid. Resembling an hydatid. **H. Degeneration of the Chorion,** or **Vesicular Mole.** See *Mole* and *Chorion, Cystic Degeneration of.*

Hydatidocele (*hi-dat-id′-o-sēl*) [ὑδατίς, hydatid; κήλη, tumor]. Oscheocele with hydatid cysts.

Hydatidoma (*hi-dat-id-o′-mah*) [ὑδατίς, hydatid; ὄμα, a tumor]. Any hydatid cyst or tumor.

Hydatidosis (*hi-dat-id-o′-sis*) [ὑδατίς, hydatid]. The condition of being affected with hydatids.

Hydatogenesis (*hi-dat-o-jen′-es-is*) [ὑδωρ, water; γένεσις, production]. The formation of water within the tissues or cavities of the body.

Hydatoncus (*hi-dat-ong′-kus*) [ὑδωρ, water; ὄγκος, a tumor]. Any cyst, or watery tumor.

Hydatorrhea (*hi-dat-or-e′-ah*) [ὑδωρ, water; ῥοία, flow]. A copious flow of water.

Hydatotherapy (*hi-dat-o-ther′-ap-e*). See *Hydrotherapy.*

Hyderabad Commission. See *Anesthetic.*

Hydnocarpus (*hid-no-kar′-pus*) [ὑδνον, mushroom; καρπός, fruit]. A genus of poisonous bixaceous tropical trees. **H.** (or **Gynocardia**) **anthelminthicus,** is anthelmintic and useful in skin-diseases. **H. inebrians** and **H. wightianus** have similar uses. Unof.

Hydracetin (*hi-dras′-et-in*) [ὑδρα, a water-serpent], $C_6H_5N_2H_2(C_2H_3O)$. A derivative of coal-tar and a powerful antipyretic and antirheumatic; its use, however, is attended with danger. Dose gr. ½ to ij. An ointment (10 per cent.) is recommended in psoriasis. Unof.

Hydracid (*hi-dras′-ia*) [ὑδωρ, water; *acidum*, acid]. A term sometimes used in chemistry to denote an acid formed by a combination of hydrogen and some acid element or radicle other than oxygen. Hydrochloric acid, HCl, and hydrogen or hydric sulphid, H_2S, are examples.

Hydradenitis (*hi-drad-en-i′-tis*) [ὑδωρ, water; ἀδήν, gland; ιτις, inflammation]. 1. Same as *Hidrosadenitis.* 2. Lymphadenitis. **H. destruens suppurativa.** See *Hydrosadenitis phlegmonosa.*

Hydradenoma (*hi-drad-en-o′-ma*). Same as *Hidradenoma.*

Hydræmia (*hi-dre′-me-ah*). See *Hydremia.*

Hydraëropericardium (*hi-drah-e-ro-per-ik-ar′-de-um*) [ὑδωρ, water; ἀήρ, air; περί, around; καρδία, heart]. The presence of fluid and gas in the pericardium.

Hydraëropleuria (*hi-drah-e-ro-plu′-re-ah*) [ὑδωρ, water; ἀήρ, air; πλευρά, side]. Same as *Hydropneumothorax.*

Hydragogue (*hi′-drag-og*) [ὑδωρ, water; ἀγωγος, leading]. 1. Expelling water. 2. A purgative that causes copious liquid alvine discharges.

Hydramin (*hi′-dram-in*) [ὑδωρ, water; *amin*]. Any one of the oxyethyl bases produced by the action of aqueous ammonia upon ethylene oxid. The hydramins are thick, strongly alkaline liquids, that decompose upon distillation.

Hydramnios (*hi-dram′-ne-os*) [ὑδωρ, water; ἀμνίον, fetal membrane]. An abnormal amount of amniotic fluid.

Hydrangea (*hi-dran′-je-ah*) [ὑδωρ, water; ἀγγεῖον, vessel]. A genus of saxifragaceous shrubs. The root of **H. arborescensis,** much used by the Cherokee Indians for calculi in the bladder, is said to be of some utility. Dose of the liquid extract ʒss–ij; of a decoction ℥j–ij. Unof.

Hydrangeion (*hi-dran′-je-on*) [ὑδωρ, water, lymph; ἀγγεῖον, vessel: *pl.*, *Hydrangeia*]. A lymphatic vessel.

Hydrangeitis (*hi-dran-je-i′-tis*) [ὑδωρ, water; ἀγγεῖον, a vessel; ιτις, inflammation]. Inflammation of a lymphatic vessel; lymphangitis.

Hydrangiology (*hi-dran-je-ol′-o-je*) [ὑδωρ, water; ἀγγεῖον, vessel; λόγος, science]. The science of the nature, functions, and diseases of the lymphatics.

Hydranth (*hi'-dranth*) [ὕδρος, hydra; ἄνθος, flower]. In biology, the proper nutritive zoöid of the Hydrozoa.

Hydrargism (*hi-drar'-gism*). See *Mercurialism.*

Hydrargyria (*hi-drar-jir'-e-ah*). See *Mercurialism.*

Hydrargyriasis (*hi-drar-jir-i'-as-is*). See *Mercurialism.*

Hydrargyrism (*hi-drar'-jir-izm*). See *Mercurialism.*

Hydrargyromania (*hi-drar-jir-o-ma'-ne-ah*) [ὑδράργυρος, mercury; μανία, madness]. Insanity due to the unwise use of mercury.

Hydrargyrophobia (*hi-drar-jir-o-fo'-be-ah*) [ὑδράργυρος, mercury; φόβος, fear]. Morbid dread of mercurial medicines.

Hydrargyrophthalmia (*hi-drar-jir-off-thal'-me-ah*) [ὑδράργυρος, mercury; ὀφθαλμία, ophthalmia]. Ophthalmia due to mercurial poisoning.

Hydrargyrum (*hi-drar'-jir-um*) [ὑδράργυρος, mercury: *gen., Hydrargyri*]. Mercury. Quicksilver. Hg = 200; quantivalence II, IV. The only liquid metallic element, hence the common name, *quicksilver.* See *Elements, Table of.* In medicine, the metal, its nitrate, oxids, chlorids, and iodids are the salts most commonly, the sulphid and cyanid less frequently, used. In small doses continued not too long a time it is a tonic, purgative, and alterative. In larger doses, or too long continued, it is likely to produce ptyalism. In "biliousness," mercurial purgatives have long been a favorite remedy, blue-mass, and mercurous chlorid or calomel being usually employed. In syphilis, mercuric chlorid and mercuric iodid are generally considered specific. Mercury in the form of calomel is useful in glandular inflammations. Formerly it was much used in the same form in typhoid fever and malarial fevers. The soluble salts of mercury are highly poisonous. **H. ammoniatum,** ammoniated mercury, "white precipitate," mercur-ammonium chlorid, NH_2HgCl, is used externally. **H. ammoniati, Ung.,** "white precipitate ointment"—ammoniated mercury 10, benzoated lard 90 parts. **H. benzoas,** $Hg(C_6H_5CO_2)_2$. Dose, in pill, gr. $\frac{1}{10}$. **H. carbolas,** easily absorbed. Dose, in pill, gr. $\frac{1}{8}$–$\frac{1}{2}$. **H. chloridum corrosivum,** $HgCl_2$ (**H. perchloridum,** B. P.), corrosive chlorid of mercury, mercuric chlorid, "bichlorid of mercury," "corrosive sublimate." Soluble in water and alcohol; antisyphilitic. Dose gr. $\frac{1}{10}$–$\frac{1}{10}$. Very poisonous. **Liq. hydrarg. perchlorid.** (B. P.), contains gr. ss of the mercurial salt to the ounce. Dose ʒss–ij. **H. chloridum mite,** Hg_2Cl_2 (**H. subchloridum,** B. P.), mild chlorid or subchlorid of mercury, mercurous chlorid, "calomel,"—laxative, tonic, and antipyretic. Insoluble in water and alcohol. Dose gr. $\frac{1}{2}$–x. **H. subchlor., Ung.** (B. P.), 1 to $6\frac{1}{2}$ of benzoated lard. **H. cum ammonia, Emplastrum.** See *Ammonium.* **H. cum creta,** mercury with chalk, "chalk-mixture," "gray powder," contains mercury 38, clarified honey, 10, prepared chalk 57, water q. s. Dose gr. ss–x. **H. cyanidum,** $Hg(CN)_2$, mercuric cyanid. Soluble in water and alcohol. It is recommended, with aconite, in diphtheria. Dose gr. $\frac{1}{100}$–$\frac{1}{10}$. Poisonous. **H., Emplastrum,** mercurial plaster—mercury 30, oleate of mercury 1.2, lead-plaster q. s. **H. et arsenii iod., Liq.,** Donovan's Solution. See *Arsenic.* **H. flav., Lotio,** unof., "yellow wash" for syphilitic sores—corrosive sublimate gr. xviij, lime-water ʒ x. **Gilbert's Syrup,** unof., hydrarg. biniodid. gr. iij, potass. iodid. gr. cij, water ʒiij, syrup q. s. *ad* ℥ x. **H. iodid. flavum,** Hg_2I_2, green iodid of mercury, mercurous iodid. Dose gr. $\frac{1}{10}$–$\frac{1}{8}$. **H. iodid. rubrum,** HgI_2, red iodid or biniodid of mercury, mercuric iodid. Soluble in a solution of potassium iodid. Poisonous. Dose gr. $\frac{1}{30}$–$\frac{1}{10}$. **H. iodid. rub., Ung.** (B. P.), one in 28. **H., Liniment** (B. P.), contains one part of mercury in six. **H., Massa,** "blue mass," "blue pill," has mercury 33, liquorice 5, althea 25, glycerin 3, confection of rose 34. It is used mainly as a purgative. Dose gr. ss–xx. **H. nigra, Lotio,** unof., "black wash" for syphilitic sores—calomel gr. xxx, lime-water ʒ x. **H. nitrat., Liq.,** solution of mercuric nitrate. It is used as an escharotic. **H. nitrat. rub., Ung.,** unof., red ointment of mercuric nitrate, brown citrine ointment; it is made with cod-liver oil. **H. nitrat., Ung.,** citrine ointment,—mercury 7, nitric acid 17, lard-oil 76. **H. nitrat., Ung., Dil.** (B. P.), citrine ointment and soft paraffin, 1 in 2. **H. oleat.,** contains yellow oxid 20, oleic acid 80. **H. oxid. flav.,** yellow oxid of mercury. Insoluble in water; soluble in nitric and hydrochloric acids. It is used in the preparation of ointments, etc. **H. oxid. flav., Ung.,** contains 10 per cent. of the oxid. **H. oxid. rub.,** red oxid of mercury. Dose gr. $\frac{1}{30}$–$\frac{1}{10}$. **H. oxid. rub., Ung.,** contains 10 per cent. of the oxid. **H. salicylas,** HgC_6H_4OCOO. Dose gr. $\frac{1}{4}$, in pill. **H. subsulph. flav.,** $Hg(HgO)_2SO_4$, yellow subsulphate of mercury, basic mercuric sulphate, "turpeth mineral." Soluble in nitro hydrochloric acid. Dose, for emesis, gr. ij–v. **H. succinimidum** has been recommended for hypodermatic use. **H. sulph. rub.,** red mercuric sulphate, "cinnabar," is used only by fumigation. **H., Suppositoria** (B. P.), each contains gr. v of mercurial ointment. **H. tannas,** a green powder, rapidly absorbed. Dose gr. j, in pill. **H., Unguent.,** mercurial ointment, "blue ointment,"—mercury 450, lard 225, suet 225, comp. tinct. benzoin 40, old mercurial ointment 100; these are triturated until the globules of mercury disappear under a magnifying glass. It is used to produce the physiologic effects of mercury by inunction.

Hydrarthrosis (*hi-drar-thro'-sis*) [ὑδωρ, water; ἄρθρον, joint]. An effusion of fluid into a joint, usually the result of chronic synovitis. It is called also **Hydrops articuli,** dropsy of the joint, white swelling, etc.

Hydrarthrus (*hi-drar'-thrus*). See *Hydrarthrosis.*

Hydrastin (*hi-dras'-tin*) [ὑδωρ, water; ὀράω, to act], $C_{22}H_{23}NO_6$. 1. An alkaloid occurring together with berberin ($C_{20}H_{17}NO_4 + 4\frac{1}{2}H_2O$) in the roots of *Hydrastis canadensis* (*q. v.*); $1\frac{1}{2}$–4 grains may be given per diem, in divided doses. In overdoses it may have poisonous effects. 2. A precipitate from a tincture of the root of *Hydrastis canadensis;* it is laxative, cholagogue, alterative, tonic, antiseptic, etc. Dose gr. j–ij. Unof.

Hydrastinin (*hi-dras'-tin-in*) [ὑδωρ, water; ὀράω, to act], $C_{11}H_{13}NO_3$. An alkaloid obtained by the oxidation of hydrastin. It is useful in chronic metritis and in salpingitis, controls hemorrhage, and is a good substitute for ergot. It stimulates the cardiac muscle and causes contraction of the lumen of arteries. Dose of the hydrochlorate gr. ij–iv, hypodermatically.

Hydrastis (*hi-dras'-tis*) [ὑδωρ, water; ὀράω, to act]. Golden seal. The roots of *H. canadensis,* with properties due to several alkaloids, the principal being hydrastin, *q. v.* It is a simple, bitter tonic, with antiperiodic properties, and arrests the movements of white blood-corpuscles. It is useful in catarrh of the stomach and urinary organs, and as a lotion in gonorrhea and gleet. Dose of the fld. ext., ♏v–xxx; of the tinct. (20 per cent.) ʒss–ij. **H., Ext., Liquid.** (B. P.) Dose ♏v–xxx. **H., Glyceritum,** hydrastis 10, glycerin 5, alcohol and water, q. s. **H., Tinct.,** 20 per cent. strength. Dose ♏xx–ʒj. Unof.

Hydrate (*hi'-drāt*) [ὕδωρ, water]. A compound of an elementary atom, or of a radical, with the radical *hydroxyl* H–O– or –O–H, as the hydrogen atom may be positive or negative. Practically a hydrate is considered as a molecule of water with its basic atom of hydrogen replaced by another electropositive atom, *e.g.*, potassium hydrate, K–O–H, is derived from water, H–O–H.

Hydration (*hi-dra'-shun*) [ὕδωρ, water]. The process by which a body or substance becomes impregnated or saturated with water.

Hydrazin (*hi-draz'-in*) [ὕδωρ, water; *azotum*, nitrogen], H_4N_2. 1. Diamid; a colorless, stable gas, soluble in water, having a peculiar odor and a strong alkaline reaction. Orthin is prepared from it. See *Phenyl-hydrazin*. 2. One of a class of bodies derived from hydrazin by replacing one or more of its hydrogen atoms by a compound radical.

Hydrazones (*hi'-draz-ōns*) [ὕδωρ, water; *azotum*, nitrogen]. Phenylhydrazones; a group of chemic bodies produced by the action of phenylhydrazin upon carbonyl compounds. They are usually crystalline compounds, insoluble in water. They are yellow or brown in color, and almost invariably decompose upon fusion.

Hydrecium (*hi-dre'-se-um*) [ὕδωρ, water; οἶκος, house: *pl.*, *Hydrecia*]. In biology, the sac for the reception of the retracted cenosarc attached to the swimming-bell of certain hydrozoans.

Hydrectasis (*hi-drek'-tas-is*) [ὕδωρ, water; ἔκτασις, a stretching out]. Distention by water or by a watery fluid.

Hydremesis (*hi-drem'-es-is*) [ὕδωρ, water; ἔμεσις, vomiting]. The vomiting of a watery material.

Hydremia (*hi-dre'-me-ah*) [ὕδωρ, water; αἷμα, blood]. A watery condition of the blood due to defective renal secretion or to imperfect fibrination. It accompanies albuminuria and certain other exhausting diseases.

Hydrencephal (*hi'-dren-sef-al*) [ὕδωρ, water; ἐγκέφαλος, brain]. A hydrocephalic brain.

Hydrencephalitis (*hi-dren-sef-al-i'-tis*) [ὕδωρ, water; ἐγκέφαλος, brain; ιτις, inflammation]. Inflammatory hydrocephalus.

Hydrencephalocele (*hi-dren-sef'-al-o-sēl*) [ὕδωρ, water; ἐγκέφαλος, brain; κήλη, hernia]. Encephalocele in which the tumor is in part composed of a watery fluid. **H. palatina**, a variety of hydrencephalocele in which the dura mater, distended with serum, projects into the mouth, forming a tumor possibly as large as a small apple.

Hydrencephalus (*hi-dren-sef'-al-us*). See *Hydrocephalus*.

Hydrenterocele (*hi-dren-ter'-o-sēl*) [ὕδωρ, water; ἔντερον, intestine; κήλη, hernia]. Intestinal hernia, the sac of which contains some extravasated fluid.

Hydrenterorrhea (*hi-dren-ter-or-e'-ah*) [ὕδωρ, water; ἔντερον, intestine; ῥοία, flow]. A watery diarrhea.

Hydriasis (*hi-dri'-as-is*). See *Hydro-therapeutics*.

Hydriatic (*hi-dre-at'-ik*) [ὕδωρ, water; ἰατικός, healing]. Pertaining to the cure of disease with water.

Hydriatric (*hi-dre-at'-rik*) [ὕδωρ, water; ἰατρός, physician]. Relating to the treatment of disease with water.

Hydriatry (*hi'-dre-at-re*). See *Hydro-therapeutics*.

Hydric (*hi'-drik*) [ὕδωρ, water]. Containing water.

Hydrid (*hi'-drid*) [ὕδωρ, water]. A chemic compound containing hydrogen united to an element.

Hydriodic (*hi-dre-od'-ik*) [ὕδωρ, water; ἰώδης, like a violet]. Containing hydrogen and iodin. **H. Acid**, HI, a heavy, colorless gas, with a suffocating odor and an acid reaction. It freezes at —55° C. The syrup of hydriodic acid contains 1 per cent. of absolute HI. Dose, ʒj–iv, well diluted.

Hydro- (*hi'-dro-*) [ὕδωρ, water]. A prefix signifying water, or that water forms a structural part. See, also, *Hydrate*.

Hydroa (*hi-dro'-ah*) [ὕδωρ, water; ᾠόν, egg]. A term including a group of vesicular and bullous skin-affections presenting many points of affinity with vesicating erythemata, herpes, and pemphigus. The group includes the diseases described as *Dermatitis herpetiformis*, *Pemphigus pruriginosus*, *Urticaria vesicans*, and *Herpes gestationis*, and is by no means uncommon. Hydroa occurs in individuals of the neurotic temperament; its course is chronic, but with a decided tendency toward ultimate recovery. (*Hydroa*, as the name of a skin-disease, is much confused in meaning with *Hidroa*, *q. v.*) **H. bullosa.** See *H. pruriginosum*. **H. æstivale.** See *H. vacciniforme*. **H. febrile.** See *Herpes facialis*. **H. gestationis**, that of pregnancy. **H. herpetiforme.** Also called *Dermatitis herpetiformis; Herpes gestationis; Herpes circinatus bullosus; Pemphigus circinatus*. See *Pemphigus pruriginosus*. **H. pruriginosum.** *Hydroa bullosa;* a very rare form, attended at its development with intense itching, and sometimes preceded by slight febrile symptoms, followed by the formation of small bullæ not exceeding the size of a split pea, and commencing as vesicles, without any antecedent lesion. Slight umbilication occurs, followed by desiccation, and the formation of scales or crusts. Successive crops are formed, the bullæ being discrete or grouped irregularly, but never in circles. **H. puerorum.** See *H. vacciniforme*. **H. vacciniforme.** *Hydroa æstivale; Hydroa puerorum; Recurrent summer eruption;* a recurring summer eruption of boyhood, usually with vesicles that leave scars. The disease generally begins in the first, second, or third year of life, and is often preceded by articular symptoms. The eruption develops chiefly on the uncovered parts, and is generally preceded by burning or pain, fulness of the region attacked, anorexia, and insomnia. Red spots appear, and on these rounded vesicles develop, singly or in groups, varying in size from that of a millet-seed to that of a large pea. They may coalesce into an irregularly outlined flattish bulla. The redness remains as an areola. These bullæ dry up, rupture, or become umbilicated, and form crusts which, on separating, leave slightly depressed scars resembling those of smallpox. The pathology is unknown.

Hydroadipsia (*hi-dro-ad-ip'-se-ah*) [ὕδωρ, water; ἀ, priv.; δίψα, thirst]. Absence of thirst, or of desire for water.

Hydrobenzamid (*hi-dro-ben'-zam-id*) [ὕδωρ, water; *benzoin; amid*], $C_{21}H_{18}N_2$. Azobenzoyl hydrid, a crystalline compound, soluble in alcohol.

Hydrobenzoïn (*hi-dro-ben-zo'-in*) [ὕδωρ, water; *benzoin*], $C_{14}H_{14}O_2$. A compound prepared by the action of sodium amalgam on benzoïn. It dissolves with difficulty in water, is readily soluble in alcohol, and crystallizes in large, shining, rhombic plates, melting at 134° C.

Hydrobilirubin (*hi-dro-bil-e-ru'-bin*) [ὕδωρ, water; *bilis*, bile; *ruber*, red], $C_{32}H_{40}N_4O_7$. A rose-red or brown-red pigment formed by treating a solution of bilirubin or biliverdin in dilute alkali with sodium amalgam. It is slightly soluble in water, easily so in alcohol, ether, and chloroform. It is a coloring-matter of feces, said to be identical with stercobilin, and is sometimes found in urine.

Hydrobiosis (*hi-dro-bi-o'-sis*) [ὕδωρ, water; βίος, life]. In biology, the origin and maintenance of life in fluid media.

Hydrobromate (*hi-dro-bro'-māt*) [ὑδωρ, water; βρῶμος, a stench]. A basic salt of hydrobromic acid.

Hydrobromic (*hi-dro-bro'-mik*) [ὑδωρ, water; βρῶμος, stench]. Composed of hydrogen and bromin. **H. Acid.** See *Acid, Hydrobromic.* **H. Ether,** C_2H_5Br. Bromid of ethyl. A colorless, translucent liquid, with a neutral reaction, ethereal smell, and a pungent, sweet taste; its specific gravity is 1.4733; it boils at 104° F. (40.7° C.), and burns with difficulty with a green, smokeless flame. It is prepared by distilling alcohol with either bromin, hydrobromic acid, or bromid of phosphorus. It is only slightly soluble in water, but freely so in ether or alcohol. It is used as an anesthetic. See *Anesthetic.*

Hydrobromid (*hi-dro-bro'-mid*). Same as *Hydrobromate.*

Hydrocaffeic Acid (*hi-dro-kaf-e'-ik*). See *Acid.*

Hydrocarbon (*hi-dro-kar'-bon*) [ὑδωρ, water; *carbo*, charcoal]. A name applied to any one of a multitude of compounds composed mainly of hydrogen and carbon, but also under certain conditions containing other elements as substitution-products. The possibilities of the number of such compounds may be seen in the following series, perhaps the simplest, carbon, C, being a tetrad, and requiring four monad atoms to saturate its quantivalence:—

Methane, CH_4.
Ethane, C_2H_6.
Propane, C_3H_8.
Butane, C_4H_{10}.
Pentane, C_5H_{12}.

} In either of these one or more atoms of hydrogen may be replaced by other atoms or radicles without altering the structure of the compound.

It will be noticed that the members of the series differ by CH_2 in the present case. The various members of the Fat-series are usually indicated as follows:—

Paraffin Series, C_nH_{2n+2},
Olefins, C_nH_{2n},
Acetylenes, C_nH_{2n-2},

} in which n stands for any number of carbon atoms. Thus, if $n = 3$, the corresponding member of the Paraffin series would be C_3H_8, etc. All the hydrocarbons are inflammable. They occur in nature as marsh-gas (fire-damp), natural gas, naphtha, petroleum, asphaltum, ozocerite, etc., in a multitude of forms. They, with their derivatives, form the subject-matter of organic chemistry. A *Table of the Hydrocarbons* is appended.

TABLE OF HYDROCARBONS.

1. PARAFFINS (ETHANES), C_nH_{2n+2}.

Name.	Formula.	Physical Condition.	Melting-point (Centigrade).	Boiling-point (Centigrade).	Specific Gravity (at the Melting-point).
Methane,	CH_4	Gas			0.5598
Ethane,	C_2H_6	Gas			
Propane,	C_3H_8	Gas			
Butane,	C_4H_{10}	Gas		0°	
Pentane,	C_5H_{12}	Liquid		37-39°	
Hexane,	C_6H_{14}	Liquid		71.5°	0.663
Heptane,	C_7H_{16}	Liquid		99°	0.6967
Octane,	C_8H_{18}	Liquid		125°	0.718
Nonane,	C_9H_{20}	Liquid	— 51°	149.5°	0.7330

TABLE OF HYDROCARBONS.—*Continued.*

1. PARAFFINS (ETHANES).—*Continued.*

Name.	Formula.	Physical Condition.	Melting-point (Centigrade).	Boiling-point (Centigrade).	Specific Gravity (at the Melting-point).
Decane,	$C_{10}H_{22}$	Liquid	— 32°	173°	0.7456
Undecane,	$C_{11}H_{24}$	Liquid	— 26.5°	194.5°	0.7745
Dodecane,	$C_{12}H_{26}$	Liquid	— 12°	214°	0.773
Tridecane,	$C_{13}H_{28}$	Liquid	— 6.2°	234°	0.775
Tetradecane,	$C_{14}H_{30}$	Liquid	+ 4.5°	252.5°	0.775
Pentadecane,	$C_{15}H_{32}$	Liquid	+ 10°	270.5°	0.775
Hexdecane,	$C_{16}H_{34}$	Solid	+ 18°	287.5°	0.775
Hepdecane,	$C_{17}H_{36}$	Solid	— 22.5°	303°	0.776
Octdecane,	$C_{18}H_{38}$	Solid	28°	317°	0.776
Nondecane,	$C_{19}H_{40}$	Solid	32°	330°	0.777
Eicosane,	$C_{20}H_{42}$	Solid	36.7°	205°	0.777
Heneicosane,	$C_{21}H_{44}$	Solid	40.4°	215°	0.778
Docosane,	$C_{22}H_{46}$	Solid	44.4°	224.5°	0.778
Tricosane,	$C_{23}H_{48}$	Solid	47.7°	234°	0.778
Tetracosane,	$C_{24}H_{50}$	Solid	51.1°	243°	0.778
Pentacosane,	$C_{25}H_{52}$	Solid			
Hexcosane,	$C_{26}H_{54}$	Solid			
Heptacosane,	$C_{27}H_{56}$	Solid	59.5°	270°	0.779
Octcosane,	$C_{28}H_{58}$	Solid			
Noncosane,	$C_{29}H_{60}$	Solid			
Hentriacontane,	$C_{31}H_{64}$	Solid	68.1°	302°	0.780
Dotriacontane,	$C_{32}H_{66}$	Solid	70°	310°	0.781
Pentatriacontane,	$C_{35}H_{72}$	Solid	74.7°	331°	0.781
Hexacontane,	$C_{60}H_{122}$	Solid	102°		

Under 760 mm. pressure.

Under 15 mm. pressure.

2. ALKYLENS (OLEFINS), C_nH_{2n}.

Methylene,	CH_2	Does not exist in the free state.			
Ethylene,	C_2H_4	Gas		— 105°	
Propylene,	C_3H_6	Gas			
Trimethylene,	C_3H_6	Gas			
Butylene,	C_4H_8	Gas		— 5°	
Amylene,	C_5H_{10}	Liquid		+ 37°	
Hexylene,	C_6H_{12}	Liquid			
Heptylene,	C_7H_{14}	Liquid			
Cetene,	C_8H_{16}	Liquid			
	C_9H_{18}	Liquid			
	$C_{10}H_{20}$	Liquid

Heptadecylene,	$C_{17}H_{34}$	Solid			
Octodecylene,	$C_{18}H_{36}$	Solid	+ 18°	179°	0.7910
Melene, . . .	$C_{30}H_{60}$	Solid			

3. ACETYLENE SERIES, C_nH_{2n-2}.

Acetylene, . .	C_2H_2	Gas			
Allylene, . . .	C_3H_4	Gas			
Crotonylene, .	C_4H_6	Liquid		180°	
Valerylene, . .	C_5H_8				
Hexoylene, . .	C_6H_{10}				
	C_7H_{12}				
	C_8H_{14}				
	C_9H_{16}				
Menthene, . .	$C_{10}H_{18}$	Liquid		167°	
	$C_{11}H_{20}$				
Dodecylidene,	$C_{12}H_{22}$		— 9°	105°	0.8097
Tridecylidene,	$C_{13}H_{24}$				
Tetradecylidene, ...	$C_{14}H_{26}$		+ 6.5°	134°	0.8064
Pentadecylidene, ...	$C_{15}H_{28}$				
Hexadecylidene, ...	$C_{16}H_{30}$		20°	160°	0.8039
Heptadecylidene, ...	$C_{17}H_{32}$				
Octadecylidene, ...	$C_{18}H_{34}$		30°	184°	0.8016

At 15 mm. pressure.

4. HYDROCARBONS, C_nH_{2n-4}.

Vinylacetylene,	C_4H_4	Not yet isolated.			
Valylene, . . .	C_5H_6	Liquid		50°	
Camphene, . .	$C_{10}H_{16}$	Solid			
Citrene, . . .	$C_{10}H_{16}$	Liquid		175–176°	0.846
Dipentene, . .	$C_{10}H_{16}$	Liquid		175–176°	0.853
Pinene, ...	$C_{10}H_{16}$	Liquid		175–176°	
Sylvestrene, .	$C_{10}H_{16}$	Liquid		175–178°	
Terpinene, . .	$C_{10}H_{16}$	Liquid		180°	
Fichtelite, . .	$C_{18}H_{32}$	Solid	46°		

5. HYDROCARBONS, C_nH_{2n-6}.

Diacetylene, .	C_4H_2	Gas			
Dipropargyl, .	C_6H_6	Liquid		85°	0.81
Benzene, . . .	C_6H_6	Liquid	+ 6°	80.5°	0.899
Toluene, . . .	C_7H_8	Liquid		110.3°	0.882

TABLE OF HYDROCARBONS.—*Continued.*

Hexamethylbenzene, $C_6(CH_3)_6$, .	264° C.	

Hydrocardia (*hi-dro-kar'-de-ah*). See *Hydropericardium*.

Hydrocaulus (*hi-dro-kaw'-lus*) [ὑδωρ, water; καυλός, a stem: *pl.*, *Hydrocauli*]. In biology, the main stem of a hydrozoan colony.

Hydrocele (*hi'-dro-sēl*) [ὑδωρ, water; κήλη, tumor]. A collection of serous fluid in the tunica vaginalis testis, or in connection with the testicle or cord. The term is applied, also, to a serous tumor in other locations.

Hydrocelia (*hi-dro-se'-le-ah*) [ὑδωρ, water; κοιλία, belly]. Dropsy of the belly or abdominal region.

Hydrocellulose (*hi-dro-sel'-u-lōs*) [ὑδωρ, water; *cellula*, a little cell], $C_{12}H_{22}O_{11}$. A body formed by moistening cellulose with a dilute mineral acid, and then drying. It is used in photography.

Hydrocelodes (*hi-dro-sel-o'-dēz*) [ὑδωρ, water; κήλη, tumor; εἶδος, form]. A tumor resembling hydrocele, but due to an extravasation of urine.

Hydrocenosis (*hi-dro-sen-o'-sis*) [ὑδωρ, water; κένωσις, evacuation]. An evacuation of water either by the use of hydragogue cathartics or by the operation of "tapping" the cavity containing the accumulation of fluid. See *Paracentesis*.

Hydrocenotic (*hi-dro-sen-ot'-ik*) [ὑδωρ, water; κένωσις, evacuation]. Relating to or causing hydrocenosis.

Hydrocephalic (*hi-dro-sef-al'-ik*) [ὑδωρ, water; κεφαλή, head]. Pertaining to or affected with hydrocephalus. **H. Cry**, the shriek of pain of the hydrocephalic child during the exacerbations.

Hydrocephalitis (*hi-dro-sef-al-i'-tis*). See *Hydrencephalitis*.

Hydrocephalocele (*hi-dro-sef'-al-o-sēl*) [ὑδωρ, water; κεφαλή, head; κήλη, a tumor]. Congenital hydrocephalus in which the encephalon protrudes through the ununited or undeveloped cranial wall.

Hydrocephaloid (*hi-dro-sef'-al-oid'*) [ὑδωρ, water; κεφαλή, head; εἶδος, form]. Pertaining to or resembling hydrocephalus. **H. Disease**, Marshall Hall's Disease; a disease resembling hydrocephalus, sometimes observed in poorly-nourished infants just after weaning. It is a condition of nervous exhaustion, generally coming on after a prolonged illness, or following premature weaning. There is a stage of irritability and one of torpor. The pulse is irregular, the fontanel flaccid and hollow, and there is no, or but slight, tendency to vomiting. Stimulants and tonics arrest the progress of the condition.

Hydrocephalus (*hi-dro-sef'-al-us*) [ὑδωρ, water; κεφαλή, head]. A collection of fluid in the cerebral ventricles (*internal hydrocephalus*) or outside the brain-substance (*external hydrocephalus*), preventing closure of the fontanels and causing enlargement of the skull. The head may measure as much as thirty inches in circumference. Wormian bones develop in the sutures and fontanels; the eyeballs are rendered prominent and at the same time their axes are depressed. Often there is a retardation of the mental development, and the patient usually dies within a few years. An acute hydrocephalus occurs in meningeal inflammation. The chronic form is congenital or infantile.

Hydrochinone (*hī-dro-ki'-nōn*) [ὑδωρ, water; *quinone*], $C_6H_6O_2$. A substance existing in urine as an ethereal compound with H_2SO_4; it is largely the cause of the dark color that this excretion assumes after the absorption of phenol on exposure to the air.

Hydrochlorate (*hi-dro-klo'-rāt*) [ὑδωρ, water; χλώρος, green]. Any salt or compound of hydrochloric acid.

Hydrochloric Acid (*hi-dro-klo'-rik*). See *Acid, Hydrochloric*.

Hydrochlorid (*hi-dro-chlo'-rid*) [ὑδωρ, water; χλώρος, green]. Same as *Hydrochlorate*.

Hydrocholecystis (*hi-dro-ko-le-sis'-tis*) [ὑδωρ, water; χολή, bile; κύστις, bladder]. Dropsy of the gall-bladder.

Hydrocinnamic Acid (*hi-dro-sin-am'-ik*). See *Acid*.

Hydrocirsocele (*hi-dro-sir'-so-sēl*) [ὑδωρ, water; κιρσός, venous enlargement; κήλη, tumor]. Hydrocele accompanied with varicose veins of the spermatic cord.

Hydrocœlia (*hid-ro-se'-le-ah*). See *Hydrocelia*.

Hydrocœroulignone (*hi-dro-se-ru-lig'-nōn*) [ὑδωρ, water; *cæruleus*, blue; *lignum*, wood], $C_{16}H_{10}O_6$. A divalent phenol, crystallizing from alcohol and glacial acetic acid in colorless leaflets, and melting at 190° C.

Hydrocollidin (*hi-dro-kol'-id-in*) [ὑδωρ, water; κόλλα, glue]. A highly poisonous ptomaïne-base, so named by Gautier and Etard, and declared by them to be identical with the hydrocollidin obtained by Cahours and Etard from the action of selenium on nicotin. Nencki, on the other hand, asserted its identity with a base (*collidin*) isolated by him in 1876, to which he had ascribed the formula $C_8H_{11}N$. The formula of Gautier and Etard's hydrocollidin is $C_8H_{13}N$. This ptomaïne was obtained from chloroformic extracts, from putrefying mackerel, and putrefying horse-flesh and ox-flesh. The free base is an almost colorless, alkaline, oily fluid, having a strong, penetrating odor like syringa. So small a dose as 0.0017 gram of the hydrochlorid, injected into birds, produced dizziness, paralysis, and death. The pupils remain normal, and the heart stops in diastole.

Hydrocolpocele (*hi-dro-kol'-po-sēl*) [ὑδωρ, water; κόλπος, vagina; κήλη, tumor]. A serous tumor of the vagina.

Hydrocotarnin (*hi-dro-ko-tar'-nin*) [ὑδωρ, water; *cotarnin*], $C_{12}H_{15}NO_3 + \frac{1}{2}H_2O$. A crystalline alkaloid occurring in small amount in opium. It melts at 50° C., and is readily soluble in alcohol, ether, and chloroform.

Hidrocotoin (*hid-ro-ko'-to-in*) [ὑδωρ, water; Sp., *coto*, a cubit], $C_{15}H_{14}O_4$. An alkaloid of coto-bark, occurring in yellowish crystals without taste.

Hydrocotyle (*hi-dro-kot'-il-e*) [ὑδωρ, water; κοτύλη, a cup]. Pennywort; a genus of umbelliferous herbs. The leaves of **H. asiatica** serve as a bitter tonic and alterative, and are very serviceable in skin-diseases, syphilitic sores, and leprosy. **H. centella**, of S. Africa, **H. umbellata**, of America, and **H. vulgaris**, of Europe, have been employed in medicine, but their properties are little known. **H. bonariasis**, of S. America, is diuretic. All unof.

Hydrocrania (*hid-ro-kra'-ne-ah*). Same as *Hydrocephalus*.

Hydrocyanic (*hi-dro-se-an'-ik*). See *Cyanogen*, and *Acid, Hydrocyanic*.

Hydrocyst (*hi'-dro-sist*) [ὑδωρ, water; κύστις, bladder]. A cyst containing a water-like liquid. Sometimes it is synonymous with hydatid. In biology, Huxley's name for singular organs found in certain of the Hydrozoa (especially the *Physophoridæ*). They are pyriform sacs of ectoderm and endoderm, closed at their distal ends, but in free communication with the somatic cavity at their proximal ends; they are arrested polypites in which the mouth has never become developed.

Hydroderma (*hi-dro-der'-mah*) [ὑδωρ, water; δέρμα, skin]. Dropsy of the skin.

Hydrodictyotomy (*hi-dro-dik-te-ot'-o-me*) [ὑδωρ, water; δίκτυον, net; τομή, section]. Surgical incision of the retina for the relief of edema.

Hydrodiuresis (*hi-dro-di-u-re'-sis*) [ὑδωρ, water; διά, through; οὐρέειν, to make water]. A copious flow of watery urine.

Hydro-electric (*hi-dro-e-lek'-trik*) [ὕδωρ, water; ἤλεκτρον, electricity]. Pertaining to electricity developed by the physical action of fluids or in connection with water. **H. Bath,** a bath in which the metallic lining of the tub is connected with one pole of a battery, the other being in contact with the person of the patient.

Hydrofluoric Acid (*hi-dro-flu-or'-ik*). See *Acid.*

Hydrogaster (*hi-dro-gas'-ter*). Synonym of *Ascites.*

Hydrogen (*hi'-dro-jen*) [ὕδωρ, water; γεννᾶν, to produce]. H = 1. Quantivalence 1. A gaseous element, one liter of which weighs .0896 gram. It is feebly basic and occurs in nature combined with oxygen in the form of water H_2O. It has been liquefied at a temperature of —286° F. under a tension of 650 atmospheres—a pressure of about 4.7 tons per square inch. In combination with carbon, oxygen, and nitrogen, it forms a multitude of radicles formerly known as "organic" compounds, but now often synthetically formed. It is used largely in the qualitative determination of arsenic and antimony, and for combustion with oxygen to produce intense heat. It has also been used by inhalation in pulmonary tuberculosis. See *Elements, Table of.* **H. peroxid,** or **dioxid,** an unstable compound having the composition H_2O_2. It is a powerful antiseptic and germicide, and is used as a disinfectant in diphtheria, glandular swellings and suppurative inflammations, and as an antispasmodic to relieve the paroxysms of whooping-cough. It is the basis of most hair-bleaching solutions. Dose ʒss–ij. Unof. **H. d., Aqua,** solution of hydrogen dioxid; contains 3 per cent. by weight of the pure dioxid. **H. sulphid.** See *Acid Hydrosulphuric.*

Hydrogenesis (*hi-dro-jen'-es-is*) [ὕδωρ, water; γεννᾶν, to produce: *pl. Hydrogeneses*]. 1. The collection or formation of a watery fluid. 2. Any disease in which there is a predominance or degeneration of mucous secretion, fat, bile, or milk.

Hydrohematocele (*hi-dro-hem'-at-o-sēl*) [ὕδωρ, water; αἷμα, blood; κήλη, tumor]. Hematocele associated with hydrocele.

Hydrohemia (*hi-dro-hem'-e-ah*). Same as *Hydremia.*

Hydrohemostat (*hi-dro-hem'-o-stat*) [ὕδωρ, water; αἷμα, blood; στατός, stopped]. A device for stopping hemorrhage by means of hydrostatic pressure.

Hydrohemothorax (*hi-dro-hem-o-thō'-raks*) [ὕδωρ, water; αἷμα, blood; θώραξ, thorax]. An effusion of hemorrhagic fluid into the pleural cavity.

Hydrohymenitis (*hi-dro-hi-men-i'-tis*). See *Hydrymenitis.*

Hydrohystera (*hi-dro-his'-ter-ah*). See *Hydrometra.*

Hydroid (*hi'-droid*) [ὕδωρ, water; εἶδος, form]. 1. Like water. 2. Living in water.

Hydrolactometer (*hi-dro-lak-tom'-et-er*) [ὕδωρ, water; *lac*, milk; μέτρον, measure]. An instrument used in estimating the percentage of water in any given sample of milk.

Hydrolatum (*hi-dro-la'-tum*) [ὕδωρ, water: *gen.*, *Hydrolati*; *pl.*, *Hydrolata*]. A medicated water.

Hydrolëin (*hi-drol'-e-in*) [ὕδωρ, water; *oleum*, oil]. A proprietary remedy consisting of an emulsion of cod-liver oil with pancreatin and borax.

Hydrology (*hi-drol'-o-je*) [ὕδωρ, water; λόγος, science]. A treatise on the nature and uses of water.

Hydrolymph (*hi'-dro-limf*) [ὕδωρ, water; *lympha*, water]. A term applied to the blood of certain animals which is composed largely of the salt or fresh water in which they live, and containing a small amount of corpuscular elements.

Hydrolyst (*hi'-dro-list*) [ὕδωρ, water; λύσις, dissolving]. A substance that, like sulphuric acid, diastase, emulsin, etc., induces hydrolysis; an hydrolytic agent.

Hydrolyte (*hi'-dro-līt*) [ὕδωρ, water; λύσις, dissolving]. The substance hydrolyzed.

Hydrolytic (*hi-dro-lit'-ik*) [ὕδωρ, water; λύειν, to dissolve]. Pertaining to the decomposition of water, or the liberation of water during a chemic reaction. **H. Ferments,** those causing a combination with the elements of water in the substances they decompose.

Hydroma (*hi-dro'-mah*) [ὕδρωμα; ὕδωρ, water; ὄμα, a tumor: *pl.*, *Hydromata*]. A tumor containing water. A cyst or sac filled with water or serous fluid. Also, an edematous swelling. Also, the cystic dilatation of a lymphatic of the neck.

Hydromania (*hi-dro-ma'-ne-ah*) [ὕδωρ, water; μανία, madness]. 1. Intense or maddening thirst. 2. Mania with desire for suicide by drowning.

Hydromel (*hi'-dro-mel*) [ὕδωρ, water; μέλι, honey]. A fermented mixture of honey and water, whether medicated or not; a kind of mead or metheglin.

Hydromeningitis (*hi-dro-men-in-ji'-tis*) [ὕδωρ, water; μῆνιγξ, a membrane; ιτις, inflammation]. Inflammation of the membranes of the brain or cord, accompanied by effusion of watery fluid.

Hydromeningocele (*hi-dro-men-in'-go-sēl*) [ὕδωρ, water; μῆνιγξ, membrane; κήλη, a tumor]. A cystic tumor of the meninges, protruding through the skull. Also, a cystic tumor in the arachnoid cavity or in the continuation of the subarachnoid space.

Hydrometer (*hi-drom'-et-er*) [ὕδωρ, water; μέτρον, a measure]. An instrument for determining the specific gravity of liquids or solutions containing water.

Hydrometra (*hi-dro-me'-trah*) [ὕδωρ, water; μήτρα, the womb]. A collection of water or mucus in the womb. It may result from congenital atresia in infants, but usually follows an endometritis with stenosis of the cervix.

Hydrometrectasia (*hi-dro-me-trek-ta'-ze-ah*) [ὕδωρ, water; μήτρα, womb; ἔκτασις, a stretching out]. Hydrometra causing distention of the uterus.

Hydromicrencephalia (*hi-dro-mi-kren-sef-a'-le-ah*) or **Hydromicrencephaly** (*hi-dro-mi-kren-sef'-al-e*) [ὕδωρ, water; μικρός, small; ἐγκέφαλος, the brain]. Micrencephaly leading to, or complicated by, a serous effusion within the cranial cavity.

Hydromphalocele (*hi-drom-fal'-o-sēl*) [ὕδωρ, water; ὀμφαλός, navel; κήλη, hernia]. Cystic tumor in the sac of an umbilical hernia.

Hydromphalus (*hi-drom'-fal-us*) [ὕδωρ, water; ὀμφαλός, navel]. A tumor at the navel distended with water. It may arise either from ascites or umbilical hernia.

Hydromyelia (*hi-dro-mi-e'-le-ah*) or **Hydromyelus** (*hi-dro-mi'-el-us*) [ὕδωρ, water; μυελός, marrow]. Dilatation of the central canal of the spinal cord with an accumulation of fluid. It may be moderate or extreme.

Hydromyelitis (*hi-dro-mi-el-i'-tis*) [ὕδωρ, water; μυελός, marrow; ιτις, inflammation]. Same as *Hydrorrhachis interna.*

Hydromyringa, or **Hydromyrinx** (*hi-dro-mir-in'-gah* or *hi-dro-mi'-rinks*) [ὕδωρ, water; *myrinx*, the tympanic membrane]. 1. The distention of the membrana tympani with water effused within its substance. 2. Less correctly, the same as *Hydrotympanum.*

Hydronaphthol (*hi-dro-naf'-thol*) [ὕδωρ, water; νάφθα, asphalt]. A proprietary preparation recommended as an odorless, non-poisonous, and non-corrosive antiseptic. It is regarded by some as identical with betanaphthol. Dose gr. ij–v. Unof.

Hydronaphthylamin (*hi-dro-naf-thil'-am-in*) [ὕδωρ, water; νάφθα, asphalt; *amin*], $C_{10}H_7.H_4.NH_2$. A compound, called also tetrahydrobetanaphthylamin; a solution of 1 to 5 per cent., whether used topically

or hypodermatically, causes great dilatation of the pupil.

Hydroncus (*hi-drong'-kus*) [ὑδωρ, water; ὄγκος, mass]. A distention or swelling caused by an accumulation of water. See, also, *Edema* and *Anasarca*.

Hydronephrosis (*hi-dro-nef-ro'-sis*) [ὑδωρ, water; νεφρός, kidney]. A collection of urine in the pelvis of the kidney from obstructed outflow. The obstruction may be caused by an impacted calculus, a stenosed ureter, congenital deformities, or new-growths. The cyst may vary in size, being either very small or enormous. Hydronephrosis is marked clinically by the presence of a tumor in the renal region, soft and fluctuating, and usually painless. **H., Intermittent,** one in which there is from time to time the occurrence of a free discharge of urine, with diminution in the size of the renal tumor; ordinarily the retention is the result of twisting or kinking of a ureter.

Hydronephrotic (*hi-dro-nef-rot'-ik*) [ὑδωρ, water; νεφρός, kidney]. Relating to, affected with, or of the nature of, hydronephrosis.

Hydronosos (*hi-dron'-o-sus*) [ὑδωρ, water; νόσος, disease]. A disease attended with dropsy.

Hydroparesis (*hi-dro-par'-es-is*) [ὑδωρ, water; πάρεσις, paralysis]. A paretic affection characterized by watery effusions, such as are seen in beriberi.

Hydropathy (*hi-drop'-ath-e*) [ὑδωρ, water; πάθος, disease]. The treatment of diseases by the use of water, externally and internally.

Hydropedesis (*hi-dro-ped-e'-sis*). See *Hidropedesis*.

Hydropericarditis (*hi-dro-per-ik-ar-di'-tis*) [ὑδωρ, water; περί, around; καρδία, heart; ιτις, inflammation]. Pericarditis accompanied by serous effusion into the pericardium.

Hydropericardium (*hi-dro-per-ik-ar'-de-um*) [ὑδωρ, water; περί, around; καρδία, heart]. A collection of water within the pericardium. It may be active, passive, or mechanical, but is generally the result of kidney-disease, valvular lesions of the heart, or chronic affections of the lungs.

Hydroperididymia (*hi-dro-per-e-did-im'-e-ah*) [ὑδωρ, water; περί, around; δίδυμος, testicle]. Hydrocele.

Hydroperitoneum (*hi-dro-per-it-on-e'-um*). See *Ascites*.

Hydrophallus (*hi-dro-fal'-us*) [ὑδωρ, water; φαλλός, penis]. A dropsical swelling of the penis.

Hydrophilous (*hi-droff'-il-us*) [ὑδωρ, water; φίλος, loving]. In biology, applied to plants that are fertilized through the agency of water.

Hydrophlegmasia (*hi-dro-fleg-ma'-ze-ah*) [ὑδωρ, water; φλεγμασία, inflammation]. Any phlegmasia or inflammation characterized by serous effusion.

Hydrophobe (*hi'-dro-fōb*) [ὑδωρ, water; φόβος, fear]. A person who is affected with rabies.

Hydrophobia (*hi-dro-fo'-be-ah*) [ὑδωρ, water; φόβος, dread]. A symptom of rabies in man, consisting in fear of, or inability to swallow, water. The term is used commonly as a synonym of *Rabies*, and particularly of the disease in man. **H., Pseudo-.** See *Pseudo-hydrophobia*.

Hydrophobic (*hi-dro-fo'-bik*) [ὑδωρ, water; φόβος, dread]. Pertaining to, or having the nature of, hydrophobia. **H. Tetanus.** See *Kopf-tetanus*.

Hydrophobophobia (*hi-dro-fo-bo-fo'-be-ah*) [ὑδωρ, water; φόβος, fear]. A morbid and intense dread of hydrophobia.

Hydrophone (*hi'-dro-fōn*) [ὑδωρ, water; φωνή, the voice]. An instrument used in auscultatory percussion, the sound being conveyed to the ear through a column of water.

Hydrophthalmia (*hi-droff-thal'-me-ah*) [ὑδωρ, water; ὀφθαλμός, eye]. An increase in the fluid contents of the eye, resulting in *glaucoma*, *keratoglobus*, *staphyloma*, etc.

Hydrophthalmos (*hi-droff-thal'-mos*). See *Keratoglobus*.

Hydrophyllium (*hi-dro-fil'-e-um*) [ὑδωρ, water; φύλλον, leaf]. In biology, one of the protective envelops of the nutritive zoöids in a colony of hydrozoa.

Hydrophyr (*hi'-dro-fer*) [ὑδωρ, water]. Brücke's name for a variety of peptone insoluble in alcohol. See *Peptone*.

Hydrophysocele (*hi-dro-fi'-zo-sēl*) [ὑδωρ, water; φῦσα, air; κήλη, tumor]. Hernia containing both serous fluid and a gas.

Hydrophysometra (*hi-dro-fi-zo-me'-trah*) [ὑδωρ, water; φῦσα, wind; μήτρα, womb]. An abnormal collection of water, or other fluid, and gas, in the womb.

Hydrophyton (*hi-droff'-it-on*) [ὑδωρ, water; φυτόν, a plant: *pl.*, *Hydrophyta*]. In biology, the branching structure furnishing support to a colony of hydrozoa.

Hydropic (*hi-drop'-ik*) [ὑδρωπικός, dropsical]. Pertaining to dropsy.

Hydropica (*hi-drop'-ik-ah*) [ὑδρωπικός, dropsical]. Medicines useful in dropsy; especially diuretic remedies.

Hydroplanula (*hi-dro-plan'-u-lah*) [*hydra*, a genus of hydrozoans; *planula*, a stage of the embryo]. In biology, an embryo hydrozoan between the planula and the tentaculated actinula.

Hydroplasm (*hi'-dro-plazm*) [ὑδωρ, water; πλάσμα, plasma]. A fluid constituent of protoplasm, or of any plasma.

Hydropneumatosis (*hi-dro-nu-mat-o'-sis*) [ὑδωρ, water; πνευμάτωσις, inflation]. An abnormal or morbid collection of water, or other fluid, and air, within any of the tissues of the body. See, also, *Hydropneumonia*.

Hydropneumonia (*hi-dro-nu-mo'-ne-ah*) [ὑδωρ, water; πνεύμων, the lung]. A disease thought to consist of a serous infiltration into the lung; pulmonary edema; also, an effusion within the pleura sometimes accompanying pneumonia.

Hydropneumopericardium (*hi-dro-nu-mo-per-ik-ar'-de-um*) [ὑδωρ, water; πνεῦμα, air; περικάρδιον, pericardium]. A morbid collection of air and water within the pericardium. It causes the clacking sound commonly known as the "water-wheel" sound.

Hydropneumothorax (*hi-dro-nu-mo-tho'-raks*) [ὑδωρ, water; πνεῦμα, air; θώραξ, thorax]. Air (or gas) and water (or serous effusion) in the pleural cavity.

Hydropolyp (*hi-dro-pol'-ip*) [ὑδωρ, water; πολύπους, polyp]. In biology, a hydroid polyp; a nutritive zoöid of a hydrozoan colony.

Hydrops (*hi'-drops*) [ὑδρωψ, dropsy]. Dropsy; an abnormal collection of fluid in a cavity or part of the body. See *Anasarca*. **H. articuli,** a watery effusion into the synovial cavity of a joint. **H. cerebri,** hydrocephalus. **H. fibrinosus,** effusion into a joint, with fibrinous deposits. **H. oculi.** Same as *Hydrophthalmia*. **H. paralyticus,** that in paralyzed parts. **H. renalis.** See *Hydronephrosis*. **H. spurius,** from obstruction of the natural outlet of a secreting organ. **H. tubæ.** Same as *Hydrosalpinx*, *q. v.* **H. tubarum.** See *Hydrosalpinx*. **H., Tuberculous,** a copious effusion into a joint from tuberculous affection of the synovial membrane. **H. vesicæ felleæ,** dropsy of the gall-bladder.

Hydroptic (*hi-drop'-tik*). Same as *Hydropic*.

Hydropyopneumothorax (*hi-dro-pi-o-nu-mo-tho'-raks*) [ὑδωρ, water; πύον, pus; πνεῦμα, air; θώραξ, chest]. Hydropneumothorax, associated with the presence of pus.

Hydropyosalpinx (*hi-dro-pi-o-sal'-pingks*) [ὑδωρ, water; πύον, pus; σάλπιγξ, tube]. An accumulation of water and pus in an oviduct.

Hydropyretic (*hi-dro-pi-ret'-ik*) [ὕδωρ, water; πυρετός, heat]. Pertaining to, or affected with, hydropyretos.

Hydropyretos (*hi-dro-pir'-et-os*) [ὕδωρ, water; πυρετός, heat]. Sweating fever.

Hydroquinin (*hi-dro-kwin'-in*) [ὕδωρ, water; *quina*, Peruvian bark], $C_{20}H_{26}N_2O_2$. An alkaloid obtained from cinchona, said to be an admirable antipyretic. Unof.

Hydroquinone (*hi-dro-kwin'-ōn*) [ὕδωρ, water; *quina*, Peruvian bark], $C_6H_6O_2$. Quinol, a divalent phenol that results on boiling arbutin with dilute H_2SO_4, or from the oxidation of anilin. It crystallizes in monoclinic leaflets and hexagonal prisms, that melt at 169° C. It is readily soluble in water, alcohol, and ether, and is valuable as an antipyretic, without producing injurious after-effects; it is also used as an antiseptic. Dose gr. xv–xx. Unof.

Hydrorhiza (*hi-dro-ri'-zah*) [ὕδωρ, water; ῥίζα, root]. In biology, the disc of attachment of a *Hydra* or the homologous organs in other *Hydrozoa*.

Hydrorrhachiocentesis (*hi-dror-ak-e-o-sen-te'-sis*) [ὕδωρ, water; ῥάχις, spine; κέντησις, puncture]. Puncture of the spinal meninges in the treatment of hydrorrhachis.

Hydrorrhachis (*hi-dror'-ak-is*) [ὕδωρ, water; ῥάχις, spine]. Dropsical effusion within the vertebral canal. **H. interna**, syringomyelia, *q. v.*

Hydrorrhachitis (*hi-dror-ak-i'-tis*) [ὕδωρ, water; ῥάχις, spine; ιτις, inflammation]. Hydrorrhachis with inflammation. See *Spina bifida*.

Hydrorrhea (*hi-dror-e'-ah*) [ὕδωρ, water; ῥοία, flow]. A flow of water. **H. gravidarum**, a condition occurring occasionally in the pregnant woman, in which there is a periodic discharge from the uterus of thin mucus that accumulates as a result of hypertrophy of the uterine glands with excessive secretion.

Hydrosadenitis (*hi-dros-ad-en-i'-tis*) [ὕδωρ, water; ἀδήν, gland; ιτις, inflammation]. See *Hidrosadenitis*. **H. phlegmonosa**, a furunculus beginning in a sweat-coil. It is also called *Hydradenitis destruens suppurativa* (Politzer), *Acnitis* (Barthélemy), and *Folliculitis exulcerans* (Lukasiewicz).

Hydrosalpinx (*hi-dro-sal'-pinks*) [ὕδωρ, water; σάλπιγξ, trumpet]. A distention of the Fallopian tube with a fluid substance, and its obstruction at the fimbriated extremity, caused by inflammation. It is frequently a result of gonorrhea.

Hydrosarca (*hi-dro-sar'-kah*). See *Anasarca*.

Hydrosarcocele (*hi-dro-sar'-ko-sēl*) [ὕδωρ, water; σάρξ, flesh; κήλη, hernia]. Sarcocele with dropsy of the tunica vaginalis testis, or with true hydrocele.

Hydroscheocele (*hi-dros'-ke-o-sēl*) [ὕδωρ, water; ὀσχέον, scrotum; κήλη, a tumor]. Dropsical hernia of the scrotum.

Hydrosoma (*hi-dro-so'-mah*) [ὕδωρ, water; σῶμα, body: *pl.*, *Hydrosomata*]. In biology, the entire double-walled body of a hydrozoön.

Hydrospermatocyst (*hi-dro-sper'-mat-o-sist*) [ὕδωρ, water; σπέρμα, seed; κύστις, cyst]. A hydrocele whose fluid contains spermatozoa.

Hydrosphygmograph (*hi-dro-sfig'-mo-graf*) [ὕδωρ, water; σφυγμός, pulse; γράφειν, to write]. A sphygmographic apparatus, in which the registering device is actuated by the fluctuations of a body of water.

Hydrostatic, or **Hydrostatics** (*hi-dro-stat'-ik*, or *-iks*) [ὕδωρ, water; στατική, standing]. The science treating of the conditions and properties of liquids in a state of equilibrium. **H. Test.** See *Birth*.

Hydrostomia (*hi-dro-sto'-me-ah*) [ὕδωρ, water; στόμα, mouth]. Excessive excretion of water from the mouth.

Hydrosudopathy (*hi-dro-su-dop'-ath-e*) [ὕδωρ, water; *sudor*, sweat; πάθος, disease]. The treatment of disease by sweating and the use of water internally or externally, or both.

Hydrosulphuric acid (*hi-dro-sul-fu'-rik*). See *Acid*.

Hydrotheca (*hi-dro-the'-kah*) [ὕδωρ, water; θήκη, a case: *pl.*, *Hydrothecæ*]. In biology, a polyp-cell; the cuticular investment of a hydroid polyp, forming a cup-like receptacle allowing the protrusion of the distal moiety of the polypite.

Hydrotherapeutics (*hi-dro-ther-ap-u'-tiks*) [ὕδωρ, water; θεραπεύειν, to heal]. That part of balneology treating of the hygienic use of water, and of its therapeutic application to the body. See also, *Bath* and *Aqua*.

Hydrotherapy (*hi-dro-ther'-ap-e*). See *Hydrotherapeutics*.

Hydrothion (*hi-dro-thi'-on*) [ὕδωρ, water; θεῖον, sulphur]. Hydrogen sulphid.

Hydrothionammonemia (*hi-dro-thi-on-am-o-ne'-me-ah*) [ὕδωρ, water; θεῖον, sulphur; *ammonia*, ammonia; αἷμα, blood]. The presence of hydrosulphid of ammonium in the blood.

Hydrothionemia (*hi-dro-thi-on-e'-me-ah*) [ὕδωρ, water; θεῖον, sulphur; αἷμα, blood]. The presence of hydrogen sulphid in the blood; also, the train of morbid symptoms resulting therefrom.

Hydrothionuria (*hi-dro-thi-on-u'-re-ah*) [ὕδωρ, water; θεῖον, sulphur; οὖρον, urine]. Hydrogen sulphid in the urine.

Hydrothoracic (*hi-dro-tho-ra'-sik*) [ὕδωρ, water; θώραξ, thorax]. Pertaining to hydrothorax.

Hydrothorax (*hi-dro-tho'-raks*) [ὕδωρ, water; θώραξ, chest]. A non-inflammatory dropsy of the pleura, usually involving both sacs. **H. purulentus.** Synonym of *Empyema*.

Hydrotis (*hi-dro'-tis*) [ὕδωρ, water; οὖς, ear]. Dropsy of, or effusion into, the ear.

Hydrotomy (*hi-drot'-o-me*) [ὕδωρ, water; τέμνειν, to cut]. A method of dissecting certain tissues by the forcible injection of water into the arteries and capillaries, whereby the structures are separated.

Hydrotropism (*hi-drot'-ro-pizm*) [ὕδωρ, water; τρόπος, a turn]. In biology, that state of a growing plant or organ which causes it to turn either away from, or toward, moisture.

Hydrotympanum (*hi-dro-tim'-pan-um*) [ὕδωρ, water; *tympanum*, the ear-drum]. Dropsical effusion into the cavity of the middle ear.

Hydrovarium (*hi-dro-va'-re-um*) [ὕδωρ, water; *ovarium*, ovary]. Ovarian dropsy, or cystoma.

Hydroxid (*hi-droks'-id*) [ὕδωρ, water; ὀξυς, sharp]. A metallic or basic radicle combined with one or more hydroxyl groups. Hydroxids may be regarded as formed from water (HOH) by the substitution for one of its hydrogen atoms of a metal or basic radicle.

Hydroxyl (*hi-droks'-il*) [ὕδωρ, water; ὀξυς, sharp]. A compound radicle, OH, that has never been isolated, but which is a factor in a vast number of chemic compounds. Thus, the oxygen bases are regarded as compounds of hydroxyl with electropositive atoms or radicles, *e. g.*, sodium hydroxid, NaOH. Water may be regarded as hydroxyl hydrid, HOH.

Hydroxylamin (*hi-droks-il'-am-in*) [ὕδωρ, water; ὀξυς, sharp; *amin*]. A basic substance (NOH_3) known only in solution in water or in combination with acids. It is prepared by passing nitric-oxid gas through a solution containing nascent hydrogen. The aqueous solution is colorless and odorless, with a strong alkaline reaction. Hydroxylamin hydrochlorid is recommended as a good substitute for chrysarobin in the treatment of skin-diseases.

Hydrozoön (*hi-dro-zo'-on*) [ὕδωρ, water; ζῷον, an animal]. A cnidarian of the sub-class *Hydrozoa*, containing the orders *Hydridæ*, *Hydromedusæ*, *Siphonophora*.

Hydruresis (*hi-dru-re'-sis*) [ὑδωρ, water; οὔρησις, οὖρον, urine]. The passage of a relatively large proportion of water in the urine.

Hydruria (*hi-dru'-re-ah*) [ὑδωρ, water; οὖρον, urine]. Excessive excretion of water by the kidneys, with or without decrease in the amount of the solid constituents of the urine. The urine is pale, limpid, and of low specific gravity. The amount of water discharged in the twenty-four hours is enormously increased. The condition occurs most frequently in men, usually under twenty years of age.

Hydrurilic Acid (*hi-dru-ril'-ik*). See *Acid*.

Hydrymenitis (*hi-dri-men-i'-tis*) [ὑδωρ, water; ὑμήν, membrane; ιτις, inflammation]. Any inflammation of a serous membrane or surface.

Hygeia (*hi-je'-ah*), or **Hygieia** (*hi-je-i'-ah*) [ὑγίεια, health]. The state or condition of health.

Hygiene (*hi'-je-ēn*) [ὑγιεινός, good for the health]. The science that treats of the laws of health in its broadest sense.

Hygienic (*hi-je-en'-ik*) [ὑγιεινός, good for the health]. Pertaining to health, or its maintenance. **H. Vinegar**, a vinegar composed of oils of clove and lavender, each 4.0; oil of marjoram, 2.0; oil of benzoes, 50.0; spiritus vini, 500; concentrated acetic acid, 1000.

Hygienist (*hi-je-en'-ist*) [ὑγίεια, health]. One who is a student of, or an expert in, hygiene.

Hygieology (*hi-je-ol'-o-je*) [ὑγίεια, health; λόγος, relation]. The science of health; hygiene.

Hygrechema (*hi-grek-e'-mah*) [ὑγρός, moist; ἦχημα, sound: *pl.*, *Hygrechemata*]. The peculiar sound produced by a liquid, as heard upon mediate or immediate auscultation.

Hygrin (*hi'-grin*) [ὑγρός, moist; from its liquid form], $C_{12}H_{13}N$. A liquid, oily alkaloid, derived from coca (*q. v*). It has the power of strongly dilating the pupil, but has no anesthetic properties.

Hygrinic (*hi-grin'-ik*) [ὑγρός, moist]. Pertaining to, or composed of, hygrin. **H. Ether**, a substance of uncertain composition, said to have mydriatic properties. Unof.

Hygro- (*hi'-gro-*) [ὑγρός, moist]. A prefix denoting moist or wet.

Hygroblepharic (*hi-gro-blef'-ar-ik*) [ὑγρός, moist; βλέφαρον, eyelid]. Serving to moisten the eyelid, as a hygroblepharic duct.

Hygrocele (*hi'-gro-sēl*) [ὑγρός, moist; κήλη, a tumor]. Same as *Hydrocele*.

Hygrodermia (*hi-gro-der'-me-ah*) [ὑγρός, moist; δέρμα, skin]. An edematous non-inflammatory skin-affection.

Hygrology (*hi-grol'-o-je*) [ὑγρός, moist; λόγος, science]. The science of the fluids, or so-called humors, of the body.

Hygroma (*hi-gro'-mah*) [ὑγρός, moist; ὄμα, tumor: *pl.*, *Hygromata*]. A serous bursa or cyst.

Hygromatous (*hi-gro'-mat-us*) [ὑγρός, moist; ὄμα, tumor]. Pertaining to, or characterized by, a hygroma.

Hygrometer (*hi-grom'-et-er*) [ὑγρός, moist; μέτρον, measure]. An instrument for determining quantitatively the amount of moisture in the air. This amount, constantly varying, is expressed in terms of the percentage required to saturate the air at the particular temperature observed.

Hygrometric (*hi-gro-met'-rik*) [ὑγρός, moist; μέτρον, measure]. 1. Pertaining to hygrometry, or the quantitative determination of atmospheric moisture. 2. Readily absorbing water, as a hygrometric salt; hygroscopic.

Hygrometry (*hi-grom'-et-re*) [ὑγρός, moist; μέτρον, measure]. The measurement of the moisture of the air.

Hygrophanous (*hi-grof'-an-us*) [ὑγρός, moist; φάνης, show]. In biology, applied to such plant-structures as are transparent when wet, but opaque when dry.

Hygrophila (*hi-grof'-il-ah*) [ὑγρός, moist; φίλος, loving]. A genus of dicotyledonous gamopetalous plants. **H. spinosa**, is a shrub used in Ceylon and India as a diuretic in dropsy. Unof.

Hygrophobia (*hi-gro-fo'-be-ah*) [ὑγρός, moist; φόβος, fear]. Insane dislike of water or of moisture.

Hygroplasm, or **Hygroplasma** (*hi'-gro-plazm* or *hi-gro-plaz'-mah*) [ὑγρός, moist; πλάσμα, anything formed]. In biology, the fluid part of protoplasm (Nägeli). Cf. *Stereoplasma*.

Hygroscope (*hi'-gro-skōp*) [ὑγρός, moist; σκοπεῖν, to inspect]. An instrument that indicates variations in the moisture of the air.

Hygroscopic (*hi-gro-skop'-ik*) [ὑγρός, moist; σκοπεῖν, to see]. Having the property of absorbing moisture from the air.

Hygroscopy (*hi-gros'-ko-pe*) [ὑγρός, moist; σκοπεῖν, to view]. Same as *Hygrometry*.

Hylogenesis (*hi-lo-jen'-es-is*) [ὕλη, matter; γένεσις, formation]. The formation of matter.

Hylogeny (*hi-loj'-en-e*). Same as *Hylogenesis*.

Hylopathism (*hi-lop'-ath-izm*) [ὕλη, matter; πάθος, disease]. Any disease arising from defect or disorder of the body-substance.

Hylophagous (*hi-lof'-ag-us*) [ὕλη, wood; φαγεῖν, to eat]. In biology, applied to certain animals that feed upon wood.

Hymen (*hi'-men*) [ὑμήν, membrane]. The fold of mucous membrane at the vaginal entrance. **H., Imperforate**, a congenital abnormality, the hymen not having an opening, and thus closing the vaginal outlet or inlet. **H., Forms of:** 1. *Bifenestrate*, or *hymen biforis*, with two openings. 2. *Bilobate*, with two lobes. 3. *Circular*, with a small foramen. 4. *Cribriform*, with many holes. 5. *Denticular*, with a serrate edge. 6. *Double* (rare). 7. *Fimbriate*, with fringed edges. 8. *Horseshoe*, with its convexity downward. 9. *Imperforate*. 10. *Normal*. 11. *Semilunar*, same as 10, or normal. 12. *Hymen septus*, divided across by a slit. 13. *Hymen subseptus*, covering only the anterior and posterior portions of the passage.

Hymenal (*hi-me'-nal*) [ὑμήν, membrane]. Pertaining to the hymen. **H. Tubercles.** See *Myrtiform Caruncles*.

Hymenea (*hi-men-e'-ah*) [ὑμήν, membrane]. A genus of leguminous trees. **H. courbaril**, locust-tree, indigenous to tropical America; is a good arterial sedative and astringent in hemoptysis, hematuria, dysentery, etc. Dose of the fluid extract gtt. x–xx. This tree and others of the genus afford copal and animé. Unof.

Hymeniferous (*hi-men-if'-er-us*) [ὑμήν, membrane; *ferre*, to bear]. In biology, having a hymenium.

Hymenitis (*hi-men-i'-tis*) [ὑμήν, membrane; ιτις, inflammation]. Inflammation of the hymen, or of any membranous structure.

Hymenium (*hi-me'-ne-um*) [ὑμένιον, dim. of ὑμήν, a membrane: *pl.*, *Hymenia*]. In biology, the spore-bearing surface in fungi.

Hymenocallis (*hi-men-o-kal'-is*) [ὑμήν, membrane]. A genus of amaryllidaceous plants. **H. rotata**, grows in the southern U. S. This and other species afford bulbs that may be substituted for squill. Unof.

Hymenography (*hi-men-og'-ra-fe*) [ὑμήν, membrane; γράφειν, to write]. Same as *Hymenology*.

Hymenology (*hi-men-ol'-o-je*) [ὑμήν, membrane; λόγος, science]. The science of the nature, structure, functions, and diseases of membranous tissue.

Hymenomalacia (*hi-men-o-mal-a'-se-ah*) [ὑμήν, mem-

brane; *μαλακία*, softness]. An abnormal softening of membranous tissues.

Hymenomycetes (*hi-men-o-mi-se'-tes*) [*ὑμήν*, membrane; *μύκης*, fungus]. An order of fungi having a hymenium or umbrella. All the edible mushrooms belong to this class.

Hymenoptera (*hi-men-op'-ter-ah*) [*ὑμήν*, membrane; *πτερόν*, wing]. An order of insects distinguished by two pairs of membranous wings. It includes ants, bees, wasps, ichneumons, flies, etc.

Hymenopterous (*hi-men-op'-ter-us*) [*ὑμήν*, membrane; *πτερόν*, wing]. In biology, applied to insects having membranous wings.

Hymenorrhaphy (*hi-men-or'-a-fe*) [*ὑμήν*, hymen; *ῥαφή*, suture]. Closure, more or less complete, of the vagina by suture at the hymen.

Hymenotome (*hi-men'-o-tōm*) [*ὑμήν*, membrane; *τέμνειν*, to cut]. A cutting instrument used in operations upon membranes.

Hymenotomy (*hi-men-ot'-o-me*) [*ὑμήν*, membrane; *τέμνειν*, to cut]. 1. Surgical incision of the hymen. 2. Dissection or anatomy of membranes.

Hyo- (*hi'-o-*) [*ὑοειδής*, hyoid]. A prefix denoting attachment to or connection with the hyoid bone.

Hyoepiglottic (*hi-o-ep-e-glot'-ik*) [*ὑοειδής*, hyoid; *ἐπιγλωττίς*, epiglottis]. Relating to the hyoid bone and the epiglottis.

Hyoglossal (*hi-o-glos'-al*) [*ὑοειδής*, hyoid; *γλῶσσα*, tongue]. Pertaining to the hyoglossus. Extending from the hyoid bone to the tongue.

Hyoglossus (*hi-o-glos'-us*). See *Muscles, Table of.*

Hyoid (*hi'-oid*) [*ὑοειδής*, similar to the Greek letter upsilon]. Having the form of the Greek letter upsilon. **H. Bone,** a bone situated between the root of the tongue and the larynx, supporting the tongue and giving attachment to its muscles. See *Bones, Table of.* **H. Fossa.** See *Fossa.*

Hyoplastron (*hi'-o-plas-tron*). See *Hyosternal.*

Hyoscin (*hi'-os-in*) [*ὑοσκύαμος*, henbane], $C_{17}H_{23}NO_3$. A viscous liquid found in henbane; it is a good soporific and valuable mydriatic. Dose, $\frac{1}{150}$ to $\frac{1}{200}$ of a grain. See *Hyoscyamus.*

Hyoscyamin (*hi-o-si'-am-in*) [*ὑοσκύαμος*, henbane], $C_{17}H_{23}NO_3$. An alkaloid occurring in the seeds of *Hyoscyamus niger*, in *Atropa belladonna*, and in *Datura stramonium.* It is isomeric with atropin, and identical with daturin and duboisin. It crystallizes in shining needles, and melts at 108.5° C. It is a mydriatic, narcotic, and sedative. Dose, gr. $\frac{1}{150}$, gradually and cautiously increased, even to 1 grain. See *Hyoscyamus.*

Hyoscyamus (*hi-o-si'-am-us*) [*ὑς*, hog; *κύαμος*, bean]. Henbane. The older leaves of *H. niger*. It contains an alkaloid, hyoscyamin, isomeric with and similar to atropin; also, a derivative, hyoscin, $C_{17}H_{23}NO_3$. It is an excellent narcotic, calmative, and hypnotic, less irritating than belladonna and stramonium, and is useful in mania and the delirium of fevers. Hyoscyamin is useful whenever atropin is indicated. It is a powerful but uncertain mydriatic. **H., Abstract.** Dose gr. iij–v. Unof. **H., Ext.** (B. P.). Dose gr. ij–v. **H., Ext., Alcoholic** (of uncertain strength). Dose gr. j. **H., Ext., Fld.** Dose ♏v–xx. **H., Succus** (B. P.) Dose ʒss–j. **H., Tinct.,** 15 per cent. in strength. Dose ʒj–iv; as a hypnotic ℥ss–j. **Hyoscyamin. sulph.** $(C_{17}N_{23}NO_3)N_2SO_4$. Dose, hypodermatically, gr. $\frac{1}{100}$–$\frac{1}{65}$; by the mouth gr. ¼–j. **Injectio hyoscyamin hypodermicæ.** Strength 1 in 120. Dose ♏j–iv. **Hyoscin. hydrobrom.** Unof. Dose, gr. $\frac{1}{200}$–$\frac{1}{60}$. **Injectio hyoscin. hydrobromat. hypodermicæ.** ½ per cent. Dose ♏j–ij.

Hyosternal (*hi-o-ster'-nal*) [*ὑοειδής*, hyoid; *στέρνον*, sternum]. 1. Relating to the hyoid bone and the sternum. 2. In biology, the second lateral piece of the plastron of a turtle; it is also called *Hyoplastron.*

Hyp (*hip*) [*ὑπό*, under]. A popular name for hypochondriasis, or persistent depression of spirits; hypo.

Hypacousis, Hypacusia, Hypacusis, or **Hypakusis** (*hip-ak-u'-sis*) [*ὑπό*, under; *ἀκουσις*, hearing]. Hardness of hearing from defect of the auditory nerve.

Hypæsthesia (*hip-es-the'-ze-ah*). See *Hypesthesia.*

Hypalbuminosis (*hip-al-bu-min-o'-sis*) [*ὑπό*, under; *albumen*]. Morbid diminution in the proportion of albumin in the blood. It is caused by anything that gives rise to an increased consumption of albumin on the part of the organism.

Hypalgesia (*hip-al-je'-ze-ah*) [*ὑπό*, under; *ἄλγησις*, painfulness]. Diminished sensitiveness to pain.

Hypalgia (*hip-al'-je-ah*) [*ὑπό*, under; *ἄλγος*, pain]. Slight or moderate pain; diminished sensibility to pain.

Hypalgic (*hip-al'-jik*) [*ὑπό*, under; *ἄλγος*, pain]. Slightly painful; experiencing slight pain.

Hypanisognathism (*hip-an-is-og'-nath-izm*) [*ὑπό*, under; *ἄνισος*, unequal, uneven; *γνάθος*, the jaw]. In biology, a lack of correspondence between the teeth of the opposite jaws. Cf. *Anisognathism* and *Epanisognathism.*

Hypanisognathous (*hip-an-is-og'-na-thus*) [*ὑπό*, under; *ἄνισος*, unequal, uneven; *γνάθος*, the jaw]. In biology, having the upper teeth broader than the lower.

Hypanthium (*hip-an'-the-um*) [*ὑπό*, under; *ἄνθος*, a flower: *pl.*, *Hypanthia*]. In biology, an enlarged receptacle.

Hypanthodium (*hip-an-tho'-de-um* [*ὑπό*, under; *ἄνθος*, a flower; *εἶδος*, form]. See *Synconium.*

Hypapophysis (*hip-ap-off'-is-is*) [*ὑπό*, under; *ἀπόφυσις*, apophysis: *pl.*, *Hypapophyses*]. An anterior or ventral apophysis from the centrum of a vertebra in the human skeleton; the atlas is held by some to have an hypophysis, which is blended with the ring of that vertebra.

Hypapoplexia (*hip-ap-o-pleks'-e-ah*) [*ὑπό*, under: *ἀποπληξία*, apoplexy]. A slight apoplexy.

Hypatonia (*hip-at-o'-ne-ah*) [*ὑπό*, under; *ἀτονία*, atony]. A slight amount of atony.

Hypemia (*hip-e'-me-ah*). See *Hyphemia.*

Hyper- (*hi'-per-*) [*ὑπέρ*, above]. A Greek prefix signifying above, beyond, or excessive.

Hyperacidity (*hi-per-as-id'-it-e*) [*ὑπέρ*, over; *acidum*, acid]. Excess of acidity.

Hyperacousis, Hyperacusia, Hyperacusis, or **Hyperakusis** (*hi-per-ak-u'-sis, hi-per-ak-u'-ze-ah*) [*ὑπέρ*, over; *ἀκουσις*, hearing]. Morbid acuteness of the sense of hearing; auditory hyperesthesia. Also, a highly developed capability of the discernment of pitch and timbre of musical sounds.

Hyperactivity (*hi-per-ak-tiv'-it-e*) [*ὑπέρ*, over; *agere*, to do]. Excessive or abnormal activity.

Hyperadenosis (*hi-per-ad-en-o'-sis*) [*ὑπέρ*, over; *ἀδήν*, gland; *νόσος*, disease]. Enlargement of the lymph-glands; Hodgkin's disease.

Hyperæmia (*hi-per-e-me-ah*). See *Hyperemia.*

Hyperæsthesia (*hi-per-es-the'-ze-ah*). See *Hyperesthesia.*

Hyperakusis (*hi-per-ak-u'-sis*). See *Hyperacousis.*

Hyperalbuminosis (*hi-per-al-bu-min-o'-sis*) [*ὑπέρ*, over; *albumen*, albumin]. An increase in the amount of albumin in the blood, which may be either relative or absolute. It is often due to the excessive ingestion of albuminous food, with insufficient exercise.

Hyperalgesia (*hi-per-al-je'-ze-ah*) [*ὑπέρ*, over; *ἄλγησις*, pain]. Excessive sensibility to pain.

Hyperalgesic (*hi-per-al-je'-zik*) [*ὑπέρ*, over; *ἄλγησις*, pain]. Exhibiting or appertaining to hyperalgesia.

Hyperalgia (*hi-per-al'-je-ah*) [*ὑπέρ*, over; *ἄλγησις*, pain]. Excessive pain. **H., Acoustic**, excessive hyperakusis.

Hyperalonemia (*hi-per-al-on-e'-me-ah*) [*ὑπέρ*, over; *ἅλς*, salt; *αἷμα*, blood]. Excess of blood-salts.

Hyperamnesia (*hi-per-am-ne'-ze-ah*). See *Hypermnesia*.

Hyperanabolism (*hi-per-an-ab'-o-lizm*) [*ὑπέρ*, over; *ἀναβάλλειν*, to build up]. Hypertrophy or excess of construction of a tissue or part.

Hyperanthraxis (*hi-per-an-thraks'-is*). Synonym of *Asiatic Cholera*.

Hyperaphia (*hi-per-a'-fe-ah*) [*ὑπέρ*, over; *ἁφή*, touch]. Excessive sensitiveness to touch.

Hyperaphrodisia (*hi-per-af-ro-diz'-e-ah*) [*ὑπέρ*, over; *ἀφροδίσια*, aphrodisia]. An over-strong venereal appetite.

Hyperapophyseal (*hi-per-ap-o-fiz'-e-al*) [*ὑπέρ*, over; *ἀπόφυσις*, apophysis]. Pertaining to a hyperapophysis.

Hyperapophysis (*hi-per-ap-off'-is-is*) [*ὑπέρ*, over; *ἀπόφυσις*, apophysis]. A process projecting backward from a neural spine.

Hyperarthritis (*hi-per-arth-ri'-tis*) [*ὑπέρ*, over; *ἄρθρον*, joint; *ιτις*, inflammation]. Severe arthritis.

Hyperasthenia (*hi-per-as-the'-ne-ah*) [*ὑπέρ*, over; *ἀσθένεια*, weakness]. Extreme weakness.

Hyperauxesis (*hi-per-awks-e'-sis*) [*ὑπέρ*, over; *αὔξησις*, increase]. Extreme increase in the size of a part.

Hyperbolic (*hi-per-bol'-ik*) [*ὑπέρ*, over; *βάλλειν*, to throw]. Exaggerated.

Hyperbrachycephalic (*hi-per-brak-e-sef-al'-ik*) [*ὑπέρ*, over; *βραχύς*, short; *κεφαλή*, head]. Extremely brachycephalic.

Hyperbrachycephaly (*hi-per-brak-e-sef'-al-e*) [*ὑπέρ*, over; *βραχύς*, short; *κεφαλή*, head]. Extreme brachycephaly.

Hyperbulia (*hi-per-bu'-le-ah*) [*ὑπέρ*, over; *βουλή*, will]. Exaggerated wilfulness or obstinacy; abnormal or insane development of will-power.

Hypercardia (*hi-per-kar'-de-ah*) [*ὑπέρ*, over; *καρδία*, the heart]. Cardiac hypertrophy.

Hypercatabolism (*hi-per-kat-ab'-o-lizm*) [*ὑπέρ*, over; *κατά*, down; *βάλλειν*, to throw]. Wasting or excess of destruction of a tissue or part.

Hypercatharsis (*hi-per-kath-ar'-sis*) [*ὑπέρ*, over; *κάθαρσις*, cleansing]. Excessive purging, or the result of too free use of cathartic medicines.

Hypercedemonia (*hi-per-se-de-mo'-ne-ah*) [*ὑπέρ*, over; *κηδεμονία*, anxiety]. 1. Extreme anxiety or grief. 2. Excessive care on the part of the physician.

Hypercele (*hi'-per-sēl'*) [*ὑπέρ*, over; *κοιλία*, belly]. The dorsal portion of the epicele.

Hypercenosis (*hi-per-sen-o'-sis*) [*ὑπέρ*, over; *κένωσις*, evacuation]. Excessive evacuation, as by purging or bleeding.

Hyperchlorhydria (*hi-per-klor-hi'-dre-ah*) [*ὑπέρ*, over; *χλωρός*, green; *ὕδωρ*, water; *γεννᾶν*, to form]. Excess of hydrochloric acid in the gastric secretion. Rossbach's Disease. See *Diseases, Eponymic, Table of*.

Hypercholesteremia (*hi-per-ko-les-ter-e'-me-ah*) [*ὑπέρ*, over; *χολή*, bile; *στέαρ*, fat; *αἷμα*, blood]. Excess of cholesterin in the blood.

Hypercholia (*hi-per-ko'-le-ah*) [*ὑπέρ*, over; *χολή*, bile]. An excessive secretion of bile.

Hyperchroma (*hi-per-kro'-mah*) [*ὑπέρ*, over; *χρῶμα*, color]. The excessive formation of the pigment of the skin, as in phthiriasis or syphilis.

Hyperchromatemia (*hi-per-kro-mat-e'-me-ah*) [*ὑπέρ*, over; *χρῶμα*, color; *αἷμα*, blood]. An increase in the color of the blood; excess of coloring-matter in the blood.

Hyperchromatic (*hi-per-kro-mat'-ik*) [*ὑπέρ*, over; *χρῶμα*, color]. Exhibiting hyperchroma.

Hyperchromatism (*hi-per-kro'-mat-izm*). Same as *Hyperchroma*.

Hyperchromatosis (*hi-per-kro-mat-o'-sis*) [*ὑπέρ*, over; *χρῶμα*, color]. Excessive pigmentation, as of the skin.

Hypercinesia (*hi-per-sin-e'-ze-ah*). See *Hyperkinesia*.

Hypercrinia (*hi-per-krin'-e-ah*) [*ὑπέρ*, over; *κρίνειν*, to separate]. Abnormal or excessive secretion.

Hypercyesis (*hi-per-si-e'-sis*) [*ὑπέρ*, over; *κύησις*, conception]. Superfetation.

Hypercyrtosis (*hi-per-sir-to'-sis*) [*ὑπέρ*, over; *κύρτωσις*, curvature]. Extreme curvature, as of the back or a limb.

Hyperdactylia (*hi-per-dak-til'-e-ah*) [*ὑπέρ*, over; *δάκτυλος*, finger]. Polydactylism.

Hyperdermatosis [*hi-per-der-mat-o'-sis*) [*ὑπέρ*, over; *δέρμα*, skin]. Hypertrophy of the skin.

Hyperdicrotic (*hi-per-di-krot'-ik*) [*ὑπέρ*, over; *δίκροτος*, a double beat]. Affected with marked or delayed dicrotism; pertaining to the pulse when the pulse-curve shows the aortic notch below the base-line.

Hyperdicrotism (*hi-per-dik'-rot-izm*) [*ὑπέρ*, over; *δίκροτος*, a double beat]. Strongly marked or excessive dicrotism.

Hyperdistention (*hi-per-dis-ten'-shun*) [*ὑπέρ*, over; *distendere*, to stretch]. Forcible or extreme distention.

Hyperdiuresis (*hi-per-di-u-re'-sis*) [*ὑπέρ*, over; *διουρέειν*, to pass urine]. Excessive secretion of urine.

Hyperdynamia (*hi-per-di-nam'-e-ah*) [*ὑπέρ*, over; *δύναμις*, energy]. Excessive strength or exaggeration of nervous or muscular function.

Hyperdynamic (*hi-per-di-nam'-ik*) [*ὑπέρ*, over; *δύναμις*, energy]. Pertaining to, or marked by, hyperdynamia.

Hypereccrisia (*hi-per-ek-kris'-e-ah*) [*ὑπέρ*, over; *ἐκ*, out; *κρίνειν*, to separate]. Excessive excretion.

Hyperechema (*hi-per-ek-e'-mah*) [*ὑπέρ*, over; *ἦχημα*, sound: *pl.*, *Hyperechemata*]. A normal sound abnormally exaggerated.

Hyperechesis (*hi-per-ek-e'-sis*) [*ὑπέρ*, over; *ἦχησις*, sound]. Abnormal loudness of voice.

Hyperemesis (*hi-per-em'-es-is*) [*ὑπέρ*, over; *ἔμεσις*, vomiting]. Excessive vomiting. **H. gravidarum.** See *Morning Sickness*.

Hyperemetic (*hi-per-em-et'-ik*) [*ὑπέρ*, over; *ἔμεσις*, vomiting]. Pertaining to, or characterized by, excessive vomiting.

Hyperemia (*hi-per-e'-me-ah*) [*ὑπέρ*, over; *αἷμα*, blood]. A condition of plethora or congestion. **H., Active**, caused by an excessive supply of blood. **H., Passive**, caused by an impediment to the removal of the blood. **H. of the Dental Pulp**, a condition due to the overfilling of the vessels of the pulp with blood, the resulting pain being sharp and lancinating, and paroxysmal in character, especially in its earlier stages.

Hyperencephalus (*hi-per-en-sef'-al-us*) [*ὑπέρ*, over; *ἐγκέφαλος*, brain]. A variety of single autositic monsters of the species *exencephalus*, in which there is the same deformity as in podencephalus, but in a higher degree. There is often hydrocephalus, and the body is likely to be deformed in other regions.

Hyperenterosis (*hi-per-en-ter-o'-sis*) [*ὑπέρ*, over; *ἔντερον*, bowel]. Hypertrophy of the intestines.

Hyperephidrosis (*hi-per-ef-hid-ro'-sis*) [*ὑπέρ*, over; *ἐφίδρωσις*, perspiration]. Excessive or long-continued sweating.

Hypererethisia, or **Hypererethism** (*hi-per-er-eth-iz'-e-ah*, or *hi-per-er'-eth-izm*) [*ὑπέρ*, over; *ἐρεθισμός*, irritation]. Excessive nervous or mental irritability.

Hypererythrocythemia (*hi-per-er-ith-ro-si-the'-me-ah*) [*ὑπέρ*, over; *ἐρυθρός*, red; *κύτος*, cell; *αἷμα*, blood]. Excess of red corpuscles in the blood.

Hyperesophoria (*hi-per-es-o-fo'-re-ah*). See *Heterophoria.*

Hyperesthesia (*hi-per-es-the'-ze-ah*) [ὑπέρ, over; αἴσθησις, sensation]. Excessive or exalted sensibility of the skin. It may be symptomatic or idiopathic.

Hyperesthetic (*hi-per-es-thet'-ik*) [ὑπέρ, over; αἴσθησις, sensation]. Pertaining to hyperesthesia.

Hyperexophoria (*hi-per-eks-o-fo'-re-ah*). See *Heterophoria.*

Hyperfecundation (*hi-per-fe kun-da'-shun*). Same as *Superfecundation.*

Hyperflexion (*hi-per-flek'-shun*) [ὑπέρ, over; *flexio*, a bending]. Overflexion, as of a limb. This is one method of treating aneurysm.

Hypergenesis (*hi-per-jen'-es-is*) [ὑπέρ, over; γένεσις, generation]. Excess or redundancy of the parts or organs of the body. It may be normal, as in the increase of the tissue of a muscle; or abnormal, as seen in monstrosities. Also, an excessive production of the elements of a tissue or organ.

Hypergenetic (*hi-per-jen-et'-ik*) [ὑπέρ, over; γένεσις, generation]. Marked by enlargement or increase of size. See also *Teratism.*

Hypergeusia (*hi-per-gu'-se-ah*) [ὑπέρ, over; γεῦσις, taste]. Abnormal acuteness of the sense of taste.

Hyperglobulia (*hi-per-glo-bu'-le-ah*) [ὑπέρ, over; *globus*, a ball]. Polycythemic plethora. An abnormal increase of the red blood-corpuscles; hypererythrocythemia.

Hyperglycemia (*hi-per-gli-se'-me-ah*) [ὑπέρ, over; γλυκύς, sweet; αἷμα, blood]. Excess of sugar in the blood.

Hyperglycogenia (*hi-per-gli-ko-je'-ne-ah*) [ὑπέρ, over; γλυκύς, sweet; γενής, producing]. The excessive production of glycogen.

Hyperhidrosis, or **Hyperidrosis** (*hi-per-hid-ro'-sis*, or *hi-per-id-ro'-sis*) [ὑπέρ, over; ἱδρώς, sweat]. Excessive sweating. A functional disorder of the sweat-glands marked by excessive secretion. It may be general or local.

Hyperhydremia (*hi-per-hi-dre'-me-ah*) [ὑπέρ, over; ὕδωρ, water; αἷμα, blood]. Excess of water in the blood.

Hyperhypnosis (*hi-per-hip-no'-sis*) [ὑπέρ, over; ὕπνος, sleep]. Excessive or frequent drowsiness and sleep.

Hypericum (*hi-per-i'-kum* or *hi-per'-ik-um*) [ὑπέρεικον, "under heath"]. St. John's wort; a genus of plants, mostly herbs or shrubs, with a resinous juice. **H. perforatum**, one of the commonest of the 160 species, has styptic, stimulant, and diuretic properties, but is now used mainly in domestic practice. Dose of the ext., gr. x–xx; of the fld. ext., ʒj-ij. Unof.

Hyperideation (*hi-per-i-de-a'-shun*) [ὑπέρ, over; *idea*, idea]. Excessive or morbid mental activity.

Hyperidrosis (*hi-per-id-ro'-sis*). See *Hyperhidrosis.*

Hyperino-epithelioma (*hi-per'-in-o-ep-ith-e-le-o'-mah*) [ὑπέρ, over; ἶς, a fiber; ἐπί, upon; θηλή, nipple; ὄμα, tumor: *pl.*, *Hyperino-epitheliomata*]. Scirrhous carcinoma with an abundance of fibrous elements.

Hyperinosemia (*hi-per-in-o-se'-me-ah*) [ὑπέρ, over; ἶς, fiber; αἷμα, blood]. An exaggerated tendency to the formation of fibrin in the blood.

Hyperinosis (*hi-per-in-o'-sis*) [ὑπέρ, over; ἶς, muscle]. 1. Over-activity of the muscular fiber. 2. Abnormal increase in the fibrin-factors in the blood; hyperinosemia.

Hyperinotic (*hi-per-in-ot'-ik*) [ὑπέρ, over; ἶς, fiber]. Characterized by hyperinosis.

Hyperinvolution (*hi-per-in-vo-lu'-shun*) [ὑπέρ, over; *involvere*, to roll around]. An extreme diminution in size of the uterus, due to abnormally excessive involution occurring after pregnancy.

Hyperisotonia (*hi-per-i-so-to'-ne-ah*) [ὑπέρ, over; ἴσος, equal; τόνος, tone]. Unusual equality of tone or tension; applied to muscles.

Hyperkeratosis (*hi-per-ker-at-o'-sis*) [ὑπέρ, over; κέρας, horn, cornea]. Hypertrophy of the cornea either in extent or thickness.

Hyperkinesia (*hi-per-kin-e'-ze-ah*) [ὑπέρ, over; κίνησις, energy]. 1. Any exaggerated spasm or muscular contraction. 2. Excessive irritability. 3. Impulsive insanity.

Hyperkinesis (*hi-per-kin-e'-sis*) [ὑπέρ, over; κίνησις, energy]. 1. See *Hyperkinesia.* 2. A disease or diseased condition marked by hyperkinesia.

Hyperkinetic (*hi-per-kin-et'-ik*) [ὑπέρ, over; κίνησις, energy]. Pertaining to, or marked by, hyperkinesia.

Hyperlactation (*hi-per-lak-ta'-shun*) [ὑπέρ, over; *lactare*, to give milk]. Prolongation of lactation beyond the ninth month. If persisted in, it produces an exhausted physical condition of the mother known as *Tabes lactealis.* This condition is marked by anemia, with cramp-like pains of the upper extremities when the child is put to the breast.

Hyperleukocythemia (*hi-per-lu-ko-si-the'-me-ah*) [ὑπέρ, over; λευκός, white; κύτος, cell; αἷμα, blood]. Excess in the proportion of white cells in the blood; leukocythemia.

Hyperleukontemia (*hi-per-lu-kon-te'-me-ah*) [ὑπέρ, over; λευκόν, albumin; αἷμα, blood]. Increase in the albuminous elements of the blood.

Hyperlipemia (*hi-per-lip-e'-me-ah*) [ὑπέρ, over; λίπος, fat; αἷμα, blood]. Excess of fat in the blood; lipemia.

Hyperlithuria (*hi-per-lith-u'-re-ah*) [ὑπέρ, over; λίθος, stone; οὖρον, urine]. Excess of lithic acid in the urine. Same as *Lithuria.*

Hyperlogia (*hi-per-lo'-je-ah*) [ὑπέρ, over; λόγος, speech]. Excessive or maniacal loquacity.

Hyperlymphia (*hi-per-limf'-e-ah*) [ὑπέρ, over; *lympha*, water]. An increase in the amount of lymph in the body.

Hypermastia (*hi-per-mas'-te-ah*) [ὑπέρ, over; μαστός, breast]. Excessive development or hypertrophy of the mammary gland, which remains normal in structure.

Hypermetamorphosis (*hi-per-met-am-or-fo'-sis*) [ὑπέρ, over; μεταμόρφωσις, a transformation]. In biology, applied to insects that undergo transformation more completely or having more stages than ordinary.

Hypermetropia (*hi-per-me-tro'-pe-ah*). Same as *Hyperopia, q. v.*

Hypermetropic (*hi-per-me-trop'-ik*) [ὑπέρ, over; μέτρον, measure; ὤψ, eye]. Affected with, or pertaining to, hypermetropia. **H. Disc.** See *Disc.*

Hypermnesia, or **Hypermnesis** (*hi-perm-ne'-ze-ah*, or *hi-perm-ne'-sis*) [ὑπέρ, over; μνῆσις, memory]. Abnormal exaltation of the power of memory.

Hypermotility (*hi-per-mo-til'-it-e*) [ὑπέρ, over; *motilis*, motile]. Excessive action. **H., Gastric**, excessive churning action of the gastric walls, often accompanied with hyperacidity due to increased secretion of HCl.

Hypernervia (*hi-per-ner'-ve-ah*). See *Hyperneuria.*

Hyperneuria (*hi-per-nu'-re-ah*) [ὑπέρ, over; νεῦρον, nerve]. Excessive nerve-action.

Hypernidation (*hi-per-nid-a'-shun*). See *Supernidation.*

Hypernea (*hi-per-ne'-ah*) or **Hypernoia** (*hi-per-noi'-ah*) [ὑπέρ, over; νοέειν, to think]. Excessive or abnormal mental activity; also, the uncontrolled and incongruous activity of the imagination in some cases of insanity.

Hyperodontogeny (*hi-per-o-don-toj'-en-e*) [ὑπέρ, over; ὀδούς, tooth; γεννᾶν, to beget]. The phenomenon of

a third dentition late in life. It is supposed to be due to the development of one or more superfluous tooth-germs that have remained dormant.

Hyperoïtis (*hi-per-o-i′-tis*) [*ὑπερῴα*, palate; *ιτις*, inflammation]. Inflammation of the palate.

Hyperonychia (*hi-per-o-nik′-e-ah*) [*ὑπέρ*, over; *ὄνυξ*, nail]. Hypertrophy of the nails.

Hyperope (*hi′-per-ōp*) [*ὑπέρ*, over; *ὤψ*, sight]. One who is affected with hyperopia.

Hyperopia (*hi-per-o′-pe-ah*) [*ὑπέρ*, over; *ὤψ*, sight]. That condition of the refractive media of the eye in which, with suspended accommodation, the focus of parallel rays of light is behind the retina; it is due to an abnormally short antero-posterior diameter of the eye, or to a subnormal refractive power of its media. **H., Absolute,** that which cannot be corrected completely by accommodation, so that there is indistinct vision even for distance. **H., Axial,** that due to abnormal shortness of the antero-posterior diameter of the eye, the refractive power being normal. **H., Facultative,** that which may be corrected by the accommodation, so that there is distinct vision at a distance. **H., Latent,** that part of the total that cannot be overcome by the accommodation, or the difference between the manifest and the total hyperopia. **H., Manifest,** that which the accommodation can overcome, or that corrigible by a convex glass aided by the accommodation. **H., Relative,** a high hyperopia in which distinct vision is possible only when excessive convergence is made. **H., Total,** the entire hyperopia, both latent and manifest.

Hyperorthognathy (*hi-per-or-thog′-na-the*) [*ὑπέρ*, over; *ὀρθός*, straight; *γνάθος*, the jaw]. Excessive orthognathy; the condition of having a cranial index greater than 91°.

Hyperosmia (*hi-per-oz′-me-ah*) [*ὑπέρ*, over; *ὀσμή*, smell]. An abnormal or morbidly acute sense of smell; also, the presence of olfactory illusions.

Hyperosphresis (*hi-per-os-fre′-sis*) [*ὑπέρ*, over; *ὄσφρησις*, the power of smelling]. Exaggeration of the sense of smell.

Hyperostosis (*hi-per-os-to′-sis*) [*ὑπέρ*, over; *ὀστέον*, bone]. Exostosis or general hypertrophy of bony tissue.

Hyperparasite (*hi-per-par′-as-īt*) [*ὑπέρ*, over; *παράσιτος*, parasite]. In biology, a parasite including in itself another parasite.

Hyperparasitism (*hi-per-par′-as-īt-izm*) [*ὑπέρ*, over; *παράσιτος*, parasite]. The infestation of parasites by other parasites.

Hyperpepsia (*hi-per-pep′-se-ah*) [*ὑπέρ*, over; *πέψις*, digestion]. Hayem's term for a form of dyspepsia characterized by an excess of chlorids in the gastric juice, without an excess of free hydrochloric acid.

Hyperphagia (*hi-per-fa′-je-ah*) [*ὑπέρ*, over; *φαγεῖν*, to eat]. Excess in eating. See *Bulimia*.

Hyperphasia (*hi-per-fa′-se-ah*) [*ὑπέρ*, over; *φάσις*, saying]. Hyperlogia; insane volubility; lack of control over the organs of speech.

Hyperphoria (*hi-per-fo′-re-ah*). See *Heterophoria*.

Hyperphrasia (*hi-per-fra′-ze-ah*) [*ὑπέρ*, over; *φράσις*, utterance]. The incoherent and exaggerated utterance of an insane person.

Hyperphrenia (*hi-per-fre′-ne-ah*) [*ὑπέρ*, over; *φρήν*, mind]. Passionate mental exaltation of the insane.

Hyperphysemia (*hi-per-fi-ze′-me-ah*) [*ὑπέρ*, over; *φῦσα*, air; *αἷμα*, blood]. Excess of gases in the blood, or the abnormal conditions associated with such excess.

Hyperplasia (*hi-per-pla′-ze-ah*) [*ὑπέρ*, over; *πλάσις*, moulding]. The excessive deposit or augmentation of the elements of the tissue composing an organ.

Hyperplastic (*hi-per-plas′-tik*) [*ὑπέρ*, over; *πλαστικός*, fit for moulding]. Pertaining to hyperplasia.

Hyperplerosis (*hi-per-ple-ro′-sis*) [*ὑπέρ*, over; *πλήρωσις*, fulness]. Excessive repletion or fulness.

Hyperplexia (*hi-per-pleks′-e-ah*) [*ὑπέρ*, over; *πλῆξις*, stroke]. 1. Ecstacy. 2. Melancholia with stupor.

Hyperpnea, or **Hyperpnoia** (*hi-per-pne′-ah*, or *hi-per-pnoi′-ah*) [*ὑπέρ*, over; *πνόη*, breath]. Panting or labored respiration; dyspnea.

Hyperporosis (*hi-per-po-ro′-sis*) [*ὑπέρ*, over; *πώρωσις*, cementing or uniting]. An excessive formation of callus in the reunion of fractured bones.

Hyperpraxia (*hi-per-praks′-e-ah*) [*ὑπέρ*, over; *πρᾶξις*, exercise]. The excessive restlessness of movement characterizing certain forms of mania.

Hyperpresbyopia (*hi-per-pres-be-o′-pe-ah*) [*ὑπέρ*, over; *πρέσβυς*, old; *ὤψ*, eye]. Excessive presbyopia. Obs.

Hyperpselaphesia (*hi-per-sel-af-e′-ze-ah*) [*ὑπέρ*, over; *ψηλάφησις*, touch]. Abnormal increase of tactile sensibility.

Hyperpyretic (*hi-per-pi-ret′-ik*) [*ὑπέρ*, over; *πῦρ*, fire]. Pertaining to hyperpyrexia.

Hyperpyrexia (*hi-per-pi-reks′-e-ah*) [*ὑπέρ*, over; *πῦρ*, fire; *ἐχειν*, to have]. A condition marked by excessively high temperature or aggravated febrile symptoms.

Hypersarcoma, or **Hypersarcosis** (*hi-per-sar-ko′-ma*, or *hi-per-sar-ko′-sis*) [*ὑπέρ*, over; *σάρξ*, flesh; *ὅμα*, a tumor]. 1. Excessive granulation, fungosity, or proud-flesh. 2. Obesity; hypertrophy.

Hypersecretion (*hi-per-se-kre′-shun*) [*ὑπέρ*, over; *secretio*, a secreting]. Excessive secretion.

Hypersomnia (*hi-per-som′-ne-ah*) [*ὑπέρ*, over; *somnus*, sleep]. Excessive sleep.

Hyperspasmia (*hi-per-spaz′-me-ah*). Synonym of *Convulsions*.

Hypersplenia (*hi-per-sple′-ne-ah*). See *Splenomegalia*.

Hypersthenia (*hi-per-sthen′-e-ah*) [*ὑπέρ*, over; *σθένος*, strength]. A condition of exalted strength or tone of the body.

Hypersthenic (*hi-per-sthen′-ik*) [*ὑπέρ*, over; *σθένος*, strength]. Characterized by hypersthenia.

Hypersystole (*hi-per-sis′-to-le*) [*ὑπέρ*, over; *συστολή*, systole]. An excessively strong systole.

Hyperthermia (*hi-per-ther′-me-ah*) [*ὑπέρ*, over; *θέρμη*, heat]. Excessive elevation of temperature.

Hyperthymia (*hi-per-thi′-me-ah*) [*ὑπέρ*, over; *θυμός*, mind]. 1. Mental hyperesthesia; morbid over-sensitiveness. 2. Vehement cruelty or foolhardiness as a symptom of mental disease. 3. Moral insanity.

Hypertonia (*hi-per-to′-ne-ah*) [*ὑπέρ*, over; *τόνος*, tone]. 1. Excess of muscular tonicity. 2. Increased intraocular tension.

Hypertonic (*hi-per-ton′-ik*) [*ὑπέρ*, over; *τόνος*, tone]. Characterized by hypertonia.

Hypertrichiasis (*hi-per-trik-i′-as-is*). See *Hirsuties*.

Hypertrichosis (*hi-per-trik-o′-sis*). See *Hirsuties*.

Hypertromos (*hi-per′-tro-mos*) [*ὑπέρ*, over; *τρόμος*, tremor]. Excessive tremor or fear.

Hypertrophia (*hi-per-tro′-fe-ah*) [*ὑπέρ*, over; *τροφή*, nourishment]. Same as *Hypertrophy*. **H. cordis,** hypertrophy of the heart.

Hypertrophic (*hi-per-trōf′-ik*) [*ὑπέρ*, over; *τροφή*, nourishment]. Marked by hypertrophy or excessive size.

Hypertrophy (*hi-per′-tro-fe*) [*ὑπέρ*, over; *τροφή*, nourishment]. This word etymologically denotes simply over-nourishment, but it has unfortunately become synonymous with excessive growth or size of an organ or part (auxesis), whether this is due to over-nourishment, over-use, or to any other condition. **H., Cardiac,** may follow dilatation of the heart, or be caused by valvular disease, diseased condition of the aorta, diseases of the kidneys and other distant organs, by constitutional disease, by excessive use of tobacco

and of some drugs, or excessive muscular action. It is attended with violent action of the heart, increase in the cardiac area of dulness and increased arterial pressure, headache, vertigo, dyspnea, palpitation, and pain in the heart. **H., Compensatory,** that following dilatation of the heart, or obstructive or regurgitant valvular disease, and produced by the efforts of that organ to make good the deficiency resulting from failing cardiac power. Let the circulation be restored, and the previous distressing symptoms will disappear. **H., Concentric,** increase in the thickness of the cardiac walls, without increase in the size of the organ, but with diminution in the capacity of its chambers. **H., Excentric,** cardiac hypertrophy, with dilatation. **H., False,** the thickening of the heart-wall is due to some extent to an adventitious fibrous growth. **H., Idiopathic,** that developing in the absence of other disease of the heart's structure, or of the structure of other organs. **H., Numerical,** an actual increase in the number of the constituent muscle-cells of the heart-walls. **H., Simple,** the walls are thicker than usual, the size of the cavities remaining unchanged. **H., True,** the hypertrophy consists in an increase in the muscular tissue itself.

Hypertropia (*hi-per-tro'-pe-ah*). See *Strabismus*.

Hyperuremia (*hi-per-u-re'-me-ah*) [ὑπέρ, over; οὖρον, urine; αἷμα, blood]. Excess of urea in the blood.

Hyperuresis (*hi-per-u-re'-sis*). Same as *Polyuria* and *Enuresis*.

Hyperuricemia (*hi-per-u-ris-e'-me-ah*) [ὑπέρ, over; οὖρον, urine; αἷμα, blood]. Excess of uric acid in the blood.

Hyperventilation (*hi-per-ven-til-a'-shun*) [ὑπέρ, over; *ventilare*, to fan]. A method of treating some diseases by exposing the body to drafts of air.

Hypesthesia (*hip-es-the'-ze-ah*) [ὑπό, under; αἰσθησις, sensation]. Impairment of sensation; lessened tactile sensibility.

Hypha (*hi'-fah*) [ὑφή, a weaving, web: *pl.*, *Hyphæ*]. In biology, the filament or thread of a fungus; the matted hyphæ form the *mycelium*.

Hyphemia (*hi-fe'-me-ah*) [ὑπό, under; αἷμα, blood]. 1. Oligemia; deficiency of blood. 2. Hemorrhage within the globe of the eye.

Hyphidrosis (*hip-hid-ro'-sis*) [ὑπό, under; ἵδρωσις, sweating]. Deficiency of perspiration.

Hyphodrome (*hi'-fo-drōm*) [ὑφή, a weaving; δρόμος, a running]. In biology, a leaf in which the veins are more or less concealed in the thick mesophyl.

Hyphology (*hi-fol'-o-je*) [ὑφή, web; λόγος, science]. Same as *Histology*.

Hyphomycetes (*hi-fo-mi-se'-tēz*) [ὑφή, web; μύκης, fungus]. A group of fungi having the spores naked, on prominent threads.

Hyphostroma (*hi-fo-stro'-mah*) [ὑφή, a web; στρῶμα, a bed]. Same as *Mycelium*.

Hyphotomy (*hi-fot'-o-me*) [ὑφή, a web; τομή, a cutting]. The dissection of tissues.

Hypinosis (*hip-in-o'-sis*) [ὑπό, under; ἴς, ἰνός, fiber]. A deficiency of fibrin in the blood.

Hypinotic (*hip-in-ot'-ik*) [ὑπό, under; ἴς, ἰνός, fiber]. Pertaining to, or affected with, hypinosis.

Hypnagogic (*hip-nag-og'-ik*) [ὕπνος, sleep; ἀγωγός, leading]. 1. Inducing sleep; pertaining to the inception of sleep. 2. Induced by sleep.

Hypnal (*hip'-nal*) [ὕπνος, sleep]. A drug composed of antipyrin and chloral hydrate, proposed as an hypnotic. It is tasteless, odorless, and crystalline, and soluble in water. Dose gr. xv. Unof.

Hypnepagogue (*hip-nep'-ag-og*) [ὕπνος, sleep; ἐπαγωγός, enticing]. A medicine that induces sleep; an hypnotic.

Hypniater (*hip-ne'-a-ter*) [ὕπνος, sleep; ἰατήρ, practitioner]. A somnambulistic or clairvoyant doctor; a hypnotizer or mesmerist.

Hypnic (*hip'-nik*) [ὑπνικός, producing sleep]. 1. Pertaining to or inducing sleep. 2. An agent that induces or influences sleep.

Hypnobat, or Hypnobate (*hip'-no-bāt*) [ὕπνος, sleep; βατός, walking]. A sleep-walker; somnambulist.

Hypnobatia (*hip-no-ba'-she-ah*) [ὕπνος, sleep; βατός, walking]. Somnambulism.

Hypnocyst (*hip'-no-sist*) [ὕπνος, sleep; κύστις, bladder]. In biology, an encysted unicellular organism not undergoing sporulation.

Hypnogenetic, Hypnogenic, Hypnogenous (*hip-no-jen-et'-ik, hip-no-jen'-ik, hip-noj'-en-us*) [ὕπνος, sleep; γεννᾶν, to produce]. 1. Producing or inducing sleep. 2. Inducing hypnotism.

Hypnography (*hip-nog'-ra-fe*). Same as *Hypnology*.

Hypnolepsy (*hip'-no-lep-se*) [ὕπνος, sleep; λῆψις, seizure]. Narcolepsy; morbid sleepiness.

Hypnology (*hip-nol'-o-je*) [ὕπνος, sleep; λόγος, science]. The science of sleep, its disorders, and its hygienic effects.

Hypnone (*hip'-nōn*). See *Acetophenone*.

Hypnopathy (*hip-nop'-ath-e*) [ὕπνος, sleep; πάθος, disease]. Sleep due to a diseased or morbid condition of the body, brain, or mind; also, narcolepsy; sleepy disease.

Hypnophobia (*hip-no-fo'-be-ah*) [ὕπνος, sleep; φόβος, fear]. Morbid dread of sleep; also, nightmare or night-terror.

Hypnosis (*hip-no'-sis*) [ὕπνος, sleep]. An artificial condition produced by hypnotizing. Also, the gradual approach of sleep. **H., African.** See *African Lethargy*.

Hypnosperm (*hip'-no-sperm*) [ὕπνος, sleep; σπέρμα, seed]. In biology, a resting spore. Cf. *Hypnospore*.

Hypnospore (*hip'-no-spor*) [ὕπνος, sleep; σπορά, a spore]. In biology, a resting spore.

Hypnotherapy (*hip-no-ther'-ap-e*) [ὕπνος, sleep; θεραπεία, healing]. Hypnotic treatment of disease.

Hypnotic (*hip-not'-ik*) [ὕπνος, sleep]. A remedy that causes sleep. A soporific. Also, pertaining to hypnotism.

Hypnotism (*hip'-not-izm*) [ὕπνος, sleep]. A state of artificial somnambulism; it may be produced by various means, as, for example, by having the subject look with concentrated attention at any small object so near that effort is required to converge the axes of the eyes. It is characterized by a partial or complete absence of volition, sensation, and self-consciousness, except so much as comes from the hypnotizer or some dominating will or idea. There are four main methods of inducing hypnotism, all originating in France. These are as follows: **Charcot's Method**; it consists in making gentle pressure over the eyeballs, and, finally, rubbing the top of the head. **Luys' Transference Method**; the hypnotism is induced by having the patient sit with his back to the light and look steadily at a rapidly revolving mirror placed two or three feet from him, on which the light is directly shining. The constant flash of the light soon wearies the eyes and produces sleep. **Nancy Method**; in this method hypnotism is induced by means of suggestion entirely, the patient submitting to the will of the operator. **Voisin's Method**; Braidism; the patient lies upon the broad of his back and gazes steadily at a bright silvered ball, suspended from the ceiling and at a distance of about nine inches from his eyes. The method of fascination is also used, the operator gazing fixedly in the subject's eyes at a distance of about a foot. See, also, *Somnambulism*.

Hypnotizable (*hip-not-īz'-ab-l*) [ὕπνος, sleep]. Susceptible of being hypnotized.

Hypnotization (*hip-not-iz-a'-shun*) [ὕπνος, sleep; *facere*, to make]. The employment of the means used to hypnotize a person; the induction of hypnotism.

Hypnotoid (*hip'-not-oid*) [ὕπνος, sleep; εἶδος, form]. Resembling hypnotism.

Hypo- (*hi'-po-*) [ὑπό, under]. A prefix denoting deficiency or lack.

Hypo (*hip'-o*) [ὑπό, under]. A popular name for *hypochondriasis*, lowness of spirits, or imaginary illness, or exaggeration of slight ailments.

Hypoæmia (*hi-po-e'-me-ah*). See *Hyphemia*.

Hypoalbuminosis (*hi-po-al-bu-min-o'-sis*). See *Hypalbuminosis* and *Hypoleukontemia*.

Hypoalonemia (*hi-po-al-o-ne'-me-ah*) [ὑπό, under; ἅλς, salt, ἁλῶν, of salts; αἷμα, blood]. A deficiency of the salts of the blood.

Hypoaria (*hi-po-a'-re-ah*) [ὑπό, under; ᾠάριον, dim. of ᾠόν, an egg]. In biology, a pair of oval ganglia found on the ventral side of the region of the thalami in most fishes.

Hypoblast (*hi'-po-blast*) [ὑπό, under; βλαστός, sprout]. The internal layer of the blastoderm, or the ental layer of cells of the embryo of a metazoan; it is called, also, the endoderm, endoblast, entoderm, or epithelioglandular layer; from it is developed the intestinal epithelium (except that of the mouth and anus) and that of the glands opening into the intestines; also, the epithelium of the air-passages.

Hypoblepharon (*hi-po-blef'-ar-on*) [ὑπό, under; βλέφαρον, lid]. 1. An artificial eye. 2. A swelling under the eyelid.

Hypobromite (*hi-po-bro'-mīt*) [ὑπό, under; βρῶμος, stench]. A salt of hypobromous acid. **H. Method**, a method of estimating the quantity of urea in urine, based upon the fact that when urea is acted upon by sodium hypobromite (or calcium hypochlorite) it is decomposed into nitrogen, carbon dioxid, and water.

Hypobulia (*hi-po-bu'-le-ah*) [ὑπό, under; βουλή, will]. Loss or deficiency of will-power.

Hypocardia (*hi-po-kar'-de-ah*) [ὑπό, under; καρδία, heart]. Downward displacement of the heart.

Hypocatalepsis (*hi-po-kat-al-ep'-sis*) [ὑπό, under; κατά, down; λαμβάνειν, to seize]. Slight catalepsy, or epilepsy.

Hypocatharsis (*hi-po-kath-ar'-sis*) [ὑπό, under; καθαίρειν, to purge]. A gentle purgation.

Hypochilium (*hi-po-kil'-e-um*) [ὑπό, under; χεῖλος, the lip: *pl.*, *Hypochilia*]. In biology, the lower part of the lip of certain orchids.

Hypochlorhydria (*hi-po-klor-hi'-dre-ah*) [ὑπό, under; χλωρός, green; ὕδωρ, water]. A condition in which there is a diminished amount of HCl in the gastric juice. It is usually associated with an overproduction of lactic acid, and is often due to a state of lowered general nutrition.

Hypochlorite (*hi-po-klo'-rīt*) [ὑπό, under; χλωρός, green]. Any salt of hypochlorous acid. Calcium hypochlorite is the essential constituent of bleaching-powder.

Hypochlorous Acid (*hi-po-klo'-rus*). See *Acid*.

Hypocholesteremia (*hi-po-ko-les-ter-e'-me-ah*) [ὑπό, under; χολή, bile; στέαρ, fat; αἷμα, blood]. Decrease or deficiency of the cholesterin of the blood.

Hypochondria (*hi-po-kon'-dre-ah*) [ὑπό, under; χόνδρος, cartilage]. 1. The regions below the costal arches on either side. 2. Same as *Hypochondriasis*.

Hypochondriac (*hi-po-kon'-dre-ak*) [ὑπό, under; χόνδρος, cartilage]. 1. Pertaining to the hypochondrium. 2. A person who is affected with hypochondriasis.

Hypochondriasis (*hi-po-kon-dri'-as-is*) [ὑποχονδριακός, affected in the hypochondria]. A disturbance of the functions of the nervous system similar to that in melancholia, in which the patient believes himself suffering from bodily disease. It is characterized by alternate spells of moodiness and excitability. **H. pituitosa.** Synonym of *Membranous Enteritis*.

Hypochondrium (*hi-po-kon'-dre-um*) [ὑπό, under; χόνδρος, cartilage: *pl.*, *Hypochondria*]. The region of the abdomen at each side of the epigastrium. See illustration under *Abdominal*.

Hypochromatemia (*hi-po-kro-mat-e'-me-ah*) [ὑπό, under; χρῶμα, color; αἷμα, blood]. Deficiency of the coloring-matter of the blood.

Hypochromatic (*hi-po-kro-mat'-ik*) [ὑπό, under; χρῶμα, color]. Deficient in coloring-matter.

Hypochromia (*hi-po-kro'-me-ah*) [ὑπό, under; χρῶμα, color]. Abnormal pallor or transparency of the skin, occurring in certain skin-diseases.

Hypochrosis (*hi-po-kro'-sis*) [ὑπό, under; χρῶσις, coloring]. Abnormal paleness; lack of normal coloration.

Hypochyma (*hi-po-ki'-mah*) [ὑπό, beneath; χέειν, to pour]. An old name for cataract.

Hypocist (*hi'-po-sist*) [ὑπό, under; κίστος, cistus]. 1. The plant *Cytinus hypocistis*, of the old world. 2. The dark astringent extract prepared by drying the sap of the foregoing plant and the juice of its berries. It is useful for hemorrhages and diarrhea. Unof.

Hypoclidium (*hi-po-kli'-de-um*) [ὑπό, under; κλείς, a key; the clavicle: *pl.*, *Hypoclidia*]. In biology, the inferomedian process formed at the junction of the clavicles of a bird.

Hypoclysis (*hip-ok'-lis-is*) [ὑπό, under; κλυσμός, a clyster]. The administration of an enema.

Hypocotyl (*hi-po-kot'-il*) [ὑπό, under; κοτυληδών, cotyledon]. A short term for *Hypocotyledonous stem*.

Hypocotyledonous (*hi-po-kot-il-e'-don-us*) [ὑπό, under; κοτυληδών, cotyledon]. In biology, situated below the cotyledons.

Hypocraterimorphous (*hi'-po-kra-ter-im-or'-fus*) [ὑποκρατήριον, the stand of a crater; μορφή, form]. Applied to certain flowers the corolla of which have a flat, spreading limb surmounting a straight tube; salver-shaped.

Hypocyrtosis (*hi-po-sir-to'-sis*) [ὑπό, under; κύρτωσις, curvature]. A slight amount of curvature.

Hypocystotomy (*hi-po-sis-tot'-o-me*) [ὑπό, under; κύστις, bladder; τομή, a cut]. Perineal cystotomy.

Hypoderm (*hi'-po-derm*) [ὑπό, under; δέρμα, skin]. 1. Subcutaneous tissue. 2. A hypodermatic injection. 3. In biology, applied to the epithelial membrane lining the cuticular, crustaceous, or chitinous investment of arthropods; also called *Hypodermis*.

Hypoderma (*hi-po-der'-mah*) [ὑπό, under; δέρμα, skin]. In biology: 1. A layer of cells, usually collenchyma, just beneath the epidermis of a leaf or stem. 2. A genus of dipterous insects, the bot-flies. See *Parasites* (*Animal*), *Table of*.

Hypodermatic (*hi-po-der-mat'-ik*) [ὑπό, under; δέρμα, skin]. Pertaining to that which is under the skin, or to the introduction of medicines beneath the skin.

Hypodermatoclysis (*hi-po-der-mat-ok'-lis-is*), or **Hypodermoclysis** (*hi-po-der-mok'-lis-is*), [ὑπό, under; δέρμα, skin; κλύσις, injection]. A method of supplying fluid to the body to replace that lost through excessive purging, as in cholera, or in cases of hemorrhage. It consists in the introduction into the subcutaneous tissues of certain quantities of normal saline solution.

Hypodermatomy (*hi-po-der-mat'-o-me*) [ὑπό, under; δέρμα, skin; τέμνειν, to cut]. Subcutaneous surgical section of parts.

Hypodermic (*hi-po-der'-mik*). See *Hypodermatic.*

Hypodermis (*hi-po-der'-mis*) [ὑπό, under; δέρμα, skin]. See *Hypoderm.*

Hypodermoclysm (*hi-po-der'-mo-klizm*). Same as *Hypodermatoclysis.*

Hypodicrotous (*hi-po-dik'-ro-tus*) [ὑπό, under; δίκροτος, double beat]. Dicrotic in a small degree.

Hypodipsia (*hi-po-dip'-se-ah*) [ὑπό, under; δίψος, drinking]. The drinking of too little water or fluid.

Hypodynia (*hi-po-din'-e-ah*) [ὑπό, under; ὀδύνη, pain]. Slight or trifling pain.

Hypoemia (*hi-po-e'-me-ah*) [ὑπό, under; αἷμα, blood]. Insufficiency of blood.

Hypoerythrocythemia (*hi-po-er-ith-ro-si-the'-me-ah*) [ὑπό, under; ἐρυθρός, red; κύτος, cell; αἷμα, blood]. Deficiency in the normal number of red corpuscles in the blood.

Hypogala (*hi-pog'-al-ah*) [ὑπό, under; γάλα, milk]. The collection of a milk-like fluid in the eye.

Hypogastralgia (*hi-po-gas-tral'-je-ah*) [ὑπό, under; γαστήρ, stomach; ἄλγος, pain]. Pain in the hypogastrium.

Hypogastric (*hi-po-gas'-trik*) [ὑπό, under; γαστήρ, the belly]. Pertaining to the hypogastrium. See *Abdomen, Artery, Ganglion,* and *Plexus.*

Hypogastriotomy (*hi-po-gas-tre-ot'-o-me*) [ὑπό, under; γαστήρ, belly; τομή, section]. The surgical opening of the abdomen through the hypogastrium.

Hypogastrium (*hi-po-gas'-tre-um*) [ὑπό, under; γαστήρ, stomach]. The lower median anterior region of the abdomen. See *Abdomen.*

Hypogastrocele (*hi-po-gas'-tro-sēl*) [ὑπό, under; γαστήρ, stomach; κήλη, hernia]. A hernia in the hypogastric region.

Hypogastrodidymus (*hi-po-gas-tro-did'-im-us*) [ὑπό, under; γαστήρ, stomach; δίδυμος, twin]. A double monstrosity in which the two fetuses are united at the hypogastrium.

Hypogastrohemia (*hi-po-gas-tro-he'-me-ah*) [ὑπό, under; γαστήρ, stomach; αἷμα, blood]. Hemorrhage in the hypogastrium.

Hypogastrorrhagia (*hi-po-gas-tror-a'-je-ah*). Same as *Hypogastrohemia.*

Hypogastrorrhea (*hi-po-gas-tror-e'-ah*) [ὑπό, under; γαστήρ, stomach; ῥοία, a flow]. A slight amount of gastrorrhea.

Hypogastrorrhexis (*hi-po-gas-tror-eks'-is*) [ὑπό, under; γαστήρ, stomach; ῥέξις, rupture]. Eventration.

Hypogeal, Hypogæal (*hi-po-je'-al*) [ὑπόγειος, under ground]. In biology, growing beneath the surface of the ground. Also, *Hypogæan, Hypogæous, Hypogean, Hypogeous.*

Hypogenesis (*hi-po-jen'-es-is*) [ὑπό, under; γένεσις, production, generation]. In biology, direct development, without alternation of generations.

Hypogenous (*hi-poj'-en-us*) [ὑπό, under; γενής, produced]. In biology, growing below the surface or on the under side.

Hypogeusia (*hi-po-gu'-se-ah*) [ὑπό, under; γεῦσις, taste]. Diminution in the sense of taste.

Hypoglossal (*hi-po-glos'-al*) [ὑπό, under; γλῶσσα, tongue]. Under the tongue. **H. Nerve.** See *Nerves, Table of.*

Hypoglossiadenitis (*hi-po-glos-e-ad-en-i'-tis*) [ὑπό, under; γλῶσσα, tongue; ἀδήν, gland; ιτις, inflammation]. Inflammation of the sublingual gland.

Hypoglossis (*hi-po-glos'-is*). See *Hypoglottis.*

Hypoglossitis (*hi-po-glos-i'-tis*) [ὑπό, under; γλῶσσα, tongue; ιτις, inflammation]. Inflammation of the tissue under the tongue.

Hypoglossus (*hi-po-glos'-us*) [ὑπό, under; γλῶσσα, tongue]. The hypoglossal nerve.

Hypoglottis (*hi-po-glot'-is*) [ὑπό, under; γλῶττα, tongue]. The under part of the tongue, attached to the lower jaw. Also, a swelling at the under part of the tongue.

Hypoglycemia (*hi-po-gli-se'-me-ah*) [ὑπό, under; γλυκύς, sweet; αἷμα, blood]. Deficiency of sugar in the blood.

Hypognathadenitis (*hi-pog-nāth-ad-en-i'-tis*) [ὑπό, under; γνάθος, jaw; ἀδήν, gland; ιτις, inflammation]. Inflammation of the submaxillary gland.

Hypognathous (*hi-pog'-na-thus*) [ὑπό, under; γνάθος, jaw]. In biology, applied to animals in which the lower mandible is longer than the upper.

Hypognathus (*hi-pog'-na-thus*) [ὑπό, under; γνάθος, jaw]. A double monstrosity in which the parasite is attached to the inferior maxillary bone.

Hypogynia (*hi-po-jin'-e-ah*) [ὑπό, under; γυνή, a woman]. The state of being hypogynous.

Hypogynous (*hi-poj'-in-us*) [ὑπό, under; γυνή, female]. In biology, growing beneath the pistil; applied to stamens or other floral organs that are inserted beneath the pistil.

Hypohæmia (*hi-po-he'-me-ah*). See *Hypohemia.*

Hypohematosis (*hi-po-hem-at-o'-sis*) [ὑπό, under; αἷμα, blood]. A diseased condition marked by hyphemia, or deficiency in the amount of blood; also, the production, or process of inducing such a condition.

Hypohidrosis (*hi-po-hid-ro'-sis*) [ὑπό, under; ἱδρωσις, sweating]. Scanty perspiration.

Hypohydremia (*hi-po-hi-dre'-me-ah*) [ὑπό, under; ὕδωρ, water; αἷμα, blood]. Deficiency of water in the blood.

Hypohypnosis (*hi-po-hip-no'-sis*) [ὑπό, under; ὕπνος, sleep]. Imperfect or partial sleep.

Hypoinosemia (*hi-po-in-o-se'-me-ah*) [ὑπό, under; ἰς, fiber; αἷμα, blood]. Decrease in the tendency to the formation of fibrin in the blood.

Hypokinesia, or Hypokinesis (*hi-po-kin-e'-se-ah,* or *hi-po-kin-e'-sis*) [ὑπό, under; κίνησις, motion]. Deficiency in motor reaction under stimulation.

Hypoleukocythemia (*hi-po-lu-ko-si-the'-me-ah*) [ὑπό, under; λευκός, white; κύτος, a cell; αἷμα, blood]. Deficiency of white corpuscles in the blood.

Hypoleukocytosis (*hi-po-lu-ko-si-to'-sis*) [ὑπό, under; λευκός, white; κύτος, cell]. Diminution in the number of colorless corpuscles in the blood.

Hypolipemia (*hi-po-lip-e'-me-ah*) [ὑπό, under; λίπος, fat; αἷμα, blood]. Deficiency of fat in the blood.

Hypologia (*hi-po-lo'-ge-ah*) [ὑπό, under; λόγος, word]. Poverty of speech as a symptom of cerebral disease.

Hypomania (*hi-po-ma'-ne-ah*) [ὑπό, under; μανια, madness]. A moderate degree of maniacal exaltation.

Hypomelancholia (*hi-po-mel-an-ko'-le-ah*) [ὑπό, under; μελαγχολία, melancholia]. Moderate or reasoning melancholia.

Hypomenous (*hi-pom'-en-us*) [ὑπό, under; μένειν, to remain]. Same as *Hypogenous.*

Hypomere (*hi'-po-mēr*) [ὑπό, under; μέρος, a part]. In biology, the lower half of certain sponges (*rhagon*), which consists of all three fundamental layers.

Hypometropia (*hi-po-me-tro'-pe-ah*) [ὑπό, under; μέτρον, measure; ὤψ, vision]. Myopia.

Hypomnesis (*hi-pom-ne'-sis*) [ὑπόμνησις, memory]. Memory or recollection.

Hypomoria (*hi-po-mo'-re-ah*) [ὑπό, under; μωρία, folly]. Slight mental disorder.

Hypomyosthenia (*hi-po-mi-os-the'-ne-ah*) [ὑπό, under; μῦς, muscle; σθένος, strength]. Deficiency in muscular power.

Hyponasty, or Hyponastic Curvature (*hi'-po-nas-te*) [ὑπό, under; ναστός, close pressed]. In biology, a

curvature produced by growth on the under side of an extended organ. Cf. *Epinasty*.

Hyponeuria (*hi-po-nu'-re-ah*) [ὑπό, under; νεῦρον, nerve]. Slight or diminished nerve-power.

Hyponoetic (*hi-po-no-et'-ik*) [ὑπό, under; νοητικός, understanding]. Under the control of the will.

Hyponome (*hi'-po-nōm*) [ὑπό, under; νέμειν, to dwell in, to inhabit]. In biology, the exhalant funnel of a cephalopod.

Hyponomous (*hi-pon'-o-mus*) [ὑπό, under; νέμειν, to feed]. Spreading or eating below the surface; applied to certain ulcers, etc.

Hypopepsia (*hi-po-pep'-se-ah*) [ὑπό, under; πέψις, digestion]. A disorder of digestion in which there is a notable diminution in the functional activity, glandular and chemic, of the stomach.

Hypophemia, Tropical. See *Ankylostomiasis*.

Hypophlœodic (*hi-po-fle-od'-ik*) [ὑπό, under; φλοιός, bark]. In biology, situated beneath the bark.

Hypophlœous (*hi-po-fle'-us*). Same as *Hypophlœodic*.

Hypophosphite (*hi-po-fos'-fit*) [ὑπό, under; *phosphorus*]. Any salt of hypophosphorous acid. Several hypophosphites (as of calcium, potassium, sodium) are official, and many others are used to a limited extent.

Hypophosphorous Acid (*hi-po-fos-fo'-rus*). See *Acid*.

Hypophrasia (*hi-po-fra'-ze-ah*) [ὑπό, under; φράσις, phrase, utterance]. Meagerness or poverty of speech, as a sign of cerebral disease.

Hypophyllium (*hi-po-fil'-e-um*) [ὑπό, under; φύλλον, a leaf: *pl.*, *Hypophyllia*]. In biology, a sheath-like petiole, without laminæ.

Hypophyllous (*hi-poff'-il-us*) [ὑπό, under; φύλλον, leaf]. Same as *Hypogenous*.

Hypophysemia (*hi-po-fi-se'-me-ah*) [ὑπό, under; σῦσα, air; αἷμα, blood]. Deficiency of gaseous elements in the blood.

Hypophysis (*hi-poff'-is-is*) [ὑπό, under; φύειν, to grow]. The pituitary body, *q. v.*; sometimes called the **H. cerebri**.

Hypoplasia (*hi-po-pla'-ze-ah*) [ὑπό, under; πλάσσειν, to mould]. Deficiency or arrested development of any organ or tissue. See *Aplasia*.

Hypoplastemia (*hi-po-plas-te'-me-ah*). See *Hypoplasticemia*.

Hypoplasticemia (*hi-po-plas-tis-e'-me-ah*) [ὑπό, under; πλαστικός, plastic; αἷμα, blood]. Deficient plasticity of the blood.

Hypopraxia (*hi-po-praks'-e-ah*) [ὑπό, under; πρᾶξις, doing]. Inactivity; listlessness; inefficiency as a sign or result of cerebral disorder.

Hypopselaphesia (*hi-pop-sel-af-e'-ze-ah*) [ὑπό, under; ψηλάφησις, touch]. Diminution of sensitiveness to tactile impressions.

Hypoptilum (*hi-pop'-til-um*) [ὑπό, under; πτίλον, feather: *pl.*, *Hypoptila*]. In biology, the entire after-shaft of a feather, including the vanes; hyporachis.

Hypoptyalism (*hi-pop-ti'-al-izm*) [ὑπό, under; πτυαλισμός, ptyalism]. A mild or slight ptyalism.

Hypopygium (*hi-po-pij'-e-um*) [ὑπό, under; πυγή, the rump: *pl.*, *Hypopygia*]. In biology, the male clasping-organ of dipterous insects.

Hypopyon (*hi-po'-pe-on*) [ὑπό, under; πῦον, pus]. A collection of pus in the anterior chamber of the eye, secondary to inflammation of adjacent tissues.

Hypoquebrachin (*hi-po-kwe-brak'-in*) [ὑπό, under; *quebracho*], $C_{21}H_{26}N_2O_2$. An alkaloid of *Quebracho*, occurring in yellow masses, melting at about 80° C., and soluble in alcohol and ether.

Hyporachis (*hi-por'-ak-is*) [ὑπό, under; ῥάχις, the spine]. In biology, the stem or rachis of the after-shaft; the *hypoptilum* of a feather.

Hyporadioli (*hi-po-ra-di'-o-li*) [ὑπό, under; *radius*, radius]. In biology, the barbules of the after-shaft of a feather.

Hyporrhea (*hi-por-e'-ah*) [ὑπό, under; ῥεῖν, to flow]. A slight hemorrhage.

Hyposmia (*hi-poz'-me-ah*) [ὑπό, under; ὀσμή, smell]. Diminution of the sense of smell.

Hypospadia, or Hypospadias (*hi-po-spa'-de-ah, hi-po-spa'-de-as*) [ὑπό, under; σπᾶν, to draw]. An abnormal opening and ending of the urethra upon the under surface of the penis, or in the under wall of the urethra. It is variously classed, according to the position of its opening, as glandular (or balanic), balano-penile, penile, peno-scrotal, scrotal, or perineal. Certain tribes of the Arabs, Africans, and native Australians produce an artificial hypospadias.

Hypostaphylitis (*hi-po-staf-il-i'-tis*) [ὑπό, under; σταφυλίς, uvula; ιτις, inflammation]. Slight inflammation of the uvula.

Hypostasis (*hi-pos'-tas-is*) [ὑπόστασις, a standing under]. A word loosely used to denote feces, or any sediment falling from a liquid, especially the sediment of urine. Also, a form of passive hyperemia caused by the dependent position of the part affected.

Hypostatic (*hi-po-stat'-ik*) [ὑπόστασις, a standing under]. Due to, or of the nature of, hypostasis. **H. Congestion.** Same as *Hypostasis*, *q. v.* **H. Pneumonia**, Piorry's term for the variety of pneumonia secondary to most of the acute febrile diseases, and occurring in the final stage of many chronic diseases. It is in part due to the mechanic gravitation of blood to the part affected, as to the back, in cases of long-continued dorsal decubitus.

Hyposternum (*hi-po-ster'-num*) [ὑπό, under; στέρνον, the breast: *pl.*, *Hyposterna*]. In biology, the third lateral piece of the plastron of a turtle; also called *Hypoplastron*.

Hyposthenia (*hi-po-sthe'-ne-ah*) [ὑπό, under; σθένος, strength]. Weakness; subnormal strength.

Hyposthenic (*hi-po-sthen'-ik*) [ὑπό, under; σθένος, strength]. 1. Tendency to, or characterized by, hyposthenia; applied to diseases that are more than ordinarily enfeebling. 2. A medicine that reduces the action of the heart without affecting its rhythm.

Hypostoma (*hi-pos'-to-mah*) [ὑπό, under; στόμα, mouth: *pl.*, *Hypostomata*]. In biology, applied (*a*) by Meigen and Bouché to the clypeus of *Diptera*, and by Meinert to a curved broad sclerite behind the *lamina labialis* of the inner stipes in the mouth of *Myriopods*; (*b*) to the proboscis of *Hydroidea*.

Hypostomatous (*hi-po-sto'-mat-us*) or **Hypostomous** (*hi-pos'-to-mus*) [ὑπό, under; στόμα, mouth]. In biology, having the mouth inferior or ventral.

Hypostome (*hi'-po-stōm*). Same as *Hypostoma*.

Hypostyptic (*hi-po-stip'-tik*) [ὑπό, under; στυπτικός, astringent]. 1. Moderately or mildly styptic. 2. A mildly styptic medicine.

Hyposynergia (*hi-po-sin-er'-je-ah*) [ὑπό, under; συνεργία, coöperation]. Defective coördination.

Hyposystole (*hi-po-sis'-to-le*) [ὑπό, under; συστολή, systole]. Deficiency of the cardiac systole.

Hyposystolia (*hi-po-sis-to'-le-ah*). See *Hyposystole*.

Hypotension (*hi-po-ten'-shun*) [ὑπό, under; *tensio*, a stretching]. Diminished or abnormally low tension; hypotonia.

Hypothallus (*hi-po-thal'-us*) [ὑπό, under; θαλλός, a young shoot or branch, a frond: *pl.*, *Hypothalli*]. In biology, a delicate filamentous mass upon which is developed the thallus of a lichen.

Hypothecium (*hi-po-the'-se-um*) [ὑπό, under; θήκη, a case]. In biology, that portion of a lichen thallus immediately around or beneath the apothecium.

Hypothenar (*hi-poth'-en-ar*) [*ὑπό*, under; *θέναρ*, palm]. The fleshy eminence on the palm of the hand over the metacarpal bone of the little finger. Also, the prominences on the palm at the base of the fingers. Also, the ball of the thumb.

Hypothermal (*hi-po-ther'-mal*) [*ὑπό*, under; *θέρμη*, heat]. Tepid; denoting a temperature placed arbitrarily between 59° and 68° F., or 15° and 25° C. Also, pertaining to the reduction of the temperature of the body.

Hypothermia (*hi-po-ther'-me-ah*) or **Hypothermy** (*hi'-po-ther-me*) [*ὑπό*, under; *θέρμη*, heat]. Deficiency in the heat of the body.

Hypothesis (*hi-poth'-es-is*) [*ὑπό*, under; *θέσις*, a position]. A supposition set forth for discussion or demonstration. A theory assumed as true.

Hypotonia, or Hypotonus (*hi-po-to'-ne-ah*, or *hi-pot'-o-nus*) [*ὑπό*, under; *τόνος*, tension]. Decrease of normal tonicity; diminution of intraocular pressure.

Hypotony (*hi-pot'-o-ne*) [*ὑπό*, under; *τόνος*, tension]. Same as *Hypotonia*. **H., Gastric,** the reverse condition of gastric hypermotility, *q. v.*

Hypotreme (*hi'-po-trēm*) [*ὑπό*, under; *τρῆμα*, a hole, (here, a spiracle): *pl.*, *Hypotremata*]. In entomology, one of a pair of strong fusiform processes extending obliquely across the anterior coxo-sternal foramina to the lower borders of the anterior spiracles in certain insects (*e. g.*, *Diptera*); they strengthen the anterior part of the thoracic wall. (*Lowne.*)

Hypotrichous (*hi-pot'-rik-us*) [*ὑπό*, under; *θρίξ*, hair]. In biology, applied to such infusoria as have the locomotor cilia on the under side of the body.

Hypotrophy (*hi-pot'-ro-fe*) [*ὑπό*, under; *τρέφειν*, to nourish]. Subnormal nutrition. A defect in the constructive or tissue-building powers of the organism. It may be congenital or acquired, and varies much in degree in different individuals, or even in the same individual at different times.

Hypouremia (*hi-po-u-re'-me-ah*) [*ὑπό*, under; *οὖρον*, urine; *αἷμα*, blood]. Diminution of the urea normally present in the blood.

Hypouricemia (*hi-po-u-ris-e'-me-ah*) [*ὑπό*, under; *οὖρον*, urine; *αἷμα*, blood]. Decrease in the uric acid of the blood.

Hypourocrinia (*hi-po-u-ro-krin'-e-ah*) [*ὑπό*, under; *οὖρον*, urine; *κρίνειν*, to separate]. A deficient or too scanty secretion of urine.

Hypoxanthin (*hi-po-zan'-thin*) [*ὑπό*, under; *ξανθός*, yellow], $C_5H_4N_4O$. A leukomaïne, also known as *Sarcin* or *Sarkin*. It occurs, accompanying adenin and guanin, in nearly all the animal tissues and organs rich in nucleated cells. In minute quantities it is a normal constituent of urine. It has also been found in plants, seeds, ferments, and wines. It is a crystalline body, soluble in cold and boiling water, insoluble in cold alcohol and ether. Hypoxanthin appears to be one of the products formed by the decomposition and successive oxidation of proteid matter previous to the formation of uric acid and urea. It is produced from adenin by the action of nitrous acid. It is nonpoisonous. See *Kossel's Test*, and *Sarcin*.

Hypsicephaly (*hip-sis-ef'-al-e*) [*ὕψι*, on high; *κεφαλή*, head]. The condition of a skull with a cranial index of over 75.1°.

Hypsicranius (*hip-sik-ra'-ne-us*) [*ὕψι*, on high; *κρανίον*, skull]. Lissauer's term for a skull having the ratio between length and height of 82.5° to 90.4°.

Hypsiliform (*hip-sil'-if-orm*). See *Ypsiliform*.

Hypsodont (*hip'-so-dont*) [*ὕψι*, on high; *ὀδούς*, tooth]. In biology, applied to such animals as have teeth furnished with long crowns and short roots.

Hypsonosus (*hip-son'-o-sus*) [*ὕψος*, height; *νόσος*, illness]. Mountain-sickness; balloon-sickness; characterized by nausea, headache, epistaxis, etc.

Hypsophobia (*hip-so-fo'-be-ah*) [*ὕψος*, height; *φόβος*, fear]. Morbid dread of being at a great height; aërophobia.

Hypsophyl, (*hip'-so-fil*) [*ὕψι*, on high; *φύλλον*, a leaf]. In biology, one of the leaf-like or bract-like structures subtending a flower or an inflorescence.

Hypsopisthius (*hip-so-pis'-the-us*) [*ὕψι*, on high; *ὀπίσθιον*, occiput]. Lissauer's term for a skull in which the angle included between the radius fixus and the line joining the hormion and lambda is between 33° and 41°.

Hypural (*hip-u'-ral*) [*ὑπό*, under; *οὐρά*, tail]. In biology, located beneath the tail.

Hyraceum (*hi-ra'-se-um*) [*ὕραξ*, a mouse]. A product from South Africa, somewhat resembling castoreum, and believed to be an excretion, perhaps fecal, of *Hyrax capensis*, the so-called South African cony or cliff-badger. Its use is the same as that of castor.

Hyssop (*his'-op*) [*ὑσσωπος*, an aromatic plant]. Hedge-hyssop. The leaves and tops of *Hyssopus officinalis*, an aromatic stimulant, carminative, and tonic, much employed in chronic catarrh of the respiratory tract. Dose of the fld. ext. ʒj–ij. Unof. See also *Lophanthus* and *Gratiola*.

Hystera (*his'-ter-ah*) [*ὑστέρα*, womb]. The uterus or womb. Also, the vulva. Also, the placenta or afterbirth.

Hysteralgia (*his-ter-al'-je-ah*) [*ὑστέρα*, womb; *ἄλγος*, pain]. Pain in the womb.

Hysteranesis (*his-ter-an'-es-is*) [*ὑστέρα*, womb; *ἄνεσις*, relaxation]. Relaxation and atony of the uterus.

Hysteranthous (*his-ter-an'-thus*) [*ὕστερος*, later; *ἄνθος*, a flower]. In biology, applied to plants in which the leaves do not appear till after the flowers have appeared.

Hysteratresia (*his-ter-at-re'-ze-ah*) [*ὑστέρα*, womb; *ἀτρετος*, imperforate]. An imperforate or impervious condition of the mouth of the womb.

Hysterauxesis (*his-ter-awks-e'-sis*) [*ὑστέρα*, womb; *αὔξησις*, enlargement]. Enlargement of the uterus, normal (as in pregnancy) or abnormal.

Hysterectomy (*his-ter-ek'-to-me*) [*ὑστέρα*, womb; *ἐκτομή*, a cutting out]. Excision or removal of the womb by surgical operation. **H., Vaginal,** removal of the womb through the vagina.

Hysterelcosis (*his-ter-el-ko'-sis*) [*ὑστέρα*, womb; *ἕλκωσις*, ulceration]. Ulceration of the uterus.

Hysteria (*his-te'-re-ah*) [*ὑστέρα*, womb]. A functional disturbance of the nervous system, supposed by early physicians to be due to a disordered condition of the womb. It is now often considered a neurosis; it is not with certainty known whether it is due to structural alteration in any part of the central nervous system, or to abnormal blood-supply. Paralyses, impairment of vision, convulsions, sensory disturbances, and psychic manifestations, are usually prominent symptoms. Major and minor types are differentiated. The popular significance of the term is that of feigned disease, but the physician usually considers the affection real. It is more frequently encountered in females than in males. **H., Epileptiform,** a synonym of *Hystero-epilepsy*. **H., Major,** hystero-epilepsy. **H., Minor,** hysteria of a mild form.

Hysteric, Hysterical (*his-ter'-ik, his-ter'-ik-al*) [*ὑστέρα*, womb]. Pertaining to hysteria, *q. v.* Also, pertaining to the womb. **H. Temperature.** See *Thermal Ataxia*. **H. Breast,** a condition of the breast in neurotic women marked by excessive superficial tenderness, diffuse swelling, constant variation in size and hardness, and by the recurrence of these symptoms at the menstrual epochs. **H. Dyspnea,** intensely rapid

breathing, 50 to 150 respirations per minute, occurring in neurotic individuals, without corresponding alteration of the pulse-rate. **H. Somnolence,** the early stage or lighter form of *H. Trance.* **H. Trance,** a peculiar condition in which the patient sinks into a lethargic, corpse-like condition, lasting from a few hours to several days.

Hystericism (*his-ter'-is-izm*) [ὑστέρα, womb]. The hysteric diathesis or temperament; proneness to the exhibition of hysteric symptoms.

Hysterics (*his-ter'-iks*) [ὑστέρα, womb]. A popular term for hysteric or convulsive movements and conditions.

Hysteriencephalitis (*his-ter-e-en-sef-al-i'-tis*) [ὑστέρα, womb; ἐγκέφαλον, brain; ιτις, inflammation]. Encephalitis and meningitis following repeated attacks of hysteria.

Hysterionica (*his-ter-e-on'-ik-ah*) [ὑστέρα, womb]. A composite-flowered herb of South America (*H. baylahuen*) of considerable efficacy in the treatment of acute and chronic affections of the respiratory apparatus. It is also a stomachic and intestinal antiseptic of value in the treatment of flatulent dyspepsia. Dose of the fluid extract ɱv–xv. Unof.

Hysteritis (*his-ter-i'-tis*). See *Metritis.*

Hysterizable (*his-ter-iz'-a-bl*) [ὑστέρα, womb; *able*, able]. Capable of being thrown into a hysteric condition.

Hystero- (*his'-ter-o-*) [ὑστέρα, uterus]. A prefix signifying relation to the uterus, or to hysteria.

Hysterocatalepsy (*his-ter-o-kat'-al-ep-se*) [ὑστέρα, womb; κατάληψις, catalepsy]. A form of hysteria accompanied by catalepsy.

Hysterocele (*his'-ter-o-sēl'*) [ὑστέρα, uterus; κήλη, hernia]. Hernia containing the uterus, or part of it.

Hysterocleisis (*his-ter-o-kli'-sis*) [ὑστέρα, womb; κλείσις, closure]. The closure of the os uteri by scarifying and suturing the labia; an operation formerly employed in the treatment of vesico-uterine fistula.

Hysterocyesis (*his-ter-o-si-e'-sis*) [ὑστέρα, womb; κύησις, pregnancy]. Uterine pregnancy.

Hysterocystocele (*his-ter-o-sis'-to-sēl'*) [ὑστέρα, womb; κύστις, bladder; κήλη, hernia]. Hysterocele complicated by cystocele; hernia of the womb and the bladder, or parts of them.

Hystero-demonopathy (*his-ter-o-de-mon-op'-ath-e*) [ὑστέρα, womb; δαίμων, a demon; πάθος, disease]. Hysteric demonopathy or demonomania.

Hysterodynia (*his-ter-o-din'-e-ah*) [ὑστέρα, womb; ὀδύνη, pain]. Pain in the womb.

Hystero-epilepsy (*his-ter-o-ep'-il-ep-se*) [ὑστέρα, womb; ἐπιληψία, epilepsy]. A form of hysteria accompanied by convulsions resembling those of epilepsy. Gowers advises the term *hysteroid* in reference thereto.

Hystero-epileptogenous (*his'-ter-o-ep-il-ep-toj'-en-us*) [ὑστέρα, womb; ἐπιληψία, epilepsy; γεννᾶν, to produce]. Producing hysteric epilepsy.

Hysterogenic (*his-ter-o-jen'-ik*) [ὑστέρα, womb; γεννᾶν, to beget]. Causing or producing hysteria.

Hysterogenic (*his-ter-o-jen'-ik*) [ὕστερος, later; γένεια, produce, bear]. In biology, applied to intercellular spaces or structures appearing late in the life of a plant. Cf. *Protogenic.*

Hysterogeny (*his-ter-oj'-en-e*) [ὑστέρα, womb; γεννᾶν, to produce]. The induction of the hysteric state or paroxysm.

Hysteroid (*his'-ter-oid'*) [ὑστέρα, womb; εἶδος, form]. Resembling hysteria. See *Hystero-epilepsy.* **H. Convulsions,** convulsive movements with hysteric symptoms in various organic diseases of the brain, in epilepsy, and in hydrophobia.

Hysterolith (*his'-ter-o-lith*) [ὑστέρα, womb; λίθος, stone]. Calculus or stone in the womb.

Hysterolithiasis (*his-ter-o-lith-i'-as-is*) [ὑστέρα, womb; λιθίασις, the formation of calculi]. The formation of hysteroliths.

Hysterology (*his-ter-ol'-o-je*) [ὑστέρα, womb; λόγος, science]. The anatomy, physiology, and pathology, of the uterus.

Hysteroloxia (*his-ter-o-loks'-e-ah*) [ὑστέρα, womb; λοξός, oblique]. Oblique displacement or position of the uterus.

Hysteromalacia (*his-ter-o-mal-a'-se-ah*) [ὑστέρα, womb; μαλακία, softness]. Softening of the tissues of the womb.

Hysteromalacoma (*his-ter-o-mal-ak-o'-mah*) [ὑστέρα, womb; μαλακός, soft]. Softening of the womb or of any part of it.

Hysteromania (*his-ter-o-ma'-ne-ah*) [ὑστέρα, womb; μανία, madness]. Hysteric insanity; also, nymphomania.

Hysterometer (*his-ter-om'-et-er*) [ὑστέρα, womb; μέτρον, measure]. An instrument for measuring the length of the intra-uterine cavity.

Hysterometry (*his-ter-om'-et-re*) [ὑστέρα, womb; μέτρον, measure]. The measurement of the womb or of its internal space.

Hysteromyoma (*his-ter-o-mi-o'-mah*) [ὑστέρα, womb; μῦς, muscle; ὄμα, tumor: *pl.*, *Hysteromyomata*]. Myoma or fibro-myoma of the womb.

Hysteromyomatous (*his-ter-o-mi-o'-mat-us*) [ὑστέρα, womb; μῦς, muscle; ὄμα, tumor]. Of the nature of or pertaining to hysteromyoma.

Hysteromyomectomy (*his'-ter-o-mi-o-mek'-to-me*) [ὑστέρα, uterus; μῦς, muscle; ἐκτομή, excision]. Removal of a hysteromyomatous growth. Removal of the body or supravaginal portion of the uterus for fibroid tumor.

Hysteroncus (*his-ter-ong'-kus*) [ὑστέρα, womb; ὄγκος, a tumor]. A tumor or swelling of the uterus.

Hysteroneurasthenia (*his'-ter-o-nu-ras-the'-ne-ah*) [ὑστέρα, womb; νεῦρον, nerve; ἀσθενεία, weakness]. Neurasthenia resulting from womb-disease.

Hystero-neurosis (*his'-ter-o-nu-ro'-sis*) [ὑστέρα, womb; νεῦρον, nerve; νόσος, disease]. A reflex action resulting from irritation of the uterus.

Hystero-oöphorectomy (*his'-ter-o-o-off-or-ek'-to-me*) [ὑστέρα, womb; ὠόφορος, egg-bearing; ἐκτομή, a cutting out]. The surgical removal of the uterus and ovaries together.

Hystero-paralysis (*his-ter-o-par-al'-is-is*) [ὑστέρα, womb; παράλυσις, palsy]. Paralysis or weakness of the walls of the womb.

Hysteropathic (*his-ter-o-path'-ik*) [ὑστέρα, womb; πάθος, disease]. Of the nature of, or pertaining to, hysteropathy.

Hysteropathy (*his-ter-op'-ath-e*) [ὑστέρα, womb; πάθος, disease]. Any disease or disorder of the womb. Also, hysteria.

Hysteropathy (*his-ter-op'-ath-e*) [ὕστερος, later; πάθος, illness]. Same as *Deuteropathy.*

Hysteropexia, Hysteropexy (*his-ter-o-peks'-e-ah*, *his'-ter-o-peks-e*) [ὑστέρα, womb; πῆξις, a fastening]. Abdominal fixation of the uterus by a surgical operation.

Hysterophore (*his'-ter-o-for*) [ὑστέρα, womb; φορός, bearing]. A form of uterine pessary.

Hysterophrenic (*his-ter-o-fren'-ik*) [ὑστέρα, womb; φρήν, the mind]. Opposed to hysterogenic.

Hysteroplegia (*his-ter-o-ple'-je-ah*) [ὑστέρα, womb; πληγή, a stroke]. Same as *Hystero-paralysis.*

Hysteropnix (*his-ter-op'-niks*) [ὑστέρα, womb; πνίξ, suffocation]. Globus hystericus.

Hysteropsophy (*his-ter-op'-so-fe*) [ὑστέρα, womb; ψόφος, sound, utterance]. The escape of air from the uterus with an audible sound.

Hystero-psychopathy (*his-ter-o-si-kop'-ath-e*) [ὑστέρα, womb; ψυκή, the mind; πάθος, disease]. Mental disorder secondary to disease of the uterus.

Hysteropsychosis (*his-ter-o-si-ko'-sis*) [ὑστέρα, womb; ψυκή, the mind]. Mental disorder associated with uterine disease.

Hysteroptosis (*his-ter-op-to'-sis*) [ὑστέρα, womb; πτῶσις, a falling]. Falling of the womb. See *Prolapsus.*

Hysterorrhaphy (*his-ter-or'-ra-fe*) [ὑστέρα, womb; ῥαφή, suture]. The closure of a uterine incision or rent by suture.

Hysterorrhea (*his-ter-or-e'-ah*) [ὑστέρα, womb; ῥοία, flow]. A discharge from the uterus.

Hysterorrhexis (*his-ter-or-eks'-is*) [ὑστέρα, womb; ῥῆξις, rupture]. Rupture of the womb.

Hysterosalpinx (*his-ter-o-sal'-pingks*) [ὑστέρα, womb; σάλπιγξ, pipe]. A Fallopian tube or oviduct.

Hysteroscope (*his'-ter-o-skōp*) [ὑστέρα, womb; σκοπεῖν, to view]. A uterine speculum, with a reflector.

Hysterospasm (*his'-ter-o-spazm*) [ὑστέρα, womb; σπασμός, spasm]. Uterine spasm.

Hysterostomatome (*his-ter-o-sto'-mat-ōm*) [ὑστέρα, womb; στόμα, mouth; τομή, section]. A knife for use in hysterostomatomy.

Hysterostomatomy, or **Hysterostomatotomy** (*his-ter-o-sto-mat'-o-me*, or *his-ter-os-to-mat-ot'-o-me*) [ὑστέρα, womb; στόμα, mouth; τομή, section]. Surgical incision of the os uteri, or its enlargement by a cutting operation.

Hysterotokotomy (*his-ter-o-to-kot'-o-me*) [ὑστέρα, womb; τόκος, birth; τομή, section]. Cesarean operation, or delivery through an incision into the womb.

Hysterotome (*his'-ter-o-tōm*) [ὑστέρα, womb; τομή, a cutting]. A hysterotomy-knife or cutting-instrument for use in hysterotomy.

Hysterotomotocia (*his-ter-o-to-mo-to'-se-ah*) [ὑστέρα, womb; τομή, cutting; τόκος, birth]. An incision into the womb for the removal of a fetus; hysterotokotomy.

Hysterotomy (*his-ter-ot'-o-me*) [ὑστέρα, womb; τομή, section]. 1. Surgical incision of the uterus. 2. Cesarean section. See *Cesarean Operation.*

Hysterotrachelorrhaphy (*his-ter-o-tra-kel-or'-ra-fe*) [ὑστέρα, womb; τράχηλος, neck; ῥαφή, suture]. A plastic operation for the restoration of a lacerated cervix uteri.

Hysterotrachelotomy (*his-ter-o-tra-kel-ot'-o-me*) [ὑστέρα, womb; τράχηλος, neck; τομή, section]. Surgical incision of the neck of the womb.

Hystero-traumatism (*his-ter-o-trau'-mat-izm*) [ὑστέρα, womb; τραῦμα, wound]. Hysteric symptoms due to or following traumatism.

Hysterotrismus (*his-ter-o-triz'-mus*) [ὑστέρα, womb; τρισμός, a creaking]. Spasm of the uterus.

Hystriciasis (*his-tris-i'-as-is*) [ὑστριξ, a hedgehog]. A disease of the hair in which the latter "stares" or stands stiffly out like the hair of the hedgehog.

Hystricismus (*his-tris-iz'-mus*). See *Ichthyosis hystrix.*

Hystrix (*his'-triks*) [ὑστριξ, porcupine]. Same as *Ichthyosis hystrix.*

I.

I. The symbol of Iodin.

Iamatology (*i-am-at-ol'-o-je*) [ἴαμα, remedy; λόγος, science]. The science of remedies, or of therapeutics; aceology. Obsolete.

Iasis (*i-a'-sis*) [ἴασις, treatment, cure]. Medical or surgical treatment.

Iateria, or **Iatoria** (*i-at-e'-re-ah*, or *i-at-o'-re-ah*) [ἰατηρία, ἰατορία, therapeutics]. Therapeutics; the art or practice of medicine.

Iatraliptic (*i-at-ral-ip'-tik*) [ἰατρός, physician; ἀλείπτης, an anointer]. Curing by using ointments and frictions. **I. Method.** Same as *Epidermatic Method.*

Iatreusiology (*i-at-ru-se-ol'-o-je*) [ἰάτρευσις, practice of medicine; λόγος, science]. The science of medical or surgical treatment; therapeutics. Obsolete.

Iatreusis (*i-at-ru'-sis*) [ἰάτρευσις, treatment]. Medical or surgical treatment.

Iatric (*i-at'-rik*) [ἰατρικός, medical]. Pertaining to the physician or to the science of medicine.

Iatro- (*i-at'-ro-*) [ἰατρός, physician]. A Greek prefix signifying relation to medicine or to physicians.

Iatrochemic, Iatrochemical (*i-at-ro-kem'-ik, i-at-ro-kem'-ik-al*) [ἰατρός, physician; χημεία, chemistry]. Pertaining to the obsolete chemic school of therapeutists; spagiric.

Iatrochemist (*i-at-ro-kem'-ist*) [ἰατρός, physician; χημεία, chemistry]. A follower of iatrochemic or spagiric doctrines.

Iatrol (*i'-at-rol*) [ἰατρον, surgery]. Oxy-iodo-methylanilid; an odorless and non-toxic antiseptic agent, said to be three times as effective, weight for weight, as iodoform. Unof.

Iatroliptic (*i-at-ro-lip'-tik*). See *Iatraliptic.*

Iatrology (*i-at-rol'-o-je*) [ἰατρός, physician; λόγος, science]. The science of medicine; an account of, or treatise on, physicians.

Iatromathematician (*i-at-ro-math-em-at-ish'-an*) [ἰατρός, physician; μαθηματικός, a mathematician]. A physician of a 17th century school (chiefly Italian) which ascribed vital activities to the sizes of pores and particles, to friction and consequent retardation, and to other mechanical causes. He asserted that all vital phenomena are mechanical.

Iatrophysics (*i-at-ro-fiz'-iks*) [ἰατρός, physician; φυσικός, pertaining to nature]. The relation of physics to medicine or the application of physics to disease or therapeutics. The materialistic explanation of disease; applied especially to an obsolete theory of the 17th century, that sought to explain physiologic and therapeutic facts by means of the principles of physics (dynamics and statics).

Iatrotechnics (*i-at-ro-tek'-niks*) [ἰατρός, physician; τέχνη, art]. The art of healing.

Iba (*e'-bah*) [African]. Gaboon chocolate; a substitute for chocolate from *Irvingia gabonensis*, a simarubaceous tree of W. Africa. Unof.

Icajin (*ik'-aj-in*) [African, *icaja*]. A poisonous alkaloid derived from an African ordeal-drug called *icaja.*

It somewhat resembles brucin, and is probably derived from some species of *Strophanthus*. Unof.

Ice (*is*) [ME., *ise*, ice]. Water in its solid state, to which it is reduced by a temperature of 0° centigrade, or 32° Fahrenheit. **I.-bag**, a bag of waterproof material filled with ice, for application to any part of the body. **I.-cap**, a bladder or rubber cap filled with pounded ice for application to the head in case of congestion. **I.-cot**, a bed cooled by ice, so as to reduce the temperature of the patient. **I.-cradle**, a device that consists in the suspension over a febrile patient in bed, by means of iron frames or barrel-hoops, of a number of zinc buckets kept half-filled with ice and enclosed in a light covering. The patient is covered with a muslin sheet and provision is made for the circulation of pure air in the cradle. The temperature of the patient is to be taken at least every four hours, and if it falls to 100° the apparatus is to be removed. If a sense of chilliness appears hot bottles are to be applied to the feet. **I.-poultice**, or **I.-compress**, an application of broken ice used for local refrigeration.

Iceland (*is'-land*) [ME., *ise*, ice; ME., *land*, land]. An island of the Arctic Ocean. **I. Moss.** See *Cetraria*. **I. Spar**, a transparent calcium carbonate, crystallized in rhomboidal prisms. It has the property of dividing and doubly refracting a ray of light.

Ichor (*i'-kor*) [ἰχώρ, serum, or pus]. An acrid and thin puriform discharge from an ulcer or wound.

Ichoroid, or **Ichorous** (*i'-kor-oid*, *i'-kor-us*) [ἰχώρ, serum, or pus; εἶδος, like]. Resembling or relating to pus containing serum and disintegrated tissue.

Ichorrhea (*i-kor-e'-ah*) [ἰκώρ, pus; ῥοία, a flow]. A copious flow of ichor.

Ichorrhemia (*i-kor-e'-me-ah*) [ἰχώρ, ichor; αἷμα, blood]. The presence in the blood of ichorous matter; septicemia; pyemia.

Ichthiasis (*ik-thi'-as-is*). See *Ichthyosis*.

Ichthidin (*ik'-thid-in*) [ἰχθύς, fish]. A substance resembling lardacein, but obtained from the eggs of cyprinoid fishes.

Ichthin (*ik'-thin*) [ἰχθύς, fish]. An albuminous substance obtained from the eggs of some fishes, and also from cartilaginous fishes and frogs.

Ichthulin (*ik'-thu-lin*) [ἰχθύς, a fish; ὕλη, matter]. A lardaceous substance, with the percentage-composition, $C_{52\cdot5}H_8N_{15\cdot2}S_1P_{0\cdot6}$, found in the eggs of fishes and in salmon. It is akin to ichthin and ichthidin.

Ichthyiasis (*ik-thi-i'-as-is*). Same as *Ichthyosis*.

Ichthyic (*ik'-thi-ik*) [ἰχθυικός, of a fish, fishy]. Pertaining to, or resembling, a fish; piscine; ichthyoid; ichthyo-morphic; icthyopsidan.

Ichthyisation (*ik-thi-iz-a'-shun*) [ἰχθύς, fish]. In biology the process of intensification of fish-like characters.

Ichthyocolla (*ik-thi-o-kol'-ah*) [ἰχθύς, fish; κόλλα, glue]. Isinglass. The air-bladder of the sturgeon, *Acipenser huso*. It occurs in horny, translucent, white sheets, that form a jelly with hot water. It is the purest form of gelatin, and is used as a food, for clarifying liquids, and as a test for tannic acid. **I., Emplastrum**, court-plaster; it consists of isinglass 10, glycerin 1, alcohol 40, water and tinct. benzoin q. s., spread upon fine white silk bolting-cloth and dried.

Ichthyography (*ik-thi-og'-ra-fe*) [ἰχθύς, fish; γράφειν, to write]. A description of fishes; ichthyology.

Ichthyoid (*ik'-thi-oid*) [ἰχθύς, fish; εἶδος, form]. Resembling a fish; fish-like.

Ichthyol (*ik'-thi-ol*) [ἰχθύς, fish; *oleum*, oil], $C_{36}H_{36}S_2Na_2O_6$. Sodium sulpho-ichthyolate. A preparation obtained from certain varieties of fossiliferous shale occurring in the Tyrolese Alps. It has a characteristic bituminous odor and taste. It is a good antiphlogistic, and has proved efficient in eczema and psoriasis, and in gynecology. It is used in the form of a 10 to 20 per cent. ointment, as a solution in glycerin, equal parts, or in the pure state. **I., German.** See *Thiol*.

Ichthyology (*ik-thi-ol'-o-je*) [ἰχθύς, fish; λόγος, science]. The science of fishes, their anatomy, distribution, and biology.

Ichthyomorphic (*ik-thi-o-mor'-fik*) [ἰχθύς, a fish; μορφή, form]. In biology, having the morphologic characters of a fish; ichthyopsidan.

Ichthyophagous (*ik-thi-off'-ag-us*) [ἰχθύς, fish; φαγεῖν, to eat]. Fish-eating. A word applied to such animals as subsist on fish.

Ichthyopterygium (*ik-thi-op-ter-ij'-e-um*) [ἰχθύς, a fish; πτερύγιον, a wing or fin]. The fore-limb or hind-limb of a vertebrate, modified as a fin.

Ichthyosis (*ik-thi-o'-sis*) [ἰχθύς, fish; νόσος, disease]. *Xeroderma ichthyoides*, *Ichthyosis vera*, *fish-skin disease*; a congenital skin-disease, usually involving the entire surface of the body, aggravated by cold, and characterized by extreme dryness of the skin and by the development of epidermal plates coarsely resembling the scales of a fish, and forming in some cases verrucous growths, sessile and pedunculated, freely projecting from the surface. **I. congenita.** See *Seborrhea squamosa neonatorum*. **I. follicularis**, a form in which the sebum and epithelium are heaped up around the orifices of the hair-follicles; it is especially seen upon the extensor surfaces of the arms and legs. **I. hystrix**; *Hystricismus*; a rare skin-disease characterized by warty-looking growths, consisting of elongated and hypertrophied papillæ, covered by greatly thickened, dark-brown, horny epidermis, and forming flat-topped or pointed, spinous projections. These are grouped together to form patches, often unilateral and distributed along the course of cutaneous nerves. They are seldom present on the face. Usually they offer no subjective symptoms. **I. linguæ**, an acquired affection of the tongue in which it becomes dry and scaly. **I. nacrée.** See *I. simplex*. **I. nigricans.** See *I. simplex*. **I. nitida.** See *I. simplex*. **I. palmæ vel palmaris et plantaris**, the exceptional form confined solely to the palms and soles. **I. sauroderma.** See *I. simplex*. **I. scutellata.** See *I. simplex*. **I. sebacea.** Synonym of *Seborrhea*. **I. sebacea cornea.** See *Darier's Disease*. **I. serpentina.** See *I. simplex*. **I. simplex**, the common form of ichthyosis in which the whole surface has a tesselated appearance, from being covered with large, angular, dirty-white, finely corrugated, papery scales that are adherent, and therefore slightly depressed in the center (*I. scutellata*), while the edges are detached, transparent, and shining (*I. nacrée* or *I. nitida*). In still higher grades the scales adhere together to form thin plates, and being of a greenish tint, resemble a serpent's skin (*I. serpentina*); when there are still thicker plates, the appearance of a crocodile hide is produced (*I. sauroderma*). The older the plates the darker they become, so that they may vary from olive-green to black (*I. nigricans*). The hair is dry, harsh, and dull-looking, and the scalp branny; the nails may be pitted and brittle. Itching is frequent. Warmth ameliorates the condition by favoring sweating. **I. spinosa**, a form of *I. hystrix*, in which the scales are spiny. **I. vera.** See *Ichthyosis*.

Ichthyotic (*ik-thi-ot'-ik*) [ἰχθύς, fish]. Relating to or affected with ichthyosis.

Ichthyotomy (*ik-thi-ot'-o-me*) [ἰχθύς, a fish; τομή, a cutting]. The dissection or anatomy of fishes.

Ichthyotoxicum (*ik-thi-o-toks'-ik-um*) [ἰχθύς, fish; τοξικόν, poison]. A name loosely given to poisoning

from eating the flesh of certain fish, and also to the poisonous principle. It may be a natural poisonous principle, or the result of putrefactive fermentation of the substance of the fish. It is probably a ptomaïne.

Ichthysmus (*ik-thiz'-mus*) [ἰχθύς, fish]. Poisoning by shell-fish and other fish. It is due to the absorption of a poison known as *mytilotoxin*, that exists chiefly in the liver of the mussel. The symptoms are numbness and coldness, apyrexia, dilated pupils, rapid pulse, and death from collapse, at times within two hours.

Ichthytoxin (*ik-the-toks'-in*) [ἰχθύς, fish; τοξικόν, poison]. A poisonous substance obtained from the blood-serum of eels.

Icica (*is'-ik-ah*) [S. Am.]. A genus of amyridaceous trees, mostly of tropical America. Varieties of elemi, caranna and tacamahac are produced by trees of this genus. Unof.

Icmacratia (*ik-mak-ra'-she-ah*) [ἰκμάς, moistness; ἀκρατία, weakness]. 1. Inability to retain the fluids of the body. 2. Depraved or enfeebled state of the bodily fluids or humors. Obsolete.

Icmastic (*ik-mas'-tik*) [ἰκμάς, fluid]. Relating to the fluids or humors of the body.

Icon (*i'-kon*) [εἰκών, image]. An image or model.

Iconography (*i-kon-og'-ra-fe*) [εἰκών, image; γράφειν, to write]. A description by means of pictorial illustration.

Icosander (*i-ko-san'-der*) [εἴκοσι, twenty; ἀνήρ, male]. In biology, a plant having twenty or more perigynous stamens.

Icterepatitis (*ik-ter-ep-at-i'-tis*) [ἴκτερος, jaundice; ἧπαρ, liver; ιτις, inflammation]. Inflammation of the liver attended with jaundice.

Icteric (*ik-ter'-ik*) [ἰκτερικός, pertaining to jaundice]. Pertaining to jaundice.

Icterine (*ik'-ter-in*) [ἴκτερος, jaundice]. Yellow, or with yellow marks.

Icteritia (*ik-ter-ish'-e-ah*) [L.]. 1. Same as *Icterus*. 2. Discoloration of the skin.

Icteritious (*ik-ter-ish'-us*) [*icteritia*, jaundice]. Affected with icterus or icteritia.

Icterode (*ik'-ter-ōd*) [ἰκτερώδης, jaundiced]. Icteroid.

Icteroid (*ik'-ter-oid*) [ἴκτερος, jaundice; εἶδος, form]. Resembling or having the nature of jaundice.

Icterophthisis (*ik-ter-off'-this-is*) [ἴκτερος, jaundice; φθίσις, wasting]. Pulmonary tuberculosis with yellow discoloration of the skin.

Icterus (*ik'-ter-us*) [ἴκτερος, jaundice]. Jaundice, *q. v.* **I. gravis, Acute Yellow Atrophy of the Liver.** A rare disease of the liver in which there is a rapid wasting of the liver-substance, with marked jaundice, and death. It may be either primary or secondary. Associated with the jaundice are headache and marked cerebral symptoms, hemorrhage from the mucous surfaces, and rise of temperature. The urine contains leucin and tyrosin. The liver is much reduced in weight, flattened, soft, its capsule wrinkled; microscopically there is an extensive destruction of the liver-cells, due to fatty degeneration. The disease occurs most frequently in females, and in early adult life. The primary form of the disease is usually encountered in pregnancy and during the puerperium. The secondary form may follow other morbid conditions of the liver, and phosphorus-poisoning. **I., Hematogenic,** See *Jaundice*. **I., Hepatogenic.** See *Hepatogenic*. **I. neonatorum,** that which is sometimes observed in an infant during the first few days after birth; it is possibly an indirect result of tying the umbilical cord, or may be due to a breaking-down of the red blood-corpuscles from exposure to cold. **I., Urobilin,** a form of jaundice, so called, due to the production in the body of an excess of urobilin by oxidation of the bile-pigments. The skin and conjunctivæ are colored yellow, the urine dark-brown, but no true jaundice exists.

Ictus (*ik'-tus*) [L., a stroke]. A sudden or unforeseen attack. **I. epilepticus,** an epileptic fit. **I. paralyticus,** a paralytic stroke. **I. solis,** sunstroke.

Id [*idus*, the dividing or division]. In biology, according to Weismann's theory of the germ-plasm, a vital unit of the third degree, having a definite structure of determinants, which in their turn are made up of biophores; an "ancestral germ-plasm," or unit containing all the primary constituents of the species. Each *id* represents an individuality, and is probably identical with the "microsome" of the nuclear rod. Cf. *Idioplasm; Idant.*

-id, or ide (*id*) [*idus*, a term]. A suffix used in chemistry to denote a combination of two elementary substances.

Idant (*i'-dant*) [*idus*, the dividing or division]. In biology, according to Weismann's theory of the germ-plasm, a vital unit of the fourth degree; a group of *ids*, differing from the latter in not being perfectly invariable quantities, but only *relatively* constant, their constitution being modified from time to time, so that the ids which previously belonged to the idant A may later take part in the composition of the idant B or C. A *chromosome* (*chromatosome*) or *nuclear rod*, composed of *vital units* or *ancestral plasms*, termed *ids* or microsomata (*microsomes*).

-ide [εἰδος, resembling in form]. A suffix denoting resemblance to the object with the name of which the designated body is combined.

Idea (*i-de'-ah*) [ἰδέ, ἰδέα, form or semblance]. A mental representation of something perceived. **I.-chase,** a condition in acute mania in which disconnected ideas and fancies flow rapidly through the mind. It is a term much used by German authors. **I., Fixed,** that form of mania in which one dominant idea controls all actions. **I., Imperative,** a morbid idea or insane suggestion imperiously demanding notice, the patient often being painfully conscious of its domination over his will.

Ideation (*i-de-a'-shun*) [ἰδέα, form or semblance]. The formation of a mental conception; the cerebral action by which, or in accord with which, an idea is formed.

Identical (*i-den'-tik-al*) [*identicus*, the same]. The same. **I. Points,** corresponding points of the two retinæ, or the two positions in normal eyes where the image of an object is focused upon the retinæ.

Identism (*i-den'-tizm*) [*idem*, the same]. The theory that chancre, chancroid, and gonorrhea are due to one and the same poison or virus.

Identist (*i-den'-tist*) [*idem*, the same]. A term applied to one who believes in the identity of certain diseases, *e. g.*, that gonorrhea and hard and soft chancre are due to the same specific virus, or that typhus and typhoid fevers are identical.

Identity (*i-den'-tit-e*) [*idem*, the same]. Absolute sameness. **I., Personal,** one's personal existence; the continuity of one's state as a person; the reality of the existence of any person; *in law*, the fact of one being the person he is assumed to be; that which is commonly proved by the establishment of similarity or sameness of age, sex, physical characteristics, marks, and peculiar habits.

Ideo-dynamism (*i-de-o-di'-nam-izm*) [ἰδέα, idea; δύναμις, force]. The domination of an idea; the control exercised by a suggested idea over the subsequent acts of a person who is, or has been, hypnotized.

Ideomotion (*i-de-o-mo'-shun*) [ἰδέα, idea; *motio*, a moving]. Motion or action due to some idea, and neither purely voluntary nor reflex.

Ideo-motor (*i-de-o-mo'-tor*) [*idea*, a mental image; *movere*, to move]. Pertaining conjointly to ideation and movement. **I. Center**, that part of the gray matter which, influenced by ideation, excites muscular movement. **I. Movements**, unconscious movements, due to impulses of the mind when the attention is otherwise absorbed.

Ideopegma (*i-de-o-peg'-mah*) [*ἰδέα*, idea; *πῆγμα*, a thing fixed: *pl.*, *Ideopegmata*]. A fixed or dominant idea that colors all the thoughts of the patient and thus creates a monomania.

Ideophrenia (*i-de-o-fre'-ne-ah*) [*ἰδέα*, form; *φρήν*, mind]. Insanity with marked perversion of ideas.

Ideophrenic (*i-de-o-fren'-ik*) [*ἰδέα*, form; *φρήν*, mind]. Relating to, or marked by, ideophrenia.

Ideoplastic (*i-de-o-plas'-tik*) [*ἰδέα*, idea; *πλάσσειν*, to form]. Giving shape to the ideas; that stage of hypnotism in which the idea impressed on the brain of the subject is translated into action.

Ideosynchysia, or Ideosynchysis (*i-de-o-sin-ki'-ze-ah*, or *i-de-o-sin'-kis-is*) [*ἰδέα*, idea; *σύγχυσις*, a pouring together]. Confusion of ideas; delirium.

-ideus (*-id'-e-us*) [*ἴδιος*, one's own]. A suffix having the sense of possession or ownership.

Idianoia (*id-e-an-oi'-ah*) [*ἴδιος*, own, peculiar; *νόος*, mind]. Same as *Idiocy*.

Idiempresis (*id-e-em-pre'-sis*) [*ἴδιος*, own; *ἐμπρησις*, burning]. Spontaneous combustion. Also, spontaneous inflammation.

Idio- (*id'-e-o-*) [*ἴδιος*, own]. A prefix signifying individual peculiarity.

Idiobiology (*id-e-o-bi-ol'-o-je*) [*ἴδιος*, peculiar; *βίος*, life; *λέγειν*, to speak]. The physiology of any particular organized body, as opposed to *Biontology*, *q. v.* (J. Aitken Meigs.)

Idioblast (*id'-e-o-blast*) [*ἴδιος*, peculiar; *βλαστός*, offshoot]. In biology, a histologic cell having a character different from that of the surrounding cells, owing to a difference either in its form or its contents, *e. g.*, the stellate hair in the interior of the tissue of *Nymphaeaceæ* (Sachs).

Idiocrasy (*id-e-ok'-ras-e*) [*ἰδιοκρασία*: *ἴδιος*, own; *κρᾶσις*, mixture]. Same as *Idiosyncrasy*.

Idioctonia (*id-e-ok-to'-ne-ah*) [*ἴδιος*, own; *κτόνος*, killing]. Self-murder; suicide.

Idiocy (*id'-e-o-se*) [*ἰδιώτης*, a private person]. A condition of mental deficiency, usually accompanied by physical degeneracy. It is characterized by a peculiar coarse, brutal, and cunning nature, with marked physical peculiarities. It is more common in males than in females. **I. of Deprivation**, that in which from birth there is a loss of two or more of the senses, with consequent lack of external impressions. **I., Eclampsic**, that following infantile convulsions. Fourteen per cent. of cases of idiocy are said to be of this origin. **I., Epileptic**, that associated with epilepsy. Such cases are the subjects of epileptic convulsions through life. **I., Ethnic**, a characteristic of certain idiocies of the Caucasian race, in which individuals are seen who present a kind of mimicry of various other races of mankind. Among the types of genetous idiocy thus characterized, writers have described the *American-Indian* type, the *Ethiopian* or *negroid*, the *Kalmuck*, the *Malayan*, and the highly characterized *Mongolian* type, which includes about ten per cent. of all cases of idiocy. **I., Genetous**, those cases in which, although the causation is indefinite, the condition dates from fetal life. **I., Hydrocephalic**, that dependent upon hydrocephalus. **I., Inflammatory**. See *I., Traumatic*. **I., Microcephalic**, that associated with smallness of the head. A circumference less than eighteen inches implies idiocy. **I., Paralytic**, that from paralysis following injury before or after birth. **I., Traumatic**, that due to injury during labor or in early childhood.

Idioderma (*id-e-o-der'-mah*). Same as *Dermatitis tuberosa*.

Idiodinic (*id-e-o-din'-ik*) [*ἴδιος*, one's own; *δῖνος*, rotation, a round area, taken in the sense of "pore"]. In biology, applied to animals that bring forth or reproduce by means of a special genital pore.

Idio-electrics (*id'-e-o-e-lek'-triks*) [*ἴδιος*, own; *ἤλεκτρον*, amber]. A name formerly applied to such bodies as amber, resin, or glass, which are readily electrified by friction, and which were then supposed to be electric in themselves.

Idioglossia (*id-e-o-glos'-e-ah*) [*ἴδιος*, own, peculiar; *γλῶσσα*, tongue]. Extremely defective utterance, but one in which the same sound is used to express the same idea, even though the sounds used belong to no known language.

Idiologism (*id-e-ol'-o-jizm*) [*ἴδιος*, own; *λόγος*, utterance]. A characteristic expression or form of utterance peculiar to any person, especially to an insane person.

Idiometritis (*id-e-o-me-tri'-tis*) [*ἴδιος*, own; *μήτρα*, womb; *ιτις*, inflammation]. Inflammation of the parenchymatous substance of the womb.

Idiomiasma (*id-e-o-mi-az'-mah*) [*ἴδιος*, own; *μίασμα*, stain, defilement: *pl.*, *Idiomiasmata*]. A term for any noxious exhalation from the body.

Idiomology (*id-e-o-mol'-o-je*) [*ἰδίωμα*, a peculiar phraseology, idiom; *λέγειν*, to speak]. The study of the peculiarities of speech of various races.

Idio-muscular (*id-e-o-mus'-ku-lar*) [*ἴδιος*, own; *musculus*, muscle]. Peculiar to muscular tissue; not involving any nerve-stimulus or any function of the organism, except those of the muscle itself. **I. Contraction**, the contraction of a fatigued or tired muscle under certain conditions of extraneous stimulus.

Idioneurosis (*id-e-o-nu-ro'-sis*) [*ἴδιος*, own; *νεῦρον*, a nerve; *νόσος*, disease]. An affection due to some disturbed or abnormal condition of the nerves supplying the affected part; a simple and uncomplicated neurosis.

Idionym (*id'-e-o-nim*) [*ἴδιος*, own; *ὄνυμα*, name]. A term restricted in its application to a particular organ.

Idiopathic (*id-e-o-path'-ik*) [*ἴδιος*, own; *πάθος*, disease] Not consequent or dependent upon another disease, or known or recognized cause. The antithesis of sympathetic, deuteropathic. **I. Dysmenorrhea**, painful menstruation unassociated with organic lesion or displacement.

Idiopathy (*id-i-op'-ath-e*) [*ἴδιος*, own; *πάθος*, disease]. 1. An idiopathic disease or condition. 2. The fact or quality of being idiopathic.

Idiophrenic (*id-e-o-fren'-ik*) [*ἴδιος*, own; *φρήν*, mind]. Due to disease of the brain; a term used to designate certain forms of insanity.

Idioplasm (*id'-e-o-plazm*) [*ἴδιος*, peculiar; *πλάσμα*, a thing formed]. In biology, a term introduced by Nägeli for a special hereditary reproductive substance not contained in the body of the cell, but in the *chromosomes* of the nucleus, controlling and determining the *actual* characters of the particular cell, and also those of all of its descendants. Each idioplasm is composed of several or many *ids* (*q. v.*), which are capable of growth and multiplication by division; although much smaller in bulk than the rest of the living substance of the cell or body (*trophoplasm*), idioplasm is the active element in the process of formation, and determines the detailed construction of the trophoplasm, which is the passive element. **I., Accessory** (*Neben-idioplasm*), a special, minute group of "supple-

mentary determinants" enclosed within the id in the neighborhood of the determinants which control the cell in question, and rendering the cell capable of regeneration of tissues other than that of which it is a component. **I., Bone,** that form of idioplasm which contains the determinants of bone-cells. Cf. *Germplasm.* **I., Nägeli's.** See *Heredity.*

Idiopsychology (*id-e-o-si-kol'-o-je*) [ἰδιος, own; ψυχή, soul]. Psychology based upon introspective study of one's own mental acts. Cf. *Heteropsychology.*

Idioretinal (*ia-e-o-ret'-in-al*) [ἰδιος, own; *retina*, retina]. Peculiar or proper to the retina.

Idiospasm (*id'-e-o-spazm*) [ἰδιος, own; σπασμός, spasm]. A spasm or cramp confined to one part.

Idiospastic (*id-e-o-spas'-tik*) [ἰδιος, one's own; σπαστικός, stretching]. Pertaining to *Idiospasm.*

Idiosthenia (*id-e-o-sthe'-ne-ah*) [ἰδιος, one's own; σθένος, strength]. Having innate or spontaneous strength or power.

Idiosyncrasy (*id-e-o-sin'-kra-se*) [ἰδιοσύγκρασις, peculiarity of temperament]. Any special or peculiar characteristic or temperament by which a person differs from other persons of ordinary habits. **I., Hemorrhagic.** See *Hemophilia.* **I., Imaginary,** a hysteric aversion to certain foods or medicines. **I., Olfactory,** a perversion of the sense of smell.

Idiosyncratic (*id-e-o-sin-krat'-ik*) [ἰδιοσύγκρασις, peculiarity of temperament]. Pertaining to idiosyncrasy. **I. Coryza,** a synonym of *Hay-fever.*

Idiot (*id'-e-ot*) [ἰδιώτης, a private person]. A person of imperfect, deficient or arrested mental development, either congenital or due to causes arising soon after birth. **I. savant,** an idiot who has a considerable or even remarkable mental development in certain directions, as in musical art, in mathematics, in memory, or in mechanical ingenuity.

Idiotcy (*id'-e-ot-se*), **Idiotism** (*id'-e-ot-izm*), **Idiotry** (*id'-e-ot-ry*) [ἰδιώτης, a private person]. Idiocy, *q. v.*

Idiothalamous (*id-e-o-thal'-am-us*) [ἰδιος, one's own; θάλαμος, a room]. In biology, applied to such lichens as have certain parts of a different character from the thallus.

Idiotia (*id-e-o'-she-ah*) [ἰδιωτεία, the condition of an idiot]. A state of idiocy; idiotism.

Idolum (*id-o'-lum*) [εἴδωλον, an image]. An illusion or hallucination.

Idrodermia (*id-ro-der'-me-ah*) [ἱδρώς, sweat; δέρμα, skin]. An affection of the sudoriferous glands of the body.

Idromania (*id-ro-ma'-ne-ah*) [ὑδώρ, water; μανία, mania]. Hydromania; insane desire for water, or to commit suicide by drowning.

Idrosadenitis (*id-ros-ad-en-i'-tis*). See *Hidrosadenitis.*

Idrosis (*id-ro'-sis*). See *Hidrosis.*

Idryl (*id'-ril*). See *Fluoranthene.*

Igasuric Acid (*ig-as-u'-rik*) [Malay, *igasur;* ignatia]. An acid occurring in St. Ignatius' bean, and certain other plants containing strychnin.

Igasurin (*ig-as-u'-rin*) [Malay, *igasur;* ignatia]. An alkaloid from ignatia, said to be more poisonous than brucin. Its existence as a definite compound has been denied.

Ignatia (*ig-na'-she-ah*) [from *Ignatius*, the founder of the Jesuits: *gen.*, *Ignatiæ*]. St. Ignatius' bean. The seed of *Strychnos ignatii*, with properties due to the alkaloids *strychnin* and *brucin*, of which the plant contains of each about 1 per cent. It is said by some to contain igasurin, *q. v.* Its therapeutic effects are similar to those of nux vomica, *q. v.* It is recommended in hysteria, and is highly efficient in controlling the functions of the cerebro-spinal axis. **I., Abstractum.** Dose gr. ss–j. **I., Tinct.,** contains 10 per cent. of the drug. Dose ɱij–x.

Ignavia (*ig-na'-ve-ah*) [L.]. Sluggishness; abnormal slowness of function.

Ignipuncture (*ig-ne-punk'-tūr*) [*ignis*, fire; *punctura*, puncture]. A method of cauterization employed in the treatment of certain forms of hypertrophy by the introduction of platinum needles heated to whiteness by the electric current.

Ignis (*ig'-nis*) [L.]. Fire. Combustion distinguished by rapid oxidation. **I. actualis,** actual cautery. **I. fatuus,** the phenomenon known as Jack o' Lantern, Will o' the Wisp, etc. **I. sacer,** an obsolete name for erysipelas. See *Anthrax* and *Herpes zoster.* **I. sancti Antonii,** *Saint Anthony's Fire,* a common name for erysipelas.

Ignition (*ig-nish'-un*) [*ignis*, fire]. The process of heating solids, especially inorganic compounds, until all volatile matter has been driven off.

Ihering's Line. See *Lines, Table of.*

Ihle's Paste. A modification of Lassar's paste. It is composed of resorcin, gr. 10 to 60; lanolin, vaselin, oxid of zinc, and powdered starch, each, 2 drams. It is used in eczema.

Ikota (*ik-o'-tah*) [Siberian]. A form of religious and hysteric mania, prevailing among the women of Siberia.

Ileac (*il'-e-ak*) [εἰλειν, to roll]. Pertaining to the ileum. **I. Passion,** an ailment characterized by severe griping pains and vomiting of fecal matter, together with spasm of the abdominal muscles.

Ileadelphus (*il-e-ad-el'-fus*) [εἰλειν, to roll; ἀδελφός, a brother]. A monstrosity double from the pelvis downward.

Ileitic (*il-e-it'-ik*) [εἰλειν, to roll; ιτις, inflammation]. Pertaining to or affected with ileitis.

Ileitis (*il-e-i'-tis*) [εἰλειν, to roll; ιτις, inflammation]. Inflammation of the ileum.

Ileo- (*il'-e-o-*) [εἰλειν, to roll]. A prefix signifying connection or relation to the ileum. **I.-cecal,** pertaining or belonging to both ileum and cecum. **I.-c. Fossa,** a depression in the lower part of the small intestine at the base of the vermiform process. **I.-c. Valve,** a valve consisting of two folds of mucosa that guards the passage between the ileum and cecum. **I.-costalis.** See *Muscles, Table of.* **I.-lumbar,** pertaining to the ileum and the lumbar region. **I.-l. Ligament.** See *Ligament.* **I.-typhoid,** a synonym for typhoid or enteric fever.

Ileo-cleisis (*il-e-o-kli'-sis*) [εἰλειν, to roll; κλείειν, to lock]. Obstruction or closure of the ileum.

Ileo-colic (*il-e-o-kol'-ik*) [εἰλειν, to roll; κόλον, colon]. Pertaining conjointly to the ileum and the colon. **I.-c. Valve.** Same as *Ileocecal Valve.*

Ileo-colitis (*il-e-o-ko-li'-tis*) [εἰλειν, to roll; κόλον, colon; ιτις, inflammation]. Inflammation of the lower part of the ileum and the colon. It is commonly known as intestinal catarrh.

Ileo-colostomy (*il-e-o-ko-los'-to-me*) [εἰλειν, to roll; κόλον, colon; στόμα, mouth]. The surgical establishment of an artificial communication between the ileum and the colon.

Ileo-colotomy (*il-e-o-ko-lot'-o-me*) [εἰλειν, to roll; κόλον, colon; τέμνειν, to cut]. A surgical operation upon the ileum and the colon.

Ileodicliditis (*il-e-o-dik-lid-i'-tis*) [εἰλειν, to roll; δικλίς, valve; ιτις, inflammation]. Inflammation of the ileocecal valve.

Ileo-ileostomy (*il-e-o-il-e-os'-to-me*) [εἰλειν, to roll; εἰλειν, to roll; στόμα, mouth]. The surgical operation of establishing an artificial communication between two different parts of the ileum.

Ileology (*il-e-ol'-o-je*) [εἰλειν, to roll; λόγος, science]. The anatomy, physiology, and pathology of the ileum.

Ileopisolitis (*il-e-o-pis-o-li'-tis*) [εἰλειν, to roll; *pisum*, a pea; ιτις, inflammation]. Inflammation of Peyer's patches or glands.

Ileoproctostomy (*il-e-o-prok-tos'-to-me*) [εἰλειν, to roll; πρωκτός, rectum; στόμα, mouth]. The surgical establishment of an artificial communication between the ileum and the rectum.

Ileorectostomy (*il-e-o-rek-tos'-to-me*). See *Ileoproctostomy*.

Ileos (*il'-e-os*). See *Ileus*.

Ileostomy (*il-e-os'-to-me*) [εἰλειν, to roll; στόμα, mouth]. The surgical establishment of a passage through the abdominal wall into the ileum, or from the ileum to some other hollow organ.

Ileotyphus (*il-e-o-ti'-fus*) [εἰλειν, to roll; τίφος, smoke]. Enteric or typhoid fever.

Ileum (*il'-e-um*) [εἰλεῖν, to roll]. The lower portion of the small intestine. It receives its name from its peristaltic movement.

Ileus (*il'-e-us*) [εἰλεός; εἰλειν, to roll]. Same as *Ileac* or *Iliac Passion*; volvulus. **I. inflammatorius.** Synonym of *Acute Intestinal Catarrh*. **I. spasmodicus.** Synonym of *Enteralgia*.

Ilex (*i'-leks*) [L., the holm-oak]. A genus of aquifoliaceous trees and shrubs of many species; the hollies. **I. aquifolium,** common European holly; the bark and leaves have medicinal uses. **I. cassine.** See *Cassena*. **I. opaca,** American holly; it has the properties of *I. aquifolium*. **I. glabra,** and **I. verticillata,** of the U. S., are tonic, febrifuge, and astringent. See also *Maté*. All unof.

Ilia (*il'-e-ah*) [L.: *pl. of Ilium*]. The iliac bones; the flanks or loins.

Iliac (*il'-e-ak*) [*ilia*, the flanks]. Pertaining to the ilium or to the flanks. **I. Aneurysm,** one occurring at the groin. **I. Artery.** See *Arteries, Table of.* **I. Crest,** the upper free margin of the ilium to which the abdominal muscles are attached. **I. Fascia.** See *Fascia*. **I. Fossa.** See *Fossa*. **I. Muscle.** See *Muscles, Table of.* **I. Region,** one of the regions into which the abdomen is conventionally divided. See *Abdomen*.

Iliaco- (*il-i'-ak-o-*) [*ilia*, the loins]. A prefix signifying relation to the loins. **I.-femoral,** relating to the ilium and the femur. **I.-trochanteric,** relating to the ilium and the great trochanter of the femur.

Iliacus (*il-i'-ak-us*). See *Muscles, Table of.*

Iliadelphus (*il-e-ad-el'-fus*) [*ilia*, flanks; ἀδελφός, brother]. A monstrosity double from the pelvis upward.

Ilicin (*il'-is-in*) [*ilex*, the holm-oak]. A crystalline febrifugal principle from the leaves of *Ilex aquifolium*.

Ilien (*il'-e-en*) [*ilia*, the loins]. Belonging to the ilium in itself.

Ilio- (*il'-e-o-*) [*ilium*, the ilium]. A prefix to denote relation to or connection with the ilium. **I.-capsularis,** a muscle occasionally found in man, originating at the anterior inferior spine of the ilium and inserted into the ilio-femoral ligament. See *Muscles, Table of.* **I.-femoral,** pertaining conjointly to the ilium and the femur. **I.-f. Crease.** See *Crease*. **I.-f. Ligament,** an inverted V-shaped ligament extending obliquely across the hip-joint, from the anterior inferior spine of the ilium to the trochanters of the femur, preventing over-extension of the joint. **I.-f. Triangle,** a triangle of which the base is a line drawn from the summit of the great trochanter to the anterior superior spine of the ilium, and the apex is formed by lines drawn backward from the anterior superior spine and upward from the summit of the trochanter. See *Triangles, Table of.* **I.-hypogastric,** pertaining conjointly to the ilium and the hypogastrium. **I.-h. Nerve.** See *Nerves, Table of.* **I.-inguinal,** pertaining to the ilium and the groin. **I.-i. Nerve.** See *Nerves, Table of.* **I.-lumbar,** pertaining conjointly to the ilium and the loins. **I.-l. Artery,** a branch of the posterior division of the internal iliac artery, supplying the iliacus, and also the psoas and quadratus lumborum muscles. See *Arteries, Table of.* **I.-l. Muscle,** that part of the quadratus lumborum muscle that is inserted into the tips of the processes of the lumbar vertebræ. See *Muscles, Table of.* **I.-pectineal,** pertaining conjointly to the ilium and the pubes. **I.-p. Ligament,** that part of the iliac fascia by which Poupart's ligament and the sheath of the crural vessels are attached to the os pubis. **I.-p. Line,** the ridge reaching from the spine of the os pubis to the auricular surface of the ilium. See *Lines, Table of.* **I.-pelvic,** pertaining conjointly to the ilium and the pelvis. **I.-p. Abscess,** suppuration sometimes occurring over the iliacus muscle during labor, and commonly due to the laceration of muscular fibers. **I.-perineal,** relating to the ilium and the perineal region. **I.-polymelius,** a monstrosity with supernumerary limbs attached to the ilium **I.-psoas,** pertaining conjointly to the ilium and the loins. **I.-p. Muscle.** See *Muscles, Table of.* **I.-pubic,** relating to both ilium and pubes. **I.-spinal,** relating to the ilium and the spinal column. **I.-tibial,** pertaining to or connecting the ilium and the tibia. **I.-t. Band,** a thickened portion of the fascia lata extending from the outer tuberosity of the tibia to the iliac crest. **I.-trochanteric,** pertaining to the ileum and a trochanter.

Ilium (*il'-e-um*) [L.]. The upper part of the *os innominatum*. The haunch-bone.

Ilixanthin (*il-iks-an'-thin*) [*ilex*, holly; ξανθός, yellow], $C_{17}H_{22}O_{11}$. A yellow crystalline coloring-matter found in holly. The crystals melt at 198° C., and are soluble in hot water and alcohol.

Ill (*il*) [ME., *ille*, ill]. Sick; diseased; unwell.

Illacrimation (*il-lak-rim-a'-shun*) [*illacrimatio*; *in*, on; *lacrima*, a tear]. Same as *Epiphora*.

Illaqueation (*il-lak-we-a'-shun*) [*illaqueare*, to ensnare]. A method of changing the direction of misplaced cilia, by withdrawing them, by a noose, through an opening in the adjacent tissue of the lid.

Illegitimacy (*il-e-jit'-im-a-se*) [*in*, not; *legitimus*, according to law]. The condition of being unlawful, or not legitimate.

Illegitimate (*il-e-jit'-im-at*) [*in*, not; *legitimus*, according to law]. Not in accordance with statutory law. **I. Child,** one born out of lawful wedlock; a bastard.

Illequation (*il-e-kwa'-shun*). See *Illaqueation*.

Illicium (*il-is'-e-um*) [*illicere*, to entice]. Star Anise. The fruit of *Illicium anisatum*, with properties due to a volatile oil identical with oil of anise. *Illicium* is properly the name of a genus of magnoliaceous trees and shrubs. **I. floridanum,** of the Gulf States, has poisonous leaves. **I. religiosum,** of Asia, is said to be highly poisonous. **I. verum,** is said to yield the star anise of commerce. Unof

Illness (*il'-nes*) [ME., *ille*, ill]. Sickness; disease; an attack of disease.

Illumination (*il-oo-min-a'-shun*) [*illuminare*, to make light]. A light produced by a luminous body, and reflected by surrounding objects. In photometry, the unit of intensity of illumination is that given by a standard candle at a distance of one foot. **I., Dark-ground,** in microscopsy, a condition in which the object appears self-luminous on a dark back-ground. This occurs when the rays of light are too oblique to enter the front lens of the objective, except such as

are reflected or refracted from the object itself. **I. of Eye**, the lighting up of the interior of the eye by means of the ophthalmoscopic mirror. **I., Oblique,** in microscopy, an illumination produced by throwing the rays of light upon an object at any angle of inclination. In ophthalmology, oblique illumination of the cornea consists in focusing a pencil of rays obliquely upon the part.

Illuminator (*il-oo'-min-a-tor*) [*illuminare*, to make light]. In microscopy, an optic apparatus for concentrating light. **I., Abbè,** an illuminating apparatus for the microscope designed by Professor Abbè. *Abbè's Condenser.*

Illuminism (*il-oo'-min-izm*) [*illuminare*, to make bright]. Insane exaltation; especially exaltation with belief in one's communion or direct intercourse with supernatural or heavenly beings.

Illusion (*il-lu'-zhun*) [*illusio*, a mocking]. A false or deceptive mental impression. Illusion differs from hallucination in that it is the false interpretation by the mind of a real sensation. The senses are not at fault in case of illusions, and the defective process is purely psychic. The distinction between illusion and hallucination is, however, by no means a constant one.

Illusional (*il-lu'-zhun-al*) [*illusio*, a mocking]. Of the nature of an illusion.

Illutation (*il-lu-ta'-shun*) [*in*, in; *lutum*, mud]. Treatment of disease by the mud-bath.

Image (*im'-āj*) [*imago*, a likeness]. The picture of an object formed by the focused rays of light proceeding from it. **I., After.** See *After-image.* **I., Diffusion of.** See *Diffusion.* **I., Direct,** or **I., Erect,** that of the fundus oculi as seen with the ophthalmoscope, the details of the fundus presenting their natural relations. **I., Inverted,** that obtained by interposing between the ophthalmoscope and the observed eye a high-power lens; it is an aërial image at the focus of the lens used. **I., Real,** that made by the focused reflected rays. **I., Refraction,** an image due to the refraction of light upon entering and leaving an object. Two things are involved: 1. The form of the object. 2. The relative refractive power of the object and the mounting-medium. **I., Subjective,** a photism; also a visual hallucination. **I., Virtual,** that produced by the imaginary focus of the rays, as, *e. g.*, behind a mirror.

Imaginal (*im-aj'-in-al*) [*imago*, an image]. Pertaining to the *Image, q. v.* **I. Discs,** in entomology, the name given by Weismann to curious encapsulated groups of embryonal cells, connected with the nerves and nerve-centers of certain insect larvæ (*Diptera*). They are the rudiments from which the nymph is developed.

Imagination (*im-aj-in-a'-shun*) [*imaginatio*, imagination]. The picture-making power of the mind. The faculty by which one creates ideas or mental pictures by means of the data derived from experience, ideally revivified, extended, and combined in new forms.

Imago (*im-a'-go*) [L.; gen., *Imaginis*]. An image. Also, the final, adult, or reproductive stage of an insect.

Imbalance (*im-bal'-ans*) [*in*, not; *bilancia*, a balance]. Lack of balance; lack of the power of keeping the erect position; lack of muscular balance (as between the muscle of the eyes).

Imbecile (*im'-bes-il*) [*imbecillus*, weak]. Feeble in mind.

Imbecility (*im-bes-il'-it-e*) [*imbecillitas*, imbecility]. Mental weakness or defect, similar to that of idiocy, but of less degree.

Imbibe (*im-bīb'*) [*imbibere*, to drink in]. To drink or suck in.

Imbibition (*im-bib-ish'-un*) [*imbibitio*, a drinking in]. The sucking up, or capillary absorption, of moisture, liquids, or gaseous substances by inorganic, or by dead or torpid organic bodies.

Imbowelling (*im-bow'-el-ing*). Same as *Eviscer-ation.*

Imbricate (*im'-brik-āt*) [*imbricare*, to cover with tiles]. Applied to that arrangement of scales, feathers, leaves, or floral organs in the bud, in which they overlap like shingles on a roof.

Imbricated (*im'-brik-a-ted*) [*imbrex*, a roof-tile]. Distinguished by overlapping. Applied to the position and arrangement of scales in certain squamous diseases of the skin.

Imitation (*im-it-a'-shun*) [*imitari*, to imitate]. A production that is similar to, or a copy of, another object or process. **I., Morbid,** the occurrence of a convulsive or mental affection brought about by observing a similar affection in another; mental contagion.

Immaculate (*im-ak'-u-lāt*) [*in*, not; *macula*, a spot]. Pure; spotless.

Immarginate (*im-ar'-jin-āt*) [*in*, not; *marginare*, to furnish with a border]. In biology, having no well-defined border.

Immature (*im-at-ūr'*) [*immaturus*, unripe]. Not ripe; not yet of an adult age or growth.

Immediate (*im-me'-de-āt*) [*in*, not; *medio*, the middle]. Direct. Without anything intervening, as *immediate auscultation* or *percussion.* **I. Contagion,** that from a direct source. **I. Ligature.** See *Ligature.* **I. Union,** union by first intention, or without suppurative granulation.

Immedicable (*im-med'-ik-ab-l*) [*in*, not; *medicare*, to cure]. That which does not yield to medicine or treatment. Incurable.

Immersion (*im-mer'-shun*) [*in*, in; *mergere*, to dip]. The plunging of a body into a liquid. In medicine, treatment by a continued bath. See *Oil-immersion, Water-immersion.* **I.-bath,** the liquid employed for immersion. **I.-battery,** a form of battery in which, by inclining the cell, the elements are immersed in the liquid. **I., Homogeneous,** a fluid between the objective of a microscope and the cover-glass, having about the same refractive and dispersive power as the glass. **I., Objective,** a microscope-objective, usually of high power, the lower lens of which is immersed in a drop of water, glycerin, or oil, placed on the cover-glass of the object under examination.

Immissio (*im-ish'-e-o*) [L.]. Insertion. **I. catheteris.** See *Catheterism.* **I. penis,** introduction of the penis into the vagina.

Immission (*im-mish'-un*) [*immissio*, a letting in]. Introduction, as of a catheter.

Immobilization (*im-mob-il-iz-a'-shun*) [*immobilis*, immovable; *facere*, to make]. The surgical fixation of a part (as a fractured bone) by means that prevent any local motion.

Immortality (*im-mor-tal'-it-e*) [*immortalitas*, undyingness]. Exemption from death; unending existence. **I. of Germ-cells.** See *Heredity;* also, *Germ-plasma.*

Immune (*im-mūn'*) [*immunis*, safe]. 1. Safe from attack; protected by vaccination, or some analogous procedure, or by previous illness. 2. A person who is protected against any special virus. **I. Animal.** See *Control-experiment.*

Immunity (*im-mūn'-it-e*) [*immunitas*, exemption]. The condition of an organ, or of the body, whereby it resists the development of infectious or morbid processes. The inoculation of attenuated virus and of chemic compounds are examples of methods by which immunity is acquired. It has also been shown that inflam-

matory action is inhibitive of bacterial development. **I., Acquired,** that derived from a previous attack of the same disease or from a modified form, as varioloid, or artificially produced by inoculation. **I., Artificial,** that produced by inoculation with the virus of a disease. **I., Natural,** the natural resistance of the tissues or system. Immunization may be transient or permanent, relative or absolute.

Immunization (*im-mūn-iz-a'-shun*) [*immunitas*, exemption]. The act or process of endowing with immunity.

Immunize (*im'-mūn-īz*) [*immunis*, exempt]. To give or to acquire immunity.

Impact (*im'-pakt*) [*impactus ; impingere*, to drive into or against]. A forcible striking against.

Impacted (*im-pak'-ted*) [*impactus ; impingere*, to drive into or against]. Driven against and retained, as a wedge. **I. Fracture,** one in which the fragments of bone are driven into one another in such a manner as to cause shortening.

Impaction (*im-pak'-shun*) [*impactio*, impact]. The state or quality of being impacted; fracture with fixation of the fragments; obstinate constipation; the wedging of the fetal head in the pelvic canal.

Impalement (*im-pāl'-ment*) [*in*, in; *pal*, a pale or picket]. The perforation of the body or a part by a rod or stake.

Impalpable (*im-pal'-pa-bl*) [*impalpabilis*, impalpable]. That which cannot be felt; unappreciable by touch. **I. Powder,** a powder so fine that its separate particles cannot be felt.

Impalsy (*im-pawl'-ze*) [*in*, in; ME., *palsey*, palsy]. To paralyze.

Impaludism (*im-pal'-u-dizm*) [*in*, in; *palus*, a marsh]. Chronic malarial poisoning.

Impar (*im'-par*) [*in*, not; *par*, equal]. Odd or unequal. **I., Ganglion,** a small ganglion on the coccyx. See *Ganglia, Table of.*

Imparipinnate (*im-par-ip-in'-āt*) [*impar*, unequal; *pinnatus*, feathered]. In biology, unequally pinnate; having an odd leaflet at the apex.

Impatiens (*im-pa'-she-enz*) [L., impatient]. Touch-me-not; jewel-weed or balsamine; a genus of geraniaceous plants. **I. balsamina** and **I. lutea,** of the old world, and **I. fulva** and **I. pallida,** of the U. S., are diuretic, emetic, and cathartic. Unof.

Impatiinid (*im-pa'-te-in-id*) [*impatiens*, impatient]. A resinous emetic principle obtainable from *Impatiens lutea.* Unof.

Impennate (*im-pen'-āt*) [*in*, not; *pennatus*, winged]. In biology, applied to such birds, as the penguin, as have short wings covered with scale-like feathers.

Impennous (*im-pen'-us*) [*in*, not; *penna*, wing]. In biology, without wings.

Imperative (*im-per'-at-iv*) [*imperativus*, imperative]. Peremptory; absolute; binding. **I. Idea.** See *Idea, Imperative.*

Imperatoria (*im-per-at-o'-re-ah*) [*imperatorius*, belonging to a commander]. A genus of umbelliferous plants; masterworts. **I. ostruthium,** false pellitory of Spain, is an aromatic stimulant, once prized as a polychrest remedy, but now little used. Unof.

Imperfection (*im-per-fek'-shun*) [*imperfectus*, imperfect]. A physical defect.

Imperforate (*im-per'-for-āt*) [*in*, not; *perforare*, to pierce]. Congenitally and abnormally closed; applied to an opening of the body, as the anus, vagina, etc. See *Occlusion* and *Obstruction.*

Imperforation (*im-per-for-a'-shun*) [*imperforatio; in*, not; *perforare*, to bore through]. Occlusion; applied especially to the anus, hymen, vagina, etc.

Imperial (*im-pe'-re-al*) [*imperialis*, pertaining to an empire]. Sovereign; commanding. **I.-blue.** Same as *Spirit-blue.* **I. Drink** or **Draft,** *potus imperialis*, a solution of a half-ounce of potassium bitartrate in three pints of hot water, to which are added four ounces of sugar and half an ounce of fresh lemon-peel. It is a good diuretic and refrigerant drink. Unof. **I. granum,** a farinaceous food for infants. Its composition is: Water 5.49, fat 1.01, a trace each of grape-sugar and cane-sugar, starch 78.93, soluble carbohydrates 3.56, albuminoids 10.51, gum, cellulose, etc., 0.50, ash 1.16. **I.-green.** Same as *Schweinfurth-green.* **I.-violet.** Same as *Rosanilin-violet.*

Imperialin (*im-pe'-re-al-in*) [*imperialis*, pertaining to an empire]. An alkaloid from *Fritillaria imperialis*, or crown imperial; it acts upon the heart. Unof.

Impermeable (*im-per'-me-a-bl*) [*in*, not; *per*, through; *meare*, to go]. Not capable of being traversed.

Impervious (*im-per'-ve-us*) [*in*, not; *pervius*, capable of passage]. Not permitting a passage through.

Impetiginoid (*im-pet-ij'-in-oid*) [*impetigo*, impetigo; *impetere*, to attack; *εἶδος*, like]. Same as *Impetiginous.*

Impetiginous (*im-pet-ij'-in-us*) [*impetigo; impetere*, to attack]. Affected with or resembling impetigo.

Impetigo (*im-pet-ī'-go*) [*impetigo ; impetere*, to attack]. An acute inflammatory skin-disease characterized by one or more pea-sized or finger-nail sized, discrete, rounded, and elevated firm pustules, unattended, as a rule, by itching or other subjective symptoms. The pustules are rounded, with thick walls, and are surrounded by areolæ. They appear suddenly, and come out one after another during the first week of the attack, attain full size, and then undergo absorption or crusting. No scar or pigmentation follows. The disease is likely to occur in children. **I. annua.** See *Aleppo Boil.* **I. capitis.** Same as *Eczema capitis.* **I. contagiosa,** *Porrigo contagiosa ;* an acute, inflammatory, contagious disease, due to the presence of a microörganism, and characterized by the appearance of vesico-pustules or blebs, that dry into flat, straw-colored, granular-looking crusts. The disease occurs usually in children. The vesicles vary in size from minute points to that of a quarter of a dollar, and the contents, at first serous, become seropurulent, and then dry up. The disease is most prone to attack the face and hands. **I., Duhring's,** differs from the foregoing by being non-infectious. See *Diseases, Table of.* **I. erysipelodes,** an old term for *Eczema pustulosum*, with deeper inflammation than usual. **I. granulata.** Same as *Pediculosis.* **I. herpetiformis,** *Herpes pyæmicus ;* a very rare disease of the skin, characterized by the formation of superficial miliary pustules, that may be discrete, but are usually closely set. The contents of the pustules are at first opaque, but become greenish-yellow, and dry up into dirty-brown crusts. The disease spreads until the whole surface is covered with swollen, crusted, and excoriated patches. It develops first on the inner side of the thighs, and about the groins, navel, breasts, and axillæ, and is mainly seen in pregnant women. The termination is fatal, as a rule. **I. rodens,** an old term for a carcinomatous disease of the skin. **I. scabida,** an old term for *Eczema pustulosum*, with unusually thick crusting. **I. sparsa,** an old term for small, scattered patches of *Eczema pustulosum.* **I., Syphilitic.** See *Syphilid, Impetiginous.*

Impetus (*im'-pe-tus*) [L.]. 1. Force or momentum. 2. The onset or attack of a disease, or of a paroxysm.

Implantation (*im-plan-ta'-shun*) [*implantatio ; in*, in; *plantare*, to set]. The act of setting in. Also, the transplantation of a tooth from the jaw of one person

to that of another. Also, the engrafting of epidermis from the skin of one person upon the body of another. The surgical repair of a wounded intestine by uniting the divided ends. **I., End-to-end,** the approximation of the ends of a divided structure, as of the bowel, or a nerve. **I., Hypodermatic,** the introduction of a medicine in the form of a soluble solid under the skin for therapeutic purposes. **I., Teratologic,** a fetal monstrosity consisting of an imperfect, joined to a perfect fetus.

Implexous (*im-pleks'-us*) [*implectere*, to entwine, entangle]. In biology, entangled.

Implumous (*im-plu'-mus*) [*in*, without; *pluma*, feathers]. In biology, featherless.

Imponderable (*im-pon'-der-a-bl*) [*in*, not; *ponderabilis*, that which can be weighed.] That which cannot be weighed. **I. Fluids,** an obsolete term, formerly applied to light, heat, and electricity.

Importation (*im-por-ta'-shun*) [*in*, in; *portare*, to carry]. Transference from another locality or foreign country. **I. of Disease,** the carrying of the contagion of disease.

Imposthumate (*im-pos'-tu-māt*) [corrupt form of *apostemate*]. To suppurate.

Imposthume (*im-pos'-tum*) [a corrupt form of *apostema*]. An abscess.

Impotence (*im'-po-tens*) [*in*, not; *possum*, to be able]. Lack of power, applied especially to male incapacity of procreation. It is variously qualified as *atonic*, when due to spinal or central exhaustion; *paralytic* or *paretic*, when the impulse that leads to the performance of the function is abolished; *psychic*, when due to fear, bashfulness, or mental disturbance; *symptomatic*, when due to some drug, or to a disturbance of the health.

Impregnation (*im-preg-na'-shun*) [*imprægnatio*, the state of being with child]. The state of being pregnant; the act of impregnating; fecundation; fertilization.

Impressio (*im-presh'-e-o*) [L.]. An impression. **I. colica,** an impression on the under surface of the right lobe of the liver for the hepatic flexure of the colon. **I. renalis,** an impression behind the *I. colica* for the right kidney and suprarenal capsule.

Impression (*im-presh'-un*) [*impressio; imprimere*, to press upon]. A hollow or depression. **I.-cup,** in dentistry, a cup or tray of metal, porcelain, gutta-percha, or other substance, used for conveying to the mouth and holding in position the material for impressions. **I., Digital,** the mark made by the pressure of a finger upon an edematous limb, or upon the neck in strangulation. **I., Rhomboid,** a broad impression on the inferior surface of the clavicle, near the sternal end, for the attachment of the rhomboid ligament.

Impressionable (*im-presh'-un-a-bl*) [*impressio*, an impression]. Readily susceptible to impressions. **I. Heart,** the condition of the heart in which it is very liable to functional disturbance.

Impressorium (*im-pres-o'-re-um*) [L.]. The seat of impressions; sensorium.

Impuberal (*im-pu'-ber-al*) [*impuber, impubes; in*, not; *pubes*, pubes]. Destitute of hair on the pubes. Not of adult age.

Impulse (*im'-puls*) [*impulsus; impellere*, to drive against]. Any communicated force. Also, the shock and reverberation on the chest-walls caused by the beating of the heart. Also, a sudden spontaneous emotion of the mind or influence acting upon it. **I., Cardiac,** the systolic beat of the heart occurring at the apex, and felt in the fifth intercostal space to the left of the sternum. **I., Morbid,** any strong, unnatural impulse, especially one of an insane character. Morbid impulses are variously qualified, as *animal, destructive, homicidal, suicidal, uncontrollable*, etc.

Impulsion (*im-pul'-shun*) [*impellere*, to impel]. The act of driving or urging onward, either mentally or physically.

Impurity (*im-pu'-rit-e*) [*in*, not; *purus*, pure or clean]. Want of purity or cleanliness. In chemistry, the condition of containing some substance other than that desired. Adulteration. In medicine, a want of clearness in the sounds of the heart, but not sufficient to cause a murmur.

Imputability (*im-pu-tab-il'-it-e*) [*imputabilitas*, imputability]. In legal medicine, that degree of mental soundness that makes one responsible for his own acts.

In- [L.]. A prefix signifying in or within. Also, a particle signifying negation.

-in, or **-ine** (*in*). A suffix seen in the names of the halogen elements, chlorin, bromin, iodin, and fluorin. Also, a distinctive termination used to distinguish organic bases, particularly the class known as alkaloids. It is also loosely applied to certain organic radicles, and to many glucosids.

Inadequacy (*in-ad'-e-qwa-se*) [*in*, not; *adæquare*, to make equal]. Same as *Insufficiency*. **I., Renal,** that state of the kidney in which it is unable to remove from the blood a sufficient proportion of the effete matters that are normally excreted by it.

Inanagenesis (*in-an-aj-en'-es-is*) [ἰς, fiber; ἀνά, again; γένεσις, production]. The renewal or regeneration of muscular fiber.

Inanaphysis (*in-an-af'-is-is*) [ἰς, fiber; ἀνά, again; φύσις, growth]. Same as *Inanagenesis*.

Inanimate (*in-an'-im-āt*) [*in*, not; *animus*, life]. Not animate; dead; without life.

Inanition (*in-an-ish'-un*) [*inanire*, to make empty]. Emptiness of the organs of digestion from want of food. Also, wasting of the body from starvation or disease. Synonym of *Fasting*.

Inantherate (*in-an'-ther-āt*) [*in*, without; *anthera*, anther]. In biology, destitute of anthers.

Inantinial (*in-an-tin'-e-al*) [*ἰνίον*, the nape of the neck; *ἀντί*, against; *ἰνίον*, the nape of the neck]. Inio-antinial; pertaining to the inion and the antinion.

Inappendiculate (*in-ap-en-dik'-u-lāt*) [*in*, without; *appendicula*, dim. of *appendix*, an appendage]. In biology, destitute of appendages.

Inappetence (*in-ap'-et-ens*) [*in*, not; *appetere*, to desire]. Loss or want of appetite.

Inappetentia (*in-ap-et-en'-she-ah*) [L.]. Synonym of *Anorexia*.

Inarticulate (*in-ar-tik'-u-lāt*) [*in*, not; *articulus*, a joint]. Not jointed or articulated. Also, vocal sounds not capable of arrangement into syllables, or of being understood.

Inassimilable (*in-as-im'-il-a-bl*) [*in*, not; *assimulare*, to make like]. Incapable of assimilation.

Incandescent (*in-kan-des'-ent*) [*incandescere*, to become white-hot]. Emitting luminous heat-rays; heated to the degree of emitting light. **I. Electric Light,** one consisting of a film of carbon of high resistance enclosed in a vacuous glass globe. The film emits a white light when the current passes through it.

Incapacity (*in-kap-as'-it-e*). See *Doli incapax*; also *Impotence*.

Incarcerated (*in-kar'-ser-a-ted*) [*incarcerare*, to imprison]. Imprisoned; closely constricted.

Incarceration (*in-kar-ser-a'-shun*) [*incarceratio; in*, in; *carcerare*, to imprison]. The condition of imprisonment or confinement of a part, as of the placenta. See also *Hernia*.

Incarial Bone (*in-ka'-re-al*) [Peruvian, *Inca*, a prince]. The interparietal bone; usually in adult man a part

of the occipital bone. It is called *incarial*, because, in the skeletons of ancient Peru, the land of the *Incas*, it is often persistent as a distinct bone.

Incarnatio (*in-kar-na'-she-o*) [L.]. Conversion into flesh. **I. unguis**, the ingrowing of a nail. See *Onychogryphosis*.

Incarnation (*in-kar-na'-shun*). 1. Granulation; healing process. 2. See *Conception*.

Incarnification (*in-kar-nif-ik-a'-shun*). Same as *Incarnation*.

Incasement (*in-kās'-ment*) [*in*, in; ME., *casse*, a box]. The act of inclosing in a case. **Incasement, Encasement, Theory of**, the doctrine that the ovum or spermatozoid of the first animal of each species incased the germs of all subsequent individuals of the species. This theory was also called that of *Preformation*. Cf. *Evolution*.

Incest (*in'-sest*) [*incestus*, not chaste]. Carnal intercourse between persons of near relationship.

Inch [ME., *inche*, inch]. The twelfth part of a foot. It equals 25.39954 millimeters.

Incidence (*in'-sid-ens*) [*incidere*, to fall upon]. A falling upon. The direction in which one body strikes another. **I., Line of**, the path of a ray or a projectile. **I., Point of**, the point upon which the ray or projectile is reflected or strikes.

Incident (*in'-sid-ent*) [*incidere*, to fall upon]. Falling upon.

Incineration (*in-sin-er-a'-shun*) [*in*, in; *cineres*, ashes]. The process of heating organic substances in contact with the air until all organic matter is driven off, and only the mineral ash remains.

Incised (*in-sizd'*) [*incidere*, to cut]. Cut or notched. **I. Wound**, one made by a sharp-edged instrument.

Incisiform (*in-si'-sif-orm*) [*incisor*, incisor; *forma*, form]. In biology, resembling an incisor tooth.

Incision (*in-sizh'-un*) [*incisio*, or *incisura*, an incision]. The act of cutting into any tissue of the body.

Incisive (*in-si'-siv*) [*incidere*, to cut]. Having the quality of cutting. Pertaining to the incisor teeth. **I. Canal.** See *Canal*. **I. Foramina.** See *Foramen*. **I. Fossa.** See *Fossa*. **I. Teeth.** See *Incisor*.

Incisor (*in-si'-sor*) [*incidere*, to cut]. Any cutting instrument. **I. Nerve**, the branch of the inferior dental nerve supplying the incisor and canine teeth. See *Nerves, Table of*. **I. Teeth**, the four most anterior teeth in each jaw.

Incisura (*in-si-su'-rah*) [*incidere*, to cut into]. A notch. Also, an incision. **I. cerebelli**, one of two notches separating the hemispheres of the cerebellum, the one in front and the other behind. **I. intertragica**, the deep notch in the pinna of the ear separating the tragus and the anti-tragus. **I. santorini**, a fissure extending in a vertical direction through the cartilage of the auditory canal.

Incisure (*in-sizh'-ur*) [*incisus*, p. p. of *incidere*, to cut into]. A slit or notch. **I.'s of Schmidt and Lantermann**, oblique lines running across the white substance of the inter-annular segments of stretched medullated nerve-fibers.

Inclaudent (*in-klaw'-dent*) [*in*, not; *claudere*, to close]. In biology, not closing.

Included (*in-klūd'-ed*) [*in*, in; *claudere*, to shut in]. Applied to stamens or pistils that do not project beyond the corolla, but are contained within it.

Inclusio fœtalis (*in-klu'-ze-o fe-ta'-lis*) [L.]. A form of fetal parasitism in which the parasite is more or less included and overgrown by the tissues of the autosite.

Inclusion (*in-klu'-zhun*) [*includere*, to enclose or shut in]. The state of being shut in. Also, the act of shutting in; that which is shut in.

Incoagulable (*in-ko-ag'-u-la-bl*) [*in*, not; *coagulare*, to curdle]. That which will not curdle or coagulate.

Incoherence (*in-ko-hēr'-ens*) [*incohærentia*; *in*, not; *cohærere*, to cling together]. The quality of being incoherent; absence of connection of ideas or of language; incongruity or inconsequence of diction.

Incoherent (*in-ko-hē'-rent*) [*in*, not; *cohærere*, to stick together]. Not connected or coherent; without ability to preserve that sequence of words or of ideas that is necessary to convey meaning.

Incombustibility (*in-com-bus-tib-il'-it-e*) [*in*, not; *comburere*, to burn up]. The state of being incombustible.

Incombustible (*in-com-bus'-tib-l*) [*in*, not; *comburere*, to burn up]. Incapable of burning.

Income (*in'-kum*) [ME., *income*, income]. The amount of food taken *per diem*.

Incompatibility (*in-kom-pat-ib-il'-it-e*) [*in*, not; *compatibilis*, compatible]. That relation between medicines that renders their admixture unsuitable This incompatibility may be physiologic, *chemic*, *physical*, or *therapeutic*.

Incompatible (*in-kom-pat'-ib-l*) [*in*, not; *compatibilis*, endurable]. Incapable of mixture without undergoing such chemic or physical changes as impair or destroy the usefulness of the compound; physiologically antagonistic, and therefore useless to prescribe.

Incompetence, Incompetency (*in-kom'-pet-ens*, *in-kom'-pe-ten-se*) [*in*, not; *competere*, to be capable; *incompetens*, insufficient]. Incapacity; inadequacy. Inability to perform natural functions. **I., Mental**, a disorder of mind sufficient to produce irresponsibility. **I., Aortic, Mitral, Pulmonary, Tricuspid.** See *Endocarditis*. **I., Valvular.** See *Insufficiency*.

Incomplete (*in-kom-plēt'*) [*in*, not; *completus*, complete]. Partial, as an incomplete hernia. **I. Copulation.** See *Coitus reservatus*. **I. Hernia.** See *Hernia*.

Incongruence (*in-kon'-gru-ens*) [*incongruens*, inconsistent]. Lack of congruence. **I., Retinal**, lack of correspondence in the situation of the percipient elements of the two retinæ.

Incongruity (*in-kon-gru'-it-e*) [*in*, not; *congruere*, to go together]. Absence of agreement or of needful harmony.

Incontinence (*in-kon'-tin-ens*) [*in*, not; *continere*, to contain]. Inability to control the evacuation of the feces or the urine; involuntary evacuation. This term is sometimes used as a synonym of venereal indulgence, lewdness. **I., Seminal.** See *Spermatorrhea*.

Incoördination (*in-ko-or-din-a'-shun*) [*in*, not; *con*, together; *ordinare*, to order]. In pathology, the inability to produce voluntary movements in proper combination or sequence; lack of harmony between the will and the muscular activity. **I. of Ocular Muscles.** See *Insufficiency*.

Incorporation (*in-kor-por-a'-shun*) [*in*, in; *corpus*, a body]. The process of intimately mixing the particles of different bodies into a practically homogeneous mass.

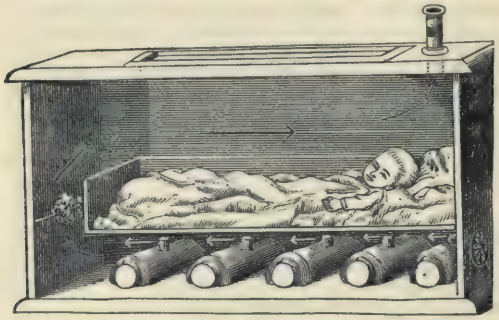
Incrassate (*in-kras'-āt*) [*in*, in; *crassare*, to make thick]. In biology, thickened or swollen.

Incrassation (*in-kras-a'-shun*) [*incrassatio*; *in*, in; *crassus*, thick]. The process of making thick, as by inspissation; enlargement of a part, due to fatness.

Incrassative (*in-kras'-at-iv*) [*incrassare*, to make thick]. 1. Having the power to make thick or thicker. 2. Formerly a medicine supposed to correct a thinness of the humors.

Incremation (*in-kre-ma'-shun*). See *Cremation*.

Increment (*in'-kre-ment*) [*incrementum*, growth]. Increase or growth.



Incremental (*in-kre-men'-tal*) [*incrementum*, growth]. Pertaining to increment or growth. **I. Lines.** See *Salter's Lines*, in *Lines, Table of.*

Incrustate (*in-krus'-tāt*) [*incrustare*, to incrust]. Forming a crust, or coated with a brittle or granular substance.

Incrustation (*in-krus-ta'-shun*) [*incrustare*, to cover with rind]. The formation of a crust. Also, the formation of a calcareous deposit in organic tissue.

Incubation (*in-ku-ba'-shun*) [*incubare*, to sit on eggs]. 1. In medicine, the period between the implanting of the contagium and the development of the disease. For the periods of incubation of some of the most important diseases, see *Exanthemata, Table of.* 2. The process of sitting upon eggs to favor hatching. See *Table* under *Pregnancy.*

Incubator (*in'-ku-ba-tor*) [*incubare*, to sit on eggs]. A device for the artificial hatching of eggs or cultivation of microscopic plants; a *couveuse* (*q. v.*) for the preservation of the life of children prematurely born. **I., Crédé's,** a copper tube made with double walls, between which water at the desired temperature may be kept, and withdrawn by means of pipes and stop-cocks. **I., Tarnier's,** an apparatus for the rearing of premature children, consisting of a box with two compartments, one containing the child, the other, and lower compartment, being filled with warm water, so as to keep a uniform temperature of 86°–88° F.

INCUBATOR OR COUVEUSE.
(*From Fullerton's "Obstetric Nursing."*)

Incubous (*in'-ku-bus*) [*incubus*, lying upon]. In biology, with the tip of one leaf lying flat over the base of the next above.

Incubus (*in'-ku-bus*) [L.]. 1. Nightmare; ephialtes. 2. Formerly, a supposed male demon that beset women, just as the succuba was supposed to consort with men. **I. vigilantium.** See *Daymare.*

Incudal (*ing'-ku-dal*) [*incus*, anvil; incus]. Relating to the incus.

Incudate (*ing'-ku-dāt*) [*incus*, incus]. In biology, having an incus.

Incudo- (*ing'-ku-do-*) [*incus*, incus]. In composition, signifying relationship to the incus. **I.-malleal,** relating to the incus and the malleus. **I.-orbicular,** relating to the incus and the orbicularis. **I.-stapedial,** relating to the incus and the stapes. **I.-tympanic,** relating to the incus and the tympanum.

Incuneation (*in-ku-ne-a'-shun*) [*incuneatio*, a wedging]. 1. The impaction of a fracture or of the fetal head. 2. The same as *Gomphosis.*

Incurable (*in-kūr'-a-bl*) [*in*, not; *curare*, to care for]. That which cannot be cured or restored to wholeness.

Incurvation (*in-kur-va'-shun*) [*incurvare*, to bend]. The state of being bent or curved in.

Incus (*ing'-kus*) [L., an anvil: *pl.*, *Incudes*]. In biology: (*a*) The middle one of the chain of bones in the middle ear of a mammal; (*b*) A portion of the mouth-parts of a rotifer.

Indazole (*in'-da-zōl*), $C_7H_6N_2$. A substance formed by heating hydrazin-cinnamic acid. It crystallizes from hot water in colorless needles, melting at 146° C., and boiling at 270° C.

Indecent (*in-de'-sent*) [*indecens*, unbecoming]. Not decent; obscene. **I. Exposure.** See *Exhibitionism.*

Indecision (*in-de-sizh'-un*) [*in*, not; *decisio; decidere*, to decide]. Morbid irresolution; want of firmness or of will; abulia or hypobulia.

Indehiscent (*in-de-his'-ent*) [*in*, not; *hiscere*, to gap]. In biology, not opening spontaneously.

Indene (*in-dēn'*), C_9H_8. A hydrocarbon that occurs with coumarone in that fraction of coal-tar boiling at 176°–182° C. It is a clear oil, boiling at 177°–178° C. Its sp. gr. is 1.040 at 15° C.

Indentation (*in-den-ta'-shun*) [*in*, in; *dens*, a tooth]. A condition of being notched or serrated. **I. of Tongue,** the notching of the borders of the tongue made by the teeth, and visible especially during inflammation of the tongue.

Index (*in'-deks*) [L.]. The first finger. Also, the relation or ratio of one part to another, taken as a standard. **I., Altitudinal,** the height of a skull multiplied by 100 and divided by its length. **I., Alveolar,** the degree of prominence of the jaws, measured by the basi-alveolar length multiplied by 100 and divided by the basi-nasal length. When the alveolar index is less than 98, the skull is *orthognathic*, when more than 103, *prognathic*, when intermediate, *mesognathic.* **I., Basilar.** Same as *I., Alveolar.* **I. of Breadth.** Same as *I., Cephalic.* **I., Cephalic,** the breadth of a skull multiplied by 100 and divided by its length. When this is below 75, the skull is called *dolichocephalic*, when above 80, it is called *brachycephalic*, between these limits, *mesaticephalic.* **I., Cephalo-orbital,** the ratio of the solid contents of the two orbits to the contents of the cranial cavity, multiplied by 100. **I., Cephalo-spinal,** the ratio of the measure of the foramen magnum in square millimeters to that of the cranial cavity in cubic centimeters, multiplied by 100. **I., Cerebral,** the ratio of the greatest transverse to the greatest antero-posterior diameter of the cranial cavity, multiplied by 100. **I.-digit,** the forefinger. **I., Facial,** the ratio of the distance of the ophryon from the alveolar point to the transverse diameter measured from one zygoma to the other, multiplied by 100. **I.-finger,** the forefinger. **I., Gnathic,** the ratio of the distance between the basion and the alveolar point to the distance between the basion and the nasal point, multiplied by 100. **I., Nasal,** the greatest nasal width multiplied by 100, and divided by the nasal length. When the nasal index exceeds 53, the nose is *platyrhine*, when less than 48, it is said to be *leptorhine*, if between these numbers, *mesorhine.* **I., Orbital,** the orbital height multiplied by 100 and divided by the orbital width. If the orbital index be above 89, it is called *megaseme*, if under 84, *microseme*, if between, *mesoseme.* **I., Refractive,** the coefficient of refraction. **I., Thoracic,** taken at its widest part is 100 times the sagittal, divided by the transverse measurement. **I., Vertical, of Height,** the ratio of the vertical diameter of the skull to the maximum antero-posterior diameter, multiplied by 100.

India (*in'-de-ah*) [Asiatic]. A country of Asia. **I. Liver,** a condition of hyperemia and enlargement of the liver, associated with general anemia and cachexia, cyanosis, anasarca, and irritable and irregular pulse. **I.-rubber,** the prepared concrete juice obtained mainly from an Indian tree, *Ficus elasticus*, and a South American tree, *Siphonia elastica.* It is valuable

chiefly for its elasticity and its insolubility in water. It is with difficulty soluble in oil of turpentine, but is highly soluble in carbon disulphid. It melts at 248° F., and remains unchanged up to 500° F. It is hardened and used in mechanical dentistry as a base for artificial teeth. It is also called *Caoutchouc*, *q. v.*

Indian (*in'-de-an*) [*India*]. Pertaining to India, the West Indies, or to the aboriginal Americans. **I. Basket**, a hollow cylinder woven of twigs of the willow, or of strips of other wood, used in applying extension to a dislocated limb. The greater the extension, the more firmly does the device cling to the surface. **I.-blue.** Same as *Indigo*. **I. Black-root**, the root of *Pterocaulon fœnistachium*. It has reputed alterative properties. Dose of the fluid extract ♏xv–xxx. Unof. **I. Corn.** See *Zea mays*. **I. Hemp.** See *Cannabis*. **I. Liquorice.** See *Abrus*. **I. Physic**, American Ipecacuanha, the bark of the root of *Gillenia trifoliata*, a mild emetic and cathartic. Dose of the fluid extract, ♏x–xl. Unof. **I. Sarsaparilla.** See *Hemidesmus*. **I. Tobacco.** See *Lobelia*. **I. Turnip.** See *Dragon Root*. **I. Madder.** Same as *Mungeet*. **I. Meal**, corn-meal. **I. Ochre.** Same as *Ochre*. **I. Plague.** Synonym of the *Plague*, *q. v.* **I. Potato.** See *Apios*. **I.-purple.** See *Pigments, Conspectus of*. **I.-red.** Same as *Colcothar* and *Ochre*. **I.-yellow.** Same as *Purree*.

Indican (*in'-dik-an*) [*indicum*, indigo], $C_{26}H_{31}NO_{17}$. The natural glucosid by the decomposition of which indigo-blue is produced from the various species of indigo-producing plants. It forms a transparent brown syrup, the aqueous solution of which has a yellow color, bitter taste, and slightly acid reaction. It is occasionally detected in the urine.

Indicant (*in'-dik-ant*) [*indicans; indicare*, to indicate]. 1. Serving as an index or as an indication. 2. A fact or symptom that indicates a certain treatment; an indication.

Indicanuria (*in-dik-an-u'-re-ah*) [*indicum*, indigo; οὖρον, urine]. The morbid excess of indican in the urine.

Indication (*in-dik-a'-shun*) [*indicatio*, an indication]. A sign or symptom, especially when it points out the proper course of treatment; the inference drawn from the various symptoms or signs in any particular case.

Indicator (*in'-dik-a-tor*) [*indicare*, to point out]. 1. The index-finger. 2. The extensor indicis muscle. See *Muscles, Table of*.

Indicum (*in-dish'-e-um*) [L.: *pl.*, *Indicia*]. A symptom or sign; a discriminating or diagnostic mark.

Indifferent (*in-dif'-er-ent*) [*in*, not; *differens*, different]. 1. Not specially differentiated. 2. Not acted upon in a special way by any reagent.

Indifferentism (*in-dif'-er-ent-izm*) [*in*, not; *differens*, different]. Lack of special differentiation.

Indifulvin (*in-de-ful'-vin*) [ἰνδικόν, indigo; *fulvus*, yellow]. A yellowish substance occurring in two varieties, and produced by the action of dilute acids on indican.

Indifuscin (*in-de-fus'-in*) [ἰνδικόν, indigo; *fuscus*, dark], $C_{14}H_{20}N_2O_9$. A substance produced by the action of dilute acids on indican.

Indigenous (*in-dij'-en-us*) [*indu*, in; *gignere*, to beget]. Native, and not exotic. Originating or belonging to a certain locality or country.

Indigestion (*in-di-jes'-chun*) [*indigestio; in*, not; *digerere*, to digest]. Same as *Dyspepsia*.

Indigitation (*in-dij-it-a'-shun*) [*in*, in; *digitus*, a finger]. A displacement of a part of the intestine by intussusception.

Indiglucin (*in-de-glu'-sin*) [ἰνδικόν, indigo; γλυκύς, sweet], $C_6H_{10}O_6$. A yellow syrup, one of the decomposition-products of indican.

Indiglycin (*in-de-gli'-sin*). Same as *Indiglucin*.

Indigo (*in'-dig-o*) [ἰνδικόν, indigo]. A blue pigment formed during the fermentation of *Indigofera anil*, *I. tinctoria*, and other species. It is insoluble in alcohol or water, but freely soluble in strong sulphuric acid; it is used mainly in the arts as a dye-stuff. Chemically, it is a mixture of several principles, the chief being a blue coloring-matter, *indigotin*. Therapeutically, it is an irritant to the mucous membrane of the alimentary tract, producing intense nausea. It has been used advantageously in epilepsy, chorea, and convulsions, in doses varying from ʒij–ʒij daily. Unof. **I.-blue**, $C_{16}H_{10}N_2O_2$. Indigotin; a chromogen found in ordinary indigo, of which it constitutes the principal ingredient. It is also derived from wood (*Isatis tinctoria*). It occurs in the plant as a glucosid, *indican*. Indigo-blue is a dark-blue powder with a reddish glimmer; it becomes metallic and copper-like under pressure. It is insoluble in water, alcohol, and ether, and is odorless and tasteless. It dissolves in hot anilin with a blue color, and crystallizes from hot oil of turpentine in beautiful blue plates. **I.-brown**, a resinous substance of a brown color, obtained by boiling an aqueous solution of indican with an acid. It is composed of a mixture of *indihumin*, $C_{10}H_9NO_3$, and *indirhetin*, $C_{18}H_{17}NO_5$, the former soluble and the latter insoluble in alcohol. **I.-carmin**, a sodium salt of indigotin-disulphonic acid; it is used as a blue dye, a washing-blue, and is a delicate test for sugar. **I.-carmin Test for Sugar**; put in 30 minims of water one part each of indigo-carmin and sodium carbonate; heat gently to solution; add one drop of urine, and boil quietly. A change to red or yellow indicates sugar. See *Tests, Table of*. **I. Extract.** See *Indigo-carmin*. **I.-red.** See *Indirubin*. **I.-white**, $C_{16}H_{12}N_2O_2$. Indigogen; a substance obtained by the reduction of indigo-blue. It occurs as a white crystalline powder, soluble in alcohol, ether, and the alkalies, with a yellowish color. It rapidly reoxidizes to indigo-blue by exposure to the air. **I., Wild.** See *Baptisia*.

Indigogen (*in'-dig-o-jen*). See *Indigo-white* and *Uroxanthin*.

Indigotin (*in-dig-o'-tin*). See *Indigo-blue*.

Indigouria (*in-dig-o-u'-re-ah*) [ἰνδικόν, indigo; οὖρον, urine]. The presence of indigo in the urine; it is due to a decomposition of indican. See *Cyanurin*.

Indihumin (*in-de-hu'-min*). See *Indigo-brown*.

Indirect (*in-di-rekt'*) [*in*, not; *dirigere*, to be in a straight line]. Not direct. **I. Division of Cells.** See *Karyokinesis*. **I. Segmentation.** See *Karyokinesis*. **I. Vision**, that perception of an object in which the image falls on some other spot than the macula.

Indirhetin (*in-dir-e'-tin*). See *Indigo-brown*.

Indirubin (*in-de-ru'-bin*) [ἰνδικόν, indigo; *rubum*, red], $C_{16}H_{10}N_2O_2$. A substance isomeric with indigo-blue, and very similar in its entire character to this substance. It is produced by effecting the condensation of indoxyl with isatin by means of a dilute soda-solution. It is also called *indigo-red*.

Indisin (*in'-dis-in*). Same as *Mauvein*, *q. v.*

Indisposition (*in-dis-po-zish'-un*) [*indispositio*, unsuitableness]. Any slight illness or disturbance of the functions of the body.

Indissoluble (*in-dis'-o-lu-bl*). See *Insoluble*.

Indium (*in'-de-um*) [*indicum*, indigo, so-called from its indigo-blue spectral line]. A rare metal. Symbol In., atomic weight, 113.7. It is very soft, and resembles lead in its properties. See *Elements, Table of*.

Individual (*in-div-id'-u-al*) [*in*, not; *dividere*, to divide]. A single being; one of a group or species.

In biology, the total result of the development of a single ovum. **I. Prepotency.** See *Prepotency*.

Indogen (*in′-do-jen*). Same as *Uroxanthin*.

Indoin (*in′-do-in*) [*indicum*, indigo]. A blue substance produced from propiolic acid on adding metallic iron, zinc, or copper.

Indol (*in′-dol*) [*indicum*, indigo], C_8H_7N. A product of intestinal putrefaction, and occurring in the feces, to which, with skatol, it imparts the unpleasant odor. It is also formed when proteids are heated with alkalies, or by superheating with water to 200° C. It is a crystalline body melting, when pure, at 53° C. It is soluble in boiling water, alcohol, and ether.

Indolemia (*in-do-le′-me-ah*) [*ivδός*, Indian; *λοιμός*, pestilence]. Asiatic cholera.

Indolent (*in′-do-lent*) [*in*, not; *dolere*, to feel pain]. Sluggish. Without pain; applied to ulcers, tumors, etc.

Indophenin (*in-do-fe′-nin*) [*indicum*, indigo; *phenyl*], $C_{13}H_7NOS$. A bluish compound formed by the action of a solution of isatin, 1 part to 30 parts of H_2SO_4, on benzene.

Indophenol (*in-do-fe′-nol*), [*indicum*, indigo; *phenyl*]. Same as *Naphthol-blue*. **I.-blue.** See *Pigments, Conspectus of*.

Indosynclonus (*in-do-sin′-klo-nus*) [*ivδός*, Indian; *συγκλονεῖν*, to dash together]. Same as *Beriberi*.

Indoxyl (*in-doks′-il*) [*ivδικόν*, indigo; *ὀξύς*, sharp], C_8H_7NO. A substance isomeric with oxindol. It results on the elimination of carbon dioxid from indoxylic acid. It is an oil, not volatile in aqueous vapor, readily soluble in water, showing yellow fluorescence.

Indoxylic Acid (*in-doks-il′-ik*). See *Acid*.

Induced (*in-dūsd′*) [*inducere*, to lead into]. Made or produced by the agency of any means. **I. Current.** See *Current*.

Induction (*in-duk′-shun*) [*inductio; inducere*, to lead in]. The establishment of an abstract law or proposition drawn from specific or particular facts. **I.-balance,** in physics, an instrument used for the detection of currents too weak to affect the galvanometer. **I.-current.** See *Current*. **I., Faradic.** See *Faradic*. **I. of Labor,** the bringing on of labor by artificial means. **I.-coil.** See *Coil*.

Inductorium (*in-duk-to′-re-um*) [L., a covering]. A magneto-induction apparatus for physiologic purposes.

Indulin-blue. Same as *Coupier's Blue*.

Indulins (*in′-du-linz*) [*ivδικόν*, indigo; *ὕλη*, matter]. Members of the safranin class of dye-stuffs. They are violet-blue to gray-blue in color, and are formed upon heating various azo-azobenzenes and amido-azobenzenes with anilin hydrochlorids. They are also called *nigrosins*. They are used to impart a blue color to wool, cotton, and silk. See *Pigments, Conspectus of*.

Indumentum (*in-du-men′-tum*) [*induere*, to put on (clothes)]. In biology, the plumage of a bird or the pubescence of a plant.

Induplicate (*in-du′-plik-āt*) [*in*, in, on; *duplicare*, to double]. In biology, applied to leaves, petals, or sepals while in the bud, which have their edges bent or rolled inward.

Indurascent (*in-du-ras′-ent*) [*in*, in; *durare*, to harden]. In biology, gradually hardening.

Indurated (*in′-du-ra-ted*) [*indurare*, to harden]. Hardened. **I. Bubo,** a hard inflammation of the lymphatic glands, usually of syphilitic origin.

Induratio (*in-du-ra′-she-o*) [L.]. Induration. **I. telæ cellulosæ.** See *Sclerema neonatorum*.

Induration (*in-du-ra′-shun*) [*induratio*, an induration]. The hardening of a tissue without alteration of structure; a hardened mass or lump. **I., Black.** See *I., Gray*. **I., Brown,** a hardening of lung-tissue, with deposition of pigmentary matter. **I. of Chancre,** a hard nodule, or a cup-like ring, about the margin of a chancre or syphilitic ulcer. **I., Fibroid.** See *I., Gray*, and *Cirrhosis*. **I., Granular.** See *Cirrhosis*. **I., Gray,** the appearance of the lung in chronic pneumonia, the cut-surface of the lung being smooth, glistening, gray, and dense. It is also called *black* or *fibroid induration*. **I., Red,** a firm, resistant, reddened condition of the lung in chronic pneumonia.

Indusiate (*in-du′-ze-āt*) [*induere*, to put on]. In biology, having an indusium.

Indusium (*in-du′-ze-um*) [*induere*, to put on: *pl.*, *Indusia*]. 1. In biology: (*a*) that portion of the epidermis of a fern-frond that covers the fruit-dots or sori; (*b*) the case or covering of an insect larva. 2. The vestigial layer of the cerebral cortex existing with greater or less distinctness upon the dorsal surface of the callosum; it is also seen in many other mammals beside man. It is called also *Indusium griseum*.

Induviæ (*in-du′-ve-e*). [L.: *pl.* Clothes]. In biology, persistent withered leaves.

Induviate (*in-du′-ve-āt*) [*induviæ*, clothes]. In biology, clothed with old or withered parts.

Inebriant (*in-e′-bre-ant*) [*inebrians; inebriare*, to make drunk]. 1. Intoxicant; causing inebriation. 2. An agent or drug that causes inebriation.

Inebriation (*in-e bre-a′-shun*) [*inebriatio; inebriare*, to make drunk]. The condition of drunkenness.

Inebriety (*in-e-bri′-et-e*) [*inebrietas*, drunkenness]. Inebriation; especially habitual drunkenness.

Inedia (*in-e′-de-ah*) [*in*, not; *edere*, to eat]. Synonym of *Fasting*.

Inein (*in′-e-in*). A crystalline substance obtained from the hairs of the seeds of *Strophanthus*.

Inenucleable (*in-e-nu′-kle-a-bl*) [*in*, not; *enucleare*, to shell out]. Not removable by enucleation.

Inequivalve (*in-e-kwi′-valv*) [*in*, not; *equus*, equal; *valva*, the leaf of a door]. In biology, applied to shells having unequal valves.

Inerm (*in-erm′*) [*in*, without; *arma*, arms]. In biology, without hooks, thorns, or prickles; unarmed.

Inertia (*in-er′-she-ah*) [*iners*, inactive, unskilled; *in*, not; *ars*, skill]. Sluggishness. In physics, the inability of matter to change its condition except by means of an external force. In physiology, inactivity of any organ or function of the body. **I. of Drugs,** lack of power, from inferior quality, to produce customary physiologic reactions. **I., Intestinal,** torpor of intestinal action, or peristalsis. **I., Time.** See *Time*. **I., Uterine,** the failure or sluggishness of uterine contractions in labor.

In extremis (*in eks-tre′-mis*) [*in*, in; *extremis*, last]. A Latin phrase, meaning *at the end;* at the point of death or in extreme danger of speedy death.

Infancy (*in′-fan-se*) [*infans*, a little child]. Early childhood. **I., Diseases of,** those to which infants are peculiarly liable.

Infant (*in′-fant*) [*infans*, a little child]. A babe. According to English law, one not having attained the age of twenty-one. **I., Overlaying of,** suffocation of an infant by the lying upon it of an adult in sleep. **I.-shelter,** a day-nursery where the infant-children of working mothers are kept at a moderate expense during the hours of labor. In France, a *crèche*.

Infanticide (*in-fant′-is-īd*) [*infans*, a little child; *cædere*, to kill]. The murder of an infant.

Infantile (*in′-fan-til*) [*infantilis*, of an infant]. Pertaining to infancy. **I. Paralysis.** See *Paralysis*.

Infantilism (*in-fan′-til-izm*) [*infans*, a little child]. The persistence of the characters of childhood into

the period of normal adolescence or even into adult life.

Infarct (*in-farkt'*) [*infarcire*, to fill in]. An obstruction or plug. **I., Anemic,** a pale wedge-shaped area in an organ due to the occlusion of a blood-vessel by an embolus, the tissues in the distribution of the vessel undergoing coagulation-necrosis. **I., Hemorrhagic,** a dark-red wedge-shaped area in an organ due to the occlusion of a vessel by an embolus, with the subsequent extravasation of blood into the tissues beyond the point of obstruction. The base of the wedge is toward the periphery, the apex toward the hilum of the organ. The condition is most common in the spleen, the kidney, and the lung. **I., Uric Acid,** the deposition of crystals of uric acid in the renal tubules of the newborn.

Infarction (*in-fark'-shun*) [*infarcire*, to stuff in]. The plugging of a vessel by an embolus; the masses of extravasated blood in the tissues in embolism; obstruction; infarct.

Infarctus (*in-fark'-tus*). See *Infarct*.

Infect (*in-fekt'*) [*inficere*, to put in, or corrupt]. To communicate or transmit the specific virus or germs of disease.

Infection (*in-fek'-shun*) [*infectio*, infection]. The communication of disease-germs or virus, by any means, direct or indirect.

Infectious (*in-fek'-shus*) [*infectio*, infection]. Having the quality of transmitting disease or the agents that cause disease. See also *Contagious*. **I. Endocarditis,** ulcerative endocarditis; malignant endocarditis. **I. Pseudo-rheumatism.** See *Pseudo-rheumatism*.

Infective (*in-fek'-tiv*) [*infectio*, infection]. Infectious. **I. Angioma.** See *Angioma serpiginosum*.

Infectivity (*in-fek-tiv'-it-e*) [*inficere*, to infect]. Infectiousness; the quality of being infectious.

Infecundity (*in-fe-kun'-dit-e*) [*in*, not; *fecundus*, fruitful]. Sterility, barrenness.

Inferent (*in'-fer-ent*). Same as *Afferent*.

Inferior (*in-fe'-re-or*) [comp. of *inferus*, low]. Lower.

Inferius (*in-fe'-re-us*) [L.]. Inferior.

Infero-lateral (*in'-fer-o-lat'-er-al*) [*inferus*, low; *latus*, side]. Situated below and to one side.

Infero-posterior (*in'-fer-o-pos-te'-re-or*) [*inferus*, low; *posterius*, posterior]. Situated backward and below.

Infertility (*in-fer-til'-it-e*) [*in*, not; *fertilis*, fertile]. Same as *Sterility*.

Infibulation (*in-fib-u-la'-shun*) [*in*, in; *fibula*, a clasp]. An operation formerly employed to prevent the retraction of the prepuce over the glans penis in order to prevent copulation. It consisted in passing a ring through opposite edges of the prepuce. In a similar manner a ring was passed through the labia of the vagina in order to insure the chastity of females.

Infiltrate (*in'-fil-trāt*) [*in*, in; *filtrare*, to strain]. To ooze into the interstitial spaces of a tissue; also, the substance thus having passed.

Infiltration (*in-fil-tra'-shun*) [*infiltratio*, infiltration]. The abnormal diffusion of any fluid from without into an organ or tissue, affecting it mechanically so as to destroy its function. **I. of Bone,** a tuberculous infiltration of bone, consisting either of matter that becomes puriform, or else of gray cancellous matter. **I., Calcareous,** deposits of lime or other calcium salts within any tissue of the body. **I., Cellular,** the primary exudation into a tissue, conveying white corpuscles. **I., Fatty,** the presence of oil or fat-globules in the interior of a cell. **I., Gray,** an opaque condition of the lung found after death from acute tuberculosis, the lung being of a dirty ash-gray color, with no appearance of lobulation or of the normal pulmonary structure. **I., Plastic,** that of a character from which new normal growth may develop. **I., Red,** a form of infiltration of the lung in acute tuberculosis in which the lung presents a more or less hyperemic appearance, and is soft and granular. **I., Sanguineous,** an extravasation of blood. An ecchymosis. **I., Tuberculous,** a confluence of tuberculous granulations.

Infinite (*in'-fin-it*) [*infinitus*, boundless]. Immeasurably or innumerably great. **I. Distance,** a term in optics to denote parallelism of the light rays. Absolute parallelism does not exist, but, practically, rays from an object 20 feet away are so considered and so called.

Infinitesimalism (*in-fin-it-es'-im-al-izm*) [*infinitus*, boundless]. The doctrine that favors the infinitesimal dilution of drugs with the view of potentizing them, or developing their power over disease.

Infirm (*in-ferm'*) [*infirmus*, not strong or firm]. Weak or feeble.

Infirmary (*in-fer'-ma-re*) [*infirmarium*, an infirmary]. A hospital. An institution where ill and infirm people are maintained during the period of treatment.

Infirmity (*in-fer'-mit-e*) [*infirmitas*, weakness]. Weakness. Feebleness due to disease or senility.

Inflame (*in-flām'*) [*inflammare*, to set on fire]. To undergo inflammation. To become unduly heated and turgid with blood, owing to a morbid condition.

Inflammatio (*in-flam-a'-she-o*) [L.]. A burning. **I. ventriculi.** See *Gastritis*.

Inflammation (*in-flam-a'-shun*) [*inflammatio*, a burning]. A condition of nutritive disturbance characterized by hyperemia, with proliferation of the cells of a tissue or organ, and attended by one or more of the symptoms of pain, heat, swelling, discoloration, and disordered function. **I., Adhesive,** a synonym of *Healing by First Intention*. **I., Aplastic,** and **I., Plastic.** See *Lymph*. **I., Granulomatous,** a chronic form of inflammation occurring usually in scrofulous or syphilitic individuals, with the formation of granulation-tissue of low vitality. This tissue breaks down into small abscesses, the latter uniting to form fistulous tracks without any tendency to the formation of cicatrices. **I. of the Periosteum of a Tooth,** periodontitis. See *Odontalgia*, and *Periostitis, Dental*. **I., Pyo-gangrenous,** a form of rapidly progressive inflammation, with the production of a gangrenous focus, surrounded by a zone of suppuration. **I., Regenerative,** that form of inflammation which is followed by cicatrization. See also *Theories of Inflammation*.

Inflammatory (*in-flam'-at-o-re*) [*inflammare*, to inflame]. Pertaining to inflammation. **I. Blush,** synonym of *Erythema*. **I. Corpuscle.** See *Corpuscle, Gluge's*. **I. Exudation,** the fluid exuded from an inflamed part. **I. Fever.** See *Traumatic Fever*. **I. Focus,** the central or culminating spot of an inflamed part, or that at which suppuration begins. **I. Fungoid Neoplasm.** See *Mycosis*. **I. Infiltration,** the exudation escaping into the interstices of an inflamed tissue and not removed by the lymphatics. **I. Zone,** the area of gangrenous formation bounded by the line of demarcation between dead and living tissue. Also, the line of demarcation.

Inflation (*in-fla'-shun*) [*inflatio; inflare*, to puff up]. Distention with air. In surgery, distention of the bowels with air, to relieve obstruction; or of the lungs, for artificial respiration; or of the Eustachian tube, for therapeutic purposes.

Inflected (*in-flekt'-ted*) [*in*, in; *flectere*, to bend]. In biology, bent inward or downward.

Inflexed (*in-flekst'*) [*inflectere*, to bend]. In biology, bent. Same as *Inflected*.

Inflorescence (*in-flor-es'-ens*) [*in*, in; *florescere*, to begin to blossom]. In biology: (*a*) blossoming, flowering; (*b*) a flower-cluster.

Influenza (*in-flu-en'-zah*) [Ital., an influence, formerly thought to be due to the stars]. A specific, contagious, epidemic affection characterized by catarrhal inflammation of the mucous membrane of the respiratory tract, accompanied by a muco-purulent discharge, fever, and prostration. There is a strong tendency to the development of broncho-pneumonia. At times symptoms referable to the gastro-intestinal system predominate; at other times the symptoms are mainly referred to the nervous system. The aged, weak, and young often succumb. The disease is popularly called by its French name, *la grippe*. See *Bacillus of Influenza*, under *Bacteria, Synonymatic Table of.*

Influx (*in'-fluks*) [*in*, in; *fluere*, to flow]. An inflow. The act of flowing in.

Infossous (*in-fos'-us*) [*in*, in; *fodere*, to dig]. In biology, sunk in or depressed. Cf. *Introvenium.*

Infra- (*in'-frah-*) [*infra*, below]. A Latin prefix meaning below or beneath.

Infra-axillary (*in'-frah-aks'-il-a-re*) [*infra*, below; *axilla*, the arm-pit]. Below the arm-pit.

Infra-branchial (*in-fra-brang'-ke-al*) [*infra*, below; *branchiæ*, gills]. Beneath or below the gills.

Infra-buccal (*in-fra-buk'-al*) [*infra*, below; *bucca*, the cheek]. In molluscs beneath the buccal mass.

Infraclavicular (*in-frah-klav-ik'-u-lar*) [*infra*, below; *clavicula*, the collar-bone]. Below the collar-bone.

Infracommissure (*in-frah-com'-is-ūr*) [*infra*, below; *committere*, to unite]. The inferior commissure of the brain.

Infraconstrictor (*in-frah-kon-strik'-tor*) [*infra*, below; *constringere*, to bind together]. The inferior constrictor of the pharynx. See *Muscles, Table of.*

Infracortical (*in-frah-kor'-tik-al*) [*infra*, below; *cortex*, a bark]. Lying beneath the cortical substance of the brain.

Infracostal (*in-frah-kos'-tal*) [*infra*, below; *costa*, a rib]. Below the ribs.

Infracostales (*in-frah-kos-ta'-lēz*). See *Muscles, Table of.*

Infraction (*in-frak'-shun*) [*in*, in; *fractio*, breaking]. Incomplete fracture of a bone. Also, an indentation or driving forward.

Infradiaphragmatic (*in-frah-di-af-rag-mat'-ik*) [*infra*, below; δία, across; φράγμα, wall]. Situated below the diaphragm.

Infraglottic (*in-frah-glot'-ik*) [*infra*, below; γλωττίς, the glottis]. Below the glottis.

Infrahyoid (*in-frah-hi'-oid*) [*infra*, below; ὑοειδής, hyoid]. Situated below the hyoid bone.

Inframammary (*in-frah-mam'-ar-e*) [*infra*, below; *mamma*, the breast]. Below the mammary apparatus.

Inframaxillary (*in-frah-maks'-il-a-re*) [*infra*, below; *maxilla*, the jaw]. Below or under the jaw.

Infraorbital (*in-frah-or'-bit-tal*) [*infra*, below; *orbita*, orbit]. Beneath or below the orbit. **I. Artery,** the branch of the internal maxillary artery traversing the infraorbital canal. **I. Canal,** the canal in the superior maxillary bone that transmits the infraorbital vessels and nerve. **I. Foramen,** the aperture in the superior maxillary bone through which the infraorbital artery passes. **I. Groove,** the groove in the superior maxillary bone leading to the infraorbital canal. **I. Nerve,** the name of the superior maxillary nerve at its entrance into the infraorbital canal.

Infrapubian (*in-frah-pu'-be-an*) [*infra*, below; *pubes*, the pubes]. Situated beneath the pubes.

Infrarectus (*in frah-rek'-tus*) [*infra*, below; *rectus*, straight]. The inferior rectus muscle of the eye. See *Muscles, Table of.*

Infrascapular (*in-frah-skap'-u-lar*) [*infra*, below; *scapula*, shoulder-blade]. Below the shoulder-blade.

Infraspinatus (*in-frah-spi na'-tus*). See *Muscles, Table of.*

Infraspinous (*in-frah-spi'-nus*) [*infra*, below; *spina*, a spine]. Beneath a spine, as of the scapula or a vertebra. **I. Fascia,** the dense membranous fascia covering the infraspinous muscle. **I. Muscle.** See *Muscles, Table of.*

Infrasternal (*in-frah-ster'-nal*) [*infra*, below; *sternum*, breast-bone]. Below the sternum. **I. Depression,** the depression of the ensiform cartilage, commonly called the pit of the stomach.

Infratemporal (*in-frah-tem'-po-ral*) [*infra*, below; *tempora*, the temple]. Situated beneath the temporal bone.

Infrathoracic (*in-frah-tho-ra'-sik*) [*infra*, below; θώραξ, thorax]. Below the thorax.

Infratrochlea (*in-frah-trok'-le-ah*) [*infra*, below; *trochlea*, a pulley]. Below the trochlea. **I. Nerve.** See *Nerves, Table of.*

Infraturbinal (*in-frah-tur'-bin-al*) [*infra*, below; *turbo*, a wheel, top]. Inferior turbinal. See *Bones, Table of.*

Infravaginal (*in-frah-vaj'-in-al*) [*infra*, below; *vagina*, sheath]. Situated below the vaginal vault.

Infriction (*in-frik'-shun*) [*infrictio*, a rubbing in]. The rubbing of a surface with an ointment or liniment.

Infundibula (*in-fun-dib'-u-lah*) [L.]. Plural of *Infundibulum, q.v.* **I. of Kidneys,** the calices or the divisions of the pelvis of the kidney formed by the confluence of the calices. **I. of Lungs,** the elongated sacs (set about with air-cells) in which the smallest air-passages terminate. **I. subgenitalia.** See *Demnia.*

Infundibular (*in-fun-dib'-u-lar*) [*infundibulum*, a funnel]. Of the nature of or belonging to an infundibulum.

Infundibuliform (*in-fun-dib-u'-lif-orm*) [*infundibulum*, a funnel; *forma*, a form]. Funnel-shaped. **I. Fascia,** the funnel-shaped membranous layer that invests the spermatic cord. **I. Process,** the cremasteric process of the fascia transversalis.

Infundibulum (*in-fun-dib'-u-lum*) [*infundere*, to pour into]. In biology, a term frequently and variously applied to funnel-shaped organs or parts. **I. of Brain,** a funnel-shaped mass of gray matter attached to the pituitary body. **I. of Cochlea,** a small cavity at the end of the modiolus. **I. of Heart,** the arterial cone from which the pulmonary artery arises. **I. of Oviduct,** the cavity formed by the fringes at the ovarian end of an oviduct.

Infuscate (*in-fus'-kāt*) [*infuscare*, to make dark or dusky]. In biology, clouded or darkened.

Infused (*in-fūzd'*) [*infundere*, to pour in]. Extracted; steeped. **I. Oils.** See *Olea infusa.*

Infusion (*in-fu'-zhun*) [*infusio, infusum*, an infusion]. 1. See *Infusum.* 2. The slow and gentle injection of water or of a medicated liquid into a vein, or into parenchymatous tissues.

Infusor (*in-fu'-zor*) [L.]. An instrument by means of which water or a medicated liquid may be made to flow slowly into a vein, or into the parenchymatous tissues.

Infusoria (*in-fu-so'-re-ah*) [*infusum*, an infusion]. A class of microscopic, ciliated *Protozoa.* They are so called because they often develop in great numbers in organic infusions. They reproduce by fission.

Infusum (*in-fu'-sum*) [L.: *gen., Infusi; pl., Infusa*]. An infusion. In pharmacy, a preparation made by treating a vegetable substance with hot or with cold water, without boiling. Infusions should, in the absence of specific directions, contain 1 part of the substance to 10 of water. There are four official *infusa*, and two in the National Formulary, besides a large number in the British Pharmacopeia.

Ingesta (*in-jĕs'-tah*) [*ingerere*, to carry into]. Substances introduced into the body, especially for purposes of alimentation.

Ingestion (*in-jes'-chun*) [*ingestio*, ingestion]. 1. The introduction of food or nutrition into the mouth or stomach. 2. The process by which a cell takes up foreign matters, such as bacilli or smaller cells.

Ingluvial (*in-glu'-ve-al*) [*ingluvies*, the crop]. Pertaining to the ingluvies.

Ingluvies (*in-glu'-ve-ēz*) [*in*, in; *glutire*, to swallow]. In biology, the most anterior dilatation of the alimentary canal, as the crop or craw in birds, the paunch or rumen in mammals, the sucking-stomach of insects.

Ingluvin (*in'-glu-vin*) [*ingluvies*, crop or craw of a bird]. A preparation obtained from the gizzard of the fowl, *Pullus gallinaceus*, used as a substitute for pepsin and pancreatin. It is very efficient in the vomiting of pregnancy. Dose gr. x–xx.

Ingot (*ing'-got*) [ME., *ingot*, a mold for molten metal]. A bar of gold, silver, or other metal, cast in a mold.

Ingrassias, Processes, or Wings of. The lesser wings of the sphenoid bone.

Ingravescent (*in-grav-es'-ent*) [*ingravescere*, to become heavy]. Increasing in weight or in severity. **I. Apoplexy.** See *Apoplexy.*

Ingravidation (*in-grav-id-a'-shun*). See *Impregnation.*

Ingredient (*in-gre'-de-ent*) [*ingredi*, to step into]. Any substance that enters into the formation of a compound.

Ingrowing Nail. See *Onychogryposis.*

Inguen (*ing'-gwen*) [L.]. The groin, *q. v.*

Inguinal (*in'-gwin-al*) [*inguen*, the groin]. Pertaining to the groin. **I. Arch,** the crural arch. **I. Canal,** the canal transmitting the spermatic cord in the male, and the round ligament in the female. It is situated parallel to and just above Poupart's ligament. **I. Glands,** the superficial and the deep glands of the groin. **I. Hernia.** See *Hernia.* See, also, *Ligament, Region, Ring.* **I. Plague.** Synonym of *Plague.*

Inguino- (*in'-gwin-o-*) [*inguen*, the groin]. In composition, pertaining to the groin. **I.-abdominal,** pertaining conjointly to the groin and the abdomen. **I.-crural,** relating to the groin and the thigh. **I.-cutaneous,** relating to the integument of the groin.

Ingurgitation (*in-gur-jit-a'-shun*) [*ingurgitatio*, a swallowing]. 1. The act of swallowing; deglutition. 2. Excess in eating or drinking.

Inhalation (*in-ha-la'-shun*) [*inhalatio; inhalare*, to draw in]. The in-breathing of air or other vapor. **I.-diseases,** those due to the inspiration of air containing dust or any finely divided matter. See *Grinders' Disease.* **I. of Medicines,** the introduction into the air-passages or lungs of medicinal substances in the form of vapor or fine spray.

Inhale (*in-hāl'*) [*inhalare*, to breathe in]. To inspire or draw air or other vapor into the lungs.

Inhaler (*in-ha'-ler*) [*inhalare*, to breathe in]. An instrument for inhaling a gas or the vapor of a liquid medicine. **I., Nitrous-oxid,** a breathing-tube for the inhalation of nitrous-oxid gas; it is constructed of vulcanized rubber or metal. See *Anesthetic.*

Inherent (*in-he'-rent*) [*inhærere*, to cleave to]. Constitutional; innate; natural to the organism; not casual or derivative.

Inheritance (*in-her'-it-ans*) [F., *inheriter*, to inherit]. The act of inheriting. **I., Particulate,** the reappearance of single peculiarities in the offspring. **I., Use,** the inheritance of acquired characters; the acquisition by the offspring of changes in the body-cells of the parent.

Inherited (*in-her'-it-ed*) [*in*, in, to; *heres*, heir]. Derived from an ancestor. **I. Disease,** a disease that has been transmitted to a child by its parent.

Inhibit (*in-hib'-it*) [*inhibere*, to check]. To check, restrain, or suppress.

Inhibition (*in-hib-ish'-un*) [*inhibitio*, restraint]. The act of checking, restraining, or suppressing; any influence that controls, retards, or restrains. Inhibitory nerves and centers are those intermediating a modification, stoppage, or suppression of a motor or secretory act already in progress. **I., Mental,** the involuntary restraint that active mental states exercise over bodily functions, normal or otherwise. **I., Vasomotor,** an influence exerted on the contractile walls of the blood-vessels, that causes their dilatation by a diminution of their tone. **I., Voluntary,** the checking or temporary restraint of a reflex by force of will.

Inhibitive (*in-hib'-it-iv*). See *Inhibitory.*

Inhibitory (*in-hib'-it-o-re*) [*inhibitorius*, inhibitory]. Having the power to restrain or hold in check. **I. Center of Setschenow,** a cerebral center in the optic lobes of the brain of the frog, the stimulation of which checks spinal reflexes. **I. Nerves of the Heart,** those of the vagus supplied by the cardio-inhibitory center, through the spinal accessory nerve. **I. Nerves of Respiration,** certain afferent fibers in the laryngeal branches of the vagus nerve, that exert an inhibitory action on the inspiratory act of respiration. **I. Centers,** nerve-centers that inhibit, restrain, or even arrest the action of other centers. **I. Fibers,** centrifugal nerve-fibers that affect other centers so as to moderate or nullify their action.

Inhumation (*in-hu-ma'-shun*) [*inhumare*, to put in the ground]. Burial of the dead in the ground. See *Humation.*

Iniad (*in'-e-ad*) [*ἰνίον*, the occiput]. Toward the inial aspect.

Inial (*in'-e-al*) [*ἰνίον*, occiput]. Pertaining to the inion. **I. Aspect,** the posterior aspect of the head.

Inien (*in'-e-en*) [*ἰνίον*, occiput]. Belonging to the inion in itself.

Iniencephalus (*in-e-en-sef'-al-us*) [*ἰνίον*, occiput; *ἐγκέφαλος*, brain]. A variety of single autositic monsters of the species *Exencephalus* in which there is the same deformity of the skull as in notencephalus, with the addition of a spinal fissure involving the cervical and thoracic vertebræ.

Iniodymus (*in-e-od'-im-us*) [*ἰνίον*, occiput; *δίδυμος*, double]. A teratism with one body and two heads joined at the occiput.

Inio-glabellar (*in'-e-o-gla-bel'-ar*) [*ἰνίον*, occiput; *glaber*, smooth]. Relating to or joining the inion and the glabella.

Inion (*in'-e-on*) [*ἰνίον*, occiput]. The external protuberance of the occipital bone. See *Craniometric Points.*

Iniops (*in'-e-ops*) [*ἰνίον*, occiput; *ὄψ*, face]. A catadidymous monstrosity with the parts below the navel double, the thoraces joined into one, and one head with two faces, the one incomplete.

Inirritative (*in-ir'-it-a-tiv*) [*in*, not; *irritare*, to irritate]. Not irritant; soothing.

Initial (*in-ish'-al*) [*in*, into; *ire*, to go]. Beginning or commencing. **I. Cells,** germ-cells. **I. Sclerosis,** the primary induration of a hard chancre. **I. Stage of Labor.** See *Labor, Stages of.*

Initis (*in-ī'-tis*) [*ἰς*, muscle, fiber; *ιτις*, inflammation]. Inflammation of fibrous or muscular tissue.

Inject (*in-jekt'*) [*in*, into; *jacere*, to throw]. To effect the introduction of a liquid into any cavity of the body, natural or artificial, by means of a syringe or similar instrument. In pathology, to produce a condition of distention of the capillaries with blood.

Injecta (*in-jek'-tah*) [L.]. Things introduced, as into the alimentary canal (correlated with *ejecta*).

Injection (*in-jek'-shun*) [*injectio*, a throwing in]. An aqueous or other solution thrown into the vessels, beneath the skin or into any cavity of the body; the introduction of such a liquid; a condition of capillary distention. **I., Anatomic,** filling the vessels of a cadaver or of an organ with preservative or coagulating solutions, for purposes of dissection, **I., Coagulating,** injection of coagulating solutions into the cavity of an aneurysm. **I., Hypodermatic,** into the subcutaneous connective tissue, by means of a syringe. **I., Nutrient,** injection of nutritive fluids into the rectum or other cavity of the body. **I., Opaque Naked-eye,** for anatomic or microscopic purposes, made of plaster-of-Paris, tallow, vermilion and gelatin, plumbic acetate and potassium bichromate (yellow injection), or plumbic acetate and sodium carbonate (white). **I., Transparent Microscopic,** made with carmin for red, potassium ferrocyanid for blue, potassium bichromate for yellow. **I.-pneumonia,** a condition of the lung somewhat resembling pneumonia, following injections of Koch's tuberculin.

Injector (*in-jek'-tor*) [*injicere*, to throw in]. An apparatus, as a syringe, used in injecting any material into the organism, or into any of its cavities.

Injury (*in'-ju-re*) [*injuria; in*, not; *jus*, a right]. Any damage or harm to the body or any of its parts.

In-knee (*in'-ne*). Knock-knee, or genu valgum, *q. v.*

Inlet (*in'-let*). The place where the air of ventilation is admitted into a room. **I. of the Pelvis,** the heart-shaped space within the brim of the pelvis; the superior pelvic strait.

Inman's Myalgia. See *Diseases, Table of.*

Innate (*in-nāt'* or *in'-nāt*) [*innatus*, born in]. Congenital; native to the organism; intrinsic. In biology, applied to anthers that appear to be supported by the very apex of the filament.

Innervation (*in-ner-va'-shun*) [*in*, in; *nervus*, nerve]. The discharge of nervous impulses from a ganglionic center; the supply of nervous influence bestowed upon any part or organ; the distribution of nerves within a part or organ; the manifestation of nervous force.

Innominata (*in-nom-in-a'-tah*). Plural of *Innominatum.* The innominate bones.

Innominate (*in-nom'-in-āt*) [*in*, without; *nomen*, a name]. A term applied to several parts of the body to which no other definite name has been given. **I. Artery.** See *Arteries, Table of.* **I. Bone,** the irregular-shaped bone forming the sides and anterior wall of the pelvic cavity. See *Bones, Table of.* **I. Foramen.** See *Foramina, Tables of.* **I. Veins.** See *Vein.*

Innominatum (*in-nom-in-a'-tum*) [L., nameless: *pl.*, *Innominata*]. The innominate bone.

Innutrition (*in-nu-trish'-un*) [*in*, not; *nutrire*, to nourish]. Want or deficiency of nutrition or nourishment.

Inoblast (*in'-o-blast*) [*is*, fiber; *βλαστός*, germ]. Any one of the cells, or corpuscles, from which connective tissue is derived.

Inocarcinoma (*in-o-kar-sin-o'-mah*) [*is*, fiber; *καρκίνος*, a crab; *ὄμα*, tumor: *pl.*, *Inocarcinomata*]. A carcinoma with a preponderance of fibrous tissue.

Inoccipitia (*in-ok-sip-it'-e-ah*) [*in*, negative; *occiput*, occiput]. Deficiency of the occipital lobe of the brain.

Inochondritis (*in-o-kon-dri'-tis*) [*is*, fiber; *χόνδρος*, cartilage; *ιτις*, inflammation]. Conjoined inflammation of tendons and cartilages.

Inoculability (*in-ok-u-la-bil'-it-e*) [*inoculare*, to implant]. The quality of being inoculable.

Inoculable (*in-ok'-u-la-bl*) [*inoculare*, to implant]. Susceptible of being inoculated.

Inocular (*in-ok'-u-lar*) [*in*, in; *oculus*, eye]. In biology, applied to those insect antennæ that arise from notches in the inner margins of the compound eyes.

Inoculation (*in-ok-u-la'-shun*) [*inoculatio*, an ingrafting]. The introduction into the circulation of the virus of infectious diseases, or of certain medicinal agents. **I., Jennerian,** vaccination, or the inoculation of cowpox-virus. **I. of Smallpox,** inoculation with the contagium of smallpox to produce a mild type of the disease. **I., Preventive,** inoculation with some virus to act as a preventive of a more serious disease or type of the same disease.

Inoculator (*in-ok'-u-la-tor*) [*inoculatio*, an ingrafting]. One who or that which inoculates; an instrument used in inoculation.

Inocyst (*in'-o-sist*) [*is*, a fiber; *κύστις*, bladder]. A fibrous capsule.

Inoendothelioma (*in-o-en-do-the-le-o'-mah*) [*is*, fiber; *ἔνδον*, within; *θηλή*, nipple; *ὄμα*, tumor: *pl.*, *Inoendotheliomata*]. Round-celled fibro-sarcoma.

Inoepithelioma (*in-o-ep-ith-e-le-o'-mah*) [*is*, fiber; *ἐπί*, upon; *θηλή*, nipple; *ὄμα*, tumor: *pl.*, *Inoepitheliomata*]. Medullary carcinoma containing fibrous tissue.

Inogen (*in'-o-jen*) [*is*, (gen. *ινός*), fiber; *γεννᾶν*, to produce]. A hypothetic substance believed to occur in muscular tissue, and to be decomposed, during contraction, into carbon dioxid, sarcolactic acid, and myosin. Because of this behavior it is considered as the energy-producing substance of muscle.

Inogenesis (*in-o-jen'-es-is*) [*is*, muscle; *γένεσις*, generation]. The formation of fibrous muscular tissue.

Inohymenitis (*in-o-hi-men-i'-tis*) [*is*, fiber; *ὑμήν*, membrane; *ιτις*, inflammation]. Inflammation of any fibrous structure.

Inoleiomyoma (*in-o-li-o-mi-o'-mah*) [*is*, fiber; *λεῖος*, smooth; *μῦς*, muscle; *ὄμα*, a tumor: *pl.*, *Inoleiomyomata*]. A myoma made up of, or containing, unstriped muscular fibers.

Inoma (*in-o' mah*) [*is*, a fiber; *ὄμα*, a tumor: *pl.*, *Inomata*]. Same as *Fibroma.*

Inomyxoma (*in-o-miks-o'-mah*) [*is*, fiber; *μύξα*, mucus; *ὄμα*, tumor: *pl.*, *Inomyxomata*]. Same as *Fibro-myxoma.*

Inoperculate (*in-o-per'-ku-lāt*) [*in*, without; *operculum*, a cover, lid]. In biology, having no operculum or lid.

Inopexia, or **Inopexy** (*in-o-peks'-e-ah*, or *in'-o-peks-e*) [*is*, fiber; *πῆξις*, coagulation]. A tendency in the blood toward spontaneous coagulation.

Inophlogosis (*in-o-flo-go'-sis*) [*is*, fiber; *φλόγωσις*, inflammation]. Inflammation of any fibrous tissue.

Inopolypous (*in-o-pol'-ip-us*) [*is*, fiber; *polypus*, polyp]. Of the nature of an inopolypus.

Inopolypus (*in-o-pol'-ip-us*) [*is*, fiber; *polypus*, polyp]. A fibrous polypus.

Inorganic (*in-or-gan'-ik*) [*in*, not; *organum*, an instrument]. A term applied to a body or a substance that possesses none of the possibilities of development, growth, or life. **I. Constituents.** See *Constituents.*

Inorrhabdomyoma (*in-or-ab-do-mi-o'-mah*) [*is*, fiber; *ῥάβδος*, rod; *μῦς*, muscle; *ὄμα*, tumor: *pl.*, *Inorrhabdomyomata*]. A fibrous rhabdomyoma.

Inosclerosis (*in-o-skle-ro'-sis*) [*is*, fiber; *σκληρός*, hard]. Sclerosis or hardening of fibrous tissue.

Inosculate (*in-os'-ku-lāt*) [*in*, in, on; *osculum*, dim. of *os*, mouth]. In biology, to unite by small openings; to anastomose.

Inosculation (*in-os-ku-la'-shun*) [*in*, in; *osculare*, to kiss]. The joining, at their mouths, of the branches of blood-vessels, especially the extremities of the arteries with the origins of veins.

Inosinic Acid (*in-o-sin'-ik*). An ammonium derivative from muscle, of unknown constitution.

Inosis (*in-o'-sis*). See *Inogenesis*.

Inosite (*in'-o-sīt*) [*ἰς*, fiber], $C_6H_{12}O_6 + 2\,H_2O$. A saccharine substance occurring sparingly in the human body, especially in the muscles. It also occurs in diabetic urine and in the urine of chronic nephritis. It is found in abundance in the vegetable kingdom, particularly in unripe beans. It forms large efflorescent crystals (rhombic tables); in microscopic preparations it is usually obtained in tufted lumps of fine crystals. It is readily soluble in water, but insoluble in absolute alcohol and ether.

Inosituria (*in-o-sit-u'-re-ah*) [*ἰς*, fiber; *οὖρον*, urine]. The presence of inosite in the urine.

Inosteatoma (*in-o-ste-at-o'-mah*) [*ἰς*, fiber; *στέαρ*, fat; *ὄμα*, tumor: *pl.*, *Inosteatomata*]. A steatoma with fibrous elements.

Inosuria (*in-o-su'-re-ah*). See *Inosituria*.

Inotagmata (*in-o-tag'-mat-ah*) [*ἰς* (*iv*), strength, force; *τάγμα*, a regular arrangement, as of soldiers]. In biology, Engelmann's name for hypothetic, contractile elements that generate the force of protoplasmic motion; they are held to be uniaxial and doubly refractive; also written *Isotagmata*.

Inquest (*in'-kwest*) [*inquesita*; *in*, into; *quærere*, to ask]. A judicial inquiry. **I., Coroner's,** an inquiry concerning the cause of the death of one who has died by violence or in some sudden or unknown way.

Inquiline (*in'-kwil-in*) [L., *inquilinus*, an inhabitant of a place that is not his own]. In biology, a commensal or messmate; an animal inhabiting an abode that it does not produce.

Inquination (*in-kwin-a'-shun*) [*inquinatio*, pollution]. Pollution; infection; corruption.

Inquisition (*in-kwiz-ish'-un*) [*inquisitio*, an inquiry]. The inquiry or hearing before a jury or commission concerning the sanity or lunacy of a criminal or a person charged with crime.

Insaccation (*in-sak-a'-shun*) [*in*, in; *saccus*, sac]. Encystment; enclosure in a sac.

Insalivation (*in-sal-iv-a'-shun*) [*in*, in; *saliva*, the spittle]. The mixture of the food with saliva during mastication.

Insalubrity (*in-sal-u'-brit-e*) [*in*, not; *salubris*, wholesome]. Unwholesomeness of air or of climate.

Insanability (*in-san-ab-il'-it-e*) [*in*, not; *sanabilis*, curable]. Incurableness; the quality or state of being incurable.

Insane (*in-sān'*) [*in*, not; *sanus*, sound]. Deranged or diseased in mind. **I. Ear.** See *Hematoma auris*.

Insaniola (*in-san-i'-o-lah*) [dim. of *insania*, insanity]. A slight or minor degree of insanity.

Insanitary (*in-san'-it-a-re*) [*in*, not; *sanitas*, health]. Not sanitary; not in a proper condition as respects the preservation of health (said of houses, buildings, and their surroundings).

Insanitation (*in-san-it-a'-shun*) [*in*, not; *sanitas*, health]. Lack of proper sanitary conditions; defect of sanitation.

Insanity (*in-san'-it-e*) [*insanitas*, insanity]. A derangement or abnormal condition of the mental faculties, with or without loss of volition and of consciousness. Insanity may be due to defective development, to acquired disease, or to natural decay. It is characterized, according to its form, by a variety of symptoms, the most common of which are change of character and habits, moroseness, confusion, elation, melancholy, mania, delusions, and hallucinations. The psychotic tendency is the chief predisposing cause, and on this some one of the many exciting causes will act and result in the final break-down. The vast majority of cases of insanity occur between the ages of twenty-five and forty-five. Melancholia, mania, delusional insanity, and dementia are the four principal types of the affection. According to Krafft-Ebing, insanity may be divided into two great groups, according as the disorder is the result of a disturbance of the developed brain or of an arrest of brain-development. He places insanity ordinarily so-called under the first head; his subdivisions are as follows:—

A. Mental affections of the developed brain.
  I. Psychoneuroses.
    1. Primary curable conditions.
      a. Melancholia
        α. Melancholia passiva.
        β. Melancholia attonita.
      b. Mania.
        α. Maniacal exaltation.
        β. Maniacal frenzy.
      c. Stupor.
    2. Secondary incurable states.
      a. Secondary monomania.
      b. Terminal dementia.
        α. Dementia agitata.
        β. Dementia apathetica.
  II. Psychic degenerative states.
    a. Constitutional affective insanity (*folie raisonante*).
    b. Moral insanity.
    c. Primary monomania.
      α. With delusions.
        αα. Of a persecutory tinge.
        ββ. Of an ambitious tinge.
      β. With imperative conceptions.
    d. Insanities transformed from the constitutional neuroses.
      α. Epileptic.
      β. Hysteric.
      γ. Hypochondriac.
    e. Periodic insanity.
  III. Brain diseases with predominating mental symptoms.
    a. Paralytic dementia.
    b. Cerebral syphilis.
    c. Chronic alcoholism.
    d. Senile dementia.
    e. Acute delirium.
B. Mental results of arrested brain-development: idiocy and cretinism.

I., Acquired, that arising after a long period of life of mental integrity. **I., Alcoholic,** that induced by alcoholic excess, usually a result of hereditary tendencies. **I., Alternating.** See *I., Circular*. **I., Circular,** cyclothymia; alternating insanity; a form of insanity recurring in cycles varying in length from a few days to many months. The arrangement of the cycle varies in different individuals, but is constant in a given case. Thus melancholia may be followed by mania, and this by a lucid interval, the passage from one mental condition to the other being abrupt or gradual. **I., Climacteric,** insanity occurring at or near the menopause. **I., Communicated,** that transmitted by association with an insane person. **I., Confusional,** stuporous insanity; delusional stupor; mania hallucinatoria; surgical insanity; puerperal mania; postfebrile insanity; an acute insanity produced by nervous shock or exhausting disease, without distinct constant emotional depression or exaltation, with marked failure of mental power or complete imbecility, often accompanied by hallucinations and loss of physical power. Recovery is usually complete. **I., Doubting,** a form of melancholia according to Régis, but according to others a psycho-convulsive mental disease closely allied to delusional insanity, which consists in an uncontrollable doubt and indecision regarding the occupations, duties, or events of the day, of religion, etc. **I., Epidemic,** a form occasionally manifested among a number of people in common association, as in convents or schools. **I., Febrile,** a maniacal form, occasionally occurring in the course or as a sequel of acute inflammation or fever. **I., Hereditary,** that transmitted from parent to child, and not induced by other

apparent cause. **I., Ideational,** a term applied to any form in which there is marked perversion of the reasoning powers. **I., Impulsive,** a form in which the patient possesses an uncontrollable desire to commit acts of violence. **I., Moral,** a form marked by perversion and depravity of the moral sense, apparently without impairment of the reasoning and intellectual faculties. **I. of Pregnancy,** a form occurring during pregnancy, characterized by melancholia, suicidal intent, and abhorrence of friends and relatives. **I., Primary,** a form, often congenital, that arises with the development of the body. It may also proceed from injury or disease of the brain in early life. **I., Puerperal,** a têrm sometimes applied to the delirium of childbirth, but more properly to the mania occurring after delivery. **I., Simultaneous,** when two or more persons hereditarily inclined become affected at the same time. **I., Menstrual.** See *I., Periodic.* **I., Periodic,** a condition dependent upon original or acquired psychopathy, in which attacks of insanity occur at regular or irregular intervals. If occurring in women at the menstrual epoch it is called *Menstrual Insanity.* **I., Stuporous,** the primary acute form of dementia; a disease chiefly met with in youth and early maturity. It is usually due largely to masturbation, and is also called *Anergic Stupor.* See also *I., Confusional.* **I., Surgical.** See *I., Confusional.* **I., Volitional,** such forms as are marked by derangement of the will.

Insatiability (*in-sa-she-ab-il'-it-e*) [*in*, not; *satiare*, to satisfy]. The property of being insatiable. See *Acoria.*

Insatiable (*in-sa'-she-ab-l*) [*insatiabilis*, that which cannot be satisfied]. Inordinately greedy; incapable of being satisfied. **I. Appetite.** See *Bulimia.*

Inscriptiones tendineæ (*in-skrip-te-o'-nēz ten-din'-e-e*). The lineæ transversæ of the rectus abdominis muscle.

Insculpt (*in-skulpt'*) [*insculpere*, to cut or carve in]. In biology, applied to lichens that grow in the depressions in rocks.

Insect (*in'-sekt*) [*insectum*, an insect]. Any member of the class of animals called *Insecta.* **I.-powder,** the powdered flowers of several species of *Pyrethrum* or "buhach," an insecticide in common use. In the United States the flowers of *P. cinerælolium* are extensively grown for this purpose. See *Buhach.* **I. Wax.** See *Chinese Wax.*

Insected (*in-sek'-ted*) [*insectus*, p. p. of *insecare*, to cut in]. Incised or cut into.

Insecticide (*in-sek'-tis-īd*) [*insectum*, insect; *cædere*, to kill]. A substance that is destructive to insects.

Insectiform (*in-sek'-tif-orm*) [*insectum*, an insect; *forma*, form]. Resembling an insect.

Insectivora (*in-sek-tiv'-o-rah*) [*insectum*, an insect; *vorare*, to devour]. An order of plantigrade animals belonging to the *Mammalia*, and living upon insects.

Insectivorism (*in-sek-tiv'-or-izm*) [*insectum*, an insect; *vorare*, to devour]. In biology, the property of capturing and devouring insects, such as is possessed by certain plants.

Insectivorous (*in-sek-tiv'-or-us*) [*insectum*, insect; *vorare*, to devour]. In biology, feeding upon insects.

Insectology (*in-sek-tol'-o-je*) [*insectum*, insect; λόγος, science]. The science treating of insects.

Insemination (*in-sem-in-a'-shun*) [*inseminare*, to plant seed]. The planting of seed. The introduction of semen.

Insenescence (*in-sen-es'-ens*) [*insenescentia; in*, not, or upon; *senex*, old]. 1. Vigorous age; old age without its ordinary infirmities. 2. The approach of old age.

Insensibility (*in-sens-ib-il'-it-e*) [*in*, not; *sentire*, to feel]. The condition or state of being insensible; absence of consciousness; anesthesia.

Insensible (*in-sen'-sib-l*) [*in*, not; *sentire*, to feel]. Without the sense of feeling. Incapable of being perceived or recognized by the senses. Unconscious.

Insertion (*in-ser'-shun*) [*insertio; inserere*, to set in]. The act of setting or placing in; or, that which is set in; the point at which a muscle is attached to the part that it moves; the place or the mode of attachment of an organ to its support. **I., Velamentous,** the attachment of the umbilical cord to the margin of the placenta.

Insidious (*in-sid'-e-us*) [*insidiæ*, an ambush]. Deceitful, stealthful. Hidden from external view. **I. Disease,** one, the onset of which is gradual or inappreciable.

Insipid (*in-sip'-id*) [*insipidus*, unsavory]. Tasteless.

Insitio dentis (*in-sish'-e-o den'-tis*) [L.]. Implantation of a tooth.

In situ (*in si'-tu*) [*in*, in; *situ*, position]. A Latin phrase meaning *in a given or natural position.*

Insolatio (*in-so-la'-she-o*). See *Sunstroke.*

Insolation (*in-so-la'-shun*) [*insolatio; in*, in; *sol*, sun]. 1. Exposure to the sun, either as a prophylactic treatment or as a cause of disease. 2. Sunstroke. 3. In pharmacy, the drying or bleaching of substances by exposure to the sun.

Insolubility (*in-sol-u-bil'-it-e*) [*insolubilis*, insoluble]. The quality of being insoluble; lack of solubility.

Insoluble (*in-sol'-u-bl*) [*in*, not; *solubilis*, soluble]. Incapable of solution.

Insomnia (*in-som'-ne-ah*) [*in*, not; *somnus*, sleep]. Want of sleep; inability to sleep.

Inspection (*in-spek'-shun*) [*inspectio*, or *inspectus*, a beholding]. In medicine, the examination of the body or any part of it.

Inspergation (*in-sper-ga'-shun*) [*inspergere*, to sprinkle into]. The sprinkling or dusting of a part with a fine powder.

Inspiration (*in-spir-a'-shun*) [*inspiratio; in*, in; *spirare*, to breathe]. That part of respiration consisting of the drawing in of the breath.

Inspiratory (*in-spi'-rat-or-e*) [*in*, in; *spirare*, to breathe]. Pertaining to the act or function of inspiration. **I. Spasm,** a rare form of hysteric spasm of the larynx occurring only during inspiration, the vocal bands instead of separating, tending to approach one another.

Inspissant (*in-spis'-ant*) [*inspissans; in*, in; *spissare*, to thicken]. 1. Tending to thicken; thickening the blood or other fluids. 2. An agent that tends to increase the thickness of the blood or some other fluid.

Inspissate (*in-spis'-āt*) [*inspissare*, to thicken]. To make thick by evaporation or by absorption of the liquid menstruum.

Instaminate (*in-stam'-in-āt*) [*in*, not; *stamen*, a stamen]. Without stamens.

Instauration (*in-staw-ra'-shun*) [*instauratio*, renewal]. The first appearance of a physiologic condition: the establishment of a new function.

Instep (*in'-step*) [*instop*, the bend of the foot]. The arch of the foot, or its dorsal aspect.

Instillation (*in-stil-a'-shun*) [*instillatio; instillare*, to put in little by little]. The pouring of a liquid *guttatim*, or little by little. To introduce into a cavity, canal, or sac, drop by drop.

Instinct (*in-stingkt'*) [*instinguere*, to impel]. In biology, organic habits registered in the nervous system of the race (Grant Allen). An inherited natural impulse, unassociated with a reasoning conception as to cause and effect.

Instinctive (*in-stingk'-tiv*) [*instinguere*, to impel]. Prompted or determined by instinct; of the nature of instinct.

Instipulate (*in-stip'-u-lāt*) [*in*, without; *stipula*, a stalk]. In biology, without stipules.

Institute (*in'-stit-ūt*) [*instituere*, to set up]. A statement of principles. Also, any establishment for the statement or dissemination of principles. **Institutes of Medicine,** the explanation or philosophy of the laws of the science of medicine, physiology, pathology, therapeutics, and hygiene, or the general and elementary principles of the same. The term is used sometimes as a synonym of physiology.

Instrument (*in'-stru-ment*) [*instrumentum; instruere*, to build]. Any mechanical tool or device used in operation or treatment. **I., Exploring,** for examining teeth to ascertain the work necessary to be done; more especially for determining the presence of caries of the teeth.

Instrumentarium (*in-stru-men-ta'-re-um*) [L.]. A supply or collection of surgical, dental, or other instruments.

Instrumentation (*in-stru-men-ta'-shun*) [*instrumentum*, an instrument]. The care and management of a surgeon's instruments.

Insuccation (*in-suk-a'-shun*) [*in*, into; *succus*, juice]. The steeping of a drug for a considerable time in water before using it in any pharmaceutic process.

Insufficiency (*in-suf-fish'-en-se*) [*insufficientia; in*, not; *sub*, under; *facere*, to make]. Incapacity of normal action, on account of some deficiency, as of size; the quality of not being sufficient for a special function or duty. In ophthalmology, a disturbance of equilibrium of the ocular muscles, that is overcome by the effort of binocular vision, and so does not produce strabismus. It is also called *latent* or *dynamic squint.* **I., Aortic.** See *Endocarditis.* **I. of the Cardiac Valves,** imperfect closure, permitting regurgitation. **I. of the Externi,** or esophoria; the internal recti ocular muscles are more powerful than the externi, or more accurately, the power of adduction, or convergence, is excessive. **I. of the Interni,** or exophoria; the external recti are predominant or the power of adduction is subnormal. **I. of Muscles, Active,** a phenomenon of a muscle acting on two or more joints when the joints over which it passes are so changed that it cannot contract actively any further than to the extent of the shortening from which it begins to be active. **I. of Muscles, Passive,** the analogue of the phenomena of active insufficiency whereby motion of the part is prevented from the position of the joint, the muscle being too short to act under such circumstances. **I. of the Ocular Muscles,** heterophoria, or unbalance; high degrees result in strabismus, diplopia, asthenopia, etc. **I., Mitral.** See *Endocarditis.* **I., Pulmonary.** See *Endocarditis.* **I., Tricuspid.** See *Endōcarditis.*

Insufflation (*in-suf-fla'-shun*) [*insufflare; in*, in; *sufflare*, to puff]. The blowing of any finely divided substance upon a surface or into a cavity, or the filling of any cavity with air, gas, or vapor.

Insufflator (*in'-suf-la-tor*) [*in*, in; *sufflare*, to blow]. A small instrument for blowing fine powders into a cavity or on a surface. Also, one for blowing air into the lungs.

Insula (*in'-su-lah*) [L.]. 1. In anatomy, the island of Reil. 2. Any detached part or exclave of an organ. 3. A blood-islet, or island. See *Island.*

Insular (*in'-su-lar*) [*insula*, an island]. Isolated in condition; also, pertaining to the Island of Reil. **I. Sclerosis,** *Disseminated, Cerebro-spinal,* or *Multiple Sclerosis.* A disease characterized by scattered islets of sclerosis in the brain and cord. It is called *sclerose en plaques disseminèes* by the French, and *multiple sclerosis* by the Germans. It is distinctly a disease of early adult life, and is of about equal frequency in the two sexes. The causes are obscure. The disease has been observed to follow infectious diseases, exposure to wet and cold, and traumatism. In some cases a neuropathic predisposition has been present. The symptoms vary according to the situation of the islets; the most common are motor derangement, a jerky tremor, paresis or paralysis, and ocular symptoms, as diplopia and amblyopia, with nystagmus, and occasionally atrophy of the discs. The tremor is ordinarily absent during repose, but appears on attempted movement, and is hence designated, intention-tremor. The speech is a characteristic one, very slow, each syllable being pronounced with difficulty; hence it is said to be of a "*scanning*" nature. Vertigo is also a very frequent symptom, and in the advanced stage the mind undergoes deterioration, and dementia may make its appearance. The knee-jerks are exaggerated and ankle-clonus is present. The lesions of the disease are small grayish or yellow gelatinous patches scattered throughout the brain and in both the white and gray matter of the cord.

Insulate (*in'-su-lāt*) [*insulare*, to make like an island]. To isolate or separate from surroundings. In electricity, to surround a conductor with a non-conducting substance or with one having an exceedingly high degree of resistance.

Insulation (*in-su-la'-shun*) [*insulatio; insulare*, to make like an island]. The process of insulating; the state or quality of being insulated.

Insult (*in'-sult*) [*insultus; in*, upon; *saltare*, to leap]. The beginning of a paroxysm or of an attack of a disease. **I., Apoplectic,** an apoplectic stroke.

Insusceptibility (*in-sus-sep-tib-il'-it-e*) [*insusceptibilis*, not susceptible]. Absence of contagious quality; it differs from Immunity in being applied to the disease instead of the person.

Integer (*in'-te-ger*) [L.]. An entity. **I., Fissural,** a term designating a fissure of the brain, which is independent in some species or individuals, and deepest at or about the middle of its length, corresponding nearly with the place of first appearance.

Integral (*in'-te-gral*) [*integer*, whole]. Entire; essential.

Integration (*in-te-gra'-shun*) [*integratio*, a renewing]. The blending of separate parts into one, as in the embryo.

Integrity (*in-teg'-rit-e*) [*integritus; integer*, whole]. Wholeness; entirety. Also, virginity.

Integument (*in-teg'-u-ment*) [*integumentum; in*, upon; *tegere*, to cover]. A covering, especially the skin. In botany, the envelop surrounding the ovule of phanerogamous plants. **I., Fetal,** the fetal membranes.

Intellect (*in'-tel-ekt*) [*intellectus; [inter*, between; *legere*, to choose]. The mind or reasoning power. **I., Deranged.** See *Insanity.*

Intelligence (*in-tel'-ij-ence*) [*intelligentia*, intelligence]. The understanding that comes from the perception of qualities and attributes of the objective world, and is manifested in the purposive employment of means to attain an end.

Intemperance (*in-tem'-per-ans*) [*in*, not; *temperantia*, mildness]. Want of moderation; immoderate indulgence, especially with reference to alcoholic liquors.

Intensity (*in-ten'-sit-e*) [*intensus*, stretched, strung]. Concentration of energy or activity. Also, a high degree of energy or power. **I., Specific.** See *Specific.*

Intensive (*in-ten'-siv*) [*intensus*, stretched; strung]. Gradually increased in force or energy. Strengthening or increasing the sexual passions. **I. Method of Pasteur.** See *Pasteur*.

Intention (*in-ten'-shun*) [*intentio*, a stretching out]. See *Healing*. **I.-tremor**, a tremor coming on when attempts at voluntary motion are made.

Inter- (*in'-ter-*) [*inter*, between]. A Latin prefix signifying between.

Interaccessory (*in-ter-ak'-ses-or-e*) [*inter*, between; *accedere*, to go to]. Situated between accessory processes of the vertebræ. **I. Muscles**, short lumbar muscles connecting the accessory processes of the vertebræ.

Interarticular (*in-ter-ar-tik'-u-lar*) [*inter*, between; *articulus*, a joint]. Situated between joints. **I. Fibro-cartilage**, the flattened cartilaginous plates, irregular in shape, between the articular cartilages of certain joints.

Interarytenoid (*in-ter-ar-i'-ten-oid*) [*inter*, between; ἀρύταινα, a pitcher; εἶδος, likeness]. Between the two arytenoid cartilages. **I. Muscle.** See *Muscles, Table of*.

Interauricular (*in-ter-aw-rik'-u-lar*) [*inter*, between; *auricula*, auricle]. Situated between the auricles or auriculæ.

Interbrain (*in'-ter-brān*). See *Diencephalon* and *Thalamencephalon*.

Intercadence (*in-ter-ka'-dens*) [*inter*, between; *cadere*, to fall]. The irregular beating of the pulse, which seems occasionally to have an additional beat between normal pulsations.

Intercadent (*in-ter-ka'-dent*) [*inter*, between; *cadere*, to fall]. Exhibiting the quality of intercadence.

Intercalary (*in-ter'-kal-a-re*) [*inter*, between; *calare*, to insert]. Placed or inserted between. **I. Growth**, a growth of new material interstitially deposited.

Intercalatum (*in-ter-kal'-at-um*) [*inter*, between; *calare*, to insert]. *Substantia nigra; locus niger;* a dark mass of crescentic outline situated between the ventral crusta and the dorsal tegmentum of the crus cerebri.

Intercapillary (*in-ter-kap'-il-a-re*) [*inter*, between; *capillus*, a hair]. Between capillaries.

Intercarotic, Intercarotid (*in-ter-kar-ot'-ik, in-ter-kar-ot'-id*) [*inter*, between; καρόειν, to produce sleep]. Situated between the external and internal carotids. **I. Ganglion.** See *Ganglia, Table of*.

Intercavernous (*in-ter-kav-er'-nus*) [*inter*, between; *caverna*, a cave]. Situated between two antra, or between the two cavernous sinuses.

Intercellular (*in-ter-sel'-u-lar*) [*inter*, between; *cellula*, a small cell]. Among or between cells.

Intercentral (*in-ter-sen'-tral*) [*inter*, between; *centrum*, a center]. Between centers.

Intercerebral (*in-ter-ser'-e-bral*) [*inter*, between; *cerebrum*, cerebrum]. Between the right and left cerebral hemispheres.

Interchondral (*in-ter-kon'-dral*) [*inter*, between; χόνδρος, cartilage]. Between cartilages; by means of the interposition of cartilages.

Intercilium (*in-ter-sil'-e-um*). See *Glabella*.

Interclavicle (*in-ter-klav'-ik-l*) [*inter*, between; *clavus*, a key]. A membrane-bone which in all vertebrates below the rank of mammals, and also in the monotremes, is developed either ventrad of the sternum, or between the clavicles. In the typical mammalia no true interclavicle exists; but some theorists have given the name to certain extra-sternal structural elements in the true or placental mammals.

Interclavicular (*in-ter-klav-ik'-u-lar*) [*inter*, between; *clavicula*, the collar-bone]. Between the clavicles.

Interclinoid (*in-ter-kli'-noid*) [*inter*, between; κλινή, bed; εἶδος, resemblance]. Between the clinoid processes of the sphenoid bone.

Intercolumnar (*in-ter-kol-um'-nar*). See *Fascia*.

Intercondylar, or Intercondyloid (*in-ter-kon'-dil-ar, in-ter-kon'-dil-oid*) [*inter*, between; κόνδυλος, a knob; εἶδος, likeness.] Between condyles. **I. Eminence**, the spine or knob separating the two condylar portions of the tibia. **I. Fossa**, the notch between the condyles of the femur. **I. Line**, a transverse line crossing above the intercondyloid fossa, and joining the condyles. **I. Notch.** Same as *I. Fossa*.

Intercostal (*in-ter-kos'-tal*) [*inter*, between; *costa*, a rib]. Pertaining to the space between ribs. **I. Arteries**, the aortic arteries of the intercostal spaces. See *Arteries, Table of*. **I. Muscles.** See *Muscles, Table of*. **I. Nerves**, the anterior divisions of the dorso-spinal nerves. See *Nerves, Table of*.

Intercosto-humeral (*in-ter-kos'-to-hu'-mer-al*) [*inter*, between; *costa*, rib; *humerus*, the bone of the upper arm]. Pertaining to the arm and the space between the ribs.

Intercourse (*in'-ter-kors*) [*intercursus*, commerce]. Communication. **I., Carnal**, sexual connection; coition. **I., Sexual.** Same as *I., Carnal*.

Intercoxal (*in-ter-koks'-al*) [*inter*, between; *coxa*, hip]. Situated between the coxæ or hips.

Intercurrent (*in-ter-kur'-ent*) [*inter*, between; *currere*, to run]. Occurring or taking place between. **I. Disease**, a term loosely applied to diseases occurring sporadically during a period of prevailing endemic or epidemic diseases. Also applied to a disease arising or progressing during the existence of another disease in the same person.

Interdental (*in-ter-den'-tal*) [*inter*, between; *dens*, a tooth]. 1. Between the teeth. 2. An interdentium. **I. Splint**, a splint used in fracture of the jaw, consisting of a metallic frame at the neck of the teeth, held by wire sutures passing between the teeth.

Interdentium (*in-ter-den'-she-um*) [*inter*, between; *dens*, a tooth]. The space between any two of the teeth.

Interdiction (*in-ter-dik'-shun*) [*interdictio*, a prohibiting]. A judicial or legal process that deprives an insane person or one suspected of insanity of the management of his own affairs or of the affairs of others.

Interdigital (*in-ter-dij'-it-al*) [*inter*, between; *digitus*, a finger]. Between fingers. **I. Membrane**, the skin between the toes of palmate-footed animals. **I. Space**, that between adjacent fingers.

Interdigitation (*in-ter-dij-it-a'-shun*) [*inter*, between; *digitus*, a finger]. The locking or dovetailing of similar parts, as the fingers of one hand with those of the other; or of the ends of the *obliquus externus* muscle with those of the *serratus magnus*.

Interfascicular (*in-ter-fas-ik'-u lar*) [*inter*, between; *fasciculus*, a bundle]. Situated between fasciculi.

Interfemoral (*in-ter-fem'-or-al*) [*inter*, between; *femur*, the thigh]. Between the femurs or thighs.

Interfere (*in-ter-fēr'*) [*inter*, between; *ferire*, to strike]. In horses, to strike one hoof or the shoe of one hoof against the opposite leg or fetlock.

Interference (*in-ter-fēr'-ens*) [*inter*, between; *ferire*, to strike]. Interposition. **I. of Light**, the mutual neutralization of waves of light, as shown in Newton's rings, when the crest of one wave falls upon the trough of another. **I. of Sound**, the neutralization of two sound-waves, one by the other.

Interfibrillar (*in-ter-fi'-bril-ar*) [*inter*, between; *fibra*, a fiber]. In biology, situated between the fibrillæ of tissues.

Interfilar (*in-ter-fi'-lar*) [*inter*, between; *filum*, a thread]. In biology, existing between the filaments of a reticulum.

Interganglionic (*in-ter-gang-gle-on′-ik*) [*inter*, between; γαγγλίον, a tumor, ganglion]. Connecting one ganglion with another; lying between ganglia.

Interglandular (*in-ter-gland′-u-lar*) [*inter*, between; *glandula*, a gland]. Situated between glands.

Interglobular (*in-ter-glob′-u-lar*) [*inter*, between; *globulus*, a ball]. Situated between globules. **I. Spaces**, irregular cavities seen in a section of dentine, after the earthy matter has been removed by putting a tooth in dilute acid. They are so called because surrounded by minute globules of dentine.

Intergyral (*in-ter-ji′-ral*) [*inter*, between; *gyrus*, a gyre]. Situated between two or more gyri.

Interhemicerebral (*in-ter-hem-e-ser′-e-bral*) [*inter*, between; ἡμι, half; *cerebrum*, cerebrum]. Situated between the cerebral hemispheres.

Interhemispheric (*in-ter-hem-is-fer′-ik*) [*inter*, between; ἡμι, half; σφαῖρα, sphere]. Situated between hemispheres.

Interinhibitive (*in-ter-in-hib′-it-iv*) [*inter*, between; *inhibere*, to inhibit]. Mutually inhibitory.

Interjectional (*in-ter-jek′-shun-al*) [*inter*, between; *jicere*, to throw]. Interjected; thrown between. **I. Speech**, the expression of emotions by inarticulate sounds.

Interlaminar (*in-ter-lam′-in-ar*) [*inter*, between; *lamina*, a leaf]. In biology, situated between laminæ.

Interlobar (*in-ter-lo′-bar*) [*inter*, between; *lobus*, a lobe]. Situated between lobes.

Interlobular (*in-ter-lob′-u-lar*) [*inter*, between; *lobulus*, a lobule]. Between lobules. **I. Emphysema.** See *Emphysema*.

Intermalar (*in-ter-ma′-lar*) [*inter*, between; *mala*, the cheek-bone]. Situated between the malar bones.

Intermarriage (*in-ter-mar′-āj*) [*inter*, between; *maritus*, a husband]. Marriage between persons related by consanguinity, or between persons of different races.

Intermastoid (*in-ter-mas′-toid*) [*inter*, between; μαστός, breast; εἶδος, likeness]. Situated between or connecting the two mastoid processes.

Intermaxilla (*in-ter-maks-il′-ah*) [*inter*, between; *maxilla*, jaw]. The premaxilla; the intermaxillary bone.

Intermaxillary (*in-ter-maks′-il-a-re*) [*inter*, between; *maxilla*, jaw-bone]. Between the maxillary bones. **I. Bone**, the small bone that receives the incisors, situated between the superior maxillary bones of the fetus. It also occurs in most mammals.

Intermediate (*in-ter-me′-de-at*) [*inter*, between; *medius*, the middle]. Situated between. **I. Dysmenorrhea.** See *Dysmenorrhea*. **I. Carbon-atoms**, those connected with two other carbon-atoms, having two valence-units that may be saturated by two hydrogen-atoms (or other elements).

Intermeningeal (*in-ter-men-in′-je-al*) [*inter*, between; μῆνιγξ, membrane]. Between the dura and the arachnoid; or, between the latter and the pia. **I. Hemorrhage**, a hemorrhage between the meninges of the brain or spinal cord.

Intermenstrual (*in-ter-men′-stru-al*) [*inter*, between; *menstrualis*, menstrual]. Between the menstrual periods.

Interment (*in-ter′-ment*) [*in*, in; *terra*, the earth]. The burial of the body.

Intermetacarpal (*in-ter-met-ak-ar′-pal*) [*inter*, between; μετά, beyond; καρπός, the wrist]. Between the metacarpal bones.

Intermetatarsal (*in-ter-met-at-ar′-sal*) [*inter*, between; μετά, beyond; ταρσός, tarsus]. Between the metatarsal bones.

Intermission (*in-ter-mish′-un*) [*intermissio*, a breaking off]. The interval between the paroxysms of a fever. Also, an interval in which the pulse fails to beat in rhythmic time.

Intermittent (*in-ter-mit′-ent*) [*inter*, between; *mittere*, to send or occur]. Occurring at intervals. **I. Fever.** See *Fever*. **I. Insanity.** See *Insanity, Cyclic*. **I. Ligature.** See *Ligature*. **I. Pulse**, one the rhythm of which is interrupted by pauses at irregular intervals. **I. Hemisystole**, a very rare condition sometimes encountered in cases of mitral insufficiency, in which with every two beats of the heart only one beat of the pulse is felt.

Intermuscular (*in-ter-mus′-ku-lar*) [*inter*, between; *musculus*, a muscle]. Situated between muscles.

Intern (*in-tern′*) [Fr., *interne*]. An in-door or resident physician in a hospital; a member of an in-door staff of physicians.

Internal (*in-ter′-nal*) [*internus*, inward]. Situated within or on the inside. **I. Capsule**, the band of white nerve-matter between the thalamus and the interventricular portion of the striatum. **I. Capsule, Knee of**, the angle formed by the junction of the two divisions of the internal capsule. **I. Cell-formation**, free cell-formation; endogenous cell-formation. That mode of cell-division in which new cells are formed within the walls of an old cell, as distinguished from fission and gemmation.

Internarial (*in-ter-na′-re-al*) [*inter*, between; *nares*, nostrils]. Situated between the nostrils.

Interneural (*in-ter-nu′-ral*) [*inter*, between; νεῦρον, nerve]. Situated between neural spines.

Internode (*in′-ter-nōd*) [*inter*, between; *nodus*, a knot]. The space between adjacent joints or knots, as the phalanx of a finger or a toe. That part of a nerve-fibril between Ranvier's nodes is called the *internodal segment*.

Internodium (*in-ter-no′-de-um*). Same as *Internode*.

Internuclear (*in-ter-nu′-kle-ar*) [*inter*, between; *nucleus*, a kernel]. Situated between nuclei.

Internuncial (*in-ter-nun′-shal*) [*inter*, between; *nuncius*, a messenger]. Serving as a connecting or announcing medium, *e.g.*, the nerves in their relation to the muscles and the will.

Internus (*in-ter′-nus*). See *Internal*.

Interoptic (*in-ter-op′-tik*) [*inter*, between; *opticus*, optic]. Between the optic lobes, tracts or nerves of the brain.

Interorbital (*in-ter-or′-bit-al*) [*inter*, between; *orbita*, the orbit]. Situated between the orbits. **I. Bone**, the median bone of fishes. **I. Plate** and **I. Septum**, a structure of the fore-brain, with its extension, found in certain fishes and reptiles.

Interosseous (*in-ter-os′-e-us*) [*inter*, between; *ossa*, a bone]. Between two bones. **I. Arteries**, a name given to various branches of the dorsal, palmar, plantar, and metatarsal arteries of the hand, foot, and forearm. See *Arteries, Table of*. **I. Muscles**, a name given to certain muscles of the hand, foot, and forearm. See *Muscles, Table of*. **I. Nerves**, the nerves supplying the interosseous muscles. See *Nerves, Table of*.

Interpalpebral (*in-ter-pal′-pe-bral*) [*inter*, between; *palpebra*, the eyelid]. Between the palpebræ. **I. Spot.** See *Pinguecula*. **I. Zone**, that part of the cornea and of the scleral conjunctiva that ordinarily is not covered by the lids.

Interpapillary (*in-ter-pap′-il-a-re*) [*inter*, between; *papilla*, a papilla]. Between papillæ.

Interparietal (*in-ter-par-i′-et-al*) [*inter*, between; *paries*, walls]. Between walls. **I. Bone**, a term sometimes applied to the upper, squamous, and non-cartilaginous part of the occipital bone. **I. Fissure.** See *Fissure*. **I. Suture**, the sagittal suture, or that formed by the approximation of the parietal bones.

Interpeduncular (*in-ter-pe-dung'-ku-lar*) [*inter*, between; *pedunculus*, a little foot]. Situated between the cerebral or cerebellar peduncles. **I. Space**, the *pons Tarini*, or posterior perforated space that forms the posterior portion of the floor of the third ventricle.

Interphalangeal (*in-ter-fa-lan'-je-al*) [*inter*, between; φάλαγξ, a finger]. Between the fingers or the toes. **I. Articulations**, the ginglymoid articulations of the fingers and of the toes.

Interplacental (*in-ter-plas-en'-tal*) [*inter*, between; *placenta*, a cake]. Between the placental lacunæ.

Interpolation (*in-ter-po-la'-shun*) [*interpolare*, to furbish up]. The surgical transfer of tissue to a new part, or from one subject to another.

Interpubic (*in-ter-pu'-bik*) [*inter*, between; *pubis*, pubis]. Situated between the pubic bones. **I. Disc**, the fibro-cartilaginous mass forming the symphysis of the pubis.

Interradial (*in-ter-ra'-de-al*) [*inter*, between; *radius*, a ray]. Situated between two rays.

Interramicorn (*in-ter-ram'-ik-orn*) [*inter*, between; *ramus*, a branch; *cornu*, a horn]. In biology, a portion of the horny sheath of the bill in certain birds.

Interrenal (*in-ter-re'-nal*) [*inter*, between; *ren*, the kidney]. Situated between the kidneys.

Interrupted (*in-ter-up'-ted*) [*interrumpere*, to break apart]. Broken; irregular. **I. Breathing.** See *Breath-sounds*.

Interrupter (*in-ter-up'-ter*) [*interrumpere*, to break apart]. One who, or that which, interrupts; specifically, a device for breaking an electric current.

Interscapular (*in-ter-skap'-u-lar*) [*inter*, between; *scapula*, the shoulder-blade]. Between the shoulder-blades. **I. Region**, the part of the chest between the two shoulder-blades. **I. Reflex.** See *Reflexes, Table of*.

Interscapulum (*in-ter-skap'-u-lum*) [*inter*, between; *scapulæ*, shoulder-blades: *pl.*, *Interscapula*]. In biology, the region of the back between the shoulder-blades.

Interspace (*in'-ter-spās*) [*inter*, between; *spatium*, a space]. An interval between the ribs, or between the fibers or lobules of a tissue or organ.

Interspinal (*in-ter-spi'-nal*) [*inter*, between; *spina*, a spine]. Between spines; specifically, between the spines of the vertebræ. **I. Muscles.** See *Muscles, Table of*.

Interspinous (*in-ter-spi'-nus*) [*inter*, between; *spina*, a spine]. Situated between spinous processes, as of the vertebræ.

Interstice (*in-ter'-stis*) [*interstitium*, a space between]. A space or interval. Also, a pore.

Interstitial (*in-ter-stish'-al*) [*interstitium*, space between: *pl.*, *Interstitia*]. Pertaining to any space or interval between parts or organs, and especially applied to that which is placed between parenchymatous structures. **I. Absorption**, the absorption of the partitions of a multiloculated cyst or abscess. Also, any similar absorption. **I. Atrophy**, a condition observed in certain diseases of the bones (*arthritis deformans*), in which the mineral matter has been absorbed to such an extent that only reticulated laminæ remain. **I. Hypertrophy**, a condition in certain diseases of the bones in which there is an excessive deposit of mineral matter in the Haversian canals and lacunæ. It is often accompanied by diminution in the size of the bone. **I. Keratitis.** See *Keratitis*. **I. Pregnancy.** See *Pregnancy*.

Intertransversales (*in-ter-trans-ver-sa'-lēz*) [*inter*, between; *transversus*, turned across]. A name given to the short bundles of muscular fibers extending between the transverse processes of contiguous vertebræ. See *Muscles, Table of*.

Intertriginous (*in-ter-trij'-in-us*) [*inter*, between; *terere*, to rub]. Of the nature of or affected with intertrigo.

Intertrigo (*in-ter-tri'-go*) [*inter*, between; *terere*, to rub]. An erythematous eruption or lesion of the skin produced by friction of adjacent parts. See *Erythema*.

Intertrochanteric (*in-ter-tro-kan-ter'-ik*) [*inter*, between; τροχαντήρ, trochanter]. Between the trochanters. **I. Line.** See *Lines, Table of*.

Intertubular (*in-ter-tu'-bu-lar*) [*inter*, between; *tubulus*, a tube]. Between tubes. **I. Substance**, the translucent, granular substance of the dentine of the tooth, containing most of its earthy elements.

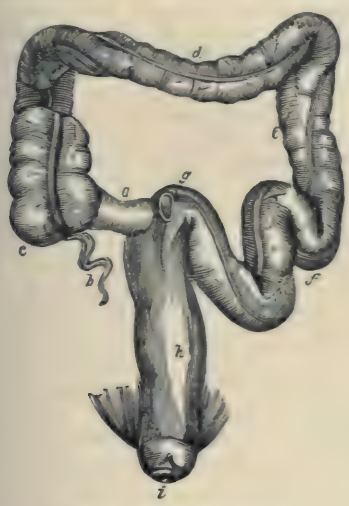
Interureteric (*in-ter-u-ret-er'-ik*) [*inter*, between; οὐρητήρ, ureter]. Situated between the ureters or their outlets.

Intervaginal (*in-ter-vaj'-in-al*) [*inter*, between; *vagina*, sheath]. Between sheaths. **I. Space**, that found within the sheaths of the optic nerve.

Interval (*in'-ter-val*) [*inter*, between; *vallum*, a rampart]. A space or lapse either of time or distance, as the interval between the paroxysms of a fever, or between two organs or parts of the body. **I., Focal**, the distance between the anterior and posterior focal points. **I., Sacro-cotyloid**, a space existing between the promontory of the sacrum and the posterior part of the cotyloid cavity or acetabulum.

Intervenium (*in-ter-ve'-ne-um*) [*inter*, between; *vena*, vein: *pl.*, *Intervenia*]. In biology, the space between the veins of leaves.

Interventricular (*in-ter-ven-trik'-u-lar*) [*inter*, between; *ventriculum*, a ventricle]. Between ventricles, *e. g.*, of the heart. **I. Septum**, the fibrous septum or partition between the ventricles of the heart.



Intervenular (*in-ter-ven'-u-lar*) [*inter*, between; *venula*, a little vein]. In biology, situated between the veins of an insect's wing.

Intervertebral (*in-ter-ver'-te-bral*) [*inter*, between; *vertebra*, a bone of the spine]. Between the vertebræ. **I. Discs**, the lenticular discs of fibro-cartilage between the adjacent surfaces of the bodies of the vertebræ. **I. Foramen.** See *Foramen*. **I. Notch**, the notch at the base of the pedicle of the laminæ on the sides of the body of each vertebra. **I. Substance.** Same as *I. Discs*.

Intervillous (*in-ter-vil'-us*) [*inter*, between; *villus*, a tuft of hair]. Situated between villi.

Intestinal (*in-tes'-tin-al*) [*intestinum*, the intestine]. Pertaining to the intestine. **I. Absorption**, the absorption of the peptonized products of digestion by the capillaries, veins, and lacteals of the mucous membrane of the intestines. **I. Anastomosis.** See *Anastomosis*. **I. Arteries**, the arteries of the intestines, of which the principal trunks are the celiac axis and the mesenteric branches. The lower part of the rectum is supplied by the hemorrhoidal branches of the iliac and pudic arteries. See *Arteries, Table of*. **I. Canal**, the entire intestinal passage from the beginning of the duodenum to the anus. **I. Cast.** Same as *I. Mole*. **I. Concretion.** See *Enterolith*. **I. Fever.** Synonym of *Typhoid fever*. **I. Fistula**, a fistula or unnatural aperture in any part of an intestine. **I. Glands**, the glands found in the *I. Canal*. See *Gland*. **I. Juice**, the liquid secretion of the intestinal glands. **I. Mole**, the membranous discharge from the bowel in *Pseudomembranous Enteritis*. **I. Obstruction**, arrest of or interference with the progress of the feces. **I. Tract**, or **Tube.** Same as *I. Canal*.

Intestine (*in-tes'-tin*) [*intestinus*, intestine]. The part of the digestive tube extending from the beginning of the duodenum to the anus. **I., Large,** comprises

THE LARGE INTESTINE.

a. Entrance of the small intestine. *b*. Appendix vermiformis. *c*. Caput cæcum coli. *d*. Transverse colon. *e*. Descending colon. *f*. Sigmoid flexure. *h*. Rectum. *i*. Anus.

the cecum, colon, and rectum. **I., Small,** consists of the duodenum, jejunum, and ileum.

Intestinorum inflammatio (*in-tes-tin-o'-rum in-flam-a'-she-o*) [L., "Inflammation of the intestines"]. See *Enteritis*.

Intestinulum (*in-tes-tin'-u-lum*) [L., a small intestine: *pl.*, *Intestinula*]. 1. The small intestine. 2. A cerebral convolution or gyrus. 3. The umbilical cord or navel-string.

Intextine (*in-teks'-tin*) [*intus*, within; *externus*, without]. In biology, a supplementary inner layer of the extine of the pollen-grains of certain plants.

Intima (*in'-tim-ah*) [*intimus*, inmost]. A term used instead of *tunica intima;* the innermost coat, or thin, transparent endothelial lining of the heart and blood-vessels, consisting of a layer of irregular, long, fusiform, nucleated, squamous cells.

Intine (*in'-tin*) [*intus*, within]. In biology, the inner coat of the pollen-grain.

Intolerance (*in-tol'-er-ans*) [*intolerans; in*, not; *tolerere*, to bear]. Want of endurance or ability to stand pain. Impatience. Also, the inability to endure the action of a medicine.

Intonation (*in-to-na'-shun*) [*intonere*, to thunder]. 1. The rumbling or gurgling sound produced by the movement of flatus in the bowels. 2. The tone of the voice.

Intortion (*in-tor'-shun*) [*intortus*, p. p. of *intorquere*, to curl, to twist]. In biology, the winding, bending, or twisting of a part or organ.

Intoxicant (*in-toks'-ik-ant*) [*intoxicare*, to intoxicate]. 1. Intoxicating; capable of producing intoxication or poisoning. 2. A drug or agent capable of producing intoxication.

Intoxication (*in-toks-ik-a'-shun*) [*intoxicare*, to poison]. A word popularly used to denote the effect of the excessive use or of an overdose of an alcoholic liquor; in a wider sense, any poisoning; the state resulting from an overpowering dose of any poison. **I., Septic.** See *Septicemia*. **I., Uremic.** See *Uremia*.

Intra- (*in'-trah-*) [*intra*, within]. A Latin prefix signifying within. **I.-abdominal,** within the cavity of the abdomen. **I.-arachnoid,** within the arachnoid space. **I.-articular,** within a joint. **I.-capsular,** within the capsular ligament of a joint.

Intrabiontic (*in-trah-bi-on'-tik*) [*intra*, within; βίος, life; ὤν (ὀντ), being]. In biology, applied to phenomena occurring within, and determined by, an individual organism. **I. Selection,** Weismann's term for the principle formulated by Roux, of the struggle of the parts concerned in ontogeny.

Intracardiac (*in-trah-kar'-de-ak*) [*intra*, within; καρδία, heart]. Situated or produced within the heart-cavity.

Intracartilaginous (*in-trah-kar-til-aj'-in-us*) [*intra*, within; *cartilago*, cartilage]. Within a cartilage. **I. Ossification.** See *Ossification*.

Intracellular (*in-tra-sel'-u-lar*) [*intra*, within; *cellula*, a little cell]. In biology, existing or happening within the cell. **I. Digestion,** also called *parenchymatous digestion;* digestion as exhibited by unicellular organisms. **I. Pangenesis.** See *Heredity* and *Pangenesis*.

Intracerebral (*in-trah-ser'-e-bral*) [*intra*, within; *cerebrum*, cerebrum]. Within the cerebrum.

Intracervical (*in-trah-ser'-vik-al*) [*intra*, within; *cervix*, cervix]. Within the cervical canal of the uterus.

Intraciliary (*in-trah-sil'-e-a-re*) [*intra*, within; *cilium*, an eye-lash]. Situated within the ciliary region.

Intracranial (*in-trah-kra'-ne-al*) [*intra*, within; κρανίον, the skull]. Within the skull. **I. Hemorrhage,** an escape of blood within the cranial cavity; cerebral hemorrhage.

Intracutaneous (*in-trah-ku-ta'-ne-us*) [*intra*, within; *cutis*, the skin]. Within the skin-substance.

Intracystic (*in-trah-sis'-tik*) [*intra*, within; κύστις, a cyst]. Situated or occurring within a cyst.

Intradermic (*in-trah-der'-mik*) [*intra*, within; δέρμα, skin]. Same as *Intracutaneous*.

Intradural (*in-trah-du'-ral*) [*intra*, within; *durus*, hard]. Situated or occurring within the dura.

Intrafetation (*in-trah-fe-ta'-shun*) [*intra*, within; *fetus*, a fetus]. The formation of a fetus within another fetus.

Intragyral (*in-trah-ji'-ral*) [*intra*, within; *gyrus*, a gyre]. Within a gyre of the brain.

Intrahepatic (*in-trah-he-pat'-ik*) [*intra*, within; ἧπαρ, liver]. Within the liver-substance.

Intralamellar (*in-trah-lam-el'-ar*) [*intra*, within; *lamella*, a thin plate]. In biology, within the lamellæ.

Intraligamentous (*in-trah-lig-am-en'-tus*) [*intra*, within; *ligamentum*, a ligament]. Within or between the folds of a ligament, as a cyst.

Intralingual (*in-trah-ling'-gwal*) [*intra*, within; *lingua*, tongue]. Within the substance of the tongue.

Intralobular (*in-trah-lob'-u-lar*) [*intra*, within; *lobulus*, a little lobe]. Within a lobe or lobule. **I. Vein,** a vein traversing a liver-lobule. **I. Plexus,** a network of vessels in a liver-lobule.

Intramembranous (*in-trah-mem'-bran-us*) [*intra*, within; *membrana*, a membrane]. Within a membrane.

Intrameningeal (*in-trah-men-in'-je-al*) [*intra*, within; μῆνιγξ, membrane]. Situated within the substance of the membranes of the brain or spinal cord. **I. Hemorrhage,** an effusion of blood into the sac of the dura mater.

Intramolecular (*in-trah-mo-lek'-u-lar*) [*intra*, within; *molecula*, a molecule]. Within the molecules of a substance.

Intramural (*in-trah-mu'-ral*) [*intra*, within; *mura*, a wall]. Intraparietal. Within the substance of the walls of an organ.

Intramuscular (*in-trah-mus'-ku-lar*) [*intra*, within; *musculus*, a muscle]. Within the substance of a muscle.

Intranasal (*in-trah-na'-sal*) [*intra*, within; *nasus*, nose]. Within the cavity of the nose.

Intranuclear (*in-trah-nu'-kle-ar*) [*intra*, within; *nucleus*, a kernel]. Within a nucleus.

Intra-ocular (*in-trah-ok'-u-lar*) [*intra*, within; *oculus*, eye]. Within the globe of the eye. **I. Hemorrhage**, an effusion of blood into the globe of the eye. **I. Pressure**, or **Tension.** See *Tension.*

Intra-orbital (*in-trah-or'-bit-al*) [*intra*, within; *orbita*, orbit]. Within the orbit. **I. Aneurysm**, an aneurysm within the orbit of the eye, and usually involving a branch of the ophthalmic artery. **I. Hemorrhage**, a hemorrhage taking place within the orbit, but behind the capsule of Tenon.

Intraosseous (*in-trah-os'-e-us*) [*intra*, within; *os*, a bone]. Within the substance of a bone.

Intraovarian (*in-trah-o-va'-re-an*) [*intra*, within; *ovarium*, ovary]. Within the ovarian stroma.

Intraparietal (*in-trah-par-i'-et-al*) [*intra*, within; *paries*, a wall]. 1. Within the wall or the substance of the wall of an organ. 2. Within the parietal region of the cerebrum, *e. g.*, the *I. Fissure.*

Intrapelvic (*in-trah-pel'-vik*) [*intra*, within; *pelvis*, basin]. Within the pelvic cavity.

Intraperitoneal (*in-tra-per-it-on-e'-al*) [*intra*, within; *περιτόναιον*, the peritoneum]. Within the peritoneum or membranous sac that covers the abdominal viscera.

Intraplacental (*in-trah-plas-en'-tal*) [*intra*, within; *placenta*, cake]. Within the placental tissue.

Intrapleural (*in-trah-plu'-ral*) [*intra*, within; *πλευρά*, a rib]. Within the pleural cavity.

Intrapolar (*in-trah-po'-lar*) [*intra*, within; *polus*, pole]. Between the poles or ends of an axis. See, also, *Extrapolar.*

Intrapulmonary (*in-trah-pul'-mo-na-re*) [*intra*, within; *pulmo*, the lung]. Within the substance of the lung.

Intraretinal (*in-trah-ret'-in-al*) [*intra*, within, *retina*, retina]. Within the substance of the retina.

Intrascleral (*in-trah-skle'-ral*) [*intra*, within; *σκληρός*, hard]. Situated, occurring, or performed within the sclera.

Intrascrotal (*in-trah-skro'-tal*) [*intra*, within; *scrotum*, scrotum]. Within the scrotal sac.

Intraspinal (*in-trah-spi'-nal*) [*intra*, within; *spina*, spine]. Within the spinal canal.

Intratesticular (*in-trah-tes-tik'-u-lar*) [*intra*, within; *testiculus*, a testicle]. Within the testicle.

Intratubal (*in-trah-tu'-bal*) [*intra*, within; *tuba*, a trumpet]. Within a Fallopian tube.

Intratympanic (*in-trah-tim-pan'-ik*) [*intra*, within; *tympanum*, the ear-drum]. Within the tympanic cavity.

Intraurethral (*in-trah-u-rēth'-ral*) [*intra*, within; *οὐρήθρα*, urethra]. Within the urethra.

Intra-uterine (*in-trah-u'-ter-in*) [*intra*, within; *uterus*, womb]. Within the womb. **I. Amputation**, a spontaneous amputation occurring occasionally to some part of the *fœtus in utero* that becomes constricted by the umbilical cord or from other causes. **I. Drowning**, death of the *fœtus in utero* from efforts at respiration, liquor amnii instead of air being drawn into the air-tubes. The cause of the respiratory efforts is an arrest of fetal circulation in the cord or placenta. **I. Fracture**, that which occurs to a *fœtus in utero.* **I. Life**, that period of the existence of an animal between conception and birth.

Intravasation (*in-trav-as-a'-shun*) [*intra*, within; *vas*, vessel]. The entrance of extraneous matter, as pus, into a blood-vessel. Cf. *Extravasation.*

Intravascular (*in-trah-vas'-ku-lar*) [*intra*, within; *vasculum*, a small vessel]. Within the blood-vessel system.

Intravenous (*in-trah-ve'-nus*) [*intra*, within; *vena*, a vein]. Within, or into the veins. **I. Infusion**, or **Injection**, the introduction of a saline solution or other liquid into the veins.

Intravertebral (*in-trah-ver'-te-bral*) [*intra*, within; *vertebra*, a vertebra]. Same as *Intraspinal.*

Intravesical (*in-tra-ves'-ik-al*) [*intra*, within; *vesica*, bladder]. Occurring or situated within the bladder.

Intrinsic (*in-trin'-sik*) [*intrinsecus*, on the inside]. 1. Inherent, inward. Peculiar to a part—*e. g.*, certain muscles. 2. Relating to the body (or organism) independent of the environment—*e. g.*, *Toponymy.*

Introcession (*in-tro-ses'-shun*) [*introcedere*, to go into]. A depression or sinking in, as of a surface.

Introflexion (*in-tro-flek'-shun*) [*intro*, within; *flexio*, a bending]. A bending in; inward flexion.

Introitus (*in-tro'-it-us*) [*intro*, within; *ire*, to go]. Any aperture or opening in the body. **I. pelvis**, the inlet of the pelvis. **I. vaginæ**, the external aperture of the vagina.

Intromission (*in-tro-mish'-un*) [*intro*, within; *mittere*, to send]. The introduction of one body within the walls of another, as of the penis into the vagina.

Introrse (*in-trors'*) [*intro*, within; *versus*, p. p. of *vertere*, to turn]. In biology, applied to stamens that turn toward the axis of the flower.

Introspection (*in-tro-spek'-shun*) [*intro*, within; *spicere*, to look]. The act of looking inward. **I., Morbid**, the morbid habit of self-examination; insane, or quasi-insane, dwelling upon one's own thoughts, feelings, impulses, fears, or conduct.

Introsusception (*in-tro-sus-sep'-shun*) [*intro*, within; *suscipere*, to receive]. The slipping or telescoping of one part of the intestine upon another part; intussusception.

Introvenium (*in-tro-ve'-ne-um*) [*intro*, within; *vena*, vein]. In biology, a condition of leaves in which the veins are infossous, or sunk and embedded in the parenchyma.

Introversion (*in-tro-ver'-shun*) [*intro*, within; *vertere*, to turn]. A turning within, as, introversion of the uterus. **I. of the Iris**, a bending backward of the iris in such a way that it lies upon the ciliary body.

Introvert (*in-tro-vert'*) [*intro*, within; *vertere*, to turn]. In biology, turned in.

Intruse (*in-trūs'*) [*intrusus*, p.p. of *intrudere*, to thrust in]. In biology, projecting inward.

Intubation (*in-tu-ba'-shun*) [*in*, in; *tubus*, a pipe]. The passage of a tube into or past the larynx, to allow the entrance of air into the lungs in croup, diphtheria, etc., or to dilate a stricture, etc.

Intumescence (*in-tu-mes'-ens*) [*intumescentia; intumescere*, to swell]. A swelling, of any character whatever. Also, an increase of the volume of any organ or part of the body.

Intumescentia (*in-tu-mes-en'-she-ah*) [L.]. A swelling. **I. gangliformis**, the reddish gangliform swelling of the seventh nerve in the aqueductus Fallopii in the petrous portion of the temporal bone.

Intussusception (*in-tus-sus-ep'-shun*) [*intus*, within; *suscipiere*, to receive]. Invagination or involution of one part of the intestine within another part. It is of frequent occurrence in the young. It is caused by undue peristalsis. The *site* of the intussusception varies; thus, it may be—1. *Ileo-cecal*, the ileum with the ileo-cecal valve descending into the cecum and colon; this is the most common variety; 2. *Colic*, the invagination being limited to the large intestine; 3. *Ileal*, when the ileum alone is involved; 4. *Ileo-*

colic, when the ileum prolapses through the lips of the ileo-cecal valve.

Inula (*in'-u-lah*) [L.]. Elecampane. The root of *I. helenium*. It contains a crystalline substance, helenin, C_6H_8O, the dose of which is gr. $\frac{1}{6}-\frac{1}{3}$, and from 20 to 40 per cent. of a starch, known as *inulin*. It is a gentle stimulant, and is employed in bronchitis and to hasten the appearance of the skin-symptoms in exanthematous fevers. Dose gr. xx – ʒj of the root, or ʒj – ij of a decoction, ʒss to the Oj. The genus *Inula* contains various coarse composite-flowered herbs of the old world, several of which have properties similar to those of the official species.

Inulin (*in'-u-lin*) [*inula*, elecampane], $C_6H_{10}O_5$. 1. A vegetable principle found in the roots of dahlia, in chicory, and other plants. It is a white powder, with which iodin gives a yellow color, and is soluble in hot water. See *Carbohydrates, Table of*. 2. The precipitate from a tincture of the root of *Inula helenium*; an aromatic stimulant, tonic, and expectorant. Dose 1 to 3 grains. Unof.

Inulol (*in'-u-lol*). See *Alantol*.

Inunction (*in-unk'-shun*) [*inunctio; inunguere*, to anoint]. The act of rubbing an oily or fatty substance into the skin. Also, the substance used for anointment. **I. Treatment**, a form of treatment of syphilis. It consists in rubbing into the skin metallic mercury or some mercurial preparation, mixed or suspended in a fatty vehicle. It is active, sure, and rapid, but dirty and unpleasant. It is best used in the form of the blue ointment of a strength of fifty per cent. The application should be made upon different portions of the body in successive treatments.

Inustion (*in-us'-chun*) [*inustio*, a burning in]. A burning in; deep or thorough cauterization.

Invagination (*in-vaj-in-a'-shun*) [*invaginatio; invaginare*, to ensheathe]. The sheathing or telescoping of a part or organ by a canal-like structure, as the intestine. An operation for obliterating a hernial canal by the inflammation resulting from pushing the skin inward and suturing the parts together.

Invalid (*in'-val-id*) [*invalidus; in*, not; *valere*, to be well]. One who is not well, especially one who is chronically ill or whose convalescence is slow.

Invaliding (*in'-val-id-ing*) [*in*, not; *valere*, to be well]. The placing of a soldier or officer on the list of invalids, and thus excusing him from active duty.

Invalidism (*in'-val-id-izm*) [*in*, not; *valere*, to be well]. Chronic ill-health; the state or condition of being an invalid.

Invenose (*in-ve'-nōs*) [*in*, not; *vena*, a vein]. In biology, destitute of veins.

Invasion (*in-va'-zhun*) [*invasio; in*, upon; *vadere*, to go]. The beginning or attack of a disease. Also, the manner in which the disease begins its attack. **I.-disease**, one due to the presence in the body of some animal parasite, as the tapeworm or the protozoan of malaria.

Invermination (*in-ver-min-a'-shun*) [*in*, in; *vermis*, worm]. A condition of having intestinal worms; ill-health due to parasitic worms; helminthiasis.

Inverse Temperature. A complete reversal of the usual course of the temperature, so that the morning temperature exhibits the maximum, and the evening temperature the minimum. It is not infrequently seen in acute tuberculous affections, and rarely in typhoid fever.

Inversio palpebrarum (*in-ver'-she-o pal-pe-bra'-rum*). Synonym of *Entropion*.

Inversion (*in-ver'-shun*) [*inversio; in*, not; *vertere*, to turn]. A turning or placing in a position the opposite of the normal position. In chemistry, a decomposition of certain sugars and other carbohydrates, induced by the action of a ferment or dilute acid, by which the elements of water are added to a carbohydrate, each molecule of which breaks up into two molecules of a different carbohydrate. **I. of Bladder**, a condition in which the bladder is in part or completely pushed into the dilated urethra. It occurs in females only. **I. of Eyelashes.** See *Entropion*. **I. of Uterus**, a condition in which the uterus is partially or completely turned inside out.

Invert (*in-vert'*) [*in*, in; *vertere*, to turn]. To turn in an opposite direction. **I.-sugar**, an amorphous saccharine substance, the chief constituent of honey, and produced by the action of ferments or dilute acids on cane-sugar. It is regarded as a mixture of equal parts of dextrose and levulose. A solution of cane-sugar turns the polarized ray of light to the right, while invert-sugar turns it to the left. From this inversion of the action on polarized light the process is called inversion, and the product invert-sugar.

Invertase (*in-ver'-tās*). Same as *Invertin*, *q. v.*

Invertebrata (*in-ver-te-bra'-tah*) [*in*, not; *vertebra*, backbone]. Animals that have no spinal column.

Invertin (*in-ver'-tin*) [*in*, not; *vertere*, to turn]. A ferment found in the intestinal juice, and produced by several species of yeast-plant; it converts cane-sugar in solution into invert-sugar. See *Ferments*.

Investing (*in-ves'-ting*) [*investire*, to invest]. Ensheathing, surrounding. In dentistry, embedding a denture in what is known as investing-material, for the purpose of soldering the linings or backings of the teeth to the plate.

Inveterate (*in-vet'-er-āt*) [*inveteratus; vetus*, old]. Long established, and obstinately resisting treatment, as an inveterate skin-disease.

Invirility (*in-vir-il'-it-e*) [*in*, not; *virilis*, of a man]. Lack of manly qualities, especially lack of virile power; male impotency.

Inviscation (*in vis-ka'-shun*) [*in*, in; *viscum*, birdlime]. The mixing of food with the saliva during mastication.

Invital (*in-vi'-tal*) [*in*, not; *vita*, life]. In biology, non-living or dead matter.

In vitro (*in vit'-ro*) [L.]. In the glass; applied to phenomena that are observed in experiments carried out in the laboratory with microörganisms, digestive ferments, and other agents, but that may not necessarily occur within the living body.

Involucel (*in-vol'-u-sel*) [dim. of *involucrum*, involucre]. In biology, a secondary involucre.

Involucre (*in'-vo-lu-ker*) [*involvere*, to roll up, to wrap up]. In biology, the bracts at the base of a flower-cluster.

Involucrum (*in-vo-lu'-krum*) [*involvere*, to enwrap: *pl.*, *Involucra*]. The covering of a part. The sheath of bone enveloping a sequestrum in dry necrosis.

Involuntary (*in-vol'-un-ta-re*) [*involuntarius: in*, not; *volo*, *velle*, to will]. Performed independently of the will; not by an act of the will. A term applied to certain motions and functions of the various organs of the body that are not controlled by, or are not dependent on, the will. **I. Contraction**, muscular contractions not resulting from an act of the will. **I. Muscles**, those that are not governed by the will.

Involute (*in'-vo-lūt*) [*involvere*, to roll up, to wrap up]. In biology, rolled up, as the edges of certain leaves in the bud.

Involution (*in-vo-lu'-shun*) [*involutio; involvere*, to roll upon]. The retrogressive change to their normal condition that certain organs undergo after fulfilling their functional purposes. **I. of the Uterus**, the return of the uterus, which after gestation weighs about two pounds, to its normal weight and condition. **I.-forms**, a term applied to microörganisms that deviate

from a type, or undergo degenerative changes, probably as a result of nutritive variation. They are free in filaments, flat layers, or cube-like packets.

Inward (*in'-ward*) [ME., *inward*, inward]. Toward the center. **I. Convulsions.** Synonym of *Laryngismus stridulus*.

Iodal (*i'-o-dal*) [*ἰώδης*, like a violet], C_2I_3HO. A compound formed on the type of chloral, but containing iodin instead of chlorin. It is reported to resemble chloral in its sedative qualities, but is seldom used as a remedy. Unof.

Iodantipyrin (*i-o-dan-tip-i'-rin*). See *Iodopyrin*.

Iodate (*i'-o-dāt*) [*ἰώδης*, like a violet]. Any salt of iodic acid.

Iodated (*i'-o-da-ted*) [*ἰώδης*, like a violet]. Charged with iodin.

Iodatum (*i-o-da'-tum*) [*ἰώδης*, like a violet]. Charged with iodin. *Amylum iodatum*, iodized starch.

Iodia (*i-o'-de-ah*) [*ἰώδης*, like a violet]. A proprietary remedy said to contain stillingia, menispermum, etc., with five grains of potassium iodid and two grains of iron phosphate in each fluidram. Dose as an alterative, ʒ j–ij.

Iodic Acid (*i-od'-ik*). See *Acid*.

Iodid (*i'-o-did*) [*ἰώδης*, like a violet]. A compound of iodin with a metal or other substance.

Iodidum (*i-o-di'-dum*) [*ἰώδης*, like a violet: *gen. Iodidi*]. An iodid.

Iodin, or Iodum (*i'-o-din*, or *i-o'-dum*) [*ἰώδης*, like a violet]. I = 126.53; quantivalence 1; specific gravity 4.948 at 17° C. (62.6° F.) A non-metallic element with metallic luster, volatilizing at a low temperature, and giving off a crimson-purple vapor. It occurs in cod-liver oil, in most marine plants, and in shell-fish. It is soluble in alcohol, in solution of potassium iodid, and in solution of sodium chlorid. In its elementary state it is an irritant to the skin, and is much used as a tincture to produce counter-irritation. See *Elements, Table of*. Potassium iodid, the principal form for internal use, is an alterative, ranking as a specific in tertiary syphilis, and with mercury, available in all forms of that disease. It is also an excellent remedy in hepatic cirrhosis and chronic bronchitis. Combined with ammonium it is valuable in catarrhal affections. **Acidi hydriodici, Syr.**, contains one per cent. of the absolute acid. Dose ʒ j–iv. **Ammonii iodidum.** See *Ammonium*. **Iodized Phenol**, unof., a mixture of iodin and carbolic acid, usually 1 to 4. For local use. **I., Liniment** (B. P.), one part of iodin in nine. **I., Liquor** (B. P.), one of iodin in 20. **Iodi, Liq., Comp.**, Lugol's solution—iodin 5, potassium iodid 10, water 85 parts. Dose ♏ j–x, diluted. **I., Tinct.**, 8 per cent. in alcohol. Dose ♏ j–v. For local use. **I., Trichlorid**, unof., recommended by Langenbach as an antiseptic in surgery. **I., Ung.**, iodin 4, potassium iodid 1, water 2, benzoated lard 93 parts. **I., Vapor** (B. P.), for inhalation, ʒ j of iodin to ℥ j of water. **Amylum iodatum**, iodized starch, iodin 5, starch 95 parts, distilled water 100 parts, triturated and dried. Dose ʒ j–℥ j. **Potassii iodidum**, KI. Dose gr. v–ʒ j. **Potass. iodid., Ung.**, contains potass. iodid. 12, sod. hyposulph. 1, boiling water 6, benzoated lard 81 parts. **Sodii iodidum**, NaI, deliquescent. Dose gr. v–ʒ ij. **I.-green.** See *Pigments, Conspectus of*. **I.-scarlet.** See *Pigments, Conspectus of*. **I.-violet.** See *Pigments, Conspectus of*.

Iodism (*i'-o-dizm*) [*ἰώδης*, like a violet]. A condition arising from the prolonged use of iodin or iodin-compounds, marked by redness of the conjunctiva and of the mucous membrane of the respiratory passages, furry throat, and lacrymation, with symptoms resembling those of acute coryza.

Iodized (*i'-o-dīzd*) [*ἰώδης*, like a violet]. Impregnated with iodin, as cotton, glycerin, etc.

Iodoform (*i-o'-do-form*) [*ἰώδης*, like a violet; *forma*, form]. Tri-iodo-methane, CHI_3. Iodid of Formyl. A compound containing about 91 per cent. of iodin. It is an antiseptic and feeble anesthetic, and is highly useful for local application to wounds, abrasions, and indolent sores. Internally it is a tonic. It seems to exert a special influence upon tuberculous processes. Its odor may be disguised by means of thymol or oil of rose. Dose, internally, gr. j–v. **I., Suppos.** (B.P.), each containing gr. iij of iodoform. **I., Unguent.**, for fetid sores.

Iodoformism (*i-o'-do-form-izm*) [*ἰώδης*, like a violet; *forma*, form]. Poisoning with iodoform.

Iodoformize (*i-o'-do-form-īz*) [*ἰώδης*, like a violet; *forma*, form]. To impregnate with iodoform.

Iodol (*i'-o-dol*) [*ἰώδης*, like a violet], C_4I_4NH. An iodo-carbamid existing in the form of an amorphous brown powder, soluble in ether and oil. It is more actively antiseptic than iodoform and is free from odor. Locally it is an anesthetic, and favors granulation. It is of reputed service as an application to syphilitic sores, etc. Dose gr. ss–v. Unof.

Iodo-naphthol-beta (*i-o-do-naf'-thol-ba'-tah*) [*ἰώδης*, like a violet; *νάφθα*, naphtha; *βετα*, the second Greek letter]. The diiodid of naphthol-beta, suggested as a substitute for iodoform as an antiseptic dressing. Unof.

Iodophenin (*i-o-do-fe'-nin*) [*ἰώδης*, like a violet; *phenyl*]. A compound allied to phenacetin. It is an efficient bactericide, but is objectionable because of its strong evolution of iodin, of which it contains about 50 per cent. It is a crystalline powder, of an iodin-odor and a burning taste, and colors the skin yellow. It melts at 266° F. (130° C.) Unof.

Iodophthisis (*i-o-doff'-this-is*) [*ἰώδης*, like a violet; *φθίσις*, a wasting]. The emaciation, or local or general wasting that may result from free use of iodin as a remedy.

Iodopyrin (*i-o-do-pi'-rin*) [*ἰώδης*, like a violet; *πῦρ*, fire]. Iodantipyrin. A chemic compound of iodin and antipyrin, with the composition, $C_{11}H_{11}IN_2O$. It is an antipyretic in doses of from one to five grains. Unof.

Iodo-quinin Sulphate. Same as *Herapathite*.

Iodosis (*i-o-do'-sis*). Same as *Iodism*.

Iodotannin (*i-o-do-tan'-in*) [*ἰώδης*, like a violet; ME., *tannen*, to tan]. An aqueous mixture of iodin and tannin.

Iodotherapy (*i-o-do-ther'-ap-e*) [*ἰώδης*, like a violet; *θεραπεία*, therapy]. The treatment or cure of disease by the use of iodin or its compounds.

Iodum (*i-o'-dum*). See *Iodin*.

Iodure (*i'-o-dūr*) [Fr.]. An iodid.

Ioduret (*i-od'-u-ret*) [*ἰώδης*, like a violet]. An iodid.

Ion (*i'-on*) [*ἰών, ἰόν*, going]. An element set free by electrolysis, and classified as an *anion* or *kation*, according as it is set free at the positive or negative pole. **I., Migration of**, the transference of an ion from one pole to another.

Ionidium (*i-o-nid'-e-um*) [*ἰον*, a violet]. A genus of violaceous herbs and shrubs. **I. ipecacuanha**, produces what is called *white ipecac*; this and several other species are emetic and cathartic. See also *Cuichunchulli*. None is officinal; but the roots of several species are said to be mixed with commercial ipecac.

Ionthus (*i-on'-thus*) [*ἰονθος*, acne]. That form of acne that often accompanies the first appearance of the beard. A general name for acne and the diseases that resemble it.

Iopterous (*i-op′-ter-us*)[*ἰον*, a violet; *πτερόν*, a feather]. In biology, having violet-colored wings.

Iotacism (*i-o′-tas-izm*) [*ἰωτακισμός*, iotacism]. 1. Inability to pronounce distinctly the proper sound of the letter *i*. 2. Substitution of the long *e* sound for the *e* sounds of other vowels.

Ioterium (*i-o-te′-re-um*) [*ἰός*, poison; *τερέειν*, to pierce: *pl.*, *ioteria*]. In biology, a poison-gland.

Ipecac (*ip′-e-kak*). See *Ipecacuanha*. **I., American.** See *Gillenia*. **I., White.** See *Ionidium*.

Ipecacuan (*ip-e-kak′-u-an*). See *Ipecacuanha*.

Ipecacuanha (*ip-e-kak-u-an′-ah*) [Braz., *ipecaaguen*]. Ipecac. The root of *Cephaëlis ipecacuanha*, found in Brazil. It contains an alkaloid, *emetin*, $C_{30}H_{30}NO_5$, and is an emetic, expectorant, and cholagogue; in very small doses, gr. ⅛, it is a mild tonic. It is used mainly as a safe and prompt emetic, in membranous croup, and in the summer diarrhea of children. Dose as an expectorant gr. ss–ij; as an emetic gr. xv–xxx. **I., Acetum.** (B. P.) Dose ɱv–xl. **I., Ext., Fld.** Dose ɱj–v. **I., Syr.,** 5 per cent. strength. Dose ʒj–ʒss. **I., Vin.,** 7 per cent. in strength. Dose ɱj–ʒj. **I., Trochisci,** contain each ¼ gr. of the drug. **I. et morphinæ, Trochisci,** contain each, morphin sulph. gr. $\frac{1}{60}$, ipecac gr. $\frac{1}{15}$, with flavoring-oil and sugar. **I. et opii, Pulvis (Pulv. ipec. comp.,** B. P.) Dover's powder, contains ipecac and opium each 10, sugar of milk 80 parts. Dose gr. ij–xv. **I. cum scilla, Pil.** (B. P.) Dose gr. v–x. **I. et opii, Tinct.,** deodorized tinct. of opium 100, evaporated to 85, fld. ext. ipecac 10, alcohol q. s., ad 100. Dose ɱv–xxx. **Emetin.** Dose as an expectorant gr. $\frac{1}{120}$–$\frac{1}{40}$; as an emetic ⅛–¼.

Ipomœa (*ip-o-me′-ah*) (*ἰψ*, worm; *ὁμοιος*, like]. A genus of convolvulaceous plants; bindweeds. **I. batatas** is the sweet potato. **I. purga.** See *Jalap*. **I. pandurata,** of the U. S., resembles jalap in its action. The seeds of **I. cœrulia** are recommended as a useful intestinal stimulant. **I. turpethum** affords turpeth-root, *q.v.* Many other species are medicinal. Unof.

Iralgia (*i-ral′-je-ah*). See *Iridalgia*.

Irascibility (*i-ras-ib-il′-it-e*) [*irasci*, to be angry]. The quality of being choleric, irritable, or of hasty temper. It is a frequent symptom in some varieties of insanity and in neurasthenia, and in some cases it amounts to a species of insanity.

Iridæmia (*ir-id-e′-me-ah*). See *Iridemia*.

Iridal (*ī′-rid-al*) [*ἶρις*, iris]. Relating to the iris.

Iridalgia (*i-rid-al′-je-ah*) [*ἶρις*, iris; *ἄλγος*, pain]. Pain referable to the iris.

Iridauxesis (*ir-id-awks-e′-sis*) [*ἶρις*, iris; *αὔξησις*, increase]. Auxesis or tumefaction of the iris.

Iridavulsion (*ir-id-av-ul′-shun*) [*ἶρις*, iris; *avellere*, to tear away]. Surgical avulsion of the iris.

Iridectome (*ir-id-ek′-tōm*) [*ἶρις*, iris; *ἐκτομή*, a cutting out]. A cutting instrument used in iridectomy.

Iridectomy (*ir-id-ek′-to-me*) [*ἶρις*, iris; *ἐκτομή*, excision]. The cutting out of a part of the iris. **I., Antiphlogistic,** one performed in inflammatory processes for therapeutic purposes. In **Optic I.** the piece of iris excised is over a portion of the lens or beneath a portion of cornea clearer than that exposed in the natural pupil, as a result of which additional vision is gained. See *Pupil, Artificial*. **I., Preliminary,** is performed in advance of the extraction of cataract, instead of at the same time.

Iridectropium (*ir-id-ek-tro′-pe-um*) [*ἶρις*, iris; *ἐκτρόπιον*, eversion]. Eversion of a part of the iris.

Iridemia (*ir-id-e′-me-ah*) [*ἶρις*, iris; *αἷμα*, blood]. Hemorrhage from the iris.

Iridencleisis, or Iridenkleisis (*ir-id-en-kli′-sis*) [*ἶρις*, iris; *ἐγκλεῖν*, to lock in]. See *Iridodesis*.

Iridentropium (*ir-id-en-tro′-pe-um*) [*ἶρις*, iris; *ἐντροπή* a turning in]. Inversion of a part of the iris.

Irideremia (*ir-id-er-e′-me-ah*) [*ἶρις*, iris; *ἐρημία*, lack]. Absence of one or both irides.

Iridescence (*ir-id-es′-ens*) [*iridescere*, to shine with rainbow-colors]. The property of breaking up light into the spectral colors.

Iridesis (*ir-id-e′-sis*). See *Iridodesis*.

Iridian (*i-rid′-e-an*) [*ἶρις*, iris]. Relating to the iris; iridal.

Iridicolor (*ir-id′-ic-ul-or*) [*iris*, a rainbow; *color*, color]. In biology, iridescent; exhibiting prismatic colors.

Iridin (*ī′-rid-in*) [*ἶρις*, iris]. *Irisin;* a precipitated extract of *Blue Flag*. See *Iris*.

Iriditis (*ir-id-ī′-tis*). Same as *Iritis*.

Iridization (*ir-id-iz-a′-shun*) [*ἶρις*, iris]. The subjective appearance, as of an iridescent halo seen by persons affected with glaucoma.

Iridocele (*i-rid′-o-sēl*) [*ἶρις*, iris; *κήλη*, hernia]. Protrusion of a part of the iris through a wound or ulcer.

Iridochoroiditis (*ir-id-o-ko-roid-ī′-tis*) [*ἶρις*, iris; *χόριον*, chorion; *εἶδος*, likeness; *ιτις*, inflammation]. Inflammation of both the iris and the choroid of the eye, the form usually assumed in sympathetic ophthalmia.

Iridocinesis (*ir-id-o-sin-e′-sis*). See *Iridokinesis*.

Iridocyclitis (*ir-id-o-sik-li′-tis*) [*ἶρις*, iris; *κύκλος*, a circle; *ιτις*, inflammation]. Inflammation of the iris and the ciliary body. See *Cyclitis*.

Iridocyclochoroiditis (*ir-id-o-sik-lo-ko-roid-ī′-tis*) [*ἶρις*, iris; *κύκλος*, circle; *χόριον*, chorion; *εἶδος*, likeness; *ιτις*, inflammation]. Combined inflammation of the iris, the ciliary body, and the choroid.

Iridocyte (*ir′-id-o-sīt*) [*ἶρις*, rainbow; *κύτος*, cell]. Any cell that produces color, either by means of its structure or its contents.

Iridodesis (*ir-id-od′-es-is*) [*ἶρις*, iris; *δέσις*, a binding together]. An obsolete method of displacing the normal pupil by ligature, instead of iridectomy.

Iridodialysis (*ir-id-o-di-al′-is-is*). See *Coredialysis*.

Iridodonesis (*ir-id-o-do-nē′-sis*) [*ἶρις*, iris; *δόνησις*, a trembling]. Tremulousness of the iris; hippus.

Iridokinesis (*ir-id-o-kin-e′-sis*) [*ἶρις*, iris; *κίνησις*, movement]. Any movement of the iris, normal or otherwise.

Iridomalacia (*ir-id-o-mal-a′-se-ah*) [*ἶρις*, iris; *μαλακία*, softness]. Morbid softening of the iris.

Iridomotor (*ir-id-o-mo′-tor*) [*ἶρις*, iris; *movere*, to move]. Promoting the motion of the iris.

Iridoncosis (*ir-id-on-ko′-sis*) [*ἶρις*, iris; *ὄγκωσις*, a puffing out]. Thickening of the iris.

Iridoncus (*ir-id-ong′-kus*) [*ἶρις*, iris; *ὄγκος*, mass]. A tumor or swelling of the iris.

Iridoparalysis (*ir-id-o-par-al′-is-is*) [*ἶρις*, iris; *παράλυσις*, paralysis]. Paralysis of the iris.

Iridoparesis (*ir-id-o-par′-es-is*) [*ἶρις*, iris; *πάρεσις*, a letting go]. A slight or partial paralysis of the iris.

Iridoplania (*ir-id-o-pla′-ne-ah*) [*ἶρις*, iris; *πλάνη*, a wandering]. Same as *Hippus*.

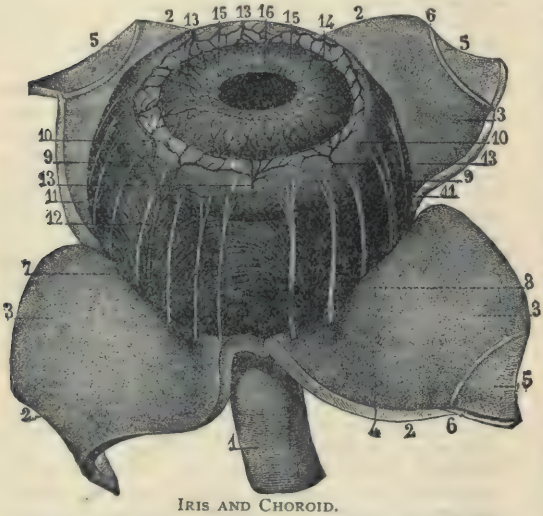
Iridoplasma (*ir-id-o-plaz′-mah*) [*ἶρις*, iris; *πλάσμα*, anything formed]. A form of degeneration of the iris.

Iridoplegia (*ir-id-o-plē′-je-ah*) [*ἶρις*, iris; *πληγή*, stroke]. Paralysis of the sphincter of the iris.

Iridoptosis (*ir-id-op-to′-sis*) [*ἶρις*, iris; *πτῶσις*, a falling]. Prolapse of the iris.

Irido-pupillary (*ir-id-o-pu′-pil-a-re*) [*ἶρις*, iris; *pupilla*, the pupil of the eye]. Pertaining to the iris and the pupil.

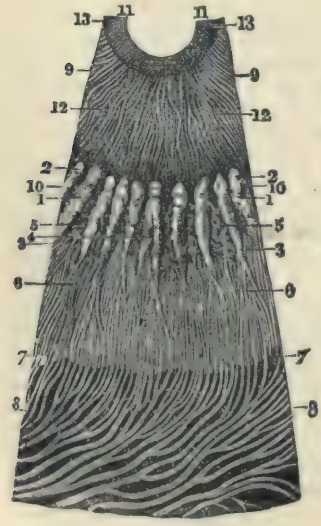
Iridorrhexis (*ir-id-or-reks′-is*) [*ἶρις*, iris; *ῥῆξις*, a breaking]. Iridectomy with iridavulsion. Rupture of the iris.



Iridoschisis, or **Iridoschisma** (*ir-id-os'-kis-is* or *ir-id-os-kiz'-mah*) [*ἰρις*, iris; *σχίσις*, *σχίσμα*, cleft]. Coloboma of the iris.

Iridotome (*ir'-id-o-tōm*) [*ἰρις*, iris; *τομή*, a cutting]. A cutting-instrument employed in iridotomy.

Iridotomy (*ir-id-ot'-o-me*) [*ἰρις*, iris; *τομή*, section]. An incision of any kind into the iris.



Iridotromos (*ir-id-ot'-ro-mos*) [*ἰρις*, iris; *τρόμος*, tremor]. Hippus; tremor of the iris.

Iris (*i'-ris*) [*ἰρις*, a colored halo or circle]. 1. The anterior portion of the vascular tunic of the eye, attached to the pectinate ligament and ciliary body; its central aperture forms the pupil. 2. Blue-flag. The roots of *I. versicolor*. It contains a resinous

IRIS AND CHOROID.

1. Optic nerve. 2, 2, 2, 2. Sclerotic, divided in four equal parts and turned back. 3, 3. Pigmentary granulation of its inner layer. 4. Section of lamina fusca. 5, 5, 5, 5. Cornea, divided in four equal parts. 6, 6. Canal of Schlemm. 7. Outer surface of choroid. 8. Superior and internal trunk of vasa vorticosa. 9, 9. Irregular border limiting the choroid zone posteriorly. 10, 10. Anterior half of this zone; ciliary muscle. 11, 11. Ciliary nerves. 12. Long ciliary artery. 13, 13, 13, 13. Anterior ciliary arteries. 14. Iris. 15. Small arterial circle of iris. 16. Pupillary orifice.

SECTION OF CILIARY BODY AND IRIS.

1, 1. Ciliary processes. 2, 2. Their bases or rounded extremities. 3, 3. Their apices. 4. A process with bifurcated extremity. 5, 5. Reticulated folds, or ciliary processes of the second order. 6, 6. Venules that emanate from these. 7, 7. Ora serrata of choroid. 8, 8. Veins of choroid. 9. Section of iris. 10, 10. Circumference of iris. 11, 11. Small ring of iris. 12, 12. Large ring of iris.

principle, *iridin*. The fresh rhizome is purgative, emetic, and diuretic, and is serviceable in catarrh of the duodenum, and in malarial ailments. **I., Ext.** Dose gr. j–v. **I., Ext. Fld.** Dose ♏v–ʒj. **Iridin**, the oleoresin, is a cholagogue. Unof. Dose gr. j–v. The genus *Iris* embraces many other species, some of them purgative, and some reputed to be poisonous. See *Orris-root*. **I., Absence of.** See *Irideremia*. **I., Angle of**, that formed by the junction of the cornea and the iris. **I.-contraction.** See *Reflexes, Table of*. **I.-green.** Same as *Bladder-green*. **I., Prolapse of** (or *Hernia of*), protrusion of a portion of the iris through an opening in the cornea or sclera; when the iris is adherent the condition is called *anterior synechia;* when the iris is adherent to the lens behind, the condition is called *posterior synechia*. **I., Tremulous**, arises from non-support of the iris in aphakia or dislocation of the crystalline lens.

Irish (*i'-rish*) [ME., *Irish*, Irish]. Pertaining to Ireland. **I. Ague.** Synonym of *Typhus Fever*, *q.v.* **I. Moss.** See *Chondrus*.

Irisin (*i'-ris-in*) [*ἰρις*, iris]. The precipitate from a tincture of the root of Blue-flag, *Iris versicolor;* it is cholagogue, sialagogue, and diuretic. Dose 2 to 4 grains. Unof.

Iritic (*i-rit'-ik*) [*ἰρις*, iris; *ιτις*, inflammation]. Of the nature of, pertaining to, or affected with, iritis.

Iritis (*i-ri'-tis*) [*ἰρις*, iris; *ιτις*, inflammation]. Inflammation of the iris, called after its origin, or character, blennorrhagic, rheumatic, diabetic, syphilitic, plastic, serous, primary, secondary. **I., Condylomatous**, *I. papulosa;* that accompanied by the formation of papules or condylomata in the iris. **I. gummosa**, that in which gummata are formed in the iris. **I. papulosa.** See *I., Condylomatous*.

Iritomy (*i-rit'-o-me*). See *Iridotomy*.

Iron (*i'-ern*) [ME., *iron*, iron]. See *Ferrum*. **I. Bath.** See *Bath*. **I. Minium.** Same as *Colcothar*. **I. Wood**, the heart-wood of *Ostrya virginica*, a tonic, antiperiodic, and alterative. It has been successfully used in malarial diseases, neuralgia, and strumous affections. Dose of the fld. ext., ʒss–j. Unof.

Irradiating (*ir-ra'-de-a-ting*) [*irradiare*, to emit rays in every direction]. Radiating from a center, as a pain arising from a definite focus of irritation.

Irradiation (*ir-ra-de-a'-shun*) [*irradiatio; irradiare*, to emit rays in every direction]. A phenomenon in which, owing to the difference in the illumination of the field of vision, or its background, objects appear much larger than they really are.

Irreducible (*ir-re-dūs'-ib-l*) [*in*, not; *reducere*, to lead back]. That which cannot be reduced or restored to its normal condition. In chemistry, applied to a compound that cannot be separated. In surgery, applied to a fracture or dislocation that cannot be replaced. **I. Hernia.** See *Hernia*.

Irregular (*ir-reg'-u-lar*) [*in*, not; *regula*, rule]. Not regular; not normal or according to rule; not rhythmic; not recurring at proper intervals.

Irregularity (*ir-reg-u-lar'-it-e*) [*in*, not; *regula*, a rule]. Lack of regularity; unevenness. **I. of the Teeth**, deviation of the teeth from their natural arrangement is of frequent occurrence, and is dependent upon a variety of causes. The following are among the most frequent: 1. Want of synchronism between the destruction of the roots of the temporary teeth and the growth of the permanent teeth. 2. The premature removal of one or more of the temporary teeth. 3. Disproportion between the size of the alveolar arch and the teeth. 4. Supernumerary teeth. 5. Malformation of the jaws.

Irrespirable (*ir-res-pi'-rab-l*) [*in*, not; *respirare*, to breathe]. Not capable of being breathed.

Irrigant (*ir'-ig-ant*) [*irrigare*, to lead water to]. A substance or wash used in or by irrigation.

Irrigation (*ir-ig-a'-shun*) [*irrigare*, to lead water to]. The application of water, especially a stream, to an inflamed or abnormal tissue for purposes of moistening, antisepsis, cooling, or flushing the part.

Irrigator (*ir'-ig-a-tor*) [*irrigare*, to lead water to]. An apparatus, or device, for accomplishing the irrigation of a part, surface, or cavity.

Irritability (*ir-it-ab-il'-it-e*) [*irritabilitas*, irritability]. The quality of being susceptible to excitement or irritation. **I., Faradic,** the muscular contraction caused by a secondary or induced current. **I., Galvanic,** the muscular contraction caused by the direct current. **I., Muscular,** the inherent contractile quality of a muscle. **I., Nervous,** the property of a nerve to transmit impulses upon stimulation. See, also, *Irascibility*.

Irritable (*ir'-it-ab-l*) [*irritabilis*, easily excited]. Easily inflamed. Susceptible to irritation. **I. Bladder,** a condition of the bladder marked by constant desire to void urine. **I. Breast,** a neuralgic condition of the mammary gland, usually associated with uterine affections, or with intercostal neuralgia. **I. Heart,** Da Costa's term for a peculiar condition of the heart characterized by precordial pain, dyspnea on exertion, palpitation, and irregularity of the heart's action. It is induced by over-exertion, masturbation, and neurotic tendencies. Hypertrophy may occasionally develop. **I. Spine,** a condition of spinal anemia frequently occurring in young hysteric females. There is pain along the spine, with tenderness on pressure, and vertigo, nausea, palpitation, and neuralgias. **I. Testicle.** See *Testicle*. **I. Tongue,** the clean, very red tongue, with enlarged red papillæ about its tip, seen in the dyspepsia of drunkards.

Irritant (*ir'-it-ant*) [*irritare*, to excite]. 1. Causing, or giving rise to, irritation. 2. An agent or remedy that induces irritation or inflammation. **I., Chemic,** one acting by virtue of its affinity for the elements or compounds of organic tissue, as nitric acid, or potassic hydrate. **I., Mechanical,** one causing lesions or inflammations by mechanical operation, as cuts, contusions, pressure, or distention. **I., Nervous,** one acting through the medium of the nerves.

Irritation (*ir-it-a'-shun*) [*irritatio*, excitement]. A condition of undue excitement. Also, an inflamed state. Also, the stimulus necessary to the performance of the functions of an organ.

Irritative (*ir'-it-a-tiv*) [*irritare*, to excite]. Exciting or irritating. **I. Fever,** a febrile condition dependent upon the presence in the body of irritating substances. Also a synonym of *Simple Continued Fever*.

Irrorate (*ir'-or-āt*) [*in*, upon; *rorare*, to distil dew]. In biology, minutely dotted, as if with small dew-drops.

Irrumation (*ir-u-ma'-shun*) [*irrumare*, to give suck]. Same as *Buccal Coitus*, *q. v.* See *Nameless Crime*.

Isabel, Isabelle (*iz'-a-bel*) [*Isabelle*, a woman's name]. Drab, or yellowish gray.

Isadelphous (*i-sad-el'-fus*) [ἴσος, equal; ἀδελφός, brother]. In biology, having an equal number of stamens in each bundle or brotherhood.

Isambert's Disease. Acute miliary tuberculosis of the larynx and pharynx.

Isandrous (*i-san'-drus*) [ἴσος, equal; ἀνήρ, a male]. In biology, having stamens alike and corresponding in number to the petals.

Isanthous (*i-san'-thus*) [ἴσος, equal; ἄνθος, a flower]. In biology, having regular flowers.

Isatin (*i'-sat-in*) [ἰσάτις, wood], $C_8H_5NO_2$. A substance obtained by the oxidation of indigo with HNO_3. It crystallizes in yellowish-red monoclinic prisms, melting at 201° C. It dissolves in water and in alcohol with a reddish-brown color; it has a disagreeable odor. **I.-yellow.** See *Pigments, Conspectus of*.

Isatoxim (*i-sat-oks'-im*) [ἰσάτις, wood; τοξικόν, poison], $C_8H_6N_2O_2$. A substance prepared from isatin and hydroxylamin. It crystallizes from alcohol in yellow needles, and melts at 202° C.

Isatropylcocain (*i-sat-ro'-pil-ko-ka'-in*), $C_{19}H_{22}NO_4$. An amorphous alkaloid from coca leaves. It has no anesthetic properties, but is said to be an active cardiac poison. Unof. See *Cocamin*.

Ischemia (*is-ke'-me-ah*) [ἰσχειν, to check; αἷμα, blood]. Bloodlessness. Deficiency of the supply of blood to a part. Local anemia.

Ischemic (*is-kem'-ik*) [ἰσχειν, to check; αἷμα, blood]. Affected with or relating to ischemia.

Ischesis (*is'-kes-is*) [ἰσχειν, to check]. Retention or suppression of a discharge or secretion.

Ischiadic (*is-ke-ad'-ik*). Same as *Ischiatic*.

Ischiagra (*is-ke-a'-grah*) [ἰσχίον, hip; ἀγρα, seizure]. Gout in the hip.

Ischial (*is'-ke-al*) [ἰσχίον, ischium]. Pertaining or belonging to the ischium.

Ischialgia (*is-ke-al'-je-ah*) [ἰσχίον, hip; ἄλγος, pain]. Sciatica; neuralgia of the hip.

Ischialgic (*is-ke-al'-jik*) [ἰσχίον, hip; ἄλγος, pain]. Relating to or affected with ischialgia.

Ischiatic (*is-ke-at'-ik*) [ἰσχίον, hip]. Pertaining to the ischium. **I. Notches,** the notches, greater and lesser, of the ischium. The former transmits the pyriformis muscle, gluteal vessels, and superior gluteal nerve, the latter the tendon of the obturator internus, its nerve, and the pudic vessels and nerve. These notches are called also sacro-sciatic notches. (See illustration on p. 228.)

Ischiatitis (*is-ke-at-i'-tis*) [ἰσχίον, hip; ἴτις, inflammation]. Inflammation of the sciatic nerve.

Ischiatocele (*is-ke-at'-o-sēl*). See *Ischiocele*.

Ischidrosis (*is-kid-ro'-sis*) [ἰσχειν, to suppress; ἱδρώς, sweat]. Suppression of sweat.

Ischidrotic (*is-kid-rot'-ik*) [ἰσχειν, to suppress; ἱδρώς, sweat]. Causing a retention or suppression of the sweat.

Ischien (*is'-ke-en*) [ἰσχίον, hip]. Belonging to the ischium in itself.

Ischigalactic (*is-ke-gal-ak'-tik*) [ἰσχειν, to restrain; γάλα, milk]. 1. Tending to check the flow of milk. 2. An antigalactic agent or medicine.

Ischio- (*is'-ke-o-*) [ἰσχίον, hip]. A prefix indicating relationship to the ischium. **I.-anal,** pertaining to the ischium and the anus. **I.-bulbar,** pertaining to the ischium and the bulb of the urethra. **I.-capsular,** pertaining to the ischium and the capsular ligament of the hip. **I.-cavernosus,** the muscle that compresses the veins of the *crus penis* and assists in the erection of the penis. The **I.-clitorianus** has a similar relation to the clitoris. See *Muscles, Table of*. **I.-fibular,** pertaining both to the ischium and the fibula. **I.-neuralgia,** sciatica. **I.-perineal,** belonging to or pertaining to both ischium and perineum; pertaining to the space between the anus and the scrotum. **I.-pubeotomy.** See *Farabœuf's Operation*. **I.-sacral,** relating to the ischium and the sacrum. **I.-tibial,** relating both to the ischium and the tibia. **I.-vertebral,** relating to the ischium and the vertebral column.

Ischiocele (*is'-ke-o-sēl*) [ἰσχίον, hip; κήλη, tumor]. Ischiatic hernia.

Ischiocerite (*is-ke-os'-er-īt*) [ἰσχίον, hip-joint; κέρας, horn]. In biology, the third joint of the developed

antenna of a crustacean. It is borne upon the basicerite and bears the merocerite.

Ischiodidymus (*is-ke-o-did'-im-us*) [ἰσχίον, hip; δίδυμος, double]. A double monstrosity united at the hips.

Ischiognathite (*is-ke-og'-nāth-īt*) [ἰσχίον, hips; γνάθος, jaw]. The third joint of any one of the mouth-parts of an arthropod.

Ischiomyelitis (*is-ke-o-mi-el-i'-tis*) [ἰσχίον, hip, loins; μυελός, marrow; ιτις, inflammation]. Lumbar myelitis; osphyomyelitis.

Ischiopagus (*is-ke-op'-ag-us*) [ἰσχίον, hip; πάγος, united]. A monomphalic monstrosity united by the coccyges and the sacra.

Ischiophthisis (*is-ke-off'-this-is*) [ἰσχίον, hip; φθίσις, a wasting]. Emaciation associated with or due to hip-joint disease.

Ischiopodite (*is-ke-op'-o-dīt*) [ἰσχίον, hip-joint; πούς, foot]. In biology, the third joint of the inner (*endopodite*) of the two main divisions of the typical limb of a crustacean.

Ischiorectal (*is-ke-o-rek'-tal*) [ἰσχίον, ischium; *rectus*, straight]. Pertaining to both ischium and rectum. **I. Abscess** or **I. Cellulitis**, an inflammation of the areolar tissue of the ischiorectal fossa involving the rectum and the thigh. Suppuration may occur at any point of the inflammation, but is ordinarily near the anus. **I. Fascia.** See *Fascia.* **I. Fossa,** a deep fossa filled with fatty tissue situated on either side of and between the rectum and the ischium.

Ischium (*is'-ke-um*) [ἰσχίον, hip]. 1. The inferior part of the os innominatum or hip-bone; the bone upon which the body rests in a sitting posture. It forms a part, also, of the acetabulum. (See illustration on p. 228.) 2. The third joint of any appendage of a crustacean, *e. g.*, the *ischiognathite* and the *ischiopodite.*

Ischnogyria (*isk-no-jir'-e-ah*) [ἰσχνός, feeble; γῦρος, curve]. A condition attended with slight development of the cerebral convolutions.

Ischnous (*isk'-nus*) [ἰσχνός, thin]. Emaciated.

Ischo- (*is'-ko-*) [ἰσχειν, to suppress]. A prefix meaning suppressed, stopped, or checked.

Ischoblennia (*is-ko-blen'-e-ah*) [ἰσχειν, to suppress; βλέννος, mucus]. The suppression of a mucous discharge.

Ischocenosis (*is-ko-sen-o'-sis*) [ἰσχειν, to suppress; κένωσις, discharge]. The suppression of any established or normal discharge.

Ischocholia (*is-ko-ko'-le-ah*) [ἰσχειν, to suppress; χολή, bile]. A suppression of the flow of bile.

Ischogalactia (*is-ko-gal-ak'-te-ah*) [ἰσχειν, to suppress; γάλα, milk]. Suppression of the natural flow of milk.

Ischolochia (*is-ko-lo'-ke-ah*) [ἰσχειν, to suppress; λόχια, lochia]. Suppression of the lochial flow.

Ischomenia (*is-ko-me'-ne ah*) [ἰσχειν, to suppress; μήν, month, menses]. Suppression of the menstrual flow.

Ischophonia (*is-ko-fo'-ne-ah*) [ἰσχειν, to suppress; φωνή, voice]. Aphonia. An impediment in speech.

Ischopyosis (*is-ko-pi-o'-sis*) [ἰσχειν, to suppress; πύον, pus]. The checking of any discharge of pus.

Ischospermia (*is-ko-sper'-me-ah*) [ἰσχειν, to check; σπέρμα, seed]. Suppression of semen.

Ischuretic (*is-ku-ret'-ik*) [ἰσχειν, to suppress; οὖρον, urine]. 1. Relating to or relieving ischuria. 2. A remedy or agent that relieves retention or suppression of urine.

Ischuria (*is-ku'-re-ah*) [ἰσχειν, to suppress; οὖρον, urine]. Retention or suppression of urine. **I. paradoxa,** the condition in which there is an excessive distention of the bladder, with constant dribbling of urine.

Ischyomyelitis (*is-ke-o-mi-el-i'-tis*). See *Ischiomyelitis.*

Isidium (*i-sid'-e-um*) [L.: *pl.*, *Isidia*]. In biology, an excrescence frequently found upon lichens; it corresponds to a soredium.

Isinglass (*i'-zing-glas*). See *Ichthyocolla* and *Glue.* **I., Vegetable.** See *Agar-agar.*

Island (*i'-land*) [ME., *iland*, island]. See *Insula* and *Blood-island.* **I. of Reil,** the central lobe of the hemisphere of the brain, situated at the base, on either side of the fissure of Sylvius. See *Insula.*

Iso- (*i'-so-*) [ἴσος, equal]. A prefix signifying equality.

Iso-amylamin (*i-so-am-il'-am-in*) [ἴσος, equal; *amylum*, starch; *amin*]. A ptomaïne obtained in the distillation of horn with potassic hydrate; it also occurs in the putrefaction of yeast. It boils at 95° C., and is non-poisonous. See *Ptomaïnes, Table of.*

Iso-apiol (*i-so-a'-pe-ol*) [ἴσος, equal; *apium*, parsley; *oleum*, oil]. A substance obtained from apiol, exercising a powerful influence upon the vasomotor system.

Isobar (*i'-so-bar*) [ἴσος, equal; βάρος, weight]. In meteorology, a term denoting a line drawn through points having the same synchronous barometric pressure.

Isobrious (*i-so'-bre-us*) [ἴσος, equal; βρῖαν, to be strong, to make strong]. In biology, applied to dicotyledonous embryos, the two lobes of which grow with equal vigor; isodynamous.

Isocaprolactone (*i-so-kap-ro-lak'-tōn*) [ἴσος, equal; *caper*, a goat; *lac*, milk], $C_6H_{10}O_2$. A compound produced by the distillation of terebic acid. It melts at about 7° C.; boils at 206° C., or 207° C.; at 0°C. it is soluble in double its bulk of water.

Isocercal (*i-so-ser'-kal*) [ἴσος, equal; κέρκος, tail]. In biology, having the tail symmetrically divided by the straight back-bone.

Isocholesterin (*i-so-ko-les'-ter-in*) [ἴσος, equal; χολή, bile; στέαρ, fat], $C_{26}H_{44}O$. A substance isomeric with cholesterin, and found in distilled sheeps' fat; it melts at 138° C.

Isocholin (*i-so-ko'-lin*) [ἴσος, equal; χολή, bile], $C_5H_{15}NO_2$. A body isomeric with cholin; it is found in fly-agaric, and may be formed by oxidizing cholin.

Isochromatic (*i-so-kro-mat'-ik*) [ἴσος, equal; χρῶμα, color]. Having the same color.

Isochronism (*i-sok'-ro-nizm*) [ἴσος, equal; χρόνος, time]. The quality of occurring at equal intervals of time, or lasting for equal periods of time.

Isochronous (*i-sok'-ro-nus*) [ἴσος, equal; χρόνος, time]. Having, occurring at, or occupying equal intervals of time.

Isocoria (*i-so-ko'-re-ah*) [ἴσος, equal; κόρη, pupil]. Equality in diameter of the two pupils.

Isocyclus (*i-so-si'-klus*) [ἴσος, equal; κύκλος, circle]. In biology, an organism consisting of a series of similar rings.

Isodactylous (*i-so-dak'-til-us*) [ἴσος, equal; δάκτυλος, digit]. In biology, having the toes and digits alike.

Isodiametric (*i-so-di-am-et'-rik*) [ἴσος, equal; δια, through; μέτρον, measure]. Having equal diameters.

Isodimorphism (*i-so-di-morf'-izm*) [ἴσος, equal; δίμορφος, two-formed]. A form of dimorphism, characterized by the appearance of a substance in two similar but incompatible forms.

Isodont (*i'-so-dont*) [ἴσος, equal; ὀδούς, tooth]. Having teeth of the same size and shape.

Isodulcite (*i-so-dul'-sit*). See *Rhamnose.*

Isodynamia (*i-so-di-nam'-e-ah*) [ἴσος, equal; δύναμις, force]. The property of being isodynamic.

Isodynamic (*i-so-di-nam'-ik*) [ἴσος, equal; δύναμις, force]. Having equal force. **I. Foods,** those that produce an equal amount of heat in undergoing the chemic changes of digestion.

Isodynamous (*i-so-di'-nam-us*) [ἴσος, equal; δύναμις, power, force]. Same as *Isobrious*.

Iso-electric (*i-so-e-lek'-tric*) [ἴσος, equal; ἤλεκτρον, amber]. Equally electric; applied to two bodies or points. **I. Curves.** See *Tension-curves*. **I. Surfaces.** See *Tension-planes*.

Isogamous (*i-sog'-am-us*) [ἴσος, equal; γάμος, marriage]. A term used to designate that mode of reproduction in which the uniting gametes are of equal size. The same as conjugating.

Isogamy (*i-sog'-am-e*) [ἴσος, equal; γάμος, marriage]. In biology, conjugation of similar gametes.

Isogeny (*i-soj'-en-e*) [ἴσος, equal; γένος, kind]. In biology, having a general similarity of origin.

Isognathous (*i-sog'-na-thus*) [ἴσος, equal; γνάθος, jaw]. In biology, having the molar teeth of both jaws alike.

Isogonic (*i-so-gon'-ik*) [ἴσος, equal; γόνος, offspring]. In biology, characterized by isogonism.

Isogonism (*i-sog'-o-nizm*) [ἴσος, equal; γόνος, offspring]. In biology, the production by different stocks of sexual organisms of identical structure.

Isogynous (*i-soj'-in-us*) [ἴσος, equal; γυνή, female]. In biology, having the pistils or carpels equal in number to the sepals.

Isolate (*is'-so-lāt* or *i'-so-lāt*) [*isola*, an island]. To separate one from another. To place apart. In chemistry, to separate an element from its combination. In electricity, to insulate.

Isolation (*is-o-la'-shun*) [*isola*, an island]. The act or process of isolating, or the state of being isolated; separation of those ill of contagious diseases from other persons.

Isologous (*i-sol'-o-gus*) [ἴσος, equal; λόγος, method, ratio, or system]. Having similar relations or proportions. A qualification applied to compounds containing a like number of carbon-atoms, with a gradually decreasing number of hydrogen-atoms.

Isolophobia (*is-o-lo-fo'-be-ah*) [*isola*, an island; φόβος, fear]. Morbid dread of being alone.

Isomastigate (*i-so-mas'-tig-āt*) [ἴσος, equal; μάστιξ, a whip]. In biology, applied to organisms bearing two or more similar flagella.

Isomer (*i'-som-er*) [ἰσομερής, having equal parts]. An isomeric body. The same as *Isomerid*.

Isomere (*i'-so-mēr*) [ἰσομερής, having equal parts]. In biology, a portion of one organism that is homologous with a portion of another organism.

Isomeric (*i-so-mer'-ik*) [ἴσος, equal; μέρος, a part]. In chemistry, applied to substances having the same centesimal composition, but the molecules of which have an essentially different structure and chemic properties; *e. g.*, aldehyd and ethylene oxid, both of which have the formula C_2H_4O. The former, however, has the structure—

Methyl. Carbonic oxid.

$$CH_3—CO—H,$$

while the latter is composed of two molecules of ethylene, joined by an atom of oxygen, thus (CH_2)—O—(CH_2). This, the most common type of isomerism, is sometimes called *metamerism*. The term is also applied to substances having the same centesimal composition, but whose molecular weights are in even multiples, a type of isomerism commonly called *polymerism*. Also, in crystallography, applied to any substance that crystallizes in more than one form. Also, applied to a substance existing in two or more forms, a type of isomerism called *allotropism*. **I. Theory of Nerve-force;** Herbert Spencer's hypothesis that in nervous action the disturbance transmitted is a wave of isomeric change, the alternation of isomeric states depending upon both nerve-fiber and molecular continuity.

Isomerids (*i-som'-er-ids*) [ἰσομερής, consisting of equal parts: ἴσος, equal; μέρος, a part]. A name applied to different substances possessing the same molecular composition. **I., Physical,** a designation applied to derivations to which one and the same structural formula must be assigned. They have been explained by assuming them to be different aggregations of molecules that were chemically similar. See also *Physical Molecules*.

Isomerism (*i-som'-er-izm*) [ἴσος, equal; μέρος, a part]. The phenomenon of bodies of like composition and like number of atoms being different in physical or in chemic properties, or in both. **I., Geometric.** *Alloisomerism, q. v.* **I., Spatial.** Same as *I., Geometric*.

Isomerous (*i-som'-er-us*) [ἴσος, equal; μέρος, part, share]. In biology, having an equal number of parts, ridges, or markings.

Isometric (*i-so-met'-rik*) [ἴσος, equal; μέτρον, measure]. Of equal measure. **I. Act,** the tension of a muscle when stimulated, its length remaining constant.

Isometropia (*i-so-met-ro'-pe-ah*) [ἴσος, equal; μέτρον, measure; ὤψ, eye]. Equality of kind and degree in the refraction of the two eyes.

Isomorph (*i'-so-morf*) [ἴσος, equal; μορφή, form]. In biology, one of two similar organisms belonging to different groups.

Isomorphic (*i-so-mor'-fik*) [ἴσος, equal; μορφή, form]. In biology, pertaining to morphologic similarity.

Isomorphism (*i-so-mor'-fizm*) [ἴσος, equal; μορφή, form]. Similarity in crystalline form. Also, the replacement of one element in a crystalline salt by another, without alteration of form or system. **I., Heteromerous,** a condition of dissimilarity in molecular composition. **I., Isomerous,** a condition of similarity in molecular composition. **I., Polymeric,** the substitution of two or more atoms of one element for one of another, without alteration of crystalline form.

Isonitrosoacetones (*i-so-ni-tro-so-as'-et-ōns*). A group of colorless crystalline bodies, readily soluble in ether and in chloroform, and as a rule soluble with difficulty in alcohol. Their alkaline solutions have an intensely yellow color.

Isonitroso-compounds (*i-so-ni-tro'-so-kom'-pownds*). Compounds that contain the bivalent oximid group =N.OH linked to carbon.

Isonomic (*i-so-nom'-ik*) [ἰσονομικός, having equality of laws]. In chemistry, applied to isomorphism existing between two compounds of like composition.

Isonym (*i'-so-nim*) [ἴσος, equal; ὄνομα, a name]. A paronym.

Isopathotherapy (*i-so-path-o-ther'-ap-e*). Same as *Isopathy*.

Isopathy (*i-sop'-ath-e*) [ἴσος, equal; πάθος, suffering]. A term used to denote the treatment of disease by the administration of one or more of its own products. Thus, smallpox would be treated by the administration internally of the variolous excretions.

Isopelletierin (*i-so-pel-et'-e-er-in*) [ἴσος, equal; *pelletierin*]. A substance found in the root-bark of *Punica granatum*. It has the same properties as pelletierin.

Isopepsin (*i-so-pep'-sin*) [ἴσος, equal; πέψις, digestion]. 1. A body formed by heating pepsin to a point between 104° and 140° F. It changes albumin into parapeptone. 2. Same as *Parapeptone*.

Isopetalous (*i-so-pet'-al-us*) [ἴσος, equal; πέταλον, a leaf]. In biology, having the petals alike.

Isophoria (*i-so-fo'-re-ah*) [ἴσος, equal; φόρος, a tending]. A condition in which the eyes lie in the same horizontal plane, the tension of the vertical muscles of

each eye being equal, and the visual lines lying in the same plane.

Isophorous (*i-soff'-or-us*) [ἴσος, equal; φέρειν, to bear]. In biology, of equal taxonomic importance, as a species and its abnormal forms.

Isopia (*i-so'-pe-ah*)[ἴσος, equal; ὤψ, eye]. A term proposed to indicate equal acuteness of vision in the two eyes.

Isopleural (*i-so-plu'-ral*) [ἴσος, equal; πλευρά, a rib]. Bilaterally symmetric.

Isopogonous (*i-so-pog'-o-nus*) [ἴσος, equal; πώγων, beard, barb] In biology, applied to feathers, the web of which is alike on both sides of the rachis.

Iso-propylamin (*i-so-pro-pil'-am-in*). See *Propylamin.*

Isopters (*i-sop'-ters*) [ἴσος, equal; ὀπτήρ, observer]. The curves of relative visual acuity of the retina at different distances from the macula, both for form and for color.

Isopurpurin (*i-so-pur'-pu-rin*) [ἴσος, equal; *purpura*, purple], $C_{14}H_5O_2(OH)_3$. A coal-tar color used in dyeing, closely allied to alizarin; it is formed by heating beta-anthraquinondisulphonic acid with sodic hydrate and potassium chlorate. It produces a yellow shade of red. See *Pigments, Conspectus of.*

Isoquinolin (*i-so-kwin'-o-lin*) [ἴσος, equal; *quinolin*], C_9H_7N. A substance that occurs together with quinaldin and ordinary quinolin in the crude quinolin from coal-tar. It is very similar to quinolin, solidifies at 0° C. to a crystalline mass, melting at 20–22° C., and boiling at 237° C.

Isosaccharic Acid (*i-so-sak-a'-rik*). See *Acid.*

Isosaccharin (*i-so-sak'-ar-in*) [ἴσος, equal; σάκχαρον, sugar], $C_6H_{10}O_5$. An isomerid of saccharin. It results from the action of lime upon milk-sugar and maltose.

Isoscope (*i'-so-skōp*) [ἴσος, equal; σκοπεῖν, to see]. An instrument consisting of two sets of parallel vertical wires, one of which can be superimposed on the other; it is designed to show that the vertical lines of separation of the retina do not correspond exactly to the vertical meridians.

Isospore (*i'-so-spōr*) [ἴσος, equal; σπόρος, a seed]. In biology, a plant producing but one kind of spore; a zygosperm.

Isosporous (*i-sos'-por-us*) [ἴσος, equal; σπορά, seed]. Same as *Homosporous.*

Isostemonous (*i-so-stem'-o-nus*) [ἴσος, equal; στήμον, a stamen]. In biology, having the stamens of the same number as the parts of the calyx or corolla.

Isotagmata (*i-so-tag'-mat-ah*). See *Inotagmata.*

Iso-therapeutics (*i-so-ther-ap-u'-tiks*). Same as *Isopathotherapy.*

Isothermal (*i-so-ther'-mal*) [ἴσος, equal; θέρμη, heat]. Of equal or uniform temperature. **I. Lines,** in physical geography, lines drawn through places having the same average temperature for a given period of time. Inasmuch as it frequently happens that two places having the same annual average temperature may have, one a climate of great extremes, the other a very equable climate, it is now customary to display comparative isotherms for the six warm and the six cold months of the extra-tropical regions. **I. Zones,** zones bounded by isothermal lines.

Isotome (*i'-so-tōm*) [ἴσος, equal; τομή, a cutting]. In biology, an imaginary line or plane indicating homologous segments or structures.

Isotonia (*i-so-to'-ne-ah*) [ἴσος, equal; τόνος, tension]. Equality of tension of the blood.

Isotropic (*i-so-trop'-ik*) [ἴσος, equal; τροπή, turning]. Having the same properties throughout; isotropous; isotropal.

Isotropous (*i-sot'-ro-pus*) [ἴσος, equal; τροπή, a turning]. Having the same shape and appearance, from whatever point observed. A term applied to singly-refracting bodies.

Isozoöid (*i-so-zo'-oid*) [ἴσος, equal; ζῷον, animal; εἶδος, form]. In biology, a zoöid resembling the organism producing it. Cf. *Allozoöid.*

Issue (*ish'-u*) [Fr., *issue*, from *exire*, to go out]. A discharging ulcer, especially that made artificially for purposes of drainage, or counter-irritation. **I.-pea,** a pea or pea-shaped pellet (as of ivy-wood, or orris-root), inserted into an issue to keep up suppuration. Orange-seeds are also used for the same purpose.

Istarin (*is'-tar-in*). A nitrogenous, phosphorized substance of complex structure occurring in brain-tissue. Its properties have not been investigated.

Isthmiac, or **Isthmic** (*is'-me-ak* or *is'-mik*) [ἰσθμός, a narrow passage]. Pertaining to any isthmus, as that of the fauces.

Isthmitis (*is-mi'-tis*) [ἰσθμός, a narrow passage; ιτις, inflammation]. Inflammation of the fauces.

Isthmo- (*is'-mo-*) [ἰσθμός, a neck]. A prefix signifying the *fauces.*

Isthmocatarrhus (*is-mo-kat-ar'-us*) [ἰσθμός, isthmus; καταρρέειν, to flow down]. A catarrh of the faucial isthmus.

Isthmodynia (*is-mo-din'-e-ah*) [ἰσθμός, neck; ὀδύνη, pain]. Pain in the faucial isthmus.

Isthmoid (*is'-moid*) [ἰσθμός, a neck; εἶδος, likeness]. Resembling an isthmus.

Isthmopathy (*is-mop'-ath-e*) [ἰσθμός, neck; πάθος, disease]. A disease of the faucial isthmus.

Isthmoplegia (*is-mo-ple'-je-ah*) [ἰσθμός, neck; πλήγη, stroke]. Paralysis of the faucial tract.

Isthmopolypus (*is-mo-pol'-ip-us*) [ἰσθμός, isthmus; πολύπους, polyp]. A polyp of the fauces.

Isthmorrhagia (*is-mor-a'-je-ah*) [ἰσθμός, isthmus; ῥηγνύναι, to burst forth]. Hemorrhage from the throat.

Isthmospasm (*is'-mo-spazm*) [ἰσθμός, isthmus; σπασμός, spasm]. Spasm of the isthmus of the fauces.

Isthmus (*is'-mus*) [ἰσθμός, isthmus]. The neck or constricted part of an organ. The part of the brain which, situated axially, serves to unite the forebrain, the cerebellum, and the spinal cord. **I., Gyral,** a narrow gyrus connecting two adjoining gyri; an annectant convolution or *pli de passage.* **I. of Fauces,** the space between the arches of the palate. **I. of Thyroid Gland,** the transverse cord connecting the lobes of the thyroid body.

Isuretin (*i-su-re'-tin*) [ἴσος, equal; οὖρον, urine], CH_4N_2O. A substance isomeric with urea; it appears on evaporating the alcoholic solution of hydroxylamin and hydrogen cyanid. It crystallizes in rhombic prisms similar to those of urea, and melts at 104–5° C.

Italian (*i-tal'-yan*) [*Italus*, an Italian]. Of or pertaining to Italy. **I. Fever.** Synonym of *Influenza*, and also of *Mediterranean Fever.* **I. Leprosy.** See *Pellagra.* **I. Method.** See *Tagliacotian Method.*

Itch (*ich*). See *Scabies.* **I., Army.** See *Army.* **I., Bakers'.** *See Baker.* **I., Barbers'.** See *Barber.* **I., Bricklayers'.** See *Bricklayer.* **I., Drunkards',** an intense itching frequent in old alcoholics. **I., Grocers'.** See *Grocer.* **I.-mite.** See *Acarus scabiei.* **I., Norway,** an extreme form of general scabies of the body, resulting in fish-scale-like desquamation. Hebra's first case was from Norway. **I., Warehousemen's.** Same as *I., Grocers'.*

-ite (*it*). A suffix employed in mineralogy denoting a mineral, or of mineral origin. A contraction of λίθος, a stone.

Iter (*i'-ter*) [*iter*, a journey]. A passage affording communication between two or more parts. **I. ad infundi-**

bulum, the passage between the third ventricle of the brain and the infundibulum. **I. a palati ad aurem**, the Eustachian tube. **I. a tertio ad quartum ventriculum**, the aqueduct of Sylvius, extending from the third ventricle to the fourth. **I. chordæ anterius**, the aperture through which the chorda tympani nerve leaves the tympanum. **I. chordæ posterius**, the aperture through which the chorda tympani nerve enters the tympanum. **I. dentium**, the canal of the permanent dental sac opening behind the corresponding temporary tooth and through which the permanent tooth rises.

-itis (*i'-tis*) [ιτις, inflammation]. A suffix used to denote inflammation.

Ivory (*i'-vor-e*) [ME., *ivory*, ivory]. The hard bone-like substance of the tusks of elephants. **I.-black.** See *Carbo animalis*, and *Pigments, Conspectus of.* **I., Dental.** See *Dentine.* **I.-brown.** See *Pigments, Conspectus of.* **I. of Tooth.** See *Dentine.*

Ivy (*i'-ve*) [ME., *ivy*, ivy]. See *Hedera.* **I.-pea**, an issue-pea made of the wood of the ivy. **I., Poison.** See *Rhus.*

Ixodes (*iks-o'-dēz*) [ἰξώδης, sticky; ἰξός, bird-lime; εἰδος, form]. An insect of the natural order *Acaridea.* See *Parasites* (*Animal*), *Table of.*

Ixyomyelitis (*iks-e-o-mi-el-i'-tis*) [ἰξύς, waist; μυελός, marrow; ιτις, inflammation]. Myelitis of the dorsal region of the spinal cord; ischiomyelis; osphyomyelitis.

Izal (*i'-zal*). Thorncliffe disinfectant; a by-product obtained in the process of coke-formation; it posseses strong disinfectant properties without any irritating quality. It mixes well with water, and has an agreeable odor. Unof.

J

Jabber (*jab'-er*) [ME., *jaber*, to chatter]. To talk rapidly and indistinctly; to chatter.

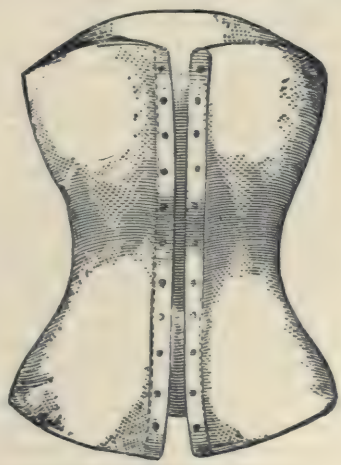
Jaborandi (*jab-or-an'-de*) [Braz.]. The leaves of *Pilocarpus pennatifolius*, a valuable diaphoretic. See *Pilocarpus.*

Jaborin (*jab'-or-in*) [Braz., *Jaborandi*], $C_{11}H_{16}N_2O_5$. An alkaloid derivable from pilocarpin by the action of heat and sulphuric acid. It is an amorphous, strongly basic substance, and has properties resembling those of atropin. Unof.

Jacaranda (*jak-ar-an'-dah*) [Brazilian]. A genus of bignoniaceous plants of tropical America. **J. caroba** is antisyphilitic, and is of service in the treatment of urethritis, rheumatism, and skin-diseases. Dose of the fl. ext. gtt. xvi–fl. ʒj. **J. lancifoliata**, is used by the natives of Brazil in urethritis. Dose of an ℥ij to Oj tincture ♏xv; of the fl. extract, gtt. xvi–xxx. Unof.

Jaccoud's Sign. See *Signs and Symptoms, Table of.*

Jack (*jak*) [ME., *Jacke*, a personal name]. A popular term for horse-flesh salted and subsequently washed in order to deprive it of its peculiar taste. **J.-knife Posture.** See *Postures.*



Jacket (*jak'-et*) [Fr., *jacque*, a coat of mail]. A short coat. **J., Bark**, a jacket stuffed with powdered cinchona. **J., Cotton**, a jacket lined with cotton, sometimes used in the treatment of pneumonia. **J., Plaster-of-Paris**, a mould of plaster-of-Paris cast upon the body or part, for keeping it rigid and fixed in a desired position, in sprain or dislocation of the spine, etc. **J.-poultice**, a poultice applied about the whole surface of the thorax; it is sometimes used in the treatment of pneumonia. **J., Straight**, a system of leather straps used to bind violently insane persons in order to prevent self-inflicted injury.

Jackson's Pectoral Syrup. A cough-medicine containing morphin hydrochlorate, sugar, sassafras pith, gum arabic, and water.

Jacksonian Epilepsy. Focal, cortical, or symptomatic epilepsy. A spasm limited to a single group of muscles in the face, arm, or leg, due generally to irritative lesion of the motor area of the brain; the spasm may also involve other groups of muscles; consciousness is usually retained; there is danger of the convulsions becoming general. See *Epilepsy*, and *Diseases, Table of.*

Jacob's Membrane. A name sometimes applied to the layer of rods and cones of the retina. **J.'s Ulcer.** See *Rodent Ulcer*, and *Diseases, Table of.*

Jacobson's Anastomosis. The tympanic plexus. See *Plexus.* **J.'s Canal.** See *Canal.* **J.'s Cartilage**, a strip of cartilage under Jacobson's organ, firmly adherent to the latter, but distinct from the septal cartilage of the nose, to the outer side of the ventral edge of which it is situated. **J.'s Nerve**, the nerve of the tympanum. See *Nerves, Table of.* **J.'s Organ**, a short, rudimentary canal, extending along the septum of Stensen's duct, and ending in a cul-de-sac.

PLASTER JACKET. (*Sayre.*)

Jacquart, Angle of. See *Angle.*

Jacquemin's Sign. See *Signs and Symptoms, Table of.*

Jactation (*jak-ta'-shun*). See *Jactitation.*

Jactitation (*jak-tit-a'-shun*) [*jactitare*, to pour forth]. The restlessness and tendency to frequent changes of

position that characterize severe distress in disease. **J., Periodic.** Synonym of *Chorea.*

Jadelot's Lines or Furrows. Certain furrows of the face of children in serious illness. Three sets are distinguished: The **Genal Furrow,** from the mouth almost to the malar bone; this and the nasal furrow are said to indicate disease of the gastro-intestinal tract or abdominal viscera; the **Labial Furrow,** from the angle of the mouth outward to the lower part of the face, which "should direct attention to the lungs;" the **Nasal Furrow,** from the nasal alæ in a semicircle about the mouth; the **Oculo-zygomatic Furrow,** beginning at the inner canthus of the eye, and passing outward below the lower lid, to be lost on the cheek; it is said to point to disorders of the cerebro-spinal nervous system. See, also, *Lines, Table of;* and *Signs and Symptoms, Table of.*

Jæger's Test-types. A series of types of varying size for testing the power of vision.

Jag (*jag*) [Prov. Eng.]. A popular slang name for a state of drunkenness; also, for enough liquor to produce a state of drunkenness. The term has been adopted into the jargon of certain proprietary cures for the alcohol-habit.

Jaggery (*jag'-er-e*) [E. Ind.]. The name given to a very impure East Indian palm-sugar, sometimes refined in England, but chiefly consumed in the country of its production.

Jail-fever. Synonym of *Typhus Fever, q. v.*

v. Jaksch's Disease. Pseudoleukocythemia of infants. See *Diseases, Table of.*

Jalap, or **Jalapa** (*jal'-ap* or *jal'-ap-ah*) [named from *Jalapa,* a city of Mexico]. The tuber of *Ipomœa jalapa,* a plant with properties due to two resins, jalapin and convolvulin. It is an active hydragogue cathartic, especially useful in combination with calomel. **J., Abstractum,** an ingredient of pil. cathartic comp. Dose gr. j–v. Unof. **J., Ext.** Dose gr. v–xv. **J., Resina,** precipitated from the tincture by water. Dose gr. ij-v. **J., Pulv., Comp.,** contains jalap 35, potassium bitartrate 65. Dose gr. x–ʒj. **J., Tinct.** (B. P.) Dose ʒss–j.

Jalapin (*jal'-ap-in*) [from *Jalapa,* a city of Mexico], $C_{34}H_{56}O_{16}$. 1. A glucosid from *Convolvulus orizabensis,* very similar in properties to convolvulin; it is actively cathartic. 2. The precipitate from a tincture of the root of *Ipomœa jalapa;* an irritant hydragogue cathartic. Dose gr. iij. Unof.

Jamaica (*jam-a'-kah*) [W. Indies]. An island of the West Indies. **J. Dogwood.** See *Piscidia.* **J. Kino.** See *Coccoloba.*

Jamaicin (*jam-a'-is-in*). Same as *Berberin.*

Jambosa (*jam-bo'-sah*) [Fr., *jambosier*]. A genus of myrtaceous S. Asiatic trees. The bark of **J. aquea, J. domestica,** and **J. vulgaris** is astringent; the fruit (rose-apple, or jambosa) is edible; the fruit and flowers are refrigerant, and the seeds are aromatic. Unof.

Jambu assu (*jam'-boo as-soo'*) [E. Ind.]. The root of *Ottonia jaborandi,* a Brazilian tree. It is thought to be stimulant and febrifuge, but its properties are not definitely known. Dose of the fld. ext. ♏x–xxx. Unof.

Jambul (*jam'-bul*) [E. Ind., *jambu*]. The dried and powdered fruit-stones of *Syzygium jambolanum,* a shrub of the order of Myrtaceæ, growing in Western India. It is a valuable astringent in the diarrheas of children, and has also been found to lessen the amount of sugar and urine excreted in diabetes. Dose gr. ij-x; of the fluid extract of the seeds, ♏v–x. Unof.

James's Pill. A pill containing equal parts of James's powder, ammoniac, and pil. aloes and myrrh. **J.'s Powder.** See *Antimonium.*

Jamestown Weed. See *Stramonium.*

Janosik's Embryo. A human embryo described by Janosik as having two gill-pouches and three aortic arches.

Janus, or **Janiceps** (*ja'-nus* or *jan'-is-eps*) [*Janus,* a two-faced divinity; *caput,* head]. A syncephalic monstrosity with two faces.

Japan (*jap-an'*) [Chin., *jih-pŭn*]. An island on the eastern coast of Asia. **J. Colors.** See *Pigments, Colors,* and *Dye-stuffs.* **J.-black.** See *Pigments, Conspectus of.* **J. Lacquer.** Same as *J.-black.* **J. Wax,** a wax obtained by boiling the berries of several trees of the genus *Rhus,* from incisions in the stems of which flows the famous Japan lacquer varnish. It is properly a fat, as it consists almost entirely of glyceryl palmitate. Its specific gravity is .999 and its melting-point 120° F. (49° C.). When freshly broken, the fractured surface is almost white or slightly yellowish-green and the odor tallow-like. It is used for mixing with beeswax in the manufacture of candles and wax matches.

Japanese (*jap-an-ēz'*) [*Japan,* an island on the east coast of Asia]. Pertaining to Japan or its inhabitants. **J. Method of Resuscitation;** it consists in drawing forward the tongue and making rapid passes with paper fans soaked in water and aqua ammoniæ. The object is to get as much of the vapor of ammonia into the lungs as possible. This method is also called *Japanese Fanning.* **J. Fanning.** See *J. Method of Resuscitation.* **J. Hot-box,** a device for applying dry-heat to a part, as the eyes.

Jar [Pers., *jarrah,* a little cruse]. A small earthen or glass vessel without handle or spout. **J., Leyden,** an electric condenser consisting of a glass jar lined, externally and internally, in its lower two-thirds with tin. See *Leyden.*

Jargon (*jar'-gon*) [ME., *jargoun,* chattering]. Confused, unintelligible talk; gibberish; babble; characteristic of some forms of idiocy and insanity.

Jargonize (*jar'-gon-īz*) [ME., *jargoun,* chattering]. To utter unintelligible sounds.

Jarich's Ointment. An ointment containing pyrogallic acid, ʒj, and lard, one ounce.

Jarjavay's Muscle. See *Muscles, Table of.*

Jasmine (*jaz'-min*) [Pers., *yasmīn,* jasmine]. See *Jasminum.* **J.-yellow.** See *Gelsemium.*

Jasminum (*jaz'-min-um*) [Pers., *yāsmīn,* jasmine]. A genus of oleaceous plants, mostly of tropical old-world origin; jasmine. Many of the species are cultivated for their fragrant flowers, and for their essential oil. Some of the species are vermifuge, others lactifuge, and still others are used in the treatment of skin-diseases. Unof.

Jatropha (*jat'-ro-fah*) [ἰατρός, a physician; τροφή, nourishment]. A genus of euphorbiaceous plants having irritant, cathartic, and emetic properties. See *Barbadoes Nut* and *Tapioca.* **J. macrorhiza,** the root of a plant indigenous to Mexico and the Southern United States, possessed of alterative and cholagogue properties; in large doses it is a hydragogue cathartic and emetic. Dose of the fluid extract ʒss–ij. Unof. **J. Oil,** the oil of the Barbadoes nut.

Jaundice (*jawn'-dis*) [Fr., *jaunisse,* yellowness]. A condition arising from obstruction of the biliary passages. It is characterized by a yellowish coloration of the skin, and may be associated with languor, malaise, nausea, vomiting, itching of the skin, diarrhea or constipation, clay-colored stools, slow pulse, and depression of temperature. Certain of the secretions of the body also are discolored, as the urine. **J., Acute Febrile.** See *Weil's Disease.* **J., Acute Infective.** See *Weil's Disease.* **J., Black,** an extreme degree of jaundice. **J., Blue,** a synonym of *Cyanosis.* **J., Hema-**

togenous, the yellowish discoloration of the skin, resulting from disorganization of the red blood-corpuscles. **J., Hemafecal,** jaundice associated with bloody stools. **J., Hepatogenic.** See *Hepatogenic*. **J., Malignant,** acute yellow atrophy of the liver. **J., White.** Synonym of *Chlorosis*.

Jaune (*zhōn*) [Fr.]. Yellow. **J.-brilliant.** Same as *Cadmium-yellow*.

Java Tea. The leaves of *Orthosiphon staminæus*, the infusion of which is reputed to be diuretic in doses of ʒ j–ij. See *Orthosiphon*.

Javelle's Water. A solution of potassium or sodium hypochlorite.

Jaw [ME., *jawe*, jaw]. See *Maxilla*. **J.-bone,** a maxilla, especially the inferior maxilla. **J.-disease,** a term for phosphorus-necrosis. **J.-jerk,** a tendon reflex obtained by suddenly depressing the lower jaw. See *Reflexes, Table of*. **J.-less,** without jaws. **J., Lock,** or **Locked.** See *Trismus*. **J., Lumpy,** actinomycosis of cattle. **J.-pocking,** a Scottish term for *Wattles, q. v.* **J.-tooth,** a molar tooth.

Jaws (*jawz*). See *Maxillary Bones*.

Jealousy (*jel'-us-e*) [ME., *jalous*, jealous]. A feeling of resentful suspicion caused by belief in the rivalry of another person in the love or favor of one's husband or wife. When excessive, unreasonable, or abnormal, it may be looked upon as a symptom of insanity.

Jecinorous (*jes-in'-or-us*) [*jecur, jecoris*, liver]. Hepatic.

Jecoral (*jek'-or-al*), **Jecorary** (*jek'-or-a-re*), **Jecorose** (*jek'-or-ōs*) [*jecur, jecoris*, liver]. Hepatic; relating to the liver.

Jecorin (*jek'-or-in*) [*jecur, jecoris*, liver], $C_{105}H_{188}N_5SP_3O_{46}$. A complex body found by Drechsel in the liver-substance. In its properties it somewhat resembles lecithin, but it reduces Fehling's solution. It occurs also in the spleen, muscle, brain, etc.

Jecur (*je'-ker*) [L.]. The liver. **J. aselli,** the liver of the cod-fish. **J. lardaceum,** waxy or lardaceous liver.

Jeffersonia (*jef-er-so'-ne-ah*) [after Thomas *Jefferson*, a president of the U. S.]. A genus of berberidaceous plants. **J. diphylla,** a N. American berberidaceous plant, useful in rheumatism, and a good substitute for senega. It is tonic and in large doses expectorant; it is also called *rheumatism-root* and *twin-leaf*. See *Twin-leaf*. Unof.

Jeffries, Bacillus of. See *Bacteria, Synonymatic Table of*.

Jejunal (*jej-u'-nal*) [*jejunus*, dry]. Pertaining to the jejunum.

Jejunitas (*je-ju'-nit-as*) [L.]. Fasting.

Jejunitis (*jej-u-ni'-tis*) [*jejunus*, dry; ιτις, inflammation]. Inflammation of the jejunum.

Jejunium (*je-ju'-ne-um*) [L., *pl.*, *Jejunia*]. A fast.

Jejuno-colostomy (*jej-u-no-ko-los'-to-me*) [*jejunus*, dry; κώλον, colon; στόμα, mouth]. The surgical formation of an artificial passage between the jejunum and the colon.

Jejuno-ileitis (*jej-u-no-il-e-i'-tis*) [*jejunus*, dry; εἰλειν, to roll; ιτις, inflammation]. Inflammation of the jejunum and the ileum.

Jejuno-ileostomy (*jej-u-no-il-e-os'-to-me*) [*jejunus*, dry; εἰλειν, to roll; στόμα, mouth]. The surgical formation of an artificial communication between the jejunum and the ileum.

Jejunostomy (*jej-u-nos'-to-me*) [*jejunus*, dry; στόμα, mouth]. The making and maintenance of an artificial opening through the abdominal wall into the jejunum. The operation is designed to permit the introduction of food in cases of carcinoma of the pylorus and similar affections.

Jejuno-typhoid (*jej-u-no-ti'-foid*) [*jejunus*, dry; τῦφος, smoke; εἶδος, likeness]. Typhoid fever with involvement of the jejunum or its glands.

Jejunum (*jej-u'-num*) [*jejunus*, dry, empty, because thought to be empty after death]. The two-fifths of

c. Cardiac, *p.* Pyloric parts of stomach. *d.* Duodenum. *j.* Jejunum and ileum. *ac.* Ascending, *tc.* transverse, and *dc.* descending colon. *r.* Rectum. *a.* Anus.

the small intestine extending between the duodenum and the ileum. Also a synonym of *Fasting*.

Jelly (*jel'-e*) [*gelare*, to freeze]. In pharmacy, a soft, non-viscid, but somewhat elastic substance, of which hydrated gelatin is the best example. Domestic fruit-jellies consist of the inspissated juice of the fruit, with one or two parts of sugar, together with the natural mucilage of the seeds of the fruit. Many of the imported jellies sold in the United States contain no fruit-juice, being for the greater part ordinary animal gelatin acidified with tartaric acid, and flavored artificially. **J., Glycerin.** See *Mounting-media;* also, *Glycerin-jelly*. **J., Wharton's.** See *Wharton*.

Jennerian (*jen-er'-e-an*) [after *Jenner*, an English physician]. Pertaining to Jenner, or to the theory or practice of vaccination.

Jensen's Fissure. See *Fissures, Table of*.

Jequiritin (*jek-ir'-it-in*). A soluble active principle obtained from jequirity seeds. See *Abrus*.

Jequirity (*jek-ir'-it-e*). See *Abrus*.

Jerk [origin uncertain]. See *Chin-jerk, Elbow-jerk, Jaw-jerk, Knee-jerk, Toe-jerk*, etc. **J.-finger.** See *Spring-finger*.

Jerkers (*jerk'-erz*). See *Jumpers*.

Jerks [origin uncertain]. A form of hysteric and almost maniacal agitation, accompanied by sudden distortions of the body. It has been epidemic in certain seasons of unusual religious excitement.

Jersey Tea. See *Red-root*.

Jervin (*jer'-vin*) [*jerva*, green hellebore-root], $C_{26}H_{37}NO_3$; a poisonous, crystalline alkaloid found in varieties of veratrum.

Jesuits' Bark. A name for *Cinchona.* **J. Drops.** See *Wade's Balsam.*

Jetolin (*jet'-o-lin*). See *Pigments, Conspectus of.*

Jewel-weed (*ju'-el-wēd*). See *Impatiens.*

Jewlap (*ju'-lap*). See *Dewlap.*

Jigger Flea. See *Pulex.*

Jimjams (*jim'-jamz*) [slang]. A vulgar synonym of delirium tremens.

Jimson (*jim'-sun*). See *Datura stramonium.*

Jingko (*jing'-ko*). See *Gingko.*

Job's Tears. See *Coix lacrima.*

Jobert's Suture. See *Suture.*
